Massachusetts: church members only. In Massachusetts Bay, the officers of the colony's company sat together as its lawmaking group, called the General Court. In May 1631 they ruled that only church members could become freemen, the men who could vote. Women could not vote at all.

To join a church, a person had to stand before the church members, tell how they had come to their faith, and be accepted. Most men in the colony could not pass that test. Under a new charter from the king in 1691, men who owned property could vote whether or not they belonged to a church.

A Virginia law on the children of enslaved women, 1662

The members of Virginia's General Assembly passed a law about the children of enslaved women in December 1662. It states that "all children borne in this country shalbe held bond or free only according to the condition of the mother." Bond meant held in slavery. Under English law, whether a child was born free or bound depended on the father. Under the new Virginia law, a child born to an enslaved woman was enslaved, whoever the father was. Enslavers gained every such child as a worker they owned.

A town made to keep a school

The lawmakers of Massachusetts Bay put the duty of teaching children on each household in 1642. Parents and masters had to try to teach their children and apprentices, young people bound to a master to learn a trade, to "read the English tongue," or have someone else teach them. They also had to teach them the colony's capital laws, the laws whose penalty was death.

If a household failed, the town's selectmen, its elected leaders, could fine it. They could also take the children away and place them with another master.

In 1647 the lawmakers passed a second law. Its opening words state that "that old deluder, Satan" wants to keep people from knowing the Scriptures, the Bible. A deluder is someone who tricks people. Once a town had fifty households, the people of the town had to appoint someone to teach reading and writing. The parents or the town paid that teacher. A town of one hundred families also had to set up a grammar school to prepare boys for the university.

Under the 1647 law, the penalty fell on the town rather than on the parents. If the people of a town went more than a year without doing what the law required, the town had to pay five pounds to the nearest school until they did it.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 7 MINUTES

A New York jury set a printer free in 1735 though the governor wanted him in prison. In the same years, the men elected to the colonial assemblies held the power to propose every law and to decide how public money was spent, which gave them control over the pay of the governors the king appointed. The men of Virginia's assembly used their power another way. They took the vote away from every free Black man, every free man of mixed Black and white family, and every Native man in the colony.

Why the governors could not control their own pay

After 1680 the members of the colonial assemblies had the power to propose all of a colony's laws. In a royal colony, the king chose the governor and his council, and the colonists elected the assembly. By 1763 nine of the thirteen colonies that later rebelled had royal governors.

The members of each colonial assembly decided how public money was spent, and they checked the spending. That gave them control over the salaries of the governor and of the colony's judges.

Officials in London tried to make the assemblies set fixed yearly salaries. They also wanted a fixed civil list, a set list of paid government posts. That list would have given each governor jobs to hand out to his supporters. The assembly members turned down every one of these attempts.

Virginia's burgesses take away the vote, 1723

The burgesses of Virginia's General Assembly passed a law in May 1723 about enslaved people accused of crimes punished by death. It also set punishments for plots and revolts, and rules to control Black and Native people, enslaved or free.

One clause of it states that "no free negro, mullatto, or indian whatsoever, shall hereafter have any vote at the election of burgesses, or any other election whatsoever." Negro was a word used then for a Black person. Mulatto was a word used then for a person with both Black and white parents or ancestors. With that clause, the burgesses took the vote from every free Black man, every free man of mixed Black and white family, and every Native man in the colony.

A lawyer in London objected. Richard West advised the Board of Trade, the group of officials in London who oversaw the colonies. On January 10, 1724, he wrote: "I cannot see why one Freeman should be used worse than another meerly upon account of his complexion." Complexion meant skin color.

William Gooch, Virginia's lieutenant governor, an officer of the king one rank below the governor, defended the law. On May 18, 1736, he wrote that free Black people had been suspected of helping a planned revolt of enslaved people before the 1723 session. He said the law was meant "to make the free-Negros sensible that a distinction ought to be made between their offspring and the Descendants of an Englishman." Sensible here meant aware. The ban was still in force when Gooch defended it in 1736.

That same year, 1736, Virginia's lawmakers set a land test for voters. A man had to have owned 100 acres of unfarmed land, or 25 acres with a house on it, for at least a year.

The Zenger trial, 1735

A jury in New York refused in 1735 to find the printer John Peter Zenger guilty of seditious libel. Libel means printed words that harm someone's good name. Seditious libel was the crime of publishing written blame of any public official, of the law, or of anything the law set up. Under that law, it made no difference whether the printed words were true.

The judge told the jury to decide only one question: whether Zenger had printed the newspaper. The jury decided more than that and found him not guilty.

What the verdict did not change. The jurors set Zenger free, but the law stayed the same. The case set no rule that later judges had to follow. In New York, the truth of the printed words did not become a defense, a reason that can keep a person from being found guilty, in a libel case until April 6, 1805, seventy years later.

That day the state's lawmakers passed a law allowing truth as a defense when the words were printed "with good motive and for justifiable ends." In 1821 New York's leaders wrote the same rule into the state's second constitution.

John Peter Zenger

Who: A New York printer jailed for more than eight months for printing attacks on the governor, then found not guilty by a jury.

When and where: New York City, November 1734 to August 1735.

Eight months in jail, and the paper missed only one issue.

John Peter Zenger sat in jail from November 17, 1734, to August 5, 1735, for printing a newspaper that attacked the governor of New York. The trouble began in 1733. The chief judge, Lewis Morris, wrote a dissent, a judge's written disagreement with the other judges, against Governor William Cosby in a court case. Cosby removed Morris from office. Morris's allies answered by starting a newspaper, the *New-York Weekly Journal*, and Zenger printed it. The first issue came out on November 5, 1733.

Until then the only paper in the colony had been the *New York Gazette*, which printed the governor's side. In the *Journal*, writers accused Cosby's government of tyranny, meaning cruel and unfair rule, with articles, jokes and mocking verses, issue after issue. Cosby offered a reward of fifty pounds to anyone who found out who wrote them. He also ordered copies of the paper burned in public by the hangman.

In January 1734 Chief Justice James De Lancey asked a grand jury to charge Zenger with a crime. A grand jury is a group of citizens who decide whether there is enough proof to charge a person with a crime. The grand jury refused. In October a second grand jury refused too. Its members said no one could tell who had written the pieces.

On November 17, 1734, the sheriff arrested Zenger and took him to the Old City Jail. De Lancey and another judge named Philipse, both allies of Cosby, had signed the order for his arrest. His bail, the money he had to pay to get out of jail until his trial, was £400. That was more money than he had, so he stayed in jail. His wife Anna and his apprentices kept printing the paper. Only one issue was missed.

On April 16, 1735, his lawyers, James Alexander and William Smith, argued that the court itself had not been set up lawfully. De Lancey struck both of their names off the list of lawyers allowed to practice. Zenger was left with no lawyer.

The trial took place on August 4, 1735, on the second floor of City Hall. Andrew Hamilton, a lawyer from Philadelphia, defended Zenger. Hamilton tried to show that what Zenger printed was true. De Lancey stopped him: "The law is clear that you cannot justify a libel." Hamilton then spoke to the jury. He told them they had "the right beyond all dispute to determine both the law and the fact." The jury found Zenger not guilty. He was let out of jail the next day.

Andrew Hamilton

Who: The Philadelphia lawyer who defended Zenger without pay and told the jury it could judge the law as well as the facts.
When and where: New York City, August 4, 1735. Philadelphia before and after.

He took the case for nothing and told the jury to judge the law.

Andrew Hamilton defended John Peter Zenger for free. He was a lawyer in Philadelphia, and the members of the Pennsylvania Assembly elected him their Speaker. He traveled to New York for the trial and worked on the case with another lawyer, John Chambers.

The judge would not let Hamilton prove that Zenger's words were true. So Hamilton built his defense on the power of the jury. He told the jurors that the case was "not of small or private concern." He called it "the cause of liberty." He argued that the law gave people "a right to liberty of both exposing and opposing arbitrary power," meaning power used without limits, "by speaking and writing truth." The jury found Zenger not guilty.

The phrase "Philadelphia lawyer" entered American speech because of this case. Dictionaries define it as a very clever lawyer, skilled at the fine points of the law.

> Back in Pennsylvania, Hamilton led the planning of the Pennsylvania State House and pushed to get it finished. The building is now called Independence Hall.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 15 MINUTES

Fifty-six men signed the Declaration of Independence, and in the next fifteen years the leaders of the new country wrote down how it would be governed. They wrote a plan of government, a constitution to replace that plan, and a list of rights added to the constitution. The men who wrote the Constitution put clauses in it that protected slavery. They set no national rule on who could vote, so each state's lawmakers decided.

In the 1790s the country's leaders split into the first two political parties. In 1798 President John Adams signed a law that made it a crime to publish false and scandalous writing against the government. Federal judges sent people who criticized him to jail under it.

The Declaration of Independence, 1776

The delegates to the Continental Congress voted for independence from Britain on July 2, 1776. The Continental Congress was the meeting of delegates from the thirteen colonies. Two days later, on July 4, they approved the Declaration of Independence, which gave their reasons.

Five men made up the committee that wrote the first version: Thomas Jefferson, John Adams, Benjamin Franklin, Robert R. Livingston and Roger Sherman. Jefferson did most of the writing. The delegates began signing the finished copy on August 2, 1776. In the end 56 men signed it. Livingston, who helped write it, never signed.

Who could vote in the new states

Leaders in many of the new states wrote state constitutions, each with its own rules for who could vote. The constitutions written in ten states between 1776 and 1790 stated that voters had to be "male" or "freemen." The election laws of five states contained no rule about sex.

New Jersey's constitution of 1776 gave the vote to "all inhabitants of this colony of full age, who are worth fifty pounds." That meant every adult living there who owned fifty pounds' worth of property could vote. It said nothing about sex or race. So unmarried women and free Black people who owned enough property could vote. Fifty pounds was about the price of three horses or eight cows in 1806.

Married women found it much harder to meet the property test, because under the law of the time a wife's property was usually in her husband's hands.

New Jersey's lawmakers passed an election law in 1790 that said a voter must vote in the town where "he or she" lived. In 1797 they passed a law that did the same for the whole state. It also dropped the words "clear estate," an old legal phrase meaning owning property outright, from the property rule. What wives and widows held was often not theirs outright, so with those words gone, it was easier for them to qualify.

Then in 1798 the lawmakers passed a law that let only white male taxpayers vote for town officers. Property owners of any race or sex still voted for county, state and national offices. The next era tells how that ended.

The Articles of Confederation

Before the Constitution, the country's plan of government was the Articles of Confederation. The members of Congress approved it on November 15, 1777. It took effect on March 1, 1781, when Maryland's leaders approved it, the last of the thirteen states to do so.

Under the Articles, each state had one vote in Congress, whatever its size. Congress had no power to tax. It could not make rules for trade between the states. Any change to the Articles needed every state to agree.

The Constitutional Convention, 1787

Delegates from the states met in Philadelphia in 1787 to write a new plan of government. The meeting was called for May 14, but too few delegates had arrived to begin until May 25. About 55 delegates took part. No delegates came from Rhode Island. The delegates worked until September 17, 1787, and 39 of them signed the finished Constitution.

The delegates settled how to share seats in Congress with a deal called the Connecticut Compromise. Every state got two senators, and the number of seats each state got in the House of Representatives depended on its population.

Three-fifths. The delegates also had to decide whether enslaved people counted as part of a state's population. They agreed to count each enslaved person as three-fifths of a free person when working out a state's seats in the House. This rule is in Article I, Section 2. Under it, the states with the most enslaved people got extra seats in the House.

Article II states that each state has as many electors, the people who pick the president, as it has senators and representatives. So those states also got extra votes for president. Under the law, the enslaved people being counted were property, with no rights at all, so none of them could vote.

Slavery and voting in the Constitution

Two other clauses of the Constitution dealt with slavery. Article I, Section 9 stated that Congress could not ban "the Migration or Importation of such Persons as any of the States now existing shall think proper to admit" before 1808. That meant members of Congress could not stop the shipping of enslaved Africans into the country for twenty years. Article V stated that no amendment could change that clause before 1808.

Article IV, Section 2 stated that a person "held to Service or Labour in one State" who escaped into another state "shall be delivered up on Claim of the Party to whom such Service or Labour may be due." That meant a person who escaped slavery into a free state still had to be handed back to the enslaver.

The Constitution set no national rule for who could vote. Article I, Section 2 stated that the voters for the House in each state must meet the same rules as the voters for the largest house of that state's own lawmaking body. So each state's lawmakers decided who could vote.

Ratification

The Constitution would take effect once nine states ratified it. To ratify means to approve formally. Under Article VII, a meeting of delegates in each state, called a convention, voted on it. From October 1787 to May 1788, Alexander Hamilton, James Madison and John Jay wrote 85 essays to persuade New Yorkers to vote for it. They signed them with a made-up name, Publius. The essays came out mainly in two New York newspapers, and they are known as *The Federalist*.

On June 21, 1788, New Hampshire's delegates made it the ninth state to ratify. The new government began on March 4, 1789. Delegates in North Carolina and Rhode Island approved the Constitution only after the first president took office. Rhode Island's lawmakers turned down eleven attempts to ratify it between September 1787 and January 1790. When Rhode Island's delegates finally voted on May 29, 1790, they approved it 34 to 32.

George Washington

Who: The first president, elected twice with every electoral vote, who chose to leave office after two terms.

When and where: Federal Hall, New York, April 30, 1789. Philadelphia, September 19, 1796.

Washington stopped after two terms, a limit presidents kept for about 150 years.

George Washington is the only person ever elected president with every electoral vote. It happened twice, in 1789 and in 1792. The electoral votes are the votes cast by electors, the people each state chooses to pick the president. The votes for the first election were counted on April 6, 1789, more than a month late. Members of the new Congress could not reach New York in time because of a cold, snowy winter. Washington had all 69 votes.

On April 30, 1789, Washington swore the oath of office, the promise each new president makes, on the second-floor balcony of Federal Hall in New York. Robert R. Livingston, a New York judge whose title was chancellor, read him the oath while a crowd watched from the street. Then Washington went inside and read his first speech as president, called the first inaugural address, to both houses of Congress.

Nothing in the Constitution limited how many times a president could be elected. In 1796 Washington decided to stop after two terms. He announced it in a written message to the country, printed on September 19, 1796, in a Philadelphia newspaper. It is called his Farewell Address, though he never read it aloud.

James Madison had written a first version in 1792. Alexander Hamilton did most of the writing in 1796, and Washington made changes to it himself. In it he told the country of "the resolution I have formed, to decline being considered among the number of those out of whom a choice is to be made." That meant he would not run again.

In the same address he warned "against the baneful effects of the spirit of party." Baneful means harmful. He also wrote that it was "our true policy to steer clear of permanent alliances with any portion of the foreign world."

For about 150 years the two-term limit stayed a habit, not a law. Franklin Roosevelt broke it when he won a third term in 1940 and a fourth in 1944. The Twenty-second Amendment of 1951 made the limit law. Era 9 tells how.

The people he owned. Washington was an enslaver. He owned 123 people at his plantation, Mount Vernon. He also managed 153 more who belonged to the estate of his wife Martha's first husband, the property that man had left when he died. Under the law, Washington could not sell or free those 153.

In his will, dated July 9, 1799, he freed his valet, or personal servant, William Lee at once. He ordered the other 122 people he owned to be freed after Martha died. Martha Washington freed them on January 1, 1801. The other 153 people went back to her first husband's estate. Martha's grandchildren, who inherited that estate, divided them among themselves, and in dividing them they split up families.

The custom of reading the Farewell Address aloud in Congress began on February 22, 1862, during the Civil War, after a thousand people in Philadelphia asked Congress to mark Washington's birthday. Since 1896 a senator has read it aloud in the Senate every year. It runs 7,641 words.

James Madison

Who: A delegate to the Constitutional Convention who first argued against a bill of rights, then wrote one and steered it through Congress.
When and where: Philadelphia and New York, 1787 to 1791. Born March 16, 1751. Died June 28, 1836.

Madison wrote the Bill of Rights after arguing that none was needed.

James Madison introduced the amendments that became the Bill of Rights. An amendment is a change or addition to the Constitution. Madison had been the loudest voice against adding a list of rights. He had argued that the Constitution already limited the government's powers. Then delegates in several states agreed to ratify only if the first Congress would consider the amendments they proposed. After that, Madison changed his position.

On June 8, 1789, Madison stood up in the House of Representatives and proposed his list. He told the House, "I think we should obtain the confidence of our fellow citizens, in proportion as we fortify the rights of the people against the encroachments of the government." To fortify means to make stronger. Encroachments means steps that go beyond what is allowed.

Madison wanted each change written into the body of the Constitution, in the place where it belonged. In August 1789 the House members followed Roger Sherman's plan instead. They voted to add the changes at the end, as separate amendments. That is why the Bill of Rights sits at the back of the Constitution.

The House members passed 17 amendments. The senators cut and combined them into 12. Members of Congress proposed those 12 amendments on September 25, 1789, and President Washington sent

them to the states on October 2. By December 15, 1791, lawmakers in three-quarters of the states had ratified ten of them. Those ten are the Bill of Rights.

At the Constitutional Convention, Madison had backed the rule counting each enslaved person as three-fifths of a free person. In essay No. 54 of *The Federalist*, he defended it. He said enslaved people had a "mixed status as property and persons." He said many times that slavery went against the principles of a republic, a country governed by elected representatives. He never put forward a workable plan to end it.

Madison enslaved people all through these years. About 100 enslaved people worked at his plantation, Montpelier, at any one time, and nearly 300 over the life of the plantation. When he was short of money, he sold sixteen of them to his cousin William Taylor, who owned a sugar plantation and a cotton plantation in Louisiana. He freed no one in his will. He asked his wife, Dolley, not to sell the people he left her without their consent unless they misbehaved. She sold some of them and kept others enslaved.

Who could become a citizen, 1790

The first federal law on who could become a citizen allowed only a "free white person." Members of Congress passed it in 1790 and called it the Naturalization Act. Naturalization is the legal process by which a person born in another country becomes a citizen.

The person had to be of good character, had to have lived in the United States for two years and in the state for one, and had to swear an oath to support the Constitution. Part of that racial limit stayed in federal law until 1952.

The Fugitive Slave Act, 1793

In 1793 the members of Congress passed a law about "persons escaping from the service of their masters." President George Washington signed it on February 12, 1793. Under the law, an enslaver, "his agent or attorney" could "seize or arrest" a person in any state. He could take that person before a single federal judge, or a county, city or town magistrate. A magistrate is a local judge. If the enslaver swore to his claim, spoken or in writing, the judge could give him a certificate to take the person away.

The law provided no jury for the seized person. It stated nothing about letting that person give evidence. Anyone who blocked the seizure, rescued the person, or hid the person after being told of the claim had to pay the enslaver $500.

The first two parties

In the 1790s the country's leaders split into the first two political parties. A political party is a group of people who work together to win elections and run the government their way.

Alexander Hamilton and John Adams led the Federalists. They wanted a strong national government and an economy built on trade, manufacturing and banking, and they leaned toward Britain. Thomas Jefferson and James Madison led the Democratic-Republicans. They wanted more of the government's power left with the states, opposed a national bank, supported farming and leaned toward France. Washington warned against parties in his Farewell Address of 1796.

The Sedition Act, 1798

In 1798 members of Congress passed four laws, and President John Adams signed them. Three of them dealt with people from other countries. The fourth, signed on July 14, 1798, was the Sedition Act. Sedition means words or acts that stir people up against the government. Under it, a person committed a crime by writing or publishing "any false, scandalous and malicious writing" against the government. The punishment was a fine of up to $2,000 and up to two years in prison. The law ran out on March 3, 1801.

The only newspaper editors put on trial under the Sedition Act worked for Democratic-Republican papers.

DISPUTED: The number found guilty. Historians have long counted 17 people charged and 10 found guilty, and a later study found 16 more people charged. The National Constitution Center counts more than two dozen found guilty, most of them publishers who opposed the government.

One of the people found guilty was Matthew Lyon, a Democratic-Republican congressman from Vermont who had been born in Ireland. In a letter, he wrote that he saw the public good "swallowed up in a continual grasp for power, in an unbounded thirst for ridiculous pomp, foolish adulation, or

selfish avarice." Pomp means showy display. Adulation means too much praise. Avarice means greed. He had also read aloud at campaign meetings a letter by the poet Joel Barlow that blamed Adams and the Senate for trouble with France.

A federal grand jury in Vermont charged Lyon on October 5, 1798. A deputy marshal, a federal law officer, arrested him the next day. On October 9 he stood trial at Rutland before Justice William Paterson of the Supreme Court. Lyon defended himself.

Paterson told the jury that its job had "nothing whatever to do with the constitutionality or unconstitutionality of the sedition law." Constitutionality means whether a law is allowed by the Constitution. The jury found Lyon guilty within an hour. Paterson sentenced him to four months in prison, a $1,000 fine and $60.96 in court costs.

Lyon was held in the jail at Vergennes. While he was there, the voters of his district elected him to Congress again. He was released on February 9, 1799.

Justice Samuel Chase sentenced another writer, James Callender, to nine months in prison and a $400 fine. After Jefferson became president, he pardoned Callender. To pardon means to officially forgive a crime. In 1804 the members of the House voted to impeach Chase, partly for how he ran Callender's trial. To impeach means to charge an official with wrongdoing in office, so that the Senate puts him on trial. The senators found him not guilty.

BY 1800

If you remember one thing: Between 1776 and 1791 the country's leaders wrote down how it would be governed, protected slavery in the plan, and left the vote to each state.

- 1787: Thirty-nine delegates signed the Constitution in Philadelphia.
- 1791: Ten amendments, the Bill of Rights, became part of it.
- 1798: Under the Sedition Act, a jury found a congressman guilty of writing against the president, and his voters re-elected him from jail.

Next: In 1803 the justices of the Supreme Court claimed a power the Constitution does not name: cancelling a law.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 11 MINUTES

The Supreme Court's justices struck down part of a law passed by Congress for the first time in 1803. From then on, American judges claimed the power to cancel laws that break the Constitution. In the same years, lawmakers in several states dropped the rule that a white man had to own property to vote. Lawmakers in some of those states took the vote away from Black men.

The first national party convention met in 1831. President Andrew Jackson handed out government jobs to his supporters. He also signed a law that let him make treaties to push Native nations out of the East and send them west. By the end of his presidency, his officials had removed about 50,000 Native people from their homelands in the East.

John Marshall

Who: The Chief Justice who wrote that judges may refuse to follow a law that breaks the Constitution.

When and where: Washington, D.C., 1801 to 1835. *Marbury v. Madison* decided in February 1803.

A judge's job, he wrote, is "to say what the law is."

John Marshall wrote the ruling in which the Supreme Court's justices first claimed the power to strike down a law passed by Congress. He was the Chief Justice, the head of the Supreme Court. President John Adams named Marshall for that post on January 20, 1801, and Marshall took his seat on February 4.

He held the seat for 34 years, until he died in Philadelphia on July 6, 1835. In that time he heard more than a thousand cases and wrote more than five hundred opinions. An opinion is a judge's written explanation of a ruling.

In 1801, in his last days in office, Adams appointed William Marbury a justice of the peace, a local judge, for Washington, D.C. The paper that gave Marbury the job, called a commission, was never delivered to him. The new Secretary of State, James Madison, refused to hand it over. The Secretary of State is the president's chief adviser on dealings with other countries. Marbury asked the Supreme Court for an order forcing Madison to deliver it.

In February 1803 Marshall and the other justices decided the case, called *Marbury v. Madison*. They said they could not give Marbury the order he asked for. A section of the Judiciary Act of 1789 said the Supreme Court could give such orders. The justices decided that the section went beyond what the Constitution allowed, so they refused to follow it. It was the first time the justices had declared a law passed by Congress and signed by the president unconstitutional, meaning that it broke the Constitution.

> Marshall wrote: "It is emphatically the province and duty of the judicial department to say what the law is." The judicial department means the courts. Province here means proper job. A law that goes against the Constitution is void, which means it has no force, he wrote. And when the two conflict in a case, judges must follow the Constitution. This power is called judicial review. The justices did not declare another act of Congress unconstitutional until the *Dred Scott* case of 1857.

The Louisiana Purchase, 1803

The deal. Two American officials, Robert Livingston and James Monroe, signed a treaty, a written agreement between countries, with France on April 30, 1803. Under it the United States bought 828,000 square miles of land west of the Mississippi River. The price was $15 million, about 4 cents an acre. President Jefferson had sent Monroe to buy only New Orleans and the land to its east called West Florida, and to spend no more than $10 million.

The question it raised. President Thomas Jefferson usually read the Constitution strictly, which means he held that the government could do only what the document said it could. He wondered whether the Constitution allowed the government to take on new land at all.

In a letter in 1803 to Wilson Cary Nicholas, Jefferson wrote: "Our peculiar security is in possession of a written Constitution. Let us not make it a blank paper by construction." Peculiar here meant special. By construction he meant by stretching the meaning of its words. He wrote that he would rather ask the nation for more power than take it. He went ahead with the purchase anyway.

French officials sold France's claim to the land. Thousands of Native people, in dozens of nations, lived on it. They were not part of the sale. Article VI of the treaty states that the United States would carry out the treaties Spain had made with "the tribes and nations of Indians" there.

Ending the import of enslaved people, 1808

Under the Constitution, the members of Congress could not ban the shipping of enslaved Africans into the country before 1808. On March 2, 1807, President Jefferson signed a law that banned it from the first day allowed. The ban took effect on January 1, 1808. From then on, bringing enslaved people across the ocean into the United States was against federal law.

Who gained the vote and who lost it

Between 1807 and 1838, the lawmakers of several states rewrote their rules on voting. They let white men without property vote. In the same laws and constitutions, they shut out Black men. New Jersey's lawmakers also ended voting by women.

New Jersey. New Jersey's lawmakers passed an election law in 1807 that let all white male taxpayers vote and shut out everyone else. Women and free Black people in New Jersey who met the property test had voted since 1776. The new law ended that. The law's words gave its aim as a "uniform practice" across the state, meaning the same rules everywhere.

New York. The delegates who rewrote New York's constitution in 1821 dropped the property test for white men. In the same document, they required a Black man to own property worth $250, free of debt, before he could vote. In 1825 only 298 of the nearly 6,000 free Black adults in New York met that test.

North Carolina and Pennsylvania. North Carolina's free Black men lost the vote in 1835. The delegates to the state's constitutional convention, a meeting of men chosen to rewrite the state constitution, took it away from them. Pennsylvania's convention delegates did the same in January 1838. They added the word "white" before "freemen," the men allowed to vote, in the section on who could vote.

Robert Purvis wrote a protest called the *Appeal of Forty Thousand Citizens, Threatened with Disfranchisement*. To disfranchise means to take away the vote. He read it aloud on March 14, 1838, at the First African Presbyterian Church in Philadelphia. Pennsylvania's voters approved the new constitution on October 9, 1838, by 113,971 votes to 112,759. Black men in Pennsylvania

could not vote again until the Fifteenth Amendment in 1870. That change to the Constitution barred the states from denying a man the vote because of his race.

The first national party convention, 1831

Men who opposed the Freemasons, a secret society, formed the Anti-Masonic Party. In September 1831 the party's members met in Baltimore to choose their candidate for president. It was the first national nominating convention held by any party. A nominating convention is a meeting where a party's members choose its candidates.

The Anti-Masons were also the first party to give voters a platform, a written list of what the party stood for. The delegates chose William Wirt. In the 1832 election he won only Vermont and its seven electoral votes.

Andrew Jackson

Who: The president who signed the law to remove Native nations from the East, used the veto to fight the national bank, and gave government jobs to his supporters.
When and where: Washington, D.C., 1829 to 1837.

He signed the removal law, and his officials forced about 50,000 people west.

Andrew Jackson was the seventh president, from 1829 to 1837. On May 28, 1830, he signed the Indian Removal Act. The act allowed the president to make treaties with Native nations living east of the Mississippi River. Under those treaties the nations had to give up their eastern land and move west. The senators passed it 28 to 19. The members of the House passed it by five votes, 102 to 97, on May 26, 1830, by the count of the House's own historians.

What the law did. By the end of Jackson's presidency, his officials had made nearly 70 removal treaties. Federal officials removed about 50,000 Native people from the East to Indian Territory, land west of the Mississippi River that the government set aside for them. The Choctaw,

starting in 1831, were the first of the southeastern nations to be forced out. The forced removal of the Muscogee, or Creek, began in 1836. Forcing the Seminole from their land took the government almost twenty years and $15 million.

White settlers got about 25 million acres of the nations' eastern land, which federal officials opened to them.

The Trail of Tears. In 1838, a year after Jackson left office, United States Army troops and state militia, part-time soldiers called up by a state, forced more than 16,000 Cherokee people out of their homelands. The soldiers held the Cherokee in camps and then sent them west. The journey is called the Trail of Tears. The National Archives puts the Cherokee dead at about 4,000. The National Park Service counts more than a thousand who died on the way and perhaps several thousand more who died from its effects.

The ruling Georgia ignored. Georgia's lawmakers had also passed a law about white people living on Cherokee land. It required any white person living in Cherokee territory after March 1, 1831, to get a license from Georgia's governor and to swear an oath to support Georgia's constitution and laws. Samuel Worcester, a Christian missionary, a man sent to spread his religion, lived on Cherokee land without that license. He was found guilty in a Georgia court and sentenced to four years of hard labor, forced heavy work, in the state prison.

In 1832 the justices of the Supreme Court decided *Worcester v. Georgia*. Chief Justice John Marshall wrote that Georgia's law was "void, and the judgment a nullity," meaning it had no force. Georgia's officials did not carry out the ruling. In April 1832 Jackson wrote to John Coffee that the Court's decision "has fell still born." Stillborn means born dead.

Many schoolbooks quote Jackson saying, "John Marshall has made his decision, now let him enforce it." No record from his own time shows that he said it. The sentence first appears in a history book by Horace Greeley printed in 1864, about twenty years after Jackson died.

The veto. On July 10, 1832, Jackson vetoed a bill to renew the charter of the Second Bank of the United States, a national bank. The charter was the paper that gave the Bank the right to operate. A veto is a president's refusal to sign a bill into law. His veto message called the Bank "dangerous to the liberties of the people."

He was the first president to make a veto the center of a major fight over the economy. He made the veto a part of his campaign in 1832 and won a second term.

Jackson then moved the government's money out of the Bank. On March 28, 1834, the senators voted to censure him for it. To censure is to scold someone officially. It is the only time the Senate has censured a president. In January 1837, after Jackson's party won a majority, the senators voted to expunge the censure, which means to strike it from the record.

Jackson also filled government jobs with his own supporters. He called this rotation in office. He argued that government work could be made "so plain and simple" that the jobs could pass around among men who deserved them. Senator William L. Marcy of New York gave the practice its nickname when he said "to the victor belong the spoils of the enemy." Spoils are the goods an army takes from the side it beats. The practice became known as the spoils system.

The fight over the school tax, 1834 and 1835

In 1834 Pennsylvania's lawmakers passed the Free Public School Act, a law for a statewide system of common schools paid for by taxes. A common school was a free public school open to the children of the town.

Many voters did not want to pay the tax. In 1835 petitions, written requests signed by thousands of them, reached the state's lawmakers, asking them to repeal, or cancel, the law. No one in the state Senate spoke against repeal, and few members of the House did.

Thaddeus Stevens, a member of the Pennsylvania House, spoke against repeal on April 11, 1835. He said: "Many complain of the school tax, not so much on account of its amount, as because it is for the benefit of others and not themselves." He pointed out that a man "cheerfully pays the tax which is necessary to support and punish convicts." The same man, Stevens said, "loudly complains of that which goes to prevent his fellow being from becoming a criminal."

After his speech, the lawmakers dropped the repeal, and the schools stayed. Stevens later called the speech the "crowning utility" of his life, the most useful thing he ever did.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 21 MINUTES

Black men in Louisiana registered to vote in 1897 numbered 130,344. In 1900 they numbered 5,320. This era tells how both numbers came to be.

Members of Congress passed three amendments to the Constitution between 1865 and 1870, and lawmakers in enough states approved them. Under them, slavery ended, people born in the country became citizens, and no state could deny a citizen the vote because of race. The justices later ruled that the citizenship rule did not cover Native people born into their own nations. In the 1870s and 1880s Black men in many Southern states voted and held office.

Starting in 1890, the delegates who rewrote Southern state constitutions added rules meant to stop Black men from voting. The justices of the Supreme Court ruled that those rules were allowed. They also ruled that laws requiring Black and white people to be kept apart were allowed. In the same years, lawmakers in Washington passed the first laws to shut out immigrants by nationality, and to fill some government jobs by exam. Lawmakers in more and more states required children to go to school.

Laws that made children go to school

In 1852 the lawmakers of Massachusetts passed the first state law that required children to go to school. Children from 8 to 14 had to attend. The school committee in each town or city had to look into every case of a child who did not. A family that broke the law could be fined up to $20. By 1900, thirty-two states had a law like it. Mississippi's lawmakers were the last to pass one, in 1918. These laws worked alongside laws against child labor.

Dred Scott v. Sandford, 1857

Dred Scott, an enslaved man, went to court to win his freedom. He argued that he had become free by living in a territory where slavery was banned. The justices of the Supreme Court decided his case, *Dred Scott v. Sandford*, on March 6, 1857, by a vote of 7 to 2.

Chief Justice Roger B. Taney wrote the ruling. He wrote that a Black person whose ancestors were brought to the country and sold as slaves was not a citizen under the Constitution. So Scott had no right to sue in a federal court. Taney also wrote that Black people "had no rights which the white man was bound to respect."

Taney's ruling also said that Congress had no power to ban slavery in the federal territories, the lands that were not yet states. With that, the justices struck down the Missouri Compromise, a law of 1820 that had banned slavery in the northern part of the Louisiana Purchase lands. That made *Dred Scott* only the second time the justices had struck down a law passed by Congress. The first was *Marbury v. Madison* in 1803.

Secession, 1860

The delegates of a South Carolina convention signed an ordinance of secession, a law declaring that their state was leaving the United States, in Charleston on December 20, 1860. Four days later the delegates approved a statement of their reasons. In it they wrote of "an increasing hostility on the part of the non-slaveholding States to the institution of slavery." They also wrote that the Northern states had joined to elect a man "whose opinions and purposes are hostile to slavery." The man they meant was Abraham Lincoln.

Abraham Lincoln

Who: The president who suspended a basic legal right during the Civil War, was told by the Chief Justice that he had no power to do it, and kept doing it.

When and where: Washington and Baltimore, April to July 1861.

Movie: *Lincoln* (2012), a film about the fight in January 1865 to get the House of Representatives to pass the Thirteenth Amendment. The film is about the amendment, not about habeas corpus.

Lincoln kept holding people without a judge, against the Chief Justice's ruling.

In the first months of the Civil War, President Abraham Lincoln suspended the writ of habeas corpus. A writ is a written order from a court. Habeas corpus is a person's right to be brought before a judge, who decides whether the government may go on holding that person. When it is suspended, the government can hold a person without taking them before a judge at all. The Constitution allows the writ to be suspended "in Cases of Rebellion or Invasion." It does not say who may suspend it.

Lincoln wrote to General Winfield Scott on April 25, 1861. Governor Hicks of Maryland had called the state's lawmakers to a special meeting, and they looked likely to vote to leave the United States. Lincoln told Scott to stop any effort to arm Maryland's people against the federal

government. He approved "the most prompt, and efficient means." Those means included "the bombardment of their cities" and, "in the extremest necessity," suspending the writ.

On April 27 he gave Scott the power to suspend it anywhere along the routes the army's troops used between Philadelphia and Washington. No federal official had suspended the writ since the War of 1812.

The arrest. At two in the morning on May 25, 1861, federal soldiers entered the country house of John Merryman, a planter, or owner of a large farm, in Baltimore County, and woke him from his bed. They took him to Fort McHenry. General George Cadwalader held him there. The charge was that Merryman was an officer in a company of men who supported secession and had federal weapons.

On May 26 Chief Justice Roger Taney, who also served as a judge in Maryland, ordered Cadwalader to bring Merryman to court. Cadwalader refused in a letter. He wrote that Lincoln had given officers the power to suspend the writ. A deputy marshal, an officer of the federal courts, carried Taney's next order to the gate of the fort, and a guard would not let him in.

On May 28, with a crowd gathered outside, Taney ruled in Baltimore that the president had no power to suspend the writ, under the Constitution or any law. He said Merryman must be freed at once. Taney issued no order to make that happen. He was 84 years old. He was also the judge who had written *Dred Scott*, so almost no one at the time saw him as neutral.

On July 4, 1861, Lincoln explained himself to Congress. He said the power to suspend the writ had "purposely been exercised but very sparingly." Then he asked, "are all the laws, but one, to go unexecuted, and the government itself go to pieces, lest that one be violated?" Unexecuted means not carried out, and lest means for fear that. He argued that the men who wrote the Constitution could not have meant that "the danger should run its course, until Congress could be called together."

Lincoln's officials went on arresting people and suspending the writ without a vote of Congress. On September 24, 1862, Lincoln suspended it across the whole country for anyone who resisted the draft, the law that made men serve in the army. In March 1863 the members of Congress passed a law that let the president suspend the writ for the rest of the war. With that law, members of Congress settled the dispute. No court settled it.

The amendment. Nearly four years after Merryman's arrest, Lincoln put his name on a change to the Constitution. On January 31, 1865, the members of the House passed that change, the Thirteenth Amendment, which ended slavery, by 119 votes to 56. Lincoln signed the resolution, the paper sending the amendment to the states, the next day, though a president does not have to sign an amendment. Enough states had ratified it, or approved it, by December 6, 1865.

Land for colleges, 1862

Senator Justin Morrill of Vermont put forward the bill that became the Morrill Act on July 2, 1862. Under it, each state received 30,000 acres of federal land for each of its senators and representatives in Congress. The land was to pay for colleges that taught "agriculture and the mechanic arts," meaning farming and the skills of building and machines. More than 10 million acres of the land given out under the act had been taken from Native nations by United States officials, through treaties, agreements and seizure.

Colleges paid for by these land gifts are called land-grant colleges. A second Morrill Act, in 1890, set a rule for each state. The state had to set up separate land-grant colleges for Black students, or show that its colleges did not turn students away because of race.

The Fourteenth and Fifteenth Amendments

Members of Congress approved the Fourteenth Amendment on June 13, 1866, and it became part of the Constitution on July 9, 1868. It states that "all persons born or naturalized in the United States" are citizens. Naturalized means made a citizen by a legal process. It also states that no state may "deny to any person within its jurisdiction the equal protection of the laws." Within its jurisdiction means inside the area where its laws apply. Equal protection means a state has to apply its laws the same way to everyone.

Who it left out. John Elk, a Native man who lived in Omaha, Nebraska, tried to register to vote in 1880. The registrar refused him because he was Native, and Elk sued. The justices ruled against him 7 to 2 in *Elk v. Wilkins* in 1884. They held that Native people born into their own nations were no more citizens by birth than the children of foreign diplomats, officials who represent other countries. Under a law of 1924, which Era 8 describes, American Indians became citizens.

Members of Congress passed the Fifteenth Amendment on February 26, 1869, and it was ratified on February 3, 1870. It states that the right of citizens to vote "shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude." Abridged means cut back. Previous condition of servitude means having once been enslaved. The amendment names race, color and past slavery. It says nothing about sex, so states could still keep women from voting.

New constitutions in the South

Reconstruction was the rebuilding of the Southern states' governments after the Civil War. Members of Congress passed laws for it called the Reconstruction Acts. Under those acts, a convention met in Charleston on January 14, 1868, to write a new constitution for South Carolina. Black men in South Carolina had voted for the first time in the election of its delegates. Three out of every five delegates were Black.

Article X of the constitution they wrote required a system of free public schools, "free and open to all the children and youths of the State, without regard to race or color." Schools were to be open at least six months a year. Once there were enough schools, children would have to attend for at least twenty-four months. For decades, state officials did not carry out Article X.

The Tweed Ring and Tammany Hall

In the 1860s and 1870s, William M. Tweed held several offices in New York City and New York State at once. He was a state senator from 1867 to 1871 and chaired the state Senate's finance committee. From 1868 he was the Grand Sachem, or head, of Tammany Hall. Tammany Hall was a political machine of the Democratic Party. A political machine is a party organization that wins votes by handing out jobs and favors. Through Tammany Hall, Tweed had great power in the Democratic Party.

How the ring stole. Tweed and the men around him, called the Tweed Ring, stole money from the city in several ways. They sent the city bills for more than the work cost. Through printing and supply companies they controlled, Tweed's men billed the city too much for supplies. They ran up the cost of public buildings far past their budgets.

A new county courthouse was expected to cost half a million dollars. It ended up costing the city's taxpayers about $13 million. Modern estimates of what the ring stole in all run from $30 million to $200 million, by the count of the reference guide EBSCO Research Starters.

How it ended. The cartoonist Thomas Nast attacked Tweed in the magazine *Harper's Weekly* from 1869. In July 1871 editors at *The New York Times* printed evidence from inside the city's accounts, after people who knew about the thefts passed it to the paper.

In late 1873 a court found Tweed guilty and sentenced him to twelve years in prison and a fine of $12,750. He appealed, which means he asked a higher court to look at the case again, and the higher court cut his sentence to one year. He died of pneumonia in the Ludlow Street jail on April 12, 1878.

Minor v. Happersett: citizens without the vote

In October 1872 Virginia Minor, a citizen of Missouri, tried to register to vote in St. Louis. The registrar, the official who signed up voters, was Reese Happersett. He refused her because she was not a "male citizen." Minor sued. She argued that the Fourteenth Amendment made voting a right of every citizen.

The justices of the Supreme Court ruled against her, and none of them disagreed. They decided the case in their session that began in October 1874. The Chief Justice read the ruling. It states that "the Constitution of the United States does not confer the right of suffrage upon any one." Suffrage means the right to vote. Under the ruling, each state could keep the vote for men only.

The first laws against immigrants by nationality

The Page Act of 1875 was the first federal law to limit immigration. It barred Chinese laborers brought over under contract. In practice, officials used it to keep out most Chinese women too.

On May 6, 1882, President Chester A. Arthur signed the Chinese Exclusion Act. Under it, no Chinese laborer could come into the country for ten years. This was the first federal law to shut out a whole group of people because of their nationality. Members of Congress later renewed the act and widened it, and they did not repeal it until 1943.

Federal officials also took over the work of admitting immigrants. Officials of New York State had run the landing station at Castle Garden from 1855 to 1890. In 1892 the federal station at Ellis Island opened.

The election of 1876 and the end of Reconstruction

The presidential election of 1876 was between Rutherford B. Hayes, a Republican, and Samuel J. Tilden, a Democrat. The electoral votes of Florida, Louisiana, South Carolina and Oregon were in dispute. On January 18, 1877, Senator George Edmunds of Vermont proposed an Electoral Commission to settle the count. It had fifteen members: five representatives, five senators and five Supreme Court justices. Members of Congress passed the bill.

The commission's members voted 8 to 7, along party lines, to give every disputed electoral vote to Hayes. Hayes became president. On April 24, 1877, on his orders, federal troops left the Louisiana state house. It was the last state house in the South that federal troops had guarded.

The Equal Justice Initiative, in its calendar *A History of Racial Injustice*, marks that withdrawal as the end of Reconstruction. Its calendar says the withdrawal opened the way for white supremacist rule to come back in the South with nothing to hold it back. White supremacy is the belief that white people should rule over everyone else.

Joseph Hayne Rainey

Who: A man born to enslaved parents, forced to work on Confederate defenses, who became the first Black member of the US House and the first to preside over it.

When and where: Georgetown, South Carolina, and Washington, D.C. Born June 21, 1832. Sworn in December 12, 1870. Died August 2, 1887.

Rainey became the first Black member of the House in 1870.

Joseph Hayne Rainey was the first African American to serve in the House of Representatives. He was born in Georgetown, South Carolina, to enslaved parents. His father, Edward L. Rainey, worked as a barber and used his earnings to buy the family's freedom in the early 1840s.

The Confederacy was the group of Southern states that broke away from the United States and fought it in the Civil War. During the war, the Confederate army forced Rainey to work on the defenses of Charleston. He also worked as a steward, a ship's servant, on a Confederate ship that slipped through the blockade, the line of United States warships that tried to keep ships out of Southern ports.

In 1862 he and his wife escaped to Bermuda. There he ran a barbershop and she ran a dress shop. They came home in 1866.

Rainey won election to a full term in Congress on October 19, 1870, with 63 percent of the vote. On November 8 he won a special election for the rest of the current term, with 86 percent. He was sworn in on December 12, 1870.

The Klan law. On April 1, 1871, he spoke for the Ku Klux Klan Act. The Ku Klux Klan was a vigilante group, people who act outside the law, that attacked Black Americans and their white allies in the South. Klansmen whipped men, women and children, and they burned Black schools and churches. In July 1870 Klansmen killed six people, among them a schoolteacher, at Cross Plains, Alabama. Members of Congress gathered testimony that Klansmen in Alabama alone committed more than 100 murders between 1868 and 1871.

Under the Ku Klux Klan Act, it became a federal crime to deny anyone the rights the Constitution protects. President Ulysses S. Grant signed it on April 20, 1871. Rainey said the Constitution owed "protection to the humblest citizen, without regard to rank."

Rainey also supported the Civil Rights Act of 1875. He pressed for equal schooling, and he said "mixed schools," schools for Black and white children together, would "annihilate" prejudice. Annihilate means wipe out.

On April 29, 1874, he led a meeting of the House from the Speaker's chair, the seat of the House's leader. He was the first African American to do so.

On January 25, 1877, Rainey spoke against the Electoral Commission. He warned it could lead to "the election of a President by one man rather than by a majority of the people of the United States." Members of Congress passed the bill anyway.

Rainey lost his seat in 1878, by 62 percent to 38, and left the House on March 3, 1879, after more than eight years. No Black member of Congress served longer than he had until the 1950s. He was the first of fourteen Black representatives who served during Reconstruction. After Reconstruction ended, the number of Black members of Congress fell to zero and stayed near zero for decades.

The Pendleton Act, 1883

Since Andrew Jackson's time, presidents had handed out government jobs to their supporters. Then Charles Guiteau, a man who had wanted a government job and had not gotten one, killed President James A. Garfield. Chester A. Arthur became president after Garfield. Arthur had come up through New York machine politics.

On January 16, 1883, Arthur signed the Pendleton Act. Under it, some federal jobs went to people who passed a competitive exam, not to people who had worked for the winning party. At first the exam rules covered only about 10 percent of the government's 132,000 workers. The other 90 percent were not covered.

Taking away the vote in Mississippi and Louisiana

The Fifteenth Amendment barred states from denying the vote because of race. In 1890 the delegates who wrote Mississippi's new constitution set out to stop Black men from voting without naming race. Senator J. Z. George led the convention. Its committee on voting included its one Black delegate, Isaiah Montgomery. The committee members agreed that their task was to take away Black men's votes.

The rules. The delegates added a poll tax, a tax of $2 a year that a man had to pay before he could vote. They required two years of living in the state and one in the county. A voter had to swear he had not committed certain crimes, crimes the committee believed Black men were more likely to commit.

State officials printed the ballots, and only a man who could read could use them. A man who could not read could be read a section of the constitution. If he could explain it, he could vote. The registrar alone decided whether he had explained it well enough. The delegates put the new constitution into effect themselves, without a vote of the people.

What the justices said. In 1898 the justices of the Supreme Court heard *Williams v. Mississippi*. Williams was a Black man found guilty of murder. Jurors in Mississippi were chosen from the lists of voters. He argued that the

voting rules in the 1890 constitution kept Black men off those lists, and so off his jury.

On April 25, 1898, the justices ruled against him, and no justice disagreed. Justice Joseph McKenna wrote that the rules "do not on their face discriminate between the races, and it has not been shown that their actual administration was evil." He went on: "only that evil was possible under them." McKenna meant that the rules did not name any race, and no one had proved that officials used them unfairly, only that they could.

How long they lasted. Mississippi's poll tax lasted until 1964 in federal elections and until 1966 in state elections. Its reading test lasted until the Voting Rights Act of 1965. Era 9 describes how each one ended.

Louisiana. Louisiana's delegates wrote a new constitution in 1898 and also put it into effect without a vote of the people. Their rules for voters were a poll tax of $1 a year, with receipts for two past years, a reading test given by parish registrars, a test of owning $300 in property, and a grandfather clause. The registrars were the officials who signed up voters in each parish, Louisiana's name for a county. The reading test had no fixed standard.

Under the grandfather clause, a man who failed the tests could still register if his father or grandfather had voted in 1867, a year when formerly enslaved men could not vote in Louisiana. Thomas Semmes chaired the convention's committee on the courts. He said: "We met here to establish the supremacy of the white race, and the white race constitutes the Democratic Party of this State."

The count. By the count of the Louisiana encyclopedia *64 Parishes*, 130,344 Black voters were registered in 1897. In 1898 there were 12,902. In 1900 there were 5,320, and in 1922 there were 598.

Plessy v. Ferguson, 1896

A Louisiana law required railroads to give Black and white passengers separate cars, or cars split by a partition. A person who broke the law could be fined $25 or jailed for 20 days. On May 18, 1896, the justices of the Supreme Court ruled 7 to 1 in *Plessy v. Ferguson* that the law was allowed.

Justice Henry Billings Brown wrote the ruling. He called it a "fallacy," a mistake in reasoning, to believe that "the enforced separation of the two races stamps the colored race with a badge of inferiority." A badge of inferiority means a mark that one group is lower than another.

Justice John Marshall Harlan was the only justice who dissented, or disagreed. He wrote: "Our constitution is color-blind, and neither knows nor tolerates classes among citizens."

Born here, a citizen: Wong Kim Ark, 1898

Wong Kim Ark was born in San Francisco in 1873 to parents who had come from China. In August 1895 he came home from a trip to China on the ship *Coptic*. Officials refused to let him land, under the Chinese exclusion laws. On October 2, 1895, a writ of habeas corpus was filed on his behalf.

The justices of the Supreme Court ruled 6 to 2 on March 28, 1898, that he was a citizen under the Fourteenth Amendment, because he was born in the United States, whatever his parents' nationality.

Cumming v. Richmond County, 1899

In June 1897 the members of the school board of Richmond County, Georgia, closed Ware High School, the county's high school for Black students. The board members said they could not afford a high school for 60 Black students while 300 Black children had no primary schooling. They kept paying for the high schools for white students.

J. W. Cumming, James S. Harper and John C. Ladeveze, Black taxpayers, sued. They asked the court to stop the board from spending public money on the white high schools until there was an equal school for their children. They also asked it to stop taxing them for schools their children could not attend.

The justices of the Supreme Court turned them down on December 18, 1899. The justices found no violation of the Fourteenth Amendment and treated the closing as a question of money, not of race.

Justice John Marshall Harlan wrote the ruling. Three years earlier he had been the one dissenter in *Plessy*. Here he wrote that "if it appeared that the board's refusal to maintain such a school was in fact an abuse of its discretion and in hostility to the colored population because of their race, different questions might have arisen." Discretion means the power to decide.

BY 1900

If you remember one thing: The three amendments of 1865 to 1870 made Black men citizens and voters, and by 1900 the delegates of the Southern states and the justices of the Supreme Court had taken most of that vote back.

In 1870: The Fifteenth Amendment barred every state from denying a man the vote because of race, and Joseph Rainey of South Carolina sat in the House.

In 1900: Louisiana had 5,320 Black voters on its rolls, down from 130,344 three years earlier, and the justices had allowed Mississippi's voting rules and Louisiana's separate railroad cars.

Next: Between 1913 and 1920, four amendments changed who paid, who chose the senators, who could drink and who could vote.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 23 MINUTES

Four amendments, changes to the Constitution, went in between 1913 and 1920. Under them, Congress could tax incomes, voters chose their senators, alcohol was banned, and no state could deny women the vote. A fifth amendment ended the ban on alcohol in 1933.

President Franklin Roosevelt was elected four times. The justices of the Supreme Court struck down parts of his New Deal, the set of laws he backed in the 1930s, and then he tried to add more justices to the Court. The justices ruled that a Virginia law was allowed, and under it doctors sterilized about 8,300 people, operating on them so that they could never have children. The justices also held that the Army's orders forcing people of Japanese descent from their homes during World War II were justified. About 122,000 people were forced into camps under those orders.

In big cities, the leaders of party organizations called political machines still traded jobs and favors for votes. One of them explained how, and this era opens with him.

George Washington Plunkitt

Who: A New York machine politician who explained to a reporter, from a shoeshine stand at the New York County Court House, how he made his money and kept his votes.

When and where: The Fifteenth Assembly District, New York City. His talks were printed in 1905. He died in 1924.

"I seen my opportunities and I took 'em."

George Washington Plunkitt was a district leader for Tammany Hall, the Democratic Party's political machine in New York City. A district leader was the party's boss in one part of the city. Plunkitt led Tammany's work in the Fifteenth Assembly District. He also served as a state senator and as a member of the state assembly, one of the two groups of lawmakers in New York State. He grew up poor. By the time he died in 1924, he was rich.

A newspaperman named William L. Riordon wrote down Plunkitt's talks and published them in 1905 as *Plunkitt of Tammany Hall*. The title page states that Plunkitt gave the talks "from His Rostrum." A rostrum is a speaker's stand, and his was the shoeshine stand at the New York County Court House. The book is not a word-for-word record. Riordon gathered and shaped what Plunkitt said.

Plunkitt split graft into two kinds. Graft is money a person gets by using a public office. Dishonest graft, he said, meant blackmailing gamblers and squeezing money out of illegal businesses. To blackmail people is to make them pay money by threatening to tell their secrets.

Honest graft meant learning where city officials planned to build something, buying the land first and then selling it to the city at a profit. "I ain't no looter," he said. "The looter hogs it. I never hogged." His

> summary of himself is cut into his gravestone: "I seen my opportunities and I took 'em."
>
> He also described the everyday work of a machine. When a building burned at night, Plunkitt and his captains, the party workers under him, came to the fire and found the families shelter and clothes on the spot. He knew employers across the city and got people jobs. His men found families in trouble before the charity groups did. He said he did it because those people remembered him on election day.

The food laws of 1906

President Theodore Roosevelt signed two laws on the same day, June 30, 1906. The Pure Food and Drug Act banned selling food, drink or drugs across state lines if they were mislabeled or made impure. Harvey Wiley and the officials of his Bureau of Chemistry enforced it. In 1930 that office was renamed the Food and Drug Administration. The Meat Inspection Act required federal inspectors in meatpacking plants, set rules for cleanliness and banned false labels. The laws followed Upton Sinclair's book *The Jungle*, published in February 1906, and years of work by Wiley's team.

Two amendments in 1913

The income tax. Members of Congress put a 2 percent tax on incomes over $4,000 into a tariff bill in 1894. A tariff is a tax on goods brought in from other countries. The Supreme Court's justices struck the income tax down, 5 to 4.

Members of Congress passed the Sixteenth Amendment on July 2, 1909. According to the National Archives, the conservatives who proposed it expected it never to be ratified. An amendment is ratified, or approved, when lawmakers or special meetings in three-quarters of the states have voted for it. The Sixteenth Amendment was ratified on February 3, 1913. Under it, Congress may tax incomes "without apportionment among the several States." That meant the money did not have to be divided among the states by population.

Senators chosen by voters. The Seventeenth Amendment was ratified on April 8, 1913, when Connecticut's lawmakers voted for it and completed the three-quarters needed. Before it, the lawmakers of each state chose that state's senators. After it, the voters chose them. Augustus Bacon of Georgia was the first senator elected by the voters under the new amendment, on July 15, 1913.

The grandfather clause struck down, 1915

Under a 1910 amendment to Oklahoma's constitution, Black men had to pass a reading test to vote, and white men were excused from it. The amendment excused anyone who could vote "on January 1st, 1866, or at any time prior thereto." It also excused any "lineal descendant" of such a person, meaning a child or grandchild. Almost no Black man could vote before 1866, so nearly all white men were excused and Black men had to take the test. A rule like this is called a grandfather clause, because it excused a man whose grandfather could vote.

Federal prosecutors, the government lawyers who bring criminal charges for the United States, charged two Oklahoma election officers, Frank Guinn and J. J. Beal, with keeping Black citizens from voting under this rule. The justices of the Supreme Court ruled against the 1866 clause in *Guinn v. United States* on June 21, 1915.

They held that it was void, meaning it had no force, because it broke the Fifteenth Amendment. That amendment bars the United States and every state from denying a citizen the vote "on account of race, color, or previous condition of servitude." Chief Justice Edward White wrote the opinion.

Prohibition and repeal

Members of Congress passed the Eighteenth Amendment on December 18, 1917, and lawmakers in the states ratified it on January 16, 1919. It banned "the manufacture, sale, or transportation of intoxicating liquors," meaning alcoholic drinks. The ban began one year after ratification, in January 1920.

Fourteen years later, members of Congress voted to end the ban. They passed the Twenty-first Amendment on February 20, 1933. Its first section reads: "The eighteenth article of amendment to the Constitution of the United States is hereby repealed." To repeal a law is to cancel it. Members of Congress sent this amendment to special conventions, meetings held in each state to decide on it, and not to the state lawmakers. It was ratified on December 5, 1933. No other amendment repeals another, and no other was sent to state conventions.

The Nineteenth Amendment, 1920

Members of the House passed the Nineteenth Amendment on May 21, 1919, and senators passed it on June 4, 1919. On August 18, 1920, Tennessee's lawmakers ratified it. Their vote made Tennessee the thirty-sixth state to ratify, which was enough. Secretary of State Bainbridge Colby certified it, or officially declared it part of the Constitution, on August 26, 1920.

Its words are: "The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex." Abridged means cut down. After it, no state could keep the vote for men only, as the justices had allowed in *Minor v. Happersett*.

BY 1920: Four amendments in seven years had given Congress the income tax, given voters the choice of their senators, banned alcohol, and barred every state from keeping the vote from women. The rules that kept Black men from voting in the South still stood, except the grandfather clause.

Quotas, and citizenship for Native people, 1921 and 1924

In 1921 members of Congress passed the Emergency Quota Act, the first law with a set limit on how many immigrants could come. A quota is a fixed share. Under the act, the yearly limit for each nationality was 3 percent of the people born in that country who were living in the United States in 1910.

In 1924 members of Congress passed the Immigration Act, which set a lower limit. It was 2 percent of the people born in each country who were living in the United States in 1890, as the census of that year counted them. A census is a count of all the people in the country. Under the 1924 act, fewer immigrants could come from Southern and Eastern Europe than before, and nearly all immigrants from Asia were barred. The total was capped at about 165,000 a year.

Citizens, but not voters. President Calvin Coolidge signed the Indian Citizenship Act on June 2, 1924. Under it, American Indians became citizens. Since 1884, under the justices' ruling in *Elk v. Wilkins*, Native people born into their own nations had not been citizens by birth. Even as citizens, they were not on the lists of voters in every state, because each state's lawmakers wrote their own rules about who could vote.

An Arizona law barred people "under guardianship" from voting. In 1928 the judges of the Arizona Supreme Court held that Native people on reservations were wards of the federal government, people under its guardianship. So, the judges held, the law kept them from voting. New Mexico's constitution shut out "Indians not taxed."

In 1948 judges in both states ended these bans. On July 15 the judges of the Arizona Supreme Court overturned their own 1928 ruling in *Harrison v. Laveen*. Justice Levi Udall wrote that ruling. In August a federal court in New Mexico ruled in *Trujillo v. Garley* that the "Indians not taxed" rule broke the Constitution. In Utah, Native people could not vote until 1957, later than in any other state.

The anti-lynching bill, 1922

Lynching is murder by a mob, carried out without any trial. Members of Congress introduced bills to make lynching a federal crime, one the national government could charge. George Henry White, then the only Black member of Congress, introduced one on January 20, 1900. Leonidas Dyer, a Republican representative from Missouri, introduced another on April 8, 1918. Members of the House passed Dyer's bill on January 26, 1922. Senators opposed to it blocked it in the Senate, and it never became law. No federal anti-lynching law passed in this era.

Teapot Dome

In the Teapot Dome case, a member of the president's cabinet leased Navy oil land to two oil men who gave him money. The cabinet is the group of officials who head the big government departments. Albert B. Fall was Secretary of the Interior under President Warren G. Harding. Fall persuaded Harding to move the Navy's oil reserves, land kept for the Navy's future oil, to the Interior Department, and the Secretary of the Navy carried out the transfer.

The leases and the money. Fall then leased, or rented out, the Teapot Dome reserve in Wyoming to Harry F. Sinclair's Mammoth Oil company. He leased the Elk Hills reserve in California to Edward Doheny's Pan-American Petroleum. Doheny gave Fall a $100,000 "loan" with no interest. Sinclair gave him about $300,000 in cash and government bonds, papers the government promises to pay back with interest.

The investigation. In October 1923 the senators on the Public Lands Committee opened an investigation. Senator Thomas J. Walsh of Montana led it for about two years, and he found Doheny's $100,000. In 1927 the justices of the Supreme Court ruled that the oil men had gotten the leases corruptly, meaning by dishonest deals.

On October 25, 1929, a jury found Fall guilty of taking a bribe from Doheny. A bribe is money given to an official in return for a favor. A judge sentenced Fall to one year in prison and a $100,000 fine. He was the first person found guilty of a crime he committed while serving in a president's cabinet.

Doheny was found not guilty of paying the same bribe. Sinclair went to jail for several months, for contempt of Congress, the crime of refusing to obey Congress or one of its committees, and for having the jury in his case followed.

School law: who decides, and who pays

Who decides where a child goes to school. Oregon's Compulsory Education Act of 1922 required parents to send children aged 8 to 16 to the public school in their district. Compulsory means required. The Society of the Sisters of the Holy Names of Jesus and Mary, which ran Catholic schools, sued Oregon's governor, Pierce, over the law. A second case was brought for Hill Military Academy.

The justices of the Supreme Court struck the law down in *Pierce v. Society of Sisters* on June 1, 1925. Justice James McReynolds wrote that it interfered with the liberty of parents to direct their children's education. He wrote: "The child is not the mere creature of the state." He meant that a child does not belong to the government, and that the people who raise a child have the right to guide the child's future.

Under that ruling, state lawmakers may require a child to be educated, but they may not require every child to attend a government school. Private schools and church schools are legal because of it. Homeschooling depends on the same ruling, but it became legal only later, state by state, in the 1980s and early 1990s.

Who decides what a teacher may teach. Tennessee's governor, Austin Peay, signed the Butler Act on March 21, 1925. It made it unlawful to teach in the state's public schools "any theory that denies the story of Divine Creation of man as taught in the Bible, and to teach instead that man has descended from a lower order of animals." That meant a teacher could not teach evolution, the scientific idea that living things, people included, developed over a very long time from earlier forms.

Civic leaders in Dayton, Tennessee, heard that the American Civil Liberties Union would pay for a court challenge to the law. They set up a test case, a trial arranged on purpose so that a court would rule on the law. They asked John T.

Scopes, a football coach and science teacher, whether biology could be taught without evolution. He said it could not, because the state's own approved textbook included it.

His trial opened in Dayton on July 10, 1925, before Judge John T. Raulston. On July 21 the jury found him guilty, and he was fined $100, the smallest fine the law allowed.

In January 1927 the judges of the Tennessee Supreme Court threw out his conviction. The state constitution required a jury, not a judge, to set any fine over $50, and Raulston had set the fine himself. So the judges never ruled on the Butler Act itself. It stayed in force until 1967.

Who pays. Between 1920 and 1950, more and more of the money for public schools came from the states, and less from local school districts. In the school year 1919-20, local money made up 83.2 percent of the money for public schools. By 1949-50 the local share had fallen to 57.3 percent. Nearly all the rest came from the state, and less than 3 percent from the federal government. Small districts were merged, and their number fell by almost a third between 1937-38 and 1949-50.

Ending segregated schools. Governor Earl Warren of California signed the Anderson Bill in June 1947. With it, California's lawmakers and governor became the first in the country to repeal their own state's law on segregated schools. Segregated schools kept children of different races apart.

Buck v. Bell, 1927

Virginia's lawmakers passed a law in 1924 that allowed state officials to sterilize people they judged "feeble-minded" and likely to have "socially inadequate offspring." Sterilization is an operation that makes a person unable ever to have children. "Feeble-minded" was a label officials put on people they judged to be slow to learn. Offspring means children. Aubrey Strode wrote the law and then defended it in court.

Carrie Buck was born on July 2, 1906, in Charlottesville. She was raised by foster parents, the Dobbs family. In 1923 she became pregnant. By her own account, as Encyclopedia Virginia reports it, Clarence Garland, the foster parents' nephew, raped her. Rape means forcing a person into sex. Her foster parents believed the pregnancy showed promiscuity, meaning sex with many partners, and so showed that she was "feebleminded." On January 23, 1924, they asked a court to have her committed to a state institution, meaning sent there to live by a court's order.

The ruling. Her case went to a trial court under Judge Bennett T. Gordon on November 18, 1924, then to Virginia's Supreme Court of Appeals on November 12, 1925, and then to the Supreme Court. On May 2, 1927, the justices ruled 8 to 1 that Virginia's law was allowed. Justice Oliver Wendell Holmes wrote the opinion. It includes the sentence "Three generations of imbeciles are enough." Imbecile was another insulting label for a person judged slow to learn. Justice Pierce Butler dissented, meaning he disagreed with the ruling, without writing an opinion.

The operation. She had been sent to the Virginia State Colony for Epileptics and Feebleminded, a state home for people who had seizures or were judged slow to learn. Dr. Albert Priddy ran it. He picked her for the operation, and on September 10, 1924, the colony's board approved it. Carrie Buck did not agree to it. Near the end of her life she said she "kicked against it," and she told the historian Paul Lombardo, "They done me wrong. They done us all wrong."

On October 19, 1927, Dr. John H. Bell performed the operation on Carrie Buck. It is called a salpingectomy. He cut her fallopian tubes, the tubes that carry eggs to the womb, so that she could never become pregnant again.

The 8,300. Between 1927 and 1972, doctors in Virginia sterilized about 8,300 people under the law. Encyclopedia Virginia names the two main operations: a vasectomy for men, which cuts the tubes that carry sperm, and a salpingectomy for women. It does not say which operation was done on each person. Virginia's lawmakers repealed the law in 1974. On May 2, 2002, Governor Mark Warner apologized for the state's program. No later group of justices has overruled *Buck v. Bell*, or cancelled it with a new ruling.

BY 1927: The justices had struck down the grandfather clause and allowed the sterilization law. Tennessee's teachers still could not teach evolution, and most of the money for schools was still local.

Franklin D. Roosevelt

Who: The president who lost key cases in the Supreme Court, tried to add justices to it, and was elected four times.

When and where: Washington, D.C., 1933 to 1945. His plan for the courts went to Congress on February 5, 1937.

After losing in the Supreme Court, Roosevelt tried to add up to six justices.

Franklin D. Roosevelt tried to change the size of the Supreme Court after its justices struck down one of his laws. On May 27, 1935, in *Schechter Poultry Corp. v. United States*, the justices struck down part of the National Industrial Recovery Act. That part let the president approve "codes of fair competition," which were rules for whole industries.

The justices held that members of Congress had given the president powers that Congress had no right to give away. They also held that the poultry business in the case was not trade between the states, so Congress could not make rules for it.

On February 5, 1937, Roosevelt sent Congress a plan to reorganize the federal courts. Under the plan, the president could name one new justice to the Supreme Court for each justice over the age of 70, up to six more. The Court could have grown from nine justices to fifteen.

On March 29, 1937, in *West Coast Hotel Co. v. Parrish*, the justices ruled that Washington State's minimum wage for women and minors was allowed. A minimum wage is the lowest pay the law allows, and minors are young people who are not yet adults. Soon after, they ruled that other New Deal laws were allowed too.

Did the plan change the justices' minds? Many people at the time believed it had. As the historian William Leuchtenburg describes it, they believed the justices, and Justice Owen Roberts above all, had "crossed over." The legal historians G. Edward White and Barry Cushman argue against that. Court papers show that Roberts had already voted for the Washington law at the justices' private meeting on December 19, 1936, weeks before Roosevelt sent his plan to Congress.

On June 14, 1937, the members of the Senate Judiciary Committee told the Senate to reject the plan. They called it "needless, futile, and utterly dangerous." On July 22, 1937, the senators rejected it, 70 to 20. According to the Federal Judicial Center, Roosevelt lost a great deal of political support for proposing it.

Four terms. The senators turned down his court plan, but the voters elected him twice more. George Washington had served two terms, and presidents after him had kept that custom. Roosevelt was elected four times, in 1932, 1936, 1940 and 1944.

An order on jobs. In his third term, Roosevelt barred discrimination in defense work and government jobs with an order of his own. He signed Executive Order 8802 on June 25, 1941. An executive order is a written order from the president to the officials under him.

The order states: "There shall be no discrimination in the employment of workers in defense industries and in Government, because of race, creed, color, or national origin." Discrimination means treating people worse because of who they are. A creed is a religion. With the order, Roosevelt created the Committee on Fair Employment Practice. After the war, members of Congress refused to make that committee permanent.

The camps. Eight months after the jobs order, Roosevelt signed a second one, Executive Order 9066, on February 19, 1942. It let the Secretary of War and military commanders mark off military areas and shut "any or all persons" out of them. Lieutenant General John L. DeWitt, commander of the Army's Western Defense Command, used it to force people of Japanese descent from their homes. He issued Public Proclamation No. 4, an official public order, on March 29, 1942.

Over six months, under his orders, about 122,000 men, women and children were forced into assembly centers, which were short-term holding places. From there they were forced into ten camps in remote parts of six western states and Arkansas. Nearly 70,000 of them were American citizens, by the count of the National Archives. None was charged with a crime, and none had any way to appeal.

The courts and the camps

A federal court in San Francisco found Fred Korematsu guilty of breaking the military's exclusion orders, the orders that shut people of Japanese descent out of the military areas. It gave him five years of probation, a time when a person found guilty lives under a court's watch instead of in prison. On December 18, 1944, in *Korematsu v. United States*, the justices of the Supreme Court let his conviction stand, 6 to 3. They held that forcing citizens out of their homes in wartime was justified.

On the same day, in *Ex parte Endo*, all the justices agreed that federal officials could not hold a citizen whom they admitted was loyal. According to the National Archives, that ruling "paved the way for the end of mass confinement."

In the 1980s federal judges threw out the convictions of Korematsu and others. Judge Marilyn Hall Patel vacated, or cancelled, Korematsu's conviction on November 10, 1983. In the Civil Liberties Act of 1988, members of Congress apologized for the imprisonment and voted to pay $20,000 to each person who had been held.

Poll taxes and the white primary

The poll tax. Under Georgia law, a voter owed a poll tax of $1 a year, and officials let no one vote who had not paid it. People under 21 or over 60, blind people, and women who did not register to vote did not have to pay. A poll tax kept anyone who could not pay it from voting. In 1890 the delegates who wrote Mississippi's constitution had added one as part of their plan to stop Black men from voting.

Nolan Breedlove sued Georgia's tax collector, T. Earl Suttles. All the justices of the Supreme Court ruled that the tax was allowed, in *Breedlove v. Suttles* on December 6, 1937. Justice Pierce Butler wrote that "the equal protection clause does not require absolute equality." The equal protection clause is the part of the Fourteenth Amendment that requires states to treat people equally under the law.

The white primary. In Texas, the Democratic Party was the only party that won elections, so its primary was the election that counted. A primary is the election in which a party chooses its candidates. On May 24, 1932, the leaders of the Texas Democratic Party voted that only "white citizens" could be members. The election judges of precinct 48 in Harris County refused Lonnie Smith, a Black voter, a ballot in the primary. A precinct is one small voting area. Smith sued one of those judges, a man named Allwright, and the others.

In *Smith v. Allwright*, decided on April 3, 1944, the justices held that the party's leaders were acting for the state when they ran the primary. Keeping Black voters out of it therefore broke the Fifteenth Amendment. Justice Stanley Reed wrote the opinion. Justice Owen Roberts dissented.

1948: the armed forces, refugees and conventions on television

On July 26, 1948, President Harry Truman signed Executive Order 9981. It states: "There shall be equality of treatment and opportunity for all persons in the armed forces without regard to race, color, religion or national origin." By about 1953 Black and white troops served together in nearly all the armed services.

The Displaced Persons Act of 1948 was the first American law for refugees, people forced from their home countries. It first allowed 200,000 Europeans who had lost their homes in the war to come to the United States. Members of Congress raised the number later. Between 1948 and 1952 about 350,000 to 400,000 people came in under it.

Both major parties held their national conventions in Philadelphia in 1948, and television networks broadcast them. A national convention is a large meeting of a party. Delegates, the people each state's party sends, choose the party's candidate for president there. They also write its platform, the list of positions it stands for. The National Constitution Center puts the television audience at as many as 10 million viewers on the East Coast.

On July 12, 1948, after a speech by Hubert Humphrey, the Democratic delegates added a civil rights plank to their platform. A plank is one position in a platform. Civil rights are the rights every citizen has to equal treatment under the law. Two Southern delegations walked out on live television.

On July 17, Southern delegates met in Birmingham, Alabama, and formed the States' Rights Democratic Party, called the Dixiecrats. They chose Strom Thurmond, the governor of South Carolina, as their candidate. Their platform stated, "We stand for the segregation of the races." Segregation means keeping people of different races apart. Thurmond won four states and 39 electoral votes.

BY 1950

If you remember one thing: In this era the justices allowed a state to sterilize people who had not agreed to it and allowed the Army to force 122,000 people into camps, and later officials apologized for both.

About 122,000 men, women and children of Japanese descent were forced into camps in 1942, nearly 70,000 of them American citizens, more than half. None was charged with a crime. In 1988 members of Congress apologized and voted to pay each person who had been held $20,000. Virginia's governor apologized for the sterilizations in 2002. No later justices have overruled *Buck v. Bell*.

Next: In 1954 the same Court ruled that segregated schools broke the Constitution, and the fight moved to how fast anything had to change.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 25 MINUTES

A senator with a brain tumor, unable to speak, pointed to his eye to vote "aye" on June 10, 1964, and the Senate cut off debate on a civil rights bill for the first time. That law banned segregation in public places. Under a second law, in 1965, officials in some states and counties had to ask federal officials before changing any voting rule. Between 1954 and 1977 the justices of the Supreme Court decided cases on schools, on how votes and voting districts were counted, and on how police question people they arrest.

Five amendments were added to the Constitution between 1951 and 1971. In 1974 President Richard Nixon resigned before members of the House could vote to impeach him. To impeach a president is to charge him formally with wrongdoing, which leads to a trial in the Senate. In 1998 the members of the House impeached President Bill Clinton, and the senators found him not guilty.

Five amendments, 1951 to 1971

Each of the five amendments added between 1951 and 1971 governs who holds office or who votes.

Since the Twenty-second Amendment was ratified on February 27, 1951, "No person shall be elected to the office of the President more than twice." Before it, Washington's two terms had been a custom, and Franklin Roosevelt had broken it. Members of Congress proposed the amendment in 1947, and Minnesota's lawmakers made it the thirty-sixth state to approve it.

The District of Columbia, the capital city, got electors in presidential elections through the Twenty-third Amendment, ratified on March 29, 1961. The District got no senators and no voting member of the House.

The Twenty-fourth Amendment, ratified on January 23, 1964, bans poll taxes only in elections for president, vice president, senator and representative. A state could still charge a poll tax in its own elections.

Then, on March 24, 1966, in *Harper v. Virginia State Board of Elections*, the justices of the Supreme Court struck down state poll taxes too. Virginia's constitution had set a poll tax of up to $1.50 a year. Justice William O. Douglas wrote that making "the affluence of the voter or payment of any fee an electoral standard" breaks the Equal Protection Clause. Affluence means wealth.

The Twenty-fifth Amendment was ratified on February 10, 1967. It states what happens when a president dies, resigns or is removed. It also sets out a way to fill an empty vice presidency: the president names someone, and the members of both houses of Congress vote to confirm, or approve, the choice.

Eighteen-year-olds got the vote under the Twenty-sixth Amendment. It was ratified on July 1, 1971, faster than any other amendment.

Brown v. Board of Education and all deliberate speed

On May 17, 1954, in *Brown v. Board of Education*, the justices of the Supreme Court held that segregated public schools broke the Constitution. The ruling did not state how or when to end segregation.

A year later, on May 31, 1955, they decided a second case, often called *Brown* II. Chief Justice Earl Warren wrote for a unanimous Court, meaning every justice agreed. The justices sent the cases back to federal district judges, the judges of the lowest federal courts. They told school boards to make "a prompt and reasonable start toward full compliance." Compliance means obeying the ruling.

They ordered the judges to admit the children who had sued to public schools "on a racially nondiscriminatory basis with all deliberate speed." A racially nondiscriminatory basis meant that no child could be turned away because of race. Deliberate means careful and unhurried, so under those words school boards could move slowly. The order set no date. School board members who moved slowly were not clearly breaking it.

Thurgood Marshall

Who: The lawyer who won 29 of the 32 cases he argued in the Supreme Court and later became its first Black justice.

When and where: Baltimore, New York and Washington, D.C. Born 1908. Died 1993.

The law school that turned him away had to admit Black students three years later.

Thurgood Marshall wanted to study law at the University of Maryland, and officials at the law school turned him away because he was Black. He went to Howard University's law school instead and graduated first in his class in 1933. One of his first cases, *Murray v. Pearson*, ended with Maryland's judges ordering that same law school to admit Black students. The Maryland Court of Appeals ruled in the case on January 15, 1936.

He went on to hold four jobs in the American legal system. From 1940 to 1961 he ran the Legal Defense and Educational Fund of the NAACP, a law office whose lawyers took civil rights cases to court. The NAACP is the National Association for the Advancement of Colored People. Colored was a word used then for Black people.

After that he was a federal appeals judge, then Solicitor General, the officer who argues the government's own cases in the Supreme Court, and then a justice of the Supreme Court. He was the first Black justice.

Before he became a justice, he argued 32 cases in the Supreme Court and won 29.

DISPUTED: When he argued them. The NAACP's own history puts all 32 in his years at the Fund. The *New York Times* put 18 of them in his years as Solicitor General, and the National Park Service counts 19 cases in that job, 14 of them won.

His NAACP cases included *Smith v. Allwright* in 1944, *Morgan v. Virginia* in 1946 on segregated buses between states, *Sweatt v. Painter* in 1950 on the University of Texas law school, and *Brown v. Board of Education* in 1954.

On October 5, 1961, President John F. Kennedy made Marshall a judge of the United States Court of Appeals for the Second Circuit, a court that hears appeals from trial courts. He did it by recess appointment, which means a president fills the seat while the Senate is away. A recess appointment ends unless the senators confirm it. Southern senators opposed Marshall, and the senators did not confirm him until September 11, 1962, eleven months later.

He left that court on August 23, 1965, to become Solicitor General of the United States. President Lyndon Johnson nominated him, or named him, to the Supreme Court on June 13, 1967. The senators confirmed him on August 30, 1967, and he took the oath as a justice on October 2. He stopped full-time work on the Court on October 1, 1991, and died on January 24, 1993.

After his death, Chief Justice William Rehnquist said most justices are remembered for their work on the Court. "Justice Marshall, however, is unique because his contributions to constitutional law before becoming a member of the Court were so significant."

Prayer and the Bible in public schools, 1962 and 1963

The members of the New York State Board of Regents, the officials who oversaw the state's schools, wrote a prayer for public school children to say each morning. It read: "Almighty God, we acknowledge our dependence upon Thee, and we beg Thy blessings upon us, our parents, our teachers and our Country." No child had to say it.

On June 25, 1962, in *Engel v. Vitale*, the justices of the Supreme Court held the prayer unconstitutional anyway, 6 to 1. Unconstitutional means against the Constitution. The justices ruled against the prayer because government officials had written it.

The prayer was short and a child could stay silent, and the justices held that neither fact changed the ruling. Justice Hugo Black wrote that the First Amendment's ban on establishing a religion, meaning setting up an official religion, "must at least mean that in this country it is no part of the business of government to compose official prayers for any group."

The justices decided two more cases together in *Abington School District v. Schempp* on June 17, 1963. In Pennsylvania's public schools, the school day opened with Bible readings. In the Baltimore city schools, children said the Lord's Prayer together. The justices struck down both. Justice Tom Clark wrote the opinion, and Justice Potter Stewart was the only one to dissent.

One person, one vote

Under Georgia's county unit system for statewide elections, the candidate who won a county got all of that county's unit votes. So a vote in a small rural county counted many times as much as a vote in a city. The justices struck the system down, 8 to 1, in *Gray v. Sanders* on March 18, 1963. Justice William O. Douglas wrote: "The conception of political equality from the Declaration of Independence, to Lincoln's Gettysburg Address, to the Fifteenth, Seventeenth, and Nineteenth Amendments can mean only one thing." He ended the sentence with the words "one person, one vote."

On June 15, 1964, in *Reynolds v. Sims*, the justices applied the same rule to the lawmaking bodies of the states. Alabama's lawmakers had not redrawn the lines of the state's legislative districts, the areas that elect the state's lawmakers, since 1901. They still used the 1900 census. By 1960, 25.1 percent of Alabamians could elect a majority of the state senate. In the worst case, one senate district had about 41 times as many people as another.

Chief Justice Earl Warren wrote the opinion. Under it, districts had to hold about equal numbers of people, and lawmakers in almost every state had to redraw their districts.

Lyndon B. Johnson

Who: A Senate leader who kept count of how each senator would vote, then a president who used the same skill on civil rights laws.
When and where: Texas and Washington, D.C., 1948 to 1969.

Johnson's 87-vote win in 1948 earned him the nickname "Landslide Lyndon."

Lyndon Johnson reached the Senate in 1948 by 87 votes, out of nearly a million cast. That was his final margin over Coke Stevenson in the Texas Democratic runoff, a second election between the top two candidates in the party's primary. A landslide is a win by a huge margin. For the rest of his life people called him "Landslide Lyndon."

Precinct 13. On the night of the runoff, Johnson seemed to have lost. Six days after the polls closed, an election judge named Luis Salas reported 202 more votes from Precinct 13 in Jim Wells County. Of them, 200 were for Johnson and 2 for Stevenson. He had changed the total on the tally sheet from 765 to 965. The added names were in alphabetical order, in the same ink and the same handwriting. Some of the people listed said they had not voted that day.

The members of the state party's executive committee voted 29 to 28 to declare Johnson the winner. A federal judge, T. Whitfield Davidson, blocked that result. Then Supreme Court Justice Hugo Black, acting alone, ruled for Johnson. He ruled aloud on September 28, 1948, and in writing the next day. Johnson's name went on the ballot.

In 1977 Salas told a reporter, James Mangan of the Associated Press, that the local political boss, George B. Parr, had ordered about 200 votes added. No court ever ruled that the votes were forged, and Johnson was never charged.

The vote counter. Johnson became his party's whip in the Senate in 1951. The whip counts votes and keeps party members in line. In 1953 he became its minority leader, the leader of the smaller party, and from 1955

to 1961 he was majority leader, the leader of the larger party. At 45, still in his first term, he was the youngest party leader the Senate had ever had.

The Senate's historians describe how he worked on other senators. He stood close to a senator's face and pulled "clippings, memos, statistics" out of his pockets. They list the tones he used: begging, accusing, coaxing, high spirits, scorn, tears, complaint and "the hint of threat."

In 1957 he pushed through the first civil rights law since Reconstruction, the years after the Civil War. He wanted it passed, but he feared a long filibuster would split his party. A filibuster is a way of blocking a bill by talking on and on so that no vote can happen. To get the bill through, he took out its main enforcement sections. Members of Congress passed it without them. According to the Senate's own history, very little changed because of it.

As president, Johnson signed the Civil Rights Act on July 2, 1964. On April 11, 1965, he signed the Elementary and Secondary Education Act, and he said, "no law I have signed or will ever sign means more to the future of America." On August 6, 1965, he signed the Voting Rights Act. It included the kind of enforcement tools that the 1957 law had been passed without. Federal examiners could register voters themselves, and some states had to ask federal officials before changing any voting rule.

How the civil rights laws passed

The filibuster. Southern senators led by Richard Russell of Georgia tried to block the Civil Rights Act of 1964 with a filibuster. They held the Senate floor, meaning they kept talking so that no vote could happen, for 60 working days, including seven Saturdays. On June 10, 1964, the senators voted 71 to 29 for cloture, the motion that ends debate. It was the first time senators had ever cut off debate on a civil rights bill.

Senator Clair Engle of California had a brain tumor and could not speak. He raised his weakened arm and pointed to his eye to vote aye, which means yes. The senators passed the bill 73 to 27 on June 19.

What the 1964 act says. The act has ten parts, called titles. Title II bans segregation in places that serve the public. Its words are: "All persons shall be entitled to the full and equal enjoyment of the goods, services, facilities, and privileges ... of any place of public accommodation ... without discrimination or segregation." Title VI bans discrimination in any program paid for with federal money.

Later, federal officials used Title VI to cut off money to school districts that stayed segregated. Title VII bans discrimination in jobs. In Title VII, members of Congress also created the Equal Employment Opportunity Commission.

What the 1965 act says. Section 4 of the Voting Rights Act of 1965 contains a formula for which places were covered. A state or county was covered if it had used a literacy test, a reading test for voters, or a similar device on November 1, 1964. It also had to have fewer than half of its voting-age people registered or voting in the 1964 presidential election. With the act, members of Congress outlawed literacy tests in the covered places.

Under Section 5, officials in every covered place had to get permission before changing any voting rule at all. The permission had to come from the Attorney General, the head of the Justice Department, or from a federal court in Washington. By the end of 1965, a quarter of a million new Black voters had been registered, one-third of them by federal examiners, according to the National Archives.

BY 1965: The justices had ruled that segregated schools, official school prayers and unequal voting districts all broke the Constitution. Members of Congress had passed the two civil rights laws, and federal examiners were registering Black voters in the South.

Federal money for schools, 1965

Johnson signed the Elementary and Secondary Education Act on April 11, 1965, outside the former Junction Elementary School near Stonewall, Texas. Elementary and secondary schools are the schools for children from first grade through high school. Junction Elementary was the one-room school where he had started at the age of four. His first teacher, Kate Deadrich Loney, sat beside him.

Under Title I of the act, federal officials send money to school districts according to how many children in them come from families with low incomes. The money comes with conditions the districts have to meet. In the 2015 budget year, about $14.3 billion went out under Title I, according to the National Center for Education Statistics in 2019.

Immigration law after 1965

Members of Congress passed the Immigration and Nationality Act in 1965. Under it, the national quotas set in the 1920s ended, and officials admitted immigrants on the basis of family ties and skills. The act also set the first cap on immigration from the Americas.

The Refugee Act of 1980 set out a permanent system for admitting refugees. The Immigration Reform and Control Act became law on November 6, 1986. Under it, about 2.7 million people who had lived in the country for years without permission got legal status, meaning the right to stay. The act also set penalties for employers who hired workers without permission to work.

Miranda v. Arizona, 1966

On March 13, 1963, police arrested Ernesto Miranda at his home in Phoenix, Arizona. They questioned him in a police interrogation room, a room for questioning suspects. After about two hours he signed a written confession. At his trial the officers admitted that no one had told him he could have a lawyer with him. An Arizona court found him guilty of kidnapping and rape.

The justices of the Supreme Court set a rule for police in *Miranda v. Arizona* on June 13, 1966. Chief Justice Earl Warren wrote the opinion. Before questioning a person in custody, meaning held by police and not free to leave, police must give four warnings. The person has the right to remain silent. Anything the person says can be used against them in court. The person has the right to a lawyer. If they cannot pay for one, a lawyer will be appointed, or provided free. If the person asks for those rights, the questioning must stop.

School law in the 1970s

The Amish fathers. Wisconsin law required children to attend school until age 16. Three fathers did not send their children to high school after the eighth grade. Jonas Yoder and Wallace Miller belonged to the Old Order Amish church, and Adin Yutzy to the Conservative Amish Mennonite church. Their children were Frieda Yoder and Barbara Miller, both 15, and Vernon Yutzy, 14. Each father was fined $5.

The justices of the Supreme Court held 6 to 1 in *Wisconsin v. Yoder*, on May 15, 1972, that Wisconsin officials could not make the fathers send their children to high school. Chief Justice Warren Burger wrote the opinion. The justices found that the families' way of life was a religious practice, lived every day and centuries old. They held that Wisconsin's officials had not shown that two more years of school mattered enough to override that practice, which the First Amendment protects.

Title IX. The Education Amendments of 1972 became law on June 23, 1972. Title IX of that law states: "No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance." That means a school or college that gets federal money may not treat a student worse because the student is a girl or a boy.

Is education a right? Texas schools were paid for partly with local property taxes. A property tax is a tax on the value of land and buildings. In the school year 1967-68, two school districts in San Antonio spent different amounts on each pupil. Edgewood, whose students were mostly Mexican American, spent $356 on each pupil. Alamo Heights spent $594.

In *San Antonio Independent School District v. Rodriguez*, on March 21, 1973, the justices decided 5 to 4 that education is not a fundamental right. A fundamental right is a right the Constitution itself protects. They found no right to education written in the Constitution or clearly implied by it. Justice Lewis Powell wrote the opinion.

Texas officials only had to show that their way of paying for schools was rational, meaning it had a sensible reason. Keeping schools under local control counted as a sensible reason. After 1973, people who sued over unequal school money had to go to state courts, under state constitutions.

Children with disabilities. President Gerald Ford signed the Education for All Handicapped Children Act on November 29, 1975. Handicapped is an older word for disabled. Under the act, every child with a disability had a right to a free, appropriate public education.

The Department of Education's history of the law states that in 1970, schools in the United States educated only one in five children with disabilities. It also states that members of Congress were concerned about "the more than 1 million children with disabilities excluded entirely from the education system."

The history also records that under the laws of many states, certain children were not allowed in school. Those laws applied to children who were deaf or blind. They also applied to children with an intellectual disability, a condition that makes learning and thinking much harder, and to children who were emotionally disturbed, meaning they had serious trouble controlling their feelings and behavior.

The paddle. In October 1970, James Ingraham was a student at Drew Junior High School in Dade County, Florida. Because he was slow to follow a teacher's instructions, he was held over a table in the principal's office and hit more than 20 times with a wooden paddle. School policy allowed one to five blows, called licks, on the buttocks with a flat wooden paddle less than two feet long, three to four inches wide and about half an inch thick.

The beating raised a hematoma, a pocket of blood under the skin. He needed a doctor, and he missed school for several days.

His family sued three school officials: the principal, Willie J. Wright, an assistant principal, Lemmie Deliford, and an assistant to the principal, Solomon Barnes. The Supreme Court's opinion does not say who held him or who struck him. Another student, Roosevelt Andrews, was paddled several times for small offenses. Once he was hit on the arms and lost the full use of an arm for a week. The opinion does not say who struck him either.

The justices decided *Ingraham v. Wright* 5 to 4 on April 19, 1977. They held that the Eighth Amendment's ban on "cruel and unusual punishments" does not cover school discipline. They wrote that it "was designed to protect those convicted of crimes."

They also held that school staff do not have to give a child a hearing, a chance to tell his side, before hitting him, because the child can sue afterward if the beating was too severe. The Constitution, as the justices read it, did not forbid paddling in schools. So paddling ended only in states where lawmakers voted to end it, one state at a time.

BY 1977: The justices had let Amish children leave school after eighth grade, had refused to call education a right, and had let school staff go on paddling. Members of Congress had opened schools to every child with a disability and barred schools that take federal money from treating girls worse than boys.

Congress and the president: war powers and Watergate

War powers. Members of Congress passed the War Powers Resolution in 1973, a law that limits how long a president may keep troops fighting without the approval of Congress. President Nixon vetoed it, meaning he rejected it, on October 24, 1973. On November 7, 1973, the representatives voted 284 to 135 and the senators voted 75 to 18 to override the veto, which made it law without his signature.

Under it, when a president sends troops into fighting without a declaration of war, he must report to Congress in writing within 48 hours. Within 60 days he must end the fighting unless members of Congress declare war, vote to approve it or give more time.

The break-in. Early on June 17, 1972, five men broke into the offices of the Democratic National Committee at the Watergate building in Washington, D.C. Police arrested them with cash and equipment for spying on the offices. Investigators later tied them to Nixon's re-election campaign. Officials in Nixon's White House at first denied any link. The break-in and the scandal that followed are called Watergate. A scandal is wrongdoing that becomes publicly known.

The tapes. On February 7, 1973, the senators voted to create a committee to investigate, led by Sam Ervin of North Carolina. A White House aide, Alexander Butterfield, told the committee that the president kept a tape recorder in rooms of the White House that switched on at the sound of a voice. In October 1973 Nixon ordered Attorney General Elliott Richardson to fire the special prosecutor, Archibald Cox, a lawyer named to investigate the case, who had demanded the tapes. Richardson and his deputy resigned in protest over Nixon's order.

In *United States v. Nixon*, decided on July 24, 1974, the justices of the Supreme Court ruled 8 to 0 that Nixon had to hand the tapes over to the prosecutor. Justice William Rehnquist took no part. Chief Justice Warren Burger wrote that the president's right to keep his talks private "must yield to the demonstrated, specific need for evidence in a pending criminal trial."

The charges and the resignation. In late July the members of the House Judiciary Committee approved three articles of impeachment, or formal charges. They approved obstruction of justice on July 27, abuse of power on July 29 and contempt of Congress on July 30. Obstruction of justice means trying to block an investigation. Abuse of power means using the powers of an office for wrong purposes.

On the morning of August 9, 1974, Nixon signed a one-sentence letter of resignation. He addressed it to the Secretary of State, because a law passed in 1792 states that a president's resignation is filed there. It took effect at 11:35 a.m., when Secretary of State Henry Kissinger initialed it, or wrote his initials on it. The members of the full House never voted on the articles.

Gerald Ford took the oath of office at noon. He said: "My fellow Americans, our long national nightmare is over." He went on to say that the Constitution worked. He also said: "I am acutely aware that you have not elected me as your President by your ballots."

Vice President Spiro Agnew had resigned in October 1973. Nixon had named Ford to replace him under the Twenty-fifth Amendment, and the members of both houses had confirmed him. As president, Ford named Nelson Rockefeller

as his vice president the same way. For about two and a half years, the country had a president and a vice president whom no voter had chosen for either office.

New kinds of schools, 1991 to 1996

In 1991 Minnesota's lawmakers passed the first state law allowing charter schools. Under it, a local school district could grant a group a charter, a written agreement, to run a school. The law's text calls them "outcome-based schools," and it allowed only eight in the whole state. State Senator Ember Reichgott Junge was its chief author. The first one, City Academy in St. Paul, opened in 1992.

Homeschooling became legal across the country state by state during the 1980s and early 1990s, through new laws and court rulings. Michigan was the last state, and it took two steps there, in 1993 and 1995.

On May 25, 1993, in *People v. DeJonge*, the justices of the Michigan Supreme Court struck down the state's rule that parents who taught their children at home must use certified teachers, meaning teachers licensed by the state. The ruling covered only families whose religious beliefs forbade certified teachers.

On the same day, in *People v. Bennett*, the same justices ruled that the rule still applied to a family with no religious objection. Michigan's lawmakers wrote a home-education exemption into the state's school attendance law in 1995. An exemption is a rule that lets some people off a requirement. It took effect on July 1, 1996.

An impeachment at the end of the century

The members of the House of Representatives impeached President Bill Clinton on December 19, 1998. They voted 228 to 206 to charge him with perjury, which means lying under oath, before a grand jury, a group of citizens who hear evidence in secret and decide whether someone should be charged with a crime. They voted 221 to 212 to charge him with obstruction of justice in the matter of Monica Lewinsky. They voted down two other charges.

The Constitution requires the votes of two-thirds of the senators, 67 votes, to find a president guilty and remove him. On February 12, 1999, the senators voted 45 guilty and 55 not guilty on the perjury charge. On the obstruction charge the vote was 50 to 50. Clinton stayed in office.

BY 2000

If you remember one thing: In this era members of Congress and the justices, between them, ended the poll taxes and literacy tests that officials in many Southern states used to keep Black Americans from voting, and a president resigned rather than face a vote on three charges.

Who counts the votes when the count itself is disputed? In 1948 a party committee and a single justice settled Lyndon Johnson's 87-vote win. The next era opens with that question in Florida in 2000, and the answer this time came from the Supreme Court.

Next: Since 2000, judges have ruled on recounts, on money in elections and on the shape of voting districts, and on January 6, 2021, a crowd attacked the Capitol while the electoral votes were being counted.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 21 MINUTES

Since 2000, judges have ruled on how votes are counted, how voting districts are drawn and whether corporations may spend money on elections. In 2000 the justices of the Supreme Court stopped a recount, a second count of the votes, in Florida during the presidential election. On January 6, 2021, while members of Congress counted the electoral votes, a crowd attacked the Capitol, the building where Congress meets. Judges also ruled on public money for religious schools and on how children are assigned to schools.

Bush v. Gore, 2000

The presidential election of 2000, between George W. Bush and Al Gore, came down to Florida. In Florida's official count, Bush led by 537 votes out of nearly 6 million. The justices of the Florida Supreme Court ordered recounts by hand of the ballots that counting machines had read as blank. They also ordered votes found in two counties' earlier recounts added to the official count.

The justices of the United States Supreme Court decided *Bush v. Gore* on December 12, 2000, in an unsigned opinion, one that no single justice signed as its author. Seven justices saw a problem under the Constitution. Different counties used different rules to decide what a ballot meant, so two identical ballots could be counted differently depending on where they were cast. Five justices voted to stop the recount instead of sending it back to be fixed, because there was no time left.

Justices John Paul Stevens, David Souter, Ruth Bader Ginsburg and Stephen Breyer dissented. The opinion states that the ruling was "limited to the present circumstances." The recount ended. Bush won Florida's 25 electoral votes and became president, with 271 electoral votes to Gore's 266. Gore had received more votes across the country than Bush.

Money and maps

Money. The justices decided *Citizens United v. Federal Election Commission* on January 21, 2010, 5 to 4. Citizens United, a nonprofit corporation, had made a film attacking Hillary Clinton. A nonprofit corporation is a group organized like a company that does not pay profits to owners. Its leaders wanted to advertise the film during a period before an election when federal law barred corporations from spending money on elections.

Justice Anthony Kennedy wrote for the majority that "the Government may not suppress political speech based on the speaker's corporate identity." Suppress means stop. That means government officials may not ban a group's political speech just because the group is a corporation. The justices overruled a 1990 decision, *Austin v. Michigan Chamber of Commerce*, and part of another, *McConnell v. Federal Election Commission*.

Maps. The justices decided *Rucho v. Common Cause*, also 5 to 4, on June 27, 2019. Gerrymandering is drawing the lines of voting districts so that one side wins more seats. Two maps were before the Court: North Carolina's map for Congress drawn by Republicans in 2016, and Maryland's drawn by Democrats in 2011.

Chief Justice John Roberts wrote that "partisan gerrymandering claims present political questions beyond the reach of the federal courts." Partisan means favoring one political party. Justice Elena Kagan wrote in dissent: "For the first time ever, this Court refuses to remedy a constitutional violation because it thinks the task beyond judicial capabilities." After 2019, a voter who believed a map was drawn to favor one party could not take that complaint to a federal court. Judges in state courts and members of Congress could still act on it.

Asking permission. Under Section 5 of the Voting Rights Act, officials in the places the act covered had to get federal permission before changing any voting rule. On June 25, 2013, in *Shelby County v. Holder*, the justices struck down the formula in Section 4(b) that set which places were covered. The ruling states that the formula "can no longer be used" to make a place ask permission. So the places it had covered no longer had to ask.

The justices left Section 5 itself in place and wrote that "Congress may draft another formula based on current conditions." As of September 2026, members of Congress had passed no new formula.

Schools and the courts

Tests and money. The No Child Left Behind Act is named for 2001, but it became law on January 8, 2002. Members of Congress wrote it as a new version of the Elementary and Secondary Education Act of 1965, and they kept that act's method: federal money for schools, with conditions attached. The Congressional Research Service, the office that does research for members of Congress, states that with No Child Left Behind, members of Congress began to focus on accountability for test results. Accountability here means judging schools by how their students scored on tests.

On December 10, 2015, members of Congress replaced it with the Every Student Succeeds Act. State officials still had to set standards, lists of what students should learn, and test students every year in reading, mathematics and science. Under the new law, state officials had more say over what to do about the results. In the 2023 budget year, federal spending on all the programs under the 1965 act came to $29.0 billion, according to a Congressional Research Service report of February 2024.

Public money for religious schools. Four times between 2002 and 2022, the justices of the Supreme Court ruled on public money for religious schools. On June 27, 2002, in *Zelman v. Simmons-Harris*, the justices ruled 5 to 4 that Ohio's scholarships for students in Cleveland were allowed. The scholarships paid up to $2,250 a year for families with low incomes, and up to $1,875 for other families.

According to the Court's 2002 opinion, 82 percent of the private schools taking part were religious, and 96 percent of the children using the scholarships went to a religious school. The justices held that such a program is allowed if it treats religion neutrally, favoring no religion and no lack of one. The money also had to reach a religious school only because a family chose that school.

In the next three rulings the justices went further. They held that when state officials pay for private schools or programs, they may not leave out religious ones. Missouri officials had refused a church preschool a grant, a gift of public money, for resurfacing its playground just because it was a church, though the grant was open to others. The justices ruled against them in *Trinity Lutheran Church of Columbia v. Comer* on June 26, 2017.

Three years later, five justices barred Montana officials from keeping scholarship money from religious schools, in *Espinoza v. Montana Department of Revenue*, decided 5 to 4 on June 30, 2020. Maine officials paid tuition, the cost of attending a school, for children from towns with no high school, but only at nonreligious schools. In *Carson v. Makin*, decided 6 to 3 on June 21, 2022, the justices held that Maine officials could not require that.

Race and school assignment. On June 28, 2007, in *Parents Involved in Community Schools v. Seattle School District No. 1*, the justices struck down two plans that used a child's race to decide which school the child attended. The vote was 5 to 4. Officials of Seattle's school district had used race to break ties, meaning to choose between students who ranked the same for a high school place. School officials in Jefferson County, Kentucky, had used it in placing children in elementary schools.

Chief Justice Roberts wrote: "The way to stop discrimination on the basis of race is to stop discriminating on the basis of race." Only four justices joined that sentence. Justice Kennedy cast the fifth vote and wrote separately. He wrote that school officials may still work toward a mix of students.

He listed ways to do it. Officials could choose where to build new schools, draw attendance zones and pay for special programs. They could also recruit students and teachers, and track enrollment and results by race. Attendance zones are the areas whose children go to each school. After 2007, school officials could still try to mix their schools, but they could not assign a single child to a school because of that child's race.

Counting the votes, January 6, 2021

Every four years, the members of the House and Senate meet together in the House chamber to count the electoral votes for president. The vice president presides, or runs the meeting. Tellers, the members chosen to count, open each state's certificate and read out its votes. A certificate is an official paper that states a fact, here the state's electoral votes. Until 2022, one member of the House and one senator together could object in writing to a state's votes. The members of the two houses then met separately, debated and voted.

Joe Biden won the 2020 election, with 306 electoral votes to Donald Trump's 232, by the count of the National Archives.

In some states, groups of Republicans signed papers stating that they were their state's electors, and they sent the papers to the Senate and the National Archives. Federal law requires each state's governor or other top official to sign a certificate naming the state's electors. No such official had signed one for these groups, so the papers were left out of the count, as a Congressional Research Service report of December 2024 states.

The attack. A crowd attacked the Capitol while the count was under way on January 6, 2021. The Government Accountability Office is a federal agency that checks the government's work. Its 2023 report states that over about seven hours, members of the crowd assaulted, or attacked, at least 174 police officers. Of them, 114 were from the United States Capitol Police and 60 from the police department of Washington, D.C.

The same office's 2022 reports record about $1.5 million in damage. They state that the plans Capitol Police officials made for the day "did not reflect the potential for extreme violence aimed at the Capitol." Those officials had information that protesters might be armed and were planning to target Congress.

That day, members of Congress took up two objections. According to the Congressional Research Service report, senators rejected the objection to Arizona's votes 93 to 6, and representatives rejected it 303 to 121. The

objection to Pennsylvania's votes failed 92 to 7 among senators and 282 to 138 among representatives. The members of Congress then finished the count and declared the result.

The new rules. Afterward, members of Congress changed the rules. The Electoral Count Reform and Presidential Transition Improvement Act became law on December 29, 2022. Under it, an objection must have the support of one-fifth of the members of each house, about 87 representatives and 20 senators. Only the state's executive, usually the governor, may certify the state's electors. Electors must be chosen under state laws passed before election day.

The President of the Senate is the vice president, and the act states: "The President of the Senate shall have no power to solely determine, accept, reject, or otherwise adjudicate or resolve disputes over the proper certificate of ascertainment of appointment of electors, the validity of electors, or the votes of electors." That means the vice president cannot decide alone which electors or which votes count.

The pardons. On January 20, 2025, the day he took office again, President Donald Trump signed Proclamation 10887, a formal order from the president. With it, he cut the prison sentences of fourteen named members of two groups, the Oath Keepers and the Proud Boys, to the time they had already served. Among them were Stewart Rhodes and Kelly Meggs.

A pardon is a president's order that forgives a federal crime, so the person is no longer punished for it. He gave "a full, complete and unconditional pardon" to everyone else found guilty of crimes connected with the events at the Capitol on January 6, 2021. He also ordered everyone still in prison for them released.

Donald Trump's two impeachment trials

Senators can remove a president from office only if two-thirds of them, 67 votes, find him guilty. Senators have never found a president guilty.

The members of the House impeached President Donald Trump on December 18, 2019, on two charges: abuse of power and obstruction of Congress, meaning blocking Congress's investigation. On February 5, 2020, the senators voted 48 guilty and 52 not guilty on the abuse of power charge, and 47 to 53 on the obstruction charge.

The members of the House impeached him a second time on January 13, 2021. The charge was incitement of insurrection, meaning stirring people up to rise against the government. On February 13, 2021, the senators voted 57 guilty and 43 not guilty, ten votes short of conviction. Seven Republican senators voted guilty: Richard Burr, Bill Cassidy, Susan Collins, Lisa Murkowski, Mitt Romney, Ben Sasse and Pat Toomey.

Wandrea ArShaye "Shaye" Moss

Who: A Fulton County election worker who was publicly and falsely accused of cheating in the 2020 count by a lawyer for the Trump campaign and by Rudolph Giuliani, and who told a committee of Congress under oath what followed.

When and where: Fulton County, Georgia, 2017 to 2022. Sworn testimony in Washington, D.C., June 21, 2022.

The object on the video was a ginger mint.

Shaye Moss worked in the Department of Registration and Elections in Fulton County, Georgia, from 2017 until 2022. She handled applications from voters and requests for absentee ballots, which are ballots mailed to voters who vote from home. She also helped count the votes. Her mother, Ruby Freeman, worked as a temporary election worker in the same county for the 2020 election.

On June 21, 2022, Moss testified under oath to the House committee that investigated January 6. She said: "I have always been told by my grandmother how important it is to vote and how people before me, a lot of people, older people in my family did not have that right."

Older voters were her favorite part of the job: "the older voters like to call, they like to talk to you, they like to get my card, they like to know that every election I am here." She once drove to a hospital to bring a woman her absentee ballot application.

The count. About five million Georgians voted in 2020. From November 11 to 19, 2020, election workers counted every ballot by hand, in 41,881 batches. In no county did the margin, the gap between the two candidates' totals, change by more than 0.73 percent. Secretary of State Brad Raffensperger certified the result on November 20, and Governor Brian Kemp certified it too. After a machine recount, requested on behalf of the Trump campaign, state officials certified the result again on December 7, 2020. Joe Biden won Georgia and its 16 electoral votes.

On December 3, 2020, a lawyer working for the Trump campaign played clips of a security video from the State Farm Arena at a hearing of the Georgia Senate. The lawyer said election workers there had pulled 18,000 hidden ballots from "suitcases of ballots under a table, under a tablecloth." The two women in the clips were Freeman and Moss.

The women's lawsuit, as the federal court described it in 2022, states what happened next. Georgia's state election officials and agents of the Georgia Bureau of Investigation watched the whole security tape, which ran for hours, and interviewed everyone who had been there. They found no evidence for any of the claims. Early on December 4, the state's Voting Implementation Manager posted that the video "Shows normal ballot processing." The containers held ballots that had been processed earlier that night, and no observer had been told to leave.

On December 10, 2020, Rudolph Giuliani, a lawyer for President Trump, told a hearing of the Georgia House that the two women were "quite obviously surreptitiously passing around USB ports as if they are vials of heroin or cocaine." Surreptitiously means secretly. USB ports are the sockets that computer memory sticks plug into. He said their homes and workplaces should have been searched. Moss later testified that the object her mother handed her in the video was "a ginger mint."

On January 2, 2021, Trump telephoned Raffensperger and named Ruby Freeman again and again. He called her "a vote scammer, a professional vote scammer and hustler." Raffensperger answered on the call that Giuliani "or his people, they sliced and diced that video and took it out of context."

What followed. Moss testified that Trump supporters sent her messages. She described them as "a lot of threats, wishing death upon me, telling me that, you know, I will be in jail with my mother, and saying things like, 'Be glad it's 2020 and not 1920.'" Many were racist, she said. The historian Tera W. Hunter wrote that the "1920" message, and messages telling the two women they should hang, pointed back to the history of lynching, murder by a mob without a trial.

Strangers went to her grandmother's house and pushed their way in. They said they had come to make a citizen's arrest, an arrest by someone who is not a police officer, and needed to find Moss and her mother. Agents of the FBI, the Federal Bureau of Investigation, a national police agency, advised Freeman to leave her home around the week of January 6, 2021, and she stayed away about two months. "I've lost my name," Freeman said, "and I've lost my reputation."

Moss said she stopped giving out her business cards and stopped going to the grocery store. Asked how many of the permanent election workers and supervisors in that video were still doing the job, Moss answered: "There is no permanent election worker or supervisor in that video that is still there." She had left too.

The lawsuit. In December 2021 Freeman and Moss sued Giuliani for defamation in federal court in Washington, D.C. Defamation is harming a person's good name with false statements. On August 30, 2023, Chief Judge Beryl Howell ruled against Giuliani on all their claims, as a penalty for refusing to hand over evidence. On December 15, 2023, a jury awarded the two women about $148 million, a figure reported by PBS. The judge later reduced the amount to about $146 million, according to NBC News.

On April 15, 2024, Judge Howell refused Giuliani's request to throw out or change the verdict, the jury's decision. In January 2025 a federal judge in New York, Lewis Liman, found Giuliani in contempt of court, the offense of disobeying a court's orders, for failing to give information about his property. A court filing showed that the judgment had been satisfied, meaning its terms had been met, on February 21, 2025.

In November 2025 President Trump pardoned Giuliani and others who had worked to overturn the 2020 result. A presidential pardon covers only federal crimes, and none of the people named had been charged with a federal crime over the 2020 election. A pardon does not cancel a civil judgment, a court's order in a lawsuit to pay money, such as the award to Freeman and Moss. That award had already been paid.

Who does not get a vote

In the 2020 census, Census Bureau workers counted about 690,000 people living in the District of Columbia, more than in Wyoming or Vermont. The voters of each of those states elect two senators and a voting representative. The District has no voting member of the House and no senators. It has three electors for president because of the Twenty-third Amendment.

The same census found about 3.3 million people in Puerto Rico, more than lived in 21 of the 50 states. Its residents are United States citizens. While they live there, they cannot vote for president. Their Resident Commissioner, their one member in the House, cannot vote on the House floor.

Just under 339,000 people lived in four smaller island areas: Guam, the United States Virgin Islands, American Samoa and the Northern Mariana Islands. None of the four has a voting member of Congress or electors for president. People born in American Samoa are nationals, who belong to the United States without being full citizens.

In all, about 4.3 million people lived in 2020 in places with no voting member of Congress. The Census Bureau states the rule itself: "The populations of the District of Columbia and Puerto Rico are excluded from the apportionment population because they do not have voting seats in Congress." The apportionment population is the count used to divide the seats in the House among the states.

Felony convictions. In 2024, about 4 million Americans could not vote because of a felony conviction, 1.7 percent of adults of voting age. A felony is a serious crime. The count is an estimate by the Sentencing Project, not a government count. In 2016 the number had been 5.9 million. Among Black Americans of voting age, 1 in 22, or 4.5 percent, could not vote for this reason. That was more than three times the rate for everyone else, 1.3 percent.

About 72 percent of the people counted were not in prison. They were on probation, which is supervision in place of prison, or on parole, which is early release from prison under supervision, or they had finished their sentences. State lawmakers and state constitutions set these rules. Under the laws of Maine and Vermont, people in prison can vote.

A senator convicted, 2024

On September 22, 2023, federal prosecutors in Manhattan charged Senator Bob Menendez of New Jersey, his wife, Nadine Menendez, and others with bribery. According to news reports of the case in 2023, agents had found $480,000 in cash and more than $100,000 in gold bars in the Menendez home. On July 16, 2024, a jury found him guilty on all counts, or charges, including acting as a foreign agent of Egypt, meaning acting on behalf of Egypt's government.

He resigned from the Senate in August 2024. On January 29, 2025, a judge sentenced him to 11 years in prison. He reported to prison in June 2025.

Immigration law after 2001

In the Homeland Security Act of 2002, members of Congress created the Department of Homeland Security. Its officials began work in 2003. Under the act, the old Immigration and Naturalization Service was split into three agencies: U.S. Citizenship and Immigration Services (USCIS), Immigration and Customs Enforcement (ICE) and Customs and Border Protection (CBP).

On June 15, 2012, officials of the Department of Homeland Security began a policy called Deferred Action for Childhood Arrivals, or DACA. Under it, certain people brought to the country as children could get protection from being deported, or sent out of the country, and permission to work. Lawsuits over DACA went on for years.

BY TODAY

If you remember one thing: Since 2000 the fights over the rules have been about counting: who counts the votes, whose money counts, and who gets no vote to count.

- 2000: Five justices stopped the Florida recount, and George W. Bush became president with fewer votes across the country than Al Gore.
- 2021: A crowd attacked the Capitol during the electoral count, and members of Congress then finished the count and declared the result.
- 2020: About 4.3 million people lived in places with no voting member of Congress, and in 2024 about 4 million adults could not vote because of a felony conviction.

Next: The chapter closing is below. Chapter 21, Crime, Police, and Justice, follows.

THE THREE QUESTIONS, ANSWERED

1. **Who decided who could vote, and how did the answer change?** Each colony's and then each state's lawmakers decided, and the men who wrote the Constitution left it that way. Virginia's lawmakers took the vote from free Black men in 1723, New Jersey's lawmakers took it from women and free Black men in 1807, and Southern delegates took it from Black men again after 1890. Members of Congress took most of that power from the states with four amendments (1870, 1920, 1964, 1971), which state lawmakers approved, and with the Voting Rights Act of 1965.
2. **When did judges first cancel a law, and what have they done with that power since?** In 1803, in *Marbury v. Madison*. The justices have used it to allow forced sterilization, separate railroad cars and the wartime camps, and to strike down school segregation, official prayers, poll taxes and unequal districts.

3. **What happens when people in power break the law?** A jury, a court or the Senate decides. In 1614 royal judges found Juan de Oñate, a former governor of New Mexico, guilty of 12 charges and ordered him out of New Mexico for life. A jury found a cabinet secretary guilty of taking a bribe in 1929, and a judge sentenced him to a year in prison. A president resigned in 1974 rather than face a vote. Bill Clinton and Donald Trump were impeached, Trump twice, and the senators found neither guilty. A jury found a senator guilty of bribery in 2024, and he went to prison.

What changed: The rules began as whatever the lawmakers of each colony chose. Over ten eras they became a written plan that judges enforce, and the vote, which began with men who owned property, reached women in 1920 and eighteen-year-olds in 1971.

FIVE DATES TO KEEP

1619: Twenty-two elected burgesses met at Jamestown, the first elected assembly in English North America.

1803: The justices of the Supreme Court first cancelled a law passed by Congress.

1870: The Fifteenth Amendment barred every state from denying a man the vote because of race.

1920: The Nineteenth Amendment barred every state from denying a woman the vote.

1974: Richard Nixon resigned the presidency rather than face a House vote on three charges.

NOT KNOWN: Whether the feet of the Acoma men were cut off in 1599: the sentence is in the written record, the Acoma account says it was done, and two historians doubt it.

Where to go: Independence Hall in Philadelphia, where the delegates signed the Constitution on September 17, 1787, is open to visitors as part of a national park.

Next: Chapter 21, Crime, Police, and Justice. It asks who enforced these laws, and what happened to the people they caught.

Chapter 21: Crime, Police, and Justice

CHAPTER 21 OF 37 · CRIME, POLICE, AND JUSTICE · 10 ERAS · ABOUT 140 MINUTES

Americans stopped whipping and branding people in public and started locking them in prisons, and from the first colonial courts on, whether a person got a fair trial depended on who that person was.

Clarence Earl Gideon sat in the Florida state prison at Raiford in 1961, with a five-year sentence for a break-in at a pool hall. He was 50 and had no money for a lawyer. Florida gave free lawyers only to people who could be sentenced to death, so the judge had refused him one. Gideon wrote to the US Supreme Court in pencil. In 1963 all nine justices agreed that a state must give a lawyer to a poor person charged with a serious crime. At his second trial, the jury found him not guilty after an hour.

This chapter follows crime and punishment in order, from the clan laws of the Cherokee to the police killings and trials of the 2020s. In the 1600s judges had people whipped, branded and hanged in front of their neighbors. By 2009 about 1.6 million people were locked inside American prisons. The people who kept order changed too: settlers took turns on a night watch, then cities hired police, then the national government hired agents. Thousands of people got no trial at all. Mobs burned, hanged and shot them, and for most of those killings nobody was ever punished.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. How did punishment move from the whipping post to the prison cell?
2. Who kept order before there were police?

3. What happened to the people in mobs who killed without a trial?

Five minutes? Read "From street work to the cell, Philadelphia" in 1750 to 1800, then "Francis McIntosh, St. Louis, 1836" in 1800 to 1850.

Can skip: "Counterfeiting was a hanging crime", "A cabinet member convicted, 1929", "Leaders in court", "Whose courts: McGirt, 2020". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 4 MINUTES

When one person killed another, the families of the two people settled it between them, and a life was owed for a life. No nation north of Mexico kept its laws in writing. Among the Cherokee, the dead person's clan had the duty to take a life from the killer's side. In accounts of other nations, the killer's relatives had the duty to give up a life in exchange. Some families took a payment instead: furs, other goods, or wampum, strings or belts of beads made from shells.

KNOWN:	The rules, which the nations remembered and later wrote down. Some come from the nations' own spoken traditions, and some from accounts by Native and European writers after about 1600.
NOT KNOWN:	The name of any person tried or punished before 1500. No written record names one.

The Cherokee law of blood

Among the Cherokee, a killing was settled between two clans. A clan is a large family group. The Cherokee had seven clans, among them the Wolf, the Deer and the Paint, and a child belonged to the mother's clan.

What the nation's newspaper said. The editors of the *Cherokee Phoenix*, the Cherokee Nation's own newspaper, printed an article on the old rules in 1829. The article states that the Cherokee "as a nation, had nothing to do with murder." The nation's leaders did not punish a killing. The clans did. The clan of the dead person had the duty to take revenge by killing the killer.

If the killer ran away, his brother or his nearest relative "was liable to suffer in his stead," in the article's words. The clan could kill the brother or the relative in the killer's place. Every killing counted as murder, so a person who killed someone by accident could be killed in return. A man who killed his own brother answered to no law and no clan.

The same article states that about twenty years before 1829, the Cherokee clans met in a council, a large meeting to decide the nation's business, and ended these rules. The Cherokee Nation dates that council to 1810. From then on, murder was a crime against the Cherokee government.

Words of comfort instead of revenge

The Haudenosaunee are five nations in what is now New York: the Mohawk, Oneida, Onondaga, Cayuga and Seneca. Their own tradition says the five nations were once caught in feuds, long runs of killings in which each side took revenge for the last death.

In that tradition, a man named Hiawatha, whose daughters had been murdered, strung shells into wampum. He used the strings to speak words of comfort instead of words of revenge. These words of condolence, comfort for people in grief, became central to the Great Law of Peace, and the five nations joined together under it.

The Haudenosaunee told the Great Law aloud for generations. Two written versions existed by 1910 at Six Nations of the Grand River, a Haudenosaunee community in Ontario. Seth Newhouse, a Mohawk, wrote one, and the chiefs of that community wrote the other. Arthur C. Parker printed them in English in 1916, for the New York State Museum.

What the written law did to a murderer. In that version, a chief who committed murder lost his title, and the other chiefs removed him. A war chief then ordered him to leave the land of the five nations and never come back.

An outsider adopted into one of the nations got a warning from a war chief for a first wrong. After a second wrong, the written law says, the person was to be sent out of the land of the five nations for good.

Forgiveness at the Green Corn

Once a year, the people of each Muscogee town forgave every crime except murder. The Muscogee, also called the Creek, and other nations of the Southeast did this at the Green Corn Ceremony, held each midsummer when the first corn ripened. Its Muscogee name, the busk, comes from their word for "to fast." People fasted, and they lit the sacred fire again in the town square.

The trader James Adair wrote about the ceremony in the middle 1700s. So did the naturalist William Bartram, who studied plants and animals, and Benjamin Hawkins, a government agent, an official sent to deal with a Native nation. The most detailed descriptions were written in the late 1800s and early 1900s.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 4 MINUTES

The only European courts in this land sat at a few Spanish outposts, and there the same officials governed the settlers, commanded the soldiers and judged the cases. Spanish settlers founded St. Augustine, in Florida, in 1565. Juan de Oñate led a Spanish colony into New Mexico in 1598. Everywhere else, the Native nations kept their own laws. The two men who led those colonies, Pedro Menéndez de Avilés and Oñate, each decided what happened to hundreds of prisoners.

In a Spanish town, an official called an alcalde acted as the judge. His power covered smaller crimes and quarrels, but in practice he heard most of the cases in his area. A person who lost could appeal, asking a higher judge or the governor himself to change the decision.

Killed without a trial, 1565

The Spanish commander Pedro Menéndez de Avilés had French Protestants killed after they surrendered to him, in September and October of 1565. Protestants are Christians outside the Catholic Church. The men had no trial.

The count. The National Park Service's handbook for Fort Matanzas lists 111 men killed the first time and 134 the second, about 245 in all, with 16 spared each time. Chuck Meide, speaking on the PBS program *Secrets of the Dead*, gives wider ranges for the two killings, from 110 to 200 and from 70 to 150.

The Acoma trial, 1599

Juan de Oñate, the leader of the Spanish colony in New Mexico, put about 500 Acoma people on trial in February 1599. He had ordered the attack on their town a month before, and he sat as their judge.

The trial followed a fight at Acoma Pueblo, the Acoma people's town. Spanish soldiers under Juan de Zaldívar came to Acoma in December 1598 and demanded food. Acoma people killed Zaldívar and eleven or twelve of his soldiers. The Acoma people's own account says the soldiers had also raped an Acoma woman, which means they forced her into sex.

Oñate opened an inquiry on December 28, an official hearing to find out what had happened. He asked the Franciscan friars with the colony, Catholic religious brothers, whether a war on Acoma would be just, meaning right and fair. They said yes. In January 1599 Oñate sent Juan de Zaldívar's brother, Vicente de Zaldívar, with about 70 soldiers against Acoma. His soldiers broke into the town, killed Acoma men, women and children, and burned it.

The count of the dead. The counts differ. New Mexico's state historian gives about 600. The Pueblo leaders of the All Pueblo Council of Governors give 800, and a National Park Service page gives about 1,500.

The trial of the captives began on February 9, 1599, and lasted three days. Oñate named a defender for the prisoners, and the defender asked for mercy. Acoma witnesses said many of their people had been working in their fields

during the first fight. They said that "some wanted to surrender but some refused, and so they fought."

The sentences. Oñate gave his sentence on February 12. He sentenced no one to death. Every man over 25 was to have one foot cut off and to be made a slave for twenty years, forced to work for Spanish colonists with no pay and no right to leave. Boys and young men from 12 to 25, and women and girls over 12, were also to be made slaves for twenty years.

Oñate sentenced the old people to be handed over as slaves to the Plains Apache. Two Hopi men, from a different people, had been captured in the fighting. Oñate sentenced each of them to have his right hand cut off and to be sent home to carry word of the punishment to his own people.

The children. Oñate declared the Acoma children under 12 innocent. He still ordered them taken from their families and handed to the friars. A National Park Service page states that about 70 girls were sent to convents in Mexico, houses where nuns live, and that in all probability none of them ever came home. The PBS program *POV* states that some scholars believe the children were later sold as slaves. The Pueblo leaders of the All Pueblo Council of Governors give the number of children taken as 60.

The feet. The Spanish record states the order, the ages of the prisoners, the twenty-year terms and the taking of the children, and on those points the accounts agree. It states Oñate's order to cut off a foot. It does not say how the cutting was to be done, or whether it was done to each man.

The Acoma people's own history says that 24 men had a foot cut off, and reporters for the Associated Press and NPR give the same number. The historian Marc Simmons first wrote that the feet were cut off, and he later came to doubt it. The historian John L. Kessell doubts it too. He wrote that "the historical record makes no mention of a one-footed Acoma slave."

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 16 MINUTES

Judges in the English colonies punished crime on the body and in public. They ordered whippings, brandings and cut-off ears, and they sent people to sit in the stocks where their neighbors could see them. Ordinary settlers in Massachusetts Bay took turns walking a watch to keep order at night. A jail held people waiting for a trial or a punishment, people who had done small wrongs, and people who owed money. Locking people in a prison for years as the punishment itself did not begin until the 1790s.

Colonial judges in Massachusetts Bay and Plymouth also tried Native people who lived near the colonists. Virginia's lawmakers passed a law in 1669 under which a master who beat an enslaved person to death, after the person resisted him, was not charged with a crime. Judges in Massachusetts had 19 people hanged for witchcraft in 1692.

Jamestown under martial law, 1610 to 1619

The leaders of the Jamestown colony in Virginia ruled it under martial law, rule by army officers instead of by ordinary courts, from 1610 to 1619. Jamestown stood in Tsenacomoco, the land of the Powhatan people.

Two of the colony's leaders issued the first orders in May and June of 1610, and Sir Thomas Dale added military rules on June 22, 1611. William Strachey printed the whole set in 1612 as the *Lawes Divine, Morall and Martiall*. Rule under these laws ended when Sir George Yeardley arrived in Virginia on April 18, 1619.

The death crimes. The historian Brent Tarter lists the punishments in the *Encyclopedia Virginia*. The punishment was death for murder, for robbery and for blasphemy, insulting God. It was also death to speak treason, words against the king's rule, to speak against the company that ran the colony, or to trade with Indians without permission.

The printed laws of 1612 also specify death for any man who would "ravish or force any woman, maid or Indian," which means rape. They specify death for "the horrible, and detestable sins of Sodomie" too, and they do not say which

acts that word covered.

The whipping crimes. The punishment was a whipping for gambling, for missing church, for sex between two unmarried people, for killing farm animals without need, and for stealing crops or farm tools.

The sources disagree about adultery, sex between a married person and someone outside the marriage. The printed laws themselves specify death for it, and Tarter lists it among the whipping crimes.

What George Percy wrote. The colonist George Percy wrote an account of the colony's early years in 1625. He wrote about the building of a fort at Henricus in 1611, and about colonists there who ran away to live with the Native people nearby. When they were caught, Dale had them put to death: "Some he apointed to be hanged some burned some to be broken upon wheles others to be Staked and some to be shott to deathe." Percy wrote that Dale did these things "To terrefy the reste," meaning to frighten the other colonists.

Breaking on the wheel was a way of putting a person to death in Europe. The executioner broke the person's arms and legs with a heavy bar or club and tied the body to a large wooden wheel. Percy does not describe how it was done at Jamestown, and he does not explain what "Staked" meant.

Percy also wrote that Dale had men who robbed the colony's storehouse tied to trees and left there until they starved to death. Percy wrote his account partly to defend his own record in Virginia.

Oñate convicted, 1614

Juan de Oñate was the leader who had sentenced the Acoma people in 1599. Spanish officials later put him on trial in Mexico City for what he had done in New Mexico. They charged him with 30 crimes in 1612 or 1613. They found him guilty of 12 in 1614. Among them were using too much force against the Acoma and hanging two Indians without cause.

The officials banished Oñate from New Mexico for life, ordering him to leave and never return. They also barred him from Mexico City for four or five years and fined him 6,000 ducats, which were Spanish coins. Whether he was later pardoned, officially forgiven and freed from the punishment, is not settled. No record shows that any Acoma person was asked to testify.

The watch and the whipping post in Massachusetts

The court records of the Massachusetts Bay Colony from the early 1630s show who kept order and how the colony's judges punished people. The colonists had settled among the Massachusett people and the Pawtucket, who belonged to a larger group of nations led by Massachusett sachems, or leaders.

From the colony's first year, its judges tried Native people who lived near the colonists. They fined the Massachusett sachem Chickatabut one beaver skin in 1631 for shooting a pig that belonged to Sir Richard Saltonstall. Governor John Winthrop wrote in his journal that Chickatabut paid it right away.

The watch. The settlers themselves kept watch at night. On April 12, 1631, the judges ordered a watch of four men every night at Dorchester and four more at Watertown, "to begin att sunsett." Anyone who fired a gun after the watch was set had to pay a fine of 40 shillings, which was English money, or be whipped. In July the judges ordered a watch of six men and an officer every night at Boston.

The watchmen were settlers taking turns, and some of them did not take their turn. The judges fined Daniel Abbott "for refuseing to watch" and Richard Norman for "negligence in watching."

The whipping post. Whipping meant being struck on the bare back with a whip, often at a post in a public place. Bartholomew Hill got a whipping for stealing a loaf of bread from John Hoskins, and John Baker got one for shooting at birds on the Sabbath, the day of rest and worship.

John Goulworth confessed to a felony, a serious crime, and the judges had him whipped and then set in the stocks. The stocks were a wooden board with holes that locked a person's ankles while the person sat in a public place. For helping in a crime, John Boggust and John Pickryn had to sit in the stocks at Salem for four hours.

The pillory was a wooden frame on a post, set on a platform in a public place. It locked a person's neck and wrists while the person stood. Britannica's account for students states that it was meant to expose people to "public scorn and ridicule," and to cause "bodily discomfort," meaning the body ached from standing locked in place.

The bilboes were iron rings locked around the ankles and joined to a bar, so the person could not walk away. Edward Seale, punished for drunkenness, sat in the bilboes until the court day ended, "& then to bee severely whiped."

The branding iron. Richard Hopkins sold guns, powder and shot to Indians. The court sentenced him in September 1632 to be whipped and "branded with a hott iron on one of his cheekes." Branding meant pressing a red-hot iron into the skin. It burned a mark into the flesh that stayed for life. Robert Scarlett, "a knowen theife," got a whipping in 1635 and the letter T, for thief, branded on his forehead. Then his master, Benjamin Felton, had to send him out of the colony.

Officers of the colony also cut off ears. Three Quakers, members of a Christian group also called the Society of Friends, were held in the Boston prison in September 1658: Christopher Holder, John Copeland and John Rous. Their sentence stated that each man's right ear was to be "cut off by the Hangman."

On September 16 the deputy of the marshal, the colony's officer who carried out the court's orders, came to the prison with a group of men and shut the door. They cut off the right ear of each of the three men. George Bishop, a Quaker, recorded it in his book *New England Judged* in 1661.

NOT KNOWN: How many strokes any of these whippings had, which of the deputy's men cut off the Quakers' ears, and with what tool.

Philip Ratcliffe

Who: A servant whose ears were cut off for speaking against the Massachusetts government and the church at Salem.

When and where: Boston, June 1631.

Whipped, ears cut off, fined 40 pounds and banished, for words.

The judges of the Massachusetts Bay court at Boston sentenced Philip Ratcliffe on June 14, 1631. Their order states that he "shalbe whipped, haue his eares cutt of, fyned 40£, & banished." In today's spelling, he was to be whipped, have his ears cut off, pay a fine of 40 pounds, and leave the colony for good. Governor John Winthrop's journal calls him a servant of a Mr. Cradock.

His crime was "vttering mallitious & scandulous speeches against the govmt & the church of Salem." He had said hateful and shameful things about the colony's government and about the church at Salem. The record says what he said was "proved vpon oath," which means people swore in court that he said it.

Winthrop wrote in his journal that the sentence "was presently executed," which in his day meant it was carried out right away. Neither the court record nor Winthrop says who cut off Ratcliffe's ears, or how. The same judges that day ordered Philip Swaddon whipped for running away from his master, Robert Seely, to go to Virginia.

When killing an enslaved person was no crime, 1669

The members of Virginia's assembly, the colony's lawmakers, passed "An act about the casuall killing of slaves" in October 1669, while Sir William Berkeley was governor. An enslaved person was a person owned by another person as property and forced to work for no pay.

Under the act, if an enslaved person resisted and died under "correction" by the master, or by someone the master sent, the death "shall not be accompted felony." Correction meant a beating. Under this law, a master who beat an enslaved person to death, after the person resisted him, was not charged with any crime.

The lawmakers gave their reason in the act. They wrote that no one would kill on purpose when the enslaved person was his own "estate," meaning his property. The act is printed in William Waller Hening's collection of Virginia's old laws, the *Statutes at Large*.

A murder trial at Plymouth, 1675

The judges of Plymouth Colony tried three Wampanoag men in 1675 for killing another Native man, John Sassamon. Plymouth stood in the country of the Wampanoag. Sassamon, a Christian, had reportedly warned Plymouth's governor that men of the Wampanoag leader Metacom, whom the English called Philip, were planning an attack. Sassamon died at Assawompset Pond on January 29, 1675.

In March the judges ordered one of the three, a man named Tobias, to answer questions about the death. Three men put up their land, worth 100 pounds, as a promise that Tobias would come back to court in June: Tobias himself, a sachem named Tuspaquin, and Tuspaquin's son William.

In June the judges tried Tobias, Tobias's son Wampapaquan and a third man, Mattashunannamo, for Sassamon's murder. The charge stated that they had struck him or twisted his neck until he died, then pushed his body through a hole in the ice of the pond. The three men said they were innocent.

The jury was twelve English colonists. The judges added six Native men to advise the jury. The six had not taken the jurors' oath, but the record states that they "fully concurred," meaning they agreed with the verdict. The jury found all three men guilty, and the judges sentenced them to hang.

Plymouth officials hanged Tobias and Mattashunannamo on June 8, 1675. The judges put off Wampapaquan's hanging for a month. Within that month he was shot to death, and the colony's court record does not say who shot him. Later that June, Metacom's men and the English colonists went to war, starting at Swansea. The English called it King Philip's War.

Salem, 1692

English settlers built Salem on Naumkeag, a home of the Pawtucket people. A plague brought by English traders killed many of the Pawtucket between 1616 and 1619, the City of Salem's tourism office states.

Colonial judges in Massachusetts tried people for witchcraft, using the Devil's power to hurt others, in 1692 and 1693. Accusers named more than 200 people, Smithsonian magazine reports. The judges had 19 of them hanged, and Sheriff George Corwin carried out the hangings. Corwin also had one man pressed to death under stones. At least five more accused people died in jail.

The first accusers were three girls in Salem Village: Betty Parris, who was 9, Abigail Williams, 11, and Ann Putnam Jr., about 12. They said three women were hurting them by witchcraft: Tituba, a woman enslaved in the house of the minister Samuel Parris, and Sarah Good and Sarah Osborn.

The magistrates, or local judges, John Hathorne and Jonathan Corwin questioned the three women on March 1, 1692. Tituba denied it. The magistrates kept at her with questions again and again, and then she confessed. Members of the Putnam family later made accusations in dozens of cases.

The special court. Governor William Phips set up a special court to try the accused on May 27, 1692. It was called a Court of Oyer and Terminer, words that mean "to hear and to decide," and William Stoughton was its chief judge.

The judges accepted spectral evidence: an accuser's word that the spirit of the accused person had come to her in a dream or a vision and hurt her. Only the accuser could say what she had seen. Stoughton was sure such evidence could be used. The minister Increase Mather wrote: "It were better that ten suspected witches should escape than one innocent person be condemned."

Pressed to death. Giles Corey refused to plead guilty or not guilty. Accounts give his age as 71 or 81. Under English law, a court could force a plea by pressing. The prisoner lay on the ground under a wooden board, and officers piled heavier and heavier stones on it until the prisoner answered or died.

Sheriff Corwin made Corey strip naked and lie face up on the ground. Then Corwin placed large rocks on the board one at a time. The pressing went on for two days, and Corey died on the third, September 19, 1692. Because he was never convicted, his children could keep his land under the law. The Massachusetts Historical Society gives that as his reason for refusing to plead.

A child in the jail. Sarah Good's daughter Dorothy was a small child when the magistrates had her jailed with her mother in March 1692. The warrant, the written order for her arrest, calls her four years old. Her father later said four or five, and one archive says six.

Her father, William Good, wrote in 1710 that she was kept in prison seven or eight months and "chain'd in the dungeon." He wrote that she was "so hardly used and terrifyed," meaning treated so harshly and frightened so badly, and that she had been a heavy cost to care for ever since. Sarah Good gave birth in jail, and her baby died there. Sarah Good was hanged on July 19, 1692.

Phips shut the special court in October 1692, after accusers named his own wife. The judges of the new court that replaced it would not allow spectral evidence, and they condemned 3 of 56 defendants. Phips had pardoned everyone still held by May 1693. The governor and lawmakers of Massachusetts passed an act in October 1711 that cancelled the convictions of many of the condemned, and they granted 600 pounds to the heirs. The state's lawmakers made a formal apology in 1957.

Rebecca Nurse

Who: A member of the Salem church whom a jury found not guilty of witchcraft, and who was then convicted and hanged.

When and where: Salem, Massachusetts, March to July 1692.

A jury found her not guilty, and the judges sent it back.

Edward and Jonathan Putnam filed a complaint against Rebecca Nurse on March 23, 1692. They said she had hurt Ann Putnam Sr., Ann Putnam Jr. and Abigail Williams by witchcraft. Marshal George Herrick arrested her the next day, on a warrant signed by the magistrates John Hathorne and Jonathan Corwin. She had been sick for eight or nine days and could not leave the house.

At her questioning on March 24 she said, "I am as clear as the child unborn." When she moved her hands, the record states, the accusers fell into fits. Thirty-nine of her neighbors signed a statement that they had never had "Any: cause or grounds to suspect her."

Women searched her body for a mark of the Devil. The most experienced of them found nothing that could not come from a natural cause. On June 28 Nurse asked the court in a petition, a written request, for other women to examine her again, two of them midwives, women who help other women give birth. She signed the petition with her mark, because she could not write her name.

At her trial the jury found her not guilty. The judges objected. They pointed to something she had said about two other accused women, Goodwife Hobbs and her daughter: "they used to come among us." Goodwife was the title for a married woman, like "Mrs." today.

The jury went out again. Back in court Nurse did not answer, and one juror, Thomas Fisk, took her silence as evidence against her. The jury then found her guilty. Afterward she explained that she had meant the two women were fellow prisoners. She wrote that she was "something hard of hearing, and full of grief," and that no one had told her how the court took her words.

Governor Phips pardoned her. Several men from Salem then persuaded him to take the pardon back. On July 3 the minister Nicholas Noyes led the members of the Salem church in putting her out of the church, "by unanimous vote," which is called excommunication. Sheriff George Corwin had her hanged on July 19, 1692. Her house in Danvers still stands. Her case file, number 94, is in the University of Virginia's *Salem Witch Trials Documentary Archive*.

BY 1700

If you remember one thing: Colonial judges punished crime by hurting people where their neighbors could watch: they had people whipped, branded and hanged, and had their ears cut off.

- 1610: Jamestown's leaders put the colony under martial law, with death for murder, robbery and speaking against the company.
- 1669: Virginia's lawmakers wrote that a master who beat a resisting enslaved person to death had committed no felony.
- 1692: Massachusetts judges had 19 people hanged for witchcraft, and the sheriff pressed Giles Corey to death.

Next: In the next fifty years the colonies set up separate courts and patrols for enslaved people, and British judges shipped tens of thousands of convicts across the ocean.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 8 MINUTES

An enslaved person accused of a crime faced a different kind of trial from a free white person. Under a Virginia law of 1723, a panel of local justices tried an enslaved person accused of a crime that carried death, with no jury. A white defendant in New York could turn away up to twenty jurors without giving a reason, and two enslaved men, Quack and Cuffee, went to trial there in 1741 with no lawyer. White men in South Carolina rode on slave patrols from 1704 to watch and control enslaved people.

Free colonists in Virginia took their quarrels over land and debts to a county court of local justices, which met about once a month. A lender could have a person who could not pay a debt locked in jail. British judges also sent about 52,200 convicts across the ocean to work in the colonies.

The county court and the debtors' jail

Local courts sat in the Virginia settlements by 1622, made up of local judges called commissioners of the peace, later called justices of the peace. The justices usually met once a month. The members of Virginia's assembly named these courts county courts in 1642, and by the end of the colonial years Virginia had 61 counties.

The justices gave out licenses to marry and to keep taverns, recorded deeds and wills, and settled quarrels over land and over debts. A deed is a paper showing who owns land. Emily Salmon, writing in the *Encyclopedia Virginia*, calls serving as a justice "the logical stepping stone" to a seat in the House of Burgesses, Virginia's assembly.

The debtors' jail. A jail in these years held people waiting for a trial or a punishment, and people who owed money. From the first colonies until the middle 1800s, a lender could have a person who could not pay a debt locked in jail. Under English law, which the colonists brought with them, the prisoner even paid the cost of being kept there.

Robert C. Voigt, writing in the *Encyclopedia of North Carolina*, explains that jailing a debtor gave the lender "a forceful means" of collecting the money. A person in jail could not work to earn it.

Convicts shipped from Britain

British judges sent about 52,200 convicts by ship to the American colonies between 1700 and 1775, a punishment called transportation. More than 20,000 of the convicts went to Virginia, and about 80 percent of all of them went to Maryland or Virginia. Emily Jones Salmon gives these numbers in the *Encyclopedia Virginia*.

Members of Parliament, Britain's lawmaking body, passed the Transportation Act in 1718. Under it British officials paid merchants to carry convicts across the ocean, and Jonathan Forward was the first merchant to hold the contract. The convicts were sold as soon as they landed, and Salmon does not name the sellers. Most of them were forced to work for their buyers for seven to fourteen years, mostly in tobacco fields. Others went to tradesmen, shipbuilders and ironworks.

Virginia's lawmakers tried to stop the shipments. They passed a law in 1722 meant to make shipping convicts too expensive. Forward complained, and the members of the Board of Trade, officials in London who watched over the colonies, overturned the law. Benjamin Franklin wrote against the shipments in 1751. The last convict ship reached the James River in Virginia in 1776.

Slave patrols and courts without juries

White South Carolinians set up official slave patrols in 1704, copying the island colony of Barbados. A slave patrol was a group of white men who rode out to watch and control enslaved people. The patrollers were the same men who served in the militia, the colony's part-time citizen army. At first wealthy men, called gentlemen, rode alongside poorer white farmers. The patrollers were paid for the work from 1734 to 1737.

Enslaved people at Stono, in South Carolina, rebelled against the people who enslaved them in 1739. After that, the members of the South Carolina assembly ordered "constant, regular patrols" in the Negro Act of 1740. Negro was an old word for a Black person. In Charleston, the town's night watch patrolled the streets.

What a patrol did. A patrol's route ran 10 to 15 miles. In later years a typical patrol was a few men on horseback. They searched the cabins where enslaved people lived, broke up their gatherings and guarded the roads. The *South Carolina Encyclopedia* states that this patrol system lasted until the end of the Civil War.

Courts with no jury. A Virginia law of 1723 states how enslaved people were to be tried for crimes that carried death. Justices named for each case tried the accused person at the county courthouse. They could convict on a confession or on the oath of one witness. All of this was done "without the solemnity of a jury," which means with no jury at all. If they found the person guilty, they ordered the execution. The owner of the accused person could come and speak in the person's defense.

The justices could also convict on the word of Black or Native witnesses if it "shall seem convincing" to them. The law calls these witnesses "Negroes, Mulattos, or Indians," old words for Black people, for people with one Black and one white parent or ancestor, and for Native people.

The same law states a punishment for any Black or Native witness found to have lied. The person's ear was to be nailed to the pillory, and the person was to stand there for an hour. Then the ear was to be cut off. An hour later the

other ear was to be nailed and cut off the same way.

Then the person was to get 39 lashes of the whip, "well laid on, on his or her bare back, at the common whipping-post." The justices had this warning read aloud to every such witness.

NOT KNOWN: Who was to carry out this punishment, and how often it was done.

The New York trials of 1741

New York judges tried about 200 people in 1741 for a plot to burn the city, after a string of fires that began in March. Daniel Horsmanden was one of the three judges. Officials burned 13 Black men at the stake and hanged 17 more. They also hanged four white people, two men and two women. John and Sarah Hughson and Peggy Kerry were hanged on June 12.

Burning at the stake meant chaining a person to an upright post with wood piled around it. Then the wood was set on fire, so the person burned to death.

The witnesses. The first witness before the grand jury, a group of citizens who decide whether a person should be charged with a crime, was Mary Burton. She was a 16-year-old servant of the tavern keeper John Hughson. At first she refused to talk. She began to talk as she was being taken to the dungeon at City Hall. Enslaved witnesses named Sandy and Fortune testified after being promised their lives. The grand jury told Sandy that enslaved people who confessed and named others "were certainly pardoned, and shipped off."

Judge Horsmanden questioned suspects himself before he sent them to the grand jury. White defendants had more protection under New York law: each could turn away up to twenty jurors without giving a reason. Quack and Cuffee, two enslaved men, had no lawyer.

Douglas Linder, who wrote an account of the trials for the Famous Trials project at the University of Missouri-Kansas City, writes of "grave questions about the contours of the suspected conspiracy." He means serious doubts about what the supposed plot really was and who was in it.

Quack and Cuffee

Who: Two enslaved men in New York City who were burned at the stake in the trials of 1741.

When and where: New York City, tried and burned in May 1741.

At the stake, each man was told the other had confessed.

Quack was enslaved by a painter named Roosevelt, and Cuffee by Adolph Philipse. On May 12 the undersheriff, the sheriff's deputy, put Cuffee in a cell with a white prisoner, Arthur Price. He gave the two men "a tankard of punch now and then," a large cup of a mixed drink, so that Price could draw Cuffee into talking. Price then swore that Cuffee had spoken about the fires.

Attorney General Richard Bradley, the colony's chief lawyer, led the case against the two men. His side called eleven witnesses. Quack and Cuffee had to defend themselves. They called ten witnesses, and most of them said the two men had been somewhere else when the fires started. The men said they were innocent. The jury, Horsmanden wrote, was "soon returned" and found them guilty. Judge Horsmanden sentenced them to be "chained to a stake, and burnt to death" on Saturday, May 30, 1741.

The sheriff brought them to the stake at about three o'clock that afternoon, with piles of wood around them. Horsmanden wrote that the crowd "were very impatient" for the fire. The deputy secretary, a Mr. Moore, and Quack's owner, Mr. Roosevelt, told each man that the other had already confessed. Both men then confessed and named other people.

Moore asked the sheriff to wait while someone asked the governor for a reprieve, an order to put off the burning. The sheriff said he could not take the men back through the crowd without a strong guard. Horsmanden called the governor's answer "conditional and discretionary," meaning it came with conditions and left room for choice. He wrote that "the execution proceeded." He does not name the men who lit the fire.

> The names they gave led to more trials. Horsmanden told the story in his own book, *A Journal of the Proceedings*, in 1744.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 11 MINUTES

Pennsylvania's lawmakers began to replace the whip and the gallows with the prison cell. Before then, a convict in Pennsylvania could be fined, made to pay back what he took, whipped, branded or hanged. From 1786 he could also be put to hard labor in the streets. The lawmakers turned the Walnut Street Jail in Philadelphia into the country's first state prison in 1790. After that, a judge could send a convict there for years, to work and to spend part of the time alone in a cell.

The rights of accused people were written down too. Lawmakers in enough states approved the Bill of Rights, the first ten additions to the Constitution, in 1791, and four of them list rights for accused people. Not everyone got a trial. Armed settlers in Pennsylvania killed twenty Conestoga people in 1763, and no one was ever charged.

Counterfeiting was a hanging crime

Colonial paper money carried the warning "To Counterfeit is Death." Counterfeiting means making fake money. Owen Sullivan was an engraver, a person who cuts designs into metal for printing, and he was born in Ireland. He ran gangs that passed fake bills from New England to New York.

The *Boston Evening Post* printed a report from Providence, Rhode Island, on October 9, 1752. It said that Sullivan "has lately had both his Ears crop'd, and been branded on both his Cheeks with the Letter C." Cropping meant cutting off part of the ear, and the C was for counterfeiting. He had been punished for faking Rhode Island's paper money. The newspaper does not name who cut and branded him.

New York judges later convicted him of faking and passing New York's bills, and he was hanged on May 10, 1756.

The Conestoga killings, 1763

Armed white settlers from Paxton Township and nearby places in Pennsylvania killed all twenty people of the Conestoga town in December 1763. No one was ever charged with the killings. The Conestoga were descendants of the Susquehannock people. Their town stood near Lancaster, on land that the Penn family had set aside for them. The land was supposed to be under the Penn family's protection.

Native nations to the west were at war with the British in 1763, in what is called Pontiac's War. The killers claimed that the unarmed Conestoga were hiding spies for the enemy. The historian Michael Goode calls that charge "a fabrication," which means a lie. Earlier in the war, Lieutenant Governor James Hamilton had offered a reward of 25 pounds for each Native scalp. A scalp is the skin and hair cut away from the top of a person's head.

The first attack. Benjamin Franklin wrote about the killings in a pamphlet in 1764. He counted twenty people in the town: seven men, five women and eight children. At daybreak on December 14, 1763, fifty-seven men rode in with

guns, short swords and hatchets. They found six people at home, three men, two women and a boy. The men shot them, stabbed them and killed them with hatchets.

Shehaes was a very old man who had been at a treaty meeting with William Penn in 1701. He was in his bed, and they cut him to pieces there. The attackers scalped all six. Then they burned the houses.

The workhouse. Lancaster's magistrates put the other fourteen Conestoga people in Lancaster's workhouse, a building where poor people were made to work, to keep them safe. On December 27 about fifty of the Paxton men broke open the workhouse door. Franklin wrote that the families knelt, with the children holding on to their parents, and said they were innocent.

The men killed all fourteen with guns and hatchets, among them children about a year old and babies still nursing. Will Soc was shot at the door. A company of British soldiers stationed nearby did nothing to stop the attack.

Franklin named some of the dead. They included Shehaes, his daughter Peggy, and her husband John Smith, a Cayuga, with their child of about three. They also included Betty and her son Peter, and Sally, whose Native name was Wyanjoy.

Governor John Penn offered a reward for the killers' names. In January 1764, as many as 200 of the Paxton men marched toward Philadelphia. They said they were protesting the government's failure to protect them, and they wanted to reach the Native refugees on Province Island, near the city. They stopped at Germantown when they heard that the city's militia had gathered. Franklin worked out a compromise: the marchers agreed to break up, and their leader, Matthew Smith, was allowed into the city to publish their complaints.

No one ever came forward with the killers' names. A modern introduction to Franklin's pamphlet, published by Miami University, states that no one was ever charged and tried.

Three trials in Boston, 1770

Judges in Boston heard three murder trials in 1770. One was of a customs informer who had shot a boy. The other two were of a British captain and of eight British soldiers.

Ebenezer Richardson fired a gun from his house into a crowd of boys on February 22, 1770, and killed Christopher Seider, who was 10 or 11. Richardson was a customs informer, a man who told on smugglers to the customs officials, the officers who collected taxes on goods brought in by ship. A jury found Richardson guilty of murder on April 21. The judges thought he was innocent, and they put off sentencing him.

The soldiers. British soldiers fired into a crowd on March 5, 1770, and killed five people. Crispus Attucks, Samuel Gray and James Caldwell died that night. Samuel Maverick, 17, died the next morning, and Patrick Carr died nearly two weeks later. Captain Thomas Preston and eight soldiers were arrested and jailed.

No lawyer in Boston would defend them until John Adams agreed, with Josiah Quincy and Robert Auchmuty. Adams later wrote that in a free country, a lawyer "ought to be the very last thing that [an] accused Person should want." In his day, want meant lack: an accused person must never be left without a lawyer.

A jury found Preston not guilty on October 30. The soldiers' trial began on November 27. After two and a half hours, the jury found six soldiers not guilty. It found Hugh Montgomery and Mathew Kilroy guilty of manslaughter, killing someone without planning to, and manslaughter could be punished by death. The two men used an old English rule called benefit of clergy, which let a first-time offender who could read escape a death sentence once.

Instead of being hanged, each man was branded on the hand, at the base of the right thumb. On December 14, 1770, Sheriff Stephen Greenleaf pressed a red-hot iron onto each man's thumb in the courtroom, and it burned a mark into the skin that stayed for life. John Adams remembered in 1822 that when the sheriff came near, the two soldiers "burst into tears." The *Boston Gazette* reported that after the branding they were "discharged," which means let go.

From street work to the cell, Philadelphia

Pennsylvania's lawmakers tried two new punishments in place of hanging between 1786 and 1790. The historian Louis Masur found that in the ten years before 1786, Pennsylvania officials had hanged about 40 people for robbery or burglary.

The wheelbarrow men. The lawmakers passed a law in 1786 under which judges sentenced convicts to "continued hard labour publicly and disgracefully imposed." People called the prisoners "wheelbarrow men." Ann Warder wrote in her diary on March 30, 1787, that the convicts cleaned the streets with "an iron collar around their neck and waist to which a long chain is fashioned and at the end a heavy ball."

Their heads were shaved, and a guard went with each gang. Warder wrote that at first the prisoners "preferred death" to being shown in public this way. Thirty wheelbarrow men escaped in one night in October 1788. The lawmakers ended the law by 1790.

The reformers. Thirty-seven Philadelphians formed the Philadelphia Society for Alleviating the Miseries of Public Prisons in 1787, a group to ease the suffering in the prisons. Among them were the doctor Benjamin Rush, Benjamin Franklin and Bishop William White. They drew on the ideas of John Howard, an English prison reformer.

In the city's old jail, men, women and children were held together, whatever their crime. Annie Anderson, writing in the *Encyclopedia of Greater Philadelphia*, states that the sheriff there forced money out of prisoners, sold them liquor from a bar and held back their food.

The cells. Pennsylvania's lawmakers passed a new law in April 1790. Under it the Walnut Street Jail became the Walnut Street Prison, a state prison for convicts from all of Pennsylvania. The lawmakers ordered a separate building of cells, called a penitentiary house, for "the more hardened and atrocious offenders," the convicts who had done the worst crimes. The word penitentiary comes from penitence, being sorry for wrongdoing.

Each cell was six feet wide, eight feet long and nine feet high, and thirty-six of them were built. Judges could sentence a prisoner to time alone in one of these cells, which is called solitary confinement.

The law professor David Shapiro studied the prison's records for the *Harvard Law Review* in 2019. He found that judges sent 748 people to the prison between 1795 and 1800, and sentenced 29 of them to time in solitary confinement. Margaret Price, convicted of counterfeiting in 1795, got four years with four months in solitary.

Prisoners worked in a nail factory inside the prison. Keepers locked a prisoner who refused to work in a cell. Caleb Lownes wrote in 1799 that such a prisoner stayed there "some weeks, without labour, bed, or furniture, of any kind, except a vessel to hold his drink, and another his mush, and a blanket."

Rights for the accused, 1791

Lawmakers in enough states approved the first ten amendments to the Constitution, called the Bill of Rights, on December 15, 1791. An amendment is an addition or change to the Constitution. Four of them list rights of people accused of crimes:

- The Fourth Amendment requires officers to have a warrant, a judge's written order, to search a home. A judge may give one only when there is good reason to believe a crime took place.
- The Fifth forbids forcing anyone to be a witness against himself. That means no one can be forced to confess, or to say anything that could help prove him guilty.
- The Sixth requires, for an accused person, "a speedy and public trial, by an impartial jury," a jury whose members favor neither side, and the help of a lawyer.
- The Eighth forbids "cruel and unusual punishments" and bail set too high. Bail is money paid to the court so an accused person can go free until the trial.

At first these rules applied only to the federal government and its courts. State courts did not have to follow them.

Patrick Lyon

Who: A Philadelphia blacksmith held three months in the Walnut Street Prison for a bank robbery he did not commit.

When and where: Philadelphia, 1798 to January 1799.

He walked 150 miles to clear his name and was locked up.

Patrick Lyon, a Philadelphia blacksmith born in Scotland, did a rush job for the Bank of Pennsylvania in 1798. He changed the locks on two of its iron vault doors. It was his last job before he left the city. He told the bank's carpenter that the doors were not right for a bank and the locks were not safe. A stranger came to his shop with the carpenter and spent a long time looking at the doors, keyholes and locks.

Then yellow fever spread through Philadelphia, and about 1,300 people died of it. Lyon left the city by boat for Lewes, Delaware, with his 19-year-old apprentice, a young man learning his trade. The apprentice died of the fever there.

On the night of August 31, while Lyon was away, someone took $162,821 from the bank's vault without breaking in. Lyon heard that he was the main suspect, and he walked back to Philadelphia to clear his name. "I had come 150 miles to surrender myself," he wrote.

High Constable John Haines, the chief of the city's constables, wanted the $2,000 reward. He and the bank's officers questioned Lyon. The bank's officers were sure that the man who changed the locks had made an extra key. A magistrate sent Lyon to the Walnut Street Prison and set his bail at $150,000.

Lyon called the prison "cold, damp, unwholesome and solitary." His cell was 12 feet by 4 feet. "I read until I was tired and walked until I was weary," he wrote. He caught yellow fever there and lived.

The robbers were Isaac Davis, a carpenter, and the bank's porter, Thomas Cunningham, who died of the fever. Davis was the stranger who had studied the locks. He confessed and gave back the money, and the

governor promised him a pardon. Davis seems never to have spent a day in prison. The bank's officers still said Lyon had helped by making a key. He stayed in prison until January 1799, when a grand jury refused to charge him.

Lyon told what had happened to him in a book, his 1799 *Narrative*. He sued the bank's officers and the constable for keeping him in prison without cause. A jury awarded him $12,000 in 1805. The men he sued appealed, and in 1807 they paid him $9,000 to settle the case. The painter John Neagle later painted him as *Pat Lyon at the Forge*.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 11 MINUTES

In the new prisons of New York and Pennsylvania, keepers locked convicts, people found guilty of crimes, alone in cells: at night in New York, and all day and night in Pennsylvania. Both kinds of prison kept prisoners silent. Officials in Boston and New York hired full-time police. Pennsylvania's lawmakers moved hangings inside jail walls in 1834, and Michigan's lawmakers voted to end the death penalty twelve years later.

In the South, white men still policed enslaved people. South Carolina's slave patrols, small groups of white men on horseback, searched the places where enslaved people lived and broke up their gatherings. Virginia's local judges, called justices, tried enslaved people with no jury. White mobs also killed people with no trial at all. A white mob in St. Louis burned Francis McIntosh to death in 1836, and no one was charged.

The Cherokee Nation's police, 1808

Under the old Cherokee law of blood, a dead person's clan, not the nation, punished a killing. Leaders of the Cherokee Nation began to change that in 1808, when they set up their own police. Two years later the clans gave up revenge.

The Cherokee lived then in their own country, in parts of what are now Georgia, Tennessee, Alabama and North Carolina. The leaders on the Cherokee national council, who made the nation's laws, passed a written law at Brooms Town on September 11, 1808. Under it they set up "regulating parties," companies of men who made sure people obeyed those laws. The principal chief, or head leader, Black Fox signed it with Path Killer, Toochalar, and Charles Hicks, the council's secretary.

The regulators. Each company had six men: a captain, a lieutenant who was second in command, and four privates. The law states the pay: fifty dollars for the captain, forty for the lieutenant and thirty for each private. The regulators went after horse thieves and robbers. They also protected what children got from their dead parents and what widows owned.

A man found guilty of stealing a horse got "one hundred stripes on the bare back," one hundred blows of a whip. Blows like these cut the skin and leave welts, raised stripes of swollen skin, and scars.

If a regulator killed a man who fought back with a weapon, "the blood of him or them shall not be required." That meant the dead man's clan, his mother's large family group, could not kill in return.

The end of clan revenge. The seven clans met in council at Oostanallah on April 10, 1810, and passed an "act of oblivion for all lives." Oblivion means forgetting: the clans forgave every life that one clan still owed another. From then on, a person who killed someone "without malice intended," meaning by accident, would not be held guilty. A man who killed his brother in anger would be guilty of murder.

With this act the clans ended the law of blood. The editors of the *Cherokee Phoenix*, the nation's own newspaper, printed both laws on March 13, 1828.

Two kinds of prison: Auburn and Eastern State

Prison keepers in New York and Pennsylvania ran two different kinds of prison in the 1820s. In both, they kept prisoners from talking to each other.

Auburn. At Auburn Prison in New York, prisoners worked together in groups during the day and slept alone in cells at night. They were not allowed to speak at any time. Elam Lynds became the head keeper in 1821. He had prisoners flogged for breaking even small rules. Flogging means beating a person's bare back with a whip, which cuts the skin and leaves welts and scars.

Lynds and John D. Cray made prisoners march in step with their arms locked together, a way of marching called the lockstep. Lynds dressed them in striped uniforms.

New York's officials used the same plan at Sing Sing, their third state prison. Officials in Connecticut, Massachusetts, Maryland and Washington, D.C., had taken up the Auburn plan by 1829. Officials in most other states chose it later.

Eastern State. Pennsylvania's officials opened Eastern State Penitentiary, a prison in Philadelphia, in October 1829. The architect John Haviland laid out seven blocks of cells joined to a center hall. He said he designed it for "watching, convenience, economy and ventilation." By economy he meant saving money, and by ventilation, fresh air.

Each prisoner lived and worked alone in a cell about 8 feet wide and 12 feet long, with its own small exercise yard. A Bible was the only thing he was allowed to keep. Prisoners made shoes and wove cloth in their cells. Whenever a prisoner left his cell, a guard put a hood over his head so that no other prisoner could see his face.

The iron gag. Guards punished prisoners who broke the rules. They gave them cold showers, and one account states that guards apparently did this once outdoors in winter. They also used the iron gag. The guards clamped an iron piece over the prisoner's tongue, like the bit in a horse's mouth, and chained it to his hands, which were held behind his back. With his hands chained to it, he could not take it out.

Prison officials put a prisoner named Mathias Maccumsey in the iron gag in 1833 as a punishment for talking, and he died. The prison doctor gave the cause as apoplexy, an old word for a sudden stroke. The historian Jennifer Lawrence Janofsky, writing in the *Encyclopedia of Greater Philadelphia*, states that the prison's leaders tried to cover up the death.

A committee of Pennsylvania lawmakers investigated charges in 1834 and 1835 that the prison's officials had been cruel to prisoners. The lawmakers did not find the warden, Samuel Wood, guilty of cruel and unusual punishment.

The English writer Charles Dickens visited Eastern State in 1842. He wrote that he believed the system "in its effects, to be cruel and wrong." He also wrote: "I hold the slow and daily tampering with the mysteries of the brain to be immeasurably worse than any torture of the body." He meant that keeping a person alone and silent for years did more harm to the mind than any torture does to the body.

Pennsylvania's prison officials gave up keeping prisoners alone in 1913. Eastern State was built for 250 prisoners, and by the middle 1920s it held about 1,700.

Charles Williams

Who: The first prisoner at Eastern State Penitentiary.

When and where: Philadelphia, October 1829 to October 1831.

Prisoner Number 1 got two years alone for stealing a watch.

Charles Williams was an 18-year-old Black farmer. He had been found guilty of breaking into a house and stealing a silver watch, a gold seal and a gold key, worth $25 in all. A seal was a small stamp, often hung on a watch chain, for pressing a mark into wax. His sentence was two years alone and in silence, with work.

Guards led him into the new prison in October 1829 with a hood over his head. From then on he was Prisoner Number 1, and Jane Brox, who tells his story in the *Public Domain Review*, writes that he was not called Charles again while he was there.

His cell was twelve feet by eight. *Smithsonian* magazine reports that prisoners there spoke to the guards through a small feeding hole and worked alone in their cells. He was let out in October 1831, two years to the day after he went in.

After Nat Turner's revolt, 1831

Nat Turner, an enslaved man, led a revolt in Southampton County, Virginia, in August 1831. Turner and the rebels who joined him killed 55 white men, women and children, by the count of the historian Patrick Breen. A Library of Virginia article gives the number as 57.

White people from Southampton and beyond killed Black people with no trial in the days after the revolt. Breen writes that they killed about three dozen in Southampton County. He also writes that armed units formed "to put down the revolt and in many cases get revenge." A Library of Virginia article states that they killed hundreds, with no exact count.

The county's justices tried the accused rebels in a court of oyer and terminer. In Virginia that meant local justices judged enslaved people with no jury. Breen counts thirty enslaved people and one free Black man sentenced to death. Nineteen were put to death on the justices' orders. Governor John Floyd changed the sentences of the other twelve so they would not die.

Turner hid for two months. He gave himself up on October 30, 1831. The justices tried him on November 5 and ordered him "hanged by the neck until he be dead" on November 11. He was hanged that day, as the justices had ordered. In the same court record, the justices set his value as property at $375. Virginia officials paid that sum to his owner.

Hangings move inside the jail

Pennsylvania's lawmakers became the first in any state to ban public executions, hangings in front of crowds, in 1834. The Death Penalty Information Center, a group that collects facts about the death penalty, records this. After that, officials hanged prisoners who had been sentenced to death inside the county prisons.

Michigan's lawmakers voted to end the death penalty on May 18, 1846. An article by the news outlet Michigan Public states that Michigan was the first English-speaking government in the world to do so.

Francis McIntosh, St. Louis, 1836

A white mob in St. Louis, Missouri, burned Francis McIntosh alive on April 28, 1836, and no one was ever charged. McIntosh was a free Black man, 26 years old, from Pittsburgh. He worked on the steamboat *Flora* as a cook and as a porter, who carried passengers' bags.

That day Deputy Constable William Mull, a local law officer, arrested McIntosh for getting in the way of officers who were arresting two sailors. Deputy Sheriff George Hammond, a county law officer, helped take him to jail. McIntosh was told he would get five years in prison. He stabbed both officers with a knife. Hammond bled to death. Mull was badly wounded, and accounts differ on whether he died later.

A crowd of several hundred white people gathered, and a city alderman, a member of the city council, was among them. Men from the crowd broke into the jail and took McIntosh out. They chained him to a locust tree near Seventh and Chestnut Streets, then piled wood around his knees and set it on fire. The crowd cheered as he burned, according to a history written at the University of Missouri-St. Louis. He died within about twenty minutes. By one report, he asked to be shot.

What the judge told the jurors. Judge Luke Lawless then spoke to the grand jury. He told the jurors to charge any person they could identify. But he said the killing might be the act of a whole crowd moved by one feeling, and if

it was, it was beyond the reach of the law. He also blamed the writings of abolitionists, people who worked to end slavery. The jurors, led by their foreman, the head juror, John O'Fallon, charged no one.

Elijah Lovejoy, the editor of the *St. Louis Observer*, wrote against the killing and against the judge. A mob of people who were against ending slavery killed Lovejoy in Alton, Illinois, in November 1837.

A young lawyer named Abraham Lincoln spoke about the McIntosh killing in Springfield, Illinois, in January 1838. He said McIntosh had been "chained to a tree, and actually burned to death." He added that it was "all within a single hour from the time he had been a freeman, attending to his own business, and at peace with the world." Lincoln's words left out the stabbing and Hammond's death.

Police take over from the night watch

The people of Boston had kept a town watch, men who walked the streets at night to keep order, since 1631.

Boston. A small day police force began work in Boston in 1838, with officers on duty full time beside the night watch. The crime historian Gary Potter calls this the first organized police force paid for with public money and with officers on duty full time, a 2017 *TIME* article reports. Boston's city officials replaced the watch and the day police with one Police Department of 250 officers in 1854.

New York. About 320,000 people lived in New York before 1845. A night watch and 182 other officers guarded them: 100 city marshals, 31 constables and 51 city police officers, all kinds of local law officers. New York's state lawmakers passed a Municipal Police Act, a law for a city police force, on May 7, 1844. Under it, city officials were to end the night watch.

The mayor and the city council argued over who would choose the officers. Mayor William Havemeyer and the council finally adopted the law for the city on May 23, 1845. Accounts differ on the size of the force: the website

CultureNow states that the 1844 law allowed 1,200 officers, and another count gives 800. After a long argument, the officers first wore a navy blue uniform in 1853.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 21 MINUTES

Mobs killed people with no trial in the South, in the West and in New Orleans, and the men in those mobs were almost never punished. After the Civil War, white mobs in the South killed Black people. A killing like this, by a mob, with no trial, is called a lynching. Mobs in the West killed Chinese immigrants, and a mob in New Orleans killed eleven Italian American men.

The count. The Equal Justice Initiative, a group in Montgomery, Alabama, founded by the lawyer Bryan Stevenson, published a report called *Lynching in America* in 2017. It records 4,075 Black people lynched in twelve Southern states between 1877 and 1950, more than one a week for 73 years. Counting lynchings in other states too, its total is more than 4,400.

The report states that the people who took part "were celebrated and acted with impunity," meaning with no fear of punishment, and that state and federal officials mostly let the killings happen.

Private detectives such as Allan Pinkerton's men worked for railroads and factory owners. Officials in Alabama and other states rented prisoners to mining companies and farm owners, and in Alabama more than 95 percent of the county prisoners and 90 percent of the state prisoners were Black. New York state senators on a committee that met in 1894 and 1895 estimated that New York City's police officers took more than $10 million a year in payments from people breaking the law.

Vigilance committees in San Francisco, 1851 and 1856

A vigilance committee was a group of private citizens who arrested, tried and punished people themselves, outside the courts. About 700 San Francisco men formed one on June 9, 1851. The next day they held their own trial and hanged John Jenkins, a man from Sydney, Australia, for stealing a safe. At that time California law allowed a death sentence for that kind of theft.

That year the committee's members hanged four men. They held and questioned people at their headquarters without due process, the rules a court must follow to give an accused person a fair trial. Of the others they held, they whipped one, forced 28 out of California, handed 15 to the police and courts, and let 41 go.

San Francisco men formed the committee again on May 14, 1856, after James Casey shot the newspaper editor James King of William. William Tell Coleman led it, and its leaders claimed 6,000 members. The committee's members hanged four more men that year, among them Casey and Charles Cora. The boxer James "Yankee" Sullivan killed himself after being held in one of the committee's cells. The members broke up the committee on August 11, 1856. Members of the two committees hanged eight people in all.

The Dakota trials, 1862

US Army officers tried 392 Dakota men after the war between the United States and the Dakota in Minnesota in 1862, and hanged 38 of them together at Mankato. The Minnesota River valley was the Dakota homeland.

Colonel Henry Sibley set up a military commission, a court of army officers, to try Dakota prisoners on September 28, 1862. The officers held the trials at the Lower Sioux Agency, also called the Lower Agency. US officials set it up in 1853 to run the new Dakota reservation, and it had a school, shops and homes for the government workers. The war began there in August 1862.

Five-minute trials. The trials took place in François LaBathe's summer kitchen, one of the only buildings there still standing. Some trials lasted no longer than five minutes. The officers sentenced 303 men to death and 16 to prison.

The law professor Carol Chomsky of the University of Minnesota wrote that "the evidence was sparse," meaning thin, and that the officers were "biased," meaning they had taken a side before they heard the cases. She wrote that the men on trial had no lawyers, and that the trials were held in a language they did not know.

President Abraham Lincoln and his lawyers read all 303 trial records. Lincoln wrote to the Senate that too much mercy might encourage another war, and that too much harshness would be "real cruelty."

He looked first for men found guilty of rape, which means forcing a person into sex, and he found two. Next he added men found to have taken part in "massacres," the killing of many civilians, people who were not soldiers. Men found only to have fought in battles stayed off his list. He approved 39 hangings, and one of those men was later reprieved, which means spared from hanging.

Army officers hanged 38 Dakota men together at Mankato on December 26, 1862. About 4,000 people watched, and 2,000 soldiers stood guard. An article by the Death Penalty Information Center states that it was the largest mass execution in United States history. Two of the 38 were not men Lincoln had

approved for hanging: the officers hanged them by mistake. One was Caske, whose Dakota name was Wicaŋhˇpi Wastedaŋpi. The other was Wasicuŋ, a white man the Dakota had adopted, whom the officers had found not guilty.

The bodies were cut down and put together in one shallow grave on a sandbar between Mankato's main street and the Minnesota River. Before morning, doctors had dug up most of them to use as cadavers, dead bodies that doctors and medical students cut open to study the human body.

A year later, the army's chief lawyer found that Sibley had never had the power to set up the trials. By then the 38 men had already been hanged.

Police against the draft riots, 1863

Mobs in New York City attacked the police, burned buildings and killed Black New Yorkers from July 13 to 16, 1863. The rioters were fighting the new Civil War draft, a law that required men to serve in the army when called. The state militia, the state's part-time soldiers, had been sent to Gettysburg, so at first the Metropolitan Police were the only force in the city.

On the first day, rioters beat Police Superintendent John Kennedy, the head of the city's police officers, until he was nearly unconscious and cut his hand with a knife. Police Commissioners Thomas Acton and John Bergen, two of the officials who ran the police, took command. Their officers kept the rioting out of Lower Manhattan, below Union Square. Rioters burned two police station houses. They also burned the Colored Orphan Asylum, a home for Black children, and the more than 200 children inside all got out.

Rioters beat, tortured and killed Black New Yorkers. Village Preservation, a New York history group, records that William Jones, a Black cart driver, had gone out to buy a loaf of bread. A mob chased him on Clarkson Street, beat him, hanged him and set him on fire. Another Black man was attacked by a crowd of 400, hanged from a tree and set on fire. Hundreds of Black New Yorkers left the city, among them the doctor James McCune Smith and his family.

Secretary of War Edwin Stanton sent five regiments, units of soldiers, from Gettysburg to stop the riot, and it ended on July 16. By the official count, 119 or 120 people were killed in the riots. A New-York Historical Society article records the official count of 119 and states that it may be too low.

Mobs that killed Chinese immigrants

White mobs in the West killed Chinese immigrants. After the killings at Los Angeles in 1871 and at Rock Springs in 1885, every man who was charged or arrested went free. The justices of the California Supreme Court had ruled in 1854 that Chinese people could not testify against white people in court.

Los Angeles, 1871. A white man named Robert Thompson was killed in Los Angeles on October 24, 1871, during a gunfight between two Chinese groups. A crowd of about 500 people, one tenth of the city, then attacked the Chinese part of town. They killed 18 Chinese men and boys, by the count of the Los Angeles Public Library, or 19 in the list of names the historian Scott Zesch published in 2008. Among the dead was a doctor, Gene Tong.

The mob hanged seven of them from the crossbar of Goller's wagon shop and three from a freight wagon. The next morning seventeen bodies lay in the jail yard.

Grand jurors in Los Angeles brought 25 charges of murder. Only ten men were tried, and seven or eight of them were found guilty of manslaughter. Judges later threw out the verdicts on a technical point of law. District Attorney Cameron Thom chose not to try the men again, and they went free in 1873.

Rock Springs, 1885. Rock Springs was a town in Wyoming, which was then a territory, land under the federal government that was not yet a state. Between 100 and 150 armed white miners, railroad workers and townspeople attacked the Chinese miners there on September 2, 1885. They killed 28, wounded 15, and robbed and burned all 79 homes in the town's Chinatown. Federal troops arrived nearly a week after the killings and stayed for 13 years.

Sixteen white miners were arrested and let out on bail, money paid as a promise to come back for trial. The historian Tom Rea, writing for WyoHistory.org, a Wyoming history website, states that "though the killing

had been done in daylight, in front of other people, no one could be found who would swear to having seen any crimes." No charges were filed. Chinese diplomats, officials who spoke for China's government, listed nearly $150,000 in losses. Under pressure from the president, members of Congress agreed to pay.

BY 1885: San Francisco's committees had hanged eight men, army officers had hanged 38 Dakota men at Mankato, and every man charged or arrested for the killings of Chinese immigrants at Los Angeles and Rock Springs had gone free.

Prisoners rented out: convict leasing

State and county officials in Alabama and other states rented prisoners to private companies after the Civil War. This was called convict leasing. The companies' bosses made the prisoners work in mines, on farms and on railroads. The companies' owners paid the state or the county, not the prisoners.

The historian Mary Ellen Curtin gives the Alabama numbers in the *Encyclopedia of Alabama*. Officials there leased prisoners from 1875 to 1928. More than 95 percent of the county prisoners and 90 percent of the state prisoners there were Black. Most county prisoners had been found guilty of misdemeanors, small crimes such as being drunk in public. They had to work longer to pay off their court costs.

The whip and the deaths. The companies' bosses whipped prisoners who tried to escape or talked back, and they whipped others to make them work harder. Each year, four or five of every hundred state prisoners died. Of the 745 county prisoners in the mines in 1896, 181 had died in the two years before. At the Coalburg mine, 90 of every 1,000 prisoners died.

Allan Pinkerton

Who: A Scottish barrel maker who started a private detective agency in Chicago.

When and where: Chicago and across the country, 1850 to 1884.

His sign was an open eye over the words "We never sleep."

Allan Pinkerton's detectives were paid by the companies that hired them. They were not police officers. Pinkerton was a cooper, a barrel maker, from Glasgow, Scotland, and in 1843 he settled in Dundee, Illinois. His house there was a hiding place for people escaping slavery. While cutting wood one day he found a gang of counterfeiters, people who made fake money, and told the sheriff, who arrested them.

Pinkerton and the lawyer Edward Rucker started a detective agency in Chicago in 1850, which became the Pinkerton National Detective Agency. The men who ran express companies, which carried money and packages by train, hired his detectives to catch criminals, and so did the men who ran the railroads.

His men kept photographs of known criminals, and some of them joined gangs in disguise. Pinkerton guarded Abraham Lincoln on his way to Washington in February 1861, against what Pinkerton said was a plan to kill him in Baltimore.

Pinkerton's detectives and local helpers raided the Missouri farm of the family of the outlaw Jesse James, a robber on the run from the law, in January 1875. They threw a firebomb into the house. It exploded and killed Jesse's eight-year-old half-brother, Archie. It wounded his mother, Zerelda Samuel. Jesse was not there. Afterward, many people took the side of the James family and blamed the agency for the raid.

Factory owners also hired Pinkerton men after the Civil War as armed guards against workers on strike, workers who had stopped work together to press their employers for changes. Pinkerton died in Chicago in 1884.

The Haymarket trial, 1886

Someone threw a bomb at police at a workers' meeting in Haymarket Square in Chicago on May 4, 1886. Seven officers were killed and sixty were hurt. The bomb thrower was never identified.

Prosecutors charged eight anarchists, people who wanted to do away with all government. They tried the eight as accessories, people who help a crime happen without doing the act. The prosecutors said the men's speeches had led to the bombing. A jury found all eight guilty in three hours. The judge sentenced seven to hang and Oscar Neebe to 15 years in prison.

Four of the men, Albert Parsons, August Spies, George Engel and Adolph Fischer, were hanged on November 11, 1887, as the judge had sentenced them. Louis Lingg had already killed himself in his cell with an explosive someone had smuggled in. Governor Richard Oglesby changed the sentences of two men to life in prison.

Governor John Peter Altgeld pardoned the three men still in prison, Samuel Fielden, Oscar Neebe and Michael Schwab, in June 1893. The pardon freed them and cancelled their punishment. Altgeld wrote that their trial had been unfair.

The first electric chair, 1890

William Kemmler became the first person put to death in an electric chair, on August 6, 1890, at Auburn Prison in New York. He had killed Matilda Ziegler in Buffalo in 1889 with a hatchet, or with an axe by one account. Electrocution means killing a person by sending a strong electric current through the body. The current stops the heart and burns the skin where the metal touches it.

A Buffalo dentist, Dr. Albert Southwick, had first suggested it in 1881. He argued that it was kinder than hanging, in which a person sentenced to death could hang for up to 30 minutes before dying. Kemmler's lawyers argued that the electric chair was a cruel and unusual punishment, which the Constitution forbids. The justices of the US Supreme Court turned them down.

Kemmler's chair had two metal plates covered with damp sponges, one on his head and one on his back. Warden Charles Durston, the head of the prison, gave the order, with 17 witnesses in the room. The first shock lasted 17 seconds. It was about 700 volts by one account, or 1,000 by another. A volt is a measure of how strongly electricity pushes through a wire or a body.

The first shock did not kill him. The witnesses smelled burning cloth and burning flesh. A second shock of about 1,030 volts went on for about two minutes, until smoke rose from his head, and Kemmler died. Doctors who examined the body found that the plate on his back had burned through to his spine, the HISTORY.com account states.

The chair ran on alternating current, a kind of electricity that flows back and forth many times a second. Harold Brown, whom New York officials hired to build the chair, used it. *Smithsonian* magazine reports that Thomas Edison, whose company sold the other kind, direct current, was secretly paying Brown to use alternating current. George Westinghouse's company built electric systems that used alternating current. After Kemmler's death Westinghouse called it "a brutal affair" and said: "They would have done better with an axe."

Eleven men killed in a New Orleans prison, 1891

A mob in New Orleans broke into the city's prison on March 14, 1891, and killed eleven Italian American men. Five months earlier, the police chief, David Hennessy, had been shot. Nineteen Italian Americans were charged with his murder, among them a 14-year-old boy. Nine were tried. The jury found six not guilty, and the trial of the other three ended in a mistrial, with no verdict. A *Smithsonian* magazine article states that "there was no solid evidence against them."

A newspaper notice stated that citizens should "come prepared for action." A crowd of thousands gathered at the Henry Clay statue. The lawyer William Parkerson told them to "set aside the verdict of that infamous jury" (infamous means known for something bad).

Who led the mob. Parkerson and three other city leaders led the killers: the lawyer Walter Denegre, the politician and businessman James Houston, and John Wickliffe, the editor of the *New Delta* newspaper. John M. Parker, who later became governor of Louisiana, and Walter Flower, who later became mayor of New Orleans, were in the mob.

The prison warden, Lemuel Davis, let the 19 prisoners hide. The mob found eleven of them. Men dragged Emmanuele Polizzi outside, hanged him from a lamppost and shot him. He was mentally ill. They hanged Antonio Bagnetto, a peddler who sold fruit, from a tree and shot him. They shot or clubbed to death nine others inside the prison.

The eleven were Antonio Bagnetto, James Caruso, Loreto Comitis, Rocco Geraci, Joseph Macheca, Antonio Marchesi, Pietro Monasterio, Emmanuele Polizzi, Frank Romero, Antonio Scaffidi and Charles Traina. Three of them had been found not guilty, three had had no verdict, and five had never been tried.

No one charged. Grand jurors, who met under Judge Robert Marr, a friend of several men in the mob, said they could not identify the killers. They called the killers "several thousands of the first, best, and even the most law-abiding, of the citizens." They charged no one.

Italian officials called home their ambassador, their government's chief representative in the United States. President Benjamin Harrison agreed to pay the families $25,000 to make up for the killings, and federal officials paid $2,211.90 to each family. Mobs lynched at least eight more Italian Americans in Louisiana in the 1890s. No one was charged and tried in court for those killings either.

Henry Smith

Who: A Black man burned to death by a white mob in front of thousands of people, without a trial.
When and where: Paris, Texas, February 1, 1893.

Thousands came by train to watch a man burned to death.

A white mob in Paris, Texas, tortured Henry Smith with hot irons and burned him to death on February 1, 1893, in front of thousands of people. He never had a trial, and no one was ever arrested for killing him.

The accusation. Myrtle Vance, a girl of three or four, was found dead in the woods near Paris in January 1893. Newspaper reports said that she had also been raped, which means forced into sex. The *New York Sun* called Smith her "ravisher," an old word for a man who rapes someone.

Her father, Henry Vance, was a Paris police officer. Several days before, he had arrested Henry Smith for being drunk and disorderly and had beaten him. Smith was accused of killing the girl. The two main accounts of what followed, by the journalist Ida B. Wells and the historian Terry Anne Scott, do not name the person who first accused him. Smith ran away to Arkansas.

Posses of Black and white men went after him. A posse is a group of men gathered to chase someone. They rode the Texas & Pacific and the St. Louis & San Francisco railways for free. Near Hope, Arkansas, a Black constable named Robinson, a local law officer, arrested Smith. Texas Governor James Hogg telegraphed Sheriff D. S. Hammond to hold Smith

for a trial. Hogg also ordered that Smith not be taken to Paris. The sheriff and the county attorney answered that they were "helpless" against "an enraged public."

Men brought Smith to Paris by train. The mayor closed the schools. Trains brought people from Dallas, Fort Worth, Texarkana, Fort Smith in Arkansas, and other towns. The *New York Sun* stated that the crowd numbered 10,000, and other accounts state from 5,000 to 15,000. Men paraded Smith through town on a carnival float to a prairie near the railroad depot. There they tied him on a wooden platform ten feet high.

The torture. Henry Vance and men of his family burned Smith with red-hot irons for fifty minutes, starting at his feet. The *Sun* identifies them as the girl's father, her brother and two uncles. Another account identifies the father, his 15-year-old son and his brother-in-law. They burned out Smith's eyes and pushed hot irons down his throat.

Then men piled wood and cottonseed hulls, the dry outer shells of cotton seeds, around the platform, poured oil on it and set it on fire. The *New York Sun* reported the torture and the burning on February 2, 1893, and Wells reprinted the report in her book *The Red Record* in 1895. The *Sun* states that people carried off pieces of the burned wood.

Scott, writing on the website BlackPast, adds that Smith rolled out of the fire and fell ten feet to the ground. People in the crowd threw a rope around him and pulled him back into the fire. She writes that men cut his shirt from his body piece by piece and threw the pieces to the crowd.

What the witnesses said. The *Sun* stated that Smith had confessed at Hope. People who had seen the girl's body told Wells they saw no sign of the rape the newspapers reported. They said they saw only a small scrape and a bruise, mostly on her neck.

The Reverend King, a Black minister in Paris, said Smith was mentally ill. King said he had tried two years before to get him into an asylum, a hospital for mentally ill people. Men drove King out of Paris for speaking

against the lynching. Wells wrote that he was "ridden out of Paris on a rail," carried out of town on a wooden pole.

The day after Smith was killed, Governor Hogg telegraphed the sheriff of Lamar County and asked for the killers to be arrested. A few days later a mob hanged Smith's stepson, William Butler, at Hickory Creek, five miles from Paris, and shot his body. Scott writes that no one was ever punished for killing William Butler either.

Police who took payments: New York, 1894

Senator Clarence Lexow and other New York state senators, sitting as a committee, investigated the New York City police in 1894 and 1895. They found that officers took payments from people who broke the law, in return for letting them go on breaking it. Their report ran to 10,576 pages. In it, they estimated that officers extorted more than $10 million a year, forcing people by threats to pay.

The owners of brothels, houses where people paid for sex, paid police captains $30,000 a year. Owners of gambling houses paid $15 to $300 a month to stay open. Officers also paid bribes, secret payments for a favor, to be promoted. Captain Timothy Creedon told the committee he had paid $15,000 to become a captain, although he had scored 97.82 on the promotion test.

An Encyclopedia.com history of the hearings states that the chief of police, Thomas Byrnes, was said to be worth $350,000. The senators also found officers taking part in bribery, frightening voters, cheating in elections and beating people.

Roosevelt's changes. Mayor William Strong put Theodore Roosevelt on the city's Board of Police Commissioners in 1895. Roosevelt brought in civil service exams for new officers, tests that a person had to pass to get a government job, and raised the physical standards. He walked the streets at midnight to check that officers were on duty, and he started police patrols on bicycles. He left in 1897 to become assistant secretary of the navy.

A court for children, Chicago, 1899

Illinois lawmakers voted to set up a court for children in Chicago in the spring of 1899. A 2019 article by the Chicago radio station WBEZ states that it was the first juvenile court in the world: a separate court for children accused of crimes, run to help the child instead of only punishing.

Before then, police arrested children, put them in handcuffs and held them overnight in jails and police stations with adult prisoners. In 1882 the Cook County jail in Chicago held more than 250 children aged 14 and under, and at least 20 of them were younger than 11. A 10-year-old boy who stole a pair of shoes waited almost two weeks in the county jail for a grand jury to hear his case.

Julia Lathrop worked at Hull House, a house on Chicago's Near West Side where Jane Addams and other women lived among poor immigrant families and helped them. Lathrop visited Illinois jails and wrote down what she found. Lucy Flower proposed a separate court for children. In 1907 a building for the children's court, with rooms where children were held, opened at Halsted and Ewing Streets.

BY 1900

If you remember one thing: White mobs killed Black, Chinese and Italian American people with no trial, and the courts punished almost none of the killers.

In 1850: A death sentence in New York was carried out with a rope, and a child arrested in Chicago could be held in jail with adult prisoners.

In 1900: New York's prisons used the electric chair, and Chicago had a court just for children, which WBEZ calls the first in the world.

Next: After 1900 the national government hired its own agents, and mobs went on taking Black prisoners out of jails.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 19 MINUTES

The national government built a police force of its own, while some officers in the South whipped Black suspects or left Black prisoners to mobs. The US attorney general put 34 federal agents, agents of the national government, to work in 1908. By the 1930s the staff of their Bureau of Investigation kept the nation's fingerprint files and worked in a crime laboratory. Federal agents hunted gangsters such as John Dillinger, and they raided the gangs that sold alcohol during Prohibition, the years when making and selling it was against the law.

Mobs still took Black prisoners out of jails and killed them. A deputy sheriff and other white men in Mississippi whipped three Black men until they confessed to a murder. The sheriff in Chattanooga sent his guards away in 1906 on the night a mob came for Ed Johnson. Three times in the 1930s, the justices of the US Supreme Court threw out verdicts because of how Black defendants had been treated.

White men, many of them made deputies by the police and given a police officer's powers, burned Greenwood, the Black district of Tulsa, in 1921 and killed as many as 300 people. No white person was sent to prison for it.

Ed Johnson

Who: A Black man wrongly convicted, or found guilty, of rape and sentenced to death, then lynched after the justices of the US Supreme Court ordered that he be kept safe.

When and where: Chattanooga, Tennessee, January to March 1906.

The justices ordered him protected, and the sheriff sent his guards away.

A jury found Ed Johnson guilty of a rape he did not commit. Rape means forcing a person into sex. The justices of the US Supreme Court stopped his hanging. A mob then lynched him on a bridge in Chattanooga, which means the men in it killed him with no trial.

A man attacked Nevada Taylor, a young white woman, from behind in January 1906, as she walked home from a streetcar stop. He choked her with a leather strap. A day or two later, officers arrested Ed Johnson, a Black man who worked as a porter at the Last Chance Saloon.

A witness, Will Hixson, may have given the police Johnson's name to collect a $375 reward. At the trial, thirteen witnesses swore that Johnson was at the saloon at the time of the attack. An all-white, all-male jury found him guilty of rape in February, and the judge sentenced him to hang. The court had chosen his lawyers, and they dropped his appeal. An appeal is a request for a higher court to look at the case again.

Two Black lawyers, Noah Parden and Styles Hutchins, took up the appeal. They asked a federal court for habeas corpus, an order to review whether a prisoner is held lawfully, and the federal judges turned them down.

Parden went to Washington and met Justice John Marshall Harlan of the US Supreme Court on March 17. Within two days the justices issued a stay, an order that stopped the hanging until they could hear the case, and ordered Sheriff Joseph Shipp to keep Johnson safe.

The night of March 19. The order appeared in Chattanooga's evening newspapers that day. That evening Shipp sent away the usual guards and left only the night jailer, Jeremiah Gibson. Between nine o'clock and midnight, a mob broke into the jail and took Johnson to the county bridge over the Tennessee River. Shipp came to the jail during the break-in and made no effort to stop the mob or to send for help.

The men put a rope around his neck, threw it over a beam and pulled him up. The rope broke or slipped, and he fell. They pulled him up a second time and shot him. One account says a deputy sheriff fired five more shots into his head. Johnson's gravestone gives his last words: "God Bless you all. I AM A Innocent Man."

A trial in the Supreme Court. For the first and only time, the justices of the US Supreme Court held a criminal trial themselves. The charge was contempt of court, the crime of defying a court's order. Twenty-five men were tried. The justices found six guilty in May 1909: Shipp, Luther Williams, Nick Nolan, Jeremiah Gibson, Henry Padgett and William Mayes.

Shipp, Williams and Nolan got 90 days in jail, and the other three got 60 days. Shipp was welcomed home as a hero. The case is *United States v. Shipp* (1909).

Judge Doug Meyer of the Hamilton County Criminal Court set aside Johnson's conviction in February 2000. He ruled that the all-white jury and the trial judge's refusal to move the trial out of Chattanooga had made it unfair. A memorial to Johnson was dedicated in Chattanooga on September 19, 2021.

A federal police force, 1908 to 1934

Attorney General Charles Bonaparte ordered the lawyers of the Department of Justice on July 26, 1908, to send most of their investigations to his chief examiner, Stanley W. Finch. Finch handed each one to one of 34 agents. Nine of the agents came from the Secret Service, and Bonaparte hired 25 himself. The group was later called the Bureau of Investigation. Today it is the Federal Bureau of Investigation, or FBI.

Attorney General Harlan Fiske Stone made J. Edgar Hoover, then 29, the Bureau's director in 1924. Hoover fired agents he called "political hacks," men who had their jobs as favors from politicians. He required new agents to pass background checks and physical tests, and from January 1928 he trained them. The Bureau had 441 agents in 1924 and 339 five years later.

Fingerprints. Hoover set up a division to hold the country's fingerprint files on July 1, 1924. A fingerprint is the pattern of ridges on a fingertip, and it is different for every person. A print left on a glass or a gun can show who touched it. Police anywhere could send in prints and ask whether they matched a known criminal.

Bureau officials began keeping the national crime counts in 1930. The FBI's own history gives November 24, 1932, as the official birthday of its crime laboratory, which agent Charles Appel did most of the work to build.

Gangsters. Gunmen killed four lawmen, one of them a Bureau agent, at the train station in Kansas City in June 1933. The FBI's history names a gangster known as "Pretty Boy" Floyd as one of the gunmen. Agents and local police killed Floyd in a shootout on an Ohio farm in October 1934.

John Dillinger was a different gangster, and his gang robbed banks across the middle of the country. Agents led by Melvin Purvis found Dillinger in Chicago in July 1934 and shot him dead as he left a movie theater. In these years members of Congress also gave the Bureau's agents the power to carry guns and make arrests.

Mobs and the courts, 1908 and 1930

White mobs attacked Black residents of Springfield, Illinois, for nearly three days in August 1908. They lynched two men, Scott Burton and William Donegan, and destroyed dozens of homes. The mobs drove nearly 2,000 Black residents out of the city for good. Officials called out the state militia, the state's part-time soldiers. About 150 people were arrested, and few of them were convicted, a National Park Service article states.

A white mob of 5,000 to 10,000 people broke into the Grant County Jail in Marion, Indiana, on August 7, 1930. They beat and hanged two Black men, Thomas Shipp and Abram Smith, both 19. A third prisoner, James Cameron, 16, survived. He was later convicted as an accessory, a person who helps with a crime, and served four years. He was pardoned, officially forgiven, in 1993.

The NAACP, a group that worked for the rights of Black Americans, named 27 suspects in the mob. All-white juries found the leaders who were tried not guilty.

Tulsa, 1921: no one sent to prison

As many as 10,000 white Tulsans attacked Greenwood, the Black district of Tulsa, Oklahoma, on the night of May 31, 1921, and the police helped organize them. Greenwood stood on Muscogee (Creek) land. The attack lasted into the afternoon of June 1. The attackers burned 35 city blocks and killed Black residents.

The count of the dead. Estimates run from 50 to 300. Lawyers at the US Department of Justice wrote in 2025 that the massacre "killed as many as 300 Tulsans, perhaps even more." Some bodies were thrown in the Arkansas River, and some were buried in unmarked mass graves.

The attack began with an arrest. Tulsa police arrested Dick Rowland, a 19-year-old Black man, after a white man accused him of attacking Sarah Page, the white woman who ran an elevator he used. Police Chief John Gustafson later told a federal agent that Page had no scratches or bruises. She said

Rowland had not said anything bad to her, and she would not press charges. A white crowd gathered at the courthouse. Armed Black men from Greenwood also came to the courthouse.

The deputies. Tulsa police then made hundreds of white men special deputies, men given a police officer's powers for a time. The Justice Department's 2025 review states that many of them had been calling for a lynching and had been drinking. Police officers helped organize these deputies into the forces that attacked Greenwood.

At Gustafson's later trial, a witness named John Oliphant said the police "were the chief fellows setting fires." The 2025 review reports that Oliphant named two men as the chief arsonists, the leaders in setting the fires: a police officer named Brown, and a man called "Cowboy Long."

Dr. A. C. Jackson, a Black surgeon, walked out of his house with his hands up to surrender. A young white man shot him, and Jackson died of his wounds. No one was ever charged with killing him.

The camps. Governor James Robertson declared martial law, rule by the military instead of by ordinary officials, at 11:30 in the morning on June 1. Police, special deputies and National Guard soldiers arrested Black Tulsans whether or not anyone suspected them of a crime. They held between 4,000 and 6,000 people under armed guard, at Convention Hall, at McNulty Park, a baseball park, and at the fairgrounds. Guard officers arrested some white residents for stealing, but they held no white residents in the camps.

The grand jury. A state grand jury, a group of citizens who decide whether to charge people with crimes, heard almost 200 witnesses. Its members charged about 70 men, many of them Greenwood's Black leaders, with starting a "riot." The *Tulsa Tribune* ran the headline "Roundup of 64 Indicted Blacks Is On: No Warrants Issued for Whites" on June 17. Indicted means charged with a crime. The grand jurors' report, printed on June 26, identified the armed Black men who had gone to the courthouse as a "direct cause."

Most of the cases were later thrown out, including the one against Dick Rowland. Some white men were accused of looting, stealing during a riot, and none of them went to prison. No white person was ever sent to prison for the

killings or the burning.

The grand jurors also charged Police Chief Gustafson with neglect of duty, which means failing to do his job, and with dishonest dealings from before the massacre. He was convicted and removed from his job. Less than a year before the massacre, a mob had taken a white prisoner, Roy Belton, from the same jail and lynched him, and Gustafson had ordered his police not to step in.

Members of a state commission published a report on the massacre in February 2001 that recommended paying the survivors. Lawyers in the Civil Rights Division of the US Department of Justice published their own review, *Review and Evaluation: Tulsa Race Massacre*, in January 2025. The review states that police and white residents worked together in the attack.

The review also states that if today's civil rights laws had been in force in 1921, the attackers could have been tried and convicted. The youngest of them would now be more than 115 years old, so no one can be tried.

The Osage murders, 1921 to 1929

Men murdered members of the Osage Nation in Oklahoma in the early 1920s to take their oil money. The Osage earned more than $30 million in 1923 from oil under their land, the Osage reservation, land set aside for the nation. Osage people held headrights, shares of that money, and when an owner died, a person who was not Osage could get the share.

The guardians. Under a 1921 law, local judges appointed white guardians to control the money of many Osage adults, and the judges handed many of these jobs to their friends. Guardians stole from the Osage people whose money they controlled, and some guardians and husbands killed Osage people to inherit their headrights.

Mollie Burkhart's family. The cattleman William Hale, known as the "King of the Osage Hills," set out to get the headrights of Mollie Burkhart's family. Mollie was married to his nephew, Ernest Burkhart. Hale's plan needed four women of the family to die in a set order: first Mollie's sister Anna, then their

mother, then two more of Mollie's sisters. After those four deaths, all their headrights would pass to Ernest, and through his nephew Hale could take control of them. Federal agents later proved that Hale ordered the murders.

Members of Mollie's family died one after another:

- Anna Brown, Mollie's sister, was shot on May 22, 1921.
- Lizzie Q. Kyle, their mother, died in July 1921, and people suspected poison.
- Henry Roan, their cousin, was shot in January 1923 on Hale's orders, for his insurance money.
- Rita Smith, another sister, died on March 10, 1923, when men blew up her house. The bomb also killed her husband, Bill Smith, and Nettie Brookshire, who worked in their house.

Mollie herself was probably being poisoned.

The count. Counts of the dead differ. The Oklahoma Historical Society and the FBI each give about two dozen, and the Osage Nation counts more than 60. People who told others what they suspected got death threats, and some were killed. Someone threw a lawyer, W. W. Vaughn, from a train.

Members of the Osage Tribal Council asked federal officials to send detectives in April 1923, and Bureau of Investigation officials sent agents. Tom White led four agents who worked undercover, in secret and under false jobs, as a cattle buyer, an insurance salesman, an oil prospector and an herb doctor.

Ernest Burkhart pleaded guilty in June 1926 and got a life sentence. A jury convicted Hale in January 1929, and he was sent to prison for life. Kelsie Morrison and John Ramsey also got life sentences. Hale, Ramsey and Burkhart were later let out on parole, let out early and watched by officials. Governor Henry Bellmon pardoned Burkhart in 1965.

A cabinet member convicted, 1929

Albert Fall was secretary of the interior, a member of the president's cabinet in charge of federal lands. He leased two oil fields that the government kept for the navy to two oil men. The fields were Teapot Dome in Wyoming and Elk Hills in California. Edward Doheny gave Fall a $100,000 "loan" with no interest, and Harry Sinclair gave him about $300,000 in bonds and cash.

A jury found Fall guilty on October 25, 1929, of taking a bribe, a secret payment for a favor, from Doheny. He was sentenced to one year in prison and a $100,000 fine. He was the first person convicted of a crime he committed as a cabinet member. A jury found Doheny not guilty of paying the bribe. Sinclair was jailed for contempt of Congress, which means refusing to obey Congress, and for trying to influence a jury. His term was six months by one account and nine by another.

The end of convict leasing in Alabama, 1928

Alabama's officials rented county prisoners, more than 95 percent of them Black, to coal companies until 1928. This was called convict leasing. The companies' bosses forced the prisoners to work in the mines and whipped them for talking back, for trying to escape and to make them work harder. An explosion at the Banner mine killed 123 Black county prisoners on April 8, 1911.

James Knox. James Knox, a prisoner from Mobile, was killed at the Flat Top mine in 1924. His death was first reported as a suicide by swallowing poison. An autopsy, a doctor's examination of the body after death, showed that his heart had failed and that someone had injected the poison into his body after he died.

The City of Birmingham's history of the case states that his fatal injuries came from being whipped with a steel wire and held in hot water. The historian Mary Ellen Curtin, writing in the *Encyclopedia of Alabama*, describes him as a prisoner tortured by being lowered into "a vat of boiling water." Neither

account names the men who whipped him, put him in the water or injected the poison. Alabama's officials ended convict leasing on June 30, 1928, after his death, the last in any state to do so.

Eliot Ness and Al Capone

Who: The Chicago gang boss who sold illegal beer and liquor during Prohibition, and the federal agent whose team raided his breweries.

When and where: Chicago, 1925 to 1932.

Movie: *The Untouchables* (1987), a film directed by Brian De Palma. It is a drama, not a documentary, and it changes many of the facts.

The gang boss went to prison for not paying his taxes.

Making and selling alcohol was against the law from 1920 to 1933, under the Eighteenth Amendment to the Constitution, and the ban was called Prohibition. Al Capone became the boss of a Chicago gang in 1925, after its leader, Johnny Torrio, was wounded and quit. His men made and sold beer and liquor.

Federal officials hired Eliot Ness, who was 26, to run the Prohibition agents in Chicago in 1929. Ness's team grew from six agents to about ten. From March 1931 they raided Capone's stills, where liquor was made, and his breweries. Gangsters offered them bribes, and the agents turned them down. A Chicago newspaper writer, Charles Schwarz, called them "untouchables."

Capone was arrested several times. Police in Philadelphia arrested him for carrying a hidden gun on May 17, 1929, and he served nine months. A federal judge sentenced him to six months for contempt of court in February 1931.

The tax case. Agents of the Treasury Department built the case that sent him away for years. A jury found him guilty of tax evasion, not paying taxes that are owed, on October 18, 1931. On November 24 the judge sentenced him to eleven years in federal prison and fined him $50,000. He also had to pay $215,000 in back taxes.

> Ness was one of the agents who took Capone to the train for the federal prison in Atlanta on May 3, 1932. It is the only time the two men are known to have met. Capone later served part of his sentence at Alcatraz, a federal prison. He was released on November 16, 1939, with brain damage caused by syphilis, a disease passed on through sex. Ness died of a heart attack in 1957, and his book *The Untouchables* came out months after his death.

Beaten into confessing: the third degree

The "third degree" meant police using cruelty to force a prisoner to confess. President Herbert Hoover set up a national commission to study crime and law enforcement in May 1929. The commission's 1931 report on police in 15 cities states that "physical brutality, protracted questioning, threats, prolonged illegal detention" were "widespread." Protracted questioning means questioning that goes on for hours or days, and prolonged illegal detention means holding a person for a long time when the law does not allow it.

Brown v. Mississippi. A man named Raymond Stewart died in Mississippi on March 30, 1934, and three Black men were later charged with his murder. That night Deputy Sheriff Dial and a group of white men seized Arthur Ellington, a Black man. They hanged him by a rope from the limb of a tree, let him down, and hanged him again. When he still said he was innocent, they tied him to the tree and whipped him. Days later the deputy arrested him again and whipped him until he agreed to confess.

On April 1 the same deputy, the jailer and other white men made Ed Brown and Henry Shields take off their clothes. They bent the two men over chairs and cut their backs open with a leather strap that had buckles on it. They kept whipping until the men confessed in the words the deputy demanded. The three men were charged with Stewart's murder on April 4, tried the next day and sentenced to death.

In court the deputy admitted the whippings. Speaking of Ellington's whipping, he said it was "Not too much for a negro." He added, "not as much as I would have done if it were left to me." Negro was a word used then for a Black person.

All the justices of the US Supreme Court agreed in 1936, in *Brown v. Mississippi*, to throw out the convictions. Chief Justice Charles Evans Hughes wrote: "The rack and torture chamber may not be substituted for the witness stand." The rack was an old device for torturing a person by stretching the body.

The Scottsboro cases, 1931 to 1937

Nine Black teenagers and young men, aged 13 to 20, were riding a freight train in Alabama on March 25, 1931. When the train stopped near the town of Paint Rock, local police and a mob seized them. Two white women on the train, Victoria Price and Ruby Bates, accused them of rape. The nine were Olen Montgomery, Clarence Norris, Haywood Patterson, Ozie Powell, Willie Roberson, Charlie Weems, Eugene Williams, and the brothers Andy and Roy Wright.

Juries sentenced eight of them to death. At the trial of Roy Wright, who was 13, the jurors could not agree between death and life in prison, and the judge declared a mistrial, which means the trial ended with no verdict. In 1932, in *Powell v. Alabama*, the justices of the US Supreme Court ordered new trials because the young men had not had real lawyers.

Ruby Bates later said that Price had made up the story to avoid being charged with vagrancy, having no home or job. Bates then testified for the defense. Judge James Horton set aside a guilty verdict against Patterson. The justices threw out the convictions again in 1935, in *Norris v. Alabama*, because officials had kept Black people off the county's jury lists.

Seven more years of trials followed. The men were let out of prison between 1943 and 1976. Governor Robert Bentley of Alabama signed a law in 2013 that led to pardons for all nine.

BY 1950

If you remember one thing: The national government now had detectives of its own, and the justices of the Supreme Court began throwing out verdicts won by torture or by trials without real lawyers.

One number: The Department of Justice started with 34 agents in 1908. The Bureau had 441 by 1924, about thirteen times as many.

Next: After 1950 the number of people in American prisons grew more than eight times over, and the justices wrote new rules for the police station.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 24 MINUTES

The number of people in American prisons grew more than eight times over in these fifty years, by the count of the Bureau of Justice Statistics, part of the US Department of Justice. In 2000, about 46 of every 100 sentenced prisoners were Black. From the 1970s on, lawmakers in Congress and the states wrote long prison terms that judges had to give, many of them for drug crimes.

New rules. The justices of the US Supreme Court set new rules for police and courts between 1961 and 1968. Police could not use evidence from an illegal search. State courts had to give a lawyer to a poor person charged with a serious crime. Police had to warn people of their rights before questioning them.

The justices struck down the death-penalty laws then in use in 1972 and allowed new ones in 1976. Some trials still ended with no one convicted, among them the 1955 murder trial for the killing of Emmett Till and the 1992 state trial of the officers who beat Rodney King.

Emmett Till

Who: A 14-year-old Black boy from Chicago, kidnapped and murdered by two white men whom an all-white jury then found not guilty.

When and where: Money and Sumner, Mississippi, August and September 1955.

Movie: *Till* (2022), a feature film about his mother, Mamie Till-Mobley, and her fight after his death.

An all-white jury set his killers free after 67 minutes.

Emmett Till was 14 and lived in Chicago. He was visiting relatives near Money, Mississippi, in August 1955. On August 24 he went into Bryant's Grocery and Meat Market, owned by a white couple, Roy and Carolyn Bryant. As Carolyn Bryant left, he whistled at her. Lawyers at the US Department of Justice tell these facts in their 2021 notice closing the case.

Between 2 and 3:30 in the morning of August 28, Roy Bryant and his half-brother, J. W. Milam, came to the house of Till's great-uncle, Mose Wright, who was 64. Milam carried a pistol and a flashlight. The two men took the boy away by force, with at least one other person.

Three days later his body was found in the Tallahatchie River. His killers had beaten him on his back and hips and shot him above the right ear, and one eye had been forced from its socket. The men had fastened a cotton gin fan around his neck with barbed wire to sink the body. The fan weighed 70 to 75 pounds.

He was identified by his father's silver ring. His mother, Mamie Till Bradley, later Mamie Till-Mobley, held an open-casket funeral in Chicago so that people could see what had been done to him.

The trial. Bryant and Milam were tried for murder in the Tallahatchie County Courthouse in Sumner in September 1955. Women and Black people were kept off the jury, and the Justice Department's 2021 notice does not name the officials who kept them off. Mose Wright stood up in court and pointed to Milam as one of the men.

The all-white, all-male jury found both men not guilty on September 23, after 67 minutes. One juror said, "If we hadn't stopped to drink pop, it wouldn't have taken that long." In November a grand jury refused to charge them with kidnapping, although they had admitted taking the boy.

Bryant and Milam told the writer William Bradford Huie, for *Look* magazine, in January 1956 that they had kidnapped and murdered Till. The magazine paid them between $3,600 and $4,000. They could not be tried again for the murder, because of the rule called double jeopardy: a person who has been found not guilty cannot be tried a second time for the same crime.

FBI agents reopened the case in 2004. A Mississippi grand jury did not charge Carolyn Bryant in February 2007. Justice Department lawyers reviewed the case again after 2017 and closed it in December 2021, stating that they could not charge anyone with a federal crime. President Joe Biden made places connected to Emmett Till and his mother a national monument on July 25, 2023.

Clarence Earl Gideon

Who: A poor man in Florida who was refused a lawyer, wrote to the US Supreme Court from prison in pencil, and won the right to a lawyer for every person charged with a serious crime.

When and where: Panama City, Florida, 1961 to 1963.

Movie: *Gideon's Trumpet* (1980), a television film with Henry Fonda as Gideon, based on Anthony Lewis's 1964 book.

He asked the Supreme Court for a lawyer, in pencil, from prison.

Someone broke into the Bay Harbor Pool Room in Panama City, Florida, on June 3, 1961. The thief took coins from the jukebox and the cigarette machine, and beer, wine and soda. A 22-year-old man named Henry Cook said he had seen Clarence Earl Gideon leave with his pockets full of coins.

Gideon, who was 50, had no money for a lawyer. Under Florida's law, only people who could be sentenced to death got free lawyers, so Judge Robert McCrary Jr. refused to give him one. Gideon defended himself in court. The jury convicted him on August 4, 1961, and the judge sentenced him to five years in prison.

From the state prison at Raiford, Gideon wrote to the US Supreme Court in pencil, asking the justices to hear his case. The justices gave him a lawyer, Abe Fortas. All nine justices agreed on March 18, 1963, in a ruling written by Justice Hugo Black, that a state must give a lawyer to a person charged with a felony, a serious crime, who cannot pay.

At Gideon's second trial, on August 5, 1963, a local lawyer, W. Fred Turner, showed that Cook had lied at the first trial about his own criminal record. The jury found Gideon not guilty after an hour. He died in 1972.

Rules for the police station, 1961 to 1968

The justices of the Supreme Court wrote several more rules for police and courts in these years.

Mapp. Cleveland police forced their way into the home of Dollree Mapp on May 23, 1957. They waved a paper they called a search warrant, a judge's written order allowing a search, and no such paper was ever shown in court. They searched the house and found books they called obscene, meaning too sexual for the law to allow. She was sentenced to one to seven years.

Six of the nine justices ruled on June 19, 1961, in *Mapp v. Ohio*, that evidence police get from an illegal search cannot be used in a state trial.

Miranda. Phoenix police officers Carroll Cooley and Wilfred Young arrested Ernesto Miranda on March 13, 1963, and questioned him for two hours about the kidnapping and rape of an 18-year-old woman. He confessed. No one had told him he could stay silent or have a lawyer.

Five of the nine justices ruled on June 13, 1966, in *Miranda v. Arizona*, that police must tell a person they are holding about these rights before questioning. Chief Justice Earl Warren wrote the ruling. He based it on the Fifth Amendment of 1791, which forbids forcing anyone to be a witness against himself.

Afterward, officers across the country began reading people their rights aloud from "Miranda warning" cards. Arizona prosecutors, the government lawyers who bring the charges in court, tried Miranda again without the confession, and a jury convicted him again on March 1, 1967.

Gault. The sheriff of Gila County, Arizona, took Gerald Gault, 15, into custody in June 1964 without telling his parents. A neighbor, Ora Cook, had complained that he made an obscene phone call. Judge Robert McGhee sent him to the State Industrial School until he turned 21, about six years. An adult could have been fined for the same act. Eight of the nine justices ruled in 1967 that children in juvenile court have the right to hear the charges, to have a lawyer, to question witnesses and to stay silent.

Terry. Cleveland detective Martin McFadden stopped John W. Terry on October 31, 1963, patted the outside of his clothes and found a gun. Eight of the nine justices ruled on June 10, 1968, in *Terry v. Ohio*, that police may stop a person they reasonably suspect is armed and about to commit a crime. They may pat the outside of the person's clothes for weapons, even without grounds to arrest, which is called a stop and frisk.

BY 1968: A poor person charged with a serious crime got a free lawyer, police had to warn a suspect of the right to stay silent, and evidence from an illegal search could not be used in a state trial.

The men who killed civil rights workers, in court

Members of the Ku Klux Klan and some Southern officers killed people who worked for Black Americans' rights in the 1960s. The Ku Klux Klan is a secret white group that used terror against Black people and their supporters. In the six cases below, nobody was convicted of murder at the time.

Jackson, Mississippi, 1963. Byron De La Beckwith shot Medgar Evers, who led the NAACP's work in Mississippi, in the driveway of his home in Jackson in June 1963. Beckwith was tried twice in 1964, and both juries could not agree. A jury convicted him in 1994, 31 years after the killing.

Birmingham, 1963. A bomb exploded under the steps of the 16th Street Baptist Church in Birmingham, Alabama, on September 15, 1963. It killed four girls: Addie Mae Collins, 14, Denise McNair, 11, Carole Robertson, 14, and Cynthia Wesley, 14. Klan members had set it.

FBI agents named Robert Chambliss as the main suspect. FBI Director J. Edgar Hoover closed the case in 1968 without charging anyone and ordered the evidence sealed. Chambliss was convicted in 1977. Thomas Blanton was convicted in 2001 and Bobby Frank Cherry in 2002, with the help of secret FBI recordings made in 1964. Another suspect died before he could be tried.

Neshoba County, 1964. Local police in Neshoba County, Mississippi, jailed three civil rights workers for "speeding" on June 21, 1964. They were James Chaney, 21, a Black college student from Mississippi, and Andrew Goodman,

20, and Michael Schwerner, 24, white men from New York. After dark the police let them go "into the hands of the Ku Klux Klan." The three were stopped again, forced into a sheriff's car, driven to a country road and shot dead.

A federal jury convicted seven of the 18 men charged, among them a deputy sheriff and the head of a Mississippi Klan group. The verdict came on October 20, 1967, and the sentences ran from three to ten years. Edgar Ray Killen, a Klan leader and former preacher who had organized the killings, went free because one juror would not convict a preacher. A jury in Mississippi convicted Killen of manslaughter, killing a person without planning to murder, on June 21, 2005, and he died in prison in 2018.

Marion, Alabama, 1965. Alabama State Trooper James Bonard Fowler shot Jimmie Lee Jackson, 26, in the stomach in a cafe in Marion in February 1965, and Jackson died eight days later. Fowler pleaded guilty in 2010 to misdemeanor manslaughter, a lesser charge for killing a person. He was sentenced to six months and served five.

Selma, 1965. Four men in Selma attacked James Reeb, a minister from Boston, in March 1965. One of them struck him in the head with a club, and Reeb died two days later. The prosecutor let a man whose brother was a suspect sit on the jury, and the jury found all three men tried not guilty.

Highway 80, Alabama, 1965. Three Klan members shot and killed Viola Liuzzo, a mother of five from Detroit, on March 25, 1965, as she drove on Highway 80. A paid FBI informer rode in their car. An informer is a person who secretly passes information to the police or the FBI. State juries did not convict the three men. Federal juries convicted all three of violating her civil rights, and each got 10 years in prison.

In these six cases, every conviction came from a federal jury or came 14 to 45 years after the killing. No one was ever convicted of killing James Reeb.

Attica, September 1971

About 1,281 of the roughly 2,200 men held at Attica, a New York state prison, took over the prison on September 9, 1971. They held 42 guards and other workers as hostages. In July the prisoners had made demands about food, mail, medical care and parole. During the takeover someone beat a guard, William Quinn, and he died. Governor Nelson Rockefeller refused to come to the prison.

Retaking the prison. Officers dropped tear gas into the prison yard at 9:46 in the morning on September 13. State troopers, deputies and guards fired into the smoke, some with shotguns loaded with buckshot. They killed at least 39 people: 29 prisoners and 10 of the hostages. Counting the whole four days, 43 people died.

Rockefeller and other officials first said the prisoners had cut the hostages' throats. The medical examiners, the doctors who examine bodies after a death, found that the hostages had died of gunshot wounds from the officers' guns. Afterward, prison officers tortured prisoners who had survived. Pages of an official report released in 2015 describe torture, burning and sexual abuse.

Who was charged. Prosecutors charged 62 prisoners with 1,289 crimes. They charged one state trooper, for reckless endangerment, putting people in danger through carelessness. A jury found the prisoner John Hill guilty of murdering William Quinn on April 5, 1975, and found another prisoner, Charley Joe Pernasilice, guilty of assault in Quinn's death.

Governor Hugh Carey pardoned the prisoners who had pleaded guilty in December 1976. Hill received clemency, a governor's mercy that cut his punishment short, about a year after his trial. New York State officials paid $8 million in settlements to prisoners and their families in 2000 and $12 million to the families of the prison workers in 2005.

Executions stop and start again, 1972 to 1999

Five of the nine justices struck down the death-penalty laws then in use on June 29, 1972, in *Furman v. Georgia*. More than 600 people were on death row, waiting to be executed. Justice Potter Stewart wrote that the death sentences were "cruel and unusual in the same way that being struck by lightning is cruel and unusual." Being struck by lightning happens to very few people, by chance.

Lawmakers in 35 states and in Congress wrote new death-penalty laws in the next four years. The justices allowed them on July 2, 1976, in *Gregg v. Georgia*.

Gary Gilmore murdered Max Jensen, 25, a gas station worker, on July 19, 1976, and Bennie Bushnell, 26, a motel manager, the next night, in Utah. He asked to be executed. At 8:07 in the morning on January 17, 1977, a firing squad shot him at the Utah State Prison. A firing squad is a group of shooters who fire rifles at the prisoner's heart. There were five shooters, and prison officials said one of them had a blank. Gilmore was the first person executed after the 1976 ruling.

Texas officials carried out the first execution by lethal injection on December 7, 1982. Lethal injection means killing a person with drugs put into a vein through a tube in the arm. The Death Penalty Information Center, a group that collects facts about the death penalty, describes the usual three-drug method. The first drug puts the person to sleep, the second stops the muscles from moving, which stops the breathing, and the third stops the heart. Some states later used a single large dose of a drug such as pentobarbital.

New death sentences reached their highest number, 325, in 1986. Executions rose to 98 in 1999, the most in any year since 1976.

Wounded Knee, 1973: the marshals and the trial

Members of the American Indian Movement took over the village of Wounded Knee, South Dakota, on February 27, 1973, and held it for 71 days. The movement had begun in Minneapolis in 1968, when its members patrolled the streets to watch for police abuse of Native people.

About 200 Oglala Lakota and movement members held the village. They were protesting against the head of the tribal government on the Pine Ridge Reservation and against the treaties the United States had broken. They chose Wounded Knee because soldiers of the 7th Cavalry had killed between 250 and 300 Lakota there in 1890. US marshals, FBI agents and other federal officers surrounded the village with armored vehicles and automatic weapons.

The shootings. Someone opened fire on a group of US marshals on the night of March 16. A bullet hit one of them, Lloyd Grimm, and left him paralyzed from the waist down. The Associated Press reported in 2000 that no suspects were ever found.

A bullet hit Frank Clearwater, an Eastern Cherokee man inside the village, in the head on April 17, and he died on April 25. The FBI released a report on deaths on the Pine Ridge Reservation, where Wounded Knee lies, in 2000. It found that Clearwater was killed by gunfire from federal officers, who were firing back after people shot at them.

A federal sniper shot and killed Lawrence "Buddy" Lamont, an Oglala man, on April 26. The FBI report gives the date as April 27 and says he died in a gunfight with federal officers at a roadblock. A US attorney, a federal prosecutor, reviewed his killing and charged no one.

Federal prosecutors charged the movement's leaders, Dennis Banks and Russell Means, for their part in the takeover. After their trial had run for eight and a half months, US District Judge Fred Nichol threw out the charges in 1974. He wrote that "the misconduct by the government in this case is so aggravated that a dismissal must be entered in the interests of justice." Aggravated here means serious.

Drug laws and long sentences, 1973 to 1994

Lawmakers wrote the long sentences that filled the prisons. Some of those sentences were mandatory minimums. A mandatory minimum is the shortest sentence a law allows for a crime, and a judge cannot give less.

New York's lawmakers passed Governor Nelson Rockefeller's drug laws in 1973. Selling two ounces or having four ounces of heroin, cocaine or marijuana brought 15 years to life in prison.

The basketball player Len Bias died from cocaine on June 19, 1986. House Speaker Tip O'Neill had Democratic leaders write a new federal drug law, and the Republicans who then ran the Senate passed their own. President Ronald Reagan signed the law on October 27, 1986.

Crack and powder. Under that law, 5 grams of crack cocaine brought at least five years in federal prison, the same sentence as 500 grams of powder cocaine. Crack is a form of cocaine that is smoked. A person with crack faced the same sentence as a person with 100 times as much powder.

Staff of the US Sentencing Commission reported that in 1992, about 91 of every 100 people sentenced in federal court for crack were Black, and about 3 were white. In 2004, of the people who entered treatment for crack, 53 of every 100 were Black and 38 were white.

Members of Congress passed the largest crime law in the country's history in 1994. Representative Jack Brooks of Texas sponsored it in the House. Senator Joe Biden of Delaware wrote the Senate version, and President Bill Clinton signed it. The law provided money for 100,000 new police officers and $9.7 billion for prisons. Under it, 60 more federal crimes could be punished by death, and people in prison could no longer get federal college grants.

BY 1994: Five grams of crack brought the same five-year federal sentence as 500 grams of powder cocaine, and members of Congress had voted money for 100,000 new police officers and $9.7 billion for prisons.

Kemba Smith

Who: A college student sentenced to 24 and a half years in federal prison for a crack cocaine ring run by a man who beat her, though she never sold or used drugs.

When and where: Virginia, and federal prison, 1994 to 2000.

Movie: *Kemba* (2024), a film about her life, shown on BET+.

A first-time offender, she got 24 and a half years, no parole.

Kemba Smith grew up near Richmond, Virginia, and went to Hampton University. There she met Peter Hall, who ran a crack cocaine ring. The NAACP Legal Defense Fund, a group of civil rights lawyers, states that she was a victim of his violence at home.

She turned herself in to federal agents on September 1, 1994. She pleaded guilty to conspiracy to sell cocaine, to lying to federal agents and to conspiracy to launder money. Conspiracy means agreeing with others to commit a crime, and to launder money means to hide where money from crime came from.

The NAACP Legal Defense Fund states that she never sold or used drugs, and that federal prosecutors still charged her with conspiracy to sell cocaine. Federal judge Richard B. Kellam sentenced her to 24 years and 6 months in federal prison, with no parole.

She was pregnant during her case. She said of her son, "I had two days with him before giving him to my parents."

President Bill Clinton cut her sentence short on December 22, 2000, after about six and a half years in prison. The Clinton Library describes her as "a first time non-violent drug offender." President Joe Biden pardoned her on January 19, 2025.

How many people were in prison

Officials of the Bureau of Justice Statistics have counted prisoners since 1925. These are their counts of people in state and federal prisons:

- 1950: about 166,000
- 1972: about 196,000
- 1990: about 771,000
- 2000: about 1.38 million

From 1950 to 1972 the count rose by about 30,000. Then it began to climb in 1974, and by 2000 it was about seven times the count of 1972. The share of Americans in prison grew more than four times over: about 1 of every 1,000 Americans in 1950, and almost 5 of every 1,000 in 2000.

In 2000, almost 10 of every 100 Black men aged 25 to 29 were in prison, against about 1 of every 100 white men that age.

Killed for his shoes, 1989

James David Martin, 17, killed Michael Eugene Thomas, 15, for his basketball shoes in 1989. Martin pleaded guilty to a lesser charge than murder and got seven years in prison. After his release he killed two more people.

Thomas was a ninth grader at Meade Senior High School in Anne Arundel County, Maryland. He had bought the shoes, Air Jordans, for $115.50. On May 2, 1989, Martin led him into the woods near the school and strangled him to death. Then Martin took the shoes and ran. The *New York Daily News*, the *New York Times*, the *New York Post* and *Sports Illustrated* reported that Martin raped the boy before he killed him.

Seven years. The school stood on federal land, so Martin was tried in federal court. He pleaded guilty to voluntary manslaughter, a charge for killing that is less serious than murder, and he was sentenced to seven years in prison. In May 1990 *Sports Illustrated* ran a cover story by Rick Telander called "Your Sneakers or Your Life."

Two more killings. Martin was released in 1996 and moved to New York City. In the Bronx on February 23, 1998, he beat 14-year-old Marleny Cruz and strangled her to death. In 2005 he murdered his wife, Cicela Santiago, in Allentown, Pennsylvania, and he was sentenced there to 22 to 40 years in prison.

Bronx detectives matched DNA from under Cruz's fingernails to Martin in 2011. He pleaded guilty to manslaughter in her killing in 2016 and got 20 more years. The Bronx district attorney said the plea was for "raping and strangling" her.

Rodney King, 1991 and 1992

Los Angeles police officers Laurence Powell, Timothy Wind and Theodore Briseno and Sergeant Stacey Koon shocked Rodney King with a Taser, a weapon that fires an electric shock, early on March 3, 1991, after a car chase. They hit him with their batons while other officers watched. Police Chief Daryl Gates said the officers struck him "between fifty-three and fifty-six times." King had a broken bone in his face, a broken right ankle, and bruises and cuts. George Holliday filmed the beating from his apartment.

The trial was moved to Simi Valley, in Ventura County. The jury included ten white jurors. The jurors found all four officers not guilty of assault on April 29, 1992, and they could not agree on one charge against Powell. Rioting spread across Los Angeles from April 29 to May 3. One count gives 63 dead and another gives 55. Police or National Guard soldiers shot 10 or 11 of them. More than 12,000 people were arrested.

A federal jury convicted Koon and Powell of violating King's civil rights in 1993, and each got 30 months in prison. The jury found Wind and Briseno not guilty. King won $3.8 million from the city of Los Angeles.

Two deaths at police hands in New York, 1983 and 1999

Michael Stewart, 1983. New York City Transit Police officers arrested Michael Stewart, 25, a Black graffiti artist, at the First Avenue subway station on September 15, 1983, for writing graffiti. In their custody he was beaten unconscious. He was hogtied, his ankles bound and his hands tied to his feet with an elastic strap. The account of his death does not name which officers struck him.

He reached Bellevue Hospital in a coma and died on September 28, after 13 days. The cause of death was listed as cardiac arrest, which means the heart stopped. The city's medical examiner, Elliot Gross, gave three different findings, among them an injury to the neck and blows to the body. Doctors hired by Stewart's family found that he had been strangled.

Six officers were tried for criminally negligent homicide, causing a death through carelessness, and for assault and perjury, lying under oath. An all-white jury found them not guilty on November 24, 1985. A lawsuit against eleven officers and the transit authority ended with a payment of $1.7 million.

Amadou Diallo, 1999. Four New York City police officers in plain clothes, Sean Carroll, Richard Murphy, Edward McMellon and Kenneth Boss, fired 41 shots at Amadou Diallo outside his building in the Bronx on February 4, 1999. Diallo, 23, was an immigrant from Guinea. Nineteen of the shots hit him and killed him. He had no gun, and he had taken out his wallet.

The officers were charged with second-degree murder, and the trial was moved to Albany. A jury found all four not guilty on February 25, 2000. City officials paid his family $3 million in 2004.

The wrong man: DNA and the Central Park case

DNA is the chemical code inside the cells of a living body, and it differs from person to person. Cells left at a crime can be tested to show whether they came from a certain person.

Kirk Bloodsworth. A Maryland jury convicted Kirk Bloodsworth in 1985 of the 1984 rape and murder of Dawn Hamilton, a nine-year-old girl in Rosedale, Maryland. The jury convicted him on the word of five witnesses, and he was sentenced to death.

A DNA test in 1993 showed that the attacker's cells, saved in a paper bag in the judge's chambers, were not his. He was freed after more than nine years in prison, and Governor William Donald Schaefer pardoned him. He was the first person on death row in the United States cleared by DNA. In 2003 the cells were matched, through a DNA database, to Kimberly Shay Ruffner, who had been held in a cell one floor below Bloodsworth. Ruffner pleaded guilty in 2004.

The lawyers Barry Scheck and Peter Neufeld had founded the Innocence Project, a group that uses DNA tests to free people who were wrongly convicted, at Cardozo Law School in New York in 1992, a year before Bloodsworth was cleared.

Central Park, 1989. A man attacked and raped Trisha Meili on April 19, 1989, while she was running in Central Park in New York City. Police questioned five teenagers for at least seven hours before recording their statements on video. They were Antron McCray, 15, Kevin Richardson, 14, Yusef Salaam, 15, Raymond Santana, 14, and Korey Wise, 16.

Four of them confessed on video, then took it back within weeks, saying the police had lied to them and pressured them. The DNA found at the scene matched none of the five. Donald Trump paid for full-page ads in four New York newspapers on May 1, 1989, calling for the death penalty. The ads named no defendant. Juries convicted all five teenagers in 1990.

BY 2000

If you remember one thing: The justices gave accused people new protections in the 1960s, and from the 1970s lawmakers wrote the long sentences that filled the prisons.

In 1960: Police did not have to warn a suspect that he could stay silent or have a lawyer.

In 2000: Police had to give that warning before questioning, and prisons held about seven times as many people as in 1972.

Next: In 2002 a judge cleared the five teenagers from Central Park, and after 2009 the prison count began to fall for the first time since 1972.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 18 MINUTES

American prisons held about 1.62 million people at the end of 2009, the most ever counted. Then the count fell for the first time since 1972, and by the end of 2023 it was about 1.25 million. The gap between Black and white Americans stayed wide: Black Americans were in prison at almost five times the rate of white Americans in 2023.

Judges and governors cleared thousands of people of crimes they had not committed. Police killed more than a thousand people a year in 2024 and 2025, by one group's count. Some officers were charged and convicted, and others were never charged, or juries found them not guilty. Murders jumped in 2020, then fell, and the 2025 murder rate tied the lowest the FBI has recorded.

Fewer prisoners, a gap that shrank but stayed wide

The prison count reached 1,617,970 at the end of 2009, the highest in the Bureau of Justice Statistics count, which goes back to 1925. It fell in 2010 for the first time since 1972.

Shorter drug sentences. Lawmakers also cut some of the long drug sentences. New York's lawmakers ended the Rockefeller minimum sentences in April 2009. Senator Dick Durbin of Illinois wrote the Fair Sentencing Act, and President Barack Obama signed it on August 3, 2010. Under the new law, it took 28 grams of crack, not 5, to bring the five-year minimum, so the gap between crack and powder cocaine sentences went from 100 to 1 down to 18 to 1.

Under the First Step Act, which President Donald Trump signed on December 21, 2018, that change reached people already in prison. In its first year, more than 2,000 federal prisoners got shorter sentences under the crack change, and more than 3,000 were let out under changed rules for time off for good behavior.

The gap. About 1,254,000 people were in state and federal prisons at the end of 2023, and about 657,500 more were in local jails in the middle of 2024, by the bureau's count. For every 100,000 Black Americans, 929 were serving prison sentences in 2023. For every 100,000 white Americans, 190 were. Ten years earlier, in 2013, the two rates had been 1,348 and 237.

A conviction for a felony can also take away a person's right to vote. About 4 million Americans could not vote in 2024 because of a felony conviction, including 1 in every 22 Black adults, by the count of the Sentencing Project, a group that studies prisons and sentences.

The Exonerated Five

Who: Five New York City teenagers convicted in 1990 of a rape in Central Park, cleared in 2002 when another man confessed and his DNA matched.

When and where: New York City, 1989 to 2014.

Movie: *When They See Us* (2019), a Netflix drama series directed by Ava DuVernay. *The Central Park Five* (2012) is a documentary by Ken Burns, Sarah Burns and David McMahon.

Another man confessed in 2002, and his DNA matched.

Antron McCray, Kevin Richardson, Yusef Salaam, Raymond Santana and Korey Wise were 14 to 16 years old when juries convicted them in 1990 of the attack on Trisha Meili in Central Park. Another man had committed the rape alone.

Judge Thomas Galligan sentenced the four younger boys to 5 to 10 years in custody for young people. Wise, who was 16, was tried as an adult. His jury found him not guilty of rape and attempted murder and guilty of sexual abuse, assault and riot. He was sentenced to 5 to 15 years in an adult prison. Santana was released in 1995, McCray in 1996, and Salaam and Richardson in 1997.

A prisoner named Matias Reyes met Wise at Auburn prison in New York in 2001. Reyes was serving a life sentence for other rapes. He told officials in 2002 that he had raped Trisha Meili and that he had acted alone. A DNA test matched him. Wise was released in August 2002, after about 13 years locked up.

Prosecutors in District Attorney Robert Morgenthau's office looked into the case again and asked the court to throw out the convictions. Justice Charles Tejada vacated, or cancelled, all five convictions on December 19, 2002.

A panel chosen by Police Commissioner Raymond Kelly accepted the DNA result in January 2003 but said the five had "most likely" also taken part in the attack. Justice Tejada and the district attorney did not accept

that view. Reyes was never charged for the attack on Meili, because the five-year time limit for charging the crime had passed.

New York City officials paid the five $41 million in 2014 to settle their lawsuit. Four of them got about $7.1 million each. Wise got $12.2 million, because he had served six more years than the others.

Proving convictions wrong

An exoneration means a judge or a governor has cleared a person of a crime after a conviction, because new evidence shows the person did not do it. The National Registry of Exonerations counted 3,767 exonerations in the United States from 1989 through the end of 2025. The Innocence Project states that DNA tests helped in more than 600 of them.

Ninety-seven people were exonerated in 2025 alone. On average each of them had lost 14.2 years in prison, and 59 of the 97 were Black. In at least 70 of the cases, police, prosecutors or other officials had broken the rules, which the Registry calls official misconduct. Payments to people who were cleared have added up to more than $5.5 billion since 1989. The National Registry of Exonerations gave these figures in its 2026 report.

George Stinney Jr. A judge threw out the conviction of George Stinney Jr., a 14-year-old Black boy, in 2014, seventy years after South Carolina officials executed him. Two white girls, Betty June Binnicker, 11, and Mary Emma Thames, 8, were killed in Alcolu, South Carolina, on March 22, 1944. Stinney was accused. He was tried, convicted and sentenced to death in one day in April 1944, and the all-white jury took less than ten minutes.

Governor Olin Johnston refused to spare him, and South Carolina officials put him to death in the electric chair on June 16, 1944. Judge Carmen Mullen threw out his conviction on December 16, 2014. She ruled that he had not had a real defense and that his confession had probably been forced. No court has named anyone else as the killer.

The death penalty, 2000 to 2026

Executions in the United States fell from 85 in 2000 to 11 in 2021, then rose to 47 in 2025. Officials had carried out 27 executions in 2026 by September 18. Judges and juries handed down 23 new death sentences in 2025, and 2,024 people were on death row on October 1, 2025. Twenty-three states have no death penalty. The Death Penalty Information Center gave these figures in September 2026.

Officials in the United States have carried out 1,681 executions since 1977. They killed 1,490 of those people by lethal injection. They killed the rest by electrocution, in gas chambers, sealed rooms filled with poison gas, by firing squad or by hanging.

The victims. Of the victims in the crimes behind these executions, 76 of every 100 were white and 14 were Black. Of all murder victims in the United States from 1985 to 2023, about 49 of every 100 were white and 47 were Black, by FBI counts. A killing was far more likely to end in an execution when the person killed was white.

The justices of the Supreme Court ruled in 2002 that states may not execute people with intellectual disabilities, a lasting limit on a person's ability to learn and reason. They ruled in 2005 that states may not execute people for crimes committed before age 18.

Cleared from death row. The Death Penalty Information Center counts more than 200 people sentenced to death since 1973 who were later cleared and freed.

The group's staff also list 21 people executed since 1976 who, they say, may have been innocent. Among them are Cameron Todd Willingham, executed in Texas in 2004, and Troy Davis, executed in Georgia in 2011. No court or governor has declared any of the 21 innocent. The group notes that courts do not usually hear a claim of innocence once the person is dead.

The Danziger Bridge, New Orleans, 2005

New Orleans police officers shot six unarmed Black people on the Danziger Bridge on September 4, 2005, in the days after Hurricane Katrina. They killed James Brissette, 17, and Ronald Madison, 40, who was shot in the back. Among the officers were Kenneth Bowen, Robert Gisevius, Anthony Villavaso and Robert Faulcon. The officers then worked to cover up what they had done.

Officers were convicted in 2011. Federal Judge Kurt Engelhardt threw out those convictions in September 2013 and ordered a new trial, pointing to what he called "highly unusual, extensive and truly bizarre actions" by the prosecutors. Five former officers pleaded guilty on April 20, 2016, and they were sentenced to 3 to 12 years in prison.

In a separate case, Roland Bourgeois Jr., 55, of the Algiers Point neighborhood, was sentenced in 2019 to 10 years in prison. He had shot three Black men who were trying to flee the area.

Police killings and what happened in court

No government agency keeps a full count of the people police kill. Campaign Zero, a group that campaigns for a cause, counted at least 1,383 people killed by police in 2024 and 1,314 in 2025. By its count, police killed Black Americans at 2.6 times the rate of white Americans in 2025. In 2020, 62 of every 100 local police departments used body cameras, cameras worn on an officer's uniform, the Bureau of Justice Statistics reported in 2023.

Officer Darren Wilson shot and killed Michael Brown, 18, in Ferguson, Missouri, on August 9, 2014. A St. Louis County grand jury did not charge Wilson. Federal prosecutors did not charge him in 2015, and in 2020 the county prosecutor, Wesley Bell, reviewed the case and did not charge him either.

The Ferguson report. Lawyers of the US Department of Justice reported on the Ferguson police on March 4, 2015. They found a "pattern or practice of unlawful conduct" that broke the First, Fourth and Fourteenth Amendments,

which protect free speech, protect people from unfair searches and arrests, and promise equal treatment under the law. Police there had broken the law again and again, in ways that went against rights the Constitution protects.

The city's finance director had written to the police chief in 2010 that "unless ticket writing ramps up significantly," it would be hard to raise more money the next year. Of the city court's 2013 cases in which a judge issued an arrest warrant, an order to arrest someone, 92 of every 100 were against Black people.

The report describes a 32-year-old Black man who sat in his parked car in a park in the summer of 2012. An officer blocked in his car and demanded his Social Security number. The officer accused him, with no cause, of being a pedophile, a person who wants to sexually abuse children. When the man spoke of his rights, the officer arrested him at gunpoint on eight city charges.

One charge was for giving his name as "Mike" instead of "Michael." Another was for not wearing a seat belt while sitting in a parked car. The man told investigators he lost his job doing work for the federal government because of the charges.

Officer Daniel Pantaleo killed Eric Garner, 43, on Staten Island, New York, on July 17, 2014. Pantaleo held him around the neck in a chokehold, which police rules banned. Garner said "I can't breathe" 11 times. The medical examiner ruled his death a homicide, a killing by another person. A grand jury did not charge Pantaleo. In July 2019 Attorney General William Barr decided against federal charges, and in August 2019 Police Commissioner James O'Neill fired Pantaleo.

Tamir Rice, 12, was holding a toy gun at a park in Cleveland on November 22, 2014. The person who called 911 said twice that the gun was "probably fake" and the person "probably a juvenile," meaning a young person. The dispatcher, the worker who sent the call to the officers, did not pass that on. Officer Timothy Loehmann shot Tamir almost as soon as he arrived and killed him. A grand jury did not charge Loehmann. Loehmann was fired in 2017 for lying on his job application.

Breonna Taylor. Officers in Louisville, Kentucky, forced open Breonna Taylor's door on March 13, 2020, with a warrant to search for drugs. Her boyfriend, Kenneth Walker, fired once and hit officer Jonathan Mattingly. Officers fired 32 shots, and Myles Cosgrove fired the shot that killed Taylor, who was 26. A grand jury did not charge Mattingly or Cosgrove.

A former detective, Kelly Goodlett, pleaded guilty in 2022 to helping put false facts on the warrant. A federal jury convicted Brett Hankison in November 2024 of using excessive force, more force than the law allows. His shots hit no one. He was sentenced to 33 months in July 2025. Louisville's city officials paid $12 million.

George Floyd. Officer Derek Chauvin knelt on George Floyd's neck in Minneapolis for more than nine minutes on May 25, 2020, and killed him. Floyd was 46. A jury convicted Chauvin of second-degree murder, third-degree murder and second-degree manslaughter, different levels of charges for causing a death, on April 20, 2021. Judge Peter Cahill sentenced him to 22 and a half years on June 25, 2021. The state's sentencing rules set 12 and a half years, and the judge gave more after finding "particular cruelty."

Chauvin also pleaded guilty to a federal crime, and Judge Paul Magnuson sentenced him to 21 years for it in July 2022, served at the same time as the state sentence. The three other officers got federal sentences: Thomas Lane 2 and a half years, J. Alexander Kueng 3 years and Tou Thao 3 and a half years. Minneapolis city officials paid Floyd's family $27 million.

Tyre Nichols. Five police officers in Memphis, Tennessee, pulled Tyre Nichols, 29, from his car on January 7, 2023. They were Tadarrius Bean, Demetrius Haley, Emmitt Martin III, Desmond Mills Jr. and Justin Smith. They sprayed him with pepper spray and shocked him with a Taser. When they caught him near his mother's house, they punched him, kicked him and beat him with a baton. He died on January 10 of injuries to his head.

Mills and Martin pleaded guilty. A federal jury convicted Haley on all counts in October 2024, and Bean and Smith only of trying to influence witnesses. A state jury found Bean, Haley and Smith not guilty of all state charges,

including murder, in May 2025. Judge Sheryl Lipman ordered a new federal trial for the three in August 2025, because the first judge may have been biased. No new verdict had been reported by September 2026.

Who was charged after school shootings

After some shootings at schools, prosecutors charged officers who did not act, or a parent who supplied the gun.

Parkland. Nikolas Cruz, 19, a former student, shot and killed 14 students and three staff members at Marjory Stoneman Douglas High School in Parkland, Florida, on February 14, 2018, and wounded 17 others. The report of a Florida state commission states that Deputy Scot Peterson "fled to a position of personal safety while Cruz shot and killed" students and staff. A jury found Peterson not guilty of felony child neglect and other charges on June 29, 2023.

Uvalde. A gunman killed 19 children and two staff members at Robb Elementary School in Uvalde, Texas, on May 24, 2022. Officers killed the gunman 77 minutes after the first officers entered the school. A Department of Justice review states that the school district police chief, Pete Arredondo, told officers at several points to wait. A grand jury charged Arredondo and a former school officer, Adrian Gonzales, with child abandonment and endangerment. A jury found Gonzales not guilty of all 29 counts on January 21, 2026.

Winder, Georgia. A gunman killed two 14-year-old students and two teachers at Apalachee High School in Winder, Georgia, on September 4, 2024. The gunman, Colt Gray, pleaded guilty to all 55 counts, and he was sentenced to life in prison without parole on July 27, 2026. His father, Colin Gray, had given him the AR-15-style rifle as a Christmas present. A jury convicted Colin Gray of two counts of second-degree murder and other crimes on March 3, 2026, and he was sentenced to 15 years on July 30, 2026.

Crime goes up, then down

Murders in the United States rose from 16,669 in 2019 to 21,570 in 2020, up 29 percent. The Pew Research Center, using FBI data, called it the largest one-year rise in more than a century. The murder rate in 2020 was 7.8 for every 100,000 people, still lower than the rate of 10 in 1991.

The violent crime rate dropped 9.3 percent from 2024 to 2025, from 362.9 to 327.6 for every 100,000 people. FBI officials called it the largest one-year drop since the bureau began making national estimates in 1936. Murders fell about 18 percent, robberies 18.5 percent and property crimes 12.4 percent. The 2025 murder rate, 4.1 for every 100,000 people, tied 1955 and 1956 as the lowest the FBI has recorded. FBI officials released these figures in August 2026.

Leaders in court

A jury in Manhattan convicted former President Donald Trump of 34 felonies on May 30, 2024. The charges were for falsifying business records to hide a payment of hush money, money paid to keep someone quiet, to Stormy Daniels. He was the first US president convicted of a felony. Judge Juan Merchan sentenced him on January 10, 2025, to an unconditional discharge, which means no jail, no fine and no probation. His appeal had not been decided by September 2026.

A federal jury convicted Senator Bob Menendez of New Jersey on July 16, 2024, of taking bribes, secret payments for favors, and of acting as an agent of Egypt's government, which means working for it in secret. Agents had found $480,000 in cash and more than $100,000 in gold bars in his home. He resigned in August 2024, and on January 29, 2025, a judge sentenced him to 11 years in prison.

President Trump pardoned, on January 20, 2025, everyone convicted over the attack on the US Capitol on January 6, 2021, with one exception. The Government Accountability Office found that about 140 police officers were attacked that day. For fourteen members of two groups, the Oath Keepers and the Proud Boys, he cut their sentences to the time they had already served.

Whose courts: McGirt, 2020

Five of the nine Supreme Court justices ruled on July 9, 2020, in *McGirt v. Oklahoma*, that the Muscogee (Creek) reservation had never been ended. Members of Congress had set that land aside for the nation in the 1800s. Justice Neil Gorsuch wrote the opinion.

US officials forced the Muscogee (Creek), the Cherokee and three other nations from their homelands in the Southeast to Indian Territory, which is now Oklahoma, in the 1830s. Those forced removals are called the Trail of Tears. Gorsuch's opinion begins: "On the far end of the Trail of Tears was a promise." Under the ruling, Oklahoma's prosecutors could not charge Native people for major crimes there, and federal and tribal courts took those cases.

Jimcy McGirt, a Seminole citizen, had been convicted in a state court of sexually abusing his wife's granddaughter. A federal jury convicted him after the ruling, in November 2020.

The judges of Oklahoma's highest criminal court then applied the same reasoning to the lands of other nations. As a result, almost all of eastern Oklahoma, including much of Tulsa, counts as Indian country, the legal name for Native land, in criminal cases. The justices ruled in 2022, in *Oklahoma v. Castro-Huerta*, that state prosecutors may also charge people who are not Native for crimes against Native victims there.

Tulsa's survivors, 2020 to 2026

No white person was ever sent to prison for the 1921 Tulsa massacre. Survivors of the massacre sued the city, the county and state bodies in 2020. Tulsa County Judge Caroline Wall dismissed the case in July 2023, and the justices of the Oklahoma Supreme Court upheld her ruling in June 2024.

Viola Ford Fletcher was 7 in 1921. She spoke to Congress on May 19, 2021, and died on November 24, 2025, at 111. Lessie Benningfield Randle, born on November 10, 1914, was the last known living survivor in May 2026.

Tulsa's mayor, Monroe Nichols, announced the Greenwood Trust on June 1, 2025, a private fund with a goal of $105 million by June 1, 2026. The plan listed $24 million for housing, $60 million for buildings and for clearing blight, which means run-down property, and $21 million for land, scholarships and grants to small businesses. It included no direct payments to the survivors. No total raised had been published by September 2026.

BY TODAY

If you remember one thing: The prison count began to fall after 2009, but Black Americans were still in prison at almost five times the rate of white Americans in 2023.

- 2009: State and federal prisons held 1,617,970 people, the most ever counted.
- 2021: A jury convicted Officer Derek Chauvin of murdering George Floyd.
- 2025: Ninety-seven people were cleared of crimes they had not committed, and the murder rate tied the lowest the FBI has recorded.

Next: The chapter closing answers the three questions from the opening.

THE THREE QUESTIONS, ANSWERED

1. **How did punishment move from the whipping post to the prison cell?** Colonial judges had people whipped, branded and hanged in public, and had their ears cut off. Pennsylvania's lawmakers turned the Walnut Street Jail into the country's first state prison in 1790, and by 2009 American prisons held about 1.62 million people.
2. **Who kept order before there were police?** Among the Native nations, families and clans settled killings, and in the colonies settlers took turns on a night watch while white men in the South rode on slave patrols. Full-time police began work in Boston in 1838 and in New York in 1845, and the US attorney general put 34 federal agents to work in 1908.
3. **What happened to the people in mobs who killed without a trial?** In almost every case the chapter describes, nobody punished them. No one was charged for killing twenty Conestoga people in 1763, for burning Francis McIntosh in 1836 or for burning Henry Smith in 1893, and no white person went to prison for the attack on Greenwood, the Black district of Tulsa, in 1921.

What changed: The chapter begins with families settling a killing life for a life and ends with about 1.25 million people in state and federal prisons. From the first colonial courts on, whether a person got a fair trial depended on who that person was.

FIVE DATES TO KEEP

1631: Massachusetts judges order settlers to keep a night watch.

1790: The Walnut Street Jail becomes the first state prison.

1893: A white mob burns Henry Smith to death in Paris, Texas.

1963: The justices rule that a poor person charged with a serious crime must get a lawyer.

2009: The prison count reaches its highest point, 1,617,970.

NOT KNOWN: Nobody knows how many people the attackers killed in Tulsa in 1921, and the estimates run from 50 to 300.

Where to go: Eastern State Penitentiary in Philadelphia, where Charles Williams became Prisoner Number 1 in 1829, is now a historic site.

Next: Chapter 22, War and the Military. It follows the wars the country fought, the draft, and the soldiers and veterans.

Chapter 22: War and the Military

CHAPTER 22 OF 37 · WAR AND THE MILITARY · 10 ERAS · ABOUT 130 MINUTES

Until World War II, sickness killed more American soldiers than weapons did. In almost every war, at home and abroad, soldiers also killed people who could not fight back.

A small photograph on glass, of three young children, was the only thing Sergeant Amos Humiston had on him when he was killed at Gettysburg on July 1, 1863. The 1850 to 1900 era tells how that picture reached his wife. In his war, about five soldiers died of disease for every three who were killed in battle like him.

This chapter follows, in order, the wars fought on this land and then the wars American soldiers fought overseas, from a town on the Missouri River destroyed about 1325 to the war with Iran that began in 2026. As you read, keep three things in view: what killed the soldiers, who was made to go, and what happened to soldiers who killed people who could not fight back. For most of this history, the flu killed more soldiers than bullets did, and so did typhoid and dysentery, infections spread by dirty water and food. In the Civil War a drafted man, one ordered into the army by law, could pay $300 and go home. The men who burned towns and shot prisoners were rarely punished, though a few people stood in their way, like the helicopter pilot Hugh Thompson at My Lai.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. What killed most American soldiers before World War II?
2. Who was made to fight, and who could get out of it?

3. Were soldiers who killed people who could not fight back ever punished?

Five minutes? Read "The Mexican War, 1846 to 1848" in 1800 to 1850 and "Who had to fight in the Civil War?" in 1850 to 1900.

Can skip: "Louisbourg, 1745", "The forts that were destroyed, 1568 and 1586", "The Bonus Army, 1932". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 5 MINUTES

People fought wars in North America long before Europeans came, and everything known about those wars comes from what the fighters left in the ground. No one north of Mexico wrote them down. Archaeologists, scientists who dig up and study what people left behind, have found skeletons with wounds, houses burned where they stood, and ditches and walls built around towns.

From that evidence they can tell that a town was attacked, about when it happened, and what a weapon did to a bone. No fighter's name survives from these wars, and no word that any of them said, including their reasons for fighting.

On the Great Plains. Signs of violence there go back to about 250 B.C. Fighting grew more common after about the year 1250. From then on attackers often burned villages, and skeletons regularly show cut marks from scalping and from bodies being cut apart. Scalping means cutting the skin and hair off the top of a person's head.

Walls, ditches and stone weapons

Farming villages along the Missouri River, in what are now North and South Dakota, often had a ditch dug around them and a palisade, a fence of tall logs set upright in the ground. Some of these villages held up to 1,000 people.

Cahokia. The largest town north of Mexico stood near present-day St. Louis. Between about 1050 and 1150, perhaps 15,000 to 20,000 people lived in its center. Its people began a wall of upright logs about two miles long around the middle of the town about 1100. They rebuilt it three times over about 200 years, so four walls stood there one after another.

Staff at Cahokia Mounds State Historic Site estimate about 20,000 logs for each wall. Towers called bastions stuck out from the wall at even distances. Archers could stand in them and shoot arrows at attackers.

Archaeologists disagree about what the Cahokia wall was for. Some point out that bastions are built for fighting, and that some stretches of the wall went up in a hurry and cut right through neighborhoods where people lived. Others, in lesson pages from the University of Illinois, think it may have marked off the town's powerful families from ordinary townspeople, or insiders from outsiders.

What the bones show. Wounds show which weapons people used. At Norris Farms, in central Illinois, archaeologists studied a cemetery of 264 people from a village of about the year 1300. At least 43 of them, about 16 in every 100, had died by violence. Counting only the adults, at least one death in three came from fighting.

Arrows had hit some of them. Others had been struck from the front, the side and the back with heavy weapons such as stone axes. The bones do not show who the attackers were.

How many died at Crow Creek?

At Crow Creek, on the Missouri River in South Dakota, archaeologists found the bones of at least 486 men, women and children killed in a single attack. The town there belonged to ancestors of the Arikara Nation. Archaeologists from the University of South Dakota dug into the ditch around the town in 1978. They dated the bones by measuring the carbon left in them, a method called radiocarbon dating, and found that the attack happened about 1325.

Nearly the whole town. Douglas Bamforth, an archaeologist at the University of Colorado, calls the 486 dead nearly the whole town. P. Willey, the scientist who studied the bones, thinks they were about 60 in every 100 of the people who lived there. Bamforth thinks the killings came from a fight over food. The likely reason, he says, was too many people in the area for the food they could get, at a time when the weather was getting worse.

Many of the people at Crow Creek had been scalped, had their heads cut off, or had their bodies cut apart. Scalping leaves cut marks on the skull, and cracked skulls were common.

The bones also show that these people were badly underfed before they were killed. Animals had chewed many of the bones, so the bodies lay in the open for some time before anyone buried them in the ditch.

The bones do not show who the attackers were. Fewer young women lie in the grave than a whole town would have had. Willey thinks the most likely reason is that the attackers carried young women away as captives.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 9 MINUTES

Small Spanish armies marched into the homelands of Native nations in the 1500s, and the reports their leaders wrote are the first written record of war in what is now the United States. The soldiers brought horses and trained attack dogs, and they fought with swords and lances. Their reports tell only the Spanish side.

Forts and prisoners. Native people destroyed every fort one Spanish captain built inland, all of them by 1568. Spanish soldiers and French colonists also fought each other on the coast of Florida. There the Spanish commander had his men kill about 245 French prisoners who had already surrendered.

De Soto's march, 1539 to 1543

Hernando de Soto landed near Tampa Bay, in Florida, in May 1539, with about 600 men, 220 horses, packs of dogs and a herd of pigs. For the next three years his army crossed the Southeast. De Soto took hostages to force the towns to let his army pass. He held the leader of the Coosa towns hostage to get through those towns, and his men ate the food the Coosa had stored.

The National Park Service's page on de Soto states what his men did to towns that did not cooperate. They threw people to the dogs, setting trained attack dogs on captives to bite and tear them, often to death. They burned people alive. They raped Native people, which means they forced them to have sex. They cut off people's noses and hands, and they enslaved men and women to carry the army's loads.

The end of the march. De Soto died of a fever on May 21, 1542. His men sank his body in the Mississippi River and hid his death, so the nations they had been fighting would not learn that he could die. In June 1543 the rest of the army went down the Mississippi in seven boats. Only 311 of the Spanish reached the Gulf of Mexico. They took enslaved Native people with them, and no one recorded how many.

How the battle at Mabila began

De Soto's army reached Mabila, a town with a palisade around it, in October 1540, a year and a half before de Soto died. The battle there began on October 18, when a Spanish officer decided that a Mabila man had not shown him enough respect. The argument ended with the officer cutting off the man's arm. An article at HistoryNet, a history magazine website, names the officer as Captain Baltasar de Gallegos. Mabila's leader was a man the Spanish called Tascalusa.

The battle lasted about nine hours. At the end de Soto's soldiers burned the town while people were still inside it. The army's own record-keeper wrote, "We killed them all either with fire or the sword."

The counts of the dead do not agree. The National Park Service's page lists more than 200 Spanish dead and about 2,000 people of Mabila. A University of Alabama news report states about 20 Spanish killed and 250 wounded, with thousands of Mabila dead. Searchers from the University of Alabama have looked for the town, and no one has ever found where Mabila stood.

The Tiguex towns, 1540 to 1541

Far to the west, in the winter of 1540 to 1541, the Spanish commander Coronado and his army fought the Tiguex towns on the Rio Grande in New Mexico. The Tiguex were Pueblo people, who lived in towns of houses several stories tall. They spoke the Tiwa language and lived in twelve or more towns near present-day Albuquerque. Tiwa is still spoken today at the pueblos of Isleta, Sandia, Taos and Picuris.

Corn and cloaks. Coronado's soldiers took over the town of Coofor and made its people leave. The army's horses and mules ate the corn stalks the Tiguex needed to burn for heat in winter. Then Coronado demanded about 300 or more pieces of cloth from the towns, and his men did not give the towns time to decide. People had to take off their own cloaks and hand them over. Soldiers took better cloaks off any Tiguex man they saw wearing one.

A complaint to Coronado. Then a Spanish soldier went into a Tiguex house and raped the wife of the man who lived there, or tried to. Pedro de Castañeda, a soldier on the expedition who later wrote its history, says so. The husband and the town's leaders complained to Coronado.

The husband could not pick out the soldier in a line of men, but he knew the soldier's horse. The owner of the horse denied it, and the husband got no justice. Castañeda knew the soldier's name and chose not to write it down.

The next day Tiguex men killed a Native man who guarded the army's horses and drove off many of the horses. Coronado sent Don García López de Cárdenas to surround the town where the soldier had raped the woman, or tried to. After a day and a night, Cárdenas's men and their Native allies from Mexico smoked the defenders out of the cellars.

The defenders made the sign of the cross to ask for peace. Two Spanish soldiers on the roof made the sign back. The men put down their weapons, and the Spanish promised them they would not be punished.

The stakes. Coronado had ordered Cárdenas not to take anyone alive and to make an example of them to frighten the other towns. Cárdenas ordered 200 stakes set up to burn the prisoners alive. Castañeda wrote that when the

prisoners saw the Spanish tying men to the stakes and starting to burn them, about 100 men in a tent fought back. Spanish foot soldiers and horsemen killed them.

Castañeda gives no exact count of the people burned. A history from the New Mexico Office of the State Historian names the town as Arenal, across the river from Coofor, and states that the Spanish killed dozens of captives there. At his trial, Cárdenas told a different story. He said some soldiers had speared men in a tent without his order.

The fighting went on for about three months. The Tiguex shut themselves inside their houses and shot arrows from the roofs and through slots in the walls. The Spanish charged on horseback and set fires to force people out. By the count on a National Park Service page, the Spanish killed hundreds of Tiguex, and the Tiguex killed a smaller number of Spanish and Mexican soldiers. The Spanish burned villages and enslaved Tiguex women and children.

Cárdenas on trial. Spanish officials later put Cárdenas on trial. A royal prosecutor, the lawyer who brought the case for the king, charged him with killings, with rapes committed by his men, with setting dogs on Native people, and with taking food and clothing. The judges of the Council of the Indies, the king's council for Spain's colonies, found him guilty in 1549 and said so again in 1551.

They first ordered him to serve 30 months as a soldier at Oran, in North Africa, and to pay 800 ducats, which were Spanish coins. He asked for a lighter punishment and got one: 12 months as a soldier in Spain, a fine of 200 ducats, and 10 years banned from the Americas.

Why the inlet is called Matanzas

An inlet south of St. Augustine, in Florida, has been called Matanzas, the Spanish word for "slaughters," since 1565. There Spanish soldiers killed about 245 French prisoners who had surrendered.

Fort Caroline. About 200 French colonists built Fort Caroline near present-day Jacksonville in 1564. They were Huguenots, French members of the Protestant churches, which had broken away from the Catholic Church, the church led by the pope in Rome. The land belonged to the Timucua, who had lived in northern Florida for at least 1,000 years. King Philip II of Spain claimed Florida, and he was Catholic.

The Spanish founded St. Augustine, farther south, on September 8, 1565. Twelve days later their commander, Pedro Menéndez de Avilés, marched 500 soldiers overland and attacked Fort Caroline at dawn. His men killed most of the settlers they found. In his own letter to the king, Menéndez counted 132 men at the fort whose throats his soldiers cut, and 10 more killed the next day. He spared about 50 women and children and sent them by ship to Havana, in Cuba.

At the inlet. A hurricane had already wrecked the French ships. About 127 French survivors came ashore at the inlet with no food and no weapons, and they surrendered to Menéndez. He told them to give up their Protestant faith. They refused, and his soldiers killed 111 of them.

Menéndez spared 16 men. A few said they were Catholic. Some were sailors from Brittany who had been forced onto the ships. Four were craftsmen the Spanish settlers at St. Augustine needed. Menéndez wrote to King Philip on October 15, 1565, "I had their hands tied behind them and put them to the knife."

A second group of French survivors came to the same inlet with their commander, Jean Ribault. They surrendered and refused the same demand, and Menéndez's men killed 134 of them. In his letter Menéndez gave his reason: the French "spread the Lutheran sect," meaning Protestant teaching, in land the king of Spain claimed.

The Florida Museum of Natural History dates the first killing to September 29, 1565. It dates the second to October 11, and the National Park Service dates it to October 12.

The forts that were destroyed, 1568 and 1586

Captain Juan Pardo built a chain of small Spanish forts inland between 1566 and 1568. He built Fort San Juan in January 1567 at the Native town of Joara, in the upper Catawba Valley of North Carolina, and thirty soldiers held it. In all, Pardo left about 120 men in forts across the Carolinas and east Tennessee.

The soldiers demanded more food than the towns around them could give, and they attacked the people they lived among. By May 1568, Native people had attacked every one of the forts, destroyed them all and killed nearly every soldier. Archaeologists have found Fort San Juan. It is the Berry site in Burke County, North Carolina.

Drake at St. Augustine. English sailors under Francis Drake burned St. Augustine in 1586. Drake was a privateer, a sea captain allowed by his government to attack Spanish ships and towns. He arrived with 21 ships between May 28 and 30, 1586, and the town had about 150 soldiers. His men burned the town and its wooden fort and took about 2,000 pounds in money from the treasury.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 10 MINUTES

English colonists fought their first wars on this coast against the nations whose land they had settled on: the Powhatan in Virginia, the Pequot in Connecticut, and Metacom's Wampanoag and their allies in New England. In every one of these wars, Native allies fought beside the colonists. Mohegan and Narragansett fighters, for example, joined the English against the Pequot in 1637.

The militia. The English colonies had no army. They had a militia instead, made up of ordinary men, mostly farmers, who left their work to fight when their leaders called them and went home when the fighting ended.

The lawmakers of Massachusetts Bay, meeting as the General Court, ordered every healthy man between 16 and 60 to join the militia on December 13, 1636. Ministers and judges did not have to. The lawmakers organized the men into three regiments, large units of soldiers. Leaders of today's Army National Guard date its beginning to that order.

Colonial soldiers struck at towns and food. They attacked the Pequot town at Mystic before dawn in 1637. In Virginia, from 1622 on, they burned Powhatan corn in the fields and seized the corn people had stored.

The Powhatan wars in Virginia, 1622 to 1646

The English colony in Virginia stood on the land of the Powhatan, a group of nations led by one head chief. In 1622 the Powhatan leader Opechancanough judged that the English would keep taking more Powhatan land unless they were stopped.

The attack of 1622. Opechancanough sent fighters to the English plantations, or large farms, along the James River in one planned attack on March 22, 1622. The men came to houses and fields as if to trade or share a meal, then attacked. They killed as many as 347 colonists, out of about 1,200 in the colony.

A Powhatan man who worked for a settler named Richard Pace warned him, and Pace warned Jamestown in time. The English accounts of the warning do not give the Powhatan man's name.

The poisoned toast. Opechancanough agreed to meet English leaders on the Pamunkey River in May 1623 to make peace. Captain William Tucker led the English party of about 12 men. The English offered poisoned drinks to toast the agreement. When the Powhatan leaders fell sick, the English shot them, and some of the English cut off scalps.

The English accounts of the dead do not agree. A settler named Robert Bennett wrote to his brother on June 9, 1623, that "some tooe (two) hundred" were thought to have been poisoned, and that the English killed about 50 more. Governor Francis Wyatt and his council answered in 1624 that no one had been poisoned at a feast and that only nine were shot. Their own report says the men took poison along, to be used if nothing else worked. Neither account names the poison.

Burning the corn. The English also went after the Powhatan food supply, from 1622 on. In their own words, they waited "till their corne was ripe," then raided through the fall and winter to "surprize their corne," meaning to seize it. They agreed to pauses in the fighting so both sides could plant, then

attacked again after the harvest. In July 1624, English soldiers burned fields with enough corn, by their own count, to feed 4,000 men for a year. The war lasted until 1632.

Opechancanough attacked again on April 18, 1644, and killed about 400 colonists. Virginia's governor, Sir William Berkeley, led soldiers who captured him in 1646 and took him to Jamestown. Within two weeks, one of his English guards shot him dead in his cell. Encyclopedia Virginia's history of Opechancanough does not name the guard.

The Pequot War, 1636 to 1638

The Pequot War grew out of two killings of English traders. Pequot men killed the trader John Stone and his crew on the Connecticut River in 1634. Manisses men from Block Island, a different nation from the Pequot, killed the trader John Oldham in July 1636.

Endecott's raid. John Endecott of Massachusetts Bay led 90 soldiers to Block Island in August 1636 and burned the villages there. Then his men sailed to Pequot land and burned a Pequot village too. Pequot fighters attacked Wethersfield, Connecticut, on April 23, 1637, killed nine men and women, and took two girls captive.

Mystic. Captain John Mason of Connecticut and Captain John Underhill of Massachusetts Bay reached the Pequot town at Mystic before dawn on May 26, 1637. Mohegan and Narragansett fighters came with them. The English set fire to the palisade and the houses inside it, and they shot the people who tried to get out.

Historians at the Mashantucket Pequot Museum count more than 400 Pequot killed in one hour, and other counts go as high as 700. Most of the Pequot fighting men were away with their sachem, or leader, Sassacus, so most of the dead were old men, women and children. The English lost two dead and twenty wounded.

The English fought the surviving Pequot in a swamp near present-day Fairfield, Connecticut, in July 1637, for about a day and a night. Sassacus escaped west, and Mohawk fighters killed him later that month. The Pequot

museum's history of the war states that some captive Pequot women were killed after the English argued over who would get them, and it does not name who killed them. The English sold other captives into slavery in New England and the Caribbean.

Captives for sale. John Winthrop, the governor of Massachusetts Bay, wrote in his journal on July 13, 1637, that the colony's leaders had sent 15 Pequot boys and 2 women away as slaves. A ship captain, William Peirce, carried them. Massachusetts leaders held a day of thanksgiving on October 12, 1637, for defeating the Pequot and bringing the soldiers home safe. In February 1638 Peirce came back on the ship *Desire* with cotton, tobacco and enslaved Africans.

The Treaty of Hartford. Leaders of the Connecticut colony at Hartford and Mohegan and Narragansett leaders signed the Treaty of Hartford, a written agreement, in 1638. Under it they divided the surviving Pequot between the Mohegan and the Narragansett. The signers barred the Pequot from their homeland and forbade them ever to call themselves Pequot again.

Pequot survivors held together. By 1651, Robin Cassacinamon had led some of them back to 500 acres of their land. In 1666, leaders of the Connecticut colony set aside a reservation, land kept for a Native nation to live on, for the Pequot at Mashantucket. The Mashantucket Pequot Tribal Nation is in Connecticut today.

King Philip's War, 1675 to 1676

King Philip's War was fought in New England in 1675 and 1676. The English called the Wampanoag sachem Metacom by the name King Philip.

A National Park Service article calls it one of the deadliest wars in American history, when the number killed is compared with how many people lived in New England. One estimate, published by HistoryNet, counts about 9,000 people killed out of about 80,000 in New England, about one person in nine. About two out of every three of the dead were Native people, and many of them died of starvation.

A death and a trial. John Sassamon, a Christian Native man, was found dead under the ice of a pond in January 1675. Days before, by the accounts of the time, he had warned Plymouth's governor, Josiah Winslow, that Metacom's men were planning an attack.

English judges at Plymouth tried three Wampanoag men for his murder on June 1, 1675, before an all-English jury. Six Native men sat with the jury to advise it. Plymouth's officials hanged two of them, Tobias and Mattashunannamo, on June 8. They held back the third, Wampapaquan, for a month and then shot him to death. The fighting began that June at the English town of Swansea.

The swamp fort. When the war began, Metacom sent the old men, women and children of the Wampanoag across Narragansett Bay to live with the Narragansett. The Narragansett stayed out of the fighting. In October 1675 their leaders promised Massachusetts Bay in a treaty that they would not join Metacom. The leaders in Boston then demanded that the Narragansett hand over the Wampanoag who had fled to them, as hostages. The Narragansett refused.

Leaders of the English colonies feared the two nations would join together. About 1,000 English soldiers attacked a fortified Narragansett winter village in a frozen swamp in Rhode Island on December 19, 1675. About 1,000

Narragansett men, women and children were living there. Governor Winslow of Plymouth and two majors, from Massachusetts and Connecticut, led the soldiers of their colonies.

The soldiers took the fort and burned every house in it. The National Park Service counts 300 Narragansett men and almost 400 women and children killed. James Oliver, an English officer, wrote that the English lost about 68 dead and 150 wounded.

After the attack, the Narragansett joined Metacom, and Native fighters struck back across New England. By one count, they attacked 52 of the 90 English towns and burned 17 of them to the ground. Narragansett fighters came to Providence in late March 1676. Roger Williams of Providence tried to bargain with them, and they turned him down and burned the town.

A Native man fighting with the colonists shot Metacom dead at Mount Hope on August 12, 1676. The colonists put his head on display at Plymouth. They sold his wife and his nine-year-old son into slavery.

What happened on Deer Island?

Massachusetts Bay's leaders held Christian Native people, who were allies of the English, on Deer Island in Boston Harbor through the winter of 1675, and many of them starved. The leaders moved them there that autumn because they did not trust them. The first were Nipmuc people from the town that is now South Natick. Between 500 and 1,100 people were held there, most of them women and children, with little shelter and too little food.

The colonists let the survivors go in May 1676. The two counts of the dead do not agree. Mass Humanities, a history group, states that about half of some 900 people held there died of hunger and cold. A National Park Service page states that very few survived, so by its account most of them died.

Some people were smuggled off the island and sold as slaves in the West Indies, the islands of the Caribbean, or in Tangier, in North Africa. The National Park Service page gives no number and does not name the men who sold them. Massachusetts colonists also put about 45 Native people to death in public on Boston Common.

Sold for life. Governor Josiah Winslow of Plymouth and Governor John Leverett of Massachusetts Bay signed papers that allowed Native men, women and children to be sold into slavery for life. A colonial record notes one sale: "that day wee sold Capt Davenport 47 Indians young & old for 80 pd," meaning 80 pounds for 47 people. Ships carried captives to Barbados, Bermuda, Jamaica, the Azores, Spain, and Tangier.

Descendants of captives sent from Rhode Island to Bermuda have since reconnected with Native nations in New England and Canada.

The Beaver Wars and the Pueblo Revolt

Other wars of the 1600s had no English colonists in them. Chapter 2, Native Nations, tells these two from the side of the nations who fought them. In the Beaver Wars, fighters from the Haudenosaunee nations, also called the Iroquois, raided villages of the Wendat, also called the Huron, for years, to control the trade in furs. French and Dutch traders armed their Native trading partners with guns, and the guns made the raids deadlier.

The raids broke the Wendat apart between 1642 and 1649. Haudenosaunee fighters destroyed the Wendat homeland, Wendake, in 1649 and 1650. They killed many Wendat and adopted many others into Haudenosaunee nations. About 500 Wendat moved east to the Quebec City region.

The Pueblo Revolt. People from the Pueblo towns of the Rio Grande rose together against Spanish rule in New Mexico on August 10, 1680. They surrounded Santa Fe, took it, and drove the Spanish out. They killed 401 settlers and 21 Franciscan friars, who were Catholic priests, and let most other Spanish people leave. The Pueblos governed themselves for 12 years. Diego de Vargas began the Spanish return in 1692, and armed resistance went on for years after.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 9 MINUTES

Both wars that reached North America in these years began in Europe, one over who would become king of Spain and one over who would rule Austria. Colonial militia and Native fighters did most of the fighting here, and the Native fighters had their own reasons. Here the two wars are called Queen Anne's War, from 1702 to 1713, and King George's War, from 1744 to 1748.

The Haudenosaunee stay out. The leaders of the Haudenosaunee Confederacy, an alliance of Native nations with the biggest fighting force in the northeast, chose to stay out of these wars.

At Montreal on August 4, 1701, about 1,300 representatives from more than 30 Native nations made peace with New France, the French colony in Canada. There the Haudenosaunee leaders promised to take neither side between France and Britain. They worked to keep that promise for about fifty years, and French and British commanders both had to plan around it.

The winter raid. In the north, the common act of war was the winter raid. Fighters came at a sleeping town before dawn, killed some of the people and took others captive. Then they marched the captives hundreds of miles to Canada on foot. A captive might be adopted into a Native nation, sold back to family for money, or killed on the trail for not keeping up.

Deerfield, February 29, 1704

About 250 fighters attacked Deerfield, a town in western Massachusetts, before dawn on February 29, 1704. Their commander was Jean-Baptiste Hertel de Rouville, a French lieutenant, or junior officer, born in Canada. He led 47 French Canadian soldiers and about 200 fighters from the Abenaki, the Wendat and the Kanien'kehaka, as the Mohawk people call themselves. The historians of Deerfield's museum write that these nations fought to keep English settlers out of their homelands.

About 300 people lived in Deerfield, and more than half were killed or taken captive. Deerfield's history museum, the Pocumtuck Valley Memorial Association, which keeps the town's old records, lists 48 killed and 111 captured. A Library of Congress history page lists 57 killed and 112 captured.

In the house of the town's minister, John Williams, the attackers killed his six-week-old daughter Jerusha and his six-year-old son John. They also killed Parthena, a Black woman Williams had bought and held as a slave. Her husband Frank, also enslaved by Williams, was taken captive.

The march north. The attackers drove the captives across the frozen Deerfield River and marched them 300 miles to New France in the middle of winter. Each captive belonged to the man who had taken them, and those men killed captives who could not keep up. Williams wrote that on one day they killed two women "so faint they could not travel."

Mary Brooks, a young woman, told Williams that her falls on the ice had caused a miscarriage, which means she had lost the baby she was carrying. She said she was too weak to walk far and knew they would kill her. They killed her that day. Williams did not record the names of the men who killed them. Of the more than 100 captives, only about half ever came back to New England.

John Williams

Who: Deerfield's minister, captured with five of his children in the 1704 raid. He came home and wrote the best-known captivity story of colonial America.

When and where: Born in Roxbury, Massachusetts, December 16, 1664. Minister at Deerfield from 1686. Captured February 29, 1704. Back in New England late in 1706. Died 1729.

The raiders took him, his wife and five of their children.

Soon after the march began, at the Green River in what is now Greenfield, Massachusetts, his wife, Eunice Mather Williams, fell while crossing and went under the icy water. She walked on a short way. At the foot of a mountain, the man who had taken her captive killed her with one blow of a hatchet. Williams did not record his name.

Williams and four of his children came home. His daughter Eunice, who was seven when the raiders took her, did not. He returned late in 1706 and preached about his captivity in Boston on December 5 that year, and in 1707 he went back to his church in Deerfield.

His book about the raid and the march, *The Redeemed Captive Returning to Zion*, was printed in seven editions before 1795.

Eunice Kanenstenhawi Williams

Who: John Williams's daughter, taken from Deerfield at seven. She became a member of the Kanien'kehaka nation at Kahnawake and chose to stay there all her life.

When and where: Born in Deerfield, September 17, 1696. Taken February 29, 1704. Died at Kahnawake, near Montreal, in 1785, aged 89.

Carried off at seven, she refused every offer to bring her home.

Eunice Williams was seven when the attackers carried her out of Deerfield. At Kahnawake, a Kanien'kehaka town near Montreal, a family adopted her in a formal ceremony. She was first named A'ongote, "she was taken and placed." Later she was named Kanenstenhawi, "she brings in the corn," and was accepted as a full member of the nation. She was also baptized a Catholic, in the Christian ceremony with water that makes a person a member of a church, and given the name Marguerite.

Her father and English officials tried again and again to bring her back. She refused. At 16 she married François-Xavier Arosen, a man of her town. They had at least three children: two daughters, Catherine and Marie, born in 1736 and 1739, and a son, John. The Pocumtuck Valley Memorial Association's history says John seems to have died at Lake George, in New York.

She visited her Williams brothers and sisters in New England four times, in 1740, 1741, 1743 and 1761. At her brother Stephen's house in Longmeadow, Massachusetts, she slept outside in the orchard instead of inside the English house. Each time, she went home to Kahnawake. New Englanders called her the "unredeemed captive," the one they never bought back.

Why the Tuscarora went to war, 1711 to 1713

The Tuscarora of North Carolina had three complaints, as the historians Elizabeth A. Fenn, Peter H. Wood and others name them in the account NCpedia publishes. They objected to the way white traders dealt with them and to the enslaving of Native people. Most of all, they objected to settlers taking their land. English settlers had founded the town of New Bern near the Tuscarora in 1710.

The Tuscarora began a series of planned attacks on the settlers on September 22, 1711. Soldiers from South Carolina, fighting with Native allies, defeated them by March 1713. By then about 1,400 Tuscarora were dead, and the winners had captured and enslaved about 1,000.

About 1,500 surviving Tuscarora walked north. In 1722 they became the sixth nation of the Haudenosaunee Confederacy.

The Yamasee War, 1715 to 1717

The Yamasee War in South Carolina began over debt and the slave trade in Native people. Yamasee towns stood along the Savannah River and around Port Royal. Traders from Charleston let the Yamasee take goods and pay later, hoping to take Yamasee land when the debts could not be paid. By 1715, paying off the debt would have taken at least two years of work from every Yamasee man.

The traders also enslaved Native people and whipped them, and settlers were moving onto Yamasee land. The Yamasee themselves had raided Apalachee towns in Florida and sold the people they captured to Carolina merchants as slaves.

Pocotaligo. Thomas Nairne, the colony's agent for dealing with Native nations, met Yamasee leaders at Pocotaligo Town on April 14, 1715, with two other colonists, William Bray and Samuel Warner. They hoped to stop the fighting before it started. The next morning, Good Friday, Yamasee men killed Bray and Warner. They held Nairne for several days and tortured him to death by sticking burning splinters of wood into his skin.

Across the South, Creek, Choctaw, Apalachee and other men killed the traders who worked among them. By June 1715, about nine in every ten of those traders were dead.

The first Yamasee attacks, on plantations near Port Royal, killed about 100 colonists. Over the whole war, about 400 settlers were killed, and colonists had to leave half the farmland in the colony. The South Carolina Encyclopedia and NCpedia give no count of the Yamasee dead or the other Native dead.

Craven's war. South Carolina's governor, Charles Craven, called up every white man and armed some enslaved Black men as well. About 300 families who owned plantations escaped by ship. Craven's forces beat the Yamasee at Port Royal and at the Salkehatchie River and drove them south of the Savannah River. By the spring of 1716, most Yamasee had moved to Spanish Florida.

Carolina officials talked the Lower Cherokee into fighting the Creek in 1716. That began a war between the Cherokee and the Creek that lasted about forty years. Carolina officials ended their own war by 1718.

Louisbourg, 1745

King George's War began in this part of the world in 1744, after a group of English scalp hunters, men who hunted Native people for their scalps, killed or wounded several Penobscot people. In 1745 New England soldiers laid siege to Louisbourg, a French fortress on Cape Breton Island, in what is now Canada, surrounding it to cut it off until it gave up.

Massachusetts leaders raised an army of their own colonists to take the fortress. The soldiers sailed from Boston on March 24, 1745, and nearly 2,000 of them landed near Louisbourg on April 30. Colonel William Pepperrell commanded them. Commodore Peter Warren, a British navy commander, waited offshore with a group of warships. Up to about 4,300 New Englanders served there over the whole siege, but only about half that many at any one time.

The acting French governor, Louis Du Pont Duchambon, asked on June 15 what conditions he would get if he surrendered. He and his soldiers surrendered the fortress on June 17, 1745.

The winter after. Far more New Englanders died holding Louisbourg than died taking it. During the siege, French fire killed about 100, and 30 died of illness. Then the soldiers spent the winter in wrecked, dirty buildings, and sickness spread. The counts of the dead do not agree. A HistoryNet account counts 561 burials between late November and mid-February. The Dictionary of Canadian Biography gives 1,200 to 2,000 deaths over the winter and spring.

British officials gave Louisbourg back to France in 1748 in the Treaty of Aix-la-Chapelle, the agreement that ended the war. In return, French officials gave back Madras, a city in India they had taken from Britain.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 17 MINUTES

Soldiers from the colonies, and then from the new United States, were at war for most of the forty years after 1754. In the Revolution, sickness killed more of them than enemy weapons did.

The French and Indian War began that year. In the treaty that ended it, in 1763, French officials signed over Canada and all French land east of the Mississippi River to Britain. The Revolution lasted from 1775 to 1783 and ended with the thirteen colonies independent. From 1785 to 1795, US soldiers fought a group of Native nations north of the Ohio River.

Counting the dead. Historians at the American Battlefield Trust estimate that about 6,800 Americans were killed in battle in the Revolution. At least 17,000 more died of disease, about two and a half for every one killed in battle, and 8,000 to 12,000 of those were prisoners of war. The Defense Department's official list shows 4,435 American battle deaths, and its own note says its records from before World War I are often incomplete.

The French and Indian War, 1754 to 1763

British and colonial soldiers fought French soldiers and the Native nations allied with France in the French and Indian War. French soldiers forced a young Virginia colonel, George Washington, to surrender at Fort Necessity, in western Pennsylvania, in 1754.

Braddock's defeat. The next summer, the British general Edward Braddock marched about 1,450 men toward Fort Duquesne, the French fort where Pittsburgh stands now. About 900 French and Canadian soldiers and Ottawa, Shawnee, Lenape and Mingo fighters caught his column, a long line of marching soldiers, near the Monongahela River on July 9, 1755.

The Native fighters shot from the woods on both sides of the road. They and the French killed 456 of Braddock's men and wounded 422. The French side lost 23 killed. Braddock was badly wounded, and he died on the night of July 13.

Fort William Henry. The French general Montcalm surrounded the British at Fort William Henry, on Lake George in New York, with about 8,000 men, nearly 2,000 of them Native fighters. The British commander, Lieutenant Colonel George Munro, surrendered on August 9, 1757. Under the terms, his men could march away with their muskets but no ammunition.

The next day, Native fighters allied with Montcalm killed and scalped sick and wounded men left in the fort. Then they attacked the column of British soldiers, and the women and children with it, on the road.

The counts of the dead run from several dozen up to about 185 men, women and children. Early reports said 1,500, but a HistoryNet account finds it unlikely that more than 200 were killed. Montcalm got 500 captives released, and the Native fighters kept about 200 more.

British soldiers took Quebec on September 13, 1759, after a battle outside the city that lasted about twenty minutes. The British general James Wolfe was shot and died on the field. Montcalm was hit by a musket ball below the ribs and died the next morning.

Did the blankets from Fort Pitt spread smallpox?

Officers at Fort Pitt, the British fort at present-day Pittsburgh, gave two Lenape men blankets from the fort's smallpox hospital in June 1763, meaning to give them the disease. No one can tell whether the blankets caused the smallpox that spread among the Ohio nations that year and the next. Smallpox spreads from person to person, mostly through the air people breathe, and it killed about one in three people who caught it. It was already in the area that spring.

The siege. In 1763, the year the war with France ended, Native nations of the Ohio country went to war against the British in what is called Pontiac's War. Shawnee, Lenape, Mingo and Seneca fighters surrounded Fort Pitt on June 22, 1763. Guyasuta was one of their leaders. Captain Simeon Ecuyer commanded the fort, with the trader and militia captain William Trent.

That spring the fort's officers had set up a hospital for soldiers sick with smallpox. On June 24, two Lenape men, one named Turtleheart, came to the fort to warn the soldiers to leave. Trent wrote in his journal, "we gave them two Blankets and an Handkerchief out of the Small Pox Hospital. I hope it will have the desired effect."

Amherst's letters. Two weeks later, the British commander in North America, General Jeffery Amherst, suggested the same thing in a letter to Colonel Henry Bouquet. "Could it not be contrived (arranged) to Send the Small Pox among those Disaffected (unfriendly) Tribes of Indians?" he wrote on July 8. Bouquet answered that he would try to spread it "by means of Blankets."

On July 16 Amherst told him to try it, and to try "Every other method that can serve to Extirpate (wipe out completely) this Execreble (hateful) Race." Amherst also told Bouquet to take no Native prisoners.

The Revolution, from Lexington to Yorktown

The Revolution was fought between British soldiers and colonists who wanted independence. The shooting started at Lexington, Massachusetts, at about 5 in the morning on April 19, 1775. British soldiers killed eight militiamen on the town green and wounded ten. The fighting went on all day along 16 miles of road back to Boston, and by night 73 British soldiers and 49 militiamen were dead.

Bunker Hill. British soldiers attacked the colonists' earth walls on Breed's Hill on June 17, 1775, in the battle named for nearby Bunker Hill. They charged three times in two hours. On the third charge they climbed the walls and fought with bayonets, the long blades fixed to the ends of their muskets. The colonists had run out of ammunition and fell back. British casualties, meaning the killed and wounded together, came to 1,054, and the colonists lost about 450.

That June, the delegates, or representatives, from the thirteen colonies who met as the Continental Congress chose Washington to command a new Continental Army. About 231,000 men served in it during the war, but never more than 48,000 at one time. About 7,000 of them were Black.

Who had to serve. Under the rules of the time, the delegates in Congress had no power to draft anyone, which means to order a person into the army by law. So in 1778 they asked each state to draft men from its militia for one year in the Continental Army. Officials in some states drafted more men than others, and the army stayed short of men. A drafted man could pay someone else to go in his place.

Lawmakers in the colonies and the states wrote laws that kept enslaved men out of the militia. That ban covered the militia, not the Continental Army, where about 7,000 Black men served.

Pennsylvania lawmakers made Quakers, whose religion forbids fighting, pay a fine if they would not join the volunteer militia companies called Associations. The fine matched the value of the time a man would have spent drilling,

practicing marching and handling weapons with his company. Officials took property from Quakers who refused to pay.

Saratoga and Yorktown. The British general John Burgoyne surrendered his army of 5,895 British and German soldiers at Saratoga, New York, on October 17, 1777. When the news reached France that December, the French foreign minister decided to make an alliance with the United States.

Four years later, Washington and the French general Rochambeau led about 17,000 American and French soldiers to Yorktown, Virginia. They surrounded the British general Charles Cornwallis there, while a French fleet held the sea behind him. About 8,000 British soldiers surrendered on October 19, 1781. It was the last big land battle of the war. When the news reached London, the British prime minister, Lord North, said, "Oh God. It is all over." The peace talks that followed ended with the Treaty of Paris in 1783.

Smallpox and Valley Forge

Washington ordered his whole army inoculated against smallpox on February 6, 1777. To inoculate a soldier, a doctor cut open a sore on a person sick with smallpox, then pushed the same blade under the healthy soldier's skin. The soldier then had a milder case of smallpox and could never catch it again.

Valley Forge. More than 12,000 soldiers, with about 400 women and children, marched into winter camp at Valley Forge, Pennsylvania, on December 19, 1777. They built about 1,500 log huts, each 14 feet by 16 feet. Four days later, Washington wrote to Congress that 2,898 of his men were "unfit for duty, because they are barefoot and otherwise naked."

Nearly 2,000 people in the camp had died by June 1778. Most died of the flu, of typhus, a fever spread by body lice, or of typhoid or dysentery, which spread through dirty water and food. Dysentery is an infection of the gut that causes bloody diarrhea, and a person can lose so much water that they die. Two out of three of those deaths came in March, April and May.

The prison ships of New York

The British held New York City from 1776 to the end of the war. Their officers kept captured American soldiers and sailors in prisons in the city and on ships in the harbor.

The British admiral in command at New York was Richard Howe. The ship called the *Jersey* held about 1,200 prisoners. The British officers who ran the ships gave the prisoners too little food and left the sick without care. By the National Park Service's account, smallpox, hunger and that neglect killed thousands.

One survivor wrote that the ship's biscuits were eaten through by weevils, which are small beetles. The bread was sour and often moldy, and the meat was rotten with age. Every morning, he wrote, a boat from each of the hospital ships carried the dead ashore, where the bodies "were all tumbled together into a hole dug for the purpose."

The Sugar House and the Provost. On land, the British held more than 4,500 Americans in the Sugar House, a sugar warehouse five stories tall. Another prison, the Provost, was run by Captain William Cunningham. His prisoners were packed so tightly that at night they could turn over only if they all turned at once.

Leaders of the Congress asked Washington to protest to Howe in January 1777. Washington wrote to Howe about prisoners the British had sent back from New York. He said their "miserable emaciated Countenances," meaning faces so thin from hunger that the bones showed, proved what they said.

The counts of the dead do not agree. A National Park Service page gives more than 11,500 dead on the ships and in the prisons around New York. Historians at the American Battlefield Trust estimate 8,000 to 12,000 deaths among all American prisoners in the whole war.

Gnadenhutten, March 8, 1782

Gnadenhutten was a town of Lenape and Mohican Christians in the Tuscarawas Valley, in what is now Ohio. They belonged to the Moravian church, and they refused to fight for either side in the Revolution. In February 1782, more than 150 of them went back to their old towns to gather the corn they had left in the fields.

About 160 Pennsylvania militiamen marched there under David Williamson, the officer they had chosen to command them. They blamed the Moravian Lenape for raids on Pennsylvania settlements, which the Lenape denied. The militiamen promised to take the people to Fort Pitt for safety and collected their weapons. Then they held a vote on whether to kill them. Only 16 or 18 of the militiamen voted against it.

The killings. The prisoners spent the night praying and singing hymns, with the men in one building and the women and children in another. On the morning of March 8, 1782, the militiamen tied them up. Taking turns, they struck each person on the head with a heavy hammer called a mallet, and then they scalped them.

They killed 96 people. Eric Sterner, writing in the *Journal of the American Revolution*, counts 62 adults and 34 children. Another count gives 28 men, 29 women and 39 children.

A militiaman named Obadiah Holmes Jr., who opposed the killing, said another militiaman, Nathan Rollins, killed 19 people himself. Two boys lived, and one of them survived being scalped. The militiamen burned the buildings with the bodies inside, burned the other Moravian towns, and carried off goods that needed 80 horses to move.

People talked of bringing the killers to court, but no one charged any of the militiamen with a crime. Later the Moravian missionary John Heckewelder, a man sent to spread his religion, gathered the bones and buried them at the town.

George Washington

Who: A Virginia officer in the French and Indian War who went on to command the Continental Army for the whole of the Revolution.

When and where: Fort Necessity, 1754. The Monongahela, July 9, 1755. Commander in chief from June 1775. Resigned at Annapolis, Maryland, December 23, 1783.

Movie: *Washington* (History channel, 2020), a documentary series in three parts, with acted scenes.

Four bullets went through his coat at the Monongahela.

As a young officer, George Washington was on the losing side twice in two years. At Fort Necessity in 1754 he surrendered to the French, and he promised that he and his men would go back to Virginia and stay out of the region for a year.

A year later he rode with Braddock as a volunteer aide, a helper to the general. After the battle at the Monongahela he wrote to his brother, "I had 4 Bullets through my Coat, and two Horses shot under" him.

The delegates of the Continental Congress chose him to command their army in June 1775, and he held the command until the war ended. On December 23, 1783, he handed his commission, the paper that made him commander, back to Congress at Annapolis. The next day he left for his home at Mount Vernon.

Joseph Plumb Martin

Who: A Connecticut teenager who joined the army at 15, served as a private and then a sergeant, and later wrote down what it was like.

When and where: Born in Becket, Massachusetts, November 21, 1760. Joined the army in June 1776 and was still serving at Yorktown in 1781. Died in Prospect, Maine, May 2, 1850, aged 89.

He made his shoes from raw cowhide on the march to Valley Forge.

Joseph Plumb Martin was 15 when he joined the Connecticut troops in June 1776. He fought on Long Island that August, and later at White Plains, Germantown and Monmouth. At Valley Forge he went out with groups of soldiers searching the countryside for food for the army.

On the march into the camp he made himself shoes from a piece of raw cowhide. His other choice, he wrote, was to go barefoot, as hundreds of other men did, "till they might be tracked by their blood upon the rough frozen ground." A National Park Service article points out that his words do not make clear whether he saw the bleeding feet himself or repeated a story people told after the war.

At Yorktown he was a sergeant in the sappers and miners, soldiers who dug the trenches that let the American and French armies surround Cornwallis. He took part in the attack on Redoubt No. 10, a small British fort of earth.

After the war he farmed in Prospect, Maine, married Lucy Clewley, and raised five children. He lost a fight over his land with Henry Knox, a former general. By 1818, when officials approved him for a pension, a payment of $96 a year for his service, he owned almost nothing. In 1830, at 70, he published his memoir, the story of his own life. It was printed again in 1962 as *Private Yankee Doodle*.

Deborah Sampson

Who: A Massachusetts woman who joined the army as a man named Robert Shurtleff, fought in the light infantry, was wounded, and later won a soldier's pension.

When and where: Born in Plympton, Massachusetts, December 17, 1760. Enlisted May 1782. Discharged October 1783. Died 1827.

She enlisted as Robert Shurtleff and served 17 months as a man.

At 10, Deborah Sampson was bound out as an indentured servant to a farmer's family in Middleborough, which meant she owed the family a set number of years of unpaid work. In May 1782, at 21, she joined the 4th Massachusetts Regiment as a man, under the name Robert Shurtleff. She served 17 months near West Point, New York, in a light infantry company, a unit of lightly armed foot soldiers.

She was wounded in combat. The Paul Revere House museum says it was in a fight with a raiding party of Loyalists, colonists who fought for the British king. The National Women's History Museum describes a sword cut to her forehead and a musket ball in her left thigh. The historian Alfred F. Young found accounts that put the wound in her shoulder or her chest.

The musket ball story. The story that she cut a musket ball out of her own thigh, so no army surgeon would find out she was a woman, comes from a book Herman Mann printed about her in 1797. The New England Historical Society calls Mann's book "a poor history," because he added a great deal that he imagined.

KNOWN:	Sampson was wounded in combat.
NOT KNOWN:	how, where on her body, or when. The accounts differ on all three.

A doctor treating her for a fever in Philadelphia found out she was a woman. General Henry Knox gave her an honorable discharge in October 1783, a record that she had served well. In 1785 she married Benjamin Gannett of Sharon, Massachusetts, and they had three children.

Paul Revere visited her at Sharon in 1804 and wrote to her congressman to support her claim for a soldier's pension. She went on the federal pension list in 1805. In 1806 she wrote to Revere asking to borrow ten dollars. She died in 1827. Ten years later, members of Congress voted to pay her husband, who had outlived her, for her service. He died before the money reached him.

St. Clair and Fallen Timbers, 1791 to 1794

Several Native nations north of the Ohio River joined in a confederacy, an alliance of nations, and fought US soldiers from 1785 to 1795. General Arthur St. Clair led about 2,000 men north from the Ohio River in 1791. They were a mix of militia, volunteers signed up for six months, and regular soldiers.

On the way, volunteers whose six months were up went home. About 60 militiamen ran off. St. Clair sent 300 regular soldiers back to guard his food supplies, and about 1,400 men were left on November 3.

The Wabash. The next day, on the Wabash River, more than 1,000 fighters under the Miami leader Little Turtle attacked St. Clair's camp. More than 900 of the army's soldiers, and the women and children traveling with them, were killed or wounded. That count comes from a US Army history article, and other counts split the dead and wounded differently. Most were left where they fell.

Members of Congress held their first special investigation ever into what went wrong, and they cleared St. Clair. President Washington then put General Anthony Wayne in charge of a new force called the Legion of the United States. Its soldiers drilled over and over until they could march and fight together.

Wayne's soldiers beat the Native confederacy at Fallen Timbers, in what is now Ohio, on August 20, 1794, in less than an hour and a half. US Army historians trace today's regular army back to the Legion.

BY 1800

If you remember one thing: In the Revolution, disease killed about two and a half American soldiers for every one killed in battle, and thousands of those who died of it were prisoners.

- 1763: Officers at Fort Pitt hand two Lenape men blankets from the smallpox hospital.
- 1777 to 1778: Nearly 2,000 people die of disease in the winter camp at Valley Forge.
- March 8, 1782: Pennsylvania militiamen kill 96 Christian Lenape and Mohican people at Gnadenhutten, and no one is charged.

Next: The new country's army fought Britain once more, then Mexico, and Native nations again and again on their own land.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 13 MINUTES

US soldiers went to war with Britain and with Mexico between 1800 and 1850, and they fought Native nations again and again on the nations' own land, from the Creek in Alabama to the Sauk in Illinois and the Seminole in Florida.

The army's officers now trained at a school of their own. President Thomas Jefferson signed the law that set up the US Military Academy at West Point, New York, on March 16, 1802. US soldiers fought the British from 1812 to 1815 and Mexico from 1846 to 1848, and they marched into Mexico City in September 1847.

Disease again. In the war with Mexico and in the Second Seminole War, disease killed most of the soldiers who died. For the war with Mexico, Defense Department records list 1,733 American soldiers killed in battle and 11,550 dead of other causes. About seven of every eight American dead died of something other than enemy fire.

Why Madison asked for war in 1812

President James Madison asked Congress for war with Britain on June 1, 1812, and listed three complaints. The first was impressment: British navy officers stopped American ships, took off sailors they said were British, and forced them to serve on British warships. The second was British orders that blocked trade by countries outside the war, including the United States. The third was that British officials encouraged Native nations to attack American settlers in the West.

The members of the House voted for war 79 to 49, and the senators voted 19 to 13, the closest votes on any declaration of war in US history. Madison signed the declaration on June 18, 1812.

Washington burns. British soldiers beat the American defenders at Bladensburg, Maryland, on August 24, 1814, and marched into Washington. Their commanders, Major General Robert Ross and Rear Admiral George Cockburn, had their men set fire to the Capitol, the President's House and the Treasury. Madison and many people in the city had already fled.

Fort McHenry. Three weeks later, British warships fired between 1,500 and 1,800 shells at Fort McHenry, which stood between the British navy and the city of Baltimore. The shelling lasted 25 hours, starting at 6 in the morning on September 13. The shells killed four men in the fort and wounded 24. Major George Armistead and his men held the fort, and the British ships sailed away.

Francis Scott Key watched the attack from an American ship in the harbor. He had gone to the British fleet to get a prisoner released, and the British would not let him go back to Baltimore until the battle was over. He wrote the verses that became "The Star-Spangled Banner."

New Orleans. American and British diplomats, officials sent to make the peace, signed a treaty to end the war at Ghent on December 24, 1814. The news did not reach New Orleans until March.

Before it came, on January 8, 1815, British soldiers under Edward Pakenham attacked General Andrew Jackson's lines outside the city. Jackson's force included frontiersmen from Tennessee and Kentucky, free Black soldiers,

Choctaw fighters, and Louisiana militia, part-time citizen soldiers. Jean Lafitte's privateers, ship crews allowed by a government to attack enemy ships, fought with them too.

Of 3,000 British soldiers in the main attack, about 2,000 were killed, wounded or captured in less than 30 minutes. Pakenham rode forward to rally them, was hit by American fire, and died of his wounds. Counts of the British dead run from 285 to about 700. Jackson's side lost 13 killed.

For the whole war, Defense Department records list 2,260 Americans killed in battle and 4,505 wounded. They list no count of soldiers who died of disease.

The Creek War, 1813 to 1814

While US soldiers fought the British, a second war began in the South, on the land of the Creek, or Muskogee, people, in what is now Alabama and Georgia. It started as a war among the Creek themselves, between Creek towns friendly to the United States and a group from the Upper Towns called the Red Sticks.

Mississippi militia ambushed Red Sticks at Burnt Corn Creek on July 27, 1813, as the Red Sticks came home with ammunition from the Spanish at Pensacola. A month later, on August 30, Red Sticks attacked Fort Mims, a stockade, or fort with a wall of upright logs, north of Mobile. They killed 250 Creek and American settlers there. Tennessee's governor then sent Andrew Jackson with Tennessee militia into Creek country.

Horseshoe Bend. Jackson's army of about 3,300 men attacked the Red Sticks' walled town of Tohopeka, at Horseshoe Bend on the Tallapoosa River, on March 27, 1814. The army included Tennessee militia, US soldiers, and Cherokee and Lower Creek allies. About 1,000 Red Sticks under Chief Menawa held the town.

Jackson's army killed more than 800 of them. Soldiers counted 557 bodies on the battlefield, and soldiers led by a man named Coffee shot an estimated 300 more in the river as they tried to swim away. Jackson's side lost 49 killed and 154 wounded. Cherokee and Lower Creek fighters took about 350 Upper Creek women and children prisoner.

Menawa was wounded seven times. He lay among the dead until dark and escaped in a canoe. Later in 1814, in the Treaty of Fort Jackson, US officials made Creek leaders give up land. An Encyclopedia of Alabama article states more than 21 million acres, and a National Park Service page states 23 million.

The Arikara towns and the Bad Axe, 1823 and 1832

The Arikara, whose towns stood on the Missouri River in present-day South Dakota, fought US soldiers in 1823. Arikara men attacked a party of fur traders led by William Ashley below their towns on June 2, 1823, and killed twelve or thirteen of Ashley's men. Colonel Henry Leavenworth came in August with about 230 soldiers of the 6th Infantry, an army unit of foot soldiers. Fur trappers and about 750 Lakota and Yankton allies came with him.

They attacked the towns with cannon. After a peace was signed, the Arikara left their towns at night. As the soldiers marched away on August 15, two men of the Missouri Fur Company set the empty towns on fire. No reliable count of the Arikara dead survives.

Black Hawk. The Sauk leader Black Hawk led about 1,000 Sauk, Meskwaki and Kickapoo people back across the Mississippi River into Illinois in April 1832. US officials said the Sauk and Meskwaki had signed the land away in an 1804 treaty, and Black Hawk rejected that treaty. About 7,000 US soldiers and militiamen went out against his band. Abraham Lincoln served as a militiaman in this war.

The Bad Axe. By August the band, perhaps 500 men, women and children, was trying to cross back over the Mississippi near the Bad Axe River, in present-day Wisconsin. Soldiers aboard an army steamboat, the *Warrior*, under Captain Throckmorton, fired on them on August 1. The next day about 1,300 soldiers and militiamen under Brigadier General Henry Atkinson attacked the people still on the east bank.

A Wisconsin Historical Society marker put up in 1955 states that the people were "driven into the water by their pursuers." There, it states, "warriors, old people, women and children" were "shot down or drowned as they tried to escape." Illinois governor Thomas Ford later estimated 150 killed, as many drowned, and 50 taken prisoner.

About 70 people reached the far bank, where Dakota fighters, allies of the United States, captured or killed them. Neither the marker nor Ford's account names the men who fired on the people in the water.

The Second Seminole War, 1835 to 1842

US soldiers fought for seven years to force the Seminole out of Florida and west to Indian Territory, now Oklahoma. The Seminole had taken in people who escaped slavery in Georgia, South Carolina and Florida, and that turned slaveholders and army officers against them.

Dade's column. About 180 Seminole fighters led by Micanopy, Alligator and Jumper attacked Major Francis Dade's column of soldiers on December 28, 1835, on the road from Fort Brooke to Fort King. They killed almost all the soldiers in the column. A Florida Department of State history page states that one soldier survived, and other accounts count two or three.

Osceola. General Thomas Jesup ordered soldiers to seize the Seminole leader Osceola near St. Augustine in October 1837, while Osceola was meeting them under a white flag of truce, the sign that both sides agree not to fight while they talk. A National Park Service history describes a "public outcry" against Jesup's "dishonorable ploy," meaning a trick that broke the rules of honor. Soldiers then took Osceola and 237 of his people to Fort Moultrie in South Carolina. He died there as a prisoner on January 30, 1838.

More than 1,500 US soldiers had died in the war by 1842, most of them of disease, and US officials had spent more than $20 million on it. The National Park Service gives no count of the Seminole dead for the whole war. Its page gives one rate instead: for every four Seminole people the soldiers forced out of Florida, they killed one.

The Mexican War, 1846 to 1848

Texas became part of the United States in 1845, and Mexican officials claimed the strip of land between the Nueces River and the Rio Grande. President James K. Polk sent soldiers under General Zachary Taylor into that strip in 1846. An article in the Colorado Encyclopedia states that Polk "goaded" Mexico into war this way, meaning he pushed Mexico into starting the fighting.

Mexican soldiers under Brigadier General Anastasio Torrejón surrounded a US patrol of cavalry, soldiers on horseback, under Captain Seth Thornton on April 25, 1846. The patrol surrendered. Mexican officials said Thornton's men were the invaders.

Polk told Congress that Mexico had "shed American blood upon the American soil." House members voted for war 174 to 14 and senators 40 to 2, and Polk signed the declaration on May 13, 1846. Ulysses S. Grant, a young officer who fought in the war, later wrote that he regarded it "as one of the most unjust ever waged by a stronger against a weaker nation."

Veracruz. US soldiers won at Monterrey in September 1846 and at Buena Vista in February 1847. General Winfield Scott's guns fired more than 6,700 shells into the Mexican port city of Veracruz over four days in March 1847, and the city's defenders surrendered on March 29. One count, in a HistoryNet article, states about 100 Mexican civilians, 80 Mexican soldiers and 13 Americans dead there. Other counts run higher. Scott's soldiers then fought their way inland and took Mexico City in September 1847.

Civilians. American soldiers also killed Mexican civilians. Early in 1847, near Saltillo, Mexican ranchers dragged an Arkansas private, Samuel Colquitt, to death. Arkansas volunteers from Captain C. C. Danley's company and another company then found the civilians they believed were guilty and shot between 17 and 30 of them.

General Taylor was furious. He threatened to send the two companies back to the Rio Grande to do hard labor, and he did not, because the Mexican general Santa Anna's army arrived. No one counted all the Mexican civilians killed in

the war.

The surgeons. Army surgeons had to cut off an arm or leg shattered in battle, an operation called amputation. In the spring of 1847 they used anesthetics in battle for the first time, drugs that put the patient to sleep so the patient feels no pain. Most of the men who died, though, died of dysentery, the gut infection that causes bloody diarrhea, or of yellow fever and malaria, fevers spread by mosquitoes.

The treaty. Mexican officials signed the Treaty of Guadalupe Hidalgo on February 2, 1848. Under it they gave up 55 percent of Mexico's land, more than 525,000 square miles, to the United States, and US officials agreed to pay the Mexican government $15 million. That land became California, Nevada, Utah, Arizona, New Mexico and much of Colorado. In the 1840s, Comanche, Apache and Ute people controlled much of Mexico's northern lands, including part of this land.

About 78,700 Americans served in the war and 13,283 died, about one in six. By an estimate quoted on Smarthistory, an education website, about 25,000 Mexican soldiers died.

John Riley

Who: An Irish-born US Army sergeant who crossed to the Mexican side before the war began and led a unit of deserters, the San Patricios, against the US Army.

When and where: Company K, 5th US Infantry. Crossed the Rio Grande in the spring of 1846. Captured at Churubusco, near Mexico City, August 20, 1847.

Movie: *One Man's Hero* (1999), a feature film about him, with Tom Berenger as Riley. It is a drama, not a documentary.

Army officers hanged fifty of his men and branded his face.

John Riley had trained West Point cadets to fire cannon. In the spring of 1846, before members of Congress declared war, he crossed the Rio Grande and joined the Mexican army, which made him a deserter, a soldier who leaves his army without permission. He organized other deserters into the San Patricio Battalion, a unit of a few hundred soldiers named in Spanish for Saint Patrick. Many of the men were Irish immigrants, and many were Catholic.

A National Park Service page lists their reasons. American officers treated Catholic soldiers with "anti-Catholic bigotry and brutal discipline," bigotry meaning hatred of people for who they are or what they believe. A Smithsonian article states that officers quite often forced Catholic soldiers to attend Protestant services.

Some men were against the war. Mexican officials offered land to foreigners who joined them. Some San Patricios were escaped slaves and free Black men, who saw Mexico, where slavery was against the law, as freer than the United States.

The San Patricios fought at Monterrey, Buena Vista, Cerro Gordo and Churubusco. At Churubusco on August 20, 1847, US soldiers captured between 75 and 80 of them. Army officers tried 72 as deserters in two mass courts-martial, or military trials, held 3 and 6 days after the capture. The men had no lawyers, and no one wrote down what was said.

The hangings. Army officers hanged fifty of them, at San Angel on September 10 and at Mixcoac on September 13, 1847. On September 13, Colonel William Harney hanged 30 of them within sight of Chapultepec Castle as the US flag went up over it. He left their bodies on the gallows to rot.

The whip and the iron. Riley had deserted before the war was declared, so the court could not sentence him to death. Instead the officers of the court ordered him whipped with fifty lashes, blows from a whip on his bare back that cut the skin. They also ordered him branded. A metal letter D, for deserter, was heated red-hot and pressed into the skin of his face near the eye, and it burned a scar in the shape of the letter that he carried for life.

Some accounts say it was done to both cheeks. One says the first D went on upside down and a second D was burned on the right way up. The Texas State Historical Association and *American Heritage* accounts do not name the men who held the whip and the iron.

Riley stayed in the Mexican army after the war. Records of where he went stop a few years later, and the date of his death is not known.

BY 1850

If you remember one thing: The army fought its way to Mexico City and the country took more than half of Mexico's land, and disease killed most of the Americans who died on the way.

One number: 7 of every 8. That many of the American soldiers who died in the war with Mexico died of something other than enemy fire: 11,550 of disease and other causes, against 1,733 killed in battle.

Next: More American soldiers died in the Civil War than in any other war the country has fought, and sickness killed more of them than bullets did.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 23 MINUTES

More American soldiers died in the Civil War, from 1861 to 1865, than in any other war the United States has fought. The Union was the United States government and the states that stayed loyal to it. The Confederacy was made up of Southern slave states whose leaders broke away.

How many died. Between 650,000 and 850,000 soldiers died in the Civil War. The historian J. David Hacker worked out that range in 2011 from census records, the government's counts of everyone in the country, from 1850 to 1880. His best estimate, about 750,000, is nearly twice the 405,399 Americans who died in World War II.

The long-used count was lower, about 620,000. The armies' own records count fewer still, because they are incomplete. The Union officer in charge of the draft, for example, counted only 133,821 Confederate dead in his final report.

What killed them. Disease killed more soldiers than bullets did. Union records list 140,414 Union soldiers killed in battle and 224,097 dead of disease and other causes. That is close to the rate an American Battlefield Trust article gives for the war: five deaths from disease for every three in battle.

Measles spread through the new army camps in 1861. In August that year Lee wrote, "The soldiers everywhere are sick." Army doctors recorded 79,462 cases of typhoid, an infection from bacteria in food or water that contains human waste. It causes high fever and stomach pain, and it can kill.

US soldiers fought the nations of the Plains and the West from the end of the Civil War until 1890. American sailors beat a Spanish fleet in Manila Bay, in the Philippines, in 1898, and American soldiers fought Spain in Cuba. A new war began in the Philippines in February 1899, between US soldiers and Filipino fighters led by Emilio Aguinaldo.

The Civil War battles, 1861 to 1865

Confederate gunners opened fire on Fort Sumter, in the harbor at Charleston, South Carolina, at 4:30 in the morning on April 12, 1861. Over 34 hours they fired more than 4,000 shots and shells. Major Robert Anderson and the Union soldiers who held the fort surrendered it the next afternoon.

Antietam. The two armies had about 23,000 casualties, soldiers killed, wounded or missing, in twelve hours of fighting at Antietam Creek in Maryland, on September 17, 1862. More soldiers were lost at Antietam than on any other single day of the war.

Gettysburg. The Union army under George Meade and the Confederate army under Robert E. Lee had 51,112 casualties between them at Gettysburg, Pennsylvania, from July 1 to 3, 1863. About 7,000 of those men were killed. On the last day, Lee sent about 12,500 men to attack the Union soldiers on Cemetery Ridge, in the attack called Pickett's Charge. Close to 60 percent of them were killed, wounded or captured.

Ulysses S. Grant's army surrounded the river town of Vicksburg, Mississippi, for 46 days, in a siege that cut the town off until it gave up. On July 4, 1863, about 29,000 Confederate soldiers at Vicksburg marched out, stacked their rifles and surrendered to him.

Who had to fight in the Civil War?

Officials on both sides drafted soldiers when too few men volunteered, and both drafts let richer men out. Members of the Confederate Congress passed their draft law first, on April 16, 1862. Under it, officials could draft any white man aged 18 to 35. On October 11, 1862, they passed the Twenty-Slave Law, under which any man who held twenty or more enslaved people did not have to serve. Drafted soldiers called it "a rich man's war."

The Union draft. Members of the US Congress passed the Enrollment Act on March 3, 1863. Army officers called provost marshals ran the draft. They drafted men in each district where too few had volunteered to fill the number of soldiers the army asked for. A drafted man could hire a substitute to go in his place, or pay a $300 fee and go home. In 1863, $300 could take the average person a whole year to earn.

Substitutes were often 18- or 19-year-olds too young to be drafted, or immigrants who were not yet citizens. People called it "a rich man's war and a poor man's fight." More than 20 percent of the men drafted did not report. Some fled west and some hid.

The New York riots. The draft began in New York City on Saturday, July 11, 1863. A rich man could pay his way out, and many New Yorkers were angry that poor men had to go instead. Many poor white workers, most of them Irish, also feared that if slavery ended, Black people would move to New York and take their jobs.

From Monday, July 13, to Thursday, July 16, mobs looted stores, burned a draft office, and attacked police and soldiers. Their main target was the city's Black people. The rioters lynched at least a dozen Black men, which means they killed them without any trial.

On Clarkson Street on July 13, a gang led by an Irish bricklayer, John Nicholson, beat a Black man named William Jones, who drove a cart for a living, hanged him and set his body on fire. The mobs burned homes and businesses. Rioters set fire to the Colored Orphan Asylum ("Colored" was a

word used then for Black people), a home for Black children without parents, on Fifth Avenue with more than 200 children inside. All of the children got out.

The official count of the dead was 119, and the New-York Historical Society notes that many historians think more died. Union soldiers came from Gettysburg to stop the riots. Afterward many Black families moved to Brooklyn and New Jersey, and the number of Black people living in New York City fell by 20 percent.

Why did surgeons cut off so many arms and legs?

Soldiers on both sides fired the minié ball, a soft lead bullet shaped like a cone, and it often flattened when it hit a body. It splintered bone, tore muscle, and drove dirt and bits of cloth into the wound. A surgeon could not mend an arm or leg smashed that way, so he cut it off. Three of every four operations in the war were amputations, close to 60,000 in all.

The operation. The surgeon first put the soldier to sleep with chloroform or ether. He tied a tight band called a tourniquet around the arm or leg to slow the bleeding, then cut through the skin with a knife called a scalpel and through the muscle with a long knife. Then he sawed through the bone. Last, he tied off the blood vessels and bandaged the stump.

Soldiers whose limbs were cut off within two days of the wound lived more often than those operated on later. Infection, loss of blood and poor food killed many of the men operated on later.

Amos Humiston

Who: A sergeant in the 154th New York Infantry, killed at Gettysburg. He was identified only because of a photograph of his three children found in his hand.

When and where: Born in Owego, New York, April 26, 1830. Killed at Gettysburg, Pennsylvania, July 1, 1863. Identified in November 1863.

A photograph of three children was all he had on him.

Amos Humiston had made harnesses for horses and had sailed on a whaling ship from 1850 to 1854. He married Philinda Smith on July 4, 1854, and they had three children, Franklin, Alice and Frederick. He joined the army in July 1862 and was a sergeant by January 1863.

He was killed on the first day at Gettysburg. The records do not say what wound killed him. His body was found near the corner of Stratton and York Streets in the town. He had nothing on him to show who he was except a small photograph on glass, called an ambrotype, of three young children. He was buried as an unknown soldier.

"Whose Father Was He?" A doctor named John Francis Bourns had hundreds of copies of the photograph made. On October 19, 1863, editors at the *Philadelphia Inquirer* printed the story under that headline. In November, Philinda Humiston saw a copy and knew her children. Without the photograph, his grave in the Soldiers' National Cemetery would read "Unknown," like the graves of 979 other soldiers there.

In October 1866, his three children were among the first thirty children at a home for soldiers' orphans that opened in Gettysburg. A monument to Humiston went up on North Stratton Street in 1993. It is the only monument on the battlefield to a single enlisted soldier, meaning a soldier who was not an officer.

The prison camps

Why the camps filled. Union and Confederate commanders traded captured soldiers under an agreement made in July 1862. In December 1862, Confederate President Jefferson Davis announced that captured Black soldiers and their white officers would not be traded. President Abraham Lincoln stopped the trades in the summer of 1863 because the Confederates would not include Black soldiers.

By August 1863, large trades had ended, and the prison camps filled up. By the end of the war, about 400,000 men had been held in more than 150 prisons.

Andersonville. Confederate officers opened a prison camp at Andersonville, Georgia, early in 1864. It was a walled pen of 26.5 acres, built for 10,000 men, and in August 1864 it held more than 33,000. One stream was the only water for most of them. About 19 feet inside the wall ran a line called the deadline, and guards had orders to shoot any prisoner who crossed it.

More than 45,000 Union soldiers were held there in 14 months. Almost 13,000 of them, more than one in four, died there under the Confederate officers who ran the camp, of disease, hunger, filth, crowding, and exposure to heat and cold.

A court of army officers found the camp's commander, Captain Henry Wirz, guilty of war crimes, acts that break the laws of war. The court sentenced him to death, and Union army officers hanged him in Washington on November 10, 1865. He was the only person put to death for war crimes in the Civil War.

The Union camps. Between 26,000 and 31,000 Confederate soldiers died in Union prison camps. At Elmira, New York, the barracks had no protection from the winter cold. Close to 3,000 Confederate prisoners died there, about one in four of the men held. An American Battlefield Trust article blames Colonel William Hoffman, the Union officer in charge of all prisoners.

At Camp Douglas, in Chicago, people from the US Sanitary Commission, a group that checked on the health of soldiers and their camps, reported standing water, filthy toilet trenches and "rotten bones." The camp's commanders cut the prisoners' food to make money for themselves. At Point Lookout, Maryland, more than 4,000 prisoners died.

Fort Pillow, April 12, 1864

Black men who joined the Union army served in regiments, large army units, called the US Colored Troops. The Confederate general Nathan Bedford Forrest attacked Fort Pillow in Tennessee with about 1,500 men on April 12, 1864. The fort held 262 Black artillery soldiers, who fired the big guns, and 295 white Tennessee cavalrymen. Forrest's men took the fort and kept shooting soldiers who had surrendered. A witness told congressional investigators, "They killed all the men after they surrendered, until orders were given to stop."

Private George Shaw, a Black soldier, testified that a Confederate shot him after he surrendered, told him "You are fighting against your master," and threw him into the river. Shaw lived. He saw Confederate soldiers shoot three teenage boys who had escaped slavery in the forehead while the boys begged for their lives.

Forrest's men killed 182 of the Black soldiers that day or wounded them so badly that they died later, about 70 percent of them. A sign in the museum at the fort lists all 182 by name. About 20 percent of the white soldiers were killed. Forrest's men also killed some Black civilians, and no one knows how many. After Fort Pillow, Black soldiers went into battle shouting "Remember Fort Pillow."

Christian Fleetwood

Who: A Black man born free in Baltimore, who carried his regiment's flag through the attack at New Market Heights and received the Medal of Honor.

When and where: Born in Baltimore, Maryland, July 21, 1840. Enlisted in the 4th US Colored Infantry, August 1863. New Market Heights, outside Richmond, Virginia, September 29, 1864. Died September 28, 1914.

Two flag bearers fell, and he picked up the flag.

Christian Fleetwood's parents were free. He graduated from the Ashmun Institute in Oxford, Pennsylvania, in 1860, and helped start the *Lyceum Observer*, an early Black newspaper in the South. When he enlisted in August 1863, his officers made him sergeant major, the regiment's top sergeant, because he was so well educated.

His regiment charged at New Market Heights on September 29, 1864. Two soldiers carrying the flag were shot down. Fleetwood picked it up and carried it forward under fire. In his diary that day he wrote that the regiment "got used up" and that he "saved colors," meaning the regiment's flag.

He was one of 14 soldiers of the Colored Troops who received the Medal of Honor, an award for bravery in battle, for that day. Every officer in his regiment asked Secretary of War Edwin Stanton to make Fleetwood an officer. Stanton refused.

After the war Fleetwood worked as a clerk in the War Department in Washington. He also organized a battalion of the District of Columbia National Guard and served as its major.

Ulysses S. Grant and Robert E. Lee

Who: The two commanding generals at the end of the Civil War. Lee led the Confederate Army of Northern Virginia from June 1862. Grant led all the Union armies from March 1864.

When and where: Lee was born at Stratford Hall, Virginia, on January 19, 1807, and died in Lexington, Virginia, on October 12, 1870. Grant was born in Point Pleasant, Ohio, on April 27, 1822, and died on July 23, 1885. They met at Appomattox Court House, Virginia, on April 9, 1865.

Movie: *Grant* (History channel, 2020), a documentary in three parts about Grant, with acted scenes.

Wesley Norris said Lee had salt water poured into his cuts.

Both men trained at West Point, where Lee finished second in the class of 1829 and Grant 21st of 39 in 1843, and both fought in the Mexican War. In 1854 Grant quit the army so he would not be thrown out, after heavy drinking at remote army posts in the West.

Wesley Norris. From 1857 Lee was in charge of 189 enslaved people on the estates of his dead father-in-law. Three of them ran away in 1859. They almost reached the Pennsylvania line, but at Westminster, Maryland, they were caught and jailed, and Lee was told. No surviving record names the men who caught them.

One of the three, Wesley Norris, gave his account in 1866. A county constable named Dick Williams, he said, whipped him and his cousin fifty times each and whipped his sister twenty times while Lee watched. Then, Norris said, Lee ordered the overseer to wash their backs with brine, very salty water, poured into the cuts.

Harpers Ferry. In October 1859, the year of the escape, Lee led the 90 US Marines who ended John Brown's raid at Harpers Ferry, Virginia. Brown and 18 of his men had seized the US Armory and Arsenal there, where the government made and stored guns, to fight a war against slavery.

Lee resigned from the US Army on April 20, 1861, after Virginia's leaders voted to leave the Union. On December 29, 1862, he signed the paper freeing the people enslaved on his father-in-law's estates, because the will required it. At Gettysburg on July 3, 1863, he ordered Pickett's Charge.

Grant took Fort Donelson in February 1862, after telling the fort's commander he would accept "no terms except an unconditional and immediate surrender." He took Vicksburg on July 4, 1863. In March 1864 he became a lieutenant general and the commander of every Union army.

Appomattox. Lee surrendered to Grant in Wilmer McLean's parlor at Appomattox Court House on April 9, 1865. Under Grant's terms, Lee's soldiers could go home once they signed a promise not to fight the United States again. The officers kept their side arms, the small weapons they carried, and their own horses and belongings. About 28,000 Confederate soldiers signed. Grant finished writing his memoirs a few days before he died of cancer in 1885.

BY 1865: Lee had surrendered at Appomattox, and somewhere between 650,000 and 850,000 soldiers of the two armies were dead.

Bear River, Sand Creek and the Marias, 1863 to 1870

During and after the Civil War, US soldiers attacked Native camps in the West where families were living through the winter.

Bear River. Colonel Patrick Edward Connor led the 3rd California Volunteer Infantry against a Northwestern Shoshone winter camp on the Bear River, near present-day Preston, Idaho, on January 29, 1863. He had announced that he did not mean to take prisoners. The soldiers attacked in the early morning and began firing without a word.

People jumped into the freezing river. A woman named Anzee Chee hid under the riverbank with other women, and she drowned her own crying baby so the soldiers would not find them. Yeager Timbimboo, a 12-year-old boy, lived by lying still among the dead.

Soldiers killed an estimated 250 to 500 Shoshone, and Connor was promoted to brigadier general for the attack. An article in Smithsonian magazine states that the attack "is often described as" the deadliest killing of Native people by US soldiers, with a death toll believed to be higher than at Sand Creek or Wounded Knee.

Sand Creek. Colonel John Chivington led about 675 Colorado volunteer soldiers against the Cheyenne and Arapaho camp of Black Kettle at Sand Creek, in Colorado, on November 29, 1864. Black Kettle's camp flew a US flag and a white flag. The soldiers killed about 230 people by the National Park Service's count, most of them women, children and old people. Soldiers cut off scalps and other parts of the bodies.

Captain Silas Soule and Lieutenant Joseph Cramer would not let their men fire. Soule put the number of dead at three hundred. He also wrote that it was "hard to see little children on their knees have their brains beat out by men professing to be civilized."

After Soule and Cramer sent their letters, army officers held an investigation and members of Congress held two more. Members of Congress's Joint Committee on the Conduct of the War wrote that Chivington "deliberately

planned and executed a foul and dastardly (cowardly) massacre," a killing of many people who could not defend themselves.

Chivington left the army and was never tried, and no officer or soldier was punished. About two months after Soule testified against Chivington, on April 23, 1865, someone shot Soule dead on a street in Denver. No one was ever brought to justice for his murder.

The Marias. General Philip Sheridan sent Major Eugene Baker of the 2nd Cavalry against Mountain Chief's band of Piikani, or Piegan Blackfeet, in Montana in January 1870. "Tell Baker to strike them hard," Sheridan ordered.

At daybreak on January 23, Baker found a camp on the Marias River. His scout, Joe Kipp, told him it was the peaceful band of Heavy Runner. By one account, Baker answered, "That makes no difference, one band or another of them. They are all Piegans and we will attack them." He ordered a sergeant to shoot Kipp if Kipp warned the camp.

Heavy Runner came out of his lodge waving his paper of safe passage, and the soldiers shot him first. They knocked down lodges, the band's tent homes, with people inside them, set them on fire, and burned the band's winter food.

Army officers counted 173 dead. A later estimate, reported by HISTORY, is that the soldiers killed 37 men, 90 women and 50 children, which makes 177. Other counts run to more than 200. Baker took about 140 women and children prisoner. When he found smallpox among them, he left them with no food or shelter. Neither Baker nor his men were ever punished.

The army in the West, 1866 to 1890

From 1866 to 1890, US soldiers fought the nations of the Plains and the West. US officials wanted the nations on reservations, land set aside for them, and soldiers attacked the bands that would not go.

The Buffalo Soldiers. Members of Congress created six regiments of Black soldiers in 1866, later merged into four: the 9th and 10th Cavalry and the 24th and 25th Infantry. They became known as the Buffalo Soldiers, and army commanders posted them west of the Mississippi River. Counts of how many of them received the Medal of Honor in the wars against the Plains nations run from 17 to 23.

Little Bighorn. An army expedition under George Armstrong Custer reported gold in the Black Hills in 1874. An 1868 treaty had promised the hills to the Lakota, and US officials ignored it. In December 1875 they ordered the winter camps off the reservation to come onto it by January 31, 1876, and then sent the army after the camps that stayed out.

Lakota and Cheyenne fighters killed Custer, the commander of the 7th Cavalry, beside the Little Bighorn River in Montana on June 25 and 26, 1876. They killed every man in the five companies, or groups of soldiers, under his own command. In all, 268 US soldiers and scouts died in the two days.

The Nez Perce. General Oliver O. Howard ordered Chief Joseph's band of Nez Perce to leave their homeland in the Wallowa country of northeast Oregon in 1877 and move to the reservation. Fighting began that June. About 750 Nez Perce people, about 200 of them fighters, fled from US soldiers from June to October. They covered about 1,170 miles and fought the soldiers again and again as they went. They surrendered at Bear Paw, in Montana, on October 5, 1877, 40 miles from Canada.

Wounded Knee. Soldiers of the 7th Cavalry under Colonel James Forsyth surrounded a Lakota camp at Wounded Knee Creek in South Dakota on December 29, 1890, and began taking away the Lakota's guns. The soldiers had four Hotchkiss guns, small cannon on wheels that fired exploding shells one after another, on a bluff above the camp.

A rifle belonging to Black Coyote, a deaf man, went off. Some accounts say he fired it, and others say it went off when a soldier grabbed it. Soldiers of the 7th Cavalry then killed between 250 and 300 Lakota, and almost half of the dead were women and children.

At least 25 soldiers died, and an article in Smithsonian magazine states that other soldiers' bullets likely hit many of them. Twenty soldiers of the 7th Cavalry received the Medal of Honor for that day.

Cathay Williams

Who: A woman born into slavery who enlisted in the army as William Cathay and served two years with a Black infantry regiment in the West.

When and where: Born in Independence, Missouri. Enlisted at St. Louis, November 1866. 38th US Infantry, in Kansas and New Mexico. Discharged October 14, 1868. Applied for a pension in 1891 and was refused.

Her papers said William Cathay, age 22, 5 feet 9 inches.

Cathay Williams was born enslaved. During the Civil War, Union soldiers of the 8th Indiana Infantry freed her and took her as "contraband," the army's word for enslaved people who came under Union control. She worked for the regiment, washing clothes and cooking, and followed it to the battle of Pea Ridge in Arkansas and to the Shenandoah Valley in Virginia.

She enlisted at St. Louis as William Cathay in November 1866. She was sent to the 38th Infantry, one of the new Black regiments. She caught smallpox soon after she enlisted and recovered. Over two years she marched about 1,000 miles with her company, from Fort Riley in Kansas to Fort Bayard in New Mexico.

An army doctor at her post found out she was a woman in 1868. She was discharged on October 14 with a certificate of disability, a paper saying she was not fit to serve. In 1876 she told a St. Louis newspaper, "I played sick... The post surgeon found out I was a woman."

> She asked for a pension, the regular payment a former soldier can get, as a disabled veteran in 1891. She had spent eighteen months in a hospital in Trinidad, Colorado, and had lost some of her toes. Officials at the Pension Bureau turned her down, even though her discharge papers recorded illness. The date of her death is not known.

1898, Cuba and the Philippines

From 1898 on, American soldiers fought most of their wars overseas. The US Navy ship *Maine* blew up in the harbor at Havana, Cuba, on February 15, 1898, and 266 of the 354 men aboard died. People still argue over the cause. Later in 1898, a court of navy officers blamed a mine. In 1976, a study led by Admiral Hyman Rickover found that a fire in a coal bin most likely set off the explosives stored next to it.

San Juan Hill. The Black soldiers of the 10th Cavalry fought at Las Guasimas, Cuba, on June 24, 1898, and again in the attack on San Juan and Kettle Hills on July 1. About one in five of them became casualties in that attack. The fighting with Spain stopped on August 13, 1898.

Typhoid killed more American soldiers in 1898 than Spanish soldiers did. Defense Department records list 385 Americans killed in battle in the war with Spain and 2,061 dead of other causes, most of them of typhoid. In the army's camps in the United States there were 20,738 cases of typhoid and 1,590 deaths.

The Philippines. Private William Walter Grayson of the 1st Nebraska Volunteer Infantry was standing guard in Manila on February 4, 1899. He fired the shot counted as the first of a new war, between US soldiers and Aguinaldo's fighters. US soldiers captured Aguinaldo in 1901, and President Theodore Roosevelt declared the war over on July 4, 1902, though fighting went on in places.

Historians at the State Department count more than 4,200 American and more than 20,000 Filipino fighters dead. They count as many as 200,000 Filipino civilians dead of violence, hunger and disease. Other estimates of the

civilian dead run much higher, up to 1,000,000, and historians disagree about them. The State Department's history does not say how many of the civilians American soldiers killed.

BY 1900

If you remember one thing: More American soldiers died in the Civil War than in any other war, and after it US soldiers spent twenty-five years fighting the nations of the West.

In 1861: Americans were fighting each other in a war at home in which between 650,000 and 850,000 soldiers died, most of them of disease.

In 1900: American soldiers were fighting across the Pacific, in the Philippines, where as many as 200,000 Filipino civilians died by the State Department's count, and more by other counts.

Next: In the next fifty years more than 20 million Americans served in two world wars, and most of them were drafted.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 24 MINUTES

Most of the Americans who fought in the two world wars were drafted. World War II was the first American war in which more of them died in battle than of disease, accidents and infections.

Who they fought. Members of Congress declared war on Germany in April 1917. German submarines had sunk American ships, and German officials had tried to draw Mexico into an alliance against the United States. American soldiers then fought on the side of the Allies, the countries already at war with Germany, among them Britain. In World War II the United States fought Japan, Germany and Italy, after Japanese pilots attacked Pearl Harbor in December 1941 and Germany and Italy declared war four days later.

The two wars. About 4.7 million Americans served in World War I, from 1917 to 1918, and 116,516 died, more of them of disease and accidents than in battle. More than 16 million served in World War II and 405,399 died, in counts that run from 1941 to 1946. These are the Defense Department's counts.

The draft. In World War I, 2.8 million men were drafted, which means they were ordered into the armed forces by law, and 2 million volunteered. In World War II about 10 million of the 16 million who served were drafted.

Military leaders kept Black service members in separate units until after President Harry Truman ordered equal treatment in 1948, and nearly every unit was mixed by about 1953. In 1945, American airmen dropped the first two atomic bombs used in war, on two cities in Japan. An atomic bomb gets its huge power from the tiny centers of atoms. One bomb could kill tens of thousands of people, and unlike other bombs it also gave off radiation, invisible energy that sickened and killed people for weeks afterward.

What was the water cure?

The water cure was a torture American soldiers used on Filipino prisoners during the war in the Philippines. Soldiers held a man down and poured water into his mouth and nose until his stomach swelled. Then they pressed or stood on his stomach to force the water out, and started again.

Igbaras. Soldiers did this to Tobeniano Ealdama, the mayor of the town of Igbaras, on the island of Panay, on November 27, 1900. Captain Edwin Glenn, an army lawyer, oversaw it. Ealdama said later, "My stomach and throat pained me, and also the nose where they passed the salt water through." That night Glenn ordered the town's 400 to 500 houses burned.

A sergeant who had been there, Charles Riley, told a Senate committee about it on April 14, 1902. Army officers tried Glenn and found him guilty. His punishment was a $50 fine and one month in which he was not allowed to do his job. He retired in 1919 as a brigadier general.

Samar. Filipino fighters killed 48 of the 74 men in an American company at Balangiga, on the island of Samar, in late 1901. Brigadier General Jacob Smith then ordered Marine Major Littleton Waller to turn the island into a "howling wilderness." Smith told him, "The more you kill and burn, the better it will please me." Smith said he thought Filipino boys of ten were old enough to fight.

Waller had eleven Filipino guides and carriers shot without a trial. At his court-martial, a trial run by military officers, the officers voted 11 to 2 to find him not guilty. At Smith's own court-martial in 1902, officers reprimanded him, which means they scolded him officially. President Theodore Roosevelt then ordered Smith to retire from the army at once. The historian Paul Kramer writes, "The scale of abuses in the Philippines remains unknowable."

The draft of 1917 and the men who refused

Members of Congress passed the Selective Service Act, the law for the World War I draft, on May 18, 1917. Men had to register on three days in 1917 and 1918, and by the end about 24 million men had filled out draft cards, about 23 percent of everyone living in the country in 1918.

Some drafted men refused to fight because their religion forbade it, and they were called conscientious objectors.

The Hutterite brothers. Three brothers, David, Joseph and Michael Hofer, and Joseph's brother-in-law Jacob Wipf were drafted in 1918. They were Hutterites, members of a Christian community in South Dakota that does not fight in wars. They refused to put on uniforms or obey military orders. Officers at a court-martial at Camp Lewis sentenced them to 20 years in prison.

Alcatraz. Soldiers took the four men, chained in pairs, to the military prison on Alcatraz Island on July 25, 1918. Guards put them in cold, wet cells in the basement. At first they got half a glass of water a day and no food.

Guards chained them standing to the cell bars with their hands crossed and pulled up high, so only their toes touched the floor. This was called high cuffing, and it strained their arms and shoulders until they swelled. After five days their arms were too swollen to put on their jackets. Duane Stoltzfus, a historian at Goshen College, writes that guards were reported to have beaten them with knotted whips as well.

Guards moved the four in chains to Fort Leavenworth, in Kansas, on November 19, 1918, after the fighting in Europe had stopped. Joseph Hofer died there on November 29, and Michael Hofer on December 2. Officials had Joseph's body dressed in the army uniform he had refused to wear.

The prison doctor listed pneumonia, a sickness that fills the lungs with fluid, during the flu outbreak in the prison. The Hutterite church's record states that they died "as a result of cruel mistreatment by the United States military." On December 6, 1918, Secretary of War Newton Baker ordered an end to chaining prisoners to cell bars.

Houston, 1917

Army leaders sent 654 Black soldiers of the 3rd Battalion, 24th Infantry, to guard the building of Camp Logan outside Houston, Texas, in July 1917. People in Houston insulted them with racial slurs every day.

Houston police arrested a Black soldier on August 23, 1917, after he questioned the arrest of a Black woman. When Corporal Charles Baltimore asked about it, police beat him, shot at him and held him. A false report that he had been killed spread through the camp.

About 150 soldiers took rifles and marched into the city. About 20 people died. Townspeople, police officers and National Guardsmen were among them, and so were soldiers of the 24th whom other soldiers of the 24th shot by accident. The Department of Veterans Affairs history of that night does not say who shot each of the others.

The trials. Army officers charged 118 soldiers with disobeying orders, mutiny (refusing orders as a group), trying to kill and murder. The officers found only eight not guilty. At sunrise on December 11, 1917, they hanged the first 13 men sentenced to death. They did it in secret, within a day of the sentence, and did not tell the War Department.

After protests, War Department officials ordered that every death sentence be reviewed first. At later trials, officers sentenced 16 more men to death, and President Woodrow Wilson changed ten of those sentences to prison terms. In all, army officers hanged 19 soldiers. Most of the others got life in prison. Only Black soldiers were sentenced to death.

The Secretary of the Army canceled all the convictions in 2023 and changed the men's records to honorable discharges, which show that a soldier left the army in good standing. The Army's reviewers found that the soldiers "were wrongly treated because of their race and were not given fair trials."

The Meuse-Argonne, the flu and the Choctaw code talkers, 1918

More than a million American soldiers fought in the Meuse-Argonne, in northern France, from September 26 to November 11, 1918. By the National Archives' count, 26,277 of them were killed and 95,768 were wounded. An Air Force Times report on the battle's 100th anniversary called it "America's deadliest battle ever."

The flu. Influenza, the flu, spread through the army camps and troopships in 1918. Most of the soldiers it killed in army hospitals died of the pneumonia that followed it, and some died within hours. A sailor on one troopship to France remembered 15 burials at sea in one day.

Eric Durr, writing on the Army's website, counts about 45,000 soldiers dead of flu and pneumonia by the end of 1918. That is more than the 26,277 killed in the Meuse-Argonne. A narrower count, of soldiers admitted to army hospitals for flu, is 24,664 deaths.

The Choctaw code talkers. German soldiers were listening in on American telephone lines. On October 26, 1918, officers of the 142nd Infantry had Choctaw soldiers send orders over the phone in the Choctaw language, and the Germans could not understand them. The soldiers made up code words. Artillery, the big guns, was "big gun," and a machine gun was "little gun shoot fast."

Nineteen Choctaw soldiers are honored today as these code talkers. Their work was kept quiet until the late 1980s. Some of them had signed their enlistment cards as "natural born citizens." In 1901 members of Congress had changed the law to make the Choctaw citizens of the United States, along with four other nations in Indian Territory, now Oklahoma: the Cherokee, Chickasaw, Seminole and Creek. Many other Native people did not become citizens until a law of 1924.

Henry Gunther

Who: A drafted bank clerk from Baltimore, whom General John Pershing's army listed as the last American soldier killed in World War I.

When and where: Born in Baltimore, Maryland, in June 1895. Company A, 313th Infantry, 79th Division. Killed near Chaumont-devant-Damvillers, France, at 10:59 a.m. on November 11, 1918.

He charged a German machine gun one minute before the fighting stopped.

Henry Gunther kept the accounts at the National Bank of Baltimore when he was drafted in September 1917, and he was engaged to be married. By the time his regiment reached France in July 1918 he was a supply sergeant. Then army censors, who read soldiers' mail, opened a letter he had written to a friend. He complained about life in the trenches and told his friend not to join. He lost his rank and became a private again.

German and Allied leaders signed the armistice, the agreement to stop fighting, early on November 11, 1918. It would take effect at 11 a.m., and a runner brought word of it to Gunther's unit. At 10:59 Gunther charged a German machine gun with his bayonet locked onto his rifle. The German soldiers fired, and a bullet hit him in the left temple, the side of his head. He died there. The records do not say why he charged.

Army officials later gave him back his sergeant's rank and awarded him the Distinguished Service Cross, an army medal for bravery in battle. His body came home in 1923, and he is buried in Most Holy Redeemer Cemetery in Baltimore.

BY 1919: The fighting in Europe was over, and 116,516 of the Americans who served had died, about 45,000 of them of flu and pneumonia.

The Bonus Army, 1932

Members of Congress voted World War I veterans a bonus, an extra payment for their war service, in 1924, but set the payment date for 1945. In 1932, during the Great Depression, thousands of veterans came to Washington and camped there to ask for the money early. Counts of the veterans run from about 10,000 to more than 20,000. Counting their wives and children, a count in George Mason University's *Histories of the National Mall* reaches about 43,000 people.

Police clearing the camps on July 28, 1932, shot two veterans, William Hushka and Eric Carlson, and both died. Hushka was a butcher from Lithuania who had sold his shop to join the army and became a citizen while he served. He was buried at Arlington National Cemetery.

Tanks and tear gas. The same day, President Herbert Hoover ordered the army to clear the camps. General Douglas MacArthur, the army's chief of staff, sent soldiers with six tanks, and they drove the veterans out with tear gas and bayonets.

A National Park Service history states that the soldiers used torches to set the camps on fire, and accounts differ on who set the fires in the main camp, at Anacostia. Members of Congress voted to pay the bonus in 1936, over President Franklin Roosevelt's veto, his refusal to sign the law.

The draft of 1940 and the objectors

President Franklin Roosevelt signed the Selective Training and Service Act on September 16, 1940, the first draft in the country's history in a time of peace. Every man aged 21 to 45 had to register. By 1945, 50 million men aged 18 to 45 had registered and 10 million had been drafted.

About 43,000 men registered as conscientious objectors. To be accepted as one, a man usually had to belong to a church that taught peace, such as the Quakers, the Mennonites or the Church of the Brethren. Of the 43,000, about 25,000 served in the armed forces without weapons, most of them as medics, and about 12,000 did unpaid work in Civilian Public Service camps. About 6,000 refused to cooperate with the draft at all and went to prison, and more than 4,400 of those were Jehovah's Witnesses.

World War II, 1941 to 1945

Japanese Navy pilots attacked the US Navy base at Pearl Harbor, Hawaii, on December 7, 1941. They killed 2,403 Americans, counting the missing: 2,008 sailors, 109 Marines, 218 soldiers and 68 civilians. A Japanese bomb of 1,760 pounds hit the forward deck of the USS *Arizona* and set off an explosion. Of her crew, 1,177 died. More than 900 of them are still inside the sunken ship.

A mess attendant. Doris Miller was a mess attendant, a sailor who cooked and served food, on the USS *West Virginia* that morning. It was one of the few jobs Navy leaders let Black sailors do. Miller carried his dying captain. Then he fired a machine gun he had never been trained to use. Admiral Chester Nimitz gave him the Navy Cross, a navy medal for bravery in battle, in May 1942.

The crew of a Japanese submarine torpedoed his ship, the *Liscome Bay*, on November 24, 1943. The torpedo set off the bombs stored below deck, and the ship sank in about 23 minutes. About three of every four men aboard died, Miller among them. His body was never found.

Bataan. Major General Edward King Jr. surrendered about 75,000 American and Filipino soldiers on the Bataan Peninsula, in the Philippines, on April 9, 1942. Japanese soldiers marched them about 65 miles. The guards starved and beat the prisoners and stabbed with bayonets men who were too weak to walk.

By a Department of Veterans Affairs estimate, Japanese soldiers killed 650 American and 16,500 Filipino soldiers during and after the march, and other counts run higher. After the war, an American military court tried the Japanese commander, Lieutenant General Homma Masaharu. The court sentenced him to death, and American soldiers shot him on April 3, 1946.

D-Day and Iwo Jima. Soldiers of the Allies, the countries fighting Germany, landed in Normandy in France on June 6, 1944, called D-Day. Researchers at the National D-Day Memorial Foundation have found the names of 4,436 Allied soldiers, sailors and airmen killed that day. Of them, 2,519 were American, and the rest came from Britain, Canada and Norway.

On the Pacific island of Iwo Jima, from February 19 to March 26, 1945, 6,821 Americans were killed and 19,217 were wounded. Of about 21,000 Japanese defenders, 216 were captured. The rest were killed.

More than 350,000 American women served in uniform, in new women's branches of the Army, Navy and Marines.

Soldiers in separate units

Black soldiers, sailors and airmen served in separate units. Black pilots trained at Tuskegee, and the 332nd Fighter Group, made up of these pilots, guarded American bombers flying over Europe.

The bomber story. Reporters began to write in March 1945 that the group never lost a bomber. That story is false. Daniel Haulman, an Air Force historian, counted the bombers lost: enemy planes shot down 27 bombers that the 332nd was guarding. The other fighter groups in the same air force lost 46 each, on average.

Port Chicago. Two ships being loaded with ammunition blew up at the Port Chicago Navy base in California on July 17, 1944. The explosion killed 320 men, and 202 of them were Black sailors. Navy officers had given the dangerous loading work to Black sailors without enough training or equipment.

Afterward, 258 sailors refused to go back to loading under the same conditions. Navy officers convicted fifty of them of mutiny. Thurgood Marshall, a lawyer for the NAACP, a group that works for Black Americans' rights, worked to get a higher court to look at their case again. In 2024, Navy Secretary Carlos Del Toro cleared the names of all the men who were punished.

Japanese Americans. After Japan's attack, Army leaders would not let Japanese Americans join the army. President Franklin Roosevelt signed Executive Order 9066, an order from the president that officials had to follow, on February 19, 1942.

Under it, federal officials forced more than 120,000 people of Japanese descent from their homes and locked them in camps behind fences and guard towers. Two thirds of them were American citizens. None of them was charged with a crime.

Army leaders dropped the ban on joining in 1943. From the camps, 1,208 people volunteered, fewer than 6 of every 100 who could. In Hawaii, where officials did not lock up Japanese Americans in large numbers, more than 10,000 volunteered. About 14,000 men served in the 442nd Regimental Combat Team, an army unit of Japanese American soldiers. They received 9,486 Purple Hearts, the medal for being wounded or killed in battle, and 21 Medals of Honor, the country's highest award for bravery in battle.

More than 375 Navajo Marines sent messages in a code built from the Navajo language. In it, a fighter plane was a "hummingbird" and a submarine was an "iron fish." Japanese code breakers never broke it. At Iwo Jima six Navajo code talkers sent more than 800 messages without an error. Military officials kept the code secret until 1968.

Truman's order. President Truman signed Executive Order 9981 on July 26, 1948. It required "equality of treatment and opportunity for all persons in the armed services without regard to race, color, religion or national origin." According to a National Park Service history, the labor leader A. Philip

Randolph, who had threatened a protest march, pushed Truman to sign it. Military leaders were slow to obey it, and nearly every unit was mixed by about 1953.

Benjamin O. Davis Jr.

Who: Commander of the Black fighter pilots trained at Tuskegee, and the first Black general in the Air Force.

When and where: Born in Washington, DC, December 18, 1912. West Point, 1932 to 1936. Commanded the 99th Fighter Squadron and the 332nd Fighter Group in Italy. Died July 4, 2002.

For four years his West Point classmates spoke to him only on duty.

Benjamin O. Davis Jr.'s father, Benjamin O. Davis Sr., was one of only two Black officers in the Army. The son entered West Point in 1932. For four years his white classmates spoke to him only when their duties required it. He never had a roommate, and he ate his meals in silence. He finished 35th of 276 in the class of 1936.

The Army had no Black flying units, so Army leaders made him an infantry officer, an officer of foot soldiers. When Army leaders opened pilot training for Black men at Tuskegee, he trained there and earned his pilot's wings in March 1942. He led the 99th Fighter Squadron and then the 332nd Fighter Group in combat.

Years later, Davis told the historian Alan Gropman that he himself doubted the claim that the group never lost a bomber. In 1998 President Bill Clinton made him a four-star general.

Daniel Inouye

Who: A Japanese American soldier from Hawaii who lost his right arm in Italy, and later a US senator.

When and where: Born in Honolulu, September 7, 1924. 442nd Regimental Combat Team. Wounded near San Terenzo, Italy, April 21, 1945. Died December 17, 2012.

With his left hand he pulled a live grenade from his right.

Daniel Inouye wanted to become a surgeon. When he first tried to join the army, he was turned away under the rule that barred Japanese Americans. He enlisted in 1943, after Army leaders dropped the ban.

He led an attack up a ridge in Italy against three German machine guns on April 21, 1945. A bullet hit him in the stomach, and he kept going. Then, in his own words, a German "rifle grenade smashed into my right elbow and exploded. I looked at my dangling arm and saw my grenade still clenched in a fist that suddenly didn't belong to me anymore."

He pulled the live grenade out of his right hand with his left and threw it at the last machine gun. Then he was shot in the leg and passed out.

Surgeons at a field hospital cut off his right arm on May 1. Doctors had already given him so much morphine, a painkiller, that they could give him nothing to put him to sleep for the operation. He was given other people's blood 17 times. He left the army in 1947 as a captain and represented Hawaii in the US Senate for 50 years. On June 21, 2000, President Clinton gave him the Medal of Honor, with 19 other Japanese American veterans.

Chester Nez

Who: A Navajo Marine, one of the first 29 code talkers, who fought on four Pacific islands.

When and where: Born in Chi Chil Tah, New Mexico, 1921. Guadalcanal, Bougainville, Guam and Peleliu, 1942 to 1944. Died in Albuquerque, June 4, 2014.

Punished at school for speaking Navajo, he built a code in it.

At his boarding school at Fort Defiance, school staff punished students, often by hitting them, for speaking Navajo. Marine recruiters came to the reservation in April 1942, and Chester Nez joined. He and 28 other Navajo Marines built the code at Camp Elliott in California.

He went into combat on Guadalcanal in November 1942, then on Bougainville. On Guam, in July and August 1944, he was wounded in the foot. He fought again on Peleliu in September 1944.

At home after the war he had nightmares and memories of combat that kept coming back, what doctors now call post-traumatic stress disorder. A Navajo healing ceremony for warriors, the Enemy Way, helped him. He finished high school, studied art at the University of Kansas on the G.I. Bill, a law under which federal officials paid for veterans' schooling, and worked 25 years for the Veterans Administration. He was the last of the first 29 when he died at 93.

BY MARCH 1945: Allied soldiers had been fighting in France since D-Day, and Marines were fighting on Iwo Jima.

Tokyo, March 1945

Major General Curtis LeMay commanded the American B-29 bombers attacking Japan, and in early 1945 he changed their method. Instead of dropping ordinary bombs from high up in daylight, the planes flew low at night and dropped bombs made to start fires. Many were filled with napalm, gasoline thickened into a jelly, which sticks to whatever it lands on, including skin, and keeps burning.

B-29 crews in 279 planes dropped more than 1,665 tons of these bombs on Tokyo's neighborhoods of wooden houses on the night of March 9 to 10, 1945. The fires joined into one huge fire, called a firestorm, that used up the oxygen in the air. People suffocated or burned to death. Sixteen square miles of the city burned, and more than a million people lost their homes.

Historians at the National WWII Museum estimate 110,000 dead, and other estimates start at 80,000. That is close to the 116,516 Americans who died in all of World War I. Most of the dead were civilians. LeMay and his commander, General Hap Arnold, called the raid a success. American bomber crews firebombed many more Japanese cities after Tokyo.

The atomic bombs, August 1945

Scientists and engineers of the Manhattan Project, the secret program to build the bomb, built the first atomic bombs at a cost of about $1.9 billion.

The order. General Thomas Handy, the acting Army chief of staff, gave the order on July 25, 1945, at the direction of the Secretary of War, Henry Stimson, and the Army chief of staff, George Marshall. He told General Carl Spaatz to have the 509th Composite Group, a bomber unit, drop the first bomb on a Japanese city as soon as the weather allowed. President Harry Truman approved.

The crew of the bomber *Enola Gay*, piloted by Colonel Paul Tibbets, dropped a bomb made with uranium, a heavy metal, on Hiroshima at 8:16 a.m. on August 6, 1945. On August 9, Major Charles Sweeney's crew dropped a bomb made with plutonium, a different heavy metal, on Nagasaki. Japan's leaders surrendered on August 14.

Scientists at the Radiation Effects Research Foundation, run by Japan and the United States together, estimate that 90,000 to 166,000 people in Hiroshima and 60,000 to 80,000 in Nagasaki died within four months. The exact numbers are not known. A US study in 1946, the Strategic Bombing Survey, gave lower counts: 70,000 to 80,000 dead in Hiroshima and more than 35,000 in Nagasaki.

Most of the dead were killed by burns from the flash of heat and by injuries from the blast. The same US study found that 15 to 20 percent died of radiation sickness.

Radiation sickness. The bombs gave off invisible energy called radiation, which killed the cells that make blood and line the gut. People with radiation sickness ran fevers within two days. After about two weeks their hair fell out, and they bled from the gums and nose and under the skin. Deaths from radiation began about a week after the bombs and were highest three to four weeks later.

Coming home: the G.I. Bill and Isaac Woodard

President Franklin Roosevelt signed the G.I. Bill on June 22, 1944. Under it, federal officials paid for veterans' schooling and promised banks that the Veterans Administration would repay a veteran's home loan if the veteran could not. By 1956, 7.8 million of the 16 million World War II veterans, about one in two, had used it for school or job training. From 1944 to 1952, Veterans Administration officials made that promise on nearly 2.4 million home loans.

Who got the loans. Local white bank officers and real estate agents decided who got the loans. Reporters at *Ebony* magazine found in 1947 that of 3,229 of these home loans in 13 Mississippi cities, only two went to Black veterans.

Isaac Woodard. Police in South Carolina beat a Black veteran blind on the day he left the Army. Sergeant Isaac Woodard, of Winnsboro, South Carolina, left the Army on February 12, 1946, after four years of service. On the bus home from Camp Gordon, Georgia, he argued with the driver after asking for a rest stop. At Batesburg, South Carolina, the driver had police take him off the bus.

Woodard said that Police Chief Lynwood Shull and Officer Elliot Long beat him with blackjacks, which are short clubs, and tried to gouge out his eyes. Shull later said, "I hit him across the front of the head." A local judge fined Woodard $50. Doctors at the veterans' hospital in Aiken found bleeding in both eyeballs. He was blind for the rest of his life.

Federal officials charged Shull with violating Woodard's civil rights. In November 1946, an all-white jury found Shull not guilty after thirty minutes. Chapter 25, Rights and Movements, tells how his case reached President Truman.

BY 1950

If you remember one thing: World War II was the first American war in which more soldiers died in battle than of disease, and most of the men who fought it had been drafted.

Left open: The draft of 1940 was the first ever in a time of peace. Would young men still be drafted after the world wars were over? The next era answers it.

Next: American forces went to war in Korea in 1950 and in Vietnam in 1965.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 15 MINUTES

American forces fought two long wars in Asia between 1950 and 2000, in Korea and in Vietnam. Drafted men fought in Vietnam until the draft ended in 1973, and after that everyone who joined the armed forces had volunteered.

The dead. By the Defense Department's counts, 36,574 Americans died in Korea, from 1950 to 1953, and 58,220 died in Vietnam. Many more people died in those wars: at least 2.5 million in the Korean War, most of them Koreans, and by Vietnam's own count about 3 million fighters and civilians in the Vietnam War.

About 697,000 American troops went to war against Iraq in 1991. The fighting lasted from January 17 to February 28, and 383 Americans died.

Korea, 1950 to 1953

North Korean troops invaded South Korea on June 25, 1950, and American troops went to fight for the South. About 120,000 Chinese soldiers surrounded about 30,000 American and allied troops at the Chosin Reservoir in North Korea in November 1950. The temperature fell to 20 degrees below zero. The fighting at Chosin ended on December 13. Of about 8,000 Marines in the fighting, 836 were killed, and the survivors called themselves "The Frozen Chosen."

No Gun Ri. American soldiers of the 7th Cavalry Regiment fired on South Korean refugees, people fleeing from danger, in the last week of July 1950. The refugees had gathered at and under a railroad bridge near the village of No Gun Ri. Survivors say about 400 people died, and Korean officials have confirmed at least 163 dead or missing.

Army officers who reviewed the shooting said in January 2001 that they could not count the dead and found no order to shoot. That month President Bill Clinton said that "things were done which should not have been done." He expressed regret and did not apologize.

The historian Sahr Conway-Lanz found a letter in 2006 from the US ambassador, John Muccio, dated July 25, 1950. It said that refugees who kept coming toward American lines after warning shots "will be shot." The Army's report did not include the letter.

By the Korean War Legacy Foundation's count, 38 percent of the Americans taken prisoner in Korea died in captivity, more than one in three. The fighting stopped with an armistice signed on July 27, 1953. At least 2.5 million people died in the war, most of them Korean soldiers and civilians. No single official count exists.

The hydrogen bomb tests, 1952 and 1954

Radioactive dust from American bomb tests after World War II sickened people who were not at war: Marshall Islanders, American service members and Japanese fishermen. American scientists and military officers tested nuclear weapons, the atomic bombs and the stronger bombs that came after them, in the Marshall Islands, in the Pacific, on the land of the Marshallese people.

The first hydrogen bomb. American scientists set off the first hydrogen bomb, a far more powerful kind of nuclear weapon, on Elugelab Island in Enewetak Atoll, a ring of small coral islands around a lagoon, on November 1, 1952. It was more than 450 times as powerful as the bomb dropped on Nagasaki. It destroyed the island and left an underwater crater 6,240 feet wide.

Castle Bravo. The test called Castle Bravo, at Bikini Atoll on March 1, 1954, was 1,000 times as powerful as the bomb dropped on Hiroshima, and two and a half times as powerful as its planners expected. A cloud 100 miles wide dropped fallout on Marshall Islanders, American service members, and the crew of a Japanese fishing boat. Fallout is radioactive dust and ash that falls back to the ground after a nuclear blast. It burns the skin it lands on and damages the body from inside when it is breathed in or swallowed.

The military had made no plans to move the people living nearby. On Rongelap, about 110 miles away, the fallout looked like snow, and children played in it. About three days after the blast, American crews took more than 230 people off Rongelap, Rongerik and Utirik, among them 28 American service members. The fallout left Rongelap unsafe to live on.

Twenty-three Japanese fishermen became sick, and one died. The physicist Theodore Taylor said later, "obviously we didn't irradiate (expose to radiation) the natives on purpose. Obviously, we didn't know what the hell we were doing."

What followed. American officials made the exposed Marshall Islanders the subjects of a secret medical study called Project 4.1. They told the people working on it not to discuss its purpose, "due to possible adverse public reaction," meaning for fear of how the public would react. The United States later gave the exposed people medical care. A screening from 1993 to 1997 found 57 cases of thyroid cancer, a cancer of a gland in the neck, among Marshallese people born before 1954.

The war in Vietnam, and who had to go

Marines landed at Da Nang, South Vietnam, on March 8, 1965. By April 1969, about 543,000 American troops were in Vietnam. The deadliest year was 1968, when 16,899 Americans died there. The last American combat troops left on March 29, 1973. The war ended on April 30, 1975, when North Vietnamese troops and their allies in the South took Saigon, the capital of South Vietnam.

Who had to go. Counts of the men drafted during the Vietnam years run from about 1.8 million to 2.2 million. Full-time college students could get a student deferment, which put off their draft call while they stayed in school. Until 1969, local draft boards, the officials who chose which men in an area were drafted, called the oldest eligible men first.

The lottery. Selective Service officials, who ran the draft for the whole country, held a lottery instead on December 1, 1969. They put 366 birthdays in blue plastic capsules and drew them one at a time. The first date drawn was September 14, so men born on that day were called first. For 1970, the draft reached number 195.

Many men refused to go. Officials accused 209,517 men of breaking the draft law, and fewer than 9,000 were convicted. Some men fled to Canada. In 1972 more men were recognized as conscientious objectors than were drafted. The last draft call came on December 7, 1972, and the law allowing the draft ran out on June 30, 1973. Since July 1980, young men have had to register for the draft again, but no one has been drafted.

The pardon. Jimmy Carter pardoned, or officially forgave, the men who had broken the draft law between 1964 and 1973 on January 21, 1977, his first full day as president. His pardon left out crimes that involved force or violence,

and it did not cover men who had deserted the armed forces after joining.

Ron Kovic

Who: A Marine from Long Island, paralyzed by a bullet in Vietnam, who came home and spoke against the war.

When and where: Born July 4, 1946. Grew up in Massapequa, New York. Wounded in Vietnam on January 20, 1968.

Movie: *Born on the Fourth of July* (1989), directed by Oliver Stone and based on Kovic's memoir. Kovic helped write the screenplay.

The second bullet went through his shoulder and into his spine.

Ron Kovic joined the Marines and then volunteered for a second tour in Vietnam, a second stretch of service there. On January 20, 1968, he was shot in the right foot. Then a second bullet went through his right shoulder. It collapsed one lung and cut into his spinal cord, the bundle of nerves inside the backbone that carries messages between the brain and the body.

From the middle of his chest down, he could no longer move. In the hospital at Da Nang, doctors told him he would never walk again.

He spent months at the Veterans Administration hospital in the Bronx, New York. *New Mobility* magazine describes the hospital as short of staff, with out-of-date equipment and conditions that were sometimes abusive. Patients called it "the Bronx Zoo."

He gave his first speech against the war in 1969. In 1972, at a protest at President Richard Nixon's campaign office in Los Angeles, he was thrown out of his wheelchair and arrested. The *New Mobility* account does not name who threw him. His book *Born on the Fourth of July* came out in 1976.

Muhammad Ali

Who: The heavyweight boxing champion, who refused to be drafted and won his case in the Supreme Court.

When and where: Refused induction in Houston, Texas, April 28, 1967. Supreme Court decision, June 28, 1971.

When an officer called his name, he would not step forward.

Muhammad Ali was a minister of the Nation of Islam, a Muslim religious group. He asked his draft board to list him as a conscientious objector. The board said no, and so did the appeal board.

He went to the army's induction center in Houston, where new soldiers were sworn in, on April 28, 1967. When the officer called him, he stayed where he was. The officer warned him that refusing was a crime that could bring five years in prison and a $10,000 fine. Boxing officials took away his heavyweight title that day.

He was found guilty in a federal court of refusing the draft on June 20, 1967, and sentenced to five years in prison and a $10,000 fine. His lawyers appealed, and he did not box again for more than three years. On June 28, 1971, all eight justices who heard the case overturned his conviction. They ruled that the appeal board had never given a reason for turning down his claim.

My Lai, March 16, 1968

American soldiers of Charlie Company, 1st Battalion, 20th Infantry, under Captain Ernest Medina, killed the unarmed people of My Lai, a village in South Vietnam, on March 16, 1968. The counts of the dead differ. The Army's own investigation, led by Lieutenant General William Peers, found at least 175 killed and possibly more than 400. Another Army count gives 347. A memorial in the village lists 504 names, from babies of one year old to a person of 82.

What the soldiers did. The Peers report describes it. Soldiers of the 1st Platoon herded 60 to 70 villagers into an irrigation ditch and shot them. In another part of the village, soldiers of the 2nd Platoon made 10 to 20 women and children squat in a circle, fired grenades into them, and then shot the wounded with rifles.

Soldiers raped women and girls, forcing them into sex by violence or threat. The investigators found that one platoon leader watched several rapes that day and did nothing to stop them. Soldiers also burned homes, killed farm animals and destroyed crops.

The cover-up. Officers at every level of the division took steps that kept the killings secret, and the story did not become public until late 1969. The Peers investigation named 30 men who knew about the killings. Fourteen of them were charged with crimes. Only one was convicted.

Calley. Lieutenant William Calley was tried at a court-martial. On March 29, 1971, a panel of six army officers found him guilty of murdering 22 people. Two days later, the same officers sentenced him to life in prison. Three days after the guilty verdict, President Richard Nixon ordered him held under house arrest, kept under guard in his own quarters.

Lieutenant General Albert Connor, the commander who reviewed the case, cut the life sentence to 20 years in August 1971. Secretary of the Army Howard Callaway cut it to 10 in April 1974. Calley was freed early on parole, under rules he had to follow, in November 1974. No one was convicted of rape.

Hugh Thompson Jr.

Who: An Army helicopter pilot who landed between American soldiers and Vietnamese villagers at My Lai to stop the killing.

When and where: Born in Atlanta, Georgia, April 15, 1943. My Lai, South Vietnam, March 16, 1968. Died in Pineville, Louisiana, January 6, 2006.

He set his helicopter down between the soldiers and the villagers.

Hugh Thompson Jr. flew a small scout helicopter with two crewmen, Glenn Andreotta and Lawrence Colburn. Over My Lai that morning, he dropped green smoke next to wounded villagers as a signal that they needed help. When he came back, they were dead. He watched Captain Medina shoot a wounded young woman, and when he saw an irrigation ditch full of bodies he radioed, "There's something wrong here."

He landed, and Lieutenant Calley told him to mind his own business. Then Thompson saw soldiers chasing about ten villagers, some of them children, toward a shelter. He set his helicopter down between the soldiers and the villagers. He told Colburn and Andreotta to fire their machine guns at the soldiers if the soldiers shot at him or the villagers.

He got 11 people out of the shelter, and two other helicopter pilots flew them to safety. Andreotta climbed into a ditch of about 100 bodies and pulled out a living boy, Do Ba. Thompson flew the boy to a hospital and reported the killings. Medina then told his men to stop.

Andreotta was killed in combat three weeks later. In 1969 Mendel Rivers, the congressman who led the House Armed Services Committee, said Thompson was the one soldier at My Lai who should be punished, for threatening American soldiers. Thompson got death threats.

In March 1998, Army leaders gave all three men the Soldier's Medal, Andreotta after his death. It is the Army's highest award for bravery outside combat with an enemy. That year Thompson and Colburn went back to My Lai and met survivors.

What the Vietnam War cost

Vietnamese officials published their first count of the war's dead on April 3, 1995. They said 1.1 million fighters of North Vietnam and of the Viet Cong, the communist fighters in South Vietnam who fought on the North's side, had died over 21 years, and nearly 2 million civilians in the North and the South. Between 200,000 and 250,000 South Vietnamese soldiers died, by the US military's estimate.

Operation Homecoming. American aircrews flew 591 American prisoners of war home from North Vietnam from February to April 1973. Many had been held in Hoa Lo prison in Hanoi, which the prisoners called the "Hanoi Hilton." The historian Andrew Lipps, quoted in a Defense Department news story, writes of the "mental and physical torture" they went through.

Agent Orange. American forces sprayed plant-killing chemicals over South Vietnam. One of them, Agent Orange, was tainted with a poison called dioxin. Today officials of the Department of Veterans Affairs treat a list of illnesses in veterans who were exposed to Agent Orange as caused by it, so the veterans do not have to prove it. The list includes several cancers, such as bladder cancer, lung cancer and prostate cancer, and also Parkinson's disease, type 2 diabetes and heart disease.

The Vietnam Veterans Memorial in Washington, designed by Maya Lin, opened in 1982. It lists 58,281 names. The count is higher than the Defense Department's 58,220 because the two lists count some deaths differently.

Women and gay service members

Under a law signed on June 12, 1948, women could serve as permanent members of the armed forces. Under the same law, women could make up no more than 2 percent of the forces and could not serve in combat units. Members of Congress removed the cap in 1967. In July 1976, 119 women entered the Military Academy at West Point, and 62 of them graduated in 1980.

Under a 1993 law called "Don't Ask, Don't Tell," gay, lesbian and bisexual service members could serve only if they kept it secret. Military officials put more than 13,000 of them out of the armed forces under it before it ended in 2011.

The Gulf War, 1991

About 100,000 Iraqi soldiers invaded Kuwait on August 2, 1990. American and allied pilots began bombing Iraq on January 17, 1991. The ground attack began on February 24 and lasted 100 hours, and President George H. W. Bush declared a cease-fire on February 28. About 697,000 American troops went to the region, and 383 died, 148 of them in battle.

No official US count of the Iraqi dead exists. In 2003, Carl Conetta of the Project on Defense Alternatives, a research group, estimated that American and allied forces killed 20,000 to 26,000 Iraqi soldiers and about 3,500 Iraqi civilians.

Gulf War illness. At least one in four of the American troops came home sick. In 2008 scientists on a committee advising the Department of Veterans Affairs found that 175,000 to 210,000 Gulf War veterans had an illness. Its signs were memory problems, headaches, pain all over the body, and stomach trouble. Doctors had found no treatment that worked, and few of the sick veterans had gotten better.

The committee's scientists linked the illness to pills the soldiers took to protect them from nerve gas, and to pesticides, the chemicals used to kill insects. Other scientists, on panels of the Institute of Medicine, weighed the evidence differently.

BY 2000

If you remember one thing: Drafted men fought in Vietnam, and after the draft ended in 1973 everyone who served had volunteered.

- July 1950: Soldiers of the 7th Cavalry fire on refugees under a railroad bridge at No Gun Ri.
- March 16, 1968: American soldiers kill the people of My Lai. Only Lieutenant William Calley is convicted, and he goes free on parole in 1974.
- June 30, 1973: The law allowing the draft runs out.

Next: Every American who fought in the wars after September 11, 2001, had volunteered.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 13 MINUTES

Every American who fought in the wars after the attacks of September 11, 2001, had volunteered. American forces fought in Afghanistan for almost 20 years and in Iraq for almost 9.

Who served. Researchers at the Pew Research Center found in 2011 that in the ten years after 9/11 about one American in 200 was on active duty, serving full-time in the military, at any one time. At the height of World War II it had been nearly one in 11.

The dead. A 2020 report to Congress, using Defense Department records up to July 2020, lists more than 2,400 American service members dead in the Afghanistan war and about 4,500 in the Iraq war. More than 53,000 were wounded in action in the two wars together.

Far more people in those countries died. Researchers in the Costs of War project at Brown University study the wars after 9/11 in Iraq, Afghanistan, Syria, Yemen and Pakistan. They estimate that more than 940,000 people in those countries were killed in the fighting itself from 2001 to 2023, and more

than 432,000 of them were civilians. They estimate that 3.6 to 3.8 million more died because of what the fighting destroyed: the ways people earned a living, hospitals and health care, roads and water systems, and the land.

Counts of the Iraqi civilian dead differ widely. A 2006 survey published in the medical journal *The Lancet* estimated about 600,000 violent deaths, and US and Iraqi officials disputed it. Chapter 23, America and the World, explains why the counts are so far apart.

Afghanistan and Iraq, 2001 to 2021

American bombing of Afghanistan began on October 7, 2001, less than a month after the September 11 attacks. The invasion of Iraq began on March 20, 2003. The last line of American military vehicles, carrying about 500 troops, left Iraq for Kuwait on December 18, 2011.

Leaving Afghanistan. American officials signed a deal with the Taliban in February 2020 and agreed to take American troops out of Afghanistan. The Taliban were the armed group American forces had fought there since 2001. President Joe Biden announced in April 2021 that the last of them would be out by September. Taliban fighters took Kabul, Afghanistan's capital, on August 15, 2021, and several thousand more American troops came to the airport to fly American embassy staff and some Afghans out.

Abbey Gate. A bomber from ISIS-K, a terror group in Afghanistan that was also fighting the Taliban, set off explosives he was wearing in a crowd at Abbey Gate, an entrance to the Kabul airport, on August 26. He killed 13 American service members: 11 Marines, a Navy medic and an Army soldier. Another 45 were wounded. US Justice Department officials said in 2025 that about 160 Afghan civilians were killed, and other reports say about 170.

The drone strike. Three days after the Abbey Gate bombing, on August 29, 2021, American forces fired a missile from a drone, an aircraft with no pilot aboard, at a car in Kabul. Officers believed it carried an ISIS-K bomb. The driver was Zemari Ahmadi, a 43-year-old aid worker, and the car was at his family's home. The missile killed ten civilians, seven of them children. The next night, at 11:59 p.m. on August 30, the last American plane left Kabul.

General Mark Milley first called it a "righteous strike." On September 17, 2021, General Frank McKenzie, the head of the military's Central Command, called it "a tragic mistake." On December 13, 2021, Defense Secretary Lloyd Austin decided that no one would be punished.

Abu Ghraib, 2003 and 2004

American military police guarding prisoners at Abu Ghraib prison near Baghdad committed what an Army report calls "sadistic (taking pleasure in hurting people), blatant (done openly), and wanton (done for no reason) criminal abuses" of them, from October to December 2003. Army Major General Antonio Taguba investigated and wrote that report in 2004.

What the guards did. The report lists guards punching, slapping and kicking prisoners, jumping on their bare feet, keeping them naked for days, and forcing them into sexual poses to photograph them. Guards poured the liquid from broken glow sticks on prisoners.

Guards used dogs without muzzles to frighten prisoners, and in at least one case a dog bit a prisoner and badly hurt him. Guards also threatened prisoners with a loaded pistol, and attached wires to one prisoner to make him think he would be tortured with electricity.

The CBS program *60 Minutes II* broadcast the guards' photographs on April 28, 2004. Army officers at courts-martial convicted Specialist Charles Graner, who was sentenced to 10 years in prison, Private First Class Lynndie England, sentenced to 3 years, and other low-ranking soldiers.

Haditha and Kandahar, 2005 and 2012

A roadside bomb killed Lance Corporal Miguel Terrazas, a 20-year-old Marine, in the Iraqi town of Haditha on November 19, 2005. Marines of Staff Sergeant Frank Wuterich's squad then shot five unarmed Iraqi men who had been ordered out of a car. Wuterich told his men to "shoot first and ask questions later." They broke into nearby houses with grenades and rifle fire. In about 45 minutes they killed 24 Iraqi men, women and children, among them an old man in a wheelchair. No weapons were found.

Military prosecutors charged eight Marines. They dropped the charges against six, and one was found not guilty at a court-martial. Wuterich pleaded guilty to one charge of neglecting his duty in January 2012. The judge sentenced him to 90 days, a pay cut and demotion to private, but under his plea deal, an agreement to admit a crime in return for a lighter punishment, he served no time in prison.

Kandahar. Army Staff Sergeant Robert Bales left his base in Kandahar, Afghanistan, on the night of March 11, 2012, and went into two villages, Alkozai and Najiban. He killed 16 unarmed Afghan civilians and wounded six more. Seventeen of the 22 people he shot were women or children, and eleven of the dead came from one family. Bales pleaded guilty, and on August 23, 2013, he was sentenced to life in prison.

Pat Tillman

Who: A professional football player who left the Arizona Cardinals to join the Army Rangers, and was killed by soldiers of his own platoon.

When and where: Enlisted 2002. 75th Ranger Regiment. Killed in eastern Afghanistan, April 22, 2004. A committee of the House of Representatives held a hearing on his death on April 24, 2007.

He called out "Cease fire" and his own name until he stopped.

Pat Tillman walked away from a $3.6 million contract with the Arizona Cardinals after September 11, 2001. In 2002 he and his brother Kevin joined the Army together. Pat became a Ranger, a soldier of a specially trained Army unit, in the 75th Ranger Regiment, and served tours in Iraq and Afghanistan.

Soldiers in a truck from Pat's own platoon fired on the hillside where his group was on April 22, 2004, after what Kevin Tillman called "a small harassing ambush." The soldier beside him said later that they yelled "Cease fire. Friendlies." Tillman threw a smoke grenade, and the shooting stopped.

When the shooting started again, Tillman was hit. He called out "Cease fire" and his own name over and over until he stopped. Three bullets struck his forehead, so close together that Army medical examiners judged he was shot with an M-16 rifle from about 10 yards. An Afghan soldier with them was killed too.

The first account. His family was told that enemy fighters had killed him. In the words of Congressman Henry Waxman, who led the hearing, "the military told the world" the same thing. Army commanders awarded him the Silver Star, a medal for bravery in battle, with a written account of a battle with the enemy.

Kevin Tillman told Congress that Pat's uniform, equipment and notebook were destroyed, and his testimony does not name who destroyed them. On May 29, 2004, five weeks after the shooting, an Army general

> announced that Tillman had "probably" been killed by his own side. Kevin Tillman called the Army's first account "utter fiction."

Wounds that do not show, and veterans at home

Military doctors diagnosed 535,544 service members with a traumatic brain injury, damage to the brain from a blow or a blast, from 2000 through 2025, according to a Defense Department count published in June 2026. About 83 percent were mild, most of them concussions, injuries in which a blow shakes the brain, and many happened in training or daily life, not in combat.

Veteran suicides. A total of 6,398 veterans killed themselves in 2023, an average of 17.5 a day, according to a report the Department of Veterans Affairs released in early 2026. That is nearly as many as the about 6,900 service members who died in the Afghanistan and Iraq wars together. Sixty-one percent of them had not received care from the department in the last year of their lives. The country had about 18 million veterans in 2023, about 6 of every 100 adults, the Pew Research Center found.

Tammy Duckworth

Who: An Army helicopter pilot who lost both legs when her Black Hawk helicopter was hit in Iraq, and later a US senator.

When and where: Born in Bangkok, Thailand. Illinois Army National Guard. Wounded in Iraq, November 12, 2004.

"The explosion vaporized my right leg," she wrote.

Tammy Duckworth became an Army officer in 1992 and learned to fly helicopters. In 2004 she went to Iraq as a Black Hawk pilot with the Illinois Army National Guard, a part-time state army force that can be sent to war.

A rocket-propelled grenade, a small rocket fired from a tube carried on a fighter's shoulder, hit the front of her helicopter on November 12, 2004. In her memoir she wrote, "The explosion vaporized my right leg. It blew my left leg up into the bottom of the instrument panel." It also tore through her right arm.

Dan Milberg, the other pilot aboard, landed the damaged helicopter. Matt Backues, another member of the crew, dragged her, unconscious, across the desert. She lost both legs and part of the use of her right arm, and she recovered at Walter Reed Army Medical Center.

She was an assistant secretary of Veterans Affairs from 2009 to 2011. Illinois voters elected her to the US House in 2012 and to the Senate in 2016. In 2018 she became the first senator to give birth while in office.

Who may serve

"Don't Ask, Don't Tell" ended on September 20, 2011, and gay, lesbian and bisexual service members could serve openly. Defense Secretary Ashton Carter opened every combat job to women on December 3, 2015. About 220,000 jobs, roughly one in ten, had been closed to them.

Transgender service members. The justices of the Supreme Court let President Donald Trump's ban on transgender service members take effect on May 6, 2025, while lawsuits went on. On June 1, 2026, judges of a federal appeals court in Washington ruled 2 to 1 that the ban likely broke the Constitution, and they blocked the discharge of the service members who had sued.

A few weeks later a judge of a lower court extended that protection to all transgender troops then serving, about 4,240 people by the count of the Gender Justice League, a group that works for transgender people's rights. New people were still not allowed to join. On August 28, 2026, Justice Department lawyers asked the Supreme Court to lift the lower court's order.

The Wounded Knee medals. Twenty soldiers of the 7th Cavalry received the Medal of Honor for Wounded Knee in 1890, where soldiers of the regiment killed between 250 and 300 Lakota people, almost half of them women and children. Defense Secretary Lloyd Austin ordered a review of those medals in 2024. In September 2025, Defense Secretary Pete Hegseth announced that the soldiers would keep them. A bill called the Remove the Stain Act, which would take the medals back, had not passed as of September 2026.

The department's name. President Trump signed an order on September 5, 2025, letting officials call the Defense Department the "Department of War." Members of Congress set its legal name. Members of the House voted 216 to 212 on July 22, 2026, to change the legal name, but as of late September 2026 the change had not become law.

2025 and 2026: boats, Venezuela and Iran

US military crews began firing on boats in the Caribbean Sea and the eastern Pacific on September 2, 2025. President Trump's officials said the boats were carrying drugs. By September 19, 2026, the Associated Press counted at least 231 people killed in 69 strikes. In at least one case, the Associated Press reported, military officials gave no evidence that the boat carried drugs.

Lawyers for the American Civil Liberties Union are suing for the families of two men from Trinidad, Chad Joseph and Rishi Samaroo, who were killed in a strike on October 14, 2025. The group says they were fishermen and farm workers.

Maduro. Soldiers of the Army's Delta Force and officers of the CIA, the American spy agency, captured Venezuela's president, Nicolás Maduro, and his wife, Cilia Flores, in the capital, Caracas, on January 3, 2026. They flew the two to a Navy ship, the USS *Iwo Jima*, and then took them to New York. The next day federal officials made public the charges against them, crimes tied to smuggling drugs. On January 5, in a federal court in New York, both said they were not guilty.

By the Council on Foreign Relations' account, American forces killed 32 Cuban officers in the attack. Members of Congress had not voted to approve the raid beforehand.

Iran. American and Israeli forces began bombing Iran on February 28, 2026, and Iranian forces fired back at American troops. By the Pentagon's public count on September 22, 2026, 19 American service members had died and more than 820 had been wounded. Five officials told the *Washington Post* that at least 22 service members had died in the Middle East since the war began, not all of them in the fighting. Chapter 23 gives a count of the people killed in Iran. The war was still going on in late September 2026.

THE THREE QUESTIONS, ANSWERED

1. **What killed most American soldiers before World War II?**
   Disease. In the war with Mexico seven of every eight American dead

died of something other than enemy fire, and in World War I flu and pneumonia killed more soldiers than the war's deadliest battle did.

2. **Who was made to fight, and who could get out of it?** Drafts filled the armies of the Civil War, both world wars and Vietnam. In 1863 a drafted man could pay $300 and go home, and in the Vietnam years college students could put off the draft. Since 1973 everyone who serves has volunteered.
3. **Were soldiers who killed people who could not fight back ever punished?** Rarely. No one was charged for killing 96 Christian Lenape and Mohican people at Gnadenhutten in 1782, and no one was tried for Sand Creek. Lieutenant William Calley, the only man convicted for My Lai, went free on parole in 1974.

What changed: The fighters changed from militia farmers, who went home when the fighting ended, to millions of drafted men in the world wars, to a small army of volunteers, about one American in 200.

FIVE DATES TO KEEP

May 26, 1637: English soldiers burn the Pequot town at Mystic.

April 19, 1775: The shooting starts at Lexington.

July 1 to 3, 1863: The battle of Gettysburg.

August 6, 1945: An American bomber crew drops an atomic bomb on Hiroshima.

June 30, 1973: The law allowing the draft runs out.

> **NOT KNOWN:** Nobody knows how many Filipino civilians died in the war of 1899 to 1902, where the counts run from 200,000 to 1,000,000, or how many of them American soldiers killed.

Where to go: The Amos Humiston monument stands on North Stratton Street in Gettysburg, Pennsylvania, the only one on the battlefield to a single enlisted soldier.

Next: Chapter 23, America and the World. It asks how the country dealt with other nations, from treaties and alliances to the islands it came to rule.

Chapter 23: America and the World

CHAPTER 23 OF 37 · AMERICA AND THE WORLD · 10 ERAS · ABOUT 90 MINUTES

From 1494 to today, people far away decided who would rule this land and its islands, and the people living there almost never got to choose.

Native Hawaiians put 21,269 signatures on a petition against letting the United States take their islands. They signed at meetings on all five main islands between September 11 and October 2, 1897. The signers were more than half of the Native Hawaiians counted that year. Four men carried the petition to Washington, and the treaty to take Hawaii failed. In July 1898 members of Congress took the islands anyway, by a method that did not need the votes the Hawaiians had blocked.

This chapter follows America's dealings with other countries, from a line drawn across the Atlantic in 1494 to the five territories of today. For the first four eras there was no United States, and rulers in Europe traded this land among themselves. In 1775 the new country started out weak. Its leaders needed France's help, and for years they could not free American sailors enslaved in Algiers. Then watch American leaders become the ones deciding for others, from the land taken from Mexico to the elected governments they helped overthrow after 1950. In every era, watch who was in the room when a deal was signed, and who was left out.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. Who got to choose when this land and its islands changed hands?
2. How did a weak new country come to rule islands and overthrow governments?

3. Are the people of the territories American citizens?

Five minutes? Read the Hawaii sections of 1850 to 1900, from "Hawaii: a kingdom overthrown, 1887 to 1893" through "21,269 names against annexation, 1897".

Can skip: "Trade laws made in London", "A committee for secret letters, 1775 to 1789", "Perry's warships in Japan, 1853 and 1854", "Trade and the climate agreement". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 2 MINUTES

Native nations on this land made alliances, promises to stand together against their enemies, long before any European arrived. Their leaders met in councils and gave gifts to seal an agreement. No Native diplomat, a person sent to speak and bargain for a nation, is known by name from the years before the Europeans came. There was no United States yet. American leaders declared independence in 1776, 276 years after 1500.

Far out in the Pacific Ocean, Polynesian voyagers, people of the many islands of the central and southern Pacific, sailed to the islands now called Hawaii and settled them. Then, in 1494, the rulers of Spain and Portugal signed a treaty, a written agreement between countries, that split the lands across the Atlantic between their two kingdoms.

When did people first reach Hawaii?

Polynesian voyagers were the first people to live on the islands of Hawaii. Scientists using revised radiocarbon dating, a way of measuring the age of old wood, bone and charcoal, now put their landing at about the years 1000 to 1200.

Older estimates were much earlier. For a long time most archaeologists, scientists who study the past through the things people left behind, put the first landing between about the year 300 and the year 750. Some newer studies put it a little later, between about 1200 and 1290.

Only one early home site in the islands has been dated with confidence, the Bellows Beach site at Waimānalo, on the island of Oʻahu. The argument over the first date is still open.

A line drawn at Tordesillas, 1494

The rulers of Spain and Portugal divided the lands across the Atlantic between them in a treaty signed in the Spanish town of Tordesillas on June 7, 1494. King Ferdinand II of Aragon and Queen Isabella I of Castile signed for Spain. King John II signed for Portugal.

The treaty described a line running from the North Pole to the South Pole, 370 leagues, or about 1,185 miles, west of the Cape Verde Islands in the Atlantic Ocean. The king of Portugal could claim new lands east of the line. The king and queen of Spain could claim new lands west of it.

Millions of people lived in the Americas, on the land these three rulers had divided. The rulers had never seen it. None of the people who lived there was at Tordesillas, and the rulers did not ask them or tell them.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 1 MINUTE

Kings in Spain, Portugal, France and England claimed land on this side of the ocean from their capitals in Europe. French Protestants, Christians who had broken away from the Catholic Church, built a fort in Florida, on land the king of Spain claimed. Spanish soldiers settled the matter in 1565 by killing hundreds of French soldiers and sailors on the Florida coast. Most of the dead had already surrendered or been captured.

Fort Caroline and Matanzas, 1565

Fort Caroline, the French fort, stood in the homeland of peoples who spoke the Timucua language. No French or Spanish leader asked them about it.

The king's contract. King Philip II of Spain made a contract in 1565 with Pedro Menéndez de Avilés, a Spanish commander. Under it, Menéndez was to settle Florida and drive the French out of their fort. Menéndez arrived in August. In his own words, he came "to plant the Gospel in these parts," which meant spreading his Catholic faith there.

The killings. Menéndez's soldiers took Fort Caroline on September 20, 1565. By his own count they cut the throats of 132 men there and killed 10 more the next day, and he sent about 50 women and children by ship to Havana. Timucua people told him where shipwrecked French sailors had come ashore. At that inlet, a narrow arm of the sea south of St. Augustine, his soldiers killed about 245 Frenchmen who had surrendered, among them the French commander, Jean Ribault. Chapter 22, War and the Military, tells the killings in full.

Menéndez wrote to King Philip that punishing the French this way was "serving God Our Lord, and Your Majesty," because they were Protestants. The inlet is still called Matanzas, the Spanish word for slaughters.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 3 MINUTES

New Netherland, the Dutch colony on Lenape land, changed hands three times in ten years. English forces took it in 1664, Dutch forces took it back in 1673, and in 1674 Dutch diplomats handed it to England again.

The colonies on this coast belonged to England, the Dutch Republic, France and Spain. Officials in London, Amsterdam, Paris and Madrid set each colony's borders, chose its wars and decided who it could trade with. Colonists had no ambassadors, officials sent to live in another country and speak for their own, and they could not sign treaties in their own names.

Trade laws made in London

Members of Parliament, England's lawmakers in London, decided what English colonists could buy and sell. They did it through a series of laws called the Navigation Acts.

They aimed the first act, in 1651, mainly at Dutch merchants. It required all trade between England and its colonies to travel in English or colonial ships, and it was one of the causes of a war at sea that English and Dutch sailors began fighting in 1652. The act of 1660 listed goods that colonists could ship only to England or to another English colony: sugar, tobacco, cotton, wool, ginger and indigo, a plant used to make blue dye.

Under the Staple Act of 1663, European goods bound for the colonies had to land in England first. Customs officers there, who collected the taxes on goods coming in, checked them, and then merchants shipped the goods on. Under these laws, merchants in Boston could not legally buy rope from Dutch traders or sell tobacco to French ones.

Dutch diplomats gave up New Netherland for a nutmeg island

The Dutch colony of New Netherland stood on the homeland of the Lenape people, which they call Lenapehoking. It covered what is now New York City, parts of Long Island and the Hudson Valley, New Jersey, northeastern Delaware and eastern Pennsylvania.

Mannahatta. Dutch colonists said they had bought the island of Mannahatta in 1626 for trade goods worth 60 guilders, the Dutch money of the time. The Dutch most likely misread what the Lenape meant by the exchange. Diseases that the colonists brought cut the number of Lenape people by 85 percent by 1700.

An English fleet arrived at New Amsterdam, the colony's main town, in 1664, and the Dutch surrendered the colony without a fight. Accounts give different days for the surrender because the English and the Dutch used different calendars at the time.

The trade. English and Dutch diplomats ended their war with the Treaty of Breda, signed on July 21, 1667. No Lenape leader took part. The Dutch had done better in the fighting, but the Dutch men who bargained at Breda let England keep New Netherland. In return the Dutch took Suriname and Run, an island in what is now Indonesia where nutmeg grew. Suriname had sugar plantations, large farms where the planters forced enslaved people to do the work.

Dutch forces sailed in during a third war, in August 1673, took the colony back and renamed its main town New Orange. Under the Treaty of Westminster, signed on February 19, 1674, Dutch diplomats handed the colony back to England, and it stayed English. By then the English called it New York.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 4 MINUTES

New England soldiers captured a French fortress in 1745, and three years later British diplomats gave it back without asking them. Colonists lived under the rule of the king of Britain, France or Spain. When their king went to war, they were at war too, and they had no say in the peace terms.

Native nations made treaties with English and French officials in their own names. In the summer of 1701 the Haudenosaunee, a league of five Native nations in what is now New York, made two agreements about two weeks apart, one with the English and one with the French.

Two agreements in the summer of 1701

At Albany. Haudenosaunee representatives met the acting English governor of New York at Albany on July 19, 1701. The English called them the Five Nations. They made a deed, a signed paper that hands over land or rights to land, to King William of England. It was about hunting lands that ran west from what is now western New York toward what is now Chicago.

People still argue over what the Haudenosaunee kept and what they gave up in that deed. Its English text states that they handed the land to the king, and that he would protect their "free hunting" there forever. Haudenosaunee groups read it as protecting their right to hunt there.

The raccoon case. In Canada, government lawyers argued against that reading in a court case. In 1987 Ontario officials charged Jesse Ireland and David Jamieson, two men of the Oneida, one of the five Haudenosaunee nations, with hunting raccoons without a license in southern Ontario, inside the area the deed describes.

The government lawyers said the hunting promise counted only if the English and the Haudenosaunee won the land back from the French and their Native allies, and that never happened. In 1990 an Ontario judge rejected that argument and ruled that the two men had a right under the deed to hunt there.

At Montréal. About two weeks after the Albany meeting, on August 4, 1701, the governor of New France, the French colony in North America, signed a peace at Montréal with about 1,300 representatives of 39 Native nations. It is called the Great Peace of Montréal, and with it the French and the Native nations ended decades of war.

French officials meant the peace to keep the Five Nations neutral, taking neither side, if the French and the English colonists went to war. The Haudenosaunee kept out of the next war between France and Britain.

Kondiaronk

Who: A Huron-Wendat chief who argued for the Great Peace of Montréal while he was dying of a fever. The French called him "the Rat."
When and where: Montréal, August 1701. Born around 1649.

He spoke for peace on August 1 and died within hours.

Kondiaronk was a chief of the Huron-Wendat people. The French nicknamed him "the Rat" for the tricks he used when he bargained.

A disease was spreading through Montréal while the great council met, and Kondiaronk caught it. On August 1, 1701, weak with fever, he spoke to the council and pushed the leaders toward agreement. Afterward he was carried to the Hôtel-Dieu, a hospital in the town, and he died a few hours later. Accounts give his death as August 1 or August 2.

The governor of Montréal, French officers, war chiefs and priests walked in the procession at his large funeral on August 3, and he was buried at the town's Notre-Dame church. The Great Peace of Montréal was signed the next day, August 4, 1701.

What British diplomats won at Utrecht, 1713

In the Treaty of Utrecht, British diplomats won a contract to ship kidnapped African people across the ocean and sell them as slaves. The treaty was signed on April 11, 1713, at Utrecht in the Netherlands. With it the diplomats ended a war in Europe that the colonists called Queen Anne's War.

Under the contract, called the asiento, British traders had the only right for thirty years to carry enslaved Black people into Spain's colonies in the Americas and sell them there. The diplomats wrote the asiento into the peace as one of Britain's prizes, beside land.

The land came from France. French diplomats signed over three things to Britain: all the land whose rivers drain into Hudson Bay, France's claims to Newfoundland, and Acadia, a French colony on the Atlantic coast of what is now Canada. A New England force had taken Acadia's capital, Port-Royal, in 1710.

Louisbourg, taken in 1745 and given back in 1748

New England soldiers under Colonel William Pepperrell sailed from Boston on March 24, 1745, to take Louisbourg, a French fortress on Cape Breton Island. With British warships offshore, they laid siege to it, surrounding it and cutting it off, and the French surrendered on June 17, 1745, after 49 days.

The cost. Far more of the New Englanders died holding the fortress than taking it. In June 1746 Pepperrell estimated that about 1,200 of his men had died, most of them of disease in the fortress that winter. Chapter 22, War and the Military, tells the siege and that winter in full.

Given back. British diplomats gave Louisbourg back to France in 1748, in the Treaty of Aix-la-Chapelle. In exchange French diplomats gave back Madras, a city in India that French forces had taken from Britain. British officials did not ask the colonists, and New Englanders were furious.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 16 MINUTES

In the middle of their war for independence, American leaders looked in secret for anyone abroad who would help them fight Britain. They started in November 1775. French and American diplomats signed an alliance in 1778, and in 1783 American diplomats in Paris signed the peace that ended the war.

Weak after the war. The new country had almost no navy and little money. Rulers in North Africa seized American ships, and their officials enslaved the crews. When the French and the British went to war with each other in the 1790s, American leaders tried to keep out of it. President Washington accepted a treaty that favored Britain because he judged the country too weak to fight the British. From 1798 to 1800 American sailors fought an undeclared war at sea against France.

A committee for secret letters, 1775 to 1789

Members of the Second Continental Congress, the meeting of delegates each colony chose to speak for it, set up the Committee of Secret Correspondence on November 29, 1775. The committee's job was to make secret contact with people in other countries who might help. Its first five members included Benjamin Franklin and John Jay.

The delegates renamed it the Committee for Foreign Affairs on April 17, 1777. Later they set up a Department of Foreign Affairs. Accounts disagree on whether that happened on January 10, 1780, or January 10, 1781. On August 10, 1781, they chose Robert R. Livingston of New York as the first Secretary for Foreign Affairs.

Under the new Constitution, members of Congress set up the department again in a law of July 27, 1789. In a second law, on September 15, 1789, they renamed it the Department of State, because they had given it record-keeping work at home on top of foreign affairs. It still has that name.

Which country recognized the United States first?

Sultan Mohammed III, the ruler of Morocco, was the first ruler of any country to recognize the United States, or accept officially that it existed, in Encyclopaedia Britannica's account. On December 20, 1777, he declared that ships flying the American flag could enter Moroccan ports freely. That was about six weeks before French officials signed their treaties with the Americans.

His declaration named ships of several other nations too. It was part of his plan to trade in peace with Christian countries, and he did not aim it at the Americans alone.

A treaty with Morocco followed nine years later. The American agent Thomas Barclay signed it at Marrakesh on June 28, 1786. Thomas Jefferson and John Adams added their signatures in Paris and London, and delegates to Congress ratified it, giving it final approval, in July 1787.

It was the first treaty American officials made with an African country or a Muslim one. Officials of the two countries rewrote parts of it in 1836 (some accounts say 1837), and it is still in force. No other treaty relationship in United States history has lasted as long without a break.

What it took to win over France, 1778

France's foreign minister, the Comte de Vergennes, a French nobleman, agreed to an alliance only after the Americans won a major battle. Benjamin Franklin sailed to France in late 1776. His ship reached Auray, in Brittany, on December 3 or 4, 1776, and he was in Paris by December 21. He, Silas Deane and Arthur Lee were the American commissioners, the men sent to bargain for the United States.

Saratoga. A British army surrendered to American forces after the Battle of Saratoga, in New York. The State Department's own historians write that Vergennes "finally decided in favor of an alliance" when that news reached him in December 1777.

Two treaties. American and French diplomats signed two treaties on February 6, 1778. In the Treaty of Amity and Commerce, a treaty of friendship and trade, the French formally recognized American independence. In the Treaty of Alliance, the two sides promised that neither would make peace with Britain without the other. A secret section stated that other countries in Europe could join.

Spain's leaders took their country into the war against Britain on June 21, 1779, as France's ally. They did not sign a treaty with the United States, and they did not recognize American independence during the war.

Benjamin Franklin

Who: The American who spoke for his country in France for more than eight years, and one of the three Americans who made the peace with Britain.

When and where: Paris, December 1776 to May 1785.

Movie: *Franklin* (2024), an eight-part drama series on Apple TV+, with Michael Douglas as Franklin. It is about his time in France and is based on Stacy Schiff's book *A Great Improvisation*. It is a drama, not a documentary.

In Paris, Franklin wore a fur cap instead of a wig.

His biographer Walter Isaacson identifies the fur as marten. Franklin wore plain clothes too, and the French took the cap as a sign that he was a plain, rugged American. Augustin de Saint-Aubin made an engraving of Franklin in the cap in 1777, and the print is in the Philadelphia Museum of Art.

Franklin represented the United States in France from December 1776 to May 1785, first as one of the commissioners and then as minister. Delegates to Congress named him Minister Plenipotentiary to France in 1778, a title meaning he had full power to act for his country there. He presented his credentials, the letters that proved his position, to the French government the next spring.

The delegates also named him minister to Sweden, in 1782. Franklin never went to Sweden, but he worked out a treaty with it from Paris and signed it in April 1783. In the same years he was one of the three Americans who made the peace with Britain. His mission in France ended in May 1785.

What British diplomats signed away in 1783

In the Treaty of Paris, British diplomats accepted that the United States was independent. They also handed the United States Britain's claim to land that Native nations lived on.

Benjamin Franklin, John Adams and John Jay bargained for the United States, and they signed the Treaty of Paris on September 3, 1783.

Under the treaty, the British accepted a western border for the United States at the Mississippi River. Americans could fish off Newfoundland, and British lenders could still collect the debts Americans had owed them since before the war. The American side promised Loyalists, colonists who had sided with Britain, payment for property that Americans had taken from them. British troops had to leave the thirteen states. Franklin asked the British to hand over Canada as well, and they refused.

The treaty took effect in 1784, after delegates to the Confederation Congress, meeting at Annapolis, Maryland, and British officials had both approved it.

Not invited. No Native nation was invited to Paris, though the land inside that western border was their home. Among them were the Haudenosaunee in what is now New York and Pennsylvania. The Tuscarora had joined their league in about 1722, and after that it was called the Six Nations: the Mohawk, Oneida, Onondaga, Cayuga, Seneca and Tuscarora.

The British king had set aside much of that land for Native nations in 1763, in a royal order called the Royal Proclamation. In 1783 British diplomats handed it to the United States, and they ignored many earlier British treaties with Native nations.

At Fort Stanwix in 1784, American officials backed by a strong force of soldiers treated the Six Nations as nations they had beaten in war, and they took huge parts of Six Nations land.

John Adams

Who: The first American minister to Great Britain, sent to the king he had rebelled against.

When and where: London. Presented to King George III on June 1, 1785.

In 1785 Adams met the king who had called the colonies rebels.

Adams met the king as the representative of the United States on June 1, 1785. Nearly ten years earlier, in August 1775, the same king had declared the colonies to be in open rebellion against him, and the next year Adams signed the Declaration of Independence.

Two days after the meeting, on June 3, 1785, Adams wrote to Thomas Jefferson that the king had received him with more kindness than he had expected. The Library of Congress holds that letter.

BY 1786: British diplomats had accepted American independence, and John Adams was the first American minister in London. The alliance with France, signed in 1778, was still in force.

Americans enslaved in Algiers, 1785 to 1796

Officials of the ruler of Algiers held American sailors as slaves from 1785 to 1796, and American leaders could not free them. Algiers, Tunis, Tripoli and Morocco, called the Barbary states, were states on the coast of North Africa. Many of their rulers sent armed ships to seize the ships of weaker countries, to make those countries pay them for safe passage, and they held the captured sailors for ransom.

Moroccan ships seized an American merchant ship in 1784, and a treaty with Morocco followed in 1786. In 1785 Muhammad, the Dey, or ruler, of Algiers, declared war on the United States, and his ships captured several American ships.

A Boston ship. An Algerian warship took the Boston ship *Maria* about three miles off Cape St. Vincent, in Portugal, on July 25, 1785. The *Maria* reached Algiers on August 4, and the Dey's officials enslaved its crew. More American crews followed.

American leaders had almost no navy and very little money. They could not free the sailors by force, and for years they could not pay what the Dey asked for them. In 1795 they sent Joel Barlow, Joseph Donaldson and Richard O'Brien to North Africa, and the three men made treaties with Algiers, Tunis and Tripoli. The treaty with Algiers was signed on September 5, 1795, and the American ratification is dated March 7, 1796.

The price. The treaty freed 83 American sailors, by the count of the State Department's historians. Counts of the captives differ with the year, from 83 freed in 1796 to 115 held in 1793.

In all, the treaty cost the United States about $1 million, by the Treasury's estimate. The money for the first payment reached Algiers late, and the Dey demanded more, which roughly doubled the price. Other accounts give a smaller sum paid at once, plus supplies for the Dey's ships every year.

The Dey's officials released the surviving sailors on July 8, 1796. Six captives had died shortly before. Several others carried lasting injuries from their years of captivity.

James Leander Cathcart

Who: An American sailor enslaved in Algiers for eleven years, who rose to be the Dey's chief Christian clerk and put the 1795 treaty into English.

When and where: Born June 1, 1767, in County Westmeath, Ireland. Captured July 25, 1785, off Cape St. Vincent, Portugal. Held in Algiers until May 1796. Died October 6, 1843.

Captured at 18, Cathcart spent eleven years as a slave in Algiers.

He had come to America from Ireland as a boy. During the Revolution the British had already captured him once and held him on prison ships at New York, until he escaped.

The capture. Cathcart was one of six crewmen on the Boston ship *Maria* when an Algerian warship with 14 guns took it on July 25, 1785. He later explained why Algerian warships were out in the Atlantic that summer. Spain's war with Algiers had kept them out until the two made peace in 1785.

Then Charles Logie, the British consul in Algiers, spoke to the Dey's government. A consul is an official who looks after his country's trade and citizens in another country. Logie told them that American ships were no longer under the British king's protection, so the Algerians could take them.

The Algerian crew drove the six Americans into a boat and took their hats, handkerchiefs and shoes. On the voyage the captors locked all 42 of their prisoners every night in the sail room in the ship's hold. The drinking water was so foul, Cathcart wrote, that "we were, literally, obliged to strain through our teeth." The *Maria* reached Algiers on August 4. On August 12 the *Dauphin* of Philadelphia arrived with 15 more American captives, which made 21 in all.

Dey Muhammad chose some of the captives to work in his palace and garden. His officials sent others to the slave prisons and to hard labor at the harbor. A man at hard labor got one suit of clothes, worth

about a dollar and a half, and two rough blankets meant to last his whole captivity.

The beating. About four months after he arrived, officials who ran the Dey's household ordered Cathcart beaten with the bastinado, blows with sticks on the soles of the bare feet. Four men threw him down and tied his arms and legs. In the usual method, Cathcart wrote, the man lay face down with his ankles tied to a pole that two men held up, and a guard sat on his shoulders. Cathcart took 28 blows and lost four toenails.

He wrote that all fourteen slaves in the garden got the same beating, "old men of sixty and children of ten years of age" among them.

The clerk. Cathcart rose step by step. He served coffee to the minister of the harbor, then became clerk of the harbor, then clerk of a slave prison, and at last chief Christian clerk to the Dey. Foreign ambassadors who could not get a meeting with the Dey went through him. He helped Joseph Donaldson, who bargained for the Americans, and he translated the Turkish text of the 1795 treaty into English.

By Cathcart's own list, 9 of the 21 Americans taken in 1785 died in Algiers, most of them of plague, a disease that spread quickly and killed many people. The other 12 went home at different times. Family or friends bought some of them free before 1796, and the rest were freed in 1796. Cathcart left Algiers on May 8, 1796, carrying dispatches, official letters for the American government.

In January 1799 he sailed from Philadelphia as the American consul for Tunis and Tripoli. His daughter, J. B. Newkirk, published his account, *The Captives: Eleven Years a Prisoner in Algiers*, in 1899.

Staying out of Europe's war, 1793 to 1796

President George Washington decided in 1793 to keep the United States out of the new war between France and Britain.

The French minister. France's new minister, Edmond-Charles Genêt, landed at Charleston, South Carolina, on April 8, 1793. Two weeks later, on April 22, Washington issued the Proclamation of Neutrality, which stated that the United States would take neither side.

Genêt hired American privateers, privately owned armed ships with a government's permission to attack enemy ships, to go after British ships. When Washington would not do as Genêt wished, Genêt threatened to go over the President's head to the American people. Washington demanded that the French government replace him.

The treaty with Britain. John Jay signed a treaty with Britain on November 19, 1794, and senators approved it on June 24, 1795, by 20 votes to 10. Under it, British troops were to leave the forts in the Northwest that British diplomats had promised to give up in 1783. British officials agreed to give American traders terms as good as those of any other country, and they put heavy limits on trade with the British islands in the Caribbean.

The two sides sent several quarrels to arbitration, a way of settling a dispute by letting a neutral panel decide: the border between Maine and Canada, the old debts, and British seizures of American ships. British officials kept the right to seize American cargo bound for France, with payment, and to take French goods off American ships without paying.

The State Department's historians sum it up this way: the treaty "addressed few U.S. interests, and ultimately granted Britain additional rights." It was very unpopular with Americans. Washington signed it anyway, because he judged that the country was too weak to fight Britain.

The treaty with Spain. Thomas Pinckney signed a treaty with Spain on October 27, 1795, after bargaining with a Spanish minister, Manuel de Godoy. Senators approved it on March 7, 1796. Under it, the border with Spanish West

Florida was set at the 31st parallel, an east-west line on the map, and Americans got free use of the Mississippi River and of the port of New Orleans without paying tax.

That mattered to farmers in Kentucky and Tennessee. They could not haul their crops over the mountains to sell them, so they floated the crops down the rivers to New Orleans, which Spanish officials controlled. Under Pinckney's Treaty they could sell them there.

The Farewell Address. Washington's Farewell Address was printed in the *American Daily Advertiser*, a Philadelphia newspaper, on September 19, 1796. Alexander Hamilton had helped him write it. In it Washington said he would not run for a third term, and he argued that American leaders should not make permanent alliances with any foreign country.

The XYZ Affair and a war at sea, 1798 to 1800

American navy crews fought French ships in the Caribbean from 1798 to 1800, in a war that neither government declared. It followed a failed attempt at talks. President John Adams had sent three commissioners to France: Elbridge Gerry, Charles Cotesworth Pinckney and John Marshall.

French agents told the three Americans that talks could not begin until the United States met their demands. The agents asked for a low-interest loan to France, and they wanted the United States government itself to pay what American merchants said France owed them. On top of that, they wanted "a substantial bribe" for the French foreign minister, Talleyrand.

W, X, Y and Z. Adams made the Americans' reports public, with the four agents' names replaced by the letters W, X, Y and Z. The agents were Nicholas Hubbard, Jean Hottinguer, Pierre Bellamy and Lucien Hauteval.

The fighting at sea that followed is called the Quasi-War, from a word meaning "almost." The State Department's historians call it "a limited, undeclared war." American and French diplomats ended it with an agreement called the Convention of 1800, also called the Treaty of Mortefontaine, and in the same agreement they ended the alliance of 1778 between France and the United States. Senators did not ratify it until December 18, 1801.

BY 1800

If you remember one thing: For its first twenty-five years the United States was too weak to free its sailors by force or to fight Britain, so its leaders made treaties and paid ransom instead.

- In 1775: The colonies were at war with Britain, and their leaders were looking in secret for help abroad.
- In 1800: American diplomats had signed treaties with France, Britain, Spain, Morocco and Algiers, and American navy crews had just fought French ships at sea.

Next: In the next fifty years American leaders doubled the size of the country with one purchase and pushed its border to the Pacific.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 10 MINUTES

With one purchase in 1803, American diplomats roughly doubled the size of the United States, and by 1848 the country's border reached the Pacific Ocean. American leaders bought land from France, took Florida from Spain, split the Oregon country with Britain and took the Southwest from Mexico in a war. Native nations lived across all that land, and none of them signed the sales and treaties.

American sailors fought two wars against rulers on the coast of North Africa in the same years. In 1823 President James Monroe told Europe's rulers to start no new colonies in the Americas.

Tribute and the Barbary wars, 1801 to 1815

American leaders had been paying tribute, protection money, to the rulers of the Barbary states, the four states on the coast of North Africa: Algiers, Tunis, Tripoli and Morocco. American officials paid the rulers so that their ships would not seize American ships and hold the crews for ransom.

When American officials would not raise the payments, the pasha, or ruler, of Tripoli declared war on the United States on May 14, 1801. The fighting ended with a treaty signed on June 10, 1805. Under it, American officials paid no more yearly tribute to Tripoli, but they did pay a ransom to free the crew of the *Philadelphia*, an American warship that Tripoli's forces had captured. A second Barbary war followed in 1815.

The Louisiana Purchase, 1803

American envoys, men sent to bargain for their government, signed a treaty on April 30, 1803, to buy about 828,000 square miles of land west of the Mississippi from France. The price was $15 million, and the purchase roughly doubled the size of the United States.

The envoys had been sent to buy only the port of New Orleans, and French officials offered them all of Louisiana instead.

Why Napoleon sold. The people enslaved in the French colony of Saint-Domingue, now called Haiti, had risen against French rule. Napoleon, the ruler of France, had sent an army to put them down. The attempt failed, and he lost the army he sent. With a war against Britain coming, Napoleon sold Louisiana to raise money and to keep the British from taking it.

A written promise. Article III of the treaty states that the people living in the territory would be "incorporated in the Union of the United States," made part of the country. It also states that they would be admitted to "all the rights, advantages and immunities of citizens of the United States" (immunities are the protections the law gives every citizen).

So in 1803, the land the United States bought came with a written promise that its people would become full citizens. A century later, judges on the Supreme Court ruled that no such promise covered Puerto Rico, Guam or the Philippines.

Native nations lived across those 828,000 square miles, but they were not part of the sale and no one asked them. The promise of citizenship in Article III did not include them.

How Florida changed hands, 1818 and 1819

General Andrew Jackson led American troops into Spanish Florida in 1818. They attacked the Seminole people and people who had escaped slavery, whom the American officials who approved the raid saw as a threat to Georgia. Jackson's troops seized the Spanish forts at Pensacola and St. Marks, and Jackson had two British citizens put to death, on charges of stirring up the Seminoles and the escaped slaves.

President James Monroe and his advisers seriously thought about speaking out against Jackson. John Quincy Adams defended him. As Secretary of State, Adams ran the country's dealings with other countries, and he used Jackson's raid to put a choice to Spain: control the people of East Florida, or hand it over to the United States.

The treaty. Adams and the Spanish minister, Luis de Onís, signed the Adams-Onís Treaty in 1819. Under it, Spain's leaders handed East Florida to the United States and gave up their claim to West Florida. Spanish officials received no payment. Instead, American officials agreed to pay American citizens, up to $5 million in all, the money those citizens said Spain owed them, so Spain would not have to pay it.

The treaty also fixed the western edge of the Louisiana Purchase. Spain's leaders gave up their claims to the Pacific Northwest, and American officials accepted Spanish rule over Texas. Leaders in both countries ratified the treaty in 1821.

John Quincy Adams

Who: The Secretary of State who got Florida from Spain and wrote the warning now called the Monroe Doctrine.

When and where: Washington, D.C., 1817 to 1825.

Adams talked President Monroe out of sharing his warning with Britain.

Monroe had thought of making his 1823 warning to Europe's rulers jointly with Britain. Adams talked him out of it, so Monroe made it alone. The State Department's historians credit Adams with writing the statement.

Adams was Secretary of State from 1817 to 1825, under President James Monroe. He had already used Jackson's raid to press Spain to give up Florida, and he negotiated the 1819 treaty with Spain's minister, Luis de Onís, which carries both their names.

The Monroe Doctrine, 1823

President James Monroe told Europe's rulers to start no new colonies in North or South America in his yearly message to Congress, on December 2, 1823. In his words, the American continents "are henceforth," meaning from now on, "not to be considered as subjects for future colonization by any European powers."

Who enforced it. The United States Navy was too small to enforce the warning in 1823. British leaders wanted other European powers kept out of Latin America too. Spanish officials had blocked British merchants from trading there under Spain's colonial trade rules, and British leaders wanted the new Latin American countries open to British trade. British warships kept those powers' fleets away.

Texas, Oregon and the land taken from Mexico, 1845 to 1848

American leaders took Texas and the Southwest in the 1840s, and they split the Oregon country with Britain.

Texas. Texans had won a war of independence from Mexico in 1836 and set up their own republic. President John Tyler made a treaty with the Republic of Texas in April 1844 to bring it into the United States, but senators voted the treaty down that June. A treaty needs the votes of two thirds of the senators.

So members of the House and the Senate passed a joint resolution instead, on March 1, 1845, to annex Texas, which means to take it and make it part of the country. A joint resolution needs only more than half of the votes in each house. Texas joined the United States on December 29. In 1898 members of Congress took Hawaii the same way.

Oregon. The Oregon country stretched from the Pacific coast to the Rocky Mountains, covering what is now Oregon, Washington and most of the Canadian province of British Columbia. American and British officials set the border there at the 49th parallel, an east-west line on the map, on June 15, 1846. The United States got the part south of that line, and the two sides settled it by treaty, without a war.

Mexico. The land in the Southwest came from a war with Mexico, fought from 1846 to 1848. American and Mexican officials signed the Treaty of Guadalupe Hidalgo on February 2, 1848, at Guadalupe Hidalgo, a city north of Mexico City where Mexico's leaders had fled. Mexican officials, whose army had lost the war, signed over more than 525,000 square miles, and American officials agreed to pay $15,000,000. The land became all or part of California, Nevada, Utah, Arizona, New Mexico, Colorado and Wyoming.

Between about 80,000 and 100,000 Mexican citizens lived on that land, depending on the count, and without moving they found themselves living in the United States. Senators changed the treaty's promises to them before they approved it on March 10, 1848.

Rights. The treaty promised that Mexicans who became American citizens would keep "the free enjoyment of their liberty and property" and the free practice of their religion. Senators rewrote that part of the treaty. In the version that took effect, members of Congress would decide the "proper time" for these new Americans to get all the rights of citizens.

Land titles. Senators cut out completely the part of the treaty that kept Spanish and Mexican land grants valid under American law. Land grants were legal titles to land given by Spanish or Mexican officials. American officials then wrote a side agreement, the Protocol of Querétaro, telling Mexican officials that the cut had not canceled those titles. American judges did not treat the side agreement as equal to the treaty.

Under a new law of 1851, Mexican landowners in California had to prove their deeds, the papers showing they owned their land, before officials of the United States government. The cases took an average of 17 years. Many families sold most of their land during those years to pay English-speaking lawyers and land taxes. The Peralta family of San José and the East Bay kept only 700 of their 49,000 acres.

English-speaking American squatters, newcomers who settled on land that was not theirs, took more. In some cases, as with the Suñol and Berryessa families, squatters lynched the Mexican landowners, killing them without any trial, and

stayed on the land. Many Mexican American families lost their land or fell into debt. The historians William Carrigan and Clive Webb counted at least 597 Mexicans whom mobs in the United States lynched between 1848 and 1928.

The miners' tax. California's new lawmakers passed the Foreign Miners' Tax in 1850, $20 a month for each miner born outside the country. They aimed it at Chinese and Latino miners, and officials collected it mostly from them. Thousands of foreign-born miners left the mining towns, and lawmakers ended the tax the next year.

Village land. In northern New Mexico and southern Colorado, some land grants belonged to whole villages together. The families of a village shared its common land, including forest on the nearby mountains. In the late 1800s American officials and judges broke up these shared grants, and the villages lost most of their common land.

A special Court of Private Land Claims judged these grants from 1891. Its judges, and United States land officials before them, often recognized a grant only up to the foot of the mountains, leaving out the forests.

The judges of the Supreme Court decided a case called *United States v. Sandoval* in 1897. They agreed with government lawyers that a village's common lands belonged to the United States government, and seven grants lost between 95 and 99 percent of their land under that ruling. Other villages lost their common land in lawsuits that split it into private pieces, or because they could not pay the taxes on it.

Another part of the treaty describes the Native nations who lived on the land as "savage tribes," an insulting name. It states that "a great part" of the land was "now occupied" by them, and that from then on they would "be under the exclusive control of the Government of the United States." The article also states that the United States government would "forcibly restrain" their raids into Mexico. Among the nations on that land were the Tohono O'odham. No Native nation signed the treaty.

Nicholas Trist

Who: The American diplomat who made peace with Mexico after President James K. Polk ordered him home.

When and where: Mexico, 1847 and 1848.

Polk fired the diplomat who made his peace with Mexico.

President James K. Polk sent Trist to Mexico to bargain for an end to the war, then recalled him in October 1847. Trist ignored the order and kept bargaining with no authority to do so. In February 1848 he signed the Treaty of Guadalupe Hidalgo.

Polk sent the treaty to the Senate anyway, because under it he got what he wanted, including California. Then he fired Trist, and he refused to pay Trist's expenses or his salary for his last months of work.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 14 MINUTES

Americans claimed their first land overseas in 1856, small islands covered in seabird droppings, which make crops grow. American officials bought Alaska from Russia in 1867, and in 1898 they took Hawaii and, after a war with Spain, Puerto Rico, Guam and the Philippines. No one asked the people who lived in these places. They became territories, lands that belonged to the United States but were not states.

How it grew. In the 1790s the United States could not free its sailors from Algiers. By 1900 it reached from the Atlantic to the Pacific, its railroad track had grown from about 9,000 miles in 1850 to 193,346 miles, and its mills made 11.4 million tons of steel a year, more than Britain and Germany together.

Hawaii. A group of mostly American businessmen overthrew Hawaii's queen in 1893 with the help of American Marines. More than half of the Native Hawaiian people signed a petition against annexation, and members of

Congress annexed the islands anyway.

Perry's warships in Japan, 1853 and 1854

Commodore Matthew Perry opened two Japanese ports to American ships by bringing warships to Japan. Perry, the navy officer in command of the group, sailed into Edo Bay, beside the city of Edo, now called Tokyo, in July 1853, and he came back in 1854. Japanese and American officials signed the Convention of Kanagawa, a written agreement that opened the two ports, on March 31, 1854. The Japanese officials signed it under the threat of Perry's warships.

Islands claimed for bird droppings, 1856

Americans first claimed land overseas for the United States in 1856, forty-two years before the war with Spain. They wanted guano, the droppings of seabirds, because it makes crops grow.

Members of Congress passed the Guano Islands Act on August 18, 1856. Under it, an American citizen who found an island with guano on it could take the island for the United States, unless another country already claimed it. Americans claimed about a hundred islands under this law.

The judges of the Supreme Court ruled that the law was valid in 1890, in a case called *Jones v. United States*. Lawmakers have never ended it, and it is still part of United States law.

Who was left out of the Alaska sale?

American officials bought Alaska from Russia in 1867, and the diplomats who wrote the treaty left Alaska's Native peoples out of American citizenship by name. American and Russian diplomats signed the treaty on March 30, 1867, for a price of $7,200,000. Russian officials formally handed over the territory at a ceremony on Castle Hill in Sitka on October 18, 1867, and then the United States flag went up.

Tlingit land. Russian officials sold land that they did not really control. Alaska Native nations lived on it, and they had no part in the sale. Castle Hill itself was Tlingit land. Alexander Baranov, the first Russian governor, had attacked the hill in 1804 to take it from the Kiksadi clan of the Tlingit people, and after a six-day battle the Russians seized the Kiksadi fort and burned it. In 1867 a Tlingit village still stood beside the Russian town of Sitka.

Article III of the treaty states who would become an American citizen. People living in Alaska who stayed would be admitted to "the enjoyment of all the rights, advantages, and immunities of citizens of the United States." The article then leaves out "uncivilized native tribes," an insulting name for Alaska's Native peoples. They would instead be "subject to such laws and regulations as the United States may from time to time adopt."

Alaska had no civil government, one run by elected or appointed officials outside the armed forces, until 1884. For 17 years American officers ruled it, first from the Army, then from the Treasury Department, then from the Navy. The historian Rebecca Poulson, writing for the Alaska Historical Society, says that American officials considered Native people "savages," an insulting word, and did not allow them to be citizens.

Kake. Under Russian rule, officials of the Russian company that ran Alaska had paid compensation, a payment to the dead person's family, when a Tlingit person was killed. Under Tlingit law, a death was settled with a payment, not with punishment. American officers refused to pay. In early 1869 an army guard at Sitka killed two men from the village of Kake, deaths Poulson calls accidental. Army officers at Sitka refused to pay compensation for them, and relatives of the dead men then killed two white men.

General Jefferson C. Davis ordered the American warship USS *Saginaw* to attack Kake. It was winter. The crew fired exploding shells from the ship's guns at the Kake villages and burned 28 of the villages' 29 clan houses, the houses of the Kake clans, which are large family groups. They also burned the villagers' canoes, totem poles and stored food.

NOT KNOWN: No one has worked out how many people died after the attack, reporters at KTOO, a public radio station in Juneau, wrote in 2024. Kake oral history, the accounts the Tlingit of Kake passed down by word of mouth, records many deaths, especially among elders and children.

Hawaii: a kingdom overthrown, 1887 to 1893

A group of mostly American businessmen overthrew Queen Liliʻuokalani of Hawaii in January 1893, and American Marines and sailors helped them. Two of their leaders had already used armed men to force a Hawaiian king to do what they wanted.

The Bayonet Constitution. A group of lawyers and sugar planters who were haole, the Hawaiian word for white people who are not Native Hawaiian, forced King Kalākaua to sign a new constitution on June 30, 1887. An armed militia, a force of armed citizens, backed them, and their leaders were two lawyers, Sanford B. Dole and Lorrin Thurston. The document became known as the Bayonet Constitution, after the blade fixed to the end of a rifle.

The overthrow. Early in 1893 members of the Annexation Club, Thurston among them, contacted John L. Stevens, the United States Minister to Hawaii and the top American diplomat there. They wanted to know whether the Americans would back them. The group, calling itself the Committee of Safety, began to move against the queen on January 15, 1893.

Stevens had 162 American sailors and Marines landed from the warship USS *Boston* on January 16. The queen's government had several hundred soldiers and police, and they did not fight. Dole became president of the new provisional government, a government set up for a short time until a lasting one is formed.

Queen Liliʻuokalani gave up her throne under protest. She addressed her protest to the United States, not to the men who had taken power. She wrote that she yielded "to the superior force of the United States of America," whose minister, John L. Stevens, "has caused United States troops to be landed at Honolulu."

Two American reports that disagree, 1893 and 1894

Two American investigations of the overthrow reached opposite findings. President Grover Cleveland sent James H. Blount to Hawaii to find out what had happened, and Blount reported that Stevens had landed the Marines on a false excuse to help the plotters.

What Cleveland said. Cleveland sent Congress a message about it on December 18, 1893. He said that the show of armed force, the "military demonstration on the soil of Honolulu," was "of itself an act of war." He also said that "the provisional government owes its existence to an armed invasion by the United States."

Albert S. Willis, the new American minister in Hawaii, apologized for what Stevens had done, which he called "the reprehensible conduct of the American minister," reprehensible meaning deserving blame. He also apologized for "the unauthorized presence on land of a military force."

What the Senate said. Cleveland could not get the queen put back on her throne. Members of a Senate committee made their own investigation in 1894, called the Morgan Report, and they cleared everyone involved. On July 4, 1894, the men who had taken power declared the Republic of Hawaii.

Queen Lili‘uokalani

Who: The last queen of Hawaii, overthrown with American help and then tried in her own palace. She wrote the song "Aloha ‘Oe."

When and where: Honolulu. Overthrown January 17, 1893. Held prisoner in ‘Iolani Palace in 1895.

The queen was put on trial in her own throne room.

The rising of 1895. Two years after the overthrow, Hawaiians loyal to the queen, among them Robert Wilcox and Prince Kūhiō, tried to restore her by force in January 1895. Within 36 hours officials of the Republic of Hawaii had caught the rebels and jailed them. Then they arrested the queen, and on January 24, 1895, they forced her to sign a paper giving up her throne for good.

The trial. They tried her before a military court in the throne room of ‘Iolani Palace, where she had ruled. The charge was misprision of treason, knowing about a plot against the government and not reporting it. The officers who sat on the court found her guilty, fined her $5,000, and sentenced her to five years in prison at hard labor, forced heavy work.

The Republic's officials later reduced the sentence. For nearly eight months they held her prisoner in an upstairs bedroom of the palace, and they allowed her no visitors except one woman companion. She spent her days praying, reading, writing music, crocheting and quilting.

21,269 names against annexation, 1897

Native Hawaiians defeated a treaty to annex their islands by signing their names against it. Two Hawaiian groups held meetings on the five main islands between September 11 and October 2, 1897: Hui Aloha ʻĀina, which had separate branches for men and for women, and Hui Kālaiʻāina. They gathered 21,269 signatures of Native Hawaiians against annexation. That year about 39,000 Native Hawaiian and part-Hawaiian people were counted, so more than half of them signed.

Four men carried the petition to Washington: James Kaulia, David Kalauokalani, John Richardson and William Auld. They arrived on December 6 and presented it to the Senate on December 9, 1897. A treaty needs the votes of two-thirds of the senators. When the four men left Washington on February 27, 1898, only 46 senators were still willing to vote for the annexation treaty, short of the two-thirds it needed. The treaty failed.

Taken anyway. Supporters of annexation in Congress then used a method that did not need the Senate votes the Hawaiians had blocked: a joint resolution, which passes when more than half of the House and more than half of the Senate vote for it. Members of the House voted for theirs, the Newlands Resolution, on June 15, 1898, and senators on July 6. President William McKinley signed it on July 7, 1898, and under it American officials took over Hawaii.

1898: Puerto Rico, Guam and the Philippines

After a war with Spain in 1898, American officials ruled Puerto Rico, Guam and the Philippines. The American battleship USS *Maine* blew up in the harbor of Havana, in Cuba, on February 15, 1898, and in April members of Congress declared war on Spain.

Guam and Puerto Rico. Juan Marina, the Spanish governor of Guam, surrendered the island to officers of the American warship USS *Charleston* on June 21, 1898. American troops landed in Puerto Rico at Guánica on July 25.

Spanish and American diplomats signed the Treaty of Paris on December 10, 1898. Spanish diplomats gave up Cuba and signed Puerto Rico and Guam over to the United States. They sold the Philippines to the United States for $20 million.

No one from Puerto Rico, Guam or the Philippines took part in the talks in Paris. Several million people in those places got new rulers without being asked. Among them on Guam were the CHamoru, the island's Native people. In the Philippines, Filipinos had already declared their own independence.

Why Americans and Filipinos went to war, 1899

War between American troops and the Philippine Republic began on February 4, 1899, because American officials had decided to keep the islands. Filipinos had been fighting Spain before the Americans arrived. On June 12, 1898, they declared their independence. American officials kept the islands instead of recognizing the new republic, and the two sides went to war.

The dead. The war lasted until 1902. About 4,200 Americans and about 20,000 Filipino soldiers were killed.

> **DISPUTED:** Counts of the Filipino civilians, people who were not soldiers, who died run from about 200,000 to as many as 1,000,000. The State Department's historians give the lowest count: as many as 200,000 dead "from violence, famine, and disease." Other estimates run much higher, and historians disagree about them.

Much of the dying came from hunger and from a cholera epidemic in 1902, an outbreak of a gut disease spread by dirty water. The epidemic was worse because the fighting had broken up daily life in the islands, and it killed more than 200,000 people in all.

What American troops did. The State Department's historians also record what American troops did. In their words, "U.S. forces at times burned villages, implemented civilian reconcentration policies, and employed torture on suspected guerrillas." Reconcentration meant forcing civilians out of their homes into camps or zones that soldiers guarded, and the guerrillas were fighters in small bands who hid among the people and attacked by surprise.

One kind of torture American soldiers used was the water cure, in which they forced water into a prisoner until his stomach swelled and then pressed it out of him. Chapter 22, War and the Military, tells where they used it and on whom.

Emilio Aguinaldo

Who: The Filipino leader who declared the Philippines independent from Spain and then led the war against the United States.

When and where: Born March 22 or 23, 1869, near Cavite, on the island of Luzon. President of the Philippine Republic from January 1899. Captured at Palanan on March 23, 1901. Died February 6, 1964.

American officers captured him by pretending to be prisoners.

Aguinaldo was the mayor of his town, Cavite Viejo, in 1896, and a local leader of the Katipunan, a secret society fighting Spanish rule.

Two deals. Aguinaldo made a deal with the Spanish governor in December 1897: he would leave the islands in return for money and a promise of reforms. From Hong Kong and Singapore he then made plans with American consuls, officials who looked after American trade and citizens there, and with officers of Commodore George Dewey's fleet. He would come back and help the Americans fight Spain. He landed in the Philippines again on May 19, 1898.

Filipinos declared independence on June 12, 1898, with Aguinaldo at the head of their government. Six months later Spanish diplomats sold the islands to the United States in the Treaty of Paris. Filipinos proclaimed a constitution on January 23, 1899, and elected Aguinaldo president of the Philippine Republic. The fighting with American troops began on February 4, and from November 1899 his forces fought as guerrillas.

The trick. General Frederick Funston captured him at Palanan, in northern Luzon, on March 23, 1901. Macabebe scouts, Filipinos who served the United States Army, dressed as rebel soldiers, and Funston and a few other American officers went along, pretending to be their prisoners. Fake letters sent ahead to Aguinaldo said that more of his own soldiers were coming and were bringing American prisoners to him. At Palanan the scouts opened fire on his guards, killed two and seized him.

> Aguinaldo swore loyalty to the United States. On April 19, 1901, he called on his fighters to lay down their weapons and accept American rule. He lived until 1964 and saw the Philippines become independent in 1946.

Samoa divided, 1899

Diplomats divided the Samoan islands between the United States and Germany on December 2, 1899, in an agreement called the Tripartite Convention, from a word meaning three-sided. The three sides that signed it were the United States, Germany and Great Britain.

By signing it, the German and British ambassadors gave up their countries' claims to Tutuila and every other Samoan island east of a north-south map line, 171 degrees west. John Hay, the American secretary of state, gave up American claims to Upolu, Savaiʻi and the other islands west of that line, leaving them to Germany.

The chiefs' papers. The chiefs of the island of Tutuila signed a paper handing their island to the United States on April 17, 1900. Tui Manuʻa Elisala, the ruler of the Manuʻa islands, signed his islands over on July 16, 1904.

BY 1900

If you remember one thing: In the second half of the 1800s American leaders took lands across two oceans, and most of the people who lived in them were never asked.

One question this era leaves open: Were the people of Puerto Rico, Guam and the Philippines now American citizens, with all the rights in the Constitution? The next era answers it.

Next: After 1900 American officials ruled the new islands, and the judges of the Supreme Court decided how much of the Constitution reached the people there.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 17 MINUTES

Puerto Rico "belongs to, but is not a part of, the United States," the judges of the Supreme Court ruled in 1901. In a set of cases between 1901 and 1922 they held the same for the other islands taken in 1898, and the people living there did not get the whole Constitution. American troops finished a war in the Philippines and occupied Haiti, the Dominican Republic and Nicaragua.

Workers, most of them from islands in the Caribbean, built the Panama Canal for the United States, on a strip of land that American officials held forever under a treaty. Americans fought in two world wars. After the first, senators refused to join the League of Nations that President Woodrow Wilson had proposed, and after the second, American leaders helped found the United Nations and the NATO military alliance.

Finishing the war in the Philippines, 1900 to 1902

American soldiers in the Philippines tortured Filipino prisoners and killed civilians. Chapter 22, War and the Military, tells what they did at Igbaras and on Samar in full. Here is what happened in Washington, and to the officers who gave the orders.

Igbaras and Samar. At Igbaras, on November 27, 1900, Captain Edwin F. Glenn, an Army lawyer, and a doctor working for the Army directed the water cure of the town's mayor, Tobeniano Ealdama, until Ealdama said he was a captain among the Filipino fighters. That night Glenn had the town burned. On Samar, townspeople and Filipino fighters at Balangiga killed about 48 American soldiers on September 28, 1901, the Army's worst loss in a single fight since the Little Bighorn. General Jacob H. Smith then ordered, "I want no prisoners. I wish you to kill and burn."

DISPUTED: Counts of the people American troops killed on Samar are far apart. Most estimates fall between 2,000 and 2,500, and a British researcher, Bob Couttie, who studied it for ten years, put it at about 2,500. An American soldier who was there said 39, and other counts reach 5,000. An old figure of 50,000 is now traced to misread documents.

What happened to the officers

The torture came out in the Senate. Senator George Frisbie Hoar asked for an investigation, and Senator Henry Cabot Lodge kept it inside his own Committee on the Philippines. On April 14, 1902, Charles S. Riley, a former sergeant, told the committee what he had seen at Igbaras.

Glenn. Secretary of War Elihu Root ordered Glenn court-martialed, tried in a military court. Army officials moved the trial from San Francisco to Catbalogan, in the Philippines, far from the witnesses. The officers on the court found Glenn guilty, suspended him for one month and fined him fifty dollars. Ealdama, the mayor he had tortured, was then serving a prison sentence as a "war traitor."

Waller and Smith. On Samar, Marine Major Littleton Waller had eleven Filipino guides and carriers shot without a trial. He told his court-martial that he had followed Smith's orders, and the officers on the court found him not guilty.

Officers at another court-martial found Smith guilty of "conduct to the prejudice of good order and military discipline," behaving in a way that harmed order and discipline in the armed forces. They asked only that he be formally scolded. President Theodore Roosevelt went further and forced Smith to retire, two years before he was due to leave the Army. Smith was not sent to prison.

Roosevelt's letter. In a private letter, Roosevelt called the water cure "the old Filipino method of mild torture" and wrote that "nobody was seriously damaged." In the same letter he also wrote, "torture is not a thing that we can tolerate."

Roosevelt declared the war over on July 4, 1902. American troops kept fighting in the Moro provinces of the southern Philippines until 1913.

The Insular Cases, 1901 to 1922

The justices, the judges of the Supreme Court, decided between 1901 and 1922 that the islands taken in 1898 belonged to the United States but were not fully part of it. Their decisions are called the Insular Cases, from a word meaning having to do with islands.

The justices decided *Downes v. Bidwell* on May 27, 1901, holding that Puerto Rico "belongs to, but is not a part of, the United States." From these cases came the idea of the "unincorporated territory," a place the United States owns and rules, where the people do not get the whole Constitution unless Congress chooses to give it to them.

A trial by jury. In *Balzac v. Porto Rico* in 1922, the justices held that Puerto Ricans had no constitutional right to a trial by jury at home. By then Puerto Ricans were American citizens.

The justices who decided these cases believed the people of the islands were not fit for full constitutional government. In 2022 Justice Neil Gorsuch wrote that the Insular Cases "have no foundation in the Constitution and rest instead on racial stereotypes," and he added, "They deserve no place in our law."

The justices of the Supreme Court have never overturned them. In 2026 they are still the law for the people of Puerto Rico, Guam, the U.S. Virgin Islands, American Samoa and the Northern Mariana Islands.

Who became a citizen, and when

Members of Congress decided, island by island, whether the people of each territory would be American citizens. The answers came at different times. People born in American Samoa are still not citizens at birth.

Puerto Rico. Members of Congress set up a government for Puerto Rico under the Foraker Act, signed on April 12, 1900. The law identified the island's people as "citizens of Porto Rico," under the protection of the United States but not citizens of it. President Wilson signed the Jones-Shafroth Act on March 2, 1917, and under it Puerto Ricans became American citizens. Their citizenship came from a law passed by Congress, not from the Constitution, and it did not come with a vote for president.

One month later Americans entered the First World War. Two months after that, Wilson signed the law for the draft, which required young men to serve in the military. Accounts disagree on how many Puerto Ricans were drafted: the figure usually given is about 18,000, and History.com gives 20,000.

Hawaii and the Virgin Islands. Hawaii's territorial government was set up under the Hawaiian Organic Act, signed on April 30, 1900. Under the same law, the people who had been citizens of the Republic of Hawaii in August 1898 became American citizens. Danish officials agreed in a treaty signed on August 4, 1916, to sell the Danish West Indies to the United States for $25 million in gold. The islands changed hands on March 31, 1917, and became the U.S. Virgin Islands, but members of Congress did not make their people American citizens until 1927.

Guam. Officers of the United States Navy governed Guam from 1899. Its people did not become citizens until President Harry Truman signed the Organic Act of Guam on August 1, 1950, fifty-two years after Navy officers took the island. Under the act, Guam got a government run by civilians and stayed an unincorporated territory.

American Samoa. Members of Congress did not approve the Samoan chiefs' deeds of 1900 and 1904 until 1929, and Navy officers governed American Samoa until 1951. Under federal law its people are still American nationals,

people who can live in the United States and carry an American passport but are not citizens. American Samoa is the only territory with people living on it where they do not become citizens at birth.

The Philippines. Under laws members of Congress passed in 1902 and 1916, American officials ran a colonial government in the Philippines, with a promise of independence someday. Under the Tydings-McDuffie Act, signed on March 24, 1934, the Philippines would become independent on July 4, 1946, after ten years of self-rule. In the same act, members of Congress put Filipinos in a different group under immigration law, so far fewer could move to the United States. The Philippines became independent on July 4, 1946.

Filipinos served in the American armed forces in the Second World War, at the call of the United States. Members of Congress then passed the Rescission Act in 1946, which stated that their service "shall not be deemed," or counted, "to have been active military, naval, or air service" for most veterans' benefits. Under it, they could not get benefits that other veterans of the same war received.

The Frenchman who signed for Panama, 1903 to 1914

American officials backed Panama's break from Colombia in 1903. President Theodore Roosevelt sent American warships to Panama, and Panama's leaders declared independence on November 3. They at once named Philippe-Jean Bunau-Varilla, a French engineer who had worked on France's failed attempt to dig a canal there, to bargain for them in Washington.

Bunau-Varilla signed the Hay-Bunau-Varilla Treaty for Panama on November 18, 1903, and no Panamanian signed it. Under the treaty American officials got a strip of land 10 miles wide across Panama, forever. Panama got $10,000,000 at once and $250,000 a year, starting nine years later.

The cost in lives. The canal opened on August 15, 1914. The official count of the dead during the American building of the canal is 5,609, out of about 56,000 workers, about one worker in ten. Most of the workers came from Barbados, Jamaica and other islands of the Caribbean. The historian Caroline Lieffers, writing for The Conversation, says many historians think the real number was several times higher.

Marines in Haiti, the Dominican Republic and Nicaragua

American presidents sent the Marines to occupy three nearby countries, holding them with troops and controlling their governments, for years at a time.

Haiti. American Marines took $500,000 from Haiti's national bank in December 1914 and moved it to New York. Haitian President Jean Vilbrun Guillaume Sam was killed in July 1915, and the State Department's historians do not name who killed him. President Woodrow Wilson then sent the Marines into Haiti, and they stayed for nineteen years, until 1934.

Under a treaty of 1915, American officials took full control of Haiti's money and set up a Haitian police force, the Gendarmerie, commanded by Marines. They forced the election of Philippe Sudré Dartiguenave as Haiti's president in August 1915.

American officials wanted a new Haitian constitution that let foreigners own land in Haiti. When Haiti's lawmakers resisted it, American officials forced President Dartiguenave to send the lawmakers home, and they did not meet again until 1929. The new constitution, written under American direction, went to a public vote on June 12, 1918. The official count recorded it as approved by 99 percent of the votes, with fewer than 5 percent of Haitians voting.

Marines and the Gendarmerie brought back the corvée, a system of forced labor, and made Haitians build roads without pay.

The killing. Haitian fighters called cacos rose against the occupation. The Marines and the Gendarmerie killed more than 2,000 cacos, by estimates in a report by the Congressional Research Service, and American forces lost 10 killed and 26 wounded. The report gives no count of other Haitians killed.

General George Barnett, a former head of the Marine Corps, spoke in October 1920 to a navy court of inquiry, a panel of officers looking into what Marines had done in Haiti. He said the Marines had recorded 2,250 Haitians killed from 1915 to 1920, 1,861 of them in 1919.

Marines fired on about 1,500 protesters at Les Cayes on December 6, 1929, and killed at least 12 Haitians. President Franklin D. Roosevelt pulled the Marines out in 1934.

Charlemagne Péralte. Péralte, born in 1885 or 1886 by different accounts, led the armed resistance from 1917, and Marine officers ordered their men to "get Charlemagne." Sergeant Herman H. Hanneken went into Péralte's camp in disguise and shot him dead near Sainte-Suzanne on November 1, 1919. The Marines photographed the body and passed the picture around.

The Dominican Republic. Marines landed in the Dominican Republic in May 1916, and American officers declared a military government that November. From 1917 to 1921 they fought guerrillas in the east, called gavilleros. The Library of Congress's country study describes the Americans' methods as "often brutal" but gives no count of the Dominicans killed. Dominicans took back control when President Horacio Vásquez took office on July 13, 1924.

Nicaragua. American officials encouraged a revolt against President José Santos Zelaya in 1909, and Marines landed at Bluefields. Marines came again in 1912 to support President Adolfo Díaz, and a guard of 100 Marines stayed at the American embassy until 1925. About 2,000 more Marines arrived in 1927.

Augusto César Sandino fought them for as long as they stayed. The Marines trained a Nicaraguan National Guard and left in January 1933, with Anastasio Somoza García in command of the Guard.

Somoza and other high officers agreed in 1934 to kill Sandino. On February 23, 1934, Sandino came to what looked like a peace meeting, and National Guardsmen seized him and murdered him. Somoza became president on January 1, 1937, and ruled for about twenty years.

NOT KNOWN: No reliable count exists of the Nicaraguans killed in the fighting with the Marines.

Woodrow Wilson

Who: The president who proposed the League of Nations and sent the Marines into Haiti.

When and where: Washington, D.C., 1915 to 1920.

Senators voted twice against the League of Nations Wilson proposed.

Wilson was president when Americans entered the First World War on April 6, 1917. He set out his terms for peace, called the Fourteen Points, on January 8, 1918. One of them was a League of Nations, a group of countries that would settle quarrels by talking instead of fighting. Senators voted against the peace treaty and the League in November 1919 and again in March 1920, and the United States never joined it.

Wilson also sent the Marines into Haiti in 1915, and they stayed until 1934. In 1917 he signed both the law that made Puerto Ricans American citizens and the draft law that followed it.

BY 1935: The Marines had left Nicaragua and Haiti, and members of Congress had promised the Philippines independence on July 4, 1946. Puerto Ricans had been American citizens since 1917, but they could not vote for president.

Puerto Rico under an appointed governor, 1937

Police in Puerto Rico shot marchers at Ponce in 1937, under Governor Blanton Winship, and the same year officials began using public money to sterilize Puerto Rican women, which means operating on them so they could never become pregnant again. Winship was an American general whom the President of the United States appointed to govern the island. Puerto Ricans did not elect him.

Ponce. Members of the Nationalist Party marched in Ponce on Palm Sunday, March 21, 1937. They marked the end of slavery in Puerto Rico and protested the jailing of their leader, Pedro Albizu Campos. The Insular Police, who were under Winship's direct military command, opened fire on the marchers.

Accounts give the dead as between 19 and 21 and the wounded as between about 150 and 235. A human rights commission that looked into it found that police had shot all the dead. The killings are known as the Ponce Massacre.

Law 116. Law 116 took effect the same year, under Winship. Under it, officials set up a Eugenics Board, and public money paid for sterilizations. The board took its name from eugenics, a set of beliefs, now rejected, that some groups of people should be kept from having children.

In Puerto Rico the usual method of sterilization was tubal ligation, which Puerto Ricans called *la operación*. In it a doctor cut or tied the two tubes that carry eggs from the ovaries to the womb. Some women instead had a hysterectomy, in which a surgeon removed the womb.

Forced and pressured. Members of the Eugenics Board forced 97 sterilizations from 1937 until the law was repealed in 1960. Many thousands more women had the operation under pressure. Some women were told, falsely, that the operation could be undone. Others were told that they would not be hired unless they were sterilized, and employers did favor hiring sterilized women. The accounts do not name who told them these things. Hospital staff turned away some pregnant women unless they agreed to be sterilized after giving birth.

Clarence Gamble, an heir to the Procter and Gamble fortune who believed in eugenics, set up clinics on the island. By 1968 about one Puerto Rican woman in three of childbearing age had been sterilized, and a 1982 study found 41 percent of married women in Puerto Rico sterilized.

The record on consent is mixed. Some women chose the operation because it was the only birth control offered to them. The doctor Helen Rodríguez-Trías said, "Women make choices based on alternatives, and there haven't been many alternatives in Puerto Rico."

Pedro Albizu Campos

Who: A United States Army officer in the First World War who became the leader of the movement for Puerto Rican independence.
When and where: Born in Ponce, Puerto Rico, on September 12, 1891.

Albizu Campos could be drafted but could not vote for president.

Under the 1917 law he was an American citizen, so officials could draft him into the army, but no one living in Puerto Rico could vote for president. He was also the first Puerto Rican to graduate from Harvard Law School.

In the First World War he served in the United States Army and rose to second lieutenant. Army officers assigned him to the 375th Infantry Regiment, which was all Black, because Army leaders kept Black and white soldiers in separate units, a practice called segregation. The segregation he met there shaped his politics.

He became president of the Puerto Rican Nationalist Party, whose members wanted independence from the United States, in 1930. He was later convicted of sedition, the crime of urging people to rise against the government, and sent to prison. Nationalists marched in Ponce in 1937 partly to protest his imprisonment, and police shot them.

The ship American officials turned away, 1939

American officials refused to let a ship full of Jewish refugees land in 1939. The *St. Louis* sailed from Hamburg, in Germany, on May 13, 1939, with 937 passengers, almost all of them Jews escaping Nazi Germany.

Cuban officials let 28 of them land, and American and Canadian officials refused the rest. The ship carried them back to Europe, where officials in Great Britain let in 288 of them, in the Netherlands 181, in Belgium 214 and in France 224.

Nazis later killed 254 of the passengers in the Holocaust, their mass murder of the Jews of Europe, according to the United States Holocaust Memorial Museum.

Guam under Japanese occupation, 1941 to 1944

The people of Guam lived through two and a half years of Japanese occupation as people of the United States who were not American citizens. Japanese forces invaded Guam on December 8, 1941, hours after the attack on Pearl Harbor. Japanese soldiers beat CHamoru people, forced them to work without pay and put some of them to death.

Japanese officers had put every able-bodied man into a labor battalion, working without pay, by the spring of 1944. In the last weeks, Japanese troops force-marched the people to concentration camps, where soldiers held civilians under guard. The largest camp was at Manenggon. American forces landed on July 21, 1944, and people on Guam mark that day as Liberation Day.

The United Nations, the Marshall Plan and NATO, 1945 to 1949

After the Second World War, American leaders helped build the kind of world organization that senators had refused in 1920. Delegates from many countries signed the United Nations Charter in San Francisco on June 26, 1945, and it took effect on October 24, 1945.

The Marshall Plan and NATO. Members of Congress passed the law for the Marshall Plan in March 1948, under which American officials sent money to rebuild Western Europe after the war. The money eventually rose to more than $12 billion. Diplomats of twelve countries signed the treaty that created NATO, the North Atlantic Treaty Organization, a military alliance, on April 4, 1949. The State Department's historians call it "the first peacetime military alliance the United States entered into outside of the Western Hemisphere."

BY 1950

If you remember one thing: In these fifty years American officials ruled islands whose people did not get the whole Constitution, and American troops held three nearby countries for years at a time.

- 1915: President Wilson sends the Marines into Haiti. They stay nineteen years.
- 1917: Puerto Ricans become American citizens by a law of Congress, without a vote for president.
- 1950: The people of Guam become citizens, fifty-two years after Navy officers took the island.

Next: Two territories became states after 1950, and American presidents sent aid, weapons and troops abroad with one rival in mind, the Soviet Union.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 12 MINUTES

Three elected governments, in Iran, Guatemala and Chile, were overthrown with secret American help in these years. For forty years after 1950, American presidents chose where aid, weapons and troops went with one rival in mind, the Soviet Union. That rivalry is called the Cold War, and American troops fought in Korea and Vietnam as part of it.

The territories. Alaska and Hawaii became states, and Puerto Rico got a new name but stayed a territory. On Pacific islands that American officials governed for the United Nations, with a duty to look after the people, they set off nuclear bombs.

What was the Cold War?

The Cold War was a long rivalry between the United States and its allies on one side and the Soviet Union and its allies on the other. The Soviet Union was a large country ruled from Moscow, in Russia, from 1922 to 1991. It was a communist country, which meant that one party ruled it and the government owned the businesses. From 1947 on, American leaders' plan, which they called containment, was to block the spread of Soviet power wherever they saw a risk of it growing.

The end. The Berlin Wall, which had divided the city of Berlin, was opened on November 9, 1989. The Soviet Union broke apart on December 26, 1991, and the Cold War was over.

The Cuban Missile Crisis, October 1962

American and Soviet leaders came closer to nuclear war in October 1962 than at any other time. Soviet leader Nikita Khrushchev and Cuban leader Fidel Castro had secretly agreed in July 1962 to put Soviet nuclear missiles in Cuba. Before that, a force backed by the United States had tried and failed to overthrow Castro in the Bay of Pigs invasion.

The pictures. An American U-2 spy plane took pictures of missile sites being built in Cuba on October 14, 1962. On October 22 President John F. Kennedy ordered American warships to stop ships carrying weapons to Cuba. He called it a quarantine, and he told the country about it on television. American forces went on alert for war, and on October 27 a U-2 was shot down over Cuba.

A secret promise. Kennedy then offered to promise not to attack Cuba if the missiles were removed. His brother Robert Kennedy secretly told the Soviet ambassador, Anatoly Dobrynin, that American missiles in Turkey would also be taken out, though not as part of any public deal. Khrushchev announced on October 28 that the Soviet missiles would leave Cuba, and the American Jupiter missiles left Turkey in April 1963.

The Peace Corps, 1961

President Kennedy created the Peace Corps, a program for American volunteers to serve in other countries, by an order he signed on March 1, 1961. Sargent Shriver was its first director, and the first volunteers went to Ghana, in Africa, that same year.

Lillian Carter

Who: A nurse from Plains, Georgia, who joined the Peace Corps at 68. Mother of President Jimmy Carter.

When and where: India, 1966 to 1968.

Movie: *Miss Lillian: More Than a President's Mother* (2021), a documentary film about her directed by Vivian Winther.

She joined the Peace Corps at 68 and turned 70 in India.

Lillian Carter, a nurse, worked in India for the Peace Corps from 1966 to 1968. She told the recruiter she wanted to go "where it's warm, people have dark skins and need a nurse's service."

She was sent to the Godrej Colony, about 30 miles from Mumbai. After she came home, her son Jimmy Carter became president. She died in 1983, and in 1986 Peace Corps officials created the Lillian Carter Award for volunteers who serve at the age of 50 or older.

Governments overthrown with American help

American officials secretly helped overthrow elected governments in Iran, Guatemala and Chile, in coups, sudden takeovers of a government by a small group, often the army.

Iran, 1953. Prime Minister Mohammad Mosaddegh had taken control of Iran's oil industry away from British companies. In June 1953 President Dwight Eisenhower approved a secret American and British plan to overthrow him. Officers of the Central Intelligence Agency, or CIA, the American government's spy service, carried it out. The CIA's director, Allen Dulles, oversaw the planning, and Kermit Roosevelt, a CIA officer, ran the plan in Iran. CIA officers paid journalists, religious leaders and politicians to attack Mosaddegh as corrupt and power-hungry.

General Fazlollah Zahedi replaced Mosaddegh on August 19, 1953, and the Shah, Iran's king, took back power. The Shah had Mosaddegh convicted of treason. Mosaddegh served three years in prison and lived the rest of his life under house arrest, and officials of the Shah's government put to death one of his advisers and more than a dozen military officers and student leaders on his side. In 2013 CIA officials released the agency's own history, which states that the agency "planned and helped implement the coup."

Guatemala, 1954. President Jacobo Árbenz began a land reform, a plan to share out farmland, with a law called Decree 900 on June 27, 1952. Under it his officials took land from owners and gave about 1.5 million acres to about 100,000 families, and the owners were paid more than $8 million in all. The United Fruit Company was one of the landowners. Árbenz's officials offered United Fruit $2.99 an acre for its land, and State Department officials demanded $75 an acre.

Eisenhower approved a CIA operation to overthrow Árbenz in August 1953. CIA officers ran what they called "psychological warfare and political action" against Árbenz's government, using fear, rumors and false stories to turn people against their leaders. The officers also drew up lists of Guatemalan officials to be killed, and one list had 58 names.

A force under Carlos Castillo Armas invaded from Honduras on June 18, 1954, after planes had harassed the capital, and on June 27 Árbenz resigned. Castillo Armas became president, and his officials gave the land back to the companies and broke up the labor unions. Human rights groups estimate that between 1954 and 1990, the forces of Guatemala's military governments murdered more than 100,000 civilians.

Chile, 1970 to 1973. Salvador Allende was elected president of Chile in September 1970. On September 15, President Richard Nixon met CIA Director Richard Helms and ordered him to stop Allende. Helms wrote down Nixon's words in his notes, among them "make the economy scream" and "$10,000,000 available, more if necessary."

CIA officers then ran a plan they called Track II, whose stated aim was "a firm and continuing policy that Allende be overthrown by a coup." They gave weapons to men who planned to kidnap the head of Chile's army, General René Schneider. A different group of plotters killed Schneider on October 22, 1970.

General Augusto Pinochet led the army coup that overthrew Allende on September 11, 1973. An American military attaché, an officer posted to the American embassy, called the coup "close to perfect." Pinochet ruled Chile until 1990.

Chile's official commissions count 3,216 people whom Pinochet's forces killed or "disappeared" between 1973 and 1990. The disappeared were people his forces took who were never seen again. The commissions also count 38,254 people who survived political imprisonment, torture or both.

Two new states and a ballot with two answers, 1959

Alaska became the 49th state on January 3, 1959, and Hawaii became the 50th on August 21, 1959. Hawaii's voters could only say Yes or No to becoming a state right away. Their ballot of June 27, 1959, asked: "Shall Hawaii immediately be admitted into the Union as a State?"

Not on the ballot. Independence was not one of the choices. Members of the United Nations General Assembly had passed Resolution 742 in 1953, which stated that votes like this one should offer a free choice among several futures, including independence. A large majority of Hawaii's voters chose statehood. Hawaii and Alaska were then taken off the United Nations list of territories that did not govern themselves.

Puerto Rico: a new name, and armed revolt, 1950 to 1954

Puerto Ricans got the right to write their own constitution in 1950, but the island stayed a territory under the Insular Cases. Members of Congress passed Public Law 600 that year, and Puerto Rico's voters approved the law in 1951 and the constitution in 1952.

A new name. Governor Luis Muñoz Marín proclaimed the Commonwealth, the *Estado Libre Asociado*, on July 25, 1952, the anniversary of the American landing at Guánica in 1898. Under that new name, the island was still a territory of the United States. Members of the United Nations General Assembly voted on November 27, 1953, to take Puerto Rico off the list of territories that did not govern themselves, and American officials then stopped sending the United Nations reports about the island.

The revolt of 1950. Some Puerto Ricans fought the new arrangement with guns. Nationalists rose up in several towns on October 30, 1950, and *Time* magazine reported that about 70 of them took Jayuya and killed four policemen there. Soldiers and pilots of the Puerto Rico National Guard, under Major General Luis R. Esteves, attacked the towns of Jayuya and Utuado with P-47 Thunderbolt warplanes, artillery, mortars and grenades. Pilots in American military aircraft fired on and bombed towns full of American citizens.

Governor Muñoz Marín counted 31 Puerto Ricans dead across the island in the revolt, *Time* reported. *Time*'s report does not state how many people the Guard killed in Jayuya and Utuado.

Blair House. Two Nationalists, Griselio Torresola and Oscar Collazo, attacked Blair House in Washington, where President Harry Truman was living, on November 1, 1950. Torresola shot a White House guard, Leslie Coffelt, three times. Coffelt was dying, but he got up and shot Torresola dead, and then Coffelt died of his wounds. Collazo was sentenced to death, and in 1952 Truman changed the sentence to life in prison.

The House, 1954. Four Puerto Rican Nationalists went into the visitors' gallery of the House of Representatives on March 1, 1954: Lolita Lebrón, Rafael Cancel Miranda, Andrés Figueroa Cordero and Irvin Flores Rodríguez. They unrolled a Puerto Rican flag and fired down onto the floor, wounding five members of the House, and all five recovered. All four Nationalists were convicted and sent to prison.

The Pacific: a trust, nuclear tests and one vote to join

After the Second World War, members of the United Nations placed more than 2,000 Pacific islands under American rule: the Marianas, the Carolines and the Marshalls. American officials governed them for the United Nations from 1947 to 1986, with a duty to look after the people. The arrangement was called the Trust Territory of the Pacific Islands.

American officials set off 67 nuclear tests between 1946 and 1958 at Bikini and Enewetak, two atolls, rings of small coral islands around a lagoon, in the Marshall Islands. They moved the people off those atolls before the tests.

Castle Bravo. The largest test was Castle Bravo, on March 1, 1954. It was two and a half times as powerful as its planners expected, and its fallout, the radioactive dust from the blast, came down on islands where people lived. All 64 people on Rongelap, about 110 miles away, took in radiation from it. American officials moved the people of Rongelap and Utirik away about three days after the blast, and Rongelap could no longer be lived on. Chapter 22, War and the Military, tells what the fallout did to them and to a Japanese fishing crew.

The study. Officials of the Atomic Energy Commission, the government agency in charge of nuclear weapons, then ran a study of the exposed people, called Project 4.1. The people in the study lived on islands that the United States governed for the United Nations, with a duty to look after them. Radioactive iodine from fallout collects in the thyroid, a gland in the neck, and in later years thyroid disease, including thyroid cancer, was the most common lasting harm among the people exposed.

One vote to join. The people of the Northern Mariana Islands voted to join the United States. Of today's five territories with people living in them, it is the only one whose people voted to come in. A Covenant, a formal agreement, between the islands and the United States was signed on February 15, 1975, and 78.8 percent of the people who voted approved it on June 17, 1975. The Commonwealth of the Northern Mariana Islands began in 1978, and its people became American citizens in 1986.

The Marshall Islands and the Federated States of Micronesia became independent countries in 1986, tied to the United States by agreements called Compacts of Free Association. Palau's compact took effect in 1994.

The capital, the canal and an apology

The capital. Washington, D.C. is not a state either. Until 1961 the people living there could not vote for president at all, just as the people of the territories still cannot. That year lawmakers in enough states ratified, or approved, the Twenty-third Amendment to the Constitution, and it took effect on March 29, 1961.

The city got back a delegate in the House in 1971, one who can speak there but cannot vote on bills. Under the Home Rule Act of 1973, its people elected their own mayor from 1975. Members of Congress passed an amendment in 1978 to give the city full seats in Congress, but lawmakers in too few states approved it, and it ran out of time in 1985.

The canal. American and Panamanian leaders signed the Torrijos-Carter Treaties on September 7, 1977. Under them, American officials handed the Panama Canal to Panama on December 31, 1999.

An apology. Members of Congress passed, and President Bill Clinton signed, the Apology Resolution, Public Law 103-150, in 1993. It is about the overthrow of the Kingdom of Hawaii a hundred years earlier. On January 17, 1893, a group of mostly American businessmen had overthrown Queen Lili‘uokalani, and John L. Stevens, the top American diplomat in Hawaii, had landed 162 American sailors and Marines to back them.

The resolution states that Stevens "conspired," or plotted in secret, with "a small group of non-Hawaiian residents of the Kingdom of Hawaii, including citizens of the United States." It names the men who took power as a Committee of Safety that "represented the American and European sugar planters, descendents of missionaries, and financiers."

The resolution states that the overthrow was illegal. In it, members of Congress apologized to Native Hawaiians "on behalf of the people of the United States" for the overthrow, carried out "with the participation of agents and citizens of the United States." It also states that the Native Hawaiian

people never directly gave up their claims to sovereignty, the right to govern themselves. Its last section states that it does not settle any claims against the United States.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 8 MINUTES

More than 3.6 million people live in the five American territories with people on them, and none of them can vote for president while living at home. They still live under the Insular Cases. Since 2001 American leaders have sent troops to wars in Afghanistan, Iraq and, in 2026, Iran, and they have argued over trade and over the Paris agreement on climate.

September 11, 2001, and the wars after it

Nineteen hijackers attacked the United States on September 11, 2001, and killed 2,977 people, not counting the hijackers. The next day, representatives of NATO's member countries called on Article 5 of their treaty, the promise that an attack on one member is an attack on all of them, for the first and only time.

American forces went into Afghanistan on October 7, 2001, and the last American troops left on August 30, 2021. American forces invaded Iraq on March 20, 2003. American leaders said Iraq had weapons of mass destruction, meaning nuclear, chemical or biological weapons. None were found.

The dead. Chapter 22, War and the Military, gives the counts of the people killed in these wars.

DISPUTED: For Iraq, counts built from deaths recorded one by one come out much lower than estimates built from surveys of households. Workers at Iraq Body Count, a group that records deaths one at a time, had counted more than 187,000 civilians killed from 2003 to 2024.

A survey published in the medical journal *The Lancet* in 2006 estimated about 600,000 violent deaths in Iraq in just the first three years of the war, and American and Iraqi officials disputed it at the time. A survey by the World Health Organization and Iraq's health ministry estimated about 151,000 violent deaths over the same three years.

Guantánamo. American officials began holding prisoners at the navy base at Guantánamo Bay, in Cuba, on January 11, 2002. Most of them were never tried in court. According to the journalist Andy Worthington, who tracks the prison, 779 men had been held there by January 2025, and 15 were still held.

Trade and the climate agreement

Members of the World Trade Organization, a group of countries that agree on rules for trade between them, approved China's entry on November 10, 2001, and China joined at the end of that year. A new agreement among the United States, Mexico and Canada took effect on July 1, 2020, according to the Office of the United States Trade Representative. It replaced the North American Free Trade Agreement, called NAFTA.

The United States has joined and left the Paris climate agreement twice. The governments that join it promise to cut the gases that are warming the earth. American presidents took the country out of it in November 2020 and brought it back in February 2021. President Donald Trump signed an order to leave again on January 20, 2025, and researchers at the Congressional Research Service, which studies issues for Congress, report that the United States was out of the agreement as of January 27, 2026.

Strikes at sea, Venezuela and Iran, 2025 and 2026

Strikes at sea. From September 2, 2025, American forces fired on boats in the Caribbean Sea and the eastern Pacific Ocean that President Trump's officials said were carrying drugs. By September 19, 2026, they had killed at least 231 people, the Associated Press reported. Chapter 22, War and the Military, tells the strikes in full, with the families who went to court over two of the dead.

Venezuela. American troops captured Venezuela's president, Nicolás Maduro, and his wife in Caracas, Venezuela's capital, on January 3, 2026, and took them to New York to face charges tied to drugs. According to the Brookings Institution, a research group, the raid went ahead without approval from Congress beforehand.

Iran. American and Israeli forces began a war with Iran by bombing it on February 28, 2026. Workers at the Human Rights Activists News Agency, a rights group that tracks Iran, counted 3,636 people killed in Iran by April 7, 2026, and 1,701 of them were civilians. Chapter 22 gives the count of American service members killed.

The territories today

The 2020 census, the government's count of everyone who lives in the country and its territories, recorded more than 3.6 million people in the five American territories with people on them. Census Bureau workers counted 3,285,874 people in Puerto Rico, 11.8 percent fewer than in 2010.

They counted 153,836 in Guam, about 87,146 in the U.S. Virgin Islands, 49,710 in American Samoa and 47,329 in the Northern Mariana Islands. Every one of the five lost people between 2010 and 2020.

Citizens and nationals. People born in Puerto Rico, Guam, the U.S. Virgin Islands and the Northern Mariana Islands are American citizens. People born in American Samoa are American nationals. Their passports say so, and to vote they must go through naturalization, the process a person from another country uses to become a citizen.

No one living in a territory can vote for president. Voters in each territory elect one delegate to the House of Representatives, who can speak and work on committees but cannot vote on whether a bill passes. Puerto Rico's delegate is called the Resident Commissioner.

La junta. Puerto Rico's government owed more than $72 billion by 2016, and more than $55 billion in pensions, the money its officials had promised to pay its workers after they retired. Puerto Rico's leaders had no legal way to change the terms of the debt. Members of Congress passed a law called PROMESA on June 30, 2016. Under it, a board of seven members, appointed in Washington, has power over Puerto Rico's budget, and Puerto Ricans call it *la junta*.

The people whose budget the board controls did not elect its members. By the board's own account, its members have changed the terms of about 80 percent of the debt, cutting it from more than $70 billion to about $37 billion.

President Trump fired several members of the board on August 5, 2025, and CBS News named five of them. Under PROMESA a president may remove a member "only for cause," which means for a real reason such as wrongdoing.

Three of the fired members, Arthur J. González, Andrew G. Biggs and Betty A. Rosa, went to court. Judge María Antongiorgi-Jordán of the federal court in Puerto Rico put them back on the board on October 3, 2025. In 2026 she made that order permanent and called the firings "plainly contrary to law," according to the Democracy Defenders Fund, a group that campaigns on political causes.

The status votes. Puerto Ricans have voted on their island's status several times, and members of Congress have not acted on any of the results. Statehood won 52.52 percent in 2020. On November 5, 2024, statehood won 58.61 percent, free association 29.57 percent and independence 11.82 percent, according to the island's certified results. Free association would make the island a separate country tied to the United States by a formal agreement, as the Marshall Islands are.

Some voters stayed away from these votes in protest. Members of Congress do not have to follow the results, and only Congress can change Puerto Rico's status.

Washington, D.C. The capital had about 690,000 people in the 2020 census, more than the state of Wyoming, which had 576,851, or Vermont. It has one delegate in the House who cannot vote on bills, and no senators. Members of the House of Representatives voted 216 to 208 to make it a state on April 22, 2021, but senators did not take up the bill.

John Fitisemanu

Who: A man born in American Samoa and living in Utah who sued to be counted an American citizen from birth.

When and where: Utah. His case was decided by a federal appeals court in 2021.

Fitisemanu sued for citizenship, and his home territory's leaders opposed him.

Because he was born in American Samoa, Fitisemanu is an American national, not a citizen, and a national must become a citizen before he can vote. He sued the United States to be recognized as a citizen by birth, and a federal judge in Utah agreed with him.

The appeal. In 2021 judges of a higher federal court, the Court of Appeals for the Tenth Circuit, overturned that decision, holding that the Insular Cases were still the law. On October 17, 2022, the justices of the Supreme Court refused to take his case.

American Samoa's own elected leaders opposed his lawsuit. They argued that citizenship ordered by a court could put at legal risk *fa'a Sāmoa*, the Samoan way of life, which includes land held in common by families and the matai system of chiefs. Fitisemanu wants to be a citizen. The leaders of his home territory did not want citizenship granted to Samoans that way.

José Luis Vaello Madero

Who: A man the United States government sued for $28,081 after he moved to Puerto Rico.

When and where: New York, then Puerto Rico. His case was decided by the Supreme Court on April 21, 2022.

Moving to Puerto Rico ended his right to a federal payment.

While Vaello Madero lived in New York, he lawfully received Supplemental Security Income, a federal payment for people with very low incomes who are elderly, blind or disabled. Members of Congress have not made that benefit available to people living in Puerto Rico. After he moved, the payments kept coming, and he did not know he was no longer allowed to get them. Lawyers for the United States government sued him to get back $28,081.

At the Supreme Court. His case reached the justices, and on April 21, 2022, they ruled 8 to 1 that the Constitution does not require Congress to pay that benefit to people in Puerto Rico. Justice Neil Gorsuch agreed with the result, but he also wrote a separate statement of his own, and in it he called for the Insular Cases to be overturned.

THE THREE QUESTIONS, ANSWERED

1. **Who got to choose when this land and its islands changed hands?** Almost never the people who lived there: no Native nation was at Paris in 1783, and no one from Puerto Rico, Guam or the Philippines was at Paris in 1898. Of today's five territories, only the Northern Mariana Islands voted to join, and Hawaii's voters chose statehood in 1959 from a ballot that left out independence.
2. **How did a weak new country come to rule islands and overthrow governments?** First it grew: by 1848 it reached the Pacific, and by 1900 its mills made more steel than Britain's and

Germany's together. Then its leaders used force. Marines helped overthrow Hawaii's queen in 1893, American leaders took Puerto Rico, Guam and the Philippines after a war with Spain in 1898, and after 1950 CIA officers secretly helped overthrow governments in Iran, Guatemala and Chile.

3. **Are the people of the territories American citizens?** Most are, but people born in American Samoa are nationals, not citizens, and no one living in a territory can vote for president.

What changed: The chapter begins with rulers dividing land they had never seen and ends with a country that began as colonies holding five island territories whose people cannot vote for president.

FIVE DATES TO KEEP

June 7, 1494: The rulers of Spain and Portugal split the lands across the Atlantic.

September 3, 1783: British diplomats accept American independence in Paris.

February 2, 1848: Mexican officials sign over the Southwest.

December 10, 1898: Spanish diplomats sign over Puerto Rico, Guam and the Philippines.

May 27, 1901: The justices rule that Puerto Rico belongs to the United States without being part of it.

NOT KNOWN: No one has worked out how many people died at Kake after the crew of the USS *Saginaw* burned the villages in 1869.

Where to go: ʻIolani Palace, in Honolulu, where Queen Liliʻuokalani was tried and held prisoner in 1895.

Next: Chapter 24, Slavery and Freedom. It asks how slavery was built here one law at a time, and what happened to the freedom enslaved people won in 1865.

PART 6

Freedom and Fairness

Chapter 24: Slavery and Freedom

CHAPTER 24 OF 37 · SLAVERY AND FREEDOM · 10 ERAS · ABOUT 110 MINUTES

Judges, lawmakers and traders built slavery here on purpose, one law and one sale at a time. Enslaved people fought it until it ended in 1865, then fought again when white lawmakers and mobs took much of their new freedom away.

In October 1865 a freed man named Thornton Copeland placed a few lines in the *Colored Tennessean*, a Black newspaper in Nashville. "INFORMATION is wanted of my mother," they began. Her name was Betty. He had last seen her in Fauquier County, Virginia, in 1844, the year he was sold in Richmond to a man named Samuel Copeland. His advertisement is now one of more than 5,000 like it that anyone can read online. No record shows whether he ever found her.

This chapter follows slavery from the captives of Native wars before 1500 to today's arguments over repair, meaning payments or other steps to make up for what slavery did. Watch for two things as you read.

First, watch who made each rule: the Virginia judges who sentenced John Punch to serve for life in 1640, the lawmakers who made a child's status follow the mother's in 1662, the traders who sold a million people south. Second, watch what enslaved people did back. They ran away, sued and learned to read in secret, and some rose up with weapons.

After 1877 the chapter follows the forced labor that replaced slavery and the vote taken from Black men. It also describes the court ruling and new laws of 1954 to 1965, under which federal officials began to enforce Black Americans' rights. Chapter 25 describes the campaigns people organized for those rights.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. How did a servant in Virginia become a slave for life, and a child a slave from birth?
2. How did enslaved people fight back?
3. What happened to the freedom people won in 1865?

Five minutes? Read "How did a servant become a slave for life?" in The 1600s, the Robert Smalls story in 1850 to 1900, and "The promises broken" in the same era.

Can skip: "The ships from Rhode Island", "Enslaved builders of the capital", "Slavery exhibits in the national parks, 2025 and 2026". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 1 MINUTE

Native nations took captives in war long before Europeans arrived, but in most of them a captive could become a member of a family.

Holding a person as property for life, and passing that status on to the person's children, is called chattel slavery, from chattel, an old word for property. Europeans later wrote chattel slavery into the laws of the colonies they set up here.

Captives who could become family

Warriors in some Native nations took captives in raids on their enemies. Among the Haudenosaunee, the nations also called the Iroquois, a family that had lost someone in war could adopt a captive to take the dead person's place. People call this custom the mourning war, and the records describe it more fully than any other kind of captive-taking. In most of these nations a captive could stop being a captive, and a captive's children did not automatically become captives too.

On the Northwest Coast, among the Tlingit, the Haida and the nations near them, slaves were property. Their owners traded them, and a slave's children were born slaves. Leland Donald studied this system in a 1997 book and found that it was slavery in the full sense of the word.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 3 MINUTES

The first people Europeans enslaved in what is now the United States were Native people. Spanish raiders took them captive on the coasts of Florida and the Carolinas from the early 1500s. Enslaved Africans came with the Spanish too. About 100 of them rebelled at a Spanish colony on the Atlantic coast in October 1526 and escaped. It is the first known revolt of enslaved Africans in what became the United States.

Spanish slavery and the first revolt

The encomienda. In their colonies, Spanish colonists ran a system called the encomienda. Under it they forced Native people to work for them and to hand over goods. King Charles I of Spain issued the New Laws on November 20, 1542. They said that no one could enslave Native people, and that an encomienda ended when its holder died. Spanish colonists opposed the New Laws and kept forcing Native people to work.

The first revolt. Lucas Vázquez de Ayllón founded a colony called San Miguel de Gualdape in 1526, on the coast of what is now Georgia or South Carolina. Nobody knows the exact spot. Between 600 and 700 colonists came with him, and about 100 of them were enslaved Africans. Ayllón died, and the colonists fought among themselves.

In October 1526 the enslaved Africans rose up and escaped. Where they went is not certain. The accounts say they most likely found shelter with Native people nearby, probably the Guale. Within months the surviving colonists gave up the colony.

St. Augustine. Pedro Menéndez de Avilés and about 800 Spanish colonists founded St. Augustine, in Florida, on September 8, 1565. They moved into the Timucua town of a chief named Seloy and made his council house their first fort. Africans were among St. Augustine's first residents, some free and some enslaved. They worked as craftsmen, farmers and house servants.

Spanish slave law came from an old code called the *Siete Partidas*. It listed rights for enslaved people that English colonial law later left out. Under it, owners were not to split up families. Enslaved people could join the Catholic Church and marry in it, and the code listed ways for them to become free.

Estevanico

Who: An enslaved man from Morocco who walked across the south of the continent after a shipwreck, then was killed while guiding a Spanish expedition into Zuni country.

When and where: Shipwrecked on the Texas coast in 1528. Reached Mexico City in 1536. Killed at the Zuni town of Hawikuh in 1539.

Shipwrecked in 1528, he walked to Mexico City as a healer.

Estevanico was born in about 1500 in Azemmour, in Morocco. In 1522 a Spanish nobleman named Andrés Dorantes de Carranza bought him. Six years later both men were on a Spanish expedition that was wrecked on the coast of Texas. Native people on that coast held the survivors, Estevanico among them, as slaves for several years.

In 1534 four of the survivors escaped: Estevanico, Dorantes, Álvar Núñez Cabeza de Vaca and Alonso del Castillo Maldonado. They walked west, working as healers along the way, and reached Mexico City in July 1536.

The Spanish official who ruled Mexico, Viceroy Antonio de Mendoza, then got Estevanico from Dorantes, either by buying him or as a gift. Some evidence suggests Mendoza freed him. On March 7, 1539, Estevanico set out as the guide for Marcos de Niza, a friar, a member of a Catholic religious order, who was heading north. Estevanico went ahead of the friar with Native men from Sonora.

The people of Hawikuh, a Zuni town, killed him there in 1539. The Spanish accounts give three different reasons. The commander Coronado wrote in 1540 that they killed him because he had "killed and assaulted their women." Pedro de Castañeda wrote that he had demanded turquoise and women. Hernando de Alarcón reported that he had boasted that armed men were coming behind him.

KNOWN:	The people of Hawikuh killed Estevanico in 1539.
NOT KNOWN:	why they did it. Zuni tradition does not agree with the Spanish accounts.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 9 MINUTES

English colonists made slavery part of their law step by step in the 1600s, one court case and one new law at a time. When about twenty Africans reached Virginia in 1619, Virginia's law had no category for a person held as property for life. Judges and elected lawmakers in Virginia, Massachusetts and Carolina created that category between 1640 and 1705. In 1662 Virginia's lawmakers ruled that a child born to an enslaved mother was enslaved for life, whoever the father was.

Ship crews fed the system from across the ocean. Over the whole Atlantic slave trade they loaded about 12.5 million captive Africans onto ships bound for the Americas. About 1.8 million of them died on the way, about one person in every seven.

Who landed at Point Comfort in 1619?

An English ship called the *White Lion* landed at Point Comfort, in Virginia, in late August 1619. It carried "20. and odd Negroes," in the words of the colonist John Rolfe, using Negro, the word English writers of the time used for Black Africans. The *White Lion* was a privateer, a privately owned armed ship that attacked the ships of enemy countries. Its crew had taken these Africans from a Portuguese slave ship.

The Africans came from the Ndongo and Kongo region of West Central Africa. The exact day they landed is disputed. The National Park Service says late August. Some writers give August 20, and the Hampton historian Beth Austin argues for about August 25.

Whose land it was. Point Comfort belonged to the Kecoughtan, one of the Powhatan nations, who lived where the city of Hampton stands today. Their language belonged to the Algonquian family, a large group of related Native languages. English colonists built a fort beside their main village in 1609.

Soon after Lord De La Warr arrived, on July 9, 1610, the colonists seized the village. They drew the people out with a man playing a tambourine and then attacked them. The records do not say how many Kecoughtan they killed. The

survivors fled to other towns of the Powhatan nations.

KNOWN:	In 1619 Virginia's law did not yet have a category for slaves.
NOT KNOWN:	whether the colonists held the Africans of 1619 as servants for a set number of years or as slaves for life. The records that survive do not settle it.

The Middle Passage

The Middle Passage was the crossing of the Atlantic Ocean that ship crews forced captive Africans to make. Over the whole history of the trade, crews loaded about 12.5 million Africans onto slave ships. About 10.7 million lived through the crossing, and about 1.8 million died at sea. These figures come from the SlaveVoyages database of slave-ship voyages.

The average voyage took just over two months, and the trip from Upper Guinea, in West Africa, about three weeks. Crews chained the captives below the deck, in spaces too low for a person to stand up. They held the women apart from the men and kept the men in chains for long periods so they could not revolt.

Crew members often raped the women and children, which means they forced them into sex. About one captive in four was a child.

People died of disease and of thirst, and some killed themselves. The crew threw the bodies of the dead into the sea. Historians at the College of Charleston report that 13 to 19 percent of the people on board died during a crossing.

Ship crews landed most of the captives who survived in the Caribbean and in Brazil. Fewer than 4 percent came to mainland North America. Crews brought about 305,000 people there straight from Africa. Counting those who came by way of the Caribbean, the total is close to 388,000.

One survivor's account

Olaudah Equiano wrote that slave traders carried him across the ocean on a slave ship when he was a child. He published his account in London in 1789, in a book called *The Interesting Narrative of the Life of Olaudah Equiano*. Two other records list his birthplace as Carolina. If they are right, he never made the crossing he describes.

In his account, the crew put Equiano below deck, and he was too sick to eat. Two white crewmen tied him across the windlass, the winch that pulled up the anchor chain, and flogged him for refusing food. Flogging means that a person is tied down and struck over and over on the bare body with a whip. Each stroke cuts the skin, and deep or repeated flogging leaves raised scars for life. Equiano wrote that captives were "hourly whipped for not eating."

He wrote that the hold was "so crowded that each had scarcely room to turn himself." The heat and the foul air made people sick, "of which many died." Children fell into the tubs the captives used as toilets and nearly smothered.

One day two men who were chained together broke through the netting around the deck and jumped into the sea. A third man followed them. The crew lowered a boat. The two chained men drowned. The crew pulled the third man out "and afterwards flogged him unmercifully."

The ship landed at Barbados, an island in the Caribbean, and from there traders sold him on to Virginia.

KNOWN:	Equiano's own book says he was born in Africa.
NOT KNOWN:	whether that is true. In 2005 the historian Vincent Carretta reported the two records, a 1759 baptism record in London and a 1773 Royal Navy crew list. The book and the records cannot both be right.

John Punch

Who: The first African known to have been sentenced by a Virginia court to serve for life.

When and where: Virginia. Sentenced on July 9, 1640.

Three servants ran away together. Only the African got life.

The three men were servants of a man named Hugh Gwyn. The court record calls them "Victor, a dutchman, the other a Scotchman called James Gregory, the third being a negro named John Punch." They ran away together toward Maryland and were caught.

The judges of the General Court of Virginia heard the case on July 9, 1640. They ordered that "the said three servants shall receive the punishment of whipping and to have thirty stripes apiece," thirty strokes of the whip each. Victor and James Gregory then had to finish their time with their master, serve him one more year, and serve the colony for three years after that.

For John Punch the judges wrote a different sentence. He "shall serve his said master or his assigns for the time of his natural Life here or elsewhere." His assigns meant anyone the master sold or handed him to. Punch was the only African among the three.

It is the first known sentence of lifetime slavery in Virginia.

How did a servant become a slave for life?

Judges and lawmakers made a separate rule for Africans, one case and one law at a time between 1640 and 1705. Under it, Africans could be held for life, and so could their children. In the early years of Virginia, many workers were indentured servants, bound by a contract to work for a master for a set number of years and then set free.

Massachusetts, 1641. Lawmakers in New England wrote slavery into law too. The lawmakers of the Massachusetts Bay colony, called the General Court, adopted a code of laws named the Body of Liberties on December 10, 1641. It allowed slavery for "lawful captives taken in just wars, and such strangers as willingly sell themselves or are sold to us."

That meant people captured in a war the colonists called fair could be held as slaves. So could outsiders who sold themselves or were sold to the colonists. The Massachusetts Bay lawmakers were the first in any English colony on the mainland to put slavery into a written law.

John Casor. Anthony Johnson, an African, had arrived in Virginia in about 1621, gained his freedom and become a landowner on the Eastern Shore. He claimed a Black man named John Casor as his servant for life. Casor said the time on his contract had run out and he was free, and he went to work for Johnson's white neighbor, Robert Parker. In 1654 Johnson took Parker to court in Northampton County to get Casor back.

The county judges ruled for Johnson on March 8, 1655. They ordered Casor back to Johnson as his servant for life, which made Casor Johnson's slave, and they made Parker pay the costs of the case. It was the first court ruling in the English mainland colonies that a person who had committed no crime could be held for life.

The child follows the mother. Virginia's House of Burgesses, the colony's elected assembly, passed a law about children in 1662. Under the old rule in English law, a child's place in the law, free or bound, came from the father.

Virginia's lawmakers broke with that on purpose. A child born to an enslaved mother was now enslaved for life, whoever the father was. Lawyers called the rule by a Latin phrase, *partus sequitur ventrem*, "the child follows the womb."

Baptism. Some colonists were unsure whether baptism, the ceremony that made a person a Christian, set an enslaved person free. Virginia's lawmakers, meeting as the General Assembly in September 1667, passed a law that said it did not. It stated that "the conferring of baptisme doth not alter the condition of the person as to his bondage or ffreedome."

The lawmakers gave their reason in the law itself. With that doubt gone, they wrote, masters would be more willing to let enslaved people be baptized.

The slave codes

Virginia's lawmakers gathered the colony's earlier slave laws into one slave code in 1705: a set of laws listing what enslaved people could not do, how they could be punished and what their owners could do to them. Under it, enslaved people counted as real estate, the same kind of property as land. The code said that baptism did not free anyone. A master who killed an enslaved person while "correcting" him, which meant punishing him, faced no penalty.

Carolina's codes. Carolina's lawmakers, who met as the colony's assembly, passed their first slave law in 1690. The Lords Proprietors, the English noblemen who owned the colony, struck that law down. The assembly's members passed a new code in 1696. They based both laws on the slave code that lawmakers in Barbados had written in 1661.

The 1690 Carolina law already allowed branding, nose-slitting and castration as punishments. Branding meant pressing a metal iron, heated red-hot, into the person's skin. The iron burned a mark, often a letter, that stayed on the body as a scar for life. Nose-slitting meant cutting the person's nose open.

Under the Barbados code, an enslaved person who hit a Christian a second time was to be whipped hard, have the nose slit and be burned on the face with a hot iron. Castration meant cutting off a man's testicles, which left him unable to father children.

These codes of the 1600s set rules for enslaved people's bodies and for who could be held for life. They said nothing about reading or writing. South Carolina's lawmakers passed the first law against teaching enslaved people to write in 1740.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 10 MINUTES

Enslaved people rose up in the North and in the South between 1700 and 1750, and after each revolt colonial lawmakers wrote harsher laws. Their slave codes ordered whipping, branding and cutting off ears. South Carolina planters grew rice to sell overseas, a crop that enslaved West Africans already knew how to grow. In 1739 about 20 enslaved men near Charleston took up arms and marched toward Spanish Florida, where the king of Spain had promised freedom to people who escaped from the English colonies.

English colonists enslaved Native people as well as Africans. Slavery was a Northern business too: in New York City in 1712, about one person in five was enslaved.

How many Native people did Carolina's traders enslave?

English traders in Carolina enslaved between 24,000 and 51,000 Native people of the Southeast from 1670 to 1715. That range comes from the historian Alan Gallay. The traders shipped many of the captives to the Caribbean. In those years they shipped more enslaved Native people out of Charleston than slave ships brought enslaved Africans in.

The ships from Rhode Island

Merchants in the northern colonies sent out slave ships too. Rhode Island merchants paid for about 1,000 slaving voyages, and about half of all the slave ships that left mainland North America sailed from Rhode Island ports. The historian Jay Coughtry counted 934 of these voyages, which carried about 106,000 Africans. In the 1700s, Rhode Island merchants controlled between 60 and 90 percent of the American trade in African captives.

The DeWolf family of Bristol, Rhode Island, sent out about twice as many slaving voyages as the families closest behind them. Bringing captives into the United States from abroad became illegal in 1808. George DeWolf kept sending out slave ships anyway, against the law, until 1825.

New York, 1711 and 1712

New York City had about 5,000 people in 1700, and at least 750 of them were enslaved. The city's aldermen, the men who governed the city, set up a market at the foot of Wall Street on November 30, 1711. There, enslaved people were sold, rented out and inspected by buyers. The market stood from 1711 to 1762. The accounts of the market do not name the men who bought and sold people there.

The fire on Maiden Lane. More than 20 enslaved people in New York City set fire to a building on Maiden Lane on April 6, 1712. Accounts describe most of them as Coromantee, Akan people from the Gold Coast of West Africa, which is Ghana today. When white people came to fight the fire, the rebels attacked them. They killed 8 or 9 white people and wounded 6 or 7. Six of the rebels killed themselves before they could be captured.

Governor Robert Hunter called out the militia, the colony's armed citizens. Officials arrested more than 70 Black people. They put 27 on trial, found 21 guilty and put all 21 to death.

One account says 20 were burned alive and one was broken on the wheel. Breaking on the wheel was a public execution: the person was tied to a large wheel, and the executioner broke the person's arms and legs with an iron bar and left the person to die. Other accounts say only that the punishments ran from burning alive to breaking on the wheel.

Afterward, the members of the colony's assembly made it illegal for enslaved people to gather in groups of more than three or to own guns.

Rice and the Lowcountry

The Lowcountry is the coast of South Carolina around Charleston. Rice planters there relied on the skill and the labor of West Africans from rice-growing parts of Africa, and they paid more for captives from those coasts. Rice shipped out of Carolina rose from about 268,602 pounds a year around 1700 to more than 30 million pounds a year around 1740, more than a hundred times as much. Charleston became the largest port on the mainland where slave ships landed their captives.

Sullivan's Island. Ships arriving at Charleston stopped first at Sullivan's Island, in the harbor. The island had a quarantine station, called the pest house, where captives who might carry disease were held apart from everyone else.

Many accounts say about 40 percent of all the enslaved Africans brought to mainland North America passed through the island itself. The Charleston historian Nic Butler and others say that figure is too high, because many ships landed elsewhere in the harbor. Their doubt is about the island's share only.

Whose land it was. The rice plantations stand on Native land. When English colonists settled Charleston in 1670, about fifteen Native groups lived in the Lowcountry, among them the Stono, the Kiawah, the Etiwan, the Edisto and the Combahee. By the middle 1700s these groups were nearly gone. Many of their people had died of disease or been killed in wars, and English colonists had taken their land.

The runaway law. South Carolina's assembly passed a law in June 1712 that listed punishments for any enslaved person who stayed away for twenty days or more. For a first escape, it ordered a public whipping of up to forty lashes, forty strokes of the whip. For a second escape, it ordered the person "branded with the letter R, on the right cheek." For a third, it ordered forty lashes and one ear cut off.

A man caught a fourth time was to be castrated. A woman caught a fourth time was to be whipped, branded with an R on the left cheek, and have her left ear cut off. The 1712 law does not name the people who carried out

these punishments.

For a fifth escape, the law let two justices of the peace, who were local judges, and three landowners decide. They could order the person killed. Or they could order the person's Achilles tendon, the cord just above the heel, cut through, so that the person could never run again. From 1723 on, South Carolina's lawmakers dropped these lists from their codes and left punishment to the enslaver.

A free town to run to

Florida belonged to Spain. In 1693 the king of Spain promised freedom to enslaved people who escaped from the English colonies and reached Florida, if they became Catholics. Men also had to serve in the militia.

Florida's governor, Manuel Montiano, set up a town for these free people in 1738, about two miles north of St. Augustine. Its Spanish name was Gracia Real de Santa Teresa de Mose, and people call it Fort Mose. It was the first free Black town in what is now the United States to be recognized by law. About 100 people lived there, in more than 20 households.

British forces surrounded St. Augustine and attacked it in 1740. Fort Mose was destroyed in the fighting, which people remember as the battle of Bloody Mose. The people rebuilt it in 1752. In 1763, when the Spanish left Florida, the people of Mose left with them for Cuba. The site is now Fort Mose Historic State Park.

Francisco Menéndez

Who: A man from West Africa who escaped slavery in Carolina and became captain of the free Black militia at Fort Mose.

When and where: Born in the Gambia region of Africa. Enslaved in Carolina. Led the militia at Fort Mose, Florida, from 1738.

He escaped slavery in Carolina and became a captain in Florida.

Francisco Menéndez was a Mandinga man, born in the Gambia region of West Africa. Slave traders carried him to Carolina, where he was enslaved.

He escaped south to Spanish Florida. There he was baptized as a Catholic and took the name Francisco Menéndez. From 1738 he led the militia at Mose, the armed men who defended the town of people who had escaped from the English colonies.

Spanish colonial records document his life. Of all the people who lived at Mose, he is the one the records describe most fully.

The Stono Rebellion, 1739

About 20 enslaved men rose up at the Stono River, south of Charleston, on September 9, 1739. It was the largest uprising of enslaved people in the mainland colonies before the American Revolution. A report written in 1739 describes them as Angolan and says "one who was called Jemmy was their Captain."

The rebels seized weapons and marched south toward Spanish Florida, and others joined them along the way. The same report says they were "calling out Liberty" and marched "with Colours displayed, and two Drums beating." The rebels killed about 25 white colonists.

Lieutenant Governor William Bull met the rebels on the road that day. He rode off to warn the planters and raised the militia, which attacked the rebels the same day. Bull also hired Chickasaw and Catawba men, and some enslaved men, to hunt down those who got away. About a week later, the militia fought a group of rebels again, about 30 miles from the first fight.

The count. The militia killed between 35 and 50 rebels in the first fight. A historical marker says at least 54. The 1739 report gives its own count: "about 40 Negroes and 20 whites were killed."

What the colonists did to the captured. The report says the militia "shot on the Spot" rebels they took in the field. Colonists cut off the heads of rebels and set them on stakes along the main roads as a warning to others. The colonists put most of the captured rebels to death. One account says the militia took 43 rebels who had no weapons and hanged them. The colonists sold the survivors to the West Indies, the islands of the Caribbean.

What the Negro Act took away

South Carolina's assembly passed the Negro Act on May 10, 1740, in answer to Stono. Under it, enslaved people could not gather in groups, grow their own food, earn money or move about freely. Teaching an enslaved person to write became a crime. That was the first law in what became the United States against teaching enslaved people. It named writing, not reading.

Under the Negro Act, a white person who murdered an enslaved person was guilty only of a misdemeanor, a minor crime punished by a fine. Any white person, not only an owner, could arrest and punish a Black person who broke the act. A court could put an enslaved person to death for plotting a revolt, running away, setting fires, or teaching others about poisonous plants.

New York, 1741

New York officials put about 200 people on trial in 1741 for a plot to burn the city. Their main witness told of the plot only after a judge had threatened her and promised her a reward.

A string of fires began in New York City in March 1741, the first at Fort George, the governor's home. City officials claimed that enslaved people and poor white people had plotted to burn the city. Three judges of the colony's Supreme Court heard the cases, among them Daniel Horsmanden. The trials began on May 11, 1741.

The witness. Mary Burton was a young servant bound to a tavern owner named John Hughson. When officials threatened her with jail, she testified about a robbery. Judge Horsmanden threatened her again and promised her an end to her contract and a reward in money. After that, she began to describe a plot she had never mentioned before. The New York courts' historical society says the sentences rested on doubtful testimony.

The count. The same society counts 30 people sentenced to death and 70 sentenced to be sold into slavery in the Caribbean. The historian Jill Lepore counts 34 put to death between May 11 and August 29, 1741.

By Lepore's count, officials burned 13 Black men at the stake and hanged 17 Black men, two white men and two white women. John Hughson, his wife Sarah and their daughter Sarah were among the white people put to death. In 1744 Horsmanden published his record of the trials.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 10 MINUTES

The men who led the Revolution wrote in 1776 "that all men are created equal," and enslaved people used words like those to claim their freedom. Elizabeth Freeman won hers in a Massachusetts court in 1781 with the words of the new state constitution. About 20,000 Black people joined or fled to the British during the war, after Virginia's royal governor promised freedom to enslaved men who fought for Britain. In 1796 Ona Judge walked out of President George Washington's household and never went back.

Slavery stayed legal in most of the new country. The first census, a count of every person in the United States, found 697,681 people held in slavery in 1790. Lawmakers and judges in Vermont and six northern states began to end slavery between 1777 and 1804, but most of their laws freed only children born after a set date, and only once those children grew up. The men who wrote the Constitution in 1787 protected slavery in three of its clauses, or parts, without once using the word slave.

Phillis Wheatley

Who: A girl kidnapped from West Africa who became the first African American to publish a book of poetry.

When and where: Landed in Boston in 1761. Her book was published in London on September 1, 1773. Freed by November 1773. Died in 1784.

Her first name came from the slave ship that carried her.

Slave traders kidnapped her from West Africa when she was about seven years old. In 1761 she landed in Boston on a slave ship called the *Phillis*. John Wheatley, a Boston merchant, and his family bought her. Her first name came from the ship, and her last name from the family who bought her.

She never went to school. John Wheatley wrote that she learned "by only what she was taught in the Family." Within sixteen months of landing, he wrote, she had learned English well enough to read the hardest parts of the Bible.

Twelve years after she landed, she was a published poet. Her book, *Poems on Various Subjects, Religious and Moral*, was published in London on September 1, 1773. It was the first book of poetry by an African American. The Wheatleys freed her by November 1773, shortly after it appeared.

She married John Peters in 1778. She died poor in 1784, at about 31 years old.

Two promises of freedom in the Revolution

Both sides in the Revolution promised freedom to some of the enslaved men who would fight for them. Neither side kept that promise to all of them.

Before any promise. A Black man died in the quarrel with Britain years before either side promised anything. British soldiers fired on a crowd of colonists in King Street, in Boston, on March 5, 1770. People call it the Boston Massacre. The first person killed was Crispus Attucks, a sailor with African and Wampanoag ancestors. Most accounts say he had escaped from slavery in Framingham, Massachusetts, around 1750. Accounts differ about whether he was legally free by 1770 or still an escaped slave.

Lord Dunmore's promise. Virginia's royal governor, Lord Dunmore, made a promise on November 7, 1775, to the men enslaved by Virginians who were fighting the British. Any of them who joined the British army would be free. About 300 men joined his Ethiopian Regiment within a month, and it grew to about 800.

The Patriot promise. The Patriots, the colonists fighting the British, made promises too. Rhode Island's lawmakers voted on February 14, 1778, that any enslaved man in the state could join the army for the rest of the war. He would be set free as soon as he passed the army's inspection, and the lawmakers promised to pay his owner up to 120 pounds.

The count. Over the whole war, by the estimates of the Gilder Lehrman Institute and the American Battlefield Trust, about 20,000 Black people joined or fled to the British. About 9,000 served the Patriots, and about 5,000 of those fought as soldiers.

Which states ended slavery first?

Vermont's constitution of 1777 was the first constitution to ban slavery. It banned holding adults in slavery. Vermont then governed itself as its own country, and it joined the United States in 1791.

Pennsylvania, 1780. Pennsylvania's lawmakers passed the Act for the Gradual Abolition of Slavery on March 1, 1780, a law to end slavery step by step over many years. No elected lawmakers anywhere in the world had passed a law to end slavery before. No enslaved person went free on the day it passed. Children born after it were to go free when they turned 28.

In Massachusetts, juries and judges ended slavery in court cases decided between 1781 and 1783. Lawmakers in Connecticut and Rhode Island passed gradual laws in 1784. New York's lawmakers passed one in 1799, and the last enslaved people in New York were freed in 1827. New Jersey's lawmakers passed theirs last, in 1804. Under these gradual laws, people in the North stayed enslaved for decades.

The members of Congress passed the Northwest Ordinance on July 13, 1787, a law for the lands north of the Ohio River. It banned slavery there.

Elizabeth Freeman ("Mum Bett")

Who: An enslaved woman who sued for her freedom under the new Massachusetts constitution and won.

When and where: Sheffield and Great Barrington, Massachusetts. Jury verdict in August 1781. Died in 1829.

Her lawyer argued that seven words in a constitution set her free.

Before she was Elizabeth Freeman, she was known as Bett, or Mum Bett. She was enslaved in the household of Colonel John Ashley in Sheffield, Massachusetts.

The new Massachusetts constitution of 1780 states that "all men are born free and equal." Bett and an enslaved man named Brom sued Ashley for their freedom. Their lawyer, Theodore Sedgwick, argued that those words made slavery illegal.

A jury in Great Barrington set them free in August 1781. The jury also ordered Ashley to pay them 30 shillings for the harm done to them. The case was called *Brom and Bett v. Ashley*, Brom and Bett against Ashley. The juries and judges in that case and in the cases of an enslaved man named Quock Walker, decided from 1781 to 1783, ended slavery in Massachusetts.

Bett took the name Elizabeth Freeman. For the rest of her life she worked for pay as a housekeeper and a nurse. She died in 1829.

Sally Hemings and Thomas Jefferson

Thomas Jefferson was the main author of the Declaration of Independence. Over his lifetime he owned more than 600 enslaved people. One of them was Sally Hemings. Jefferson owned her and used her for sex from the time she was a girl, and she had his children.

Her family. Sally Hemings was born enslaved in 1773. Her mother, Elizabeth Hemings, was enslaved. Her father was most likely John Wayles, the man who owned her mother. By law Wayles owned Elizabeth Hemings, and she had no legal right to refuse him sex. Wayles was also the father of Jefferson's wife, Martha. That made Sally Hemings the half-sister of Jefferson's wife.

Paris, 1787. Jefferson was the United States minister to France in 1787, the man who spoke for his country in Paris. That year Sally Hemings went to Paris with his daughter Polly. Sally was 14 and enslaved by Jefferson. He was 44. By law he owned her, and she could not refuse him. He had the legal power to sell her or her family.

Her son Madison Hemings said in 1873 that in Paris she "became Mr. Jefferson's concubine," using an old word for a woman a man kept for sex without marrying her. Madison Hemings said she was pregnant when they came back to Virginia.

Under French law she could have claimed her freedom in Paris. Madison Hemings said Jefferson promised that her children would be freed at age 21 if she went back with him. She had children from 1790 to 1808. Four lived to be adults: Beverly, Harriet, Madison and Eston.

The DNA. In 1998 scientists compared DNA and found that a man of the Jefferson family was the father of Eston Hemings. That test could not tell Thomas Jefferson apart from other men of his family, such as a brother or a nephew. In January 2000 the Thomas Jefferson Foundation, which runs Jefferson's home at Monticello, concluded that Jefferson "was probably the father" of her children. By 2018 the foundation's historians treated this as a fact.

In September 2026 a study paid for by the Smithsonian tested DNA from a lock of Thomas Jefferson's own hair, cut on the day he died. Richard Kurin of the Smithsonian said some Hemings descendants "had more Thomas Jefferson DNA than the known Jefferson descendants." The scientists concluded that Jefferson himself fathered her children.

Historians disagree about the right word for what Jefferson did. Jessica Marie Johnson, a historian of slavery at Johns Hopkins University, wrote in 2026 that Jefferson was a rapist. In her 2008 history of the Hemings family, the historian Annette Gordon-Reed argued that Jefferson and Sally Hemings loved each other. Another historian, Eric Foner, answered in a review that neither of them left any record of their feelings.

Jefferson died in 1826. Neither he nor anyone after him ever legally freed Sally Hemings. His daughter Martha Jefferson Randolph let her live in Charlottesville with her sons. There she lived as a free woman, though no paper made her free by law, and the census of 1833 listed her as free. She died in 1835.

The Constitution's protections for slavery, 1787

The men who wrote the Constitution in 1787 put three protections for slavery into it. None of the three clauses uses the word slave.

Three-fifths. Under the three-fifths clause, each enslaved person counted as three-fifths of a person. The number of seats a state got in the House of Representatives depended on that count. Enslaved people could not vote, but their owners' states got extra seats for them. The slave states held 47 of the 105 seats in the House in 1793. Counting only their free people, they would have had 33.

Runaways. The fugitive clause said that a person "held to Service or Labour" who escaped to another state had to be "delivered up," handed back to the person who claimed that person's work.

The trade. The slave-trade clause barred Congress from ending the import of enslaved people before 1808.

Enslaved builders of the capital

Enslaved people worked at every stage of building the White House and the Capitol in Washington. The cornerstone of the White House was laid on October 13, 1792, and that of the Capitol on September 18, 1793.

Enslaved men cut sandstone at the quarries on Aquia Creek, the open pits where the stone was dug. They also cut timber, made bricks, sawed lumber and did carpentry. The officials in charge of the building hired them from their owners, and the owners kept the pay.

The payroll of the President's House for May 1795 names five enslaved carpenters: Tom, Peter, Ben, Harry and Daniel. The architect James Hoban owned four of them, and his assistant Pierce Purcell owned one. The payroll records the days four of the men worked that month: Peter 28, Ben 28, Daniel 25 and Harry 9. Hoban signed for their wages.

Ona Judge

Who: An enslaved woman who escaped from President George Washington's household and was never caught.

When and where: Walked out of the President's House in Philadelphia on May 21, 1796. Lived free in New Hampshire. Died in 1848.

She walked out while the Washingtons were eating dinner.

Ona Judge was enslaved as Martha Washington's personal servant. On May 21, 1796, while the Washingtons sat at dinner in the President's House in Philadelphia, she left. She boarded a sloop, a small sailing ship, called the *Nancy*, and sailed to Portsmouth, New Hampshire.

Three days later a runaway advertisement ran in the *Philadelphia Gazette*, offering ten dollars for her capture. George Washington tried for years to get her back. She refused an offer to return. She married and lived in New Hampshire until she died in 1848.

In the 1840s she told her own story to newspaper interviewers, including one from *The Granite Freeman* in 1845. She told them that she was poor and that she was free.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 26 MINUTES

Cotton planters spread slavery west and south between 1800 and 1850. The number of people held in slavery kept rising, even after a federal law against bringing captives from abroad took effect on January 1, 1808. Most of the growth came from children born into slavery. Census takers counted 697,681 enslaved people in 1790 and 3,953,760 in 1860, almost six times as many.

Slave traders moved more than a million people from the older slave states of the Upper South, such as Virginia, to the new cotton states of the Deep South and sold them to planters there. Traders and buyers split families by selling husbands, wives and children to different owners.

Enslaved people resisted every day, and some rose up in armed revolt. Thousands escaped to the free states and to Canada. In most of the slave states, lawmakers made it a crime to teach an enslaved person to read.

Cotton

Eli Whitney built a cotton gin, a machine that pulls the seeds out of cotton, in 1793. With the gin, planters could make money growing upland cotton, the kind that grows away from the coast. Enslavers took enslaved people west to clear and plant new cotton lands. Cotton growers in the United States produced fewer than 9,000 bales, big pressed bundles, a year around 1790. By 1800 they produced more than 200,000 bales, and by 1860 about 4 million, more than 400 times the crop of 1790.

The number of slave states grew from six in 1790 to fifteen in 1860. By 1860 enslaved people on Southern plantations grew about 75 percent of the world's cotton. Cotton made up more than half of everything Americans sold to other countries, measured in dollars.

People as money. By 1860 the people who held four million people in slavery valued them at $3 billion or more. That was more than all the money invested in the country's railroads and factories put together. Enslavers bought, sold and priced people as property. They also mortgaged them: they borrowed money and promised to hand the enslaved people over to the lender if they could not pay it back.

Whose land it was. The cotton land of these years was Native land. Choctaw leaders signed the Treaty of Dancing Rabbit Creek, a written agreement with the United States, on September 27, 1830. In it they signed away more than 10 million acres in Mississippi and Alabama. It was the first treaty signed after members of Congress passed the Indian Removal Act of 1830. The Chickasaw signed away their land in the Treaty of Pontotoc Creek in 1832.

Under the Removal Act, United States officials then forced both nations west to Indian Territory, today's Oklahoma. They moved the Choctaw in groups in 1831, 1832 and 1833. By the Choctaw Nation's own count, more than a quarter of the Choctaw people removed in those years died.

Enslavers then brought in enslaved people to clear and plant the land the Choctaw and Chickasaw had lost. Mississippi's cotton crop grew from about 20 million pounds in 1820 to 193.2 million pounds in 1839. The number of

enslaved people in Mississippi grew from 65,659 in 1830 to 195,211 in 1840.

Sold south

Slave traders moved more than one million people from the Upper South to the cotton lands of the Deep South between about 1790 and 1860. From 1820 on, they moved about 200,000 people every ten years. They marched people overland in coffles, lines of people chained together. They also shipped people along the coast to New Orleans, which had the largest slave market in the country.

Franklin and Armfield. The biggest trading firm belonged to Isaac Franklin and John Armfield. From 1828 to 1836 they ran it from 1315 Duke Street in Alexandria, Virginia. Their compound took up half a city block, with separate pens for men and for women. At their busiest they moved between 1,000 and 1,500 people a year, and about 8,500 in the nine years of the partnership. They marched people to Natchez, in Mississippi, and shipped others to New Orleans on their own ships.

Franklin and Armfield also sold enslaved women and teenage girls to men who bought them in order to rape them, to force them into sex. This was known as the "fancy" trade, and the traders charged much higher prices for these women and girls. The historian Joshua Rothman read the partners' own letters. He found that Franklin, Armfield and their partner Rice Ballard also raped some of these women themselves, and joked about it in their letters.

Families. Traders and buyers broke families apart as a matter of routine. The Equal Justice Initiative, a group that studies racial injustice, has added up the effects. Its researchers found that traders separated nearly half of the people they moved from a husband, a wife or a parent. About one enslaved marriage in three ended because an owner sold the husband or the wife away. Traders sold children away from their mothers.

Work, food and home

Enslaved people worked from sunup to sundown, six days a week. On cotton and sugar plantations, an overseer, a man the owner paid to run the work, drove them in gangs, row by row across the fields. This was called the gang system.

On the rice plantations of the Lowcountry, the coast around Charleston, the overseer gave each person a set task for the day. When it was done, the rest of the day was the person's own. This was called the task system.

Two hundred pounds. Solomon Northup, a free New Yorker whom two men drugged and sold into slavery in 1841, picked cotton in Louisiana in the 1840s. His own story comes later in this era. In his book *Twelve Years a Slave* (1853), he wrote: "An ordinary day's work is two hundred pounds."

Every night each person's cotton was weighed at the gin-house, the building where the cotton gin stood. When a person's cotton came up short, the owner or the overseer whipped that person.

On the plantation where Northup was held, the owner, Edwin Epps, did the whipping himself in the yard. Northup wrote that "Twenty-five are deemed a mere brush," fifty lashes were "the ordinary penalty," and "one hundred is called severe."

Food and clothes. Frederick Douglass lived as an enslaved child on a plantation in Maryland. In his *Narrative* (1845), he recorded the food allowance there for one month: eight pounds of pork, or the same amount of fish, and one bushel, about a big basketful, of cornmeal.

The enslaver gave out clothing once a year. It was so thin that small children too young for field work often had only a long shirt to wear. Enslaved people added to their food with gardens, fishing and trapping where their owners allowed it.

Formerly enslaved people interviewed in the 1930s remembered cabins of one room, with dirt floors and beds made of boards. Under the law, their marriages did not count. An owner could sell a husband, a wife or a child on any day.

Punishment

Owners and overseers flogged enslaved people for picking too little cotton, for arriving late and for running away. A flogging meant being tied and whipped again and again on the bare body. Each stroke cut the skin, and deep or repeated whipping left raised scars for life. The whip named most often in Southern sources is the cowskin, also called the cowhide, a whip made of dried, twisted cow's hide.

Frederick Douglass described a flogging he saw as a child. His enslaver, Aaron Anthony, stripped Douglass's Aunt Hester from her neck to her waist. He tied her crossed hands to a hook in a ceiling beam, so that she stood on her toes. Then he whipped her with "the heavy cowskin" until her blood dripped to the floor.

The enslavers' own words. Theodore Weld, an abolitionist, one of the people working to end slavery, published *American Slavery As It Is* in 1839. It collected reports from eyewitnesses and advertisements from Southern newspapers. One witness saw an overseer whip a man named Joe "with a heavy cow-hide full six feet long" for arriving five minutes late.

The enslavers wrote the advertisements themselves. Micajah Ricks of Nash County, North Carolina, placed one in the Raleigh *Standard* on July 18, 1838. It began: "Ranaway, a negro woman and two children," using negro, an old word for a Black person. The ad went on: "a few days before she went off, I burnt her with a hot iron, on the left side of her face, I tried to make the letter M." The advertisement does not give the woman's name.

In another advertisement that Weld printed, Robert Nicoll of Mobile, Alabama, offered ten dollars for "my woman Siby, very much scarred about the neck and ears by whipping."

Sexual violence

By law, an enslaved woman or girl had no right to refuse the man who owned her, and no right to defend herself from him. Harriet Jacobs later wrote a book about what one of those men tried to do to her.

Jacobs was born enslaved in Edenton, North Carolina, in 1813. In 1825 she was left in a will to a three-year-old girl, Mary Matilda Norcom. That put her under the control of the girl's father, Dr. James Norcom. From her early teens, Norcom tried again and again to rape her. He held her as property, and for years she could not get away from him.

To protect herself she began a relationship with a white lawyer, Samuel Tredwell Sawyer, and had two children with him, Joseph and Louisa.

Seven years in a crawl space. Jacobs ran away in 1835. She hid in a crawl space above a storeroom in her grandmother's house for seven years. The space was so small she could barely sit up. In 1842 she escaped north by boat. Ten years later the wife of her employer, Cornelia Grinnell Willis, bought her freedom.

Jacobs told her story in *Incidents in the Life of a Slave Girl*, dated 1861 and published under the name "Linda Brent." Historian Jean Fagan Yellin later proved from Jacobs's letters that she wrote it herself. She died in Washington, D.C., in 1897.

Churches and hush harbors

Richard Allen was born enslaved. In Philadelphia he founded the African Methodist Episcopal Church, known as the AME Church, which was formally organized in 1816. It was the first Black church denomination, a group of churches that share the same beliefs and leaders, in the country.

In the slave states, enslaved people also worshipped out of their owners' sight. They met in brush arbors, shelters built of branches, which they called "hush harbors." They sang spirituals, religious songs that expressed their faith and also had hidden messages in them.

BY 1830: Cotton planters were moving onto Choctaw land in Mississippi, Franklin and Armfield were marching people south from Alexandria, and Georgia's lawmakers had just passed a new law against teaching enslaved people.

Reading made a crime

The first laws against teaching enslaved people named writing, not reading. South Carolina's lawmakers banned teaching enslaved people to write in 1740, and Georgia's followed in 1755.

Later laws banned teaching reading too. Virginia's lawmakers banned enslaved people in 1819 from any school "for teaching them reading or writing." Between 1829 and 1834 lawmakers in Georgia, Louisiana, North Carolina, Virginia, Alabama and South Carolina passed new laws or made their old ones harsher. North Carolina's law of 1830 forbade any free person to "teach or attempt to teach any slave within this State to read or write." Most of the slave states had such a law, but not all of them.

The punishments. The punishments depended on who broke the law. A white person who taught was fined. In North Carolina the fine was up to $200. The laws of Georgia and other states added jail. For Black teachers and learners, the laws ordered whipping. North Carolina's law set the punishment at 39 lashes, and in Virginia a person caught at a school could get up to 20 lashes. Several of these laws covered free Black people as well as the enslaved.

Enslavers had several fears. With writing, an enslaved person could forge, or fake, a pass, a note from an owner that allowed an enslaved person to travel. Readers could get the newspapers of the abolitionists, and they could read the Bible without an owner choosing which parts they heard. After Nat Turner, an enslaved preacher, led a revolt in Virginia in 1831, enslavers feared organized revolt most of all.

Enslaved people learned to read anyway. Estimates reported by Encyclopedia Virginia and History.com say about 5 to 10 percent of enslaved people could read by 1860. Some estimates for the last years of slavery run as high as 20 percent.

Frederick Douglass

Who: A man born enslaved who learned to read in secret against the orders of the man who held him, escaped, and became the most heard abolitionist of his century.

When and where: Born in Talbot County, Maryland, in February 1818. Escaped on September 3, 1838. Died in 1895.

Movie: *Becoming Frederick Douglass* (2022), a documentary by Stanley Nelson, shown on PBS. It is about Douglass's life.

He traded bread with hungry white boys for reading lessons.

As a boy Frederick Douglass lived in Baltimore, in the household of Hugh and Sophia Auld. Sophia Auld began to teach him the alphabet. Hugh Auld stopped her. Teaching a slave to read was against the law, he told her, and reading "would forever unfit him to be a slave."

Douglass saw in those words how white men kept Black people enslaved: by keeping them from learning. "From that moment," he wrote in his *Narrative* (1845), "I understood the pathway from slavery to freedom." In a later book, in 1855, he called Auld's words "the first decidedly anti-slavery lecture" he ever heard.

He kept learning in secret, paying hungry white boys with bread for lessons. At about age twelve he bought a book of speeches called *The Columbian Orator*.

When Douglass was a teenager, the man who owned him, Thomas Auld, took him away from Baltimore to St. Michael's, Maryland. Thomas Auld hired him out for a year to Edward Covey, a farmer known for "breaking young slaves." Covey whipped him until his back bled. After six months Douglass fought back. They fought for nearly two hours, and Covey never whipped him again.

Thomas Auld later sent him back to Baltimore to learn a trade in the shipyards. Douglass earned $1.50 a day, and every Saturday night he had to hand "every cent" of it to Hugh Auld. He escaped on September 3, 1838. He rode a train north through Baltimore, dressed in a sailor's clothes and carrying a sailor's papers that he had borrowed. Anna Murray, a free Black woman, helped him, and he married her.

He published his *Narrative of the Life of Frederick Douglass* in 1845, and two years later he started a newspaper, the *North Star*. For the rest of the century he spoke and wrote against slavery. More people heard him speak than any other abolitionist, and he was photographed more than any other abolitionist.

No record gives the day he was born, in February 1818. He chose February 14 as his birthday. He died in 1895.

Milla Granson (Lilly Ann Granderson)

Who: An enslaved woman who ran a secret night school in Natchez, Mississippi, and by her own count taught hundreds of people to read and write.

When and where: Born in Petersburg, Virginia, about 1816. Enslaved in Kentucky, then near Natchez, Mississippi. Died in 1889.

Her school opened at midnight and closed at two in the morning.

Milla Granson ran a school at night in Natchez, Mississippi, while she was enslaved. Her pupils were enslaved people who came after a full day's work. In March 1864 she told her story to Laura Haviland, a teacher who belonged to the Quakers, a Christian group. Haviland printed it in a book in 1881, and it is the only record of the school.

Granson was enslaved in Kentucky, where the children of her enslaver taught her to read and write. When that enslaver died, she was sold south to an owner near Natchez and put to work in the fields. She could not keep up with the field hands, and the overseer whipped her. She told Haviland: "sometimes I thought I would die from such cruel whippings upon my bared body." The record does not give the overseer's name.

The school opened "at eleven or twelve o'clock at night, and closed at two o'clock A. M." Every door and window was shut so no one would find out. Her pupils came into a back alley, "each with a bundle of pitch-pine splinters for lights."

She taught twelve at a time. When those twelve could read and write, she sent them off and took twelve more, "until she had graduated hundreds." Some of her pupils wrote their own passes and set out for Canada. She never heard from them again, and she believed they got away.

After slavery ended, she pushed for the founding of Natchez Seminary, the school that became Jackson State University. She married Oliver Granderson. She died in 1889 and is buried in the Natchez City Cemetery.

Resistance and revolt

Enslaved people resisted slavery in small ways every day. They worked slowly, broke tools, pretended to be sick and took food. Most of all, they ran away.

Southern newspapers were full of advertisements for runaways, placed by enslavers who wanted them back. Some of the ads warn that the person "can read," or "can write and may forge a pass." Researchers at Cornell University, in a project called Freedom on the Move, are putting thousands of these ads online.

Gabriel, 1800. An enslaved blacksmith named Gabriel planned to lead a march on Richmond, Virginia, in 1800. On August 30, the day it was to begin, two enslaved men, Pharoah and Tom, who belonged to members of the Sheppard family, told Mosby Sheppard about the plan. Sheppard told Governor James Monroe. A storm that day scattered those who had gathered.

Virginia judges, sitting in special courts with no juries, found 26 men guilty, Gabriel among them. On the judges' orders, all 26 were hanged. Encyclopedia Virginia's account does not name the men who carried out the hangings.

The German Coast, 1811. Charles Deslondes led an uprising in January 1811 on the German Coast of the Territory of Orleans, upriver from New Orleans. Between 64 and 125 enslaved people began it, and accounts put the number who joined at 200 to 500. They marched about twenty miles down the river road toward New Orleans and killed two white men, Gilbert Andry and François Trépagnier.

Governor William C. C. Claiborne, General Wade Hampton and a militia, a band of armed local men, put the uprising down. Hampton led U.S. Army troops and Navy sailors. Manuel Andry and Charles Perret led the militia, which was made up of planters. On January 10, in about half an hour of fighting, they killed 40 to 45 rebels. They killed others without any trial as they caught them.

Over the next two weeks, planters sat as judges in special courts called tribunals. Planters and U.S. officials put 44 more captured rebels to death. About 95 rebels were killed in all. The militia cut off the heads of the dead and

set nearly 100 of them on poles along the levee, the river wall, from New Orleans upriver. Deslondes was captured on January 11 and given no trial. Militiamen cut off his hands, shot him several times and burned him alive.

Charleston, 1822. White officials in Charleston, South Carolina, accused Denmark Vesey, a free Black carpenter, of planning a revolt to free thousands of enslaved people. No revolt ever took place, and no white person was harmed. Officials in Charleston put Vesey and 34 other men to death.

The officials claimed the city's African Methodist Episcopal church had helped plan the revolt. They ordered its members to scatter and destroyed the church. The Equal Justice Initiative says they burned it to the ground, and other accounts say it was torn down. Black Charlestonians rebuilt their church. In 1834 Charleston's white city leaders outlawed independent Black churches, the historian Manisha Sinha writes. The accounts do not name the officials who passed that ban. The congregation later became the church known today as Mother Emanuel.

Nat Turner

Who: An enslaved preacher who led the deadliest slave revolt in United States history.

When and where: Southampton County, Virginia, August 21 to 23, 1831. Hanged on November 11, 1831.

Movie: *The Birth of a Nation* (2016), a feature film about Turner's revolt. Its makers took the title on purpose from a 1915 film by D. W. Griffith that inspired a new Ku Klux Klan.

After his three-day revolt, white militias killed more than 100 Black people.

Nat Turner was an enslaved preacher in Southampton County, Virginia. In jail after the revolt, he told a lawyer, Thomas R. Gray, that "the Spirit" had appeared to him in 1828. It told him that "the first should be last and the last should be first," and that signs in the sky would show him when to begin. When the sun went dark in an eclipse in February 1831, he took it as the sign to "slay my enemies with their own weapons."

Turner and a few other enslaved men began on the night of August 21, 1831. They killed the man who held him, Joseph Travis, and Travis's family as they slept. Then they went on from farm to farm, killing white men, women and children.

More men joined them until they were fifty or sixty, on horseback and armed. They headed for Jerusalem, the town where the county court met. About three miles from the town, armed white men fired on them, and the rebels scattered. By August 23 the rebels had killed at least 55 white people.

Militias and bands of armed white men answered by killing more than 100 Black people. Many of them had nothing to do with the revolt. Some estimates put the number killed at 200.

Turner hid until he was caught on October 30. Judges in Southampton County put about 30 people on trial, and Virginia officials put to death 19 of those found guilty. They hanged Turner on November 11, 1831. Gray published Turner's account that year as *The Confessions of Nat Turner*.

Lawmakers in Virginia and other slave states answered the revolt with new laws against teaching enslaved people to read and against their gathering in groups.

Sengbe Pieh (Joseph Cinqué)

Who: A Mende man who led the captives of the ship *Amistad* in taking control of it, and who won freedom for them in the United States Supreme Court.

When and where: From the Mende country, in the region of Sierra Leone in West Africa. Took the ship on July 1, 1839. Freed by the Supreme Court in 1841. Home in 1842.

Movie: *Amistad* (1997), a feature film about the case.

Fifty-three captives took over the ship that was carrying them.

Spanish slave traders had carried Sengbe Pieh and the others, most of them Mende people from the region of Sierra Leone, to Cuba. There the 53 were bought for a Cuban plantation and put aboard a sailing ship, the *Amistad*. On July 1, 1839, led by Pieh, they rose up and took control of the ship. Pieh is also known as Joseph Cinqué.

In late August 1839, the U.S. Navy ship *Washington*, commanded by Lieutenant Thomas R. Gedney, seized the *Amistad* off Long Island. Officials took the Africans to New London, Connecticut, and jailed them. Some died at sea or in prison while they waited for trial.

Their lawyers took the case all the way to the Supreme Court, and former president John Quincy Adams argued part of it for them. On March 9, 1841, the justices set them free. In 1842, 35 of the survivors sailed home to Sierra Leone. They had never been enslaved on American soil.

Solomon Northup

Who: A free man from New York who was kidnapped and held in slavery in Louisiana for twelve years, and who named the people who did it.

When and where: Kidnapped in Washington, D.C., in 1841. Freed on January 4, 1853. Where and when he died is not known.

Movie: *12 Years a Slave* (2013), directed by Steve McQueen. It won the Academy Award for Best Picture.

He woke up "alone, in utter darkness, and in chains."

Solomon Northup was born free in Minerva, New York, in 1808, and worked as a farmer and a fiddler. In 1841 two white men who called themselves Merrill Brown and Abram Hamilton offered him work playing music for a circus. They took him to Washington, D.C. There they gave him a drink that left him "insensible," or unconscious.

He woke in a slave pen, a building where traders locked up enslaved people until they sold them. It was Williams's slave pen, called the Yellow House, near the U.S. Capitol. A slave trader named James H. Burch held him there. When Northup said he was a free man, Burch beat him with a paddle, "a piece of hard-wood board, eighteen or twenty inches long," and with a cat-o'-nine-tails, a whip of rope with many strands, each with a knot tied at the end.

Burch told Northup that if he ever again said he was free, what came next would be worse. "He swore that he would either conquer or kill me."

Twelve years. In New Orleans, Burch's partner, a trader named Theophilus Freeman, told Northup that his name was now Platt. Freeman sold him under that name to William Ford, a preacher who owned a lumber mill. In the winter of 1842 Ford sold him to a carpenter, John Tibeats. Then Edwin Epps held him for almost ten years on a cotton plantation on Bayou Boeuf, in Louisiana.

The letter. A Canadian carpenter named Samuel Bass mailed letters for Northup to people he knew in Saratoga Springs, New York. Two storekeepers there sent one on to Northup's wife, Anne. She went to

Henry B. Northup, a lawyer who had been Solomon's friend since childhood, and whose family had once enslaved Solomon's father, Mintus, and freed him in a will. With help from the governor of New York, Washington Hunt, Henry B. Northup won Solomon's freedom on January 4, 1853.

No one punished. That year Northup published *Twelve Years a Slave*, which sold about 30,000 copies. Burch was tried in Washington in 1853 and found not guilty, because the law did not allow Northup, a Black man, to testify against a white man. In May 1857 the New York case against the kidnappers ended without a trial, in a dispute over which court had the power to hear it. No one was ever convicted.

NOT KNOWN: where and when Northup died. After about 1857 he disappears from the records.

BY 1840: Lawmakers in Virginia and other slave states had answered Nat Turner's revolt with new laws against reading and gathering, the *Amistad* captives were waiting in Connecticut for the Supreme Court, and thousands of enslaved people were escaping north anyway.

The Underground Railroad and the abolitionists

The Underground Railroad was a network of people who helped enslaved people escape to the free states and to Canada, with guides and safe houses. Free Black communities and their churches did much of the work. By an estimate the National Park Service uses, it helped about 100,000 people escape over several decades. Many more tried to escape and were caught.

In the free states, Black people started their own churches, newspapers and groups. Samuel Cornish and John Russwurm published the first issue of *Freedom's Journal* in New York on March 16, 1827, the first newspaper in the United States owned by Black people. Free Black communities in the North ran vigilance committees, groups that hid people who had escaped and helped them move on.

Sojourner Truth

Who: A woman who walked away from slavery in New York, then sued to get back her son, who had been sold south against the law, and won.
When and where: Ulster County, New York. Walked to freedom in 1826. Won her son's return in 1828. Died in 1883.

Her five-year-old son was sold to Alabama. She sued and won.

She was born enslaved in about 1797 in Ulster County, New York, and her name then was Isabella Baumfree. In 1826 she walked away from her enslaver, carrying her baby daughter. One year later, on July 4, 1827, New York's law ending slavery took effect.

Her son Peter was five years old. A little before she walked away, her enslaver, John Dumont, sold the boy for $20 to a doctor, who sold him on to his brother, Solomon Gedney. Solomon Gedney sent Peter to his sister's husband, a planter in Alabama. Selling a child out of the state that way was against New York law. She did not find out for months.

She sued, and in 1828 she won his return. The Historical Society of the New York Courts says she was the first Black woman to win a case of this kind against a white man in an American court.

She took the name Sojourner Truth in 1843. Her life story, the *Narrative of Sojourner Truth*, was published in 1850.

Harriet Tubman

Who: A woman who escaped slavery in Maryland and went back about 13 times to lead about 70 people out.

When and where: Born in Dorchester County, on Maryland's Eastern Shore, in March 1822. Escaped in September 1849. Died in 1913.

Movie: *Harriet* (2019), a feature film about her life, with Cynthia Erivo as Tubman.

At 13 she was hit in the head with a two-pound weight.

She was born in March 1822 in Dorchester County, on Maryland's Eastern Shore, and her name then was Araminta Ross. In 1835, when she was 13, she was at a store when an enslaved person tried to escape. An overseer threw a two-pound weight. It hit her in the back of the head and broke her skull. For the rest of her life she had pain and "sleeping spells," times when she fell asleep suddenly. The accounts of her injury do not name the overseer.

She escaped to Philadelphia, Pennsylvania, in September 1849. Between 1850 and 1860 she went back into Maryland about 13 times and brought out about 70 people, most of them family and friends, among them her parents, Rit and Ben.

An old story says she made 19 trips and freed 300 people. The National Park Service calls that story a legend. The numbers 13 and 70 come from her own statements and the records.

During the Civil War she worked as a scout for the Union army, the army of the United States. She died of pneumonia in 1913, at about 91 years old, in a home for elderly Black people.

BY 1850

If you remember one thing: Cotton planters spread slavery onto land the Choctaw and Chickasaw had been forced to leave, traders sold about a million people south to work it, and enslaved people answered by running, learning to read in secret and rising up.

In 1830: Mississippi had 65,659 enslaved people.

In 1840: it had 195,211, three times as many, on the land the Choctaw and Chickasaw had lost.

Next: In 1854 federal troops marched Anthony Burns, a man who had escaped from slavery, through Boston to a ship that took him back to Virginia.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 32 MINUTES

Slavery ended in this era, and the people it had held spent the rest of the century fighting to keep the freedom they had won. In 1850 the members of Congress passed a law that forced people in the free states to help catch those who escaped.

Fifteen years later, after the Civil War, the 13th Amendment, a change added to the Constitution, forbade slavery, and about four million people became free. Many of them had already freed themselves during the war by escaping to the Union army, the army of the United States.

Freed people searched for family members who had been sold away. They married in law, chose their own names, built churches and schools, voted and served in Congress. White men answered with new laws that forced Black people to work, with whippings and burnings, and with massacres, the killing of many people who could not defend themselves. President Rutherford B. Hayes ordered the last federal troops out of the Southern statehouses in April 1877. That ended the period of rebuilding called Reconstruction.

The Fugitive Slave Act, 1850

The Fugitive Slave Act, a law about fugitives, people who had escaped, became law on September 18, 1850. Under it, federal officials called commissioners, who worked for the national government, decided whether a captured person was a runaway slave. There was no jury. The captured person was not allowed to testify, to speak as a witness in court.

A commissioner was paid $10 for ruling that a person was a slave and $5 for ruling that the person was free. Officials could force bystanders to help catch people. The law's rules held in the free states too, and free Black people in the North fled to Canada.

Anthony Burns. Anthony Burns escaped from slavery in Virginia by stowing away on a ship. Charles F. Suttle, the man who held him in slavery, came to Boston with William Brent to claim him. On May 24, 1854, the two men had Burns arrested there. After a hearing that lasted a week, federal troops marched him through the city on June 2, 1854, to a ship that took him back to Virginia. He passed crowds draped in black, the color of mourning.

Celia, 1855

A Missouri judge refused in 1855 to tell a jury that an enslaved woman had the right to fight off a man who was raping her. Her name was Celia. Robert Newsom, a farmer in Callaway County, Missouri, bought her in 1850, when she was 14 years old. From 1850 to 1855 he raped her again and again. She had two children, and at least one was his. In 1855 she was pregnant again.

Newsom told Celia on the night of June 23, 1855, that he would come to her cabin. She had put a large stick in the corner. When he came, she struck him on the head with it twice, and the second blow killed him. She burned his body in her fireplace.

The trial. Missouri's law made it a crime to force "any woman" into sex against her will, and it allowed a woman to use force to resist. Celia's trial began in October 1855. Her lawyer, John Jameson, asked Judge William Hall to tell the jury that Celia could be found not guilty if she had been resisting rape. Hall refused. That left the jury no way to treat the killing as self-defense.

A jury of twelve white men found her guilty of murder. Her lawyers appealed, asking a higher court to look at the case again. The judges of the Missouri Supreme Court turned the appeal down on December 14, 1855. Celia was hanged in Fulton, Missouri, on December 21, 1855. The accounts of her death do not name the officials who hanged her.

Missouri's governor pardoned her in 2024, at the request of her descendants.

Dred and Harriet Scott

Who: An enslaved couple who sued for their freedom and lost in the United States Supreme Court, whose justices ruled that no Black American could be a citizen.

When and where: Suit filed in St. Louis, Missouri, in 1846. Supreme Court decision on March 6, 1857. Freed in May 1857.

A chief justice wrote that Black Americans could never be citizens.

Dred Scott was born enslaved in Virginia in about 1800. Peter and Elizabeth Taylor Blow held him. The Blows moved to St. Louis in 1830 and sold him to Dr. John Emerson, an army surgeon.

Emerson took Scott to Fort Armstrong, in Illinois, in 1833, and then to Fort Snelling, in Wisconsin Territory, in 1836. Slavery was banned in both places. At Fort Snelling, Dred Scott married Harriet Robinson, who was also enslaved. They had two daughters, Eliza and Lizzie. Eliza was born on a steamboat in free waters. After Emerson died in 1843, his widow, Irene Emerson, claimed the family as her property.

Eleven years in court. The Scotts sued for their freedom in St. Louis on April 6, 1846. They argued that living where slavery was banned had made them free. A jury ruled in their favor on January 12, 1850. The judges of the Missouri Supreme Court reversed that ruling on March 22, 1852, and Irene Emerson held the Scotts as her property again.

The Scotts and their lawyers took the case to the United States Supreme Court. On March 6, 1857, the justices ruled against them, 7 votes to 2. Chief Justice Roger Taney wrote that Black Americans were not and could never be citizens, and that Black people "had no rights which the white man was bound to respect." The justices also ruled that Congress could not ban slavery in the territories of the West.

Freedom. Irene Emerson's second husband, Calvin Chaffee, handed ownership of the family to Taylor Blow, who freed them on May 26, 1857. Dred Scott worked as a porter, a man who carried guests' bags, at Barnum's Hotel in St. Louis, and he helped Harriet with her laundry work. He died of tuberculosis, a disease of the lungs, on September 17, 1858.

Sold and smuggled, 1858 to 1860

Pierce Mease Butler sold between 429 and 436 men, women and children at a racetrack near Savannah, Georgia, on March 2 and 3, 1859, to pay his gambling debts. The National Park Service describes it as the largest single sale of people in the United States. The slave dealer Joseph Bryan ran it and advertised it for weeks in newspapers from Charleston to Richmond. The sale brought in $303,850.

A reporter from the *New York Tribune*, Mortimer Thomson, went disguised as a buyer. He wrote a long article about the sale for the *Tribune*, "What Became of the Slaves on a Georgia Plantation?" Black Georgians remembered those two days as "the weeping time."

The *Wanderer*. Bringing captives from Africa had been against the law since 1808, but some men kept doing it. In 1858 Charles A. L. Lamar led a group of investors who paid for a ship called the *Wanderer* to bring captives from Africa. Its captain, William R. Corrie, bought 487 Africans at the Congo River. About 409 of them were still alive when the ship landed at Jekyll Island, Georgia, on November 29, 1858. The others died on the voyage. Six trials followed, and none of them ended in a conviction.

The *Clotilda*. Timothy Meaher, a businessman and shipbuilder in Mobile, Alabama, bet in 1860 that he could sneak a ship full of captives into Mobile Bay. Captain William Foster sailed the ship *Clotilda* to West Africa. He bought 125 people and carried 110 of them across the ocean. On July 8, 1860, the ship entered the Gulf of Mexico. Later that month Foster anchored it near Twelve-Mile Island and set it on fire to destroy the evidence. The only punishment anyone received was a $1,000 fine charged to Foster.

Oluale Kossola (Cudjo Lewis)

Who: A man carried to Alabama on the *Clotilda*, the last known slave ship to reach the United States, who helped found the town of Africatown after he was freed.

When and where: Born about 1841 in what is now Benin, in West Africa. Landed near Mobile, Alabama, in July 1860. Freed in 1865. Died in 1935.

Movie: *Descendant* (2022), a documentary by Margaret Brown about the *Clotilda*, Africatown and the families of the survivors.

The crossing took 45 days. He was one of 110 aboard.

Oluale Kossola was born in about 1841 in what is now the country of Benin, among the Yoruba Isha people. The army of Ghezo, the King of Dahomey, attacked his town in April 1860. Kossola was captured and held in a barracoon, a pen for captives, at the port of Ouidah. There he was sold to William Foster, the *Clotilda*'s captain. The crossing to Alabama took 45 days, and Kossola suffered from terrible thirst.

In Mobile, James Meaher, Timothy Meaher's brother, enslaved him. Kossola worked on a steamship and lived with others from the *Clotilda* under Meaher's house, which stood high off the ground. He was freed in 1865. He took the name Cudjo Lewis and married Abile, a woman who had also been on the *Clotilda*.

Africatown. The people from the *Clotilda* could not afford to sail home. Timothy Meaher was responsible for what had been done to them, so they decided to ask him to give them land, free. They chose Kossola to speak for them. Meaher refused. So they bought land from him and from others, and about 30 of them founded Africatown, north of Mobile.

Kossola and Abile had six children, and all six died young. In 1902 he was hurt in a train accident and sued the railroad company. He became the caretaker of the Africatown church.

The writer Zora Neale Hurston interviewed him in 1927. Her book about his life, *Barracoon*, was not published until 2018. Kossola died on July 26, 1935, at about 94. In May 2019 officials of the Alabama Historical

> Commission announced that the burned wreck of the *Clotilda* had been identified in the Mobile River.

BY 1861: The justices of the Supreme Court had ruled that no Black American could be a citizen, the *Clotilda* had landed its captives near Mobile, and Southern states had broken away from the United States.

Freedom taken during the war

Three enslaved men, Frank Baker, Shepard Mallory and James Townsend, rowed to Fort Monroe, a Union fort at Old Point Comfort in Virginia, on May 23 and 24, 1861. It was the same ground where the *White Lion* had landed Africans in 1619. The men were about to be taken south to build batteries, gun positions, for the Confederate army, the army of the Southern states that had broken away.

General Benjamin Butler refused to send them back. He called them "contraband of war," meaning property of the enemy that an army may seize. Word spread, and enslaved people walked, rowed and rode to Union lines across the South. By the end of the war, about half a million people had freed themselves by reaching the Union army. The people who escaped to Fort Monroe called it "Freedom's Fortress."

The camps. Union army officials, and later officials of the Freedmen's Bureau, the federal office set up to help freed people, ran camps for people who had escaped slavery. These were called contraband camps, and they were crowded and dirty.

More than 60,000 freed people died of smallpox between 1862 and 1868, according to the historian Jim Downs. Smallpox is a disease caused by a virus that spreads from person to person. It brings a fever and a rash that spreads over the skin and turns to scabs. About 3 in every 10 people who caught it died, and many who lived had scars for life, most of all on their faces.

Doctors knew how to prevent it. They could vaccinate people, giving them a shot that protects against the disease, and they could keep the sick away from the well, which is called quarantine. The quarantine tents for freed people were

made of old, ripped army cloth.

Philip Reid. Philip Reid was an enslaved craftsman at the foundry of Clark Mills in Washington, D.C., a workshop where metal is melted and cast. Mills owned him. Mills's workers were casting the Statue of Freedom for the top of the Capitol dome. The paid foreman demanded more money before he would take apart the plaster model, and Reid worked out how to separate it with a pulley and tackle. He was paid $1.25 a day, but he kept only the pay for Sundays. Mills took the rest.

Members of Congress passed a law that freed the enslaved people of Washington, D.C., on April 16, 1862, and Reid was one of them. The government of the District of Columbia counts 3,100 people freed there, and the US Senate's history office counts 2,989. Under the law, owners loyal to the Union could be paid up to $300 for each person freed. The statue was set on the dome on December 2, 1863. In his later life Reid signed his name Reed.

Robert Smalls

Who: An enslaved harbor pilot who sailed himself, his family and his crew out of slavery on a Confederate ship, and later served five terms in Congress.

When and where: Charleston, South Carolina, before dawn on May 13, 1862. Later Beaufort, South Carolina. Died in 1915.

He wore the captain's straw hat and sailed past Fort Sumter.

Robert Smalls was 23 years old and enslaved. He worked as the pilot, the man who steered the ship, on a Confederate transport ship called the *Planter*, in Charleston harbor.

Before dawn on May 13, 1862, Smalls took the *Planter* out with an enslaved crew and their families aboard. He wore the captain's hat and gave the right signals as they passed Fort Sumter. Out at sea he surrendered the ship to the Union navy ships that were blockading, or closing off, the harbor.

> Smalls went on to become a ship's captain in United States service. After the war he served as one of South Carolina's state lawmakers. He was elected to the United States House of Representatives five times. He died in 1915.

Who did the Emancipation Proclamation free?

President Abraham Lincoln's Emancipation Proclamation declared free the enslaved people in the states that were fighting against the United States. Emancipation means setting people free from slavery. Lincoln announced it on September 22, 1862, and it took effect on January 1, 1863. Wherever the Union army advanced after that, its soldiers freed the enslaved people they reached. In the proclamation, Lincoln also opened the army to Black men.

Lincoln left out the slave states that had stayed loyal to the Union: Delaware, Maryland, Kentucky and Missouri. He also left out Tennessee and the parts of Virginia and Louisiana that the Union army already held. Enslaved people in those places had to wait for their state's lawmakers to end slavery, or for the 13th Amendment.

Black soldiers and the scourged back

About 180,000 Black men served in the Union army in the regiments called the U.S. Colored Troops. By the end of the war, about one Union soldier in ten was Black. About 19,000 more Black men served in the navy. At the Battle of New Market Heights in Virginia, on September 29, 1864, fourteen Black soldiers earned the Medal of Honor, the highest award for bravery in battle.

Peter. A man named Peter escaped in March 1863 from the 3,000-acre plantation of Captain John Lyons in St. Landry Parish, Louisiana, and reached Union troops at Baton Rouge. Army doctors examined him before he joined the army. His back was covered in thick raised scars, called keloid scars, which grow over a healed wound.

Peter said the overseer, Artayou Carrier, had whipped him in October 1862. He said he lay in bed for two months, sore "from the whipping and salt brine" that was poured on the wounds. The accounts do not say who poured it.

The photographers William D. McPherson and J. Oliver photographed his back about April 2, 1863. The picture became known as "The Scourged Back," scourged meaning whipped. *Harper's Weekly* printed pictures made from the photograph on July 4, 1863, and called the man "Gordon." Historians now think the magazine's staff put "Gordon" together from pictures of three different men, and that the man in this photograph was Peter. No record shows what became of Peter after he joined the Union army.

William Harvey Carney

Who: A man born enslaved in Virginia who carried the flag at Fort Wagner with the 54th Massachusetts, a Black regiment. His actions there were the earliest act of bravery by a Black American to be recognized with the Medal of Honor.

When and where: Born in Norfolk, Virginia, on February 29, 1840. Fort Wagner, South Carolina, July 18, 1863. Died on December 9, 1908.

"The dear old flag never touched the ground!"

William Harvey Carney was born enslaved in Norfolk, Virginia, on February 29, 1840. Accounts differ about how he became free. Some say he escaped on the Underground Railroad. Others say his father escaped and then bought his freedom. The family settled in New Bedford, Massachusetts.

Carney joined Company C of the 54th Massachusetts, a regiment of Black soldiers, in February 1863, and he became a sergeant in March. On July 18, 1863, the 54th attacked Fort Wagner, in South Carolina. The soldier carrying the flag was shot.

Carney took the flag and went forward with several serious wounds. He planted it on the wall of the fort and then carried it back to the Union lines. The National Park Service quotes his words afterward: "Boys, I did but my duty," and then, "the dear old flag never touched the ground!" The attack appears in the film *Glory* (1989), which is about the 54th Massachusetts.

He received the Medal of Honor in May 1900. The National Park Service says his actions were "the earliest act of African American bravery to be recognized with the medal." He was one of 22 African Americans to receive it for service in the Civil War. He died at Boston City Hospital on December 9, 1908.

Combahee Ferry, Juneteenth and the 13th Amendment

Harriet Tubman guided Union gunboats and soldiers of the 2nd South Carolina Volunteers up the Combahee River in South Carolina on the night of June 2, 1863. More than 700 enslaved people escaped to freedom on the boats that night.

The 13th Amendment. The members of Congress passed the 13th Amendment on January 31, 1865. It became part of the Constitution on December 6, 1865, when lawmakers in enough states had approved it. Its text forbids slavery everywhere in the United States, "except as a punishment for crime whereof the party shall have been duly convicted." That exception still allowed forced labor for people convicted of crimes.

Juneteenth. Major General Gordon Granger arrived in Galveston, Texas, on June 19, 1865, with about 2,000 federal soldiers. He issued General Order No. 3. It said that "all slaves are free," with "absolute equality of personal rights." More than 250,000 people were still enslaved in Texas, two and a half years after the Emancipation Proclamation, because the Union army had not been there to enforce it. June 19 became a day of celebration, called Juneteenth.

The Five Tribes. Slaveholders in the Choctaw and Chickasaw nations, the nations that United States officials forced west to Indian Territory in the 1830s, had also held Black people in slavery. So had slaveholders in the Cherokee, Muscogee (Creek) and Seminole nations. Together these five nations were known as the Five Tribes. At emancipation as many as 2,500 people were enslaved in the Cherokee Nation.

The leaders of each of these nations signed treaties with the United States in 1866. In them the leaders agreed to free the people their nations had enslaved and to make them citizens of the nation. In Article 9 of the Cherokee treaty, Cherokee leaders promised the freed people, called Freedmen, "all the rights of native Cherokees."

BY 1866: Slavery was illegal everywhere in the United States, about four million people were free, and Union soldiers had announced freedom as far away as Galveston, Texas.

Freedom, day to day

For decades after slavery ended, freed people searched for family members who had been sold away. They placed advertisements in Black newspapers, under headings such as "Information Wanted," asking for news of mothers, children, husbands and wives. The searches ran into the 1900s. Few ended in a reunion, and when one did, people wrote about it with joy.

Researchers at Villanova University and Mother Bethel AME Church in Philadelphia, in a project called "Last Seen: Finding Family After Slavery," have put more than 5,000 of these ads online.

Marriages and names. Enslaved people's marriages had never counted in law. After the war, officers of the Freedmen's Bureau recorded thousands of marriages. Couples who had been together for decades stood up to be married in law. The Bureau's marriage registers survive at the National Archives.

Freed people chose and registered their own last names. Some kept a former owner's name, so that family members who had been sold away could find them. Others chose new names. Freeman was one.

Churches. Congregations that had met in hush harbors built their own churches. Within ten years of the war, freed people had joined or founded AME and AME Zion churches across the South. They used their churches as schools, as meeting halls and as places to organize for elections.

The bank. Members of Congress set up the Freedman's Savings Bank by law to hold the savings of freed people, and President Lincoln signed the law on March 3, 1865. The bank's managers ran it badly and lost money on risky deals. It failed in June 1874, holding nearly $3 million saved by about 61,000 people.

The officials in charge of closing the bank, called commissioners, paid back 62 percent of what was owed between 1875 and 1883. Only about 30,000 depositors turned in their bank books to collect, and about 31,000 never got anything back.

Thornton Copeland

Who: A freed man who placed a newspaper advertisement in 1865 searching for his mother, from whom he had been sold away 21 years earlier.

When and where: The *Colored Tennessean*, a newspaper in Nashville, Tennessee, October 1865. He had been sold in Richmond, Virginia, in 1844.

He had not seen his mother in 21 years.

Thornton Copeland was sold away from his mother in 1844. The buyer was Samuel Copeland, in Richmond, Virginia. The ad does not say who sold him. Before that, a man named Robert Rogers had held him.

In October 1865, after slavery ended, he placed an advertisement in the *Colored Tennessean*, a Black newspaper in Nashville, to look for her. Her name was Betty. His advertisement reads: "INFORMATION is wanted of my mother, whom I left in Fauquier county, Va., in 1844, and I was sold in Richmond, Va., to Saml. Copeland."

His advertisement is item 918 in the "Last Seen" collection. No record shows whether he ever found his mother.

Schools, the moment freedom came

People who had been forbidden to read started schools as soon as the Union lines reached them. They opened schools in churches, in army camps and in buildings the Union army had taken over. Grandparents and grandchildren learned in the same rooms. Grown men and women came to night classes after a full day's work.

Who paid. Freed people paid for schools themselves wherever they could. They paid school fees out of their first wages, and they gave land and their own labor to build schoolhouses. Northern aid societies helped, the American Missionary Association most of all. Thousands of teachers came south, many of them women, and a growing number of them Black.

Freedmen's Bureau officials had counted more than 2,600 day and night schools with about 150,000 students by 1870. Counts that include every kind of school are higher.

New colleges opened for freed people. Fisk, in Nashville, opened in January 1866. Members of Congress passed a law that set up Howard University in 1867. By 1872 there were about 25 colleges for freed people.

Delegates in the Southern states wrote new state constitutions in 1868 and 1869. Their conventions were the first public bodies in United States history with many Black members. The delegates created the South's first statewide systems of free public schools, open to white children too.

Susie King Taylor

Who: A girl who learned to read in secret schools in Savannah, escaped at 13, and became the first Black teacher of freed children in a school working openly in Georgia.

When and where: Born in Liberty County, Georgia, on August 6, 1848. Taught on St. Simons Island, Georgia, in 1862. Died in 1912.

At 14 she taught 40 children by day and adults at night.

As a child in Savannah, Georgia, Susie King Taylor went to two secret schools run by Black women. Two white young people also taught her, breaking the law to do it.

In April 1862, at 13, she escaped with others to St. Simons Island, which the Union army held. She turned 14 that August. There she became the first Black teacher of freed students in a school for freed people working openly in Georgia. She taught about 40 children by day and grown people at night, until the Union army moved everyone off the island in October 1862.

She married Edward King, a Black noncommissioned officer, a soldier who had risen through the ranks to lead other soldiers. She served with the 33rd U.S. Colored Troops as a nurse and laundress, and she taught soldiers to read. In 1902 she published a book about those years, *Reminiscences of My Life in Camp*. She died in 1912.

Memphis and New Orleans, 1866

White mobs in Memphis, Tennessee, attacked the city's Black neighborhoods in early May 1866. The mobs included city policemen, firemen and some businessmen. The attacks began after a clash between the police and Black Union soldiers who had just left the army. General George Stoneman had taken the soldiers' guns away. The mobs killed 46 Black people. Two white people also died.

Members of Congress formed a committee to look into the killings. Its members counted 75 people injured, 100 robbed and five women raped. The mobs burned 91 homes, 4 churches and 8 schools, every Black church and school in the city. No one was ever punished for the killings, as far as the records show.

Frances Thompson. Frances Thompson testified to the committee. She said that on May 1, 1866, seven white men broke into her home and raped her and her roommate, 16-year-old Lucy Smith. Accounts of her testimony differ on whether two or three of the men were police officers. The men also stole about $300.

Memphis police arrested Thompson in July 1876 for wearing women's clothing. Dr. Joseph Nuttall, who worked for the city, and three other doctors examined her body against her will and declared that she was a man. She could not pay the fine, and she was sentenced to 100 days on the chain gang, a crew of prisoners chained together and forced to work, cleaning streets.

Her opponents used the arrest to attack her testimony about the rapes. She died of dysentery, a disease of the gut, in the city hospital on November 1, 1876.

New Orleans. The men who wrote Louisiana's constitution of 1864 ended slavery in the state but did not give Black men the vote. In 1866 Republicans who wanted Black men to vote called these delegates back together to change the constitution. Mayor John T. Monroe declared the meeting unlawful and asked the army for help arresting the delegates.

The delegates met anyway, at the Mechanics' Institute in New Orleans, on July 30, 1866. About 200 unarmed Black men, most of them Union veterans, marched in support.

Sheriff Harry T. Hays had given police powers to many men, a lot of them former Confederate soldiers. These police attacked, with white mobs and firemen. By the National Park Service's count, they killed 34 Black people and wounded 119, and they killed 3 white delegates and wounded 17. The official report records higher totals: 38 killed and 146 wounded in all. General Philip Sheridan called it "an absolute massacre by the police."

BY 1868: Under the 14th Amendment, Black Americans born in the United States were citizens, and white mobs and police had killed dozens of Black people in Memphis and New Orleans.

Black political power

The 15th Amendment became part of the Constitution on February 3, 1870. It states that the right to vote "shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude," where abridged means cut down and servitude means slavery.

In the ten years that followed, 16 Black men served in Congress, 14 in the House and 2 in the Senate. All of them were Republicans from the South. Joseph Rainey of South Carolina became the first Black member of the House of Representatives on December 12, 1870. Robert Smalls served five terms in the House.

Across the South, about 2,000 Black men held public office during Reconstruction, some elected and some appointed. The historian Eric Foner has found more than 1,500 of them by name and listed them in his book *Freedom's Lawmakers*.

Hiram Revels and Blanche K. Bruce

Who: The first two Black United States senators. Revels was the first to serve. Bruce, born enslaved, was the first to serve a full six-year term.

When and where: Both represented Mississippi. Revels served from 1870 to 1871. Bruce served from 1875 to 1881.

Senators argued he had not been a citizen long enough.

Hiram Revels was born free in Fayetteville, North Carolina. He was a minister in the African Methodist Episcopal Church and a teacher. During the Civil War he served as a chaplain, a minister to soldiers, for Black regiments. In 1869 he won a seat in the Mississippi state senate.

Mississippi's state lawmakers voted 85 to 15 on January 20, 1870, to send him to the United States Senate. Democrats in the Senate argued against seating him. Some said he had not been a citizen until the 14th Amendment was adopted in 1868, so he had not been a citizen long enough to serve. The senators voted 48 to 8 to seat him, and on February 25, 1870, he became the first Black United States senator.

Revels served until March 3, 1871. That year he became the first president of Alcorn University. He died in 1901.

Blanche K. Bruce. Bruce was born enslaved near Farmville, Virginia, and Pettus Perkinson held him in slavery. When the Civil War began, Bruce escaped to Lawrence, Kansas, where he taught school. After the war he moved to Mississippi, where he was a sheriff and a tax collector in Bolivar County and the county's superintendent of education.

He was elected to the Senate on February 4, 1874. He served from March 4, 1875, to March 3, 1881, the first Black senator to serve a full term. Later he served as Register of the Treasury, an office in the federal government. He died in Washington, D.C., in 1898.

The promises broken

Within a year of the war's end, President Andrew Johnson and Southern lawmakers had taken back much of what freed people had been promised. Johnson had become president in April 1865, when John Wilkes Booth shot and killed President Lincoln.

Forty acres. Union general William T. Sherman issued Special Field Orders No. 15 on January 16, 1865. In it, Sherman set aside about 400,000 acres of coastal land, from Charleston to northern Florida, for freed families in plots of forty acres. About 40,000 people settled on the land. In the fall of 1865, President Andrew Johnson reversed the order and gave the land back to its former owners. The phrase "forty acres and a mule" comes from this broken promise.

The Black Codes. Mississippi's lawmakers passed the first Black Codes in November 1865, and lawmakers in other Southern states followed. Under the new vagrancy laws, which made it a crime to have no job or home, officials could arrest a Black person who could not prove he had a job. Under apprenticeship laws, officials could force Black children to work for white employers. Other laws required licenses to work in certain jobs. Officials hired out the people they arrested under these laws to work for others.

Citizens. The members of Congress answered with the Civil Rights Act of 1866. President Johnson refused to sign it, and they made it law anyway on April 9, 1866. Under it, people born in the United States were citizens, except Native people who paid no taxes. Black citizens had the same right as white citizens to make contracts, go to court and own property.

The members of Congress also approved the 14th Amendment, which became part of the Constitution on July 9, 1868. It states that people born in the United States are citizens, and that no state may deny any person "the equal protection of the laws," the same protection the laws give everyone else.

Sharecropping. Without land of their own, many freed families became sharecroppers. A sharecropper farmed a landlord's fields in exchange for a share of the crop. The landlord lent the family tools, seed and food, charged at

the plantation store's prices, and took the cost out of the family's share. The debt carried over from year to year, and families could not leave the land until it was paid.

Convict leasing

The 13th Amendment allowed forced labor as a punishment for crime, and Southern officials used that exception. Sheriffs arrested Black men, often for vagrancy or small crimes under the new codes, and county judges sentenced them. State officials then leased the prisoners, or rented them out, to planters, mine owners and railroads. The prisoners worked without pay. This was called convict leasing.

Alabama. Alabama officials leased the state's prisoners to companies from 1875 to 1928. State officials signed the leases, and company managers ran the prison camps. Officials sent most of the prisoners to coal mines run by companies such as the Tennessee Coal, Iron and Railroad Company, Sloss Iron and Steel, and Pratt Coal and Iron.

More than 95 percent of the county prisoners and 90 percent of the state prisoners were Black. In one count from the 1890s, 181 of 745 county prisoners in the mines died within two years, about one in four. County prisoners also had to work off their court costs, which made their sentences longer. In 1912 Alabama's state government took in more than $1 million from prison mining.

Terror

Confederate veterans founded the Ku Klux Klan in Pulaski, Tennessee, in December 1865. Klansmen, armed and in disguise, whipped freed people and the white people who worked with them, burned their homes and murdered them. They attacked mostly at night.

Schools and teachers. Klansmen went after schools and teachers. In late 1869, at Greensboro, Georgia, they drove away a teacher named R. H. Gladding. Abram Colby, a Black man, had just been elected to Georgia's state lawmaking body, and he supported the school. Klansmen took him out of his house and beat him nearly to death.

In Alabama, Klansmen burned many Black schools and churches. On July 11, 1870, at Cross Plains, Alabama, they killed a teacher of freed people, William Luke, a preacher from Ontario in Canada. Accounts say six or eight people were killed there.

Under the Enforcement Acts of 1870 and 1871, federal officials broke up the Klan for a time.

Colfax, 1873. White men carried out a massacre at Colfax, Louisiana, on Easter Sunday, April 13, 1873. The historian Eric Foner calls it the bloodiest single act of racial violence in Reconstruction. After a disputed election, Black militiamen and Republicans held the courthouse of Grant Parish, a parish being what other states call a county.

Christopher Columbus Nash, who claimed to be the sheriff, led more than 150 armed white men against them. Other accounts say about 300. The attackers fired a small cannon, set the courthouse on fire and shot the men who came out. That night some of the attackers killed their prisoners, most of them with shots to the head. Estimates of the number of Black men killed run from about 60 to 153. Two white men died.

A jury found three of the attackers guilty of conspiracy, planning a crime together. On March 27, 1876, in the case *United States v. Cruikshank*, the justices of the Supreme Court threw out the convictions. They ruled that the

rights at stake protected people only against actions by governments, not against private men. No one was ever punished for the killings.

Louisiana officials put up a marker in 1950 calling it a riot in which "three white men and 150 Negroes were slain." It was taken down in 2021.

The end of Reconstruction, 1877

The presidential election of 1876 ended in dispute. Five senators, five representatives and five Supreme Court justices decided it. They voted 8 to 7, Republicans against Democrats, to give the Republican, Rutherford B. Hayes, every disputed vote.

Democrats in Congress then stopped blocking the count. In return, Republicans agreed to end the army's control over the South. No written copy of this deal has ever been found. It is called the Compromise of 1877.

President Hayes then ordered the last federal troops out of the Southern statehouses. The last ones left the Louisiana statehouse in New Orleans on April 24, 1877. The 13th, 14th and 15th Amendments stayed in the Constitution, but federal officials stopped enforcing them in the South.

Plessy. The justices of the Supreme Court ruled 7 to 1 in *Plessy v. Ferguson*, on May 18, 1896, that states could keep Black and white people separate by law, under the rule known as "separate but equal." Justice Harlan was the only one to disagree. With that ruling, the justices upheld the segregation laws, laws separating people by race, that Southern lawmakers had already passed.

BY 1900

If you remember one thing: Hundreds of thousands of enslaved people freed themselves during the war, the 13th Amendment ended slavery in 1865, and within twelve years white lawmakers, mobs and judges had taken back much of what freedom had promised.

- January 1, 1863: Lincoln's Emancipation Proclamation takes effect.
- December 6, 1865: The 13th Amendment becomes part of the Constitution.
- April 24, 1877: The last federal troops leave the Louisiana statehouse.

Next: Sheriffs, judges and mine owners kept Black people working without pay well into the 1900s, and white mobs lynched thousands of Black people, killing them with no trial.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 8 MINUTES

Southern lawmakers, sheriffs, judges and company managers spent the first half of the 1900s running a system that took slavery's place. Lawmakers passed laws that kept Black and white people apart, and they took the vote from most Black men. Sheriffs arrested Black men for small crimes, judges sentenced them, and state officials rented them to mine companies, whose managers worked them without pay. White mobs lynched Black people by the thousands. Researchers at the Equal Justice Initiative have counted more than 4,400 such killings between 1877 and 1950.

The people who had been born into slavery were old by the 1930s. Writers paid by the federal government wrote down the life stories of more than 2,300 of them between 1936 and 1938.

Segregation and the stolen vote

Jim Crow. The justices' 1896 ruling in *Plessy v. Ferguson*, told at the end of the last era, let states keep Black and white people apart by law. Lawmakers across the South then passed laws that kept them apart in schools, railroad cars, waiting rooms, courtrooms and cemeteries, and at water fountains. This segregation, the separating of people by race, was written into what people called the Jim Crow laws.

The stolen vote. Southern lawmakers also took the vote from most Black men. The men who wrote Mississippi's constitution of 1890, the state's set of basic laws, set the pattern with three rules for voters. One was a poll tax, a fee a man had to pay before he could vote. Another was a literacy test, a reading test.

The third was the understanding clause, and it let one local officer decide who passed. Under it, a man had to be able to read any part of the state constitution. A man who could not read could still sign up to vote if the officer judged that he understood a part read aloud to him, or gave "a reasonable interpretation" of it.

Henry Williams. In Mississippi only qualified voters could sit on a jury, and officials made their jury lists from the books of registered voters. So the same rules that kept Black men from voting kept them off juries. An all-white jury found Henry Williams, a Black man, guilty of murder, and the judge sentenced him to be hanged.

Williams's lawyer took the case to the Supreme Court. In 1898 he told the justices that the officer who signed up voters was "the sole judge" of each test, so the officer could turn away any man he chose. The justices ruled against Williams.

Much later, in a 1965 case about the same rules, lawyers for the United States government told the Supreme Court that Black men had once been more than half of Mississippi's qualified voters. By 1899 they were about 9 percent.

The grandfather clause. The men who wrote Louisiana's new constitution added a grandfather clause in 1898. It let a man vote if his father or grandfather had voted before January 1, 1867. At that time most Black

Southerners had been enslaved, so the clause let white men who could not pass the tests vote anyway.

Louisiana had about 130,000 registered Black voters in 1896. By 1900 there were 5,320. By 1904, by the count of Equal Justice Initiative researchers, there were about 1,000.

Lynching

Researchers at the Equal Justice Initiative have documented more than 4,400 lynchings, killings by a mob with no trial, of Black people carried out as racial terror between 1877 and 1950. Other counts, which use different years and different rules for what counts, give different totals. Mobs hanged people and shot them.

Ed Johnson. An all-white jury in Chattanooga, Tennessee, found a Black man named Ed Johnson guilty of rape in 1906, though about a dozen witnesses said he was somewhere else. His lawyers asked the Supreme Court to look at the case again, and the justices stopped his execution while they did.

That night the sheriff, Joseph F. Shipp, took away the jail's usual guard and left only the night jailer. A mob broke into the jail, took Johnson to a bridge over the Tennessee River, hanged him from a beam and shot him. In 2000 a Tennessee judge threw out the guilty verdict.

White mobs used lynching to frighten Black people into staying in low-paid work and into obeying white Southerners. Black Southerners left the South to get away from the terror, in a movement known as the Great Migration.

Forced labor after slavery

Sheriffs, judges, state officials and company managers kept Black people working without pay well into the 1900s, through convict leasing and debt peonage. Under convict leasing, state officials rented prisoners out to companies, and company managers worked them without wages. Debt peonage meant forcing a person to work to pay off a debt.

Douglas Blackmon told this history in his book *Slavery by Another Name*, which won the Pulitzer Prize, one of the top American prizes for writing. In 2012 PBS showed a film made from the book.

The mines. Alabama's convict leasing, told in the last era, went on until 1928. In 1911, 123 Black county prisoners whom officials had leased to the Banner Mine were killed in an explosion there.

A prisoner named James Knox, from Mobile, died at the Flat Top mine in 1924. The first report of his death stated that he had killed himself by swallowing poison. An autopsy, an examination of the body after death, showed something else, according to a City of Birmingham article. He had died of heart failure, and the poison had been put into his body with a needle after he was dead.

The same article states that the injuries that killed him came from being whipped with a steel wire and lowered into hot water. The historian Mary Ellen Curtin writes that he was tortured by being lowered into a vat, a large tub, of boiling water.

Both accounts state that Knox was tortured to death, and they differ only on whether the water was hot or boiling. Neither account names who whipped him and put him in the water, who put in the poison, or who first called his death a suicide.

Alabama officials ended convict leasing on June 30, 1928. Alabama was the last state to end it.

Alonzo Bailey. Alonzo Bailey, a farm worker in Alabama, signed on to work for the Riverside Company for $12 a month and took $15 in advance, paid before the work was done. After about a month he left. Under Alabama law,

leaving a job after taking an advance was a crime, and the law barred him from telling the court why he had left. He was fined $30 and sentenced to 136 days of hard labor.

Booker T. Washington secretly helped pay for Bailey's lawyers. On January 3, 1911, in *Bailey v. Alabama*, the justices of the Supreme Court ruled 7 to 2 that the law broke the 13th Amendment, the part of the Constitution, added in 1865, that forbids slavery.

Lawmakers in other Southern states kept laws like it for decades. The justices struck down Georgia's law in 1942 and Florida's in 1944.

The last voices

Federal officials running the Federal Writers' Project, a government program that gave jobs to writers, sent interviewers to talk with people who had been born into slavery. Between 1936 and 1938 the interviewers worked in 17 states, wrote down more than 2,300 life stories and took 500 photographs. The Library of Congress keeps them in a collection called "Born in Slavery."

The Library of Congress also keeps sound recordings of people who were born into slavery, made between 1932 and 1975. The collection is called "Voices Remembering Slavery."

Fountain Hughes

Who: A man born into slavery in Virginia, one of the few people born enslaved whose own voice survives on a recording.

When and where: Born in Charlottesville, Virginia. Recorded by the Library of Congress in Baltimore, Maryland, on June 11, 1949.

"They'd sell us like they sell horses and cows and hogs."

Hermond Norwood of the Library of Congress interviewed Fountain Hughes in Baltimore on June 11, 1949, and the recording still exists. Hughes began: "My name is Fountain Hughes. I was born in Charlottesville, Virginia."

His grandfather, Wormley Hughes, was the enslaved head gardener at Monticello, Thomas Jefferson's plantation. Fountain Hughes said his father "got killed in the Army," and that left the children "to live on whatever people choose to give us."

He was never sold, he said, because "I was too young to sell." But he described how others were sold: "They'd sell us like they sell horses and cows and hogs and all like that. Have an auction bench, and they'd put you on up on the bench and bid on you."

He could not go anywhere without his enslaver's permission: "I couldn't go from here across the street, or I couldn't go through nobody's house without I have a note or something from my master." He said of being enslaved: "You're nothing but a dog. You're not a thing but a dog!"

NOT KNOWN: the year he was born. He said he was 101 years old, which would mean about 1848. Some reference books give 1854, and other accounts argue for a later year.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 4 MINUTES

Federal judges and lawmakers began to enforce the promises of the Civil War amendments in these fifty years, almost a hundred years after they were written.

The 14th and 15th Amendments, described in the 1850 to 1900 era, are changes added to the Constitution in 1868 and 1870. The 14th states that no state may deny any person "the equal protection of the laws," the same protection the laws give everyone else. Under the 15th, no one may be kept from voting because of race. For almost a hundred years, federal officials did not enforce them in the South.

The justices of the Supreme Court ruled in 1954 that public schools kept separate by race were against the Constitution. Members of Congress passed two laws in 1964 and 1965 that gave federal officials the power to enforce the amendments. After Alex Haley's book *Roots* came out in 1976 and ABC showed it on television in 1977, many Black families began tracing their ancestors back to slavery.

The amendments enforced

The justices of the Supreme Court all agreed in *Brown v. Board of Education*, on May 17, 1954, that "separate educational facilities are inherently unequal," unequal by their very nature. With that ruling, the justices threw out the "separate but equal" rule of *Plessy v. Ferguson* for public schools.

Two laws. The Civil Rights Act became law on July 2, 1964, and the Voting Rights Act on August 6, 1965. Under the Civil Rights Act, hotels, restaurants and other places open to the public could no longer turn people away or keep them apart because of race, and employers could no longer refuse people jobs because of race. Under the Voting Rights Act, no state or county could use any rule to keep a citizen from voting because of race.

With these laws, the members of Congress who voted for them gave federal officials the power to enforce the 14th and 15th Amendments. They came about a hundred years after the 13th Amendment forbade slavery.

Mississippi, 1995. Mississippi's state lawmakers voted in 1995 to approve the 13th Amendment, 130 years after it became part of the Constitution. No one filed the paperwork that would have made their vote official.

Roots and the search for family

An estimated 130 million people watched the *Roots* miniseries, a story told on television over several nights, when ABC showed it in January 1977. It was the largest audience a television series had ever had.

Alex Haley

Who: A writer whose book *Roots* told his family's story back to an enslaved African ancestor, and whose work led many Black Americans to search for their own families.

When and where: Born in Ithaca, New York, in 1921. *Roots* published in 1976. Died in Tennessee in 1992.

Movie: *Roots* (1977), a television miniseries on ABC based on Haley's book. It tells his family's story as drama. It is not a documentary about Haley.

A family story said an ancestor insisted "his real name was Kin-te."

Alex Haley spent part of his childhood in Henning, Tennessee, his mother's hometown. There his aunts and grandmothers told the family's stories. One was about an African ancestor named Toby, who "insisted that his real name was Kin-te."

Haley served twenty years in the United States Coast Guard, and he became a writer while he was in it. Later he traveled to Gambia, in West Africa. There a griot, a keeper of history who tells it from memory, told him the story of "his ancestor Kunta Kinte, captured by slave traders."

Roots came out in 1976 and won a special Pulitzer Prize in 1977. The television miniseries ran on eight nights in a row in January 1977 and won 145 awards, including nine Emmys, the top awards for television.

The challenges. In 1978 Haley agreed to pay the writer Harold Courlander $650,000 to settle a lawsuit claiming that Haley had copied passages from Courlander's novel *The African*. Professional genealogists,

people who trace family histories from records, have challenged links in the chain of records behind Haley's family story. Haley died in a Tennessee hospital in February 1992, of problems caused by diabetes.

NOT KNOWN: whether the records support every link Haley drew between his family and Kunta Kinte.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 10 MINUTES

Americans since 2000 have built museums about slavery, opened its records to anyone who wants to search them, and argued over whether to repair what it did. The Smithsonian's National Museum of African American History and Culture opened in Washington in 2016. In a project begun in 2015, volunteers made about 1.8 million names from the records of the Freedmen's Bureau, the federal office set up after the Civil War to help freed people, searchable online.

Lawmakers and city leaders have argued over payments or other repairs to the descendants of enslaved people. Federal officials removed or changed exhibits about slavery at some national parks in 2025 and 2026, and judges were still deciding in September 2026 whether that was lawful.

Museums, a holiday and a late vote

The Smithsonian's National Museum of African American History and Culture opened in Washington, D.C., on September 24, 2016. Its history galleries begin with the slave trade. Among the things on display is a cabin where enslaved people lived. The International African American Museum opened in Charleston, South Carolina, on June 27, 2023. It stands at Gadsden's Wharf, one of the main places where slave ships landed their captives.

Members of Congress passed the Juneteenth National Independence Day Act, and President Joe Biden signed it on June 17, 2021. Under it, June 19 is a federal holiday. It marks the day in 1865 when Union soldiers announced freedom in Galveston, Texas.

Two Mississippi residents found in 2012 that the paperwork for the state's 1995 vote approving the 13th Amendment had never been filed. It was officially recorded on February 7, 2013.

Celia's pardon. Celia was the enslaved girl Robert Newsom bought at 14 in 1850 and raped again and again until 1855, when she killed him. She was hanged that December, and the accounts do not name the officials who hanged her. On December 20, 2024, at the request of her descendants, Missouri's governor, Mike Parson, pardoned her, an official act that forgave her for the crime.

The records opened

For millions of Black Americans, the records of the Freedmen's Bureau are the first papers in which their ancestors appear by name, according to FamilySearch and the Smithsonian. The records include marriage registers, work contracts and school lists. Volunteers for FamilySearch, a genealogy group, typed up about 1.8 million names from them so that people could search them, in a project begun in 2015. The names can be searched at discoverfreedmen.org.

The GU272. The Maryland Jesuits, priests of a Catholic religious order, sold 272 enslaved people to plantations in Louisiana in 1838. They sold them in part to keep Georgetown College, now Georgetown University, from running out of money. It is one of the best-documented mass sales of people in American history. The people sold are now called the GU272.

Georgetown's leaders announced in 2016 that descendants of the GU272 would get an advantage when they applied to the university, and they renamed buildings. Genealogists have traced thousands of descendants, according to the Georgetown Memory Project in 2021.

The Jesuits and leaders of the descendants set up the Descendants Truth and Reconciliation Foundation in 2021, reconciliation meaning making peace after a wrong. The Jesuits promised to give $100 million to it. The Boston Globe reported that it is the largest pledge of its kind by a religious group in the United States.

The Cherokee Freedmen. The Cherokee treaty of 1866, told in the 1850 to 1900 era, promised the people Cherokee slaveholders had held in slavery, called Freedmen, "all the rights of native Cherokees."

In 2017, in the case *Cherokee Nation v. Nash*, a federal judge ruled that the treaty still bound the Cherokee Nation. Descendants of Cherokee Freedmen had a right to full citizenship in the nation. Cherokee leaders accepted the ruling. In 2021 the justices of the Cherokee Nation's own Supreme Court struck the words "by blood" out of its rules on citizenship.

Mélisande Short-Colomb

Who: A descendant of two people sold by the Maryland Jesuits in 1838, who enrolled at Georgetown University at the age of 63.

When and where: From New Orleans. Entered Georgetown University in Washington, D.C., in the fall of 2017.

She enrolled at Georgetown at 63, 179 years after the sale.

Mélisande Short-Colomb was a retired chef from New Orleans. She descends from Abraham Mahoney and Mary Ellen Queen, two of the 272 people the Jesuits of Maryland sold in 1838 to keep the college going.

She grew up hearing family stories from her grandmother and her great-aunts. In the summer of 2016 she learned that Mahoney and Queen had been part of the 1838 sale. In April 2017 Georgetown's leaders held a Liturgy of Remembrance, a religious service honoring the people who were sold. After that, she applied to the university, and she started there that fall.

At Georgetown she wrote a play, *Here I Am*, about her ancestors and the university.

Repair debated

Reparations are payments or other actions meant to make up for a wrong. Members of Congress have argued since 1989 over whether the United States should pay reparations for slavery.

H.R. 40. Representative John Conyers first introduced a bill called H.R. 40 in 1989. It would set up a commission, a group of people chosen to study slavery and its effects and to recommend ways to repair them, including a formal apology and payments. The number 40 comes from the forty-acre plots that General William T. Sherman set aside for freed families in January 1865, land President Andrew Johnson took back that fall.

The members of the House Judiciary Committee voted to move the bill forward for the first time in 2021. Representative Ayanna Pressley of Massachusetts introduced it again on January 3, 2025. As of September 2026, neither the full House nor the full Senate had voted to pass it, according to the records of Congress.

Evanston. The members of the city council of Evanston, Illinois, voted in 2019 to create the first reparations program paid for by a city. Council member Robin Rue Simmons led the effort. City officials set aside $10 million and in March 2021 approved its first grants of $25,000 for housing. The program is for Black residents who lived in Evanston between 1919 and 1969.

In those years Evanston's city officials used city laws to separate where Black and white people could live. The members of the city council passed Evanston's first zoning law, a law that sets what may be built in each part of a city, in January 1921, and Mayor Harry P. Pearsons signed it.

The law marked almost every block where Black people lived outside the west side of town for stores and businesses. As those blocks were turned over to businesses, the Black families living there were pushed out to the west side, the historian Andrew Wiese writes.

By August 2026, according to the Evanston RoundTable newspaper, 137 people had received a total of $3.47 million. A conservative group called Judicial Watch sued the city in May 2024, arguing that paying people based on

race breaks the 14th Amendment. On June 16, 2026, lawyers for the U.S. Department of Justice asked to join the lawsuit against the city. The case was still open in September 2026.

California and Maryland. In California, a state task force, a group the state set up to study reparations, delivered its final report on June 29, 2023. According to the state's Department of Justice, it made more than 115 recommendations, including a formal apology. Governor Gavin Newsom signed the state's apology in September 2024.

Newsom signed a law on October 10, 2025, creating a state Bureau for Descendants of American Slavery. The bureau is to check who qualifies, handle claims and recommend forms of repair. The law provides for no payments.

In Maryland, Governor Wes Moore vetoed a bill for a state reparations commission in May 2025, which means he refused to sign it into law. On December 16, 2025, Maryland's state lawmakers passed it over his veto, 31 to 14 in the Senate and 93 to 35 in the House. The 23-member commission is to study state and local policies from 1877 to 1965.

Slavery exhibits in the national parks, 2025 and 2026

President Donald Trump signed an executive order, a written command from the president to the people who run the federal government, on March 27, 2025. It was called "Restoring Truth and Sanity to American History." Interior Secretary Doug Burgum, who is in charge of the national parks, then ordered a review of how the signs and exhibits in the parks present the history of the United States.

Peter's photograph. Reporters for the Washington Post and the New York Times wrote in September 2025 that officials had ordered a copy of an 1863 photograph removed from an exhibit at Fort Pulaski National Monument, near Savannah, Georgia. The photograph shows the back of Peter, a man who escaped slavery in Louisiana in 1863, covered in scars from whipping. On September 16, 2025, Elizabeth Peace, who spoke for the Interior Department, told The Hill newspaper that park sites "were not asked to remove the photo." The two accounts differ.

The President's House. Officials removed the exhibits about slavery at the President's House site in Philadelphia in January 2026. That was the house where President George Washington lived, and where Ona Judge, an enslaved woman, walked out to freedom in 1796. On February 16, 2026, Judge Cynthia M. Rufe ordered the exhibits put back. Government lawyers appealed, and the judges of an appeals court, a higher court that hears appeals, later ruled that the administration had the power to replace that exhibit.

The national case. In a separate case, Judge Angel Kelley of the federal court in Massachusetts ruled on June 12, 2026, that the order could not be carried out at any of the park system's 433 sites. She ordered the removed exhibits put back by July 3. On July 2, 2026, the judges of the First Circuit Court of Appeals paused her order, so removals could go on while the case continued.

By the government's own count, in court papers filed in June 2026, exhibits had been removed or changed at 37 park sites. The case was still undecided in September 2026.

Joycelyn Davis

Who: A descendant of Charlie and Maggie Lewis. Charlie Lewis was one of the Africans smuggled into Mobile, Alabama, as captives on the *Clotilda* in 1860.

When and where: Africatown, in Mobile, Alabama, where she has lived all her life.

Movie: *Descendant* (2022), a documentary by Margaret Brown about the *Clotilda*, Africatown and the survivors' families. Joycelyn Davis appears in it.

"Our community is suffering, and you're asking about a ship?"

Joycelyn Davis descends from people who survived the last known slave ship to reach the United States, and she organizes gatherings in their honor in the town they founded. Her ancestors Charlie and Maggie Lewis were among the 110 Africans whom Captain William Foster carried from West Africa and smuggled into Mobile on the *Clotilda* in 1860, more than fifty years after bringing captives into the country became illegal.

She has lived in Africatown all her life. As a child she visited her great-grandmother in Lewis Quarters, one of the first pieces of land the *Clotilda* survivors bought, named for Charlie and Maggie Lewis. She went to the school and the church that her ancestors founded. In 2017 she sued the International Paper Company over pollution from its old mill near Mobile. She is a cancer survivor.

The ship. She said those words early in the search for the wreck of the *Clotilda*. After the wreck was confirmed in 2019, she came to see the ship as a way to bring money and attention to Africatown. That year she organized a reunion of *Clotilda* descendants. Of the crowd that came, she told National Geographic: "I never in a million years thought it would be that big."

A yearly festival she organizes is called Spirit of Our Ancestors. The 2021 festival, the third, honored the women who survived the *Clotilda*. She appears in *Descendant*, the documentary by Margaret Brown. It won a

special jury award at the Sundance Film Festival in January 2022 and was released in theaters and on Netflix on October 21, 2022.

THE THREE QUESTIONS, ANSWERED

1. **How did a servant in Virginia become a slave for life, and a child a slave from birth?** Virginia's judges and lawmakers did it one ruling at a time. Judges sentenced John Punch to serve for life in 1640, and in 1662 lawmakers ruled that a child born to an enslaved mother was enslaved for life.
2. **How did enslaved people fight back?** They worked slowly, ran away, sued, learned to read in secret and rose up with weapons. During the Civil War about half a million freed themselves by reaching the Union army.
3. **What happened to the freedom people won in 1865?** Freed people voted, built schools and sent 16 men to Congress. But within twelve years Southern lawmakers passed Black Codes, Klansmen whipped and murdered freed people, and federal officials stopped enforcing their rights in the South until members of Congress passed the laws of 1964 and 1965.

What changed: Slavery grew from a few court rulings in Virginia into a system that held four million people, and the freedom that ended it in 1865 took another hundred years to enforce.

FIVE DATES TO KEEP

July 9, 1640: John Punch is sentenced to serve for life.

1662: Virginia's law makes a child follow the mother into slavery.

January 1, 1808: Bringing captives from abroad becomes illegal.

December 6, 1865: The 13th Amendment ends slavery.

July 2, 1964: The Civil Rights Act becomes law.

NOT KNOWN: whether Virginia's colonists held the Africans of 1619 as servants for a set number of years or as slaves for life.

Where to go: The Smithsonian's National Museum of African American History and Culture, in Washington, D.C., whose history galleries begin with the slave trade.

Next: Chapter 25, Rights and Movements. It follows the campaigns for the rights the Constitution promised, from 1877 on.

Chapter 25: Rights and Movements

CHAPTER 25 OF 37 · RIGHTS AND MOVEMENTS · 10 ERAS · ABOUT 280 MINUTES

Most of the rights Americans have today were won by people who were first refused them and kept asking for years. Organizing often cost them their jobs, their freedom or their lives. Some of those rights were later taken away again.

Four men at Germantown, in Pennsylvania, signed a paper against owning enslaved people on April 18, 1688, and sent it to their Quaker church. The members of four church meetings read it, one after another, and passed it on without doing anything. Then the Quakers forgot it. People working to end slavery found it again in 1844, and it went missing a second time. In March 2005 it turned up in a vault in a Philadelphia meetinghouse. Haverford College, in Pennsylvania, keeps it now.

This chapter follows people who were told no: women, Black Americans, Native nations, Chinese and Mexican Americans, Japanese Americans, gay and transgender Americans, and disabled Americans. It goes era by era, from the clan mothers of the Haudenosaunee to the courtrooms of 2026. Watch how the methods grow. The first tools are a petition and a printed booklet. Later come the planned arrest, the boycott, the march, the sit-in, and the lawsuit brought on purpose to test a law. Watch, too, what each step costs, and how often a right that was won had to be won a second time.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. How did people without power get the people in power to listen?
2. What did organizing cost the people who did it?

3. Can a right that has been won be taken away again?

Five minutes? Read "Selma and the Voting Rights Act, 1965" in 1950 to 2000.

Can skip: "Two men climb the Gateway Arch, 1964", "Suffragists remember the clan mothers, 1891 and 1893", "Equal pay for the women's soccer team, 2016 to 2022". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 3 MINUTES

No record shows a rights movement in this land before 1500, but in at least one Native nation women held real power in government. A rights movement is a group of people who organize together to change a rule that denies them something.

About six hundred Native nations lived north of the Rio Grande, the river along part of today's border with Mexico, in 1492. Each one governed itself in its own way. The clearest record of women's power comes from the Haudenosaunee, a union of five nations in what is now New York, where women chose the chiefs and could remove them.

The clan mothers of the Haudenosaunee

The Haudenosaunee Confederacy has five founding nations: the Seneca, the Cayuga, the Onondaga, the Oneida and the Mohawk. The Onondaga Nation's own account places the founding on the shores of Onondaga Lake, in what is now central New York. The Onondaga still describe how their women choose leaders.

Each clan, a group of related families, has a clan mother. She chooses the man who speaks for her clan in council, the meeting where the chiefs talk and decide together. His title is Hoyane, which means chief. In the Onondaga account, a figure called the Peacemaker placed deer antlers on the headdress of every Hoyane to show that the man was a chief.

Taking the antlers. The clan mother can also start the removal of a chief. If he stops speaking for his clan, she warns him that he is not following the ways of the Great Peace, the laws the five nations agreed to live by when they joined together. If he still does not change, the clan removes him in council and takes his antlers off. The Onondaga say he has been "de-horned."

Haudenosaunee women held other powers too. An article by the National Park Service, the federal office that runs the national parks and historic sites, states that the women grew the food and shared it out, and through that work "controlled the economy" of their nations. They also held "the final authority over land transfers and decisions about engaging in war." They had the last word on giving land to anyone else and on going to war.

When a husband and wife separated, the wife took with her all the property she had brought into the home. The children went with her too.

When the union began. No one can prove when the five nations agreed to the Great Law of Peace. The Haudenosaunee keep their own account in spoken history and in wampum, belts and strings of shell beads that record agreements. By that account the date falls between about the year 1000 and 1400. Scholars working from written records mostly date it around 1450, the encyclopedia Britannica reports, and some date it to the late 1100s.

What the records can and cannot show

Almost everything written down about how these nations governed themselves was written after Europeans arrived, by Europeans. The nations kept their own records in spoken accounts and in wampum, cut from the white and purple parts of clam shells and woven into strings and belts.

The Onondaga Nation describes how a belt works. A speaker puts the words of an agreement into the wampum while the belt is woven. Every speaker after that uses the belt to remember the agreement and what has happened since. The Onondaga have kept the Confederacy's wampum since its founding.

NOT KNOWN: No record from before 1500 in this land names a single person who claimed a right that others denied.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 5 MINUTES

Under Spanish law in the 1500s, settlers forced Native people to work for them. Nobody here organized to change that law. The loudest objection came from a Spanish priest, Bartolomé de Las Casas, who argued in Spain that Native people had rights.

People also fought back. Enslaved Africans at San Miguel de Gualdape, a Spanish settlement on the coast of what is now Georgia or the Carolinas, rose up and escaped in October 1526. It is the first rebellion of enslaved Africans on record in what became the United States.

What was the encomienda?

The encomienda was a grant from the Spanish king that gave a settler the labor of a named group of Native people. It was one of the Spanish systems for forcing Native people to work.

On paper, the settler had to protect the people and teach them Christianity. In practice, he forced them to work for him and took the food and goods they produced. The historians who wrote the open textbook *The American Yawp* call it "an exploitive feudal arrangement in which Spain tied Indigenous laborers to vast estates." It used Native workers for the settlers' gain and bound them to huge farms, the way farm workers in old Europe were bound to a lord's land.

The same historians write that the settlers who held these grants "brutalized their laborers," beating and hurting the people who worked for them. Las Casas reached the Caribbean in 1502. He later wrote that he saw Spaniards "cut off the Hands, Noses, and Ears, both of Indians and Indianesses," meaning Native men and women. They did it, he wrote, "for no other reason, but only to gratify their bloody mindedness," for the pleasure of hurting people.

Hispaniola. On the Caribbean island of Hispaniola, Spaniards enslaved the Taíno, the Native people of the islands, and made them dig for gold. When the gold ran out, the Spaniards forced them to work on the encomienda farms. The Native population of Hispaniola fell from 60,000 in 1508 to fewer than 20,000 ten years later. Fewer than one person in three was left.

The authors of *The American Yawp* write of the Spaniards' "casual violence and dehumanizing exploitation," treating people as if they were not human. Within a few generations, the same authors write, the whole island had been emptied of its Native people.

King Charles I of Spain ended the encomienda in 1542 with a set of rules called the New Laws. Spanish officials replaced it with another forced-labor system, the repartimiento, and Spanish settlers went on forcing Native people to work for them.

Bartolomé de Las Casas

Las Casas was a priest with the Spanish soldiers who killed the Taíno gathered in a Cuban town in 1513. He spent the rest of his life arguing for Native people. At first he also asked for enslaved Africans to take their place.

He went to Cuba in 1513 as a chaplain, a priest who travels with soldiers, with the Spanish forces who were taking the island from the Taíno. At the town of Caonao, the Taíno had made cassava bread and fish for the soldiers under Captain Narváez. About two thousand people sat in the town square, and more than five hundred were in a large house nearby.

In his *History of the Indies*, Las Casas wrote what happened next. One Spaniard drew his sword, and then the whole hundred soldiers drew theirs. They began "to rip open the bellies, to cut and kill" the men, women, children and old people, who were all sitting down. They went into the large house and killed the people there too. Some escaped by climbing to the top of the house. Las Casas was in the town, but he had stepped away to another square shortly before the killing began.

Giving up his grant. For serving with the soldiers, Las Casas received land and an encomienda. In 1514 he told the people of his church that the whole encomienda system was wrong. He freed the Native people he held and began arguing for them to the Spanish officials on the island.

The request he later regretted. Two years later, in 1516, Las Casas asked the Spanish king to bring enslaved Africans to the Indies, Spain's islands and lands across the Atlantic, to take the place of Native workers. He believed Africans were better suited to hard physical labor. Slave traders had already been carrying enslaved Africans across the Atlantic for about sixteen years.

King Charles I of Spain, later Emperor Charles V, gave a man named Lorenzo de Gorrevod a charter, a written permission, to ship enslaved Africans across the Atlantic. The date was August 18, 1518.

Las Casas also wrote a short book about what Spanish settlers did to Native people, *A Brief Account of the Devastation of the Indies*. Its Spanish title is *Brevísima relación de la destrucción de las Indias*. Soon after he wrote it, King Charles issued the New Laws of 1542.

The debate at Valladolid. Charles V called Las Casas and a scholar named Juan Ginés de Sepúlveda to the town of Valladolid, in Spain, in 1550. The question was whether the Spanish had the right to make war on Native people and rule them by force. Sepúlveda argued that they did. Las Casas argued that they did not.

The two men spoke in front of a panel of churchmen and royal officials, among them the church scholars Domingo Soto and Melchor Cano. On the first day Sepúlveda spoke for three hours. The panel held its final meeting in 1551. Andrea Daher, a scholar writing for an encyclopedia of Sorbonne University in Paris, records no ruling by the panel.

Later in life, Las Casas changed his mind about enslaving Africans. In his *History of the Indies* he wrote at length against the African slave trade and the slave markets of Spain and Portugal. He did not publish that book while he was alive, so his change of mind was not public while the trade grew.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 10 MINUTES

In the English colonies of the 1600s, the men in charge punished people who spoke against them. The records name the people they punished. English colonists also brought English law with them, and under one of its rules a married woman did not count in law as a person separate from her husband. Nobody organized against that rule in this century.

The colony's leaders banished Anne Hutchinson from Massachusetts in November 1637 for what she taught in her own house. Massachusetts officials hanged Mary Dyer on Boston Common in 1660 for coming back to the colony as a Quaker, a member of a new religion that the colony's leaders had outlawed. In 1688 four men in Pennsylvania signed a protest against slavery and sent it to their church.

Coverture: what marriage did to a woman in law

The rule was called coverture. In law, a married woman was "covered" by her husband. The legal name for her was *feme covert*, a covered woman, and she had no legal standing of her own.

She did not control property, even property she had brought into the marriage. Her husband had full rights to any money or wages she earned. She could not sign a contract, a written deal that a court can make people keep. Nobody could take her to court, and she could not bring a case to court in her own name.

An adult woman who had never married, or whose husband had died, was a *feme sole*, a woman on her own. She could buy and sell property, sign contracts and go to court in her own name. Under English law, a woman lost those rights on the day she married.

Daily life. Wives ran businesses beside their husbands, and for husbands who were away. Some married women traded in their own names under a legal exception, and the people of their town held everyone to the deal. Under the law, whatever a wife held, she held because her husband allowed it.

Anne Hutchinson

Who: A Boston woman whom the colony's leaders tried and banished for what she taught at religious meetings in her own house.

When and where: Boston and Newtown, Massachusetts Bay Colony. Meetings from 1636, trial in November 1637, put out of her church in March 1638.

"You have power over my body," she told the men judging her.

Anne Hutchinson came to Boston, an English town built on Massachusett land, with her husband, William, and their children in 1634. From 1636 she held a weekly meeting in her house to go over the Sunday sermons. At first only women came. Then men came too, including some of the most important men in the colony.

Like the colony's leaders, she was a Puritan, one of the English Protestants who had come to Massachusetts to worship God in their own way. Puritans used the word grace for God's gift of being saved, of going to heaven after death. Hutchinson taught that God saved people by grace alone, and not because they behaved well. She also said she could tell which ministers and which neighbors had received it.

The trial. In November 1637 the colony's lawmakers, called the General Court, tried her for heresy, teaching against the church's beliefs. They sat as judges at Newtown, the town now called Cambridge, and the trial lasted two days. Governor John Winthrop told her she was "called here as one of those that have troubled the peace of the commonwealth," meaning the colony. He called her meetings "a thing not tolerable nor comely in the sight of God nor fitting for your sex."

She answered his Bible verses with Bible verses of her own. At the end she said God had spoken to her directly, by "an immediate revelation," and that God would curse the Puritans and their families for generations if they harmed her. The judges called that blasphemy, speaking against God. She told them, "You have power over my body, but the Lord Jesus hath power over my body and soul."

The trial record states the sentence: "Mrs. Hutchinson, the sentence of the court you hear is that you are banished from out of our jurisdiction as being a woman not fit for our society." A jurisdiction is the area a government rules, and banished meant forced out of it and forbidden to return. She asked, "I desire to know wherefore," or why, "I am banished?"

The second trial. Colony officials held her through the winter. In March 1638 the leaders of the Boston church tried her again and put her out of the church. Their charge said she had "rather been a Husband than a Wife and a preacher than a Hearer." It went on, "and a Magistrate than a Subject." A magistrate was an official with the power to judge cases.

That spring the family moved to Aquidneck Island, in what became Rhode Island, on land the minister Roger Williams helped them buy from the Narragansett. One of the first written rules of their new town, Portsmouth, said no person should be punished or "called into question on matter of religion … so long as he keeps the peace."

Her death. After her husband died, she moved in 1642 to Dutch-held land on Long Island Sound, the country of the Siwanoy, a Native people. The next winter the Dutch governor, Willem Kieft, and his council approved attacks by Dutch soldiers and armed settlers on the Native people of the region. On the night of February 25, 1643, those men murdered at least eighty Munsee people, and perhaps as many as 120.

The war that followed lasted until 1645. In August or September 1643, during that war, Siwanoy warriors killed Anne Hutchinson, her servants and all but one of the children who were with her. One daughter survived.

Massachusetts leaders outlaw Quakers, then hang four of them

Massachusetts officials hanged a woman named Mary Dyer in 1660 because she kept coming back to the colony as a Quaker. The Quakers followed George Fox, an Englishman who taught that men and women were equal in God's eyes. Quakers refused to take their hats off to people of higher rank, because they believed all people were equal. They also refused to swear oaths, solemn promises made in God's name, to any government. Massachusetts Governor John Endecott called them a "pernicious sect," a harmful religious group.

The laws. The men of the General Court passed a series of laws against Quakers. In late 1656 and 1657 they outlawed "the cursed sect of heretics commonly called Quakers." They fined ship captains who brought Quakers to the colony and people who owned Quaker books.

In October 1657 they set punishments for Quakers who came back after being sent away. A man who came back once was to have one ear cut off with a blade, and a man who came back a second time was to lose the other ear. For a third return, the law stated, "they shall have their tongues bored through with a hot iron," a hole burned through the tongue with a heated iron rod. For women who came back, the law set whipping on the bare back.

Three men's ears. The colony's leaders used that law in 1658 against a Quaker named Christopher Holder and two other Quaker men. One of the two was John Rous. Governor Endecott sent Rous to prison, and on September 7, 1658, Rous was sentenced to have his right ear cut off. A British reference book, the *Dictionary of National Biography*, states that the cutting was done inside the prison, although the law called for it to be done in public.

A chronology by the law professor Douglas Linder gives a different date for the cutting of the three men's ears, June 3, 1658. Linder adds that the men were also whipped, and then beaten twice a week for nine weeks. Neither account names the judges or the men who did the cutting, the whipping and the beating.

On October 19, 1658, the men of the General Court voted 12 to 11 to banish Quakers "upon pain of death." Under that law, a Quaker who came back after being sent away could be hanged.

Mary Dyer. Dyer had lived in Boston in the 1630s and was a close friend of Anne Hutchinson. When church leaders put Hutchinson out in March 1638, Dyer walked out of the church beside her. Around 1650 she met George Fox in England, and she came back to Boston as a Quaker in 1657. Officials jailed her as soon as she landed. She spent two and a half months in a dark cell with its windows boarded up.

Her husband got her out by promising she would not preach, and the family moved to Rhode Island. She kept going back to Massachusetts to stand by Quakers who were in prison there.

Governor Endecott sentenced Mary Dyer and two Quaker men to death on October 20, 1659. The men were William Robinson, a merchant from London, and Marmaduke Stephenson, a farm worker from Yorkshire. Dyer's son, William Dyer, asked the governor to spare her.

On October 26 Endecott signed an order giving her 48 hours to leave the colony. First, the order said, she must be taken to the gallows, the wooden frame used for hangings, and stand there with a rope around her neck while the two men were hanged. Officials hanged Robinson and Stephenson in front of her on October 27, 1659. Then they took her back to prison and sent her out of the colony.

She came back to Massachusetts in 1660. Her husband asked for her life, and she refused to say she was sorry. On June 1 officials hanged Mary Dyer near the Frog Pond on Boston Common, on the sentence of Governor Endecott and the General Court. About 200 soldiers stood around the gallows with guns, swords, long spears called pikes, and flags.

The count. Officials hanged a fourth Quaker in Boston in 1661, William Leddra, a cloth maker and Quaker minister from Cornwall, in England. An English Quaker named Edward Burrough counted what had been done to Quakers in Massachusetts between 1656 and 1660. His count lists 64 jailings

and 25 banishments. King Charles II of England ordered the punishments stopped on September 9, 1661, and said accused Quakers must be sent to England instead. By 1677, Quakers could meet openly in Massachusetts.

Four men sign a protest against slavery, 1688

Four men at Germantown, in Pennsylvania, signed a paper against owning enslaved people on April 18, 1688. Their names were Garret Hendericks, Francis Daniel Pastorius, Derick op de Graeff and Abraham op de Graeff. They sent it up through the meetings of their Quaker church. A National Park Service page calls it the first protest against African slavery made by a religious body in the English colonies.

Germantown stood on the land of the Lenape, the Native people of the Philadelphia region. Pastorius had bought the land in 1683 from William Penn, a Quaker to whom King Charles II had given a charter for Pennsylvania in 1681. The surviving records of that sale do not name the Lenape families who lived on it.

The protest rested on the Golden Rule, the teaching that people should treat others as they want to be treated. In the paper's own spelling, the rule was "that we shall doe to all men licke as we will be done ourselves."

Up through the meetings. A Quaker meeting is a group of Quakers who worship and make decisions together. A monthly meeting is a local group, a quarterly meeting joins several local groups, and a yearly meeting joins the Quakers of a whole region. The members of four meetings, one after another, read the paper and passed it on without acting. The first three were Germantown Monthly Meeting, Dublin Monthly Meeting and Philadelphia Quarterly Meeting.

The last was Burlington Yearly Meeting, in New Jersey, and its members voted to take no stand either way. Nothing changed because of the protest.

Lost and found. The Quakers put the paper aside and forgot it. Abolitionists, people working to end slavery, found it again in 1844.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 5 MINUTES

Single men, each writing on his own, printed the arguments against slavery in these fifty years. No organized group yet worked for anyone's rights, and the Quakers began to argue about slavery among themselves. Quaker leaders punished the members who raised the question first. By 1776 the Quakers of Philadelphia had changed their own rules anyway and banned slaveholding among their members. The era's last section runs past 1750, to 1778, to finish that story.

A Boston merchant writes a pamphlet against slavery, 1700

Samuel Sewall, a Boston merchant and magistrate, wrote a three-page pamphlet called *The Selling of Joseph* in 1700. A pamphlet is a short printed booklet. A Massachusetts Historical Society page calls it the first antislavery pamphlet published in America. Bartholomew Green and John Allen printed it in Boston.

Sewall argued that taking people and selling them is the crime the Bible calls man stealing, and he pointed to the verse Exodus 21:16. Then he went through the usual arguments in favor of slavery and answered each one.

Adam's case. Sewall wrote it because of a case in Boston. That year a petition, a written request signed by many people, went around Boston asking for the freedom of an enslaved man named Adam and his wife. The petition said they were "unjustly held in Bondage" by a merchant named John Saffin. Saffin had promised Adam his freedom after seven years of good behavior, and when the seven years were up, he would not free him.

Saffin printed an answer to Sewall in 1701, defending slavery and his own treatment of Adam. Adam went to court, and in 1703 he won his freedom. Sewall answered Saffin again in 1705 by reprinting an English attack on the slave trade.

Quakers who spoke first, and what their church did to them

Among the Quakers, an argument about slavery kept going in these years, and their own church leaders spoke out against the first Quakers who pressed it. Ralph Sandiford published *A Brief Examination of the Practice of the Times* in Philadelphia in 1729. It argued against owning slaves, and Quaker leaders spoke out against it in public.

Benjamin Lay in Barbados. Benjamin Lay was born in Essex, in England, in 1682. From 1718 he and his wife spent about eighteen months in Barbados, an island in the Caribbean where enslaved Africans already outnumbered the white settlers by 1660, about 27,000 to 26,000. He later wrote that there he "saw and heard of such very great Barbarity," or cruelty, "used toward the Slaves, Night and Day."

A man named Richard Parrot whipped the people he enslaved "very severely" every Monday morning. One of them, a barrel maker, told Lay he would not be whipped on Monday morning, and he killed himself on a Sunday. Hungry enslaved workers came into the Lays' shop to buy, to beg, and sometimes to steal food. Lay wrote that when he caught them he sometimes whipped them, "but I have been sorry for it many times."

Near Philadelphia. Lay then settled near Philadelphia. He was just over 4 feet tall, with a hunched back and thin arms and legs. For a time he lived in a cave with a library of about 200 books. His wife, Sarah Lay, was also small and had a curved spine. She was a recorded Quaker minister, a speaker her meeting officially recognized.

Lay published a book against slaveholding in 1737 with a long title: *All Slave-Keepers That Keep the Innocent in Bondage, Apostates*. An apostate is a person who has abandoned their faith. Benjamin Franklin printed it and left his own name off it.

Quaker leaders spoke out against the book, and the Quakers of Philadelphia Yearly Meeting disowned Lay. Disowning was a formal statement that a member no longer shared an essential part of the faith. The member's name came off the list, and he could no longer hold certain offices, though he could still come to worship. Sarah Lay stayed a member all her life.

The sword and the book. At the yearly meeting's gathering in Burlington, New Jersey, in 1738, Lay stood up in front of the Quakers there. His words began, "Oh, all you negro masters, who are contentedly holding your fellow-creatures in a state of slavery during life," using the word of the time for Black people. He threw off his plain Quaker cloak. Underneath he wore a soldier's uniform, in front of people who were committed to peace.

Holding people as slaves, he said, was as right, or "as justifiable," as "if you should thrust a sword through their hearts, as I do through this." Then he drove a sword into a hollowed-out book. Inside it he had hidden an animal bladder filled with pokeberry juice, and the red juice sprayed the people near him.

The Quakers carried him out and laid him on the doorstep. He lay there for the rest of the day, so everyone leaving had to step over him. Lay died in 1759.

The Quaker meetings change their rules, 1754 to 1778

Quakers changed their rules about slavery step by step after 1750. The Quakers of Philadelphia Yearly Meeting published a paper in 1754 that called slavery a sin, and sent it to other meetings. Four years later the members of the yearly meeting spoke out against buying and selling people, but still allowed members to keep the people they already held.

The ban. Philadelphia Yearly Meeting's members banned slaveholding among themselves in 1776, 88 years after the four men at Germantown signed their protest. A Quaker who held people in slavery could now be disowned, and Philadelphia Quakers disowned the first members for it in 1778.

Quakers in other regions made the same change in those years. The members of New England Yearly Meeting made slaveholding a reason to disown a member in 1773. New York Quakers spoke out against slaveholding in 1774, and North Carolina Quakers made it a reason to disown a member in 1776.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 12 MINUTES

People left out of the Revolution's promises answered with the Revolution's own words. The delegates to the Continental Congress voted on July 4, 1776, to adopt the Declaration of Independence, which states that "all men are created equal." The men who wrote the new state constitutions of 1776 kept women from voting, except in New Jersey.

Black taxpayers in Massachusetts asked why they paid taxes without a vote. In New Jersey, some women and some free Black men voted for thirty-one years, until the state's lawmakers took the vote away in 1807. In Philadelphia, a group of men formed a society in 1775 to help free people who had been seized and held as slaves against the law.

Dinah Nevil and the first antislavery society, 1775

The Philadelphia antislavery society of 1775 started because one woman said she was free. Her name was Dinah Nevil, and the records call her an Indian woman, meaning a Native American. A Virginia man named Benjamin Bannarman bought Nevil and her four children from Nathaniel Lowry of New Jersey in 1773. When they were delivered in Philadelphia, Nevil said in public that she and her children were "free people."

The mayor of Philadelphia sent Nevil and her children to the city's Work House, a building where the city held people, to wait for a hearing. A group of Quakers led by Israel Pemberton brought a lawsuit for her. The case ran for two years. At the end, the judges ruled that Dinah Nevil and her children were slaves. The society's records do not name the judges.

The society. After that ruling and others like it, a group of men met at the Rising Sun Tavern in Philadelphia on April 14, 1775. They formed the Society for the Relief of Free Negroes Unlawfully Held in Bondage. Sixteen of the 24 first members were Quakers. Thomas Harrison was the secretary, and Anthony Benezet was a member.

A Historical Society of Pennsylvania page calls it the first abolition society in the western world. Its first work was helping free people of color, people who were not white, who had been seized and held as slaves. The members stopped meeting in November 1775. Most of them were Quakers, who refused to fight in the war with Britain, and they believed that refusal would turn people against the society.

How Nevil got free. Dinah Nevil never won her case. Thomas Harrison, who had been caring for her and her children, used his own money in 1781 to buy the family from the man who claimed them. Then he freed them. Judges had kept rejecting her claim, and buying her was the only way left. Eight years had passed since she first said she was free.

The society grows. The society began meeting again on April 23, 1787, and let in members who were not Quakers. Its members elected Benjamin Franklin president. Later members included Benjamin Rush, Thomas Paine and John Jay. People in other states set up societies like it. New York had one by 1785, two years before the Philadelphia society met again. In 1787 Richard Allen, Absalom Jones and other Black Philadelphians formed their own group, the Free African Society.

The Philadelphia members got a charter in 1789, an official paper from the Pennsylvania government that recognized the society. They also took a longer name: the Pennsylvania Society for Promoting the Abolition of Slavery, for the Relief of Free Negroes Unlawfully Held in Bondage, and for Improving the Condition of the African Race. By 1790 Delaware, Maryland and Connecticut had societies too.

Abigail Adams

Who: A Massachusetts woman who asked her husband, while he helped lead a new country, to "Remember the Ladies" in its laws.

When and where: Braintree, Massachusetts. Letters of March 31, April 14 and May 7, 1776.

Movie: John Adams (2008 HBO miniseries). The series is about John Adams and his family. Abigail is a lead character, not the subject.

"Remember the Ladies," she wrote. "I cannot but laugh," he answered.

John Adams had been away at the Continental Congress in Philadelphia since 1774, and that summer he helped draft the Declaration of Independence. Abigail Adams stayed at home in Braintree, the town now called Quincy, Massachusetts, and ran the family farm and its money. The couple wrote to each other often. The Massachusetts Historical Society keeps their letters.

On March 31, 1776, she wrote, in her own spelling, "I long to hear that you have declared an independency." She went on: "and by the way in the new Code of Laws which I suppose it will be necessary for you to make I desire you would Remember the Ladies, and be more generous and favourable to them than your ancestors."

"Do not put such unlimited power into the hands of the Husbands," she wrote. "Remember all Men would be tyrants if they could." Tyrants are rulers who use their power cruelly. "If perticuliar care and attention is not paid to the Laidies we are determined to foment a Rebelion, and will not hold ourselves bound by any Laws in which we have no voice, or Representation." To foment a rebellion is to stir one up.

What she was asking about. In 1776 coverture still governed marriage in the colonies, and a husband controlled everything his wife owned and earned. The rule was centuries old. An English lawyer, William Blackstone, had written it down a few years earlier in his *Commentaries on the Laws of England*, published from 1765 to 1769.

"By marriage, the husband and wife are one person in law," Blackstone wrote, "that is, the very being or legal existence of the woman is suspended during the marriage." While she was married, a wife did not exist in law as her own person.

The colonists' own words. In her March letter, Abigail Adams warned that women would not obey laws in which they had "no voice, or Representation." She was using the colonists' own complaint against Britain. That July the delegates accused the British king of "imposing Taxes on us without our Consent." They called "the right of Representation in the Legislature," a say in the body that makes the laws, "a right inestimable to them," too precious to measure.

His answer. John Adams wrote back on April 14, 1776: "As to your extraordinary Code of Laws, I cannot but laugh." He wrote that the war had "loosened the bands of Government every where," He listed who had grown bold: "That Children and Apprentices were disobedient," "that schools and Colledges were grown turbulent," meaning rowdy, and "that Indians slighted their Guardians and Negroes grew insolent to their Masters."

Slighted means treated without respect, and insolent means rude to someone in charge. By "Negroes" and "their Masters" he meant enslaved Black people and the men who enslaved them. He would not give up the men's power, he wrote, because that "would compleatly subject Us to the Despotism of the Peticoat." Despotism is rule by a tyrant, and a petticoat was a woman's underskirt. He meant rule by women.

Her reply. She wrote back on May 7, 1776: "I can not say that I think you very generous to the Ladies, for whilst you are proclaiming peace and good will to Men, Emancipating all Nations, you insist upon retaining an absolute power over Wives," emancipating meaning setting free. She added that "Arbitary power is like most other things which are very hard, very liable to be broken," arbitrary power being power used however the ruler likes, with no rules to limit it.

> No lawmakers in any state changed a law for women because of these letters, which were private. Her grandson Charles Francis Adams published a book of her letters, *Letters of Mrs. Adams, the Wife of John Adams*, in 1840, more than twenty years after she died.

Some women and free Black men vote in New Jersey, 1776 to 1807

Unmarried women and free Black men who owned enough property could vote in New Jersey from 1776 to 1807. The state's constitution of 1776 gave the vote to "all inhabitants of this colony, of full age, who are worth fifty pounds ... and have resided within the county ... for twelve months." It did not say male, and it did not say white. The other states' constitutions of 1776 limited the vote to a "freeman," a "man" or a white man, and every one of them left women out.

Who could pass the test. Because of coverture, only unmarried women and widows could meet New Jersey's property test. A married woman could not own fifty pounds of anything, because in law everything she had belonged to her husband. Members of the state assembly said so in 1800: "Our Constitution gives this right to maids or widows black or white," maids meaning unmarried women. Some losing candidates later complained that married women had voted anyway.

The names on the lists. The state's election laws of 1790 and 1797 described the voter as "he or she." Researchers at the Museum of the American Revolution have found 163 women's names on nine lists of voters from 1800 to 1807. That count is the lowest possible number, because only nine lists survive.

Sarah Eoff, Margaret McDonald and Eleanor Boylan are on the 1800 list for Bedminster Township. Eleanor Boylan was a widow of about 51 when she voted. Four women of one family, Rebecca, Ann, Catherine and Sarah VanDike, voted together in October 1801. The 1801 list for Montgomery Township holds at least 46 women and at least four free Black men, among them Caesar Trent of Princeton.

The vote taken away. The men who made New Jersey's laws took the vote away in November 1807. Earlier that year, in February, Essex County held a vote on whether to build a new courthouse in Newark or in Elizabeth. People

on both sides broke the rules and brought in voters who had no right to vote. In Elizabeth the votes counted came to 279 percent of the people allowed to vote, nearly three votes for every voter.

The new law limited the vote to "free, white, male citizens." It took the vote from women, from free Black men and from recent immigrants. In its opening paragraph the lawmakers wrote of "doubts" about letting "aliens, persons of color, or negroes" vote.

Aliens meant people from other countries who were not citizens. An exhibit by the Museum of the American Revolution says the lawmakers blamed women, people of color and newcomers for all the cheating, which the museum calls scapegoating, putting the blame on people who were not at fault.

Why they did it. Writers for the National Park Service, the New Jersey Historical Commission and the Museum of the American Revolution all say the lawmakers acted for party reasons, not out of a debate about women's rights. The museum's historians also link the law to the cheating in the courthouse vote. The two parties of the time were the Federalists and the Democratic-Republicans.

The three disagree about which party women's votes had helped. A National Park Service page says women often voted for the Federalists, and that the law helped the rival Democratic-Republicans before the 1808 presidential election. A New Jersey Historical Commission teaching sheet says Federalists had come to believe that women's votes helped the Democratic-Republicans.

No vote, no taxes: Paul and John Cuffe, 1780

Seven free Black men of Dartmouth, Massachusetts, told the state's lawmakers in February 1780 that they should not be taxed if they could not vote. They were John Cuffe, Adventur Child, Paul Cuffe, Samuel Gray, Pero Howland, Pero Russell and Pero Coggeshall. John and Paul Cuffe were brothers. Gray, Howland and Russell signed with a mark instead of a written name.

The petition said that "by reason of long bondage and hard slavery, we have been deprived of enjoying the profits of our labor or the advantage of inheriting estates from our parents." They were taxed all the same, although "we are not allowed the privilege of freemen of the State, having no vote or influence in the election of those that tax us." It also said that "many of our colour (as is well known) have cheerfully entered the field of battle in the defence of the common cause," meaning they had fought in the Revolution.

The new Massachusetts constitution of March 1780 contained nothing that answered their complaint. The Cuffe brothers wrote to the county court and to the town's leaders, calling themselves both "Indian men" and "free Negroes." They refused to pay their taxes, and Dartmouth's town officials put them in jail for it.

Prince Hall asks for schools, 1787

Prince Hall and other Black Bostonians asked the Massachusetts lawmakers for schools for their children in 1787. No law barred Black children from Boston's free schools, but the National Park Service records that Black students there "found themselves at the mercy of hostile teachers and fellow students." The petition said they "receive no benefit from the free schools in the town of Boston, which we think is a great grievance," a wrong worth complaining about, "as by woful experience we now feel the want of a common education."

The lawmakers turned the petition down. They turned down a second petition in 1796. In 1798 the families opened their own school, the African School. It met in the home of Primus Hall, Prince Hall's son.

Judith Sargent Murray argues that women's minds are equal, 1790

Judith Sargent Murray published an essay called "On the Equality of the Sexes" in 1790. She was born on May 1, 1751, in Gloucester, Massachusetts. The essay ran in the *Massachusetts Magazine* under the pen name "Constantia," a made-up name for signing her writing.

She argued that men and women have equal minds, and that women fell behind only because girls did not get the education that boys got. One line of the essay asks "in what the minds of females are so notoriously deficient, or unequal." Unlike Abigail Adams's private letters, the essay was printed where anyone could read it.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 25 MINUTES

Women who organized against slavery in these fifty years learned to gather signatures, print their arguments and speak to crowds, and then some of them turned the same methods to their own rights. Ministers, lawmakers and mobs attacked them for it. Black families in Boston campaigned to get their children into the city's schools.

Teachers in Hartford, Connecticut, began teaching deaf children together in sign language in 1817. At Seneca Falls, New York, in July 1848, more than 300 people met. One hundred of them signed a declaration that listed the wrongs men had done to women, and the people at the meeting voted to demand the vote.

Deaf children taught together, 1817

The American School for the Deaf opened at Hartford, Connecticut, on April 15, 1817, in a building called Bennett's City Hotel. Seven pupils came full time in the first classes. Teachers taught them in sign language, using a method from France.

Thomas Hopkins Gallaudet founded the school with Laurent Clerc, a deaf French teacher whom Gallaudet brought back from Paris. A Hartford doctor, Mason Fitch Cogswell, and ten other Hartford men backed them. Cogswell's deaf daughter, Alice Cogswell, was one of the first pupils.

Public money. Connecticut's lawmakers voted the school $5,000 in October 1816, before it opened. An essay by John Crowley for the Disability History Museum calls that grant the first public money for educating Americans with disabilities. In 1819 members of Congress voted the school 23,000 acres of public land in Alabama, after a motion by Henry Clay.

It was land the United States had taken from Native nations, and the surviving accounts do not say which nation's land it had been. The school's leaders sold the land to build up an endowment, a sum of money kept and invested so that

its earnings pay for the school's work.

Girls ask for the same lessons as boys

Some of the first organized demands for women in these years were about schooling. Girls' schools usually taught manners and fine arts, and a few women opened schools that taught girls the subjects boys learned.

Emma Willard wrote *A Plan for Improving Female Education* in 1819 and addressed it to New York's lawmakers. She argued that young women needed the same subjects young men were taught. With the support of Governor DeWitt Clinton, she opened the Troy Female Seminary in Troy, New York, in 1821. A seminary was a school for older girls or young women.

Catharine Beecher and her sister Mary opened the Hartford Female Seminary in Connecticut on May 20, 1823. Their pupils studied geography, world history, Latin, rhetoric (the art of speaking and writing well), philosophy and the natural sciences. Within three years the school had 100 full-time pupils.

Mount Holyoke. Mary Lyon began raising money for a school for women in 1834. Gifts ran from six cents to $1,000. Women's sewing circles sent quilts and bedding, and the school's trustees, the people in charge of its money and buildings, gave stoves and furniture. She opened Mount Holyoke Female Seminary at South Hadley, Massachusetts, in 1837. Tuition was $60 a year.

A history page by Mount Holyoke College says Lyon "endured ridicule from those who felt her ambitious undertaking would be 'wasted' on women." It adds that "The idea of a college for women was horrifying to many people in the 1830s."

Oberlin. At Oberlin, in Ohio, women won the chance to earn a college degree in two steps. Oberlin stands on land that the college's own art museum calls "unceded ancestral lands" of the Erie, Wyandotte, Mingo and other Native nations, unceded meaning never given up by treaty or agreement.

Women studied beside men at Oberlin from its opening in 1833, but in a Ladies Course that ended with a diploma, not a degree. Four women entered the course that led to a bachelor's degree in 1837: Mary Kellogg, Mary Caroline

Rudd, Mary Hosford and Elizabeth Prall. Rudd, Hosford and Prall graduated in 1841. Kellogg ran out of money, left, and came back later.

Oberlin was the first college to give bachelor's degrees to women in classes with men. It also became, in 1835, the first college with a rule of admitting Black students.

Boston's Black families and the city's schools

Boston's Black families opened the African School in Primus Hall's house in 1798. They moved it into the basement of the African Meeting House in 1808, and in the mid-1830s it moved into the Abiel Smith School. The Smith School became the segregated school where most of Boston's Black pupils were taught, kept apart from white pupils by race. The members of Boston's Primary School Committee kept separate schools for Black and white children.

The boycott. William Cooper Nell and others organized a boycott of the Smith School in the late 1840s, which means families kept their children out of it in protest. They also gathered signatures against it.

Sarah Roberts. A father, Benjamin Roberts, asked the Primary School Committee four times to let his five-year-old daughter, Sarah, into the school nearest their home. To reach the Smith School she had to walk past five schools for white children. The committee's members refused each time, and in 1848 he sued the city of Boston. The Roberts family lost the case, and the committee's members kept the schools separate.

Women petition Congress, 1829 to 1830

A petition is a written request to people in power, signed by the people who are asking. Women had no vote, and petitions were the way they first spoke to Congress about national questions. The House of Representatives' own historian says women first petitioned on political issues in 1829 and 1830.

The question was Indian removal, the plan to force the Cherokee and other Native nations off their land. Catharine Beecher wrote a *Circular Addressed to Benevolent Ladies of the United States* on December 31, 1829. "It may be, that female petitioners can lawfully be heard, even by the highest rulers of our land," she wrote. More than 1,500 women signed petitions to Congress against removal. The women of Steubenville, Ohio, called themselves "the feeblest of the feeble" in theirs, on February 15, 1830.

Members of Congress mocked the women in public. Senator Thomas Hart Benton of Missouri told "these ladies" to "sit down on the way side, and wait for the coming of the conquerors." In 1830 a majority in Congress voted for the Indian Removal Act.

Maria W. Stewart speaks in Boston, 1832

Maria W. Stewart, a free Black woman, spoke at Franklin Hall in Boston in September 1832, to an audience that included men. A National Park Service page calls it one of the first recorded times an American woman of any race spoke in public.

Stewart was born in 1803 in Hartford, Connecticut. In her own words she "was left an orphan at five years of age" and "was bound out in a clergyman's family," sent to work as a servant in a minister's house. In Boston she and her husband, James W. Stewart, lived among the city's free Black families. William Lloyd Garrison printed her essay "Religion and the Pure Principles of Morality" in 1831 in his antislavery newspaper, *The Liberator*.

Her words. "How long shall the fair daughters of Africa be compelled to bury their minds and talents beneath a load of iron pots and kettles?" she asked in her speeches. She urged her listeners, "Sue for your rights and privileges."

Audiences turned against her. She scolded Black men in public for drinking too much, and some people objected that it was improper for a woman to speak in front of men. She gave a farewell speech on September 21, 1833. She asked, "What if I am a woman," and said it was "no use for me as an individual, to try to make myself useful among my color in this city."

She moved to New York in 1834 and taught school. She later worked as matron, the woman in charge of housekeeping and care, at the Freedmen's Hospital in Washington, where she died on December 17, 1879.

Prudence Crandall and Sarah Harris

Who: A young Black woman who asked to be taught, and the white teacher who was arrested, tried and attacked for teaching her and other Black girls.
When and where: Canterbury, Connecticut, 1832 to 1834.

"I want to get a little more learning," Sarah Harris told her teacher.

Sarah Harris had finished primary school, and she wanted enough schooling to teach Black children in the town of Norwich. Her father handed out *The Liberator*, Garrison's antislavery newspaper. In 1832 she asked Prudence Crandall to let her into Crandall's school for girls in Canterbury, Connecticut. "I want to get a little more learning, if possible enough to teach colored children," she said, using the word of the time for Black people. "If you think it will be the means of injuring you, I will not insist on the favor."

Crandall admitted her. The white families took their daughters out of the school.

A school for Black girls. In the spring of 1833 Crandall went to Boston to see Garrison. Then she traveled around New England asking Black families to send their daughters. Her advertisements said the school would reopen on April 1, 1833, for "young ladies and little misses of color." About 24 pupils came, and most of them boarded in the house.

The man who led the fight against the school was Andrew T. Judson, a lawyer and politician who lived next door. "We mean there shall not be such a school set up anywhere in our State," he told the minister Samuel J. May. He also said, "They are an inferior race of beings, and never can or ought to be recognized as the equals of whites."

The Black Law. The lawmakers of the Connecticut General Assembly passed what people called the Black Law on May 24, 1833. Under it, a school in the state that took Black pupils from outside Connecticut

without the town's permission was breaking the law. They wrote it to close Crandall's school.

Connecticut officials arrested Crandall on June 27, 1833, and she spent a night in jail. Judson led the case against her. At her first trial the jury could not agree. At the second, in October 1833, Judge David Daggett told the jury that Black Americans were not citizens, so the protections her lawyers pointed to did not cover her pupils. The jury found her guilty.

The judges of the Connecticut Supreme Court threw out the guilty verdict, the jury's decision, on a technical point on July 26, 1834. They did not rule on the law itself, so the Black Law still stood.

The town against the pupils. Canterbury's town officials went after the pupils too. Ann Eliza Hammond was a 16-year-old pupil from Providence, Rhode Island, who arrived in April 1833. Town officials used the state's vagrancy law against her, a law against people with no home or work in the town. Its punishment was whipping "on the naked body not exceeding ten stripes," up to ten lashes of a whip on bare skin. Crandall paid so that no one whipped her.

Shopkeepers would not sell to the school, and people threw stones and eggs at the pupils. Someone hung a dead cat at the school door. In January 1834 a fire set by an unknown person damaged the building.

The last night. A mob of armed men broke the windows of the house on the night of September 9, 1834, and went through it with weapons while Crandall and her pupils were inside. A National Park Service page states that the mob broke more than ninety windows. An account in the Online Review of Rhode Island History says five main windows on the first floor. No one was ever charged, and no record names the attackers. Crandall closed the school the next morning.

Crandall married a Baptist minister, Calvin Philleo, and moved west to Illinois and then Kansas. Connecticut's lawmakers voted her a pension of $400 a year in 1886, and she died in Kansas in 1890, aged 87. Sarah Harris became an abolitionist and a conductor on the Underground

> Railroad, helping people escape from slavery. In 1877 she traveled to Kansas to visit Crandall, and the two women wrote to each other about their old pupils.

BY 1834: Women had petitioned Congress for the first time, a free Black woman had spoken to men and women in Boston, and a mob had closed a school for Black girls in Connecticut.

Mobs attack the organizers, 1835 to 1838

White mobs in Boston, Alton and Philadelphia attacked people who organized against slavery between 1835 and 1838. The mobs broke up meetings, destroyed printing presses, burned a hall and killed a newspaper editor. No one was convicted for any of the three attacks.

Boston. A mob of about 5,000 men surrounded a meeting of the Boston Female Anti-Slavery Society at its room on Washington Street on October 21, 1835. Maria Weston Chapman, her sisters Caroline, Anne and Deborah Weston, and eight other women had founded the society in 1834. Deborah Weston called it "the day when 5,000 men mobbed 45 women." A report in the *Hampshire Gazette* of October 28, 1835, described the crowd as citizens "calling themselves 'respectable.'"

When Mayor Theodore Lyman asked the women to leave, Maria Weston Chapman answered, "If this is the last bulwark of freedom, we may as well die here as anywhere." A bulwark is a strong wall that protects. The women walked out through the hissing crowd and finished their meeting at the Chapman house.

The mob caught William Lloyd Garrison and dragged him through the streets at the end of a rope. Mayor Lyman and other men took him to the Leverett Street Jail and kept him there overnight so the mob could not reach him. No record names a man in the mob or shows that anyone was charged.

Alton. A mob in Alton, Illinois, shot and killed Elijah Lovejoy on November 7, 1837. He was a Presbyterian minister who printed an antislavery newspaper. After threats to hurt him, he had moved from St. Louis to Alton, 25 miles away,

for safety. Mobs in Alton smashed three of his printing presses.

That night Lovejoy and a group of men guarded a fourth press in a warehouse. About 20 or 30 men of the town surrounded the building. Men in the armed mob shot Lovejoy five times as he stood in an open doorway. He died within the hour, two days before his 35th birthday.

Judge William Martin and a jury in Alton's city court tried the men who had defended the press, for riot, in January 1838. A riot is a violent disturbance by a crowd. The jury found the warehouse owner, Winthrop Gilman, not guilty in about fifteen minutes, and the prosecutor dropped the charges against the other eleven defenders.

Then eleven men of the mob, among them John Solomon, Levi Palmer and James M. Rock, were tried for riot for breaking in and destroying the press. The jury found them not guilty on January 20, 1838. No one was charged with killing Lovejoy, and the court record does not name who fired the shots.

Philadelphia. A mob in Philadelphia burned down Pennsylvania Hall, a new meeting hall where antislavery groups met, on May 17, 1838. The Pennsylvania Hall Association had raised about $40,000 to build it, and the Philadelphia Female Anti-Slavery Society raised much of that money. The hall opened on May 14, and that week the Anti-Slavery Convention of American Women met in it. A convention is a large organized meeting.

Three days after the hall opened, the mob set it on fire, using its own gas lights. Between 10,000 and 15,000 people watched, and 200 to 300 of them took part in the attack.

Mayor John Swift made what one history of the city calls "half-hearted efforts" to clear the crowd. Sheriff John G. Watmough arrested about a dozen men that night, and the crowd took them away from him. In all, officials arrested dozens of men and investigated five, and no court found any of them guilty. The same history records the rioters only as "dock workers and white rioters," and names none of them. The judges of the Pennsylvania Supreme Court ordered the county to pay $27,942.27 for the damage in 1847.

Sarah and Angelina Grimké

Who: Two sisters from a South Carolina slaveholding family who spoke against slavery to crowds of men and women, and were condemned from the pulpit for speaking at all.

When and where: Charleston, then Philadelphia and New England. Their speaking tour ran in 1837 and 1838.

In 23 weeks they spoke to more than 40,000 people.

Sarah and Angelina Grimké grew up in Charleston, South Carolina. Their father, John Faucheraud Grimké, was a judge and cotton planter who held people in slavery. Both sisters became Quakers, and Angelina left Charleston for Philadelphia in November 1829. In 1835 the sisters joined the American Anti-Slavery Society, and they became its first women agents, or organizers.

That July a mob in Charleston broke into the post office and burned antislavery papers. Angelina wrote a letter to William Lloyd Garrison about it, and he printed it in *The Liberator*. After that the sisters were not welcome in South Carolina.

The tour. At Poughkeepsie, New York, they spoke to a crowd of men and women together. In 23 weeks across 1837 and 1838 they spoke at 88 or more meetings in 67 towns, to more than 40,000 people.

The ministers' letter. In July 1837 the Congregational ministers of Massachusetts, leaders of a Protestant church, issued a Pastoral Letter to their churches, and ministers read it aloud from their pulpits. The letter states that women like the sisters put "the female character" in danger of "wide spread and permanent injury." It criticizes "females" who take "an obtrusive and ostentatious part in measures of reform," pushing forward to be seen. The ministers were attacking the sisters for being women who spoke in public.

Sarah Grimké answered the same month. The first of her "Letters on the Equality of the Sexes" ran in the *New England Spectator*. At a convention of antislavery women in 1837, Angelina proposed that "the right of

petition is natural and inalienable," a right that nobody can take away.

The gag rule. Since 1836 the House of Representatives had a rule that set aside every antislavery petition without reading it, and people called it the gag rule. Women of Brookline, Massachusetts, petitioned the House to end it on February 14, 1838. They called it "an assumption of authority, at once dangerous and destructive to the fundamental principles of republican government, to the rights of minorities, to the sovereignty of the People."

They meant that the rule went against the idea that the people hold the final power in their government, and against the rights of the smaller side in a vote. The first two names on the petition were Sarah M. Grimké and Angelina E. Grimké. Members of the House voted to renew the gag rule each time a new Congress met, every two years, until 1844.

At the State House. On February 21, 1838, Angelina Grimké gave a committee of the Massachusetts lawmakers antislavery petitions signed by about 20,000 Massachusetts women. She spoke to the committee in front of an overflowing crowd. The House of Representatives' historian calls her "the first woman in the United States to speak before a legislative body," a group of lawmakers.

"I stand before you as a southerner, exiled from the land of my birth by the sound of the lash and the piteous cry of the slave," she told them, exiled meaning driven from home and piteous meaning full of pain. She also said, "We are citizens of this republic and as such our honor, happiness, and well-being are bound up in its politics, government, and laws."

Both sisters lived to see the end of slavery in the United States. Sarah died in 1873 and Angelina in 1879, before American women won the vote.

Dorothea Dix

Who: A Massachusetts woman who visited every jail and poorhouse in her state, wrote down how the people who ran them held people with mental illness, and handed the record to the state's lawmakers.
When and where: Massachusetts, 1841 to 1843. Born 1802, died 1887.

At Medford she found one person in a stall for seventeen years.

Dorothea Dix went to teach a Sunday school class at the jail at East Cambridge, Massachusetts, on March 28, 1841. She found women with mental illness, called *insane* at the time, locked in with convicted criminals in "a bare, foul-smelling, unheated jail room." The word *insane* then meant a person whose mind worked in ways that their family or their town could not manage. The jail officials denied her account. Then they improved the women's conditions.

Every jail in the state. Between 1841 and 1843 Dix visited every jail, poorhouse and house of correction in Massachusetts. A poorhouse was a building where a town kept people who had no money. A house of correction was a kind of jail for people found guilty of small crimes. She wrote down what she saw in each one.

In January 1843 she gave the Massachusetts lawmakers a memorial, a formal written statement, of what she had found. "I come as the advocate of the helpless, forgotten, insane men and women held in cages, closets, cellars, stalls, pens!" she wrote. "Chained, naked, beaten with rods, and lashed into obedience!" A stall and a pen are enclosures built for animals, a rod is a stick used for beating, and lashed means whipped.

Her notes named places. At Lincoln she found a woman in a cage. At Medford she found one person "chained, and one in a close stall for seventeen years."

Printers reprinted the memorial as a pamphlet, and newspapers printed parts of it. The lawmakers voted money to make the state hospital at Worcester bigger. The United States had 13 hospitals for people with

> mental illness in 1843. By 1880 it had 123, and Dix had helped found 32 of them.

BY 1843: Mobs had killed an antislavery editor and burned a hall, women speakers had answered the ministers who told them to keep quiet, and a woman had put the treatment of people with mental illness before a state's lawmakers.

Coverture begins to break, 1837 to 1848

Coverture, the old English rule that a married woman had no legal existence apart from her husband, was still in force in 1848. The first law in any state that let a married woman own property in her own name passed in Mississippi in 1839. It came out of a court case about a Chickasaw woman, and the property in that case was an enslaved man.

Betsy Love's case. Betsy Love was Chickasaw, through her mother, Sally Colbert. She had inherited an enslaved man named Toney from her father, Thomas Love, and had given him to her daughter, Susan. Betsy Love's husband owed money to a man named John Fisher, and Fisher went to court to have Toney sold at auction to pay the husband's debt.

The judges of the Mississippi Supreme Court ruled in 1837 that Betsy Love was the legal owner, and that her husband had no rights over her property. They gave three reasons. Chickasaw families trace their family lines and pass on property through the mother. Since 1830, contracts made under Chickasaw law, including marriage contracts, had counted as binding in Mississippi. The third, in the words of the National Park Service's account, was that "Property in the Chickasaw Nation was owned by the women of the tribe."

The new laws. Mississippi's lawmakers passed the Married Women's Property Act in 1839. A married woman could now own property she got by gift, will, purchase or inheritance, as long as it did not come from her husband.

New York's lawmakers passed their own Married Women's Property Act in 1848, months before the Seneca Falls convention. The property a woman owned when she married now stayed hers. Her husband could not sell it, and

the people he owed money to could not take it to pay his debts. Lawmakers in other states copied New York's law. One part of coverture, the part about property a wife brought into a marriage, no longer applied in New York. The rest of coverture stayed the law.

Sojourner Truth takes her name, 1843

The woman born Isabella Bomfree in Ulster County, New York, in 1797 changed her name in 1843. She said the Spirit had called her to preach the truth, and she named herself Sojourner Truth. A sojourner is a traveler who stays in a place for a while. She traveled through Long Island, Connecticut and Massachusetts, speaking and singing.

She joined the Northampton Association of Education and Industry in Massachusetts in 1844. Abolitionists had founded it as a community. Its members supported women's rights and religious tolerance and opposed war, and the community was a stop on the Underground Railroad. It broke up in 1850, and her formal lecture tour began the next year.

Elizabeth Cady Stanton and Lucretia Mott

Who: Two women who were refused seats as delegates at an antislavery meeting in London because they were women, and who called the first women's rights convention eight years later.

When and where: London, 1840. Waterloo and Seneca Falls, New York, July 1848.

A New York publisher printed their declaration to make fun of it.

Elizabeth Cady Stanton and Lucretia Mott met in London in 1840, at the World Anti-Slavery Convention. Mott was a Quaker who had helped found the Philadelphia Female Anti-Slavery Society in 1833. American antislavery groups had elected women as delegates, and in the words of a National Park Service account, the women "were refused admission because of their sex." That account does not name the men who refused them.

After an argument, the men at the convention decided that the women "would sit at the rear of the hall, but not participate." Stanton was in London on her honeymoon. She found Mott in the women's section, and the two agreed to hold a women's rights convention when they got home.

Seneca Falls. Stanton moved to Seneca Falls in 1847. The town is on Cayuga land. The Cayuga Nation kept a 64,000-acre reservation there by a 1789 treaty, a written agreement, with New York. New York officials bought almost all of it in 1795 and the last three square miles in 1807. A federal judge in western New York ruled in 2017 that Congress had never approved those purchases, as a law of 1790 required.

Stanton later wrote about what pushed her to act: "The general discontent I felt with women's portion as wife, mother, housekeeper ... impressed me with a strange feeling that some active measures should be taken."

Tea at Waterloo. Five women met for tea at Waterloo, New York, on July 9, 1848, and decided to hold the convention. They were Stanton, Mott, Mary Ann M'Clintock, Martha Coffin Wright and Jane Hunt. They put a notice in the local paper calling people to "a Convention to discuss the social, civil and religious rights and condition of woman."

The convention met on July 19 and 20, 1848, at the Wesleyan Chapel in Seneca Falls, three miles east of Waterloo. More than 300 people came. The first day was meant for women only, and men took part on the second. Lucretia Mott's husband, James Mott, chaired the convention, which means he ran the meeting. Mary M'Clintock was the secretary.

The declaration. Stanton wrote a Declaration of Sentiments with the M'Clintock family, modeled on the Declaration of Independence. It listed, one by one, the wrongs men had done to women. "He has never permitted her to exercise her inalienable right to the elective franchise," meaning the right to vote. "He has taken from her all right in property, even to the wages she earns." That was coverture. "He has denied her the facilities for obtaining a thorough education," it went on, "all colleges being closed against her."

The vote on the vote. The people at the convention voted on a set of resolutions, written statements of what they wanted. Eleven passed with no one against them. The resolution demanding the vote met opposition and passed only narrowly. Frederick Douglass stood with Stanton and argued for it. He had escaped from slavery in Maryland ten years before and now published an antislavery newspaper, the *North Star*.

One hundred people signed the Declaration of Sentiments, 68 women and 32 men. A Library of Congress exhibition states that seventy-two years of organized campaigning for women's votes followed that resolution, up to the 19th Amendment in 1920.

The signers had written that they expected "misconception, misrepresentation, and ridicule," and it came. James Gordon Bennett, publisher of the *New York Herald*, printed the whole declaration in

his paper to make fun of it. Some signers later took their names off after people criticized them harshly for signing. The records do not say how many.

BY 1850

If you remember one thing: Women who learned to organize against slavery used the same petitions, speeches and meetings to demand rights of their own, ending with a vote at Seneca Falls to demand the vote.

- February 21, 1838: Angelina Grimké speaks to a committee of Massachusetts lawmakers, with petitions from about 20,000 women.
- 1839: Mississippi's lawmakers pass the first law in any state that lets a married woman own property in her own name.
- July 19 and 20, 1848: More than 300 people meet at Seneca Falls, and 100 sign the Declaration of Sentiments.

Next: After 1850, people who were denied their rights began to plan court cases on purpose.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 52 MINUTES

Americans who were denied rights in the second half of the 1800s learned to plan court cases on purpose. They chose a law to challenge, raised money, hired a lawyer and found a person willing to be arrested or refused. Susan B. Anthony voted in 1872, the Tape family sued a school board in 1884, and Black men on a committee in New Orleans arranged an arrest on a train in 1892.

The judge at Anthony's trial told the jury to find her guilty. The Tapes won in court, and school officials still kept their daughter out of the white school. Homer Plessy, the man the committee chose, lost in the Supreme Court.

Around the cases. After the Civil War, members of Congress and state lawmakers added three amendments, or changes, to the Constitution, and in 1869 the leaders of the women's movement split over whether Black men or women should get the vote first. Women first voted under territorial law in Wyoming and Utah.

Members of Congress voted for laws that shut Chinese immigrants out, and Chinese Americans fought those laws in court. In Memphis, the newspaper editor Ida B. Wells began counting the people killed by lynch mobs, crowds that killed people outside the law, with no trial.

Sojourner Truth

Who: A woman born into slavery in New York who spoke in public for more than thirty years for the rights of Black people and of women.

When and where: Akron, Ohio, May 1851. Washington, D.C., 1864. Died at Battle Creek, Michigan, November 26, 1883.

The famous "Ain't I a woman?" version was written by someone else.

Sojourner Truth published *The Narrative of Sojourner Truth: a Northern Slave* in 1850 and bought a house in Northampton, Massachusetts. She paid for part of it by selling photographs of herself. On them she printed the words "I sell the shadow to support the substance."

Akron, 1851. She spoke at the Ohio Women's Rights Convention in the Old Stone Church at Akron, Ohio, on May 28, 1851. She had not been invited. (One account gives the date as May 29. The convention ran for two days.)

Marius Robinson, one of the convention's secretaries, printed a report of her speech in the *Anti-Slavery Bugle* on June 21, 1851, about three weeks later. Truth was staying with Robinson and his wife, Emily, at the time, and a National Park Service page says it is believed he went over the text with her.

His version begins, "May I say a few words? I want to say a few words about this matter. I am a woman's rights. I have as much muscle as any man, and can do as much work as any man." She went on, "I have plowed and reaped and husked and chopped and mowed, and can any man do more than that?"

Later she said, "You need not be afraid to give us our rights for fear we will take too much, for we can't take more than our pint will hold." She ended, "But man is in a tight place, the poor slave is on him, woman is

coming on him, and he is surely between a hawk and a buzzard." Robinson wrote that it was "impossible to transfer it to paper, or convey any adequate idea of the effect it produced upon the audience."

The other version. Frances Dana Gage, who had run the convention, wrote the famous version, with the question "And ain't I a woman?" repeated through it. Gage published it in 1863, twelve years after the speech, while she was in South Carolina, in land held by the Union Army during the war. She did not check it with Truth, and she called it "but a faint sketch of her speech."

Gage's version gives Truth a Southern way of speaking. Truth grew up in Ulster County, New York, nearly 100 miles north of New York City. She spoke only Dutch until she was nine, and she was never enslaved in the South. Gage's version also has her say she bore thirteen children. She had five. A National Women's History Museum exhibit says Gage "fabricated" her version, which means she made it up. Robinson's version is the one written down that summer.

Fighting the rules. After 1857 Truth lived in Michigan. During the Civil War she recruited Black men for the Union Army, among them her grandson James Caldwell, who joined the 54th Massachusetts regiment in April 1863. That year officials in Indiana arrested her under a state law that barred Black people from entering the state, and held her for ten days.

She worked in Washington, D.C., in 1864 for the National Freedmen's Relief Association, which helped people who had just been freed from slavery. She rode the city's streetcars to force the companies to carry Black passengers. When a streetcar conductor tried to stop her from riding by force, she had him arrested and won her case. On October 29, 1864, she met President Abraham Lincoln at the White House.

From 1870 she campaigned for the federal government to give land in the West to people freed from slavery, and the campaign failed. She went to the polls in Battle Creek, Michigan, to vote in 1872, and election officials turned her away. That same year, Susan B. Anthony voted in Rochester,

> New York, and was arrested for it. Sojourner Truth died at Battle Creek on November 26, 1883. Her exact age is not known: counting from 1797, she was about 86, and she herself believed she was 105.

Massachusetts lawmakers outlaw segregated schools, 1855

After the Roberts family lost in court, William Cooper Nell and other Black Bostonians kept up their boycott of the segregated Smith School and their petition drives. Prince Hall and other Black Bostonians had first asked the state's lawmakers for schools for their children in 1787. In 1855, 68 years after that first petition, Massachusetts lawmakers voted to outlaw segregated public schools. A National Park Service page records that race-based segregation continued in Boston's public schools for decades afterward, even though state and federal laws forbade it.

A wife's wages, New York, 1860

A married woman in New York did not own the money she earned until 1860. Under coverture, her wages belonged to her husband. Women's rights campaigners carried petitions to every county in the state. They held conventions in 40 of its 60 counties and gave talks in 150 towns. Frances D. Gage, Antoinette Brown Blackwell and Susan B. Anthony were among the speakers.

The bill. Anthony gave a draft bill, a proposed law, to a state senator, Andrew J. Colvin, and he brought it to the state's lawmakers. State senators passed it on February 28, 1860, and members of the assembly on March 20, and Governor Edwin D. Morgan signed it.

One newspaper of the time printed the date of passage as March 30. The law states that "the earnings of any married woman, from her trade, business, labor or services, shall be her sole and separate property, and may be used or invested by her in her own name."

Three amendments, and the violence around them

Members of Congress and state lawmakers added three amendments to the Constitution after the Civil War. An amendment becomes part of the Constitution when lawmakers in enough states vote to approve it, which is called ratifying it. The 13th, ratified on December 6, 1865, bans slavery.

The 14th, part of the Constitution from July 9, 1868, states that "All persons born or naturalized in the United States" are citizens, naturalized meaning made a citizen after coming from another country.

It also says no state may "deny to any person within its jurisdiction the equal protection of the laws," so a state must apply its laws the same way to everyone. The 15th, ratified on February 3, 1870, states that the right to vote cannot be denied "on account of race, color, or previous condition of servitude," servitude meaning slavery.

The violence. In these same years white men attacked Black Americans who were living as free people. In May 1866, mobs that included Memphis police officers, firemen and businessmen killed 46 Black residents of the city. By the count of a committee of Congress, the mobs also burned 91 homes, 4 churches and 8 schools and raped five women. Rape means forcing a person into sex.

More than 150 armed white men led by Christopher Columbus Nash killed between 62 and 153 Black men at Colfax, Louisiana, on April 13, 1873.

The soldiers leave. After the war, federal soldiers stayed in the South, and some of them guarded its state houses. These were the years called Reconstruction, when members of Congress wrote Black Americans' rights into the three amendments and into new federal laws. President Rutherford B. Hayes ordered the soldiers out of the Louisiana state house in April 1877, the last state house in the South that they guarded. Reconstruction ended when they left. Chapter 24, Slavery and Freedom, tells that story in full.

A law struck down. Members of Congress voted for a Civil Rights Act in 1875. Under it, no one could lawfully deny anyone "the full and equal enjoyment of any of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land or water, theaters and other places of public amusement." Public conveyances are trains, boats and coaches for hire.

The justices of the Supreme Court struck the law down in 1883. They held that the 14th Amendment did not let Congress stop private individuals from treating people unfairly because of race.

Why the women's movement split in 1869

The people who had worked together against slavery split in 1869 over who should get the vote next. The 15th Amendment, which members of Congress passed on February 26, 1869, bars denying the vote because of race and says nothing about sex. The 14th Amendment had already become the first place the Constitution used the word "male." Under its second section, the number of seats a state got in Congress depended on the number of its "male inhabitants" who could vote.

The meeting. The break came on May 12, 1869, at the third annual meeting of the American Equal Rights Association. People working to end slavery and women's rights campaigners had formed that group together in 1866. At the 1866 meeting, the Black campaigner Frances Ellen Watkins Harper had told the white women there, "You white women speak here of rights. I speak of wrongs."

At the 1869 meeting, Frederick Douglass argued that Black men needed the vote first. "I do not see how any one can pretend that there is the same urgency in giving the ballot to woman as to the negro," he said, using the word of the time for Black people. "With us, the question is a matter of life and death, at least, in fifteen States of the Union." He described Black families "in danger of having their homes burnt down over their heads," and children "not allowed to enter schools."

Susan B. Anthony answered, "If you will not give the whole loaf of suffrage to the entire people, give it to the most intelligent first," suffrage meaning the right to vote. Elizabeth Cady Stanton said, "If intelligence, justice, and morality are to have precedence in the government, let the question of women brought up first and that of the negro last."

Stanton's words. A National Park Service page records that Stanton used racist language in this fight. She called Black Americans "ignorant of the laws and customs" of the country. Stanton and Anthony argued that educated white

women should vote before Black men, and their words angered Black campaigners, among them Douglass and Harper.

Two groups. Stanton and Anthony started the National Woman Suffrage Association in 1869, which worked for a change to the Constitution. Lucy Stone, Henry Blackwell and Julia Ward Howe started the American Woman Suffrage Association, which worked state by state and supported the 15th Amendment. The two groups stayed apart until 1890, when they joined as the National American Woman Suffrage Association. Two daughters of the founders, Alice Stone Blackwell and Harriot Stanton Blatch, helped bring them together.

BY 1870: Three new amendments had ended slavery, made people born in the country citizens and barred the states from denying the vote by race. White mobs were killing Black Americans who lived as free people, and the women's movement had split in two.

Women vote first in the West, 1869 and 1870

The lawmakers of Wyoming Territory passed the first law in United States history that openly gave women the vote, and they had mixed reasons for it. William H. Bright, a Democrat from South Pass City, brought the bill to the territory's first group of lawmakers. Governor John Allen Campbell approved it on December 10, 1869. Women could now vote and hold office. A National Park Service page records that some of the lawmakers also wanted to draw more women to a territory that had very few.

Shoshone country. South Pass City was a gold-mining camp that grew up after gold was found in 1867. It stood in country that United States officials had recognized as the Eastern Shoshone's in an 1863 treaty, a homeland of about 44 million acres. White prospectors, men searching for gold, had been slipping into that country since the 1850s, in spite of the treaties. In the 1868 treaty of Fort Bridger, United States officials left the Shoshone only a reservation of about 3.2 million acres on the Wind River.

Utah. The lawmakers of Utah Territory passed a women's vote law two months later, and the acting governor signed it on February 12, 1870. Two days after that, a Salt Lake City schoolteacher named Seraph Young voted in the city election. She was the first woman in the United States to vote under a law that gave women the vote on the same terms as men.

The first offices. Esther Hobart Morris became justice of the peace at South Pass City, a local judge for small cases, on February 17, 1870. She was the first woman in the country to hold that office. That spring, women in Laramie were called to serve on juries, the first women in the country to do so. Later, the jury rule was read to cover only "male citizens over 21 years of age."

The Wyoming State Museum, which records this, does not say who read it that way. Under that reading, no women sat on Wyoming juries until 1949. Louisa Swain of Laramie voted on the morning of September 6, 1870.

Taken and given back. Members of Congress voted to take Utah women's vote away in the Edmunds-Tucker Act of 1887, as part of a federal campaign against the Mormon church. Utah women got the vote back in the state constitution when Utah became a state on January 4, 1896. When Wyoming became a state in 1890, its women kept the vote, so Wyoming was the first state where women could vote.

Susan B. Anthony

Who: One of fifteen women who voted in Rochester, New York, in 1872, and the only one put on trial for it.

When and where: Rochester, New York, November 5, 1872. Trial at Canandaigua, New York, June 17 to 19, 1873.

"I shall never pay a dollar of your unjust penalty."

The leaders of the National Woman Suffrage Association decided in 1871 that women should try to register to vote, be refused, and then sue in federal court. Their argument was that the 14th Amendment made voting one of the rights of every citizen. Anthony went to register in Rochester, and the officials let her. On election day she went back, and the officials let her vote.

Election day. Anthony and fourteen other women voted in the national election in the first district of Rochester's Eighth Ward on November 5, 1872. A poll watcher for one party, Sylvester Lewis, challenged her. The three election inspectors did what New York law required. They put her under oath and asked whether she was a citizen, whether she lived in the district and whether anyone had paid her. Her answers satisfied them, and they put her ballots in the boxes.

The arrest. Nine days later, a federal official, Commissioner William Storrs, issued warrants, papers ordering an arrest, for all fifteen women. A deputy marshal, a federal officer who makes arrests, came to Anthony's house on November 18. She told the story many times. "'What for?' I asked. 'To arrest you,' he said. 'Is that the way you arrest men?' 'No.' Then I demanded that I should be arrested properly." He took her downtown on the streetcar, and the government paid her fare.

All fifteen women were arrested, and only Anthony was tried. The charge stated that she had voted "without having a lawful right to vote," being "then and there a person of the female sex." At a hearing on November 29, 1872, the assistant prosecutor, John Pound, asked the election

inspectors, "Was Miss Anthony dressed in the apparel of a woman and had she the appearance of a woman?" Her lawyer objected. The inspectors answering had been arrested themselves for letting the women vote.

Talking to the jurors' towns. Federal courts at that time did not let a person on trial for a crime speak to the jury. So in March and April 1873 Anthony spoke to the people the jurors would come from. She gave a lecture, "Is It a Crime for a U.S. Citizen to Vote?", in twenty-nine villages and towns of Monroe County. The federal prosecutor, Richard Crowley, had the trial moved to Ontario County, and Anthony scheduled a speech in every village there too.

The ordered verdict. The trial opened at Canandaigua on June 17, 1873, before a jury of twelve men. The judge was Ward Hunt, a justice of the Supreme Court who was also hearing cases in that part of New York. When the prosecution finished, Hunt read out an opinion he had already written. He said voting was not one of the rights the 14th Amendment protected, and that Anthony had known New York let only men vote.

Then he told the jury to bring in a verdict of guilty. Her lawyer, Henry Selden, asked for each juror to be asked one by one for his own verdict. The clerk refused. The jury never talked the case over.

Selden asked for a new trial on June 19, because Hunt had taken the decision away from the jury, and Hunt refused. Then the judge asked the question a court asks before it sets a punishment. Three reports of what Anthony said next survive, and none comes from the court's own record. The words below are from the version she published herself.

What she said. "Has the prisoner anything to say why sentence shall not be pronounced?" Hunt asked. Anthony answered, "Yes, your honor, I have many things to say, for in your ordered verdict of guilty, you have trampled under foot every vital principle of our government." She went on, "Robbed of the fundamental privilege of citizenship, I am degraded from the status of a citizen to that of a subject."

"The Court cannot allow the prisoner to go on," Hunt said. She kept going: "since the day of my arrest last November, this is the first time that either myself or any person of my disfranchised class has been allowed a word of defense before judge or jury," disfranchised meaning denied the vote. "The prisoner must sit down," said Hunt. "The Court cannot allow it."

She said that every man who had judged her was her "political superior," whether "native or foreign born, white or black, rich or poor, educated or ignorant, awake or asleep, sober or drunk." Hunt said she had been tried "according to the established forms of law." She replied, "Yes, your honor, but by forms of law all made by men, interpreted by men, administered by men, in favor of men, and against women."

The fine. Hunt fined her $100 and the costs of the trial. "May it please your honor, I shall never pay a dollar of your unjust penalty," she said. Hunt answered, "Madam, the Court will not order you committed until the fine is paid." If he had jailed her for not paying, she could have appealed to the Supreme Court.

The deputy marshal sent to collect reported in July 1873 that he could "find no goods or chattles land or tenements" to take, no belongings and no buildings. Federal officials dropped the matter, and she never paid.

The three election inspectors were tried after her, found guilty and fined $25 each. They refused to pay too, and the marshal put them in jail on February 25, 1874. Anthony sent telegrams to Representative Benjamin Butler and Senator Aaron Sargent. President Ulysses S. Grant pardoned the inspectors on March 3, 1874, canceling their punishment. The same day, the voters of the Eighth Ward elected all three to their posts again.

The Comstock Act, 1873

Members of Congress voted on March 3, 1873, for "An Act for the Suppression of, trade in, and circulation of obscene literature and articles of immoral use," known as the Comstock Act. Sending certain things by mail became a federal crime. They included anatomy books, some novels, photographs of boxing matches and information about contraception, ways to prevent pregnancy. Under the act, it was a crime to mail a woman the information she needed about her own body.

One man's word. Obscene means indecent or shocking, but the act never said what counted as obscene. Anthony Comstock had pushed members of Congress to pass it, and he was appointed a special agent of the Post Office. In practice, he decided what the word meant. In court he often refused to let jurors see the item he had seized, saying it was too vile to show them. He claimed that over his life he seized 150 tons of books, made 4,000 arrests and drove 15 people to suicide.

A Harvard doctor says school will harm girls, 1873

Edward H. Clarke, a professor at Harvard Medical School, published a book in 1873 that said studying would damage girls' bodies. The book was *Sex in Education*, with the subtitle *A Fair Chance for the Girls*. Clarke argued that a girl's body spends the teenage years building the organs used to carry a pregnancy, and that studying the way boys studied would take the energy that work needed.

"Unless the work is accomplished at that period, unless the reproductive mechanism is built and put in good working order at that time, it will never be perfectly accomplished afterwards," he wrote. He warned that the result would be "monstrous brains and puny bodies."

The harms he listed. A Smith College history page lists the harms Clarke said would follow. They were atrophy of the uterus and ovaries, meaning those organs shrinking and stopping working, and masculinization, a girl's body taking on a man's traits. They also included sterility, being unable to have children, and insanity and death.

He said women should study no more than four hours a day, and not at all during their monthly bleeding. He described a patient he called Miss A: "She graduated at nineteen, the first scholar, and an invalid," a person too sick to live a normal life.

Leaders of the new women's colleges answered him. Smith College opened in 1875, and its first president, Laurenus Clark Seelye, said, "It is to preserve her womanliness that this College has been founded." Smith's leaders built supervised houses for its students in answer to worries like Clarke's.

Mary Putnam Jacobi's evidence. Mary Putnam Jacobi answered with evidence. She had earned a pharmacy degree, a degree in preparing medicines, in 1863, the first woman in the country to do so. She earned a medical degree in 1864 and a second medical degree in Paris in 1871.

Jacobi sent out a thousand printed lists of questions through women's rights groups and collected answers from hundreds of women, rich and poor, in towns and on farms. Her essay *The Question of Rest During Menstruation*

won Harvard's Boylston Prize in 1876, and she was the first woman to win it. She found no evidence that monthly bleeding made women unfit to study or work.

Supreme Court justices rule that the Constitution gives no one the vote

Virginia Minor, a woman in St. Louis, Missouri, used the same argument Anthony had used. The registrar, Reese Happersett, refused to register her to vote, and she sued him, arguing that she was a citizen and that citizens have the right to vote.

All the justices of the Supreme Court ruled against her in *Minor v. Happersett*, decided in the court term that began in October 1874. They held that "the Constitution of the United States does not confer the right of suffrage upon any one," and that a state could give the vote to men only.

Women were citizens, but in the justices' reading, being a citizen did not include a right to vote. After that ruling, the only way left to win the vote everywhere at once was a new amendment to the Constitution.

BY 1875: Women voted in Wyoming and Utah, Anthony had been found guilty for voting in New York, and the Supreme Court's justices had ruled that the Constitution gave no one the vote.

Getting into college, and into court as a lawyer

Women won their first places in colleges, in medicine and in law in these years. A woman who got in could still be kept from staying, or from working.

Colleges. Vassar College, a college for women at Poughkeepsie, New York, opened on September 26, 1865, with 353 students. Smith, Wellesley and Bryn Mawr opened within the next twenty years. Two teachers from New England started Spelman in the basement of a Baptist church in Atlanta, Georgia, on April 11, 1881. Its first class was eleven students: ten women, some of them formerly enslaved, and one girl.

Universities. Some universities that had taken only men began to take women. The first woman to enter Cornell, Jennie Spencer of Cortland, came in 1870. She had won a state scholarship, and she left because there was nowhere near the campus for a woman to live. Women entered Cornell regularly from 1872.

Doctors and lawyers. Rebecca Lee Crumpler received the degree "Doctress of Medicine" from the New England Female Medical College on March 1, 1864. She was the first African American woman in the United States to earn a medical degree. After the war she moved to Richmond, Virginia, and worked with the Freedmen's Bureau, the federal office that helped people freed from slavery, treating patients who had no other doctor.

Arabella Mansfield passed the Iowa bar examination on June 15, 1869, and became the first woman admitted to a state bar, the body of lawyers allowed to practice in a court. Iowa's law described "any white male citizen" as eligible, and she argued that nothing in it forbade a woman.

Charlotte E. Ray graduated from Howard University School of Law in 1872 and was admitted to the District of Columbia bar, the first Black woman lawyer in the country. A page by the District of Columbia attorney general's office says she later had to close her law office because, as a woman of color, she could not get enough clients.

Myra Bradwell. Other women passed the law examination and were still refused a license. Myra Bradwell passed the Illinois bar examination in 1869, and the judges of the Illinois Supreme Court refused her a license because she was married.

She took her case to the Supreme Court of the United States and lost, eight to one, in *Bradwell v. The State*, in the term that began in October 1872. Justice Samuel F. Miller wrote for the Court that each state decides who may practice law, and that the 14th Amendment does not protect that right.

Justice Joseph Bradley wrote separately, "The paramount destiny and mission of woman are to fulfil the noble and benign offices of wife and mother. This is the law of the Creator," paramount meaning most important and benign offices meaning kind duties. He meant that a woman's place was in the home. He also wrote, "A married woman is incapable, without her husband's consent, of making contracts which shall be binding on her or him." That sentence states the rule of coverture.

Belva Lockwood. The justices of the Supreme Court refused to let Belva Lockwood argue cases before them in 1876. They said "none but men are permitted to practice before [us] as attorneys and counselors." Lockwood lobbied Congress, pressing its members in person, until they voted for "An Act to relieve certain legal disabilities of women." On March 3, 1879, she became the first woman admitted to the bar of the Supreme Court.

Laws that shut Chinese immigrants out, 1875 and 1882

While Americans argued about who should be added to the voters, members of Congress voted for laws to keep Chinese immigrants out. President Ulysses S. Grant signed the Page Act on March 3, 1875. A National Park Service page calls it the first federal law to restrict immigration. Agents at the ports could stop and question "any subject of China, Japan, or any Oriental country," using an old word for Asian, to find out whether the person had come "without their free and voluntary consent."

Who the agents stopped. Under the act, no one could bring in women "for the purposes of prostitution," which means to be paid for sex, and officials decided which women those were. The officers applied it to Asian women in general, and in practice almost no Chinese women could enter the country.

The Exclusion Act. President Chester A. Arthur signed the Chinese Exclusion Act on May 6, 1882. Chinese laborers could not enter the country for ten years. Section 14 states that "no State court or court of the United States shall admit Chinese to citizenship." Members of Congress extended the law in 1892, made it permanent in 1902 and repealed it, or canceled it, in 1943. Britannica calls it "the first and only major federal legislation to explicitly suspend immigration for a specific nationality."

Frances Thompson arrested for living as a woman, 1876

Memphis police arrested a Black woman named Frances Thompson for wearing women's clothing on July 10, 1876. Writers today, among them reporters at CNN, describe her as a transgender woman, a woman whose body was counted as male at birth. She told police and reporters she had lived her whole life as a woman.

Ten years earlier, in 1866, Thompson had told a committee of Congress that seven white men had raped her and another woman, Lucy Smith, during the Memphis massacre.

What the city did to her. After the 1876 arrest, four doctors, among them Dr. Joseph Nuttall, a doctor working for the city, examined her body against her will at the central police station on Adams Street and declared her a man. Modern reports on her case by MLK50 and CNN do not say how the doctors examined her. The city's recorder, an official who judged small cases, fined her $50.

She could not pay, so the recorder sentenced her to 100 days on the city chain gang, a group of prisoners chained together and made to work outdoors. She cleaned the streets for 50 cents a day toward her fine. Crowds gathered to stare at her. Officials made her pose for photographs in men's and women's clothing, and newspapers printed them. After harassment from other prisoners and the public, city officials took her off the chain gang and held her at the police station for the rest of her sentence.

Memphis newspapers printed the doctors' finding, and writers for several of the papers used it to try to show that her 1866 testimony about the rape was false. Her neighbors later found her sick and took her to the city hospital. She died there of dysentery, a disease of the gut, on November 1, 1876.

Sarah Winnemucca

Who: A Northern Paiute woman who worked as an interpreter for the United States government and the Army, saw what United States officials and soldiers did to her people, and spent the rest of her life saying so in public.

When and where: Nevada and Oregon, 1844 to 1891. The removal to the Yakama Reservation, 1878 to 1879.

"My people were only given one week to get ready in."

Sarah Winnemucca's Paiute name was Thocmetony, which means Shell Flower. She was the daughter of Chief Winnemucca and the granddaughter of Chief Truckee, and both men had guided white travelers across Paiute country. A National Park Service page lists what she saw growing up: "the murder of two uncles, the attempted rape of her sister, the Pyramid Lake War and Bannock War, and the burning of Paiute food supplies."

Working for the government. She spoke several languages. In the 1870s she worked as an interpreter for the Indian Office and as a go-between for the Paiute and the United States Army. Part of that work was persuading Paiute bands to move onto reservations. During the Bannock War of 1878, she found her father's band, who were being held by Bannock fighters, and led them out to the Army's protection. She traveled 230 miles in three days.

The removal. Army soldiers then removed Paiute people who had not fought in the war at all. The House of Representatives' historian writes that the Paiute were punished for the part a small number of them had taken in the fighting. Winnemucca wrote that "just a little before Christmas" in 1878 she learned that President Rutherford B. Hayes had ordered it. "My people were only given one week to get ready in," she wrote.

Soldiers took them off the Malheur Reservation, which lay inside their own homeland, and sent them 350 miles north to the Yakama Reservation, the Yakama Nation's land. About 550 Paiute men, women and children made the journey. It took nearly a month, through snow and over two mountain ranges. The women and children rode in wagons.

Some of the men walked in leg irons, metal rings locked around the ankles and chained together. The records do not say which soldiers or officials put the irons on them. Five children, one woman and an old man died on the road. Their bodies were left beside it, because the ground was too frozen to dig graves.

At Yakama. The historian Sally Zanjani estimated that more than a fifth of the group died at Yakama afterward, most of them from hunger and disease. W. V. Rinehart, the government agent at Malheur, wrote a report in August 1879. In it he complained about what the removal had cost. He also wrote that officials had sent the Paiute off without enough supplies, even though supplies were on the way.

The campaign. After the removal, Winnemucca stopped working as an interpreter and became a campaigner. In the early 1880s she gave more than 300 speeches. She met President Hayes and the Secretary of the Interior, Carl Schurz, in Washington in 1880. Hayes did not change his decision. Schurz gave her a written promise that her people could go back to Malheur, and then he did not keep it. President Chester Arthur opened the Malheur land to white settlers in 1882 and 1883.

She petitioned Congress in 1884 to give Malheur back to her people. She asked the government to "sweep away the [Indian] agency system" and "give us homes to live in, for God's sake and for humanity's sake." She published *Life Among the Piutes: Their Wrongs and Claims* in 1883, with help from the reformers Elizabeth Peabody and Mary Peabody Mann. A page by the Oregon Historical Society calls it the first autobiography published by a Native American woman.

Her school. She also started a school for Paiute children and taught them in Paiute and in English. It closed after three years, when the money ran out. In the same years, United States officials were opening boarding schools, where Native children lived far from their families. An Army officer, Richard Henry Pratt, opened the first of them, Carlisle, in Pennsylvania in 1879.

Staff at these schools cut the children's hair, gave them English names and forbade their languages, and punished children who spoke them with beatings, solitary confinement and withheld food. A federal count published in 2024 found that at least 973 children died at the schools.

Sarah Winnemucca died in 1891. Her statue stands in the United States Capitol for the state of Nevada. It shows her at 35, holding up a shell flower in her right hand, with a book at her side.

BY 1879: Women were entering colleges and courtrooms, members of Congress had passed the first federal law to keep immigrants out, and soldiers had marched the Paiute away from their reservation in winter.

Standing Bear goes to court, 1879

A Ponca leader named Standing Bear went to federal court in 1879 and won a ruling that a Native American is a person under the law. Then he toured the country arguing his case in public.

The Ponca land. The Ponca lived at the mouth of the Niobrara River in Nebraska. They had never fought the United States and had never sold that land. But in 1868 United States officials made a treaty with the Sioux that created the Great Sioux Reservation, and the Ponca land lay inside its lines.

Members of Congress set aside $25,000 in 1876 to move the Ponca to Indian Territory "if they consented to go." Indian Territory was the land where United States officials sent Native nations they forced from their homes.

Officials took eight Ponca chiefs south to choose new land. The chiefs turned down every place they saw and asked to go home. When officials refused, the chiefs walked more than 500 miles back to Nebraska in winter, in 40 days, "with only a few dollars and one blanket each."

The forced move. Federal officials ordered the move anyway, "using Army troops if necessary." An Indian Office inspector, E. C. Kemble, led the first 170 people south on April 30, 1877. He ordered the agent, E. A. Howard, to move the rest of the Ponca. They left on May 16, 1877, with 25 soldiers guarding them, and left behind their homes, crops and burial grounds. Standing Bear's daughter died on the way.

In July they crossed into Indian Territory onto Quapaw land. Later they chose 101,894 acres that had been the Cherokee Nation's land. A third of the Ponca died after they arrived.

Carrying his son home. Standing Bear's son, Bear Shield, died of a fever at sixteen in late December 1878. In early January 1879 Standing Bear set out on foot for Nebraska with a small group of his people, mostly women and children, carrying his son's bones to bury at home. The walk took about two months. Soldiers arrested the group and held them at Fort Omaha, an Army post, under General George Crook.

The court. Two Omaha lawyers, John L. Webster and Andrew J. Poppleton, took his case. They asked for a writ of habeas corpus, an old legal rule under which a person being held can make the government show its legal reason for holding him.

Judge Elmer S. Dundy of the United States District Court in Omaha heard the case on May 1 and 2, 1879. Standing Bear told the court, "That hand is not the color of yours. But if I pierce it, I shall feel pain ... I am a man. The same god made us both."

Dundy ruled on May 12, 1879, that "an Indian is a person within the meaning of the laws of the United States," and ordered the Ponca released. From June 1879 Standing Bear toured the country. He spoke in Chicago, Pittsburgh, Philadelphia, Boston, New York, Washington and Baltimore. The journalist Thomas Tibbles went with him, and so did Susette La Flesche of the Omaha Nation, called Bright Eyes, who interpreted, and her brother Frank.

What the ruling did not do. The ruling covered Standing Bear and the people held with him. Native people did not become citizens because of it. John Elk, a Native man who had left his nation and lived in Omaha, tried to register to vote in April 1880. Charles Wilkins, the registrar of his ward, refused him because he was Native.

The justices of the Supreme Court ruled against Elk, seven to two, in *Elk v. Wilkins* on November 3, 1884. Justice Horace Gray wrote that a Native person born into a Native nation did not become a citizen by being born in the United States. Justices John Marshall Harlan and William B. Woods dissented, which means they disagreed with the ruling.

Reformers who asked for allotment

Standing Bear's speeches reached white reformers in the East. They organized, lobbied and petitioned, and what they won was a law under which Native nations lost about two-thirds of the land they still held.

Helen Hunt Jackson heard Standing Bear speak in Boston in 1879. Two years later she published *A Century of Dishonor*, a book about how the United States government had treated Native nations. She sent a copy to every member of Congress with a note: "Look upon your hands: they are stained with the blood of your relations."

The reform groups. Two Philadelphia women, Mary Lucinda Bonney and Amelia Stone Quinton, founded the Women's National Indian Association in 1879. A group of wealthy Philadelphia men founded the Indian Rights Association on December 15, 1882, after Herbert Welsh and Henry S. Pancoast came back from a visit to the Sioux in Dakota Territory. They said their aim was to secure for Native people "the political and civil rights already guaranteed to them by treaty and statutes."

Its members believed that Native people would survive only by becoming Protestant Christians and living like white Americans. From 1883 a Quaker hotel owner, Albert K. Smiley, gathered these reformers every year at his resort at Lake Mohonk, New York. Mark S. Joy, writing about the conferences in 2019, names no Native people taking part. The reformers asked members of Congress to break reservation land into plots owned by single families, which was called allotment.

The Dawes Act. Members of Congress did it in the Dawes Act, signed on February 8, 1887, and named for Senator Henry Dawes of Massachusetts. The head of each family got 160 acres, and each person who took a plot became a citizen. Federal officials could buy the land that was "not allotted" from the Native nations and sell it to settlers.

Under the Dawes Act and the laws that followed it, the land held by Native nations went from about 138 million acres in 1887 to about 48 million by 1934. That is about 90 million acres gone, two acres out of every three. Another

count gives about 137 million and 47 million.

Mary and Joseph Tape

Who: Two Chinese American parents who took San Francisco's school leaders to court because they would not let their eight-year-old daughter into the school near their home. They won, and school officials still kept her out.

When and where: San Francisco, 1884 and 1885.

"Is it a disgrace to be Born a Chinese?" Mary Tape wrote.

San Francisco's schools had been separated by race from the start. The first public schools, opened in 1851, were for white children only. A school for Black children opened in 1854, and one for Chinese children in 1859. The city's school officials closed the Chinese school in 1870, which left Chinese American children with no public school at all.

The Ward case. A Black mother, Harriet A. Ward, had taken the same question to court in January 1874 for her daughter, Mary Frances, who was eleven. Noah F. Flood, the principal of the Broadway Grammar School, had refused to take her.

California law said, "The education of children of African descent, and Indian children, shall be provided for in separate schools." The judges of the California Supreme Court ruled against the Wards. A Black child could be kept out of a white school, they held, wherever a separate school existed, and San Francisco had one.

The family. Mary Tape was born near Shanghai, China, in 1857 and came to the United States alone in 1868, when she was eleven. Women of the Ladies' Protection and Relief Society took her in. She learned English there and took the name Mary McGladery, after one of the women who cared for her.

Joseph Tape, born Jeu Dip, arrived in 1864. He worked as a servant, ran a milk delivery business, and worked as a broker, a go-between in business deals, and as an interpreter for the Imperial Consulate of China. They had

four children, Mamie, Frank, Emily and Gertrude, and lived in the Cow Hollow part of San Francisco.

The lawsuit. They took Mamie to Spring Valley Primary School, the all-white school near their home, in 1884. The principal, Jennie Hurley, refused her because her family came from China. Joseph Tape sued the San Francisco Board of Education, the school superintendent Andrew Jackson Moulder, and Hurley herself.

The judge of the Superior Court of California ruled for the Tapes on January 9, 1885. He held that keeping out "children of Chinese parents" broke California law and the 14th Amendment's promise of equal protection. The members of the Board of Education appealed, and the judges of the California Supreme Court agreed with the lower court.

Shut out again. Moulder sent a telegram to the state's lawmakers as soon as the decision came down. The lawmakers passed a law that let school officials set up "separate schools for children of Mongolian or Chinese descent," using a word white Americans then used for people from East Asia. On April 8, 1885, officials at Spring Valley refused Mamie again. This time they said she had no vaccination certificate and the classes were full.

Her letter. That day Mary Tape wrote to the Board of Education, in English, her second language. The *Daily Alta California* printed her letter, with her own spelling, on its front page on April 16, 1885.

"I see that you are going to make all sorts of excuses to keep my child out of the Public schools. Dear sirs, Will you please to tell me! Is it a disgrace to be Born a Chinese? Didn't God make us all!!! What right have you to bar my children out of the school because she is a chinese Decend."

"It seems no matter how a Chinese may live and dress so long as you know they Chinese. Then they are hated as one. There is not any right or justice for them. ... Mamie Tape will never attend any of the Chinese schools of your making! Never!!! I will let the world see sir What justice

there is When it is govern by the Race prejudice men! ... I guess she is more of a American then a good many of you that is going to prevent her being Educated." She signed it "Mrs. M. Tape."

Mamie and her brother Frank became the first two pupils at the new Chinese Primary School in Chinatown on April 13, 1885. A history page by the San Francisco Unified School District states that the district's officials reopened the separate Chinese school "as a way to avoid integrating white schools," to keep Chinese children out of white children's schools.

BY 1887: A federal judge had ruled that a Native American is a person under the law, reformers had won the Dawes Act, and the Tapes had won their case and still lost their daughter's place in the school.

Chinese Americans take the law to court, 1886 to 1898

Chinese Americans used the 14th Amendment to challenge laws aimed at them, and sometimes they won. The members of San Francisco's Board of Supervisors, the officials who made the city's laws, voted in 1885 to require a permit to run a laundry in a wooden building. About 200 Chinese laundry owners applied, and the supervisors refused every one. About 80 owners who were not Chinese applied, and all but one got a permit.

Yick Wo. Officials arrested more than 150 Chinese men for working without a permit. One of them was Yick Wo, who had run a laundry at 349 Third Street for 22 years, and the sheriff, Peter Hopkins, held him in jail. All the justices of the Supreme Court ruled for Yick Wo in *Yick Wo v. Hopkins* on May 10, 1886. Justice Stanley Matthews wrote that a law "applied and administered by public authority with an evil eye and an unequal hand" denied people the equal protection of the laws.

The Geary Act. Members of Congress voted for the Geary Act in 1892. It kept Chinese exclusion going, and every Chinese laborer had to register and carry a certificate of residence at all times. A man caught without one could be

sentenced to up to a year of hard labor and then deported, sent out of the country by force.

To prove he had lived in the country, he needed a white witness. The act, as the Supreme Court quoted it, asked for "at least one credible white witness." A KQED news report says two.

The leaders of the Chinese Six Companies, a Chinese American association, told people not to register. They collected a dollar from each Chinese resident to pay lawyers and put out leaflets that said, "The Geary Act is an unjust law." About 100,000 Chinese people lived in the United States, and only about 13,000 registered in the first period. A 2026 KQED news report, drawing on the historians Kelly Lytle Hernández, Alexander Jin and Russell Jeung, calls the refusal the first mass resistance to deportation in the United States.

The test case. Three men became the test case: Fong Yue Ting, Wong Quan and Lee Joe. Lee Joe had lived in the country since about 1874. He had tried to get a certificate in April 1893 and was refused, because his only witnesses were Chinese. The justices of the Supreme Court upheld the law, five to three, in *Fong Yue Ting v. United States* on May 15, 1893. Justice David Brewer wrote in dissent that deportation meant "removal from home, from family, from business, from property."

Wong Kim Ark. Wong Kim Ark was born at 751 Sacramento Street in San Francisco in 1873, to Chinese parents. When he came home from a visit to China in August 1895, officials at the port of San Francisco refused to let him back in.

The justices of the Supreme Court ruled six to two on March 28, 1898, that he was a citizen under the 14th Amendment, because he was born in the United States. Justice Horace Gray wrote for the Court. Chief Justice Melville Fuller dissented, and Justice John Marshall Harlan joined him.

Black men in New Orleans plan an arrest, 1891 to 1896

A group of Black men in New Orleans formed a committee in 1891 to fight a new law in court, and they planned the arrest that started the case. Louisiana's lawmakers had passed Act 111, the Separate Car Act, on June 10, 1890.

Railroads had to give "equal but separate" seats to Black and white passengers. A passenger who sat in the wrong car could be fined $25 or jailed for 20 days. Black New Orleanians protested, and 16 of the state's lawmakers at the time were Black. The majority passed it anyway.

The committee. French-speaking men of African descent in New Orleans formed the Comité des Citoyens, the Citizens' Committee, in September 1891. Its full name was the Citizens' Committee to Test the Constitutionality of the Separate Car Law, which means whether the law fit the Constitution. The members raised money and hired a lawyer, Albion W. Tourgée.

The arrest. Homer Plessy volunteered to be arrested. He was born Homère Patris Plessy in New Orleans on March 17, 1863, to free parents of color, and he worked as a shoemaker. On June 7, 1892, he bought a ticket to Covington, Louisiana, on the East Louisiana Railroad and sat in the car for white passengers. Railroad officials were in on the plan, because the company did not want to pay the cost of running extra cars.

As planned, a private detective hired for the job arrested him, so that he would be charged with exactly the offense the committee wanted to fight. Judge John H. Ferguson of the Orleans Parish criminal court ruled against Plessy. The case is called Plessy v. Ferguson after the two men.

The ruling. The justices of the Supreme Court ruled against Plessy, seven to one, on May 18, 1896. Under their ruling, a state could make Black and white passengers ride in separate cars, as long as the cars were equal.

Justice Henry Billings Brown, who wrote the decision, said such laws did not mark either race as lower than the other. If Black Americans felt marked as lower, he wrote, that was "solely because the colored race chooses to put that construction upon it," because they chose to read the law that way.

Justice John Marshall Harlan disagreed, alone. "In view of the constitution, in the eye of the law, there is in this country no superior, dominant, ruling class of citizens," he wrote. "Our constitution is color-blind, and neither knows nor tolerates classes among citizens." The ruling stood for nearly sixty years, until *Brown v. Board of Education* in 1954. Homer Plessy died in New Orleans in 1925.

Ida B. Wells

Who: A Memphis newspaper editor who counted the people killed by lynch mobs, published the count, showed that the reason given for the killings was false, and was driven out of the South for it.

When and where: Born at Holly Springs, Mississippi, July 16, 1862. Memphis, Tennessee, 1884 to 1892.

She counted 728 lynchings in eight years and printed the number.

Ida B. Wells was born into slavery and freed in 1865. In 1884 she bought a first-class railroad ticket, and the train crew ordered her into the car for Black passengers. She refused, and they removed her from the train by force. She sued the railroad and won $500 in the circuit court, and the judges of the Tennessee Supreme Court overturned the award.

She taught in a segregated public school in Memphis. In 1891 she wrote a newspaper article showing that the board of education gave the Black schools less money, and she lost her teaching job for it. Neither the National Park Service nor the Mississippi Department of Archives and History, in their accounts of her life, names the official who fired her.

The People's Grocery. Her friend Thomas Moss was part owner of the People's Grocery, a store run by Black owners in a mostly Black part of Memphis. It was taking business from a white-owned store nearby. William Barrett, one of the rival owners, got a judge to declare the People's Grocery a public nuisance, a place that harms the people around it, and to make him a deputy.

Barrett and a group of deputies in ordinary clothes marched on the store. Shots were fired, and three deputies were wounded. "Thirty-one men were arrested and thrown in jail as 'conspirators,'" Wells wrote. Moss and two others from the store were among them.

The lynching. In the early hours of March 9, 1892, a mob took Thomas Moss, Calvin McDowell and a third man out of their cells in the Memphis jail. The men of the mob took them to the rail yards and shot them to death. Calvin McDowell was shot with a shotgun at close range. The third man was shot in the neck, and records give his name two ways, as Will Stewart and as Henry Steward.

Moss's last words were reported as "Tell my people to go west. There is no justice for them here." Black Memphis "urged and waited for the authorities to act in the matter and bring the lynchers to justice. No attempt was made to do so," Wells wrote. No one was ever arrested for the killings.

Black Memphis answers. Black Memphians organized in answer. "The black men left the city by thousands," Wells wrote. The people who stayed stopped riding the streetcars. The streetcar company's superintendent, manager and treasurer came to the office of Wells's newspaper, the *Free Speech*, and asked its editors to tell people to ride again.

The editorial. Wells printed an editorial in the *Free Speech* on May 21, 1892: "Nobody in this section of the country believes the old thread-bare lie that Negro men rape white women." The excuse given in public for lynching was that Black men had raped white women. Wells wrote that white men were killing Black men over relationships that white women had chosen.

She described what happened next in a pamphlet later that year. After editorials in the Memphis daily papers, men of the city held a meeting at the Cotton Exchange Building on May 24, 1892. "A committee was sent for the editors of the Free Speech," she wrote, "and the only reason the

open threats of lynching that were not carried out was because they could not be found." Her business partner, J. L. Fleming, "had to leave town to escape the mob, and was afterwards ordered not to return."

Wells was on vacation in New York. Letters and telegrams warned her "that bodily harm awaited my return." Then "Creditors took possession of the office and sold the outfit, and the Free Speech was as if it had never been." She did not go back. Her return home, she wrote, was "forbidden under penalty of death."

The count. Her pamphlet *Southern Horrors: Lynch Law in All Its Phases* came out in 1892. "The dark and bloody record of the South shows 728 Afro-Americans lynched during the past eight years," she wrote. "Only one-third of the 728 victims to mobs have been charged with rape, to say nothing of those of that one-third who were innocent." Two out of three had never been accused of the crime that lynching was said to punish. Using the *Chicago Tribune*'s yearly lists, she later counted 241 people lynched in 1892.

She wrote *The Reason Why the Colored American Is Not in the World's Columbian Exposition* for the world's fair in Chicago in 1893, printed in three languages. In 1894 she toured Britain speaking about lynching, and people there formed a London Anti-Lynching Committee. She married Ferdinand Barnett in 1895, and they had four children. The same year she published *A Red Record*, 100 pages of lynching figures and history.

Frances Willard. One white reformer fought her in public. Frances Willard was president of the Woman's Christian Temperance Union, a women's group that campaigned against alcohol. Willard had told a newspaper, the *New York Voice*, in 1890 that "The colored race multiplies like the locusts of Egypt," and that "The safety of woman, of childhood, the home, is menaced," or threatened, "in a thousand localities."

Wells printed those words in Britain in 1894. At her group's convention in Cleveland on November 5, 1894, Willard said Wells had "put an imputation upon half the white race in this country that is unjust." An imputation is an accusation. Wells answered her in *A Red Record*.

Suffragists remember the clan mothers, 1891 and 1893

A National Park Service page records that the power of Haudenosaunee women inspired leaders of the women's rights movement. Elizabeth Cady Stanton told the National Council of Women in 1891 that Haudenosaunee women "did not hesitate, when occasion required, 'to knock off the horns,' as it was technically called, from the head of a chief." She meant the clan mothers' power to remove a chief.

Matilda Joslyn Gage wrote in the *New York Evening Post* that among the Haudenosaunee, "In the home the wife was absolute." The Wolf Clan of the Mohawk Nation adopted Gage as an honorary member in 1893 and gave her the name Ka-ron-ien-ha-wi, "She who holds the sky."

A city government overthrown, Wilmington, 1898

Armed white men overthrew the elected government of Wilmington, North Carolina, on November 10, 1898. Black and white Republicans held the city's offices, and Alex Manly edited the *Daily Record*, the city's Black newspaper. Manly had printed an editorial that challenged white beliefs about relationships between Black and white people, and Democratic Party leaders used it to stir up white voters. Before the election two days earlier, the Red Shirts, a group of Democratic Party supporters, had frightened Black people and forced white voters to vote for Democrats.

The attack. Alfred Moore Waddell, a former Confederate officer and congressman, led the attack. About 500 white men gathered at the armory, a building where weapons were stored, and the crowd grew to perhaps 2,000. They broke into the *Daily Record* office and set the building on fire. Violence broke out across the town.

KNOWN:	The white men murdered at least 14 men, and every one of the dead who was reported was Black. The coroner, the county official who looks into deaths, counted 14.
DISPUTED:	The state's commission report of 2006 gives as many as sixty. The records do not give an exact count.

The new government. That afternoon Waddell's men forced the Republican mayor, Silas P. Wright, the aldermen, the members of the city council, and other city officers to resign. The new aldermen made Waddell mayor. The new city leaders banished Black leaders and white Republicans, forcing them to leave the city for good. Manly escaped.

Governor Daniel Russell did not ask for federal help, and President William McKinley sent no troops. Lawyers in the United States Attorney General's office investigated and closed the case in 1900 without charging anyone. The records do not name the men who fired.

BY 1900

If you remember one thing: People who were denied their rights learned to bring test cases on purpose, and judges ruled against many of them, from Anthony's vote to Plessy's train seat.

One number: 728. That is how many Black Americans Ida B. Wells counted as lynched in the eight years before 1892, about 91 a year, or nearly two every week.

Next: In the new century, organizers took their cause to the White House gates and to the courts, one law school at a time.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 64 MINUTES

The people who organized for their rights between 1900 and 1950 worked out the methods that organizers in the 1960s later used. Alice Paul put women on a picket line at the White House gates in 1917. Disabled New Yorkers sat down in a city relief office in 1935 and would not leave.

Charles Hamilton Houston planned a chain of court cases, one law school at a time. A. Philip Randolph planned marches on Washington in 1941 and 1948, and both times a president signed an order, first against unfair hiring by race in defense factories, then against unequal treatment in the armed forces.

What they were up against. Women won the vote in 1920, and white officials in the South kept many Black women from voting with the same rules and violence they used against Black men. White mobs attacked Black Americans in Springfield in 1908 and in 25 cities in 1919. White Tulsans burned the Black district of Greenwood in 1921 and killed as many as 300 people.

Officials in 30 states had at least 60,000 people operated on so that they could never have children. After President Franklin D. Roosevelt signed an order in 1942, Army officers forced about 120,000 people whose families came from Japan out of their homes and into camps, without charging them with any crime. Those who disobeyed, such as Fred Korematsu, were charged with breaking the orders themselves. The justices of the Supreme Court ruled in 1927 that the operations were allowed, and in 1944 that the removal was allowed.

Two sections run past 1950 to finish their stories: the Tulsa survivors' fight to be paid goes on to 2026, and Native Americans' fight for the vote goes on to 1957.

A mob in Lincoln's town, and the NAACP, 1908 and 1909

A group of Black and white reformers founded the National Association for the Advancement of Colored People, the NAACP, after a white mob attacked Black residents of Springfield, Illinois, in August 1908. Colored was a common word for Black people at the time. Springfield was Abraham Lincoln's home town.

Springfield. Reporters for Springfield's newspapers wrote on August 14, 1908, that a Black man had tried to attack a white woman in her home the night before. Then they wrote about a second attack. A white mob went looking for the men accused, and when the men in it could not find them, they turned on the city's Black neighborhoods.

The violence lasted nearly three days. The mob lynched two men, Scott Burton and William Donegan, killing them without any trial. Neither man had anything to do with any crime. The rioters destroyed dozens of homes. Part-time soldiers of the state militia, the state's own army, stopped the violence. Officials arrested about 150 people, and few of them were ever found guilty of anything. Nearly 2,000 Black residents left Springfield and never came back.

The founding. The NAACP's founders started it on February 12, 1909, a hundred years after Lincoln was born. Its white founders included Mary White Ovington, Oswald Garrison Villard, William English Walling and Dr. Henry Moscowitz. About 60 people signed the call for its first conference, and seven of them were Black. They included the scholar W. E. B. Du Bois, Mary Church Terrell and Ida B. Wells-Barnett. The founders said their aim was to "secure for all people the rights guaranteed in the 13th, 14th, and 15th Amendments."

Women march in Washington, 1913

Women marched down Pennsylvania Avenue in Washington to demand the vote on March 3, 1913, the day before Woodrow Wilson became president. Alice Paul and Lucy Burns organized the march. They ran the Congressional Committee of the National American Woman Suffrage Association. They chose the same route the president's parade would take the next day, and at least 250,000 people came to watch.

The crowd. The crowd pushed off the sidewalks and blocked the street. Men shoved the marchers, spat on them and shouted insults and crude requests for sex at them. The police did little to stop it. United States Army troops arrived about an hour later and cleared the street. Afterward, members of Congress investigated why the police had done so little.

Ida B. Wells-Barnett steps in. More than forty Black women marched, in their state groups or with women of their professions. Ida B. Wells-Barnett came with the Illinois group. As the march was forming, the parade's national organizers told the Illinois women that their group was to be "entirely white" and that Black women were to march at the tail end of the parade. The leader of the Illinois group went along with it.

Wells-Barnett refused and left. She waited at the side of the avenue until the Illinois women came past. Then she stepped into the line between two white marchers, Belle Squire and Virginia Brooks. The same year, Black women in Chicago formed the Alpha Suffrage Club, the first Black women's suffrage club in Illinois. Ida B. Wells-Barnett died in Chicago on March 25, 1931.

The Silent Sentinels and the Occoquan Workhouse, 1917

Women stood at the gates of the White House six days a week from January 10, 1917, holding banners that asked President Wilson to support their vote. A National Park Service article states that Alice Paul invented picketing the White House, standing outside it with signs as a public protest. One banner read "Mr President What Will You Do For Woman Suffrage?" Another read "How Long, Mr President, Must Women Wait For Liberty?" The women became known as the Silent Sentinels.

The arrests. Police began arresting the women in 1917 on a charge of "obstructing traffic," blocking the road. Over the whole campaign, judges found more than 150 women guilty of it. In November 1917 alone, 41 women were arrested, among them Lucy Burns, Dorothy Day, Dora Lewis and Mary Nolan. Their sentences ran from six days to six months.

The Night of Terror. Many of them were sent to the Occoquan Workhouse, a prison in Virginia. On the night of November 14, 1917, on the orders of the superintendent, W. H. Whittaker, the guards attacked them. The guards threw the women around, hung some of them by their arms and refused them food and medical care. Lucy Burns kept a daily log on scraps of paper and got it smuggled out of the workhouse.

Her entry for that night reads: "Seized by guards from behind, flung off my feet, and shot out of the room. All of us were seized by men guards and dragged to cells in men's part. Dorothy Day was roughly used-back twisted. Mrs. Mary A. Nolan (73-year-old picket from Jacksonville, Florida) flung into cell."

The guards handcuffed Burns all night, and for part of the time they chained her hands to the bars of her cell. By her own account, they did it because she had asked the other women how they were. That night is known as the Night of Terror.

Fed by force. Many of the prisoners went on hunger strike, refusing to eat as a protest. The prison doctor, Dr. Gannon, answered by feeding them by force. Forcible feeding meant holding a woman down and pushing a tube through

her nose or mouth, down her throat and into her stomach. Then the doctor poured liquid food through the tube. Burns wrote in her log what was done to her:

"I was held down by five people at legs, arms, and head. I refused to open mouth. Gannon pushed tube up left nostril. I turned and twisted my head all I could, but he managed to push it up. It hurts nose and throat very much and makes nose bleed freely. Tube drawn out covered with blood. Operation leaves one very sick. Food dumped directly into stomach feels like a ball of lead. Left nostril, throat and muscles of neck very sore all night."

Dora Lewis was held down by five people while Gannon forced the tube through her lips. "I didn't know where to breathe from and everything turned black when the fluid began pouring in," she wrote. Alice Paul and Rose Winslow were fed this way three times a day for three weeks, until they were let out. Winslow got a note out of the prison: "We think of the coming feeding all day. It is horrible."

Alice Paul

Who: The organizer who put the first picket line outside the White House, and who served six prison terms for women's right to vote.

When and where: Born at Mount Laurel, New Jersey, January 11, 1885. Washington, D.C., 1913 to 1920.

A nurse shone a light on her face every hour all night.

Alice Paul grew up in a Quaker family and earned a doctorate, the highest university degree, in economics from the University of Pennsylvania in 1912. She also studied in London and Birmingham. In England she joined Emmeline Pankhurst's campaign for the vote and was arrested for it more than once.

Back home, she became chairman of the National American Woman Suffrage Association's Congressional Committee in 1913. She then founded the Congressional Union and, in 1916, the National Woman's

Party. She organized the 1913 march in Washington, and she started the picket line at the White House gates on January 10, 1917.

Seven months. In October 1917 she was arrested for picketing and sentenced to seven months for obstructing traffic. On her way to serve it, she told reporters, "We are being imprisoned, not because we obstructed traffic, but because we pointed out to the President the fact that he was obstructing the cause of democracy at home, while Americans were fighting for it abroad." The United States was then fighting in the First World War.

The psychopathic ward. In the District of Columbia jail she went on hunger strike. Commissioner Gardner, one of the officials who governed the District of Columbia, told Dr. Gannon, "Go ahead, take her and feed her." She was carried on a stretcher to the jail's psychopathic ward, the part of the hospital for people thought to be insane. Gannon ordered one of her windows nailed shut and her door replaced with a barred cell door. A prisoner on a ladder nailed heavy boards across the other window from outside.

A nurse was ordered to check on her every hour through the night by turning an electric light onto her face. Under the rules of the time, the signatures of two doctors were enough to send a person to St. Elizabeth's, the government asylum, a hospital where such people were locked up. "No trial, no counsel, no protest from the outside world!" she wrote later, counsel meaning a lawyer.

The doctor who said no. The psychiatrist sent to examine her, Dr. William A. White, ran St. Elizabeth's, and he did not find her insane. A psychiatrist is a doctor who treats illnesses of the mind. "I felt myself in the presence of an unusually gifted personality," he wrote, and he praised the "most admirable, coherent, logical and forceful way" in which she argued her case. A lawyer, Dudley Field Malone, forced his way in and got her out of the ward.

She was released after five weeks of her seven-month sentence. She served six prison terms for the vote in all, three in England and three in the United States.

After the vote. She earned a law degree in 1922 and wrote the Equal Rights Amendment, which said that men and women must have equal rights under the law.

She had it introduced at Seneca Falls on July 20, 1923, where it was called the Lucretia Mott Amendment. In 1945 she worked on the words about women in the United Nations Charter, and later on the part about sex in the Civil Rights Act of 1964. The amendment she wrote was still not part of the Constitution when she died at Moorestown, New Jersey, on July 9, 1977, aged 92.

Margaret Sanger and the Comstock laws, 1914 to 1936

Margaret Sanger went to jail for giving women information about birth control, ways to keep from becoming pregnant. The Comstock Act of 1873 made it a crime to send that information by mail. Sanger was charged under the Comstock laws in 1914 for publishing *The Woman Rebel*, a paper about birth control, and she left for England.

The clinic. She opened a birth control clinic in Brooklyn, New York, on October 16, 1916. Police arrested her about a week later, and she spent 30 days in jail. Judges ruled in 1918 that doctors could give women birth control for medical reasons. Sanger founded the American Birth Control League in 1921.

The judges of a federal court ruled in 1936 that doctors could give their patients birth control. A National Women's History Museum biography states that Sanger also supported parts of the eugenics movement, whose members wanted to stop people they judged unfit from having children.

BY 1918: The NAACP had been working for nine years, and women who picketed the White House had been jailed and fed by force.

Attacks in 25 cities, and a court case out of Elaine, 1919 to 1925

White mobs attacked Black Americans in 25 major cities in 1919, and the NAACP's lawyers turned one of those attacks into a Supreme Court ruling. The year's violence is called the Red Summer. Writers at the Equal Justice Initiative, a group that records racial violence, state that white mobs and police especially targeted Black veterans coming home from the First World War.

Chicago. A 17-year-old Black boy named Eugene Williams was swimming off a raft near the 29th Street beach in Chicago on July 27, 1919. A 24-year-old white man, George Stauber, threw stones at the Black boys, and Eugene Williams drowned. A police officer, Daniel Callahan, refused to arrest Stauber.

White youth gangs and neighborhood "athletic clubs" then attacked Black neighborhoods, and the fighting went on until August 3. Thirty-eight people were killed, 23 Black and 15 white. About 537 were hurt, and two out of three of them were Black. Two out of three of the 138 people charged with crimes afterward were Black too.

Elaine. In Elaine, Arkansas, Black sharecroppers had joined a union. A sharecropper farmed land owned by someone else and paid for it with a share of the crop, and a union is a group of workers who bargain together. This one, the Progressive Farmers and Household Union of America, was led by Robert Lee Hill. Its members wanted a better price for their cotton from the white landowners.

About 100 of them met in a church at Hoop Spur on the night of September 30, 1919. Men in a car outside and the union's armed guards exchanged shots. A white security officer, W. A. Adkins, was killed, and a deputy sheriff, Charles Pratt, was wounded.

The killing. Between 500 and 1,000 armed white men came to Elaine from the surrounding Arkansas counties and from across the river in Mississippi. A white witness, H. F. Smiddy, swore in 1921 that "several hundred of them" began "to hunt negroes" and shoot them as they found them. Governor Charles Hillman Brough sent more than 500 soldiers from Camp Pike, and they arrived on October 2. Some accounts say the soldiers also killed Black people at random.

Four brothers, David, Gibson, Lewis and Leroy Johnston, were killed on October 2 on their way home from a hunting trip. The Encyclopedia of Arkansas does not say who killed them. Five white people were killed.

DISPUTED: The count of Black dead. The Encyclopedia of Arkansas gives a count that "ranged into the hundreds," and a National Archives page gives more than 100. The Army commander, Colonel Isaac Jenks, reported that his soldiers had killed two.

The trials. Phillips County officials charged 122 Black people with crimes. By November 5, 1919, twelve men had been tried in Phillips County and sentenced to death. One of their white defense lawyers admitted he "had not interviewed any witnesses." Walter White of the NAACP went to Arkansas to investigate, and a Black lawyer from Little Rock, Scipio Africanus Jones, defended the twelve.

The justices of the Supreme Court ruled on February 19, 1923, in *Moore v. Dempsey*, that the trials had been unfair. Justice Oliver Wendell Holmes wrote that one trial "lasted about three-quarters of an hour and in less than five minutes the jury brought in a verdict of guilty of murder in the first degree." An angry crowd had filled the courthouse and the streets around it.

Sworn statements in the case said Black witnesses had been "whipped, placed in the electric chair and strangled by something put in their noses to make them testify." Governor Thomas McRae freed the last of the twelve in January 1925.

Anti-lynching bills in Congress, 1900 to 1924

NAACP leaders pushed Congress for a federal law against lynching, and in the whole of this era members of Congress never passed one. Under such a law, federal judges could have tried the members of a lynch mob when state officials would not.

Representative George Henry White of North Carolina brought the first federal anti-lynching bill to Congress on January 20, 1900. He was the last Black member of Congress of his generation. Members of Congress did not pass his bill.

The Dyer bill. Representative Leonidas Dyer of Missouri introduced a bill on April 8, 1918, "to protect citizens of the United States against lynching in default of protection by the States," wherever the states failed to protect them. Members of a lynch mob would have been tried in federal court for murder, and the county where a lynching happened would have been fined.

Any sheriff or jailer who handed a prisoner to a mob, or failed to stop one, could have been jailed and fined up to $5,000. People who had been part of a mob could not sit on the jury.

NAACP leaders published a report in April 1919, *Thirty Years of Lynching in the United States, 1889-1918*. It recorded 3,224 people killed by lynch mobs in those thirty years, about two every week. Of them, 2,522 were Black, and 50 of the Black victims were women.

They sent James Weldon Johnson to Washington to press members of Congress in person. "I tramped the corridors of the Capitol and the two office buildings so constantly that toward the end, I could, I think, have been able to find my way about blindfolded," he wrote.

The vote that never came. Members of the House of Representatives passed the bill on January 26, 1922, by 230 votes to 119, with several hundred Black visitors crowded into the public gallery. NAACP organizers held a silent march in Washington for it on June 14, 1922, with more than 5,000 Black

marchers. Senators never voted on it. Southern Democratic senators filibustered it, which means they kept talking so that no vote could be held. They did the same in 1923 and 1924, and Republican senators let the bill drop.

The 19th Amendment, 1920, and the women it did not reach

The 19th Amendment to the Constitution was ratified in August 1920. After it, no official of the United States or of any state could refuse citizens the vote because of their sex. Its first section is one sentence: "The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex," abridged meaning cut down.

Forty-two years. The same words had been in front of Congress for 42 years. Senator Aaron Sargent of California introduced them on January 10, 1878. Senators voted them down in 1887, 1914, 1918 and February 1919. Susan B. Anthony died in Rochester, New York, on March 13, 1906, and suffragists named the measure the Anthony Amendment in her memory.

Representatives passed it on May 21, 1919, and senators passed it on June 4, 1919, by 56 votes to 25. Then lawmakers in three-fourths of the states had to ratify it. Tennessee's lawmakers made it the 36th state to do so on August 18, 1920, the last one needed. Secretary of State Bainbridge Colby signed the paper declaring it part of the Constitution on August 26, 1920, 72 years after the meeting at Seneca Falls.

Who still could not vote. State officials could no longer refuse a woman the vote because she was a woman, but they could still refuse her for other reasons. In the South, white officials already kept Black men from voting, by rules and by violence.

A National Park Service article states that Black women in the South "encountered the very same disfranchisement strategies and anti-Black violence that led to the disfranchisement of Black men." A National Archives page states that many women "remained unable to vote long into the 20th century because of discriminatory state voting laws," laws unfair to people because of who they were.

BY 1920: Women had won the vote in the Constitution, white officials in the South still kept many Black women and men from using it, and senators had blocked every federal bill against lynching.

Tulsa, June 1, 1921: white Tulsans burn Greenwood

Thousands of armed white Tulsans went into Greenwood, the Black district of Tulsa, Oklahoma, on June 1, 1921, and burned it to the ground. They killed as many as 300 people. The attackers threw bodies into the Arkansas River, carried them off on railroad flatcars and buried them in unmarked graves, so the true count may never be known. Red Cross workers counted about 700 people hurt.

DISPUTED: The number of dead. The historian Scott Ellsworth writes that "credible estimates of deaths range from fifty to three hundred." In 2025 lawyers at the United States Department of Justice wrote that the attack "killed as many as 300 Tulsans, perhaps even more."

Greenwood. About 10,000 Black people lived in Greenwood. It had two newspapers, more than a dozen churches, a library, two "fine hotels," four drug stores and many grocery stores. Loula Williams owned the Dreamland Theater, and J. B. Stradford owned a hotel of 54 rooms. Doctors, lawyers and teachers lived on Detroit Avenue, and families owned pianos and good furniture.

Black Tulsans spent their money in Greenwood because most white business owners in Tulsa would not serve them or treated them with contempt. Under city laws, Black families could not live in white blocks unless they worked there as servants. White officials controlled the city's tax money and spent none of it in Greenwood on running water or on carrying away sewage and garbage, and they paved fewer of its streets. All of Tulsa, Greenwood included, stood on land in the Muscogee (Creek) Nation's reservation.

How it began. Police arrested Dick Rowland, a 19-year-old Black man, on May 31. A white woman, Sarah Page, ran the elevator he used, and a white man had accused him of attacking her. She did not press charges. That evening a white crowd gathered at the courthouse to lynch Rowland, and armed Black men went there to stop it. Shooting broke out.

Tulsa police then deputized hundreds of white men, swearing them in as temporary police officers. Many of those men had been calling for a lynching and had been drinking.

The night. White men set the first fires in Greenwood at about 1 in the morning. When firemen came, armed white men threatened them and told them to let the Black homes burn. A little after 5 in the morning, a whistle blew. White men who had been organized into companies during the night gathered at three railroad stations and went into Greenwood.

How many. Counts of the white men who went in run from 8,000 to 10,000, and the state commission of 2001 gave about 10,000. The head of Oklahoma's National Guard, the state's own army of part-time soldiers, gave the *New York Times* a figure of 25,000. The Justice Department's review says many take that to be a misprint for 2,500.

House by house. The attackers went from house to house. They took what they wanted, piled bedding and furniture in the middle of a room, poured kerosene over it and lit it. They backed trucks up to houses and loaded "everything moveable and of value." White women came with shopping bags and took clothes, silverware and jewelry. The attackers opened safes and destroyed people's legal papers before burning the buildings.

They burned more than 1,200 houses and 35 city blocks. Among the buildings they burned were a dozen churches, five hotels, 31 restaurants, four drug stores, eight doctors' offices, more than two dozen grocery stores and the library.

The killing. They killed people who ran and people who gave up. The Justice Department's review describes a grandfather shot in front of his family in a wagon, and an old man who could not walk, shot in his home when he said he

could not "march." Four white men tied a blind man who had lost both legs to the back of a car and dragged him through the streets until he died.

An old couple on Greenwood Avenue were shot in the back of the head while they prayed. A man was shot as he came out of a burning building and thrown back into the fire. Survivors could not name the men who did these things. The Red Cross's relief director in Tulsa, Maurice Willows, who was white, wrote: "This was NOT a RIOT."

Fighting back. Some Black men fought back. A group fired from the bell tower of the new Mount Zion Baptist Church until National Guard soldiers turned a machine gun on it. J. B. Stradford shot from the second floor of his hotel. He gave up when the attackers promised not to burn it, and then they burned it.

The Guard. Three Guard units were in Tulsa, and before the governor took control the guardsmen took orders from Police Chief John Gustafson. By their own reports, they helped the police organize white men into companies and went into Greenwood to round up Black residents. The Justice Department's review states that the guardsmen's main work was capturing Black men. That left Black homes empty, and other white men looted and burned them.

Some guardsmen tried to hold back white attackers. Governor James Robertson declared martial law, which put the Guard in charge of the city, at 11:30 that morning.

The airplanes. Airplanes flew over Greenwood during the attack. The Justice Department's review calls it "undisputed" that the men in them watched where Black residents ran and told the police. Many survivors said men in the planes also dropped firebombs or shot at people fleeing. The lawyer B. C. Franklin, who saw it, described turpentine bombs. The review calls that part "hotly disputed."

The camps, the passes and the grand jury, June 1921

Police, deputies and guardsmen arrested Black people all over Tulsa after the burning, whether or not they were suspected of anything. The Justice Department's review states that the arrests were not based on "probable cause or even reasonable suspicion," the legal words for a good reason to believe a person has done something wrong. Guardsmen also arrested Black servants in the servants' rooms of white homes.

They held the people they arrested under armed guard in three places: Convention Hall, McNulty Park, which was a baseball park, and the stalls of the fairgrounds. At the fullest, between 4,000 and 6,000 people were held, some for a few days and some for up to two weeks. Guardsmen arrested some white men for looting, but they held no white person in the camps.

The cards. To leave a camp, a Black person needed an identification card, and a white person had to vouch for it. People who worked in white homes and businesses got green cards that did not run out. People without jobs got red cards that were good for one day.

Anyone found without a card was arrested again. By June 7, officials had given out 7,500 of these cards, and the rule lasted at least a month. People forced to live under it said they were treated "as though they [were] dogs."

Forced labor. The day after the burning, the Guard commander ordered "all able bodied [N]egro men" in the camps to "render such service and perform such labor as is required." The men cleared the ruins and buried the dead. Red Cross officials paid up to 25 cents an hour, and a meal cost 20 cents.

For several weeks officials did not allow Black Tulsans to own or buy guns. Most of Greenwood's people had no home left. Many lived in Red Cross tents for more than a year, and many of the tents had no floor.

The grand jury. A state grand jury, a group of citizens who decide whether there is enough evidence to charge someone with a crime, heard almost 200 witnesses. It charged about 70 men, many of them Black leaders of Greenwood, with starting the "riot." The *Tulsa Daily World* printed its report

on June 26, 1921, under the headline "Grand Jury Blames Negroes for Inciting Race Rioting: Whites Clearly Exonerated," exonerated meaning cleared of blame.

Most of the cases were later dropped, including the case against Dick Rowland. Some white men were charged with looting. No white man went to prison for the killings or the burning. The grand jury also charged Police Chief Gustafson with neglect of duty, failing to do the job he was paid to do, and with dishonest dealings from before the massacre. He was found guilty in court and removed from his post.

Building Greenwood again, against the city

Greenwood's people rebuilt their district with no rebuilding money from the city, the state or the federal government, after winning a court fight against city leaders who tried to stop them. Tulsa's city commissioners passed Fire Ordinance No. 2156, a city law, on June 7, 1921. It put most of Greenwood inside the city's fire limits, an area with strict building rules meant to stop fires spreading. Every new building there had to be "of concrete, brick, or steel and ... at least two stories high."

The first newspaper story about the rule said the land would "never again be a [N]egro quarter but will become a wholesale and industrial center." The Justice Department's review stated in 2025 that "those who drafted the ordinance planned to drive Black people out of Greenwood."

The lawyers in a tent. B. C. Franklin, a Black lawyer, set up an office in a tent on Archer Street with two partners, I. H. Spears and T. O. Chappelle. Before they could get to court, police had arrested many people for trying to rebuild. The lawyers won a court order that stopped the rule for a time, and then, in September 1921, an order that stopped it for good.

The claims. Greenwood's people filed more than $1.8 million in damage claims with the city between June 1921 and June 1922. City officials turned down all but one, and the one they paid went to a white shop owner for guns taken from his store. Franklin's firm filed about $4 million in claims against the city and against insurance companies.

Officials of the insurance companies refused to pay, because their policies did not cover damage done in a "riot." The justices of the Oklahoma Supreme Court ruled in 1926 that no one could sue the insurance companies over it. Judges threw out the lawsuits against the city, Mayor T. D. Evans, the police and the airplane company.

Greenwood again. The National Negro Business League held its national meeting in Greenwood by 1925, and by the 1940s Greenwood had 242 Black-owned businesses. From the 1950s, city officials took land along its edges for highways. The Inner Dispersal Loop and the Cherokee Expressway, finished in the 1970s, run along Greenwood's south and east sides.

The survivors ask to be paid, 1997 to 2026

Greenwood's survivors began asking to be paid for what was taken from them in June 1921, and in more than a hundred years neither the city nor the state paid them. Oklahoma's lawmakers set up an 11-member commission to study the massacre in 1997. Its members handed in their report on February 28, 2001. They asked the state to pay the survivors and their descendants directly, and to fund scholarships, business growth in the area and a memorial.

The lawmakers passed the 1921 Tulsa Race Riot Reconciliation Act on June 1, 2001. They voted no money for the survivors in it.

The lawsuits. Survivors and descendants sued the state and the city in 2003. Federal judges threw the case out in 2004, ruling that they had waited too long to sue. The last three known survivors sued again in 2020: Viola Fletcher, her brother Hughes Van Ellis and Lessie Benningfield Randle. They sued the City of Tulsa, the Tulsa Regional Chamber, the county's commissioners, Sheriff Vic Regalado and the Oklahoma Military Department. On May 19, 2021, the three spoke to a committee of Congress.

A president's visit. President Joe Biden met the three survivors and spoke at the Greenwood Cultural Center on June 1, 2021. He was the first president in office to visit Greenwood about the massacre. "It wasn't a riot, it was a massacre," he said. He did not call for the survivors to be paid.

The end of the case. The justices of the Oklahoma Supreme Court ended the survivors' lawsuit on June 12, 2024, by eight votes to one. They wrote that the harm the massacre left behind "can only be resolved by policymakers, not the courts." Hughes Van Ellis had died on October 9, 2023, aged 102. Viola Fletcher died on November 24, 2025, aged 111. Lessie Benningfield Randle, born on November 10, 1914, was the last known survivor in 2026, and neither the city nor the state had ever paid her.

The graves. Tulsa's mayor, G. T. Bynum, started a search for the massacre's unmarked graves in 2018. By September 2026 the searchers had dug up the remains of 55 people in Oaklawn Cemetery, and they have named two victims of the massacre. C. L. Daniel was identified by DNA in July 2024. James Goings was identified from Veterans Administration records in June 2025, and his grave has not been found. Both men had served in the Army in the First World War.

Viola Fletcher

Who: A seven-year-old girl whose family fled Greenwood in 1921, who never went to school past the fourth grade, and who at 107 asked Congress for justice.
When and where: Tulsa, Oklahoma, 1921. Washington, D.C., May 19, 2021.

"I am 107 years old and have never seen justice."

Viola Fletcher was born Viola Ford on May 10, 1914, the daughter of Lucinda Ellis and John Wesley Ford of Tulsa. She grew up in Greenwood with her parents and five brothers and sisters. "The neighborhood I fell asleep in that night was rich," she told Congress in 2021, "not just in terms of wealth, but in culture, community, and heritage." "My family had a beautiful home. We had great neighbors and I had friends to play with. I felt safe."

The night they left. On the night of May 31, 1921, her family woke her and told her they had to leave. "I will never forget the violence of the white mob when we left our house," she said. "I still hear airplanes flying overhead. I hear the screams. I live through the Massacre every day."

"When my family was forced to leave Tulsa, I lost my chance at an education," she said. "I never finished school past the fourth grade." During the Second World War she worked in the shipyards in California. "For most of my life, I was a domestic worker serving white families," she said, cleaning and cooking in other people's homes.

Before Congress. At 106, in 2020, she joined her brother and Lessie Benningfield Randle in suing the City of Tulsa and others. She spoke to the House of Representatives' subcommittee on civil rights on May 19, 2021. "Today, I am in Washington, D.C. for the first time in my life. I am here seeking justice," she told them. "I am 107 years old and have never seen justice." She asked them to "open the courtroom doors to us."

She and her grandson, Ike Howard, published a book about her life in 2023, *Don't Let Them Bury My Story*. The justices of the Oklahoma Supreme Court ended the survivors' lawsuit in June 2024. Viola Fletcher died on November 24, 2025, aged 111, and she never saw the survivors paid.

Grace Fryer

Who: A watch-dial painter who sued the company whose paint had poisoned her, and who had to fight a state time limit that ran out before she knew she was ill.

When and where: Orange, New Jersey, 1917 to 1928.

Movie: Radium Girls (2018)

The painters shaped each radium brush between their lips.

Grace Fryer painted numbers on watch dials at the U.S. Radium Corporation's plant in Orange, New Jersey, from 1917 to 1920. The paint glowed in the dark because it had radium in it. Radium is a radioactive metal, which gives off radiation, energy that can damage the body's cells.

To keep a fine point on the brush, the painters put the tip between their lips. The physicist Robley Evans wrote down why: a cloth or their fingers "were too harsh, but by wiping the brush clean between their lips the proper erasing point could be obtained."

What radium did. The body takes up radium as if it were calcium and builds it into the bones and teeth. Once there, it stays and keeps giving off radiation from the inside. When doctors examined the bodies of dial painters after death, they found 99 percent of the radiation in the skeleton. Radium in the bones stopped the marrow from making blood properly, killed the jaw bone so that it broke apart, and caused bone cancers.

Fryer left the plant in 1920. In 1924 she went to a dentist, Theodor Blum, who found that her jaw bone was wasting away. He had never seen anything like it. Doctors came to call it radium jaw.

The time limit. A lawyer, Raymond Berry, filed suit against the company in May 1927 for Fryer and four women she had worked with: Katherine Schaub, Quinta Maggia Macdonald, Albina Maggia Larice and Edna Hussman.

The company's lawyers argued that New Jersey's statute of limitations, the time limit after which a person can no longer sue, meant the company could not be blamed. New Jersey's limit for injuries at work was two years. Radium poisoning took longer than two years to show itself, and Fryer had left the plant seven years before.

The settlement. A federal judge, William Clark, brought the two sides to a settlement outside court on June 4, 1928, and they signed it on June 8. Each woman got $10,000, though some sources give as much as $15,000. Each also got $600 a year for as long as she lived, and her doctors' bills paid. The settlement papers contain no admission that the company was to blame.

Ottawa, Illinois. Ten years later, women who had painted dials for the Radium Dial Company in Ottawa, Illinois, fought the same fight. One of them, Catherine Wolfe Donohue, collapsed at a hearing on February 10, 1938, and was carried out of the room.

The officer hearing her case ruled on April 5, 1938, that her work had made her ill and awarded her $5,661, plus $277 a year for life. On July 6 the members of the Illinois Industrial Commission, the state board that heard workers' claims, threw out the company's appeal and added $730.

She died on July 27, 1938, aged 35. The last ruling in her case came that October, after her death, and her family received a small payment.

BY 1925: White Tulsans had burned Greenwood, its people were rebuilding it without help from the city, and a dentist had found a watch-dial painter's jaw bone wasting away from radium.

Native Americans become citizens and fight for the vote, 1911 to 1957

Native Americans organized their own national rights groups in these years, and it took them 33 years after they became citizens to win the vote in every state. Native people founded the Society of American Indians at Columbus, Ohio, on October 12, 1911, the first national rights organization run by Native people.

Charles Eastman and Carlos Montezuma were among its leaders, and Zitkala-Ša edited its journal. She founded the National Council of American Indians in 1926. Eighty delegates from more than 50 tribes met in Denver on November 16, 1944, and founded the National Congress of American Indians.

Citizens without the vote. Members of Congress passed the Indian Citizenship Act on June 2, 1924, and President Calvin Coolidge signed it. American Indians became citizens. That did not put them on the voter rolls, the lists of people allowed to vote, because officials in each state set their own rules about who could vote.

Arizona and New Mexico. Under Arizona's law, no one could vote who was an "idiot, insane person, person non compos mentis, or under guardianship." Non compos mentis is Latin for "not of sound mind," and a person under guardianship has been placed in someone else's care by law.

The justices of the Arizona Supreme Court ruled in 1928 that Native people living on reservations were under the guardianship of the federal government, and so could not vote. New Mexico officials used the state constitution's phrase "Indians not taxed." People on reservations paid no state taxes, they argued, and so could not vote.

1948. Judges threw out both rules in 1948. The justices of the Arizona Supreme Court threw out their own court's 1928 ruling in *Harrison v. Laveen* on July 15, 1948. Justice Levi Udall wrote that a Native person who met the other requirements could not be kept off the rolls for living on a reservation.

Three federal judges in New Mexico ruled in August 1948, in *Trujillo v. Garley*, that the "Indians not taxed" rule broke the Constitution. Utah's officials were the last in any state to let Native people vote, in 1957.

A society for gay rights in Chicago, 1924

Henry Gerber founded the Society for Human Rights in Chicago on December 10, 1924. A National Park Service article calls it the first organization in the United States set up only to work for the civil rights of gay people. A gay person is a man who loves men or a woman who loves women.

Gerber was born Josef Heinrich Dittmar in Bavaria, in Germany, on June 29, 1892. He came through Ellis Island in October 1913, served in the United States Army and worked for the Post Office. He got a charter for the society from the State of Illinois, a paper that made it a legal group, by describing its members as people "abused and hindered in the legal pursuit of happiness." Its members printed two issues of a newsletter, *Friendship and Freedom*. No copy survives.

The arrests. Chicago police arrested Gerber and other members without a warrant, a court paper that allows an arrest. They took his typewriter, his writings and his diaries, and they gave back only the typewriter. Post Office officials fired him "for conduct unbecoming a postal employee." The society ended in 1925. Gerber died in 1972. His house in Chicago became a National Historic Landmark in June 2015.

Eugenics: operating on people so they could not have children

Eugenics was the belief that a country could improve its people by deciding who was fit to have children and stopping the rest. Francis Galton, an English scientist who studied numbers about people, made up the word in 1883. A fact sheet from the National Human Genome Research Institute calls eugenics "the scientifically erroneous and immoral theory of 'racial improvement' and 'planned breeding,'" erroneous meaning wrong. The idea became popular in the early 1900s.

Sterilization. American eugenicists pushed for laws under which officials could force people to be sterilized. To sterilize a person is to operate on them so that they can never have a child, and the operation cannot be undone. When Dr. John H. Bell operated on Carrie Buck in Virginia in 1927, he cut out a piece of each of the two tubes that carry eggs to her womb.

The model law. Harry H. Laughlin of the Eugenics Record Office wrote a model sterilization law for lawmakers in each state to copy. A page from the United States Holocaust Memorial Museum states that "in part due to Laughlin's efforts, dozens of American states enacted laws that forced certain people to be sterilized against their will." The same page states that "more than 62,000 sterilizations had been performed in the United States by the 1960s," and that about six in ten of the people operated on were women.

The National Human Genome Research Institute's fact sheet counts at least 60,000 people sterilized under the laws of 30 states by the 1970s. The people targeted included Latinos, Native Americans, African Americans, poor white people and disabled people.

Germany. Germany's Nazi rulers passed the Law for the Prevention of Offspring with Hereditary Diseases in 1933, a law about children and illnesses passed from parents to children. The Holocaust Museum's page states that the law was "based in part on the practice of forced sterilization in the US." Doctors in Nazi Germany sterilized about 400,000 people under it.

Leaders of the University of Heidelberg in Germany gave Harry Laughlin an honorary degree in 1936, a degree given as an honor without study. He wrote back on May 28, 1936, that "To me this honor will be doubly valued because it will come from a nation which for many centuries nurtured the human seed-stock which later founded my own country." Seed-stock means the animals or plants that farmers keep for breeding. Laughlin used the word for people.

Carrie Buck

Who: A young Virginia woman chosen as a test case by the man who wanted to sterilize her, and defended by a lawyer who wanted the same thing.

When and where: Virginia, 1924 to 1927. Died at Waynesboro, Virginia, January 28, 1983.

Her own lawyer wanted her sterilized too.

Carrie Buck's case was arranged so that Virginia's officials would win it. Virginia's lawmakers passed the state's sterilization law on March 20, 1924, and a lawyer, Aubrey Strode, wrote it. Albert Priddy ran the Virginia State Colony for Epileptics and Feeble-Minded, a place where Virginia's officials held people they had ordered locked up. Epileptics are people with epilepsy, an illness that causes seizures. Feeble-minded was a label then given to people who scored low on intelligence tests.

How she came to the Colony. Carrie Buck was born in Charlottesville on July 2, 1906, and raised by foster parents. Encyclopedia Virginia states that she was "allegedly raped" by their nephew and became pregnant. Rape means forcing a person to have sex. Her foster parents said the pregnancy showed that she was feeble-minded, and on January 23, 1924, they asked a court in Charlottesville to have her sent to the Colony.

Priddy wanted to know whether the new law would hold up in court. So he picked one of the people held there, Carrie Buck, and had a case brought over her. Priddy died on January 13, 1925, and Dr. John H. Bell took his place at the Colony and in the case. That is why it is called *Buck v. Bell*.

Two lawyers on one side. Strode, who had written the law, argued for the Colony in court. Carrie Buck's lawyer was Irving P. Whitehead, who had sat on the Colony's own board and supported sterilization. The historian Paul Lombardo found that Whitehead did not seriously question any of the witnesses against her and did not call one witness for her. Both lawyers wanted the judges to rule that the law was allowed.

A eugenics researcher, Arthur Estabrook, interviewed the family for one day. Then he testified that Carrie, her mother Emma and her baby daughter Vivian were "a defective strain." Officials had committed Emma Buck to the Colony in April 1920, ordering her held there. Vivian was born on March 28, 1924. A social worker said of the baby that she had "a look about it that is not quite normal."

Three courts. Judge Bennett T. Gordon of the trial court ruled for the Colony on November 18, 1924. The judges of the Virginia Supreme Court of Appeals agreed with him on November 12, 1925. The justices of the Supreme Court of the United States heard the case on April 22, 1927, and ruled for the Colony, eight to one, on May 2, 1927.

The operation. Dr. Bell performed a salpingectomy on Carrie Buck on October 19, 1927. He cut out a section of each of her two tubes that carry an egg from an ovary to the womb. After that, no egg could reach her womb, so she could never become pregnant. The operation could not be undone. The staff released her from the Colony the next month.

Officials had brought her sister, Doris Buck, to the Colony in June 1926. Colony officials signed an order to sterilize Doris in December 1927, and doctors operated on her in January 1928.

Afterward. Virginia doctors sterilized about 8,300 people under the law between 1927 and 1972. Virginia's lawmakers ended the law in 1974. Lawyers for the American Civil Liberties Union sued for the survivors in 1980, and the two sides settled the case out of court. On May 2, 2002, 75 years to the day after the ruling, Governor Mark Warner apologized for what he called "a shameful effort in which state government never should have been involved."

> Carrie Buck married twice. She died in a nursing home in Waynesboro, Virginia, on January 28, 1983. The justices of the Supreme Court have never overturned *Buck v. Bell*, which means they have never ruled that it was wrong.

BY 1929: Native Americans were citizens who still could not vote in Arizona or New Mexico, and the Supreme Court's justices had allowed Virginia doctors to sterilize Carrie Buck.

Citizens sent to Mexico, 1929 to 1936

Federal, state and county officials sent or forced hundreds of thousands of people whose families came from Mexico out of the United States during the Great Depression, the years of hard times after 1929. Many of them were American citizens. Counts run from about 500,000 to about 2 million. In a 2005 law, California's lawmakers found that about 1.2 million of the 2 million people they counted had been born in the United States, which made them citizens.

Los Angeles. William N. Doak, President Herbert Hoover's Secretary of Labor, led a national campaign to remove Mexicans, saying they were taking jobs. In Los Angeles, Charles P. Visel, head of the city's unemployment relief committee, planned the publicity. Immigration agents closed the exits of La Placita park in Los Angeles on February 26, 1931, with about 400 people inside.

Los Angeles County welfare officers told families their relief money, the public money that poor families lived on during the Depression, would stop unless they took free train tickets to Mexico. The first county train left on March 23, 1931. Hospital staff carried patients on stretchers to trucks bound for the border. Local officials often sold the property that families left behind.

The apologies. California's governor signed a law on October 7, 2005, in which the state's lawmakers apologized "for the fundamental violations of their basic civil liberties and constitutional rights committed during the period of illegal deportation and coerced emigration." That means people were sent out

of the country against the law, or forced to leave it. The Los Angeles County supervisors, who run the county, apologized in 2012. Representative Hilda Solis called on the federal government to apologize in 2006. No president and no Congress has apologized.

Two California school cases, 1931 and 1946

Mexican American parents in California won two school desegregation cases, fifteen years apart, and the first, in 1931, was the first school desegregation case won in the United States, desegregation meaning an end to keeping children of different races apart.

Lemon Grove. The principal of Lemon Grove Grammar School, near San Diego, Jerome T. Green, stood in the doorway on January 5, 1931. He let in every child except the Mexican American ones and told them to go to a separate two-room building. Members of the school board had planned this the summer before. The school had 169 pupils: 87 counted as European American, about 75 Mexican American and 7 Japanese American.

The parents formed a committee, the Comité de Vecinos de Lemon Grove, the Lemon Grove Neighbors Committee. They kept their children out of the separate building and hired two lawyers, Fred Noon and A. C. Brinkley, and they sued in the name of one of the pupils, Roberto Alvarez.

Judge Claude Chambers of the San Diego County Superior Court ruled on March 30, 1931. He ordered the district to admit the children "on a basis of equality with other children of said school district, and without separation or segregation in a separate school because of race or nationality." Putting "all the Mexicans in one group can only be done by infringing," or breaking, "the laws of the State of California," he said. Some accounts date the ruling March 31.

Mendez. Fifteen years later, five families in Orange County, among them the Mendez family, sued four school districts there. Their lawyer had won a case in 1944 against segregated pools and parks in San Bernardino.

Judge Paul J. McCormick ruled for the families on February 18, 1946. "A paramount requisite in the American system of public education is social equality," he wrote. He meant that treating all children as equals came first in

American public schools.

When the districts' officials appealed, asking a higher court to change the ruling, other groups joined the fight. NAACP lawyers, among them Thurgood Marshall, filed a friend-of-the-court brief, an argument from people who are not part of a case. Four other groups filed briefs too, among them a Japanese American group and a Latin American group.

The judges of the federal appeals court ruled for the families on April 14, 1947. Governor Earl Warren signed the Anderson Bill in June 1947, and with it California's lawmakers took segregated schools out of the state's school laws, the first lawmakers in any state to do so. Warren became Chief Justice of the United States in 1953.

The Munemitsu farm. While the Mendez family fought school segregation, they were farming land whose Japanese American owners federal officials had locked up. The farm was 40 acres in Westminster that belonged to Seima Munemitsu and his family. Federal officials held the Munemitsus at the Poston camp in Arizona from May 1942 to September 1945.

Could a school turn a disabled child away?

Yes. School officials could turn a disabled child away in these years, because no law required them to teach one. The rule came from a Massachusetts case decided on January 4, 1893.

Members of the Cambridge school committee had put a boy named John A. Watson out of the public schools in 1885. Their record states that he was excluded "because he was too weak-minded to derive profit from instruction," and that he was "troublesome to other children, making uncouth noises, pinching others," uncouth meaning rude and rough. The judges of the Massachusetts Supreme Judicial Court ruled that the committee's decision was final and that no court could review it. That rule held through the whole of this era.

Parents organize. Parents in Cleveland, Ohio, founded the Cuyahoga County Council for the Retarded Child in 1933. "Retarded" was the word then used for children with intellectual disabilities. The county's own history describes it as a group led by parents and "founded to assist children of the region who had been excluded from their public schools."

A sit-in for jobs, New York, 1935

Six disabled New Yorkers sat down in the city's Home Relief Bureau in May 1935 and refused to leave until they were given a fair chance at government jobs. During the Depression, federal officials gave out jobs to people who were out of work through the Works Progress Administration, the WPA. Workers at the city's Home Relief Bureau stamped disabled people's applications "PH," for "physically handicapped." Officials treated anyone with the stamp as unable to work, and gave them no WPA jobs.

The league. About 300 disabled people formed the League of the Physically Handicapped. Most of them lived with the effects of polio, a disease that can paralyze muscles, or of cerebral palsy, a condition from birth that affects movement. After the bureau's director refused to see them, six of them began the sit-in while others picketed outside. Later they sat in at WPA headquarters too.

One member said afterward that "everybody was getting jobs." The militant members, the same member said, "just refused to accept the fact that we were the only people who were looked upon as not worthy, not capable of work," militant meaning ready to fight hard for a cause.

Officials had made about 1,500 jobs for disabled people in New York City by 1936, and the league had ended by 1938. Lawmakers in Congress passed the Social Security Act in August 1935. It defined disability as "inability to engage in substantial gainful work," so a person who received disability insurance could not easily take a job.

BY 1935: Officials had forced hundreds of thousands of people of Mexican descent, many of them citizens, out of the country, and disabled New Yorkers had sat in to demand a fair chance at jobs.

Charles Hamilton Houston's plan: law schools first, 1935 to 1949

Charles Hamilton Houston planned the NAACP's attack on segregated schools as a series of court cases, starting with law schools. He was born in Washington, D.C., on September 3, 1895, and he was the first Black editor of the *Harvard Law Review*. He became dean, the head, of Howard University's law school in 1929, where he trained Black lawyers to fight segregation in court. One of his students was Thurgood Marshall.

The plan. Houston became the NAACP's first special counsel, its chief lawyer, in the 1930s. His plan, in his words, was to "start with the law schools and higher education, and integrate schools from the top down." To integrate schools is to let Black and white students learn in the same schools.

Donald Murray. The first case was Donald Gaines Murray's. He applied to the University of Maryland School of Law on January 24, 1935, and was refused because he was Black. Houston, Marshall and a Baltimore lawyer, Nicholas Gosnell, took his case to the Baltimore City Court.

Judge Eugene O'Dunne ordered the university's president, Raymond A. Pearson, to admit him. The judges of the Maryland Court of Appeals agreed on January 15, 1936, and Murray graduated in 1938. The second case, Lloyd Gaines's in Missouri, went to the Supreme Court in 1938.

Ada Lois Sipuel. Ada Lois Sipuel was born in Chickasha, Oklahoma, on February 8, 1924. She applied to the University of Oklahoma College of Law on January 14, 1946. The university's president, George Lynn Cross, put in writing that there was no academic reason to reject her. He refused her because state law forbade teaching Black and white students in the same room.

Thurgood Marshall took her case, and the justices of the Supreme Court decided it on January 12, 1948. Oklahoma's leaders answered by setting up a separate law school for Black students in five days, in rooms at the State Capitol. She was admitted to the University of Oklahoma on June 18, 1949, three years and five months after she applied, and graduated in August 1952. Houston died on April 22, 1950.

Lloyd Gaines

Who: A history graduate who sued to study law in his own state, won the NAACP's first school case at the Supreme Court, and then disappeared.
When and where: Missouri, 1935 to 1938. Last seen in Chicago, March 1939.

He won his case and then disappeared.

Lloyd Gaines graduated with honors from Lincoln University, Missouri's college for Black students, with a degree in history, in August 1935. His father, Henry Richard Gaines, was a tenant farmer, a farmer who rents the land he works, and had been a teacher. Lloyd was one of eleven children.

Sent out of state. He applied to the University of Missouri School of Law. The registrar, the official in charge of signing up students, was S. W. Canada, and he sent Gaines to the president of Lincoln University. Lincoln's president pointed him to a Missouri law that paid a Black student's fees to study law in a neighboring state. Missouri's officials offered to pay for him to attend law school in Kansas, Nebraska, Iowa or Illinois rather than let him into its own.

He refused the offer and sued. Charles Hamilton Houston of the NAACP and a St. Louis lawyer, Sidney Redmond, filed his case in the circuit court, a state court in Missouri, on January 24, 1936. The circuit judge ruled against him in July 1936, and the judges of the Missouri Supreme Court ruled against him on December 9, 1937.

The ruling. The justices of the Supreme Court of the United States heard the case on November 9, 1938, and decided it on December 12, 1938, six to two, for Gaines. "The State was bound to furnish him within its borders facilities for legal education substantially equal to those which the State there afforded for persons of the white race," Chief Justice Charles Evans Hughes wrote.

A state had to give a Black student a law school as good as the white one, inside the state itself. Justice James McReynolds dissented, and Justice Pierce Butler joined him.

Gone. Missouri's lawmakers did not let Gaines into the university. They created a separate law school for Black students at Lincoln University in 1939. Gaines never attended either school. He was last seen in Chicago in March 1939, at a fraternity house, and he left a bag of his belongings behind. No one formally reported him missing until October 1939.

KNOWN:	FBI agents reopened the case in 2007 as part of their work on unsolved civil rights crimes.
NOT KNOWN:	What happened to Lloyd Gaines. He has never been found.

Marian Anderson sings at the Lincoln Memorial, 1939

Leaders of the Daughters of the American Revolution, a women's group, barred the Black singer Marian Anderson from singing in their hall in Washington, Constitution Hall, in 1939. Under the hall's rules, only white performers could appear there. Interior Secretary Harold Ickes arranged for her to sing on the steps of the Lincoln Memorial instead.

About 75,000 people came on Easter Sunday, April 9, 1939. Ickes introduced her with the words "Genius draws no color line." She opened with "My Country 'Tis of Thee." At the memorial's opening ceremony in 1922, the organizers had seated the crowd by race, and they had checked the speech of the one Black speaker, Robert Russa Moton, in advance.

A. Philip Randolph

Who: A union leader who twice got a president to sign an order against discrimination by threatening to bring a march to Washington.

When and where: Washington, D.C., 1941 and 1948.

"Ten, twenty, fifty thousand Negroes on the White House lawn."

A. Philip Randolph founded the Brotherhood of Sleeping Car Porters in 1925, a union of the Black Pullman porters who worked on railroad sleeping cars. In 1935 the Brotherhood became the first African American union admitted to the American Federation of Labor, a national group of unions.

The first march. Americans were building weapons for the Second World War in 1941, and defense factories were hiring. Randolph and Bayard Rustin began organizing a march on Washington against discrimination in the defense industries, which means treating people worse because of their race. Randolph and other Black leaders met Eleanor Roosevelt and members of the president's cabinet. Randolph told them he would bring "ten, twenty, fifty thousand Negroes on the White House lawn," using the word of the time for Black people.

The order. President Roosevelt signed Executive Order 8802 on June 25, 1941. An executive order is a written order from the president to the people who work for the federal government. "There shall be no discrimination in the employment of workers in defense industries and in Government, because of race, creed, color, or national origin," it said, creed meaning religion.

With the order, Roosevelt set up a Committee on Fair Employment Practice to take complaints and look into them. Federal agencies, companies with defense contracts and the unions working on them all had to follow the order, and Randolph called off the march. A National

Archives page states that most historians judge that the committee did little, especially in the South. After the war, members of Congress refused to make it permanent.

The second march. Randolph planned another march in 1948, this time against segregation in the armed forces, where officers still kept Black and white troops apart. President Truman signed Executive Order 9981 on July 26, 1948: "There shall be equality of treatment and opportunity for all persons in the armed forces without regard to race, color, religion or national origin." Military leaders resisted the order. By about 1953, the end of the Korean War, Black and white troops served together in nearly all of the armed services.

Randolph was the chief organizer of the March on Washington in 1963. He received the Presidential Medal of Freedom in 1964 and died at his home in New York City on May 16, 1979, aged 90.

BY 1941: NAACP lawyers had won their first school case at the Supreme Court, and A. Philip Randolph's threat of a march had won a president's order against unfair hiring in defense factories.

About 120,000 people held without charges, 1942 to 1945

Army officers, acting on President Roosevelt's order, forced about 120,000 people of Japanese ancestry out of their homes on the west coast in 1942, and federal officials held them in camps. People of Japanese ancestry are people whose families came from Japan. Officials locked them up without charging them with any crime or giving them a trial. Fred Korematsu and others who disobeyed the orders were charged with breaking them. Japan had attacked Pearl Harbor, Hawaii, on December 7, 1941.

The order. President Franklin D. Roosevelt signed Executive Order 9066 on February 19, 1942. Army commanders could now mark off "military areas," as large as they decided, and order "any or all persons" out of them. Lieutenant General John L. DeWitt, who commanded the Army on the west coast, used it against people of Japanese ancestry. He set curfews, orders to stay indoors during set hours, that applied only to Japanese Americans, and he gave families as little as 48 hours' notice to leave their homes.

Members of Congress passed a law on March 21, 1942, making it a crime to disobey his orders, punishable by up to a year in prison and a $5,000 fine. A page from the federal courts counts more than 120,000 people removed, two out of three of them American citizens. A National Archives page counts about 122,000, of whom nearly 70,000 were citizens.

Topaz. Officials held them first in temporary centers such as the Tanforan racetrack near San Francisco, and then in ten camps built inland, in Wyoming, California, Utah, Arizona, Colorado, Idaho and Arkansas. One of the ten was Topaz, the Central Utah Relocation Center, 15 miles northwest of Delta, Utah. It opened on September 11, 1942, and closed on October 31, 1945. More than 11,000 people passed through it, most of them from around San Francisco, and at its fullest more than 8,000 lived there at once.

The camp had 42 blocks, each with 12 barracks and 250 to 300 people. The barracks were built of pine boards covered with tarpaper. The furniture handed out was pot-bellied stoves, army cots, blankets and mattress covers.

The people of each block shared one dining hall and one building of washrooms, toilets and laundry. A fence with seven watchtowers surrounded the camp.

James Wakasa. James Hatsuki Wakasa, a 63-year-old man born in Japan, was walking his dog inside the fence at Topaz on April 11, 1943. Private First Class Gerald Philpott, the military policeman in Guard Tower 8, shot him dead. Philpott said Wakasa had been too close to the fence and had not turned back when warned. Witnesses believed Wakasa was hard of hearing.

Investigators found that his body lay several feet inside the fence and that he had been facing the guard when he was shot. Army officers tried Philpott at a court-martial, a military trial, for manslaughter, killing a person without planning to, and found him not guilty.

Four cases at the Supreme Court, and the one that won, 1943 and 1944

Four Japanese Americans took the government's orders to the Supreme Court. Three of them lost, and one, Mitsuye Endo, won.

Breaking the curfew on purpose. Gordon Hirabayashi and Minoru Yasui each broke the curfew on purpose so that they could challenge it in court. Yasui, a lawyer in Portland, Oregon, walked the streets after curfew on March 28, 1942, asked police officers to arrest him, and then turned himself in at the police station.

Hirabayashi, a student at the University of Washington, stayed out past curfew, refused to report for removal, and went to the FBI himself on May 16, 1942. The justices ruled in both cases in 1943 that the curfew was allowed, and they put off the question of whether the removal itself was lawful.

Korematsu's case. They answered that question in Fred Korematsu's case on December 18, 1944, and they ruled by six votes to three that the removal was allowed. Justice Hugo Black wrote for the majority that "all legal restrictions which curtail the civil rights of a single racial group are immediately suspect" and needed "the most rigid scrutiny," the closest possible look. Then he allowed this one.

Justice Frank Murphy dissented. He called the removal "the legalization of racism." He compared it to the "abhorrent and despicable treatment of minority groups by the dictatorial tyrannies which this nation is now pledged to destroy," meaning the countries the United States was fighting, which were ruled by dictators. Justice Robert Jackson also dissented. Korematsu, he wrote, had been found guilty for "being present in the state whereof he is a citizen."

Mitsuye Endo. On the same day, the justices ruled in Mitsuye Endo's case, and the government lost. Endo was born in Sacramento, California, on May 10, 1920, and worked as a clerk for the state of California. A lawyer, James Purcell, chose her to bring the case because a judge would find it hard to call her disloyal. She worked for the state, she was a Christian, she spoke only English, she had never been to Japan, and her brother was in the United States Army.

Purcell filed a petition for habeas corpus for her in the federal court in San Francisco on July 12, 1942. That petition asks a judge to order that a person held prisoner be brought to court, and freed if no one can show a lawful reason to hold her.

Staying in the camps. While the case went on, officials of the War Relocation Authority, the agency that ran the camps, offered to let her out if she dropped it. She refused and stayed in the camps, because leaving would have ended the case for everyone else. Officials moved her from the Sacramento assembly center to Tule Lake and then to Topaz.

"Mitsuye Endo should be given her liberty," Justice William O. Douglas wrote for the Court. The government, he wrote, "has no authority to subject citizens who are concededly loyal to its leave procedure." He meant that officials could not keep holding citizens whom they themselves agreed were loyal.

The end of the camps. Army commanders had issued Public Proclamation No. 21 the day before the rulings, December 17, 1944. It ended the exclusion, the order keeping people of Japanese ancestry away from the west coast, on January 2, 1945. The last camp, Tule Lake, closed on March 20, 1946. Endo

moved to Chicago in May 1945 and worked as a secretary for the Mayor's Committee on Race Relations. She married Kenneth Tsutsumi, raised three children and died in Chicago on April 14, 2006.

Fred Korematsu

Who: A welder who refused to leave his home when Japanese Americans were ordered out, lost at the Supreme Court, and had his conviction thrown out in 1983.
When and where: Oakland, California, 1942. San Francisco, 1983.

"If anything, I should be pardoning the government."

Fred Korematsu was born in Oakland, California, on January 30, 1919, and named Toyosaburo. A teacher suggested he call himself Fred. His parents, Kakusaburo and Kotsui, ran the Stonehurst Flower Nursery in East Oakland.

Staying behind. When the orders came in 1942, his family went to the camps and he did not. He was 23. He had a girlfriend, Ida Boitano, and a job as a welder. He got identification papers in a false name, Clyde Sarah, and kept working. Police stopped him and his girlfriend on a street in San Leandro, California, on May 30, 1942, and arrested him. The charge was breaking Civilian Exclusion Order No. 34, the Army's order for people of Japanese ancestry to leave his area.

The case. Ernest Besig, a lawyer with the American Civil Liberties Union, visited him in the Army stockade, a military jail, at the Presidio in San Francisco and asked to take his case to the higher courts. Korematsu agreed. A federal judge found him guilty and gave him five years' probation, which meant he stayed free under a court's watch. Then Army officers sent him to the Tanforan racetrack on June 28, 1942, and to the Topaz camp with his family that September.

The justices of the Supreme Court heard his case on October 11, 1944, and ruled against him on December 18, 1944. After he left the camp, he moved to Detroit and married Kathryn Pearson. They came back to

California and raised two children.

The hidden reports. In the early 1980s, a team of lawyers who worked without pay found that the government's own lawyers had hidden evidence from the Supreme Court. Intelligence reports had told them that Japanese Americans were no military threat, and they had kept those reports out of the case. The team reopened his case.

Judge Marilyn Hall Patel ruled on November 10, 1983, in the same San Francisco courthouse where he had been found guilty, 39 years after the Supreme Court's ruling. She wrote that "the conviction that was handed down in this court and affirmed by the Supreme Court in *Korematsu v. United States* is ... vacated," or cancelled, "and the underlying indictment," the criminal charge against him, "dismissed."

About a pardon, a president's official forgiveness of a crime, he said, "I don't want a pardon. If anything, I should be pardoning the government." He received the Presidential Medal of Freedom in 1998 and died at Larkspur, California, on March 30, 2005, aged 86. In California, January 30 is Fred Korematsu Day.

Elizabeth Peratrovich and the Alaska law, 1945

Alaska's lawmakers approved the Alaska Anti-Discrimination Act on February 16, 1945, after the Tlingit leader Elizabeth Peratrovich spoke for it before them. Alaska was then a territory, land ruled by the United States that was not yet a state. The act was the first law against discrimination in the United States or its territories. Signs such as "No Natives Allowed" hung in Alaska, and the lawmakers wrote the act against them.

Peratrovich belonged to the Lukaax.ádi clan of the Tlingit. For half a century the Alaska Native Brotherhood, founded at Sitka in 1912, and the Alaska Native Sisterhood, founded in 1915, were the only civil rights groups for Alaska Natives. In Alaska, February 16 is Elizabeth Peratrovich Day every year.

A soldier blinded on his way home, and the president's committee, 1946

Sergeant Isaac Woodard was discharged from the Army after four years on February 12, 1946, and took a bus home to South Carolina. After he argued with the bus driver, police at Batesburg, South Carolina, took him off the bus. Police Chief Lynwood Shull and Officer Elliot Long beat him with blackjacks, short heavy clubs. Woodard said they tried to gouge out his eyes, to dig them out. A local judge fined Woodard himself $50.

Blind. At the veterans' hospital in Aiken, doctors found bleeding inside both of his eyeballs and a torn cornea, the clear front of the eye, in his right eye. He was blind for the rest of his life. Justice Department lawyers charged Shull with breaking Woodard's civil rights. In November 1946 an all-white federal jury took thirty minutes to find Shull not guilty.

The president. Walter White of the NAACP led a group to see President Harry Truman on September 19, 1946, and told him what had been done to Woodard. "My God! I had no idea that it was as terrible as that! We've got to do something!" Truman said. He signed Executive Order 9808 on December 5, 1946, which set up the President's Committee on Civil Rights. The committee's report, *To Secure These Rights*, came out in 1947.

BY 1950

If you remember one thing: Organizers in these fifty years invented the picket line, the sit-in, the threatened march and the planned chain of court cases, while mobs and officials burned, jailed, sterilized and removed the people they targeted.

In 1900: Representative George Henry White brought the first federal bill against lynching to Congress, and it failed.

In 1950: Women had the vote under the Constitution, Native Americans could vote in every state but Utah, and NAACP lawyers had won their first law school cases. Congress had still passed no law against lynching.

Next: After 1950, the court cases reached the public schools, and the marches filled the streets.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 56 MINUTES

Five groups of Americans ran organized campaigns after 1950: Black Americans, women, Mexican Americans, gay Americans and disabled Americans. Each group won changes in the country's laws. The justices of the Supreme Court ruled in 1954 that segregated public schools broke the Constitution, and in 1956 they struck down segregation on Montgomery's buses. Members of Congress then passed new laws.

In the Civil Rights Act of 1964 they made segregation in businesses and public places illegal. Later they banned literacy tests for voting in 1965, sex discrimination in schools that took federal money in 1972, and refusing a disabled person a job or a way into a public building in 1990. A literacy test was a reading and writing test that officials used to keep Black citizens from voting.

The cost. Each of those changes followed years of organizing, and the organizers paid for it. People who signed lawsuits lost their jobs, police beat marchers with nightsticks, and firemen turned high-pressure hoses on children. Members of the Ku Klux Klan, a secret white group that used terror against Black Americans, killed four girls with a bomb in a Birmingham church in 1963.

The next year, white men in Mississippi killed three civil rights workers, and a Neshoba County deputy sheriff was among the men later found guilty over it. Civil rights are the rights every citizen has to equal treatment under the law and to vote.

An Alabama state trooper shot Jimmie Lee Jackson in 1965. Doctors operated on Black women such as Fannie Lou Hamer, and on poor girls, without asking them, so that they could never have children. Federal officials fired thousands of gay people from government jobs.

The law school cases, 1950

NAACP lawyers following the plan Charles Hamilton Houston made in the 1930s won two more cases in June 1950, six weeks after he died. The justices of the Supreme Court decided both cases on June 5, 1950, and all of them agreed on both.

Heman Sweatt. Heman Marion Sweatt had applied to the University of Texas Law School in February 1946, and university officials turned him away because he was Black. Texas officials then opened a separate law school for Black students in Austin in February 1947. Its four teachers were part-timers borrowed from the university, and it had no full-time librarian. About 10,000 books were on order, and few had arrived. No body of lawyers had approved it as a real law school.

Chief Justice Fred Vinson wrote that the education it offered was not "substantially equal" to what Sweatt would get at the university. "Equal protection of the laws is not achieved through indiscriminate imposition of inequalities," he wrote. A state could not call it equal treatment to give Black students something worse. The justices ordered Texas officials to admit Sweatt.

George McLaurin. George W. McLaurin already had a master's degree and wanted a doctorate in education. University of Oklahoma officials let him in and then made rules for him alone, and the justices' written opinion lists them.

He "was required to sit apart at a designated desk in an anteroom adjoining the classroom," a desk set aside for him in a small room next to the classroom. He had to sit at an assigned desk on the library's upper floor, "but not to use the desks in the regular reading room."

In the cafeteria he had "to sit at a designated table and to eat at a different time from the other students." Before the case was argued, university officials eased the rules a little. McLaurin could sit in a marked row in the classroom and eat at the usual hours, still at a table of his own. The justices struck down the whole arrangement.

What signing cost in Clarendon County, 1949 and 1950

In Clarendon County, South Carolina, 107 Black parents and children signed a petition against the county's schools. For it, employers fired them, merchants refused to sell to them and lenders turned them down for loans.

One bus. School District 22 ran more than 30 school buses for white children and none for Black children, and the parents began by asking for one bus. The court record describes the all-white Summerton High School as "modern, safe, sanitary, well equipped, lighted and healthy." It describes the Black schools as "inadequate…unhealthy…old and overcrowded and in a dilapidated condition," falling apart.

The Reverend Joseph A. DeLaine, a minister and teacher, brought the NAACP together with the Pearson brothers to start the case. Six white men later attacked DeLaine. He got away by pretending he had a gun in his pocket and jumping into the passing truck of another man who had signed.

The signers. The petition went round for signatures on November 11, 1949, and the parents' lawyers filed the lawsuit on May 16, 1950. It is named for Harry Briggs, whose name was first on the list. A National Park Service page

records what happened to the signers. They were "fired from their jobs, denied service when trying to purchase supplies for their farms, or being turned down for loans on their properties."

Barbara Rose Johns

Who: A sixteen-year-old who led her whole school out on strike, three years before *Brown*.
When and where: Farmville, Prince Edward County, Virginia, April 23, 1951.

A fake phone call got the principal out of the building.

Barbara Rose Johns was a student at Robert Russa Moton High School in Farmville, the high school for Black students in Prince Edward County, Virginia. The building had been made for 180 students, and it held between 360 and 450.

Classes met in the auditorium, in school buses and in three wooden sheds wrapped in tar paper, which people compared to chicken coops. The school had no cafeteria, no science laboratory and no gym. One day a half-empty school bus for white children passed her without stopping, and she decided to act.

The strike. A student named John Watson telephoned the principal's office on April 23, 1951, and disguised his voice. He said Moton students were making trouble at the bus station downtown. The principal, M. Boyd Jones, left to see. While he was gone, the strike Johns led began, and the students stayed out of class for two weeks.

The lawyers' condition. She wrote to two NAACP lawyers in Richmond, Oliver W. Hill and Spottswood William Robinson III. They agreed to take the case on one condition: the parents had to sue to end segregation itself, rather than ask for a better Black school. The Reverend L. Francis Griffin called the parents to a meeting at the First Baptist Church in Farmville on May 3, 1951, to hear the offer, and they agreed.

> On May 23, 1951, 74 parents filed the lawsuit, *Davis v. County School Board of Prince Edward County*, for 118 Moton students. It became one of the five cases the justices of the Supreme Court decided as *Brown v. Board of Education*.
>
> Her parents sent her out of the county. She finished her last year of high school in Montgomery, Alabama, living with her uncle, the Reverend Vernon Johns, and his wife, Altona. Her family's house in Prince Edward County later burned down, and the family believed someone had set the fire. Barbara Rose Johns died of bone cancer in Philadelphia on September 25, 1991, aged 56.

Brown v. Board of Education, May 17, 1954

All nine justices of the Supreme Court ruled on May 17, 1954, in *Brown v. Board of Education of Topeka*, that separating children by race in public schools broke the 14th Amendment and its promise of "the equal protection of the laws." Chief Justice Earl Warren wrote, "Separate educational facilities are inherently," or by their very nature, "unequal."

With that ruling, the justices rejected the reasoning of *Plessy v. Ferguson* for public schools, 58 years after that case. In *Plessy*, in 1896, the justices had allowed a Louisiana law that kept Black and white train passengers apart in "equal but separate" cars.

Brown was five lawsuits that the justices bundled together. They were *Brown v. Board of Education* from Topeka, Kansas, *Briggs v. Elliott* from Clarendon County, South Carolina, *Davis v. County School Board* from Prince Edward County, Virginia, *Belton v. Gebhart* from Delaware, and *Bolling v. Sharpe* from Washington, D.C.

Rosa Parks and Martin Luther King Jr.

Who: The NAACP branch secretary whose arrest set off the Montgomery bus boycott, and the 26-year-old minister the boycotters chose to lead it.
When and where: Montgomery, Alabama, December 1955 to December 1956.

The Women's Political Council printed 50,000 leaflets after her arrest.

Rosa Parks had been the secretary of the Montgomery NAACP for twelve years on the day she was arrested for keeping her bus seat. In the early 1940s she started the branch's Youth Council. As secretary of the NAACP's Alabama State Conference, she traveled the state interviewing victims of discrimination and witnesses to lynchings. She had broken the bus seating rules many times before, and a driver had once put her off a bus for it.

Claudette Colvin. Nine months before Parks's arrest, on March 2, 1955, a fifteen-year-old student named Claudette Colvin refused to give up her seat on a Montgomery bus when white passengers got on. She told police she had a right under the Constitution to sit anywhere on the bus, as white passengers did. The officers swore at her, hit her with a nightstick and dragged her off the bus.

E. D. Nixon, a Montgomery organizer, and others decided not to build a campaign around her case. Nixon thought she was too young. When she became pregnant later that year, he looked for someone who fit the strict customs of the time. Colvin believed the choice also had to do with her family's standing outside Montgomery's Black middle class.

The boycott. Police arrested Rosa Parks on December 1, 1955, for refusing to give up her bus seat. The Women's Political Council, a group of Black professional women formed in 1949, had already been pressing white city officials about the buses. Jo Ann Robinson of the council had

proposed a boycott, a refusal to use or buy something as a protest, more than a year before. After Parks's arrest, council members printed 50,000 leaflets calling for a one-day boycott on Monday, December 5.

After that Monday, Black riders stayed off the buses. The same day, Montgomery's Black ministers and organizers formed the Montgomery Improvement Association and elected Martin Luther King Jr. as its president. He was 26, the pastor of Dexter Avenue Baptist Church, and still finishing his doctorate at Boston University. About 40,000 Black people lived in Montgomery, and for a year most of them walked to work or school, shared cars, took taxis or hitchhiked.

The bombs. City leaders had nearly 100 of the boycott's leaders charged with conspiracy, the crime of planning together to break the law. Someone bombed King's house on January 30, 1956, while his wife, Coretta Scott King, their seven-week-old daughter, Yolanda, and a neighbor were inside. No one was hurt, and no one was ever charged with a crime for the bombing. On February 1 a bomb went off in E. D. Nixon's yard.

Four other women. Four other women brought the lawsuit that ended bus segregation in Montgomery. The lawyer Fred Gray filed *Browder v. Gayle* on February 1, 1956, for Aurelia Browder, Susie McDonald, Mary Louise Smith and Claudette Colvin, then sixteen. Federal judges in Montgomery struck down Alabama's bus segregation laws in June 1956, and in November the justices of the Supreme Court agreed. Black riders went back on the buses on December 21, 1956.

Colvin later worked as a nurse's aide in New York for fifty years. A judge erased her 1955 arrest record on December 16, 2022, and she died on January 13, 2026, aged 86. Rosa Parks lost her job as a tailor and received death threats. She and Raymond Parks moved to Detroit in 1957. She worked in the office of Representative John Conyers from 1965 to 1988, and she died in Detroit on October 24, 2005.

Memphis. King led the movement for twelve more years and won the Nobel Peace Prize in 1964, at 35. He went to Memphis, Tennessee, twice in 1968 to support 1,300 Black sanitation workers on strike. On February 1, 1968, two of them, Echol Cole and Robert Walker, had been crushed to death in the compactor of their garbage truck. The strikers carried signs that read "I AM A MAN."

King was shot in Memphis on April 4, 1968, and died at 7:05 that evening at St. Joseph's Hospital. He was 39. After his death, city officials recognized the workers' union.

DISPUTED: Who was behind the killing. James Earl Ray pleaded guilty to King's murder in March 1969, and a judge sentenced him to 99 years. For the rest of his life Ray tried to take back his plea, until he died in April 1998. In 1999 the King family brought a civil case, a lawsuit rather than a criminal trial, against a Memphis man named Jowers.

The jury found that Jowers and "others, including government agencies" had plotted the killing. In 2000 Justice Department investigators reported that they found those claims not believable.

BY 1956: The Supreme Court's justices had ruled segregated public schools unconstitutional, and Black riders in Montgomery had stayed off the buses for more than a year until the justices struck down bus segregation there too.

After Brown: Little Rock, Prince Edward County and New Orleans, 1957 to 1964

After *Brown*, Black families still had to force their way into white schools one district at a time, and white officials fought them with new city rules and by shutting down public schools.

Little Rock. Nine Black students entered Central High School in Little Rock, Arkansas, in 1957. Daisy Bates organized them. She was president of the Arkansas State Conference of the NAACP, and with her husband, L. C. Bates, she published a newspaper, the *Arkansas State Press*. The nine students met at her house every school day and left for Central High from there.

A rock came through her living room window in August 1957 with a note tied to it: "STONE THIS TIME. DYNAMITE NEXT." Twice, people burned crosses in her front yard, and someone fired shots into the house from a passing car. The National Park Service's page on the Bates home does not name the people who did it.

The membership lists. Members of the city councils of Little Rock and North Little Rock then passed rules that made every organization hand its list of members to the city clerk, to be made public. Daisy Bates kept the records of the Little Rock branch of the NAACP. She refused to hand over the list, and she was found guilty in court for refusing.

The justices of the Supreme Court threw out that verdict on February 23, 1960. Justice Potter Stewart wrote that keeping a group's members private "may in many circumstances be indispensable to preservation of freedom of association, particularly where a group espouses dissident beliefs." People have a right to join a group without officials forcing the group to name its members. Dissident beliefs go against those of the people in power.

Prince Edward County. Prince Edward County, Virginia, was home to the Moton students' case. Members of the county's board of supervisors voted on June 26, 1959, to stop paying for public schools, and the county had no public

schools until September 8, 1964. White children went to a private school, Prince Edward Academy. About 2,000 Black children went without formal schooling for five years.

Attorney General Robert F. Kennedy said in 1963 that "the only places on earth not to provide free public education are Communist China, North Vietnam, Sarawak, Singapore, British Honduras." Then he added, "and Prince Edward County, Virginia."

The justices of the Supreme Court decided a case brought by Black schoolchildren of the county, the first of them named Cocheyse J. Griffin, on May 25, 1964. Closing the county's schools, while every other county in Virginia kept its schools open, denied the children "the equal protection of the laws," they ruled. A federal judge could make the supervisors raise taxes to reopen the schools.

New Orleans. A federal judge, J. Skelly Wright, ordered New Orleans school officials to start letting Black children into white schools in the spring of 1960. Four Black six-year-old girls went into two white schools on November 14, 1960. Ruby Bridges went alone into William Frantz Elementary. Leona Tate, Tessie Prevost and Gail Etienne went together into McDonogh 19, in the Lower Ninth Ward, with federal marshals, officers who work for the federal courts, walking them in.

White parents took their children out. By the end of the month, fewer than ten white children attended the two schools combined. From January to May 1961, Ruby Bridges was the only pupil at William Frantz.

Levittown, 1957: a family moves in

Levittown, Pennsylvania, was a town of houses built and sold by one builder, William Levitt. Daisy and William Myers became the first Black family to live there in August 1957, and white mobs gathered outside their home for nearly three months. William Myers was an Army veteran of the Second World War, and Daisy Myers was a teacher. They had three young children.

The lease. In the first Levittown, in New York, the standard lease had barred anyone "other than members of the Caucasian race," meaning anyone who was not white, from living in a house. The justices of the Supreme Court ruled in *Shelley v. Kraemer* in 1948 that no court could enforce clauses like that, so no judge could order anyone to obey them. Levitt dropped the written clause and kept selling only to white buyers.

The mobs. When the Myers family moved in, mobs gathered outside the house. People threw rocks through the windows, burned crosses and made death threats by telephone. Delivery men stopped bringing milk, bread and heating oil, and state police guarded the house. A documentary, *Crisis in Levittown*, was filmed while it was happening, in 1957. Daisy Myers later wrote a book about it, *Sticks 'n Stones*, published in 2005.

Sit-ins and Freedom Rides, 1960 and 1961

Black and white students used their own bodies to test segregation in 1960 and 1961, first at lunch counters and then on buses.

Greensboro. Four freshmen from the Agricultural and Technical College of North Carolina walked into the Woolworth store in Greensboro on February 1, 1960. Franklin McCain, Joseph McNeil, David Richmond and Ezell Blair Jr. sat at the lunch counter, which was for white customers only, ordered coffee and waited. The waitress and the manager ignored them. A police officer walked up and down behind them. Some white customers shouted at them, and others encouraged them.

The next day 19 students came. The day after that 85 came, from several colleges. Before the week was out there were 400, taking turns so they could still go to class. Students started sit-ins in seven other North Carolina cities and in Hampton, Virginia, and Nashville, Tennessee.

Woolworth's managers opened the Greensboro counter to Black customers on July 25, 1960. By that summer, restaurants and lunch counters in 33 Southern cities served Black customers, and a year later those in 126 cities did.

The Freedom Riders. The justices of the Supreme Court struck down Virginia laws that required segregation in travel between states in *Boynton v. Virginia* in 1960. Leaders of the Congress of Racial Equality, known as CORE, organized riders to find out whether the people running bus stations in the South would obey.

The first thirteen Freedom Riders, Black and white, left Washington, D.C., on May 4, 1961, in two groups, one on a Greyhound bus and one on a Trailways bus. A National Park Service page gives the number as eleven.

Anniston. A white mob that included members of the Ku Klux Klan attacked the Greyhound bus at Anniston, Alabama, on May 14, 1961. They slashed its tires, followed it out of town and firebombed it. The riders were trapped on the burning bus. They got out after an explosion, and then the mob beat them. The Reverend Fred Shuttlesworth organized a line of cars and got them to Birmingham within a few hours.

A photographer, Joe Postiglione, took pictures of the bus as it burned. Charles Person, one of the Freedom Riders, later wrote that the photograph appeared "on front pages of newspapers across the country and the world." Accounts name different men as the mob's leaders. No record shows that anyone went to prison for burning the bus.

The same day, young white men climbed onto the second bus, the Trailways bus, at Anniston and beat the riders until they moved into segregated seats. One of the riders they beat was Walter Bergman, a white man. The Encyclopedia of Alabama states that he suffered permanent brain damage.

Birmingham. When that bus reached Birmingham, a crowd armed with pipes, chains and baseball bats met it, and many of the men in it belonged to the Klan. Bull Connor, Birmingham's public safety commissioner, had told Klan leaders that his police would hold back from the station for 15 minutes, and he encouraged the Klan to attack the riders.

With no police there, Klansmen beat the riders in the waiting room and in a dark hallway. They beat James Peck, a white rider, until he was unconscious, with heavy wounds to his face and head. Staff at a hospital for white people only refused to treat him, and doctors at Jefferson Hillman Hospital closed his wounds with 53 stitches. In the historian Raymond Arsenault's account, Bergman was beaten for the second time that day. Over the summer of 1961 the number of Freedom Riders grew to more than 400.

Fannie Lou Hamer

Who: A plantation timekeeper in Mississippi who tried to register to vote, lost her job the same day, was beaten in a jail for her organizing, and told the country about it on national television.

When and where: Ruleville, Sunflower County, Mississippi, 1962 and 1963. Atlantic City, New Jersey, August 22, 1964.

"I question America," she told the country on television.

Fannie Lou Hamer was the youngest of the twenty children of Ella and James Lee Townsend. She began working in the cotton fields at six, weeding first and then picking. In 1944 she married Perry Hamer, whom people called Pap. For eighteen years she worked on the W. D. Marlow plantation outside Ruleville, keeping the time records for the other workers.

The operation. She went into a hospital in 1961, and a doctor performed a hysterectomy on her without asking her or telling her. A hysterectomy is an operation that cuts out the womb, the organ in which a baby grows. After it, a woman can never become pregnant, and it cannot be undone.

Hamer called operations like hers a "Mississippi appendectomy," after the ordinary operation that takes out the appendix, a small part of the gut, and her name for them came into use. The Mississippi Department of Archives and History's account of her life does not name the surgeon.

Registering. She and seventeen others went 26 miles to the Sunflower County courthouse in Indianola to register to vote on August 31, 1962. Police let only two of them in to take the literacy test. Registrars, the officials who signed people up to vote, used that test to turn Black voters away.

That evening the plantation owner told her, "If you don't go down and withdraw your registration, you will have to leave." She answered, "I didn't try to register for you. I tried to register for myself." She lost her job

that day. On September 10 someone fired sixteen bullets into the Tucker family's house in Ruleville, and other houses were shot at the same night.

Winona. She was one of ten people coming home by Continental Trailways bus from a voter registration workshop on June 9, 1963. At the bus station in Winona, Mississippi, some of the group tried to use the restaurant and the washroom. Winona's police chief, Thomas Herrod, ordered them arrested.

In the jail, state highway patrolmen made two Black prisoners, Roosevelt Knox and Sol Poe, beat her with a blackjack. The patrolmen ordered her to lie face down on a bunk. The first prisoner beat her until he was exhausted. Then the patrolman gave the blackjack to the second prisoner and made the first one sit on her feet so she could not move them.

"I began to scream and one white man got up and began to beat me in my head and tell me to hush," she said. The officers also had June Johnson, who was fifteen, and Annell Ponder beaten. Hamer lost the sight of one eye and had kidney damage for the rest of her life. "After I got out of jail, half dead, I found that Medgar Evers had been shot down in his own yard," she said.

Federal prosecutors tried five white Winona and Montgomery County officers, among them Chief Herrod, in December 1963 for violating the prisoners' civil rights. An all-white, all-male jury found them not guilty on every count.

Atlantic City. Mississippi's delegation to the 1964 Democratic National Convention, the group of people the state party sent to vote at the national party's meeting, was all white. Hamer and others founded the Mississippi Freedom Democratic Party, and in August 1964 they went to the convention in Atlantic City to ask to be seated in its place. She was the group's vice chair.

On August 22 she told the convention's credentials committee, the group that decided which delegates could take their seats, what had been done to her. Television carried it across the country. A National Archives

page records that her testimony "was interrupted by President Lyndon Johnson, in an effort to suppress the truth and stabilize the Democratic Party."

She ended, "All of this is on account of we want to register, to become first-class citizens. And if the Freedom Democratic Party is not seated now, I question America. Is this America, the land of the free and the home of the brave, where we have to sleep with our telephones off the hooks because our lives be threatened daily, because we want to live as decent human beings, in America?"

She started the Freedom Farm in 1969 to grow food and give families in Sunflower County a living. She used to say, "Nobody's free until everybody's free." She died on March 14, 1977, at 59, of heart failure brought on by cancer, diabetes and high blood pressure. Writers at the Equal Justice Initiative state that the kidney damage from the beating helped cause her death.

BY 1962: Students had sat in at lunch counters across the South, Klansmen had burned a Freedom Riders' bus and beaten the riders, and Fannie Lou Hamer had lost her job for trying to register to vote.

Birmingham, 1963: the children and the church

Birmingham, Alabama, police arrested hundreds of Black children for marching against segregation in May 1963, and firemen turned hoses on them. That September, members of the Ku Klux Klan killed four girls with a bomb at the church the marches had started from.

The children's march. Students aged eight to eighteen gathered at the 16th Street Baptist Church on May 2, 1963, and marched downtown to ask the mayor to end segregation. On the orders of Bull Connor, the public safety commissioner, police arrested them. National Park Service pages give two counts for that day. One says 600 children were arrested, some as young as six, and another says 1,200. By the next day at least 1,000 children were in jail, and over the following days Connor's police jailed more than 3,000 demonstrators.

Hoses and dogs. Connor ordered fire hoses and police dogs turned on the marchers on May 3. A National Park Service page describes it: "Firemen blasted the protestors, including children, with high-pressure fire hoses, and police used their nightsticks indiscriminately," without caring whom they hit. "Police K-9 units loosed their dogs into crowds of peaceful demonstrators, pinning down one woman and severely wounding three teenagers." These were the hoses firemen used on burning buildings, and the water came out hard enough to knock people off their feet.

The bomb. A bomb went off under the steps of the 16th Street Baptist Church just before 11 in the morning on Sunday, September 15, 1963. It killed four girls: Addie Mae Collins, Carole Robertson and Cynthia Wesley, who were fourteen, and Denise McNair, who was eleven.

A few minutes before, they had been together in the basement women's room in their Sunday clothes, ready to sing and to show people to their seats at the adult service, talking about the new school year. Addie Mae's sister, Sarah, survived and lost her right eye.

The bombers. The bombers were members of the Ku Klux Klan. FBI agents named Robert Chambliss as their main suspect. FBI Director J. Edgar Hoover closed the investigation in 1968 without charging anyone and ordered the evidence sealed. Investigators reopened the case after Hoover died in 1972.

Juries later found three of the bombers guilty: Chambliss on November 14, 1977, fourteen years after the bombing, Thomas Blanton on May 1, 2001, and Bobby Frank Cherry in 2002, 39 years after it. Chambliss died in prison in 1985. Blanton was given four life sentences and died in prison in 2020. A fourth Klansman, Herman Cash, died in 1994 without being tried.

Organizers killed in Mississippi, 1963 and 1964

White men in Mississippi killed civil rights organizers in 1963 and 1964, and for decades no jury in the state found anyone guilty of murder for it.

Medgar Evers. Medgar Evers was born at Decatur, Mississippi, on July 2, 1925, and fought in Germany and France in the Second World War. From 1954 he was the NAACP's field secretary for the state of Mississippi. He led marches, prayer vigils, boycotts and drives to register voters, and he worked to get James Meredith admitted to the University of Mississippi in 1962.

Byron De La Beckwith, a member of the White Citizens' Council, shot Evers in the back in the driveway of his home in Jackson in the early hours of June 12, 1963. The Citizens' Council was a group founded in Mississippi in 1954, after *Brown*, to keep segregation in place. Evers's wife, Myrlie, and their children had waited up for him and were watching television. When they heard the shot, the children did what they had practiced: they dropped to the floor and crawled to the bathroom.

Myrlie found her husband collapsed and bleeding, still holding the T-shirts he had carried in from the car. He died at University Hospital from his wounds and loss of blood. Beckwith was tried twice in 1964, and both juries failed to agree on whether he was guilty. A jury found him guilty on February 5, 1994, 31 years and three trials after the killing, and the judge sentenced him to life in prison. He died on January 21, 2001, aged 80.

Freedom Summer. Volunteers came to Mississippi in the summer of 1964 to register Black voters and run summer schools of their own, called Freedom Schools. It was called Freedom Summer. On June 21, 1964, three of the workers went to look at a Black church that had been burned after a civil rights meeting was held there.

James Chaney, 21, was a Black college student from Mississippi. Andrew Goodman, 20, and Michael Schwerner, 24, were white New Yorkers working with CORE. Local police arrested the three for "speeding" and held them in jail. The National Archives records that they were "released after dark into the hands of the Ku Klux Klan."

Searchers found their bodies near Old Jolly Farm in Neshoba County on August 4, 1964. Goodman and Schwerner had each been shot once in the head. Chaney had two broken arms, a broken jaw, a crushed right shoulder and injuries to his groin.

The trials. Twenty-one men were arrested. A federal jury found seven of the eighteen men on trial guilty of violating the three workers' civil rights on October 20, 1967. They included Cecil Price, the Neshoba County deputy sheriff, and Samuel Bowers, the imperial wizard, or top leader, of the White Knights of the Ku Klux Klan of Mississippi. Their sentences ran from three to ten years.

One juror would not vote to find Edgar Ray Killen guilty. Killen was a former preacher and Klan leader who had organized the killings. A Mississippi jury found Killen guilty of manslaughter on June 21, 2005, 41 years to the day after the killings. He was sentenced to 60 years and died in the state prison at Parchman on January 11, 2018.

The March on Washington, August 28, 1963

About 250,000 people came to Washington on August 28, 1963, for the March on Washington for Jobs and Freedom. A National Park Service page counts about 190,000 of them as Black and about 60,000 as white. A. Philip Randolph, who had threatened a march on Washington in 1941 and called it off, led this one. Bayard Rustin organized it in less than three months.

All men. All ten of the march's sponsors were men. Besides Randolph, they included Martin Luther King Jr., John Lewis of the Student Nonviolent Coordinating Committee, the heads of three other civil rights groups and four other men, among them the union leader Walter Reuther. Dorothy Height of the National Council of Negro Women helped plan the march, and the Park Service page states that she "operated in the background of this male dominated, leadership group." No woman gave a formal speech.

The day. The marchers walked the mile-long National Mall to the Lincoln Memorial, where civil rights and religious leaders spoke for three hours. The sponsors issued ten demands, among them fair wages, fair hiring and desegregated schools. The Park Service page records that John Lewis's speech was "toned down...at the request of white liberals and moderate black allies," people on his own side who asked him to say it more softly. What he said included, "we do not want our freedom gradually but we want to be free now."

King's speech. The National Archives calls King's speech, known as "I Have a Dream," the high point of the march. He told the crowd that he dreamed his four little children would one day live in a nation where they "will not be judged by the color of their skin but by the content of their character."

The law that followed. In 1964, Southern senators kept talking for 60 working days so that no vote could be held on a civil rights bill. On June 10, enough senators voted to end the talking, the first time that had happened on a civil rights bill, and nine days later they passed it, 73 to 27. President Lyndon Johnson signed the Civil Rights Act on July 2, 1964.

Under the act, segregation became illegal in businesses such as theaters, restaurants and hotels, and in public places such as swimming pools, libraries and public schools. Job discrimination became illegal too. A Government Publishing Office page states that this act and the Voting Rights Act of 1965 "reflected the demands of the march."

Bayard Rustin

Who: The organizer who planned the March on Washington in under three months, and who was found guilty in a California court in 1953 for having sex with men.

When and where: Born at West Chester, Pennsylvania, March 17, 1912. Los Angeles, 1953. Washington, D.C., 1963.

California's governor pardoned him 33 years after he died.

Bayard Rustin was raised a Quaker in a family already doing civil rights work, and he was a pacifist all his life, a person who refuses to take part in war or violence. In 1942, in California, he visited Japanese Americans held at the Manzanar camp and reported on the conditions there.

The first Freedom Ride. He and George Houser organized the Journey of Reconciliation in 1947, a bus trip to test a Supreme Court ruling against racial discrimination in travel between states. A National Park Service page calls it the first of the Freedom Rides. Police arrested Rustin for breaking a state law on segregated seating, and he served 22 days on a chain gang.

Los Angeles, 1953. He was found guilty of vagrancy in the Los Angeles County Superior Court on January 22, 1953. Vagrancy is a crime that means wandering with no job or home. What he had done was have sex with other men who agreed to it. The judge sentenced him to 60 days in jail and ordered him to register as a sex offender, which put his name on California's list of people found guilty of sex crimes.

California's governor wrote in 2020 that "Mr. Rustin was sentenced pursuant to a charge commonly used to punish gay men for engaging in consensual adult sexual conduct," sex that both adults agreed to. The same document says his conviction caused "an injustice that was compounded by his political opponents' use of the record of this case to try to undermine him, his associates, and the civil rights movement."

The march. He taught Martin Luther King Jr. how to practice nonviolent resistance, and he worked for years with A. Philip Randolph. Randolph made him deputy director of the March on Washington, and Rustin planned the whole of it.

He died in New York City on August 24, 1987, of a burst appendix, aged 75. President Barack Obama awarded him the Presidential Medal of Freedom on August 8, 2013, and called him "an unyielding activist for civil rights, dignity, and equality for all." Governor Gavin Newsom of California pardoned him on February 4, 2020, an official forgiveness of the crime. In the same order, Newsom told his office to find and pardon other people who had been arrested and charged for sex between adults who agreed to it.

Two men climb the Gateway Arch, 1964

Percy Green and Richard Daly climbed 125 feet up the unfinished north leg of the Gateway Arch in St. Louis, Missouri, on July 14, 1964. They were protesting the fact that Black workers were kept out of the jobs building it. Green belonged to CORE and later founded a group called ACTION.

BY 1964: About 250,000 people had marched on Washington, Klansmen had killed four girls in a Birmingham church and three civil rights workers in Mississippi, and Fannie Lou Hamer had told her story on national television.

Selma and the Voting Rights Act, 1965

Marchers in Selma, Alabama, campaigned for the right to vote in 1965, and state troopers, other officers and Klansmen attacked them. The 15th Amendment had barred states from denying the vote because of race since 1870, and yet in much of the South officials still used literacy tests to keep Black citizens from registering.

Jimmie Lee Jackson. State Trooper James Bonard Fowler shot Jimmie Lee Jackson in the stomach inside a cafe in Marion, Alabama, during a march for voting rights on February 18, 1965. Jackson was 26 and had been protecting his mother and grandfather. He died of an infection from the wound on February 26. Fowler was charged with murder in May 2007. In 2010 he pleaded guilty to misdemeanor manslaughter, a minor charge, and served five months of a six-month sentence.

Bloody Sunday. About 600 people, most of them Black, walked out of Brown Chapel in Selma on Sunday, March 7, 1965, to march to Montgomery, the state capital. At the Edmund Pettus Bridge, Major John Cloud of the Alabama State Troopers gave them two minutes to turn back. Then state troopers and other officers attacked them "with nightsticks and teargas," in the National Park Service's words. At least 50 marchers needed hospital care. The day is called Bloody Sunday.

James Reeb. About 2,000 people marched again on March 9, led by King. The marchers turned back at the bridge, and the day is called Turnaround Tuesday. That evening four men attacked three ministers outside a restaurant in Selma. One of the attackers hit the Reverend James Reeb of Boston in the head with a club, and Reeb died two days later.

Elmer L. Cook, William Stanley Hoggle and Namon O'Neil Hoggle were tried for his murder, and the jury found all three not guilty on December 10, 1965. The prosecutor had allowed a man whose brother was a suspect in the attack to sit on the jury.

Viola Liuzzo. The march set out again on March 21, 1965, with more than 8,000 people, and by the time it reached the capitol in Montgomery on March 25 the crowd had grown to nearly 25,000. That night, Viola Liuzzo was driving on Highway 80 between Selma and Montgomery. She was a 39-year-old white mother of five from Detroit who had come to help. In Lowndes County, four members of the Ku Klux Klan fired into her car and killed her. Her passenger, Leroy Moton, a 19-year-old Black volunteer, survived.

The four men were Collie Leroy Wilkins Jr., William Orville Eaton, Eugene Thomas and Gary Thomas Rowe. Rowe was a paid FBI informant, a person who secretly passed information to the FBI, and prosecutors promised not to charge him. Alabama juries did not find the other three guilty. A federal jury found them guilty of violating her civil rights, and the judge sentenced each to ten years.

FBI Director J. Edgar Hoover called Liuzzo an "outside agitator" and spread rumors about her to the press. Her family sued the FBI in 1979, and a federal judge dismissed the suit in 1983.

The Voting Rights Act. President Lyndon Johnson signed the Voting Rights Act on August 6, 1965. It banned literacy tests, and federal officials sent examiners into the places that had used them, with the power to sign up voters themselves. States and counties on the act's list had to get approval from federal officials in Washington before changing any voting rule.

By the end of 1965, a quarter of a million new Black voters had registered, a third of them through the federal examiners. By the end of 1966, only four of the thirteen Southern states still had fewer than half of their Black citizens registered.

The Chicano movement, 1954 to 1970

Mexican Americans ran their own rights campaigns from the 1950s. Many called themselves Chicanos, and their campaigns the Chicano movement.

Hernandez v. Texas. They won a case at the Supreme Court in 1954. A jury in Jackson County, Texas, found a Mexican American man, Pete Hernandez, guilty of murder, and he was sentenced to life in prison. About 14 of every 100 people in the county had Mexican or Latin American last names. In 25 years, no one with such a name had served on a jury commission, the board that chose jurors. More than 6,000 jurors had been called in that time, and none had such a name.

On the courthouse grounds, one of the two men's toilets was marked "Colored Men" and "Hombres Aqui," which means "Men Here." All nine justices ruled on May 3, 1954, in *Hernandez v. Texas*, that shutting Mexican Americans out of juries broke the 14th Amendment and its promise of equal protection. The ruling came two weeks before *Brown*.

The walkouts. About 15,000 students walked out of seven schools in East Los Angeles from March 1 to 8, 1968. About 60 of every 100 Mexican American students there left high school without finishing. Staff forbade students to speak Spanish and steered them into trade classes instead of classes that prepared them for college. The students asked for teaching in both languages, changes to what they were taught, and Mexican American principals.

Members of the Board of Education turned them down, saying the changes would cost too much. Police arrested thirteen organizers on March 31 on charges of felony conspiracy, planning together to commit a serious crime. One of them, the teacher Sal Castro, was fired. He got his job back after months of sit-ins at the board's offices, and on October 2 police arrested 35 people there.

The Moratorium. Between 20,000 and 30,000 people marched through East Los Angeles in the National Chicano Moratorium on August 29, 1970. They were protesting how many Mexican Americans were being drafted, wounded and killed in the Vietnam War. About 1,500 police officers came to Laguna Park, fired tear gas into the crowd and beat protesters. Three or four people were killed that day, and 150 were arrested.

Los Angeles County Sheriff's Deputy Thomas Wilson fired a tear gas projectile into the Silver Dollar Bar on Whittier Boulevard. It hit Rubén Salazar, a reporter for the *Los Angeles Times*, in the head and killed him. The coroner, the county official who decides how a person died, ruled his death a homicide, a killing by another person. District Attorney Evelle Younger decided not to charge Wilson. City officials later renamed Laguna Park for Salazar.

Two more dead. Two young members of the Brown Berets, a Chicano youth group, were also killed that day. Police said that Angel Gilberto Díaz drove through a police barricade and that officers shot him. Raúl Ruiz, a reporter who was at the march, said Díaz was sitting in the passenger seat when he was shot in the back of the head. Neither account names the officers who shot him.

Witnesses said Lyn Ward died when a tear gas canister exploded, and police said a bomb planted by protesters killed him.

DISPUTED: The art historian Ruben C. Cordova counts three dead that day, because the fourth man often named, Gustav Montag, was killed at a later protest, on January 31, 1971, when a pellet from a police shotgun bounced and struck him in the heart. PBS SoCal counts four dead on August 29.

The farmworkers. In the same years, farmworkers organized under Larry Itliong, Cesar Chavez and Dolores Huerta. About 1,500 mostly Filipino American grape workers led by Itliong walked out at Delano, California, on September 8, 1965. Eight days later, members of the union of Chavez and Huerta, the National Farm Workers Association, voted to join them.

What the strike won. The two unions joined together and became the union now called the United Farm Workers. People across the country stopped buying California table grapes to back the strikers. On July 29, 1970, 26 grape growers in Delano signed the farmworkers' first union contracts. Chapter 14, Work and Workers, tells the strike in full.

What was reported about Chavez. The *New York Times* reported in March 2026 that Chavez had sexually abused two girls in the 1970s. The two women, Debra Rojas and Ana Murguia, are daughters of union organizers. They said the abuse began when they were 12 and 13, and Rojas said Chavez raped her in a motel room when she was 15.

Dolores Huerta then said publicly that Chavez had pressured her into sex once and had raped her in a car in 1966, and that she became pregnant both times. She said she had kept the secret for 60 years because she believed the truth would hurt the farmworker movement.

Chavez died in 1993, so no court has ever heard these accusations. The United Farm Workers canceled its events for Cesar Chavez Day. California's lawmakers voted on March 26, 2026, to rename the state holiday Farmworkers Day, and Governor Gavin Newsom signed the change into law.

The women's movement and the Equal Rights Amendment, 1966 to 1982

Women organized in the late 1960s for equal treatment at work and under the law, and they won some laws and lost a constitutional amendment by three states.

NOW. Federal law had banned sex discrimination at work since 1964. At a government conference on women in Washington on June 30, 1966, some delegates wanted the conference to demand that a federal office, the Equal Employment Opportunity Commission, enforce that ban. Conference officials ruled the demand out of order, against the meeting's rules, saying a government commission could not act against another government office.

That night 28 people met in the hotel room of Betty Friedan, whose 1963 book *The Feminine Mystique* had been a best-seller, and founded the National Organization for Women, known as NOW. They set it up "to take action to bring women into full participation in the mainstream of American society NOW."

The amendment. Alice Paul wrote the first version of the Equal Rights Amendment, and it was first brought before Congress in 1923. The first section of the version members of Congress voted on in the 1970s reads: "Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex." Representative Martha Griffiths of Michigan pushed it through the House in 1971. Senators passed it on March 22, 1972, by 84 votes to 8.

Three-fourths of the states, 38 of them, had to ratify it within seven years. Hawaii ratified first, and 35 states had ratified by 1977.

STOP ERA. Phyllis Schlafly led the campaign against it, called STOP ERA, from 1972. She argued that under the amendment women could be drafted into the military. She also argued that widows would lose Social Security money paid to them as wives, and that mothers would lose their edge in court fights over who keeps the children. Lawmakers in Nebraska, Tennessee, Idaho, Kentucky and South Dakota voted to take back their states' approval.

Members of Congress extended the deadline to 1982, and no more states ratified before it ran out. When the deadline passed, the amendment was three states short of the 38 it needed.

Credit. Members of Congress passed the Equal Credit Opportunity Act in October 1974. No lender could now legally refuse a woman credit, a loan or the right to buy now and pay later, because of her sex or because she was married or single.

What did Title IX change?

Title IX barred schools and colleges that take federal money from shutting anyone out of a program because of sex, and school sports teams are among those programs. It became law on June 23, 1972. Its main sentence reads: "No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance."

Who passed it. Representative Patsy Takemoto Mink of Hawaii, Representative Edith Green of Oregon and Senator Birch Bayh of Indiana worked together to pass it. Green, who had taught school for 11 years, led the hearings in the House in 1970. After Mink died on September 28, 2002, members of Congress renamed the law the Patsy T. Mink Equal Opportunity in Education Act.

The numbers. Fewer than 300,000 girls played high school sports before Title IX, and more than 3 million did by 2012, more than ten times as many. That year the White House reported that American high schools still offered girls 1.3 million fewer chances to play sports than boys. In the 2013-14 school year, the Government Accountability Office found that girls were 49 of every 100 students at public high schools that offered sports, and 43 of every 100 players.

Gay Americans organize, 1953 to 1979

Gay Americans organized openly from the 1950s against being fired, arrested and photographed for who they were.

Fired. President Dwight Eisenhower signed Executive Order 10450 on April 27, 1953. The order listed "sexual perversion," the government's term then for being gay, among the reasons to remove a person from a federal job. The historian David K. Johnson estimates that "somewhere between 5,000 and 10,000 people lost their jobs" under it. Frank Kameny, who worked at the Army Map Service, was fired in 1957 and fought his firing as a civil rights case.

Protesters picketed the White House against the firings on May 21, 1965. The members of the Civil Service Commission, which set the rules for federal jobs, announced in 1975 that federal workers would no longer be fired for being gay.

Stonewall. State rules in New York in the 1960s forbade bars to serve alcohol to gay people. Police raided gay bars, arrested the customers and photographed them. In the early hours of June 28, 1969, police led by Deputy Inspector Seymour Pine raided the Stonewall Inn, a gay bar in Greenwich Village. This time the crowd outside fought back. People threw coins, bottles, bricks, garbage cans and burning trash.

The police shut themselves inside the bar until the Tactical Patrol Force, a police unit trained to break up riots, arrived. The protests went on for six nights, and police arrested 13 people the first night. A National Park Service page counts fifty to sixty gay groups in the country before Stonewall and at least 1,500 a year later.

Thousands of people marched from Greenwich Village to Central Park in the Christopher Street Liberation Day March on June 28, 1970, the first anniversary of the raid. Craig Rodwell led the organizing.

Harvey Milk. Harvey Milk was one of the first openly gay people elected to public office in the United States, as a member of San Francisco's Board of Supervisors. Dan White, a former supervisor, shot Mayor George Moscone and then shot Milk five times at City Hall on November 27, 1978. A jury found

White guilty of voluntary manslaughter, a lesser crime than murder, in May 1979, and he was sentenced to seven years and eight months. He served about five. Crowds rioted at City Hall after the verdict.

Native activists hold their ground, 1969 to 1974

Native activists occupied land, and some broke fishing laws on purpose to be arrested. They held Alcatraz Island in San Francisco Bay from November 20, 1969, to June 11, 1971. In 1973 they held the village of Wounded Knee, on the Pine Ridge Reservation in South Dakota, the Oglala Lakota's land, from February 27 to May 8.

Fishing. Native fishermen in Washington State fished where their treaties said they could, and got arrested for it on purpose. Billy Frank Jr. of the Nisqually Nation was arrested more than 50 times, starting at age fourteen, at Frank's Landing.

Judge Boldt ruled on February 12, 1974, in *United States v. Washington*, that the tribes were entitled to half of the salmon that could be caught. The justices of the Supreme Court agreed with the ruling in 1979. President Barack Obama awarded Frank the Presidential Medal of Freedom in 2015, after his death.

BY 1974: Mexican American students had walked out of their schools, women had won Title IX, gay New Yorkers had fought back at the Stonewall Inn, and Native activists had held Alcatraz and Wounded Knee.

Done to children without asking them, 1965 to 1973

Between 1965 and 1973, surgeons sterilized two poor girls in Alabama after nurses told their mother they would get shots, and staff at a New York state school beat and sexually abused disabled children.

The Relf sisters. Nurses in Montgomery, Alabama, told Minnie Relf in June 1973 that her daughters would get birth control "shots." The nurses worked at the family planning clinic of Montgomery Community Action, which was paid for with federal money.

Minnie Relf could not read or write, and she signed the form with an "X." Surgeons then sterilized the two girls, who were 12 and 14, by tubal ligation. In that operation a surgeon cuts or ties the two tubes that carry eggs to the womb, so that the girls could never become pregnant.

Their father, Lonnie Relf, saw the surgical scars when they came home from three days in the hospital. The records do not name the surgeons. Lawyers for the Southern Poverty Law Center sued for the family. The judge in the case found that an estimated 100,000 to 150,000 poor people were being sterilized each year under programs paid for with federal money, and barred federal money for sterilizations done against people's will.

Willowbrook. Willowbrook State School, on Staten Island in New York City, was a place run by the state for children with intellectual disabilities. It was built for 4,000 people and held 6,000 by 1965. Senator Robert F. Kennedy toured it that year and said the residents were "living in filth and dirt, their clothing in rags." The television reporter Geraldo Rivera showed crowded wards, filthy bathrooms, and staff beating and sexually abusing residents in 1972.

Parents of 5,000 residents sued the State of New York on March 17, 1972. New York officials agreed to a court order in 1975, and the last children left Willowbrook on September 17, 1987.

Parents sue to get their children into school, 1971 to 1975

Parents of disabled children sued in 1971 and 1972 to get their children into public schools, and they won.

The Pennsylvania law. Pennsylvania's school law let a school board "refuse to accept or retain beginners who have not attained," or reached, "a mental age of five years." A child's mental age was a test score given as the age of an ordinary child who would score the same.

The law also allowed the "temporary or permanent exclusion from the public school of children who are found to be uneducable and untrainable," judged unable to be taught. A child who scored under 30 on an intelligence test was called uneducable, and officials handed the child to the state welfare department for placement and perhaps training, instead of school.

The lawsuit. The parents' organization was the Pennsylvania Association for Retarded Children, using the word of the time, in laws and in the case, for people with intellectual disabilities. The association's lawyer, Thomas K. Gilhool of Philadelphia, sued the state for fourteen children on January 7, 1971. The association's leaders estimated that about 100,000 children in Pennsylvania were being denied a free education.

The two sides had reached an agreement by October 1971, and three federal judges issued orders on October 8, 1971, and May 5, 1972. Pennsylvania officials agreed to give every such child from 6 to 21 a free public education. Schools had to offer a hearing before labeling a child retarded, and had to test each labeled child again at least every two years. A federal judge ruled the same way for seven children in Washington, D.C., in *Mills v. Board of Education*, on August 1, 1972.

A national law. Parents were bringing cases like these in twenty states. The federal Bureau of Education for the Handicapped estimated that in 1975 about a million disabled children were still shut out of school completely. At least 300,000 more were getting schooling that did not meet their needs. President Gerald Ford signed the Education for All Handicapped Children Act on November 29, 1975. It promised a free public education suited to each disabled child, in every state.

Section 504, Gallaudet and the Americans with Disabilities Act, 1973 to 1990

Disabled Americans occupied federal offices in 1977 and forced officials to enforce a law that had been passed four years before. Section 504 of the Rehabilitation Act of 1973 was the first federal law protecting the civil rights of disabled people. It says that no qualified person with a disability "shall, solely by reason of his or her disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance."

No one who ran a school, hospital or office paid with federal money could legally turn a person away only because of a disability. But federal officials could not enforce the law until someone signed the rules for carrying it out, and for four years no one did. Joseph A. Califano Jr., the Secretary of Health, Education, and Welfare, refused to sign them after leaders of schools and hospitals objected to what the rules would cost.

The sit-in. Disabled people demonstrated at federal offices in eleven cities on April 5, 1977: San Francisco, Washington, Seattle, Los Angeles, Denver, Chicago, Dallas, Atlanta, New York, Boston and Philadelphia. In San Francisco, about 100 of them occupied the department's offices at 50 UN Plaza and stayed. National Park Service pages give the length of the sit-in as 26 days in one account and 24 days in another. The sit-in worked: Califano signed the rules.

Who fed them. Members of the Black Panther Party, a Black political group, brought in one hot meal a day and food for two more. Leaders of a union, the International Association of Machinists, paid bills and paid to fly a group to Washington. The Brick Hut, a business owned and run together by a group of lesbian women, women who love women, and Glide Memorial Church also helped. Judy Heumann, Kitty Cone and Dennis Billups led the occupation from inside.

Judy Heumann

Who: A woman refused a place at school as a child and a teaching license as an adult, who sued, won, and then helped lead the 1977 sit-in that won the Section 504 rules.

When and where: New York City, 1949 to 1970. San Francisco, April 1977.

"I was willing to make a fuss about it."

Judy Heumann got polio at eighteen months old, which paralyzed her, and she used a wheelchair from early childhood. New York City school officials refused to take her. Her mother, Ilse, spent years pressing them. Judy got in at about fourth grade, into a separate program for disabled students called Health Conservation 21.

The license. She finished college and applied for a license to teach. New York Board of Education officials turned her down in 1970 because she used a wheelchair. She asked the American Civil Liberties Union for help, and its lawyers refused, saying that turning someone down for a medical reason was not discrimination.

That year the *New York Times* put her story on its front page, and a lawyer, Roy Lucas, offered to represent her. She sued the Board of Education at 22, before Judge Constance Baker Motley. Board officials settled before trial and gave her the license. She and her supporters then started a group called Disabled in Action.

50 UN Plaza. In April 1977 she was one of the three leaders inside the occupied federal offices at 50 UN Plaza in San Francisco. During the sit-in she and Dennis Billups flew to Washington.

She spent the rest of her life on the same work. From 1993 to 2001 she was the federal official in charge of special education and rehabilitation. She advised the World Bank on disability from 2001 to 2005, and from 2010 to 2017 she was the federal government's special adviser on international disability rights. She died in Washington on March 4, 2023.

> "Some people say that what I did changed the world," she once said. "But really, I simply refused to accept what I was told about who I could be. And I was willing to make a fuss about it."

Deaf President Now, 1988, and the Capitol Crawl

Gallaudet University, in Washington, D.C., is the country's university for deaf students. In March 1988 members of its board of trustees, the group that runs the university, chose a hearing candidate, Elisabeth Zinser, as president over deaf candidates. Students marched, stopped going to classes and let the air out of the tires of school buses in front of the university's gates.

Four demands. Zinser had to go and a deaf president be chosen. The board's chair, Jane Spilman, had to resign. At least 51 of every 100 board members had to be deaf. No one who protested could be punished. After eight days the trustees gave in. I. King Jordan became Gallaudet's first deaf president. "A Deaf person can do anything a hearing person can, except hear," he said.

The Capitol Crawl. While members of Congress were considering the Americans with Disabilities Act, disabled protesters left their wheelchairs, walkers and crutches at the bottom of the steps of the Capitol and climbed the steps without them. The protest is called the Capitol Crawl. President George H. W. Bush signed the Americans with Disabilities Act on July 26, 1990. Employers, state and city governments, businesses open to the public and public bus and train systems all had to give disabled people an equal chance at their jobs, services and goods.

Busing, Detroit and Boston, 1974

When Black parents in the North sued over segregated schools in the 1970s, they won in Boston and lost at the Supreme Court over Detroit's suburbs.

Detroit. The justices ruled five to four against busing children across school district lines on July 25, 1974, in *Milliken v. Bradley*. A judge could not send city children to suburban schools, or suburban children to city schools, unless someone proved that one district had caused segregation in the other. A judge's plan that would have covered Detroit and 53 suburban districts could not go ahead. Justice Thurgood Marshall, who had argued *Brown* before the Supreme Court as the NAACP's lawyer, was one of the four who dissented.

Boston. Tallulah Morgan, a Black mother of three, and thirteen other families sued the Boston School Committee, the city's elected school board, in 1972. Judge W. Arthur Garrity ruled on June 21, 1974, that "the entire school system of Boston was unconstitutionally segregated," kept apart by race in a way the Constitution forbids. School officials, he found, "had knowingly carried out a systematic program of segregation affecting all of the city's students, teachers and school facilities."

Busing, carrying children by bus to schools outside their neighborhoods, began on September 9, 1974, and paired South Boston with Roxbury. Protesters threw rocks and bottles at the buses, broke the windows and shouted racial insults. Of the 800 Black students assigned to South Boston High that first day, 56 came. Garrity handed the job of watching over the schools to state officials in 1982 and issued his final order in 1985.

Warren County residents lie down in the road, 1982

Residents of mostly Black Warren County, North Carolina, lay down in front of dump trucks in September 1982 to stop a landfill for poisoned soil. Someone had illegally dumped chemicals called PCBs along North Carolina's roadsides in 1978, poisoning the soil. State officials chose Afton, in mostly Black, rural Warren County, as the place to bury it.

After the courts failed them, residents and civil rights leaders, among them the Reverend Benjamin Chavis of the United Church of Christ's Commission for Racial Justice, blocked the trucks. Police arrested about 500 people over six weeks, and state officials had the landfill built anyway. The protest is widely named as the start of the environmental justice movement, the campaign against placing pollution where poor and nonwhite people live. Members of the church's commission published a report, *Toxic Wastes and Race*, in 1987.

An apology and $20,000, 1980 to 1990

Japanese Americans who had been held in the camps of the Second World War campaigned for an apology and payment, and in 1988 they won both. The Japanese American Citizens League and the National Council for Japanese American Redress led the campaign.

The commission. President Jimmy Carter signed a law creating a commission to study the camps on July 31, 1980. Its members held 20 days of hearings in 11 places in 1981 and heard more than 750 witnesses. Their report, in February 1983, found that the causes were "race prejudice, war hysteria and a failure of political leadership." A federal judge also threw out the finding that Fred Korematsu had been guilty in 1983.

The law. Senators Daniel Inouye and Spark Matsunaga and Representatives Norman Mineta and Robert Matsui led the bill through Congress. President Ronald Reagan signed the Civil Liberties Act on August 10, 1988. Each person still living who had been held received an apology and $20,000. The first letters and checks went out on October 1, 1990.

BY 2000

If you remember one thing: Marchers, students, parents and disabled protesters won court rulings against segregated schools and buses, and new laws against segregation in public places, literacy tests, sex discrimination in schools and shutting disabled people out. Many of them were beaten, jailed or killed for it.

Left open: Would the justices of the Supreme Court keep the Voting Rights Act as members of Congress wrote it in 1965?

Next: After 2000, judges and lawmakers widened some of these rights and narrowed others.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 50 MINUTES

Judges and lawmakers since 2000 have widened some of the rights earlier movements won and taken back others. Same-sex couples, two men or two women, won the right to marry in every state in 2015, twelve years after police in some states could still arrest two men or two women for having sex at home. Members of Congress passed the first federal law against lynching in 2022, after about 200 earlier bills had failed.

Rights narrowed. The justices of the Supreme Court cut back the Voting Rights Act of 1965 in 2013 and again in 2026. They overruled the 1973 ruling that protected abortion in 2022, declaring it wrong and ending it, and a year later they stopped colleges from considering an applicant's race.

Their rulings of 2025 and 2026 allowed states to ban some medical care for transgender young people and to keep transgender girls off girls' school teams. A transgender person is someone whose own sense of being male or female, called gender identity, differs from the sex recorded at birth.

New tools. Organizers used phones and social media alongside the old tools of meetings, lawsuits and marches. A seventeen-year-old recorded a Minneapolis police officer kneeling on George Floyd in 2020, and after people saw her video they protested in cities around the world. Two words posted on Twitter in October 2017, "me too," were used more than 19 million times within a year.

Police officers and federal agents also killed people in these years, among them George Floyd in 2020, and Renée Good and Alex Pretti, two American citizens shot by federal immigration agents in Minneapolis in 2026. As of September 2026 no one had been charged with killing Good or Pretti, and the fights over voting maps, DACA and the Equal Rights Amendment were still going on.

The justices strike down the Voting Rights Act's list, 2013

The justices of the Supreme Court struck down the list of places that had to get federal permission before changing a voting rule on June 25, 2013. That permission is called preclearance. Since 1965, officials in the listed states and counties had needed it from federal officials in Washington.

The list. Nine states were on the list in full. Alabama, Georgia, Louisiana, Mississippi, South Carolina and Virginia were covered from November 1, 1964. Alaska, Arizona and Texas were covered from November 1, 1972. Named counties in California, Florida, New York, North Carolina and South Dakota were covered too, and so were two townships in Michigan.

Shelby County v. Holder. The justices split five to four. Chief Justice John Roberts wrote for the majority that "the Act imposes current burdens and must be justified by current needs." The majority struck down Section 4(b), the formula that decided which places went on the list, and left the preclearance rule itself standing with no list of places it applied to.

"We issue no holding on §5 itself, only on the coverage formula," Roberts wrote, and "Congress may draft another formula based on current conditions." Justice Ruth Bader Ginsburg wrote the dissent, joined by Justices Stephen Breyer, Sonia Sotomayor and Elena Kagan. A Justice Department web page

states the result. The places that had been on the list "no longer need to seek preclearance for the new voting changes," unless a separate court order covers them.

No new list. Members of Congress tried to write a new list in the John R. Lewis Voting Rights Advancement Act, named for John Lewis of the Student Nonviolent Coordinating Committee, one of the speakers at the 1963 March on Washington. Under one version, a state with 15 or more voting rights violations in the previous 25 years would be covered for 10 years.

Senators voted 49 to 51 on ending debate over the bill on January 19, 2022. Ending debate needed 60 votes, so the bill never came to a final vote. Later that night senators voted 52 to 48 to keep the 60-vote rule in place. By September 2026 members of Congress had passed no new list.

Proving intent: Louisiana v. Callais, 2026

Anyone suing under Section 2 of the Voting Rights Act must now show that state officials meant to discriminate by race, under a ruling of April 29, 2026. Section 2 lets people go to court over a voting rule or a map of election districts that gives a racial group less chance to elect the candidates it wants. Members of Congress had rewritten Section 2 in 1982 so that a person suing would not have to prove what the officials intended.

The Louisiana map. Louisiana's lawmakers drew a map of six congressional districts with one majority-Black district after the 2020 census. A federal judge held that the map likely broke Section 2. The lawmakers then drew a second majority-Black district. Other voters sued, saying the new map was a racial gerrymander, a set of districts drawn by race in a way the Constitution forbids.

The new rule. Justice Samuel Alito wrote for six justices that the Voting Rights Act had not required the second district, so the map broke the Constitution. He set a new rule for every future case. Section 2 "imposes liability only when the evidence supports a strong inference that the State intentionally drew its districts to afford minority voters less opportunity because of their race." A person suing must now show that officials meant to treat voters unfairly because of race.

The Congressional Research Service, which writes explanations of the law for members of Congress, put it this way on May 14, 2026. A person suing "now must show that a state drew a redistricting map based on racial, and not political, considerations." That person must also "present evidence of current-day, intentional voting discrimination that is based on race."

The dissent. Justice Elena Kagan dissented, joined by Justices Sonia Sotomayor and Ketanji Brown Jackson. To show how lawmakers can draw districts so that some people's votes count for less, she asked readers to imagine a round district that was 90 percent Black, in a state that was otherwise 90 percent white.

Lawmakers could slice that district "into six pie pieces," she wrote, and spread its Black voters across six mostly white districts. In that imagined state, "Election after election, Black citizens' votes are, by every practical measure, wasted." "'Cracked' is the usual term," she said, and the majority had made "a nullity of Section 2," a rule with no force left in it.

The new map. Louisiana's Republican lawmakers passed a new map in May 2026. It removed one of the state's two majority-Black districts and was expected to elect five Republicans and one Democrat. About a third of Louisiana's people are Black. State Senator Jay Morris wrote the bill. "We focused on the Democrat numbers, not the racial numbers when drawing," said State Representative Beau Beaullieu, a Republican. State Representative Kyle Green Jr., a Democrat, said the map took Black Louisianians "from 33% of the population to 16% of the representation."

Louisiana officials put off the House primary elections set for May 16, 2026. To use the new map, they threw out about 40,000 votes that people had already cast.

Other states. The justices let Alabama keep using a 2023 congressional map with one majority-Black district on June 2, 2026. They stopped a lower court's order against it, saying Alabama was "likely to succeed on the merits as to both claims," likely to win.

The Congressional Research Service reported in May 2026 that "some state legislatures are considering or have already enacted modifications to their redistricting maps that eliminate majority-minority districts for the upcoming 2026 congressional elections." Lawmakers in some states were drawing new maps without districts where most voters were Black or Latino. In September 2026 members of Congress had passed no new rule for Section 2.

Separate schools, counted in 2021 and 2022

School officials have been forbidden by law since 1954 to send children to separate schools because of their race. In the 2020s, federal and university researchers still found many schools where three-quarters or more of the students were of one race.

The federal count. The federal Government Accountability Office, which checks on government work for Congress, published a report on June 16, 2022, about the school year 2020-21. Its researchers found that about 18.5 million children, more than a third of American public school students, "attended schools where 75 percent or more students were of a single race or ethnicity," ethnicity meaning a group's shared background, such as Hispanic. Fourteen percent of students attended schools where 90 percent or more were of one race or ethnicity.

The longer count. Researchers at the Civil Rights Project at UCLA, a university research center, count a longer stretch using the federal government's school data. In a report of April 2024, Gary Orfield and Ryan Pfleger gave the share of public schools that were 90 to 100 percent non-white. It was 7.4 percent in 1988 and 19.8 percent in 2021, or about one school in five. In those schools in 2021, 78 of every 100 students were poor.

The same report follows Black students in the South. The share who attended a school where most students were white reached a peak of about 43 percent in the mid-1980s, and it was about 16 percent in 2021. The authors tie the turn to a 1991 Supreme Court ruling, *Board of Education of Oklahoma City v. Dowell*, which let judges end court orders to desegregate. After it, the share fell for nearly 30 years in a row.

Race in college admissions, 2014 to 2023

The justices of the Supreme Court ruled in 2023 that colleges may not give applicants a boost because of their race. In Justice Sonia Sotomayor's count, the justices had let colleges consider race "in a limited way" for 45 years before that, to gain the benefits of racial diversity. The practice is often called affirmative action.

The lawsuits. Students for Fair Admissions, a nonprofit group founded in 2014, sued Harvard College and the University of North Carolina in November 2014. Its first board had three members, Edward Blum, Abigail Fisher and Richard Fisher. At Harvard, readers and committees considered race at several steps of the process, and for a significant share of the Black and Hispanic students admitted, race tipped the decision. At the University of North Carolina, readers could give an applicant a "plus" because of race.

The ruling. Chief Justice John Roberts wrote for six justices on June 29, 2023, that both programs broke the 14th Amendment's promise of equal protection. "The guarantee of equal protection cannot mean one thing when applied to one individual and something else when applied to a person of another color," he wrote. A college may still read an applicant's own account of "how race affected the applicant's life," he added, if it is tied to the applicant's character or abilities. The justices left open the question for the military academies.

The dissent. Sotomayor dissented, joined by Justice Elena Kagan, and by Justice Ketanji Brown Jackson in the North Carolina case. Jackson took no part in the Harvard case. "The Court long ago concluded that this guarantee can be enforced through race-conscious means in a society that is not, and has never been, colorblind," Sotomayor wrote, colorblind meaning taking no notice of race at all. "Today, this Court stands in the way and rolls back decades of precedent," the Court's own earlier rulings, "and momentous progress."

From arrest to marriage, 2003 to 2015

Two men or two women in some states could still be arrested in 2003 for having sex at home. Twelve years later the justices of the Supreme Court ruled that same-sex couples could marry in every state.

Lawrence v. Texas. The justices voted six to three on June 26, 2003, to strike down a Texas law that made it a crime for two people of the same sex to have sex in private. Justice Anthony Kennedy wrote the opinion. The justices overruled a 1986 ruling that had allowed such a law: "*Bowers* was not correct when it was decided, is not correct today, and is hereby overruled."

Massachusetts. The Supreme Judicial Court of Massachusetts, the state's highest court, ruled on November 18, 2003, that the state constitution guaranteed same-sex couples the right to marry. The judges held back their own order for 180 days "to permit the Legislature to take such action" as it chose, the Legislature meaning the state's lawmakers. Massachusetts became the first state where same-sex couples could marry on May 17, 2004.

Edith Windsor. Edith Windsor and Thea Spyer married in Ontario, Canada, in 2007 and lived in New York. Spyer died in February 2009 and left everything she owned to Windsor. The federal Defense of Marriage Act defined marriage as one man and one woman for more than 1,000 federal laws and rules.

So federal officials counted Windsor as unmarried, and she paid $363,053 in estate taxes, a tax on what a person leaves at death. She sued for the money back, and the justices struck down that part of the law, five to four, in *United States v. Windsor* on June 26, 2013.

Obergefell. By 2015 voters and lawmakers had changed their marriage laws to include same-sex couples in eleven states and the District of Columbia, by the justices' count. The justices ruled five to four on June 26, 2015, in *Obergefell v. Hodges*, that same-sex couples may marry in every state. Kennedy wrote the opinion. Chief Justice John Roberts and Justices Antonin Scalia, Clarence Thomas and Samuel Alito each wrote a dissent.

Within moments of the ruling, LGBT people gathered in Christopher Park in New York. LGBT is short for lesbian, gay, bisexual and transgender. President Barack Obama made that park, a triangle of about 0.12 acres, the Stonewall National Monument on June 24, 2016, in memory of the 1969 uprising at the Stonewall Inn.

Jim Obergefell

Who: A widower who sued Ohio to have his name put on his husband's death certificate, and won the case that made same-sex marriage legal in every state.
When and where: Ohio, and Baltimore, Maryland, 2011 to 2015.

The couple married inside a medical plane on a Baltimore runway.

Jim Obergefell sued the state of Ohio over a death certificate. He wanted to be named on it as the husband of John Arthur, and Ohio law would not allow it.

In the justices' words. The justices set out his story in their written opinion, where "petitioner" and "plaintiff" both mean a person who brought the case. "Petitioner James Obergefell, a plaintiff in the Ohio case, met John Arthur over two decades ago. They fell in love and started a life together, establishing a lasting, committed relation. In 2011, however, Arthur was diagnosed with amyotrophic lateral sclerosis, or ALS."

ALS destroys the nerve cells that carry orders from the brain to the muscles. The muscles stop getting those orders, waste away and stop working. It takes the hands and legs first, then swallowing, then breathing. The Court called the disease "progressive, with no known cure."

The wedding. The two men decided to marry before Arthur died. Ohio did not allow same-sex couples to marry, and Maryland did. The Court went on: "It was difficult for Arthur to move, and so the couple were wed

inside a medical transport plane as it remained on the tarmac in Baltimore. Three months later, Arthur died. Ohio law does not permit Obergefell to be listed as the surviving spouse on Arthur's death certificate." The wedding was on July 11, 2013, and Arthur died on October 22, 2013.

The case. Obergefell sued. His case was joined with cases from Michigan, Kentucky and Tennessee, brought together by 14 same-sex couples and two men whose partners had died. The justices decided them together on June 26, 2015. The last lines of Justice Kennedy's opinion read: "They ask for equal dignity in the eyes of the law. The Constitution grants them that right."

BY 2015: The justices had struck down the Voting Rights Act's list of places that needed federal permission, and same-sex couples could marry in every state.

The Respect for Marriage Act, 2022, and Kim Davis

Members of Congress wrote the protection for same-sex marriages into federal law in 2022, and the Respect for Marriage Act became law on December 13, 2022. It does not require any state to issue marriage licenses. It forbids any state official to refuse to recognize a marriage from another state because of the couple's sex, race, ethnicity or national origin. The Attorney General, or the person harmed, may sue anyone who breaks it.

The votes. Senators passed it on November 29, 2022, by 61 votes to 36, with twelve Republican senators voting yes. The House passed it on December 8, 2022, by 258 votes to 169, with 39 Republicans voting yes. The law opens with a sentence from Kennedy's *Obergefell* opinion: "No union is more profound than marriage, for it embodies the highest ideals of love, fidelity, devotion, sacrifice, and family."

Kim Davis. Kim Davis was a county clerk in Kentucky. After the 2015 ruling she refused, on religious grounds, to issue a marriage license to a gay couple, David Ermold and David Moore, and she spent six days in jail.

A jury later ordered her to pay the couple $100,000 for the harm done to them and $260,000 for their lawyers' fees. In 2025 she asked the justices of the Supreme Court to overturn *Obergefell*, the first such request since 2015. The justices refused to hear it on November 10, 2025.

Black Lives Matter and Ferguson, 2012 to 2016

Black Lives Matter began in 2013, after a Florida jury found the man who killed Trayvon Martin not guilty.

Trayvon Martin. George Zimmerman, a neighborhood-watch volunteer, shot and killed Martin, a 17-year-old Black teenager who was walking back from a convenience store, in Sanford, Florida, on February 26, 2012. Martin was unarmed. The Sanford police chief said on March 12, 2012, that no charge could be filed. After demonstrations across the country, Governor Rick Scott appointed a special prosecutor, a lawyer chosen to handle this one case, in April 2012.

The special prosecutor charged Zimmerman with second-degree murder, a murder that was not planned ahead. The jury found him not guilty on July 13, 2013. Justice Department officials announced in 2015 that they would not bring federal hate-crime charges.

After the verdict, three Black organizers, Alicia Garza, Patrisse Cullors and Opal Tometi, started a project to build a movement and called it #BlackLivesMatter. The mark # turns a phrase into a hashtag, a label that people can search for on social media.

Michael Brown. Officer Darren Wilson of the Ferguson Police Department in Missouri shot and killed Michael Brown, an unarmed 18-year-old, at about noon on August 9, 2014. Justice Department officials announced on March 4, 2015, that the evidence did not support charging Wilson with a federal crime. Their report states that Wilson did not willfully, knowingly and on purpose, violate Brown's right to be free from unreasonable force.

The Ferguson report. The same day, lawyers in the Justice Department's Civil Rights Division published a report on the whole Ferguson police department. Its investigators had interviewed half the department's officers and read more than 35,000 pages of police records, and spent about 100 days of work in the town.

They found "a pattern or practice of unlawful conduct within the Ferguson Police Department that violates the First, Fourth, and Fourteenth Amendments to the United States Constitution." Ferguson's police broke the Constitution again and again, as a regular way of working.

Who the police stopped. The police department's own numbers for 2012 to 2014 showed who the police stopped. Black people were 67 percent of Ferguson's population. They were 85 percent of the drivers stopped, 90 percent of the people given tickets and 93 percent of the people arrested. Police searched Black drivers more than twice as often as white drivers, and found something illegal on them 26 percent less often.

The investigators found that "nearly 90% of documented force used by FPD officers was used against African Americans." In every dog-bite case where the race was recorded, the person bitten was Black. The report states that "Ferguson's law enforcement practices are shaped by the City's focus on revenue rather than by public safety needs." The city's finance director wrote to the police chief in March 2010 that "unless ticket writing ramps up significantly before the end of the year, it will be hard to significantly raise collections next year."

Recording the police. The investigators also found that officers punished people for recording them and for protesting. One officer saw a couple filming him. He arrested the father, then pulled the mother over and arrested her too, saying "no more mercy, since she wanted to videotape," and "nobody videotapes me." He took the phone from their daughter. When the parents got out of jail on bond, money paid so a person can wait for trial at home, the video had been deleted.

A federal judge ordered Ferguson officers in November 2014 to stop interfering with people "lawfully and peacefully" recording the police. On February 9, 2015, six months after Michael Brown's death, people protested outside the police station. Officers pushed a man who was recording the arrests to the ground and handcuffed him. The report states that his video shows he "was neither interfering nor resisting." Officers also arrested a protester in a wheelchair who was streaming the protest live. The report names none of these people.

Colin Kaepernick. Some athletes joined the protests against police killings. Colin Kaepernick, the quarterback of the San Francisco 49ers football team, sat and then knelt during the national anthem in the 2016 preseason, "in protest of police brutality and racial inequality." He chose to leave his contract in March 2017, and no team signed him. He accused the owners of the National Football League in October 2017 of secretly agreeing to keep him out. He settled with the league on February 15, 2019, and the terms were kept secret.

Minneapolis, May 25, 2020

A Minneapolis police officer, Derek Chauvin, knelt on George Floyd for about ten minutes on May 25, 2020, while Floyd lay handcuffed and face down in the street. Floyd died, and a jury later found Chauvin guilty of murdering him. Chauvin later admitted these facts in writing, in a plea agreement he signed in federal court on December 15, 2021, a statement in which a person accused of a crime admits to it under a deal with prosecutors.

What the officers did. Chauvin and his partner, Officer Tou Thao, answered a call about a counterfeit bill, a fake banknote. Officers J. Alexander Kueng and Thomas Lane were already there. They tried to put Floyd in a squad car. Then Chauvin, Kueng and Lane moved Floyd, who was handcuffed, out of the car and face down on the street.

He "remained restrained, prone and handcuffed on the ground for approximately ten minutes," prone meaning lying face down. Chauvin "held his left knee on Mr. Floyd's neck, back, and shoulder area and his right knee on Mr. Floyd's left arm and upper back" the whole time.

Floyd stopped resisting soon after the officers first held him down, and Chauvin went on kneeling on him. He admitted that he knew he had no legal reason to continue, "because he was aware that Mr. Floyd not only stopped resisting, but also stopped talking, stopped moving, stopped breathing, and lost consciousness and a pulse." By his own account he "heard Mr. Floyd repeatedly explain that he could not breathe, was in pain, and wanted help."

Bystanders asked him again and again to check for a pulse and to get off Floyd. Kueng checked for a pulse at least twice and said twice that he could not find one. Chauvin admitted he did not see Thao or Kueng do or say anything to get him off Floyd. Lane twice asked whether Floyd should be rolled onto his side.

Darnella Frazier. Darnella Frazier was seventeen. She was walking with her nine-year-old cousin, and she recorded what the officers did on her phone. The Pulitzer Prize Board gave her a special citation in 2021. News reports of the announcement quote it: "for courageously recording the murder of George Floyd, a video that spurred protests against police brutality around the world." She testified at Chauvin's state trial.

The verdicts. A Hennepin County jury found Chauvin guilty on April 20, 2021, of two kinds of murder, second-degree and third-degree, and of second-degree manslaughter. Judge Peter Cahill sentenced him to 22 and a half years. In federal court Judge Paul Magnuson sentenced him to 21 years, to be served at the same time. Thao, Kueng and Lane got federal sentences of between two and a half and three and a half years.

The boy in 2017. In the same plea agreement, Chauvin admitted to an attack four years earlier. He answered a call on September 4, 2017, from a mother who said her 14-year-old son had hit her. Chauvin held the boy by the throat and hit him in the head with a flashlight, cutting him near the left ear.

Then he knelt on the boy's neck, shoulders and upper back "for between fifteen and sixteen minutes" while the boy lay face down, handcuffed and not resisting, and "at times, cried from pain." Chauvin left all of it out of his report that night. The plea agreement does not name the boy.

The protests. People protested in cities and towns across the country that summer. Researchers at the Pew Research Center, an organization that runs surveys, asked 9,654 American adults about the protests between June 4 and 10, 2020. Six of every 100 said they had gone to a rally or protest on these issues in the past month. Two-thirds said they supported the Black Lives Matter movement, and 38 of every 100 said they strongly supported it.

The Crowd Counting Consortium, a project run by researchers at Harvard and the University of Connecticut, counts protests. Its data supported a *New York Times* analysis that the 2020 protests were the largest and broadest in American history up to then. The same data showed the protests were "overwhelmingly peaceful, especially relative to the heavy-handed police response," in the words of Harvard's Ash Center.

What Congress and the Justice Department did. Members of the House of Representatives passed the George Floyd Justice in Policing Act on March 3, 2021, by 220 votes to 212, and senators never voted on it. Under President Joe Biden, Justice Department lawyers sued Minneapolis and Louisville to force changes in how their police worked, through consent decrees, agreements that a judge enforces.

On May 21, 2025, under President Donald Trump, Harmeet Dhillon, the head of the Justice Department's Civil Rights Division, dropped both lawsuits. She said she was ending "the Biden Civil Rights Division's failed experiment of handcuffing local leaders and police departments with factually unjustified consent decrees."

BY 2021: Protests after police killings had filled streets across the country, and a jury had found Derek Chauvin guilty of murdering George Floyd.

The Emmett Till Antilynching Act, 2022

The Emmett Till Antilynching Act became law on March 29, 2022, the first federal law against lynching. Members of the House passed it on February 28, 2022, and senators passed it on March 7.

About 200 bills. Members of Congress had introduced about 200 anti-lynching bills before it, and none had become law. The House Judiciary Committee's own 2022 report on the bill gives two different starting dates.

One section says the first bill came from Congressman George Henry White in 1900, when he was the only Black member of Congress. Another says the first came from Congressman Leonidas Dyer of Missouri in 1918. Both sections agree that the House passed three anti-lynching bills between 1920 and 1940, and that none of them became law.

What the law covers. The law is named for Emmett Till, whom the report describes as "a 14-year-old African American youth from Chicago who was lynched in 1955 while visiting an uncle in Mississippi." Under federal law, a hate crime is hurting a person on purpose because of their race, color, religion or national origin, and in some cases their gender, sexual orientation, gender identity or disability.

The new law covers a person who conspires, or plans with others, to commit a hate crime. When the crime kills someone or badly injures them, that person can be sent to prison for up to 30 years.

Me too, 2017 to 2026

The actress Alyssa Milano wrote on Twitter on October 15, 2017, "If you've been sexually harassed or assaulted write 'me too' as a reply to this tweet," harassment meaning unwanted sexual words or touching and assault meaning a sexual attack.

The count. Researchers at the Pew Research Center later counted public English-language posts on Twitter. They found the hashtag #MeToo used more than 19 million times between that day and September 30, 2018, an average of 55,319 times a day. The researchers counted posts on one website in one language, so the figure is a count of posts and not of people.

Harvey Weinstein. Milano posted the words during the reporting about the film producer Harvey Weinstein. *The New York Times* and *The New Yorker* reported in October 2017 that more than a dozen women accused him of sexual harassment, assault or rape. He denied "any nonconsensual sex," sex the other person did not agree to. He was dismissed from his company that month.

A New York jury found him guilty of rape and of a criminal sexual act in 2020, and he was sentenced to 23 years. Under New York law, a criminal sexual act means forcing a person into sex acts such as oral sex. Judges of the New York Court of Appeals, the state's highest court, threw out those verdicts in 2024 because of "egregious errors," very serious mistakes, by the trial judge. A Los Angeles jury found him guilty of rape and two other charges in 2022.

At a new trial in New York, on June 11, 2025, a jury found him guilty of forcing oral sex on Miriam Haley, a former production assistant, in his Manhattan apartment in 2006. Justice Curtis Farber sentenced him to 15 years in prison on September 23, 2026. "You took what you wanted by force, and you have never accepted responsibility," Farber told him.

The words "me too" were already in use. A youth worker in Selma, Alabama, named Tarana Burke had been using them with girls and young women for years before 2017.

Tarana Burke

Who: A youth organizer who used the words "me too" with survivors of sexual violence for years before the words became a hashtag.

When and where: The Bronx, New York, and Selma, Alabama, 1973 to 2018.

She was saying "me too" to girls years before the hashtag.

Tarana Burke is herself a survivor of sexual abuse. She grew up in the Bronx, in New York City, and at fourteen she joined a group called the 21st Century Youth Leadership Movement. After Alabama State University and Auburn University, she moved to Selma, Alabama, and kept working for the same group there.

The girl at the camp. A National Women's History Museum biography dates the start of her work to 1996, when a girl at a youth camp told Burke that she had been sexually abused. The same biography states that years later Burke "began using the phrase 'me too' to promote the idea of 'empowerment through empathy.'" Burke's own account says her work turned toward survivors of sexual violence while she lived in Selma.

Just Be. She started an organization for Black girls called Just Be.

DISPUTED: When Just Be and her use of the name "Me Too" began. Her own website says she created Just Be in 2005, and the museum's biography gives 2007. A Colorado State University page states that she made a "Me Too" page on MySpace, a social network of that time, in 2006.

2017. The words spread across Twitter in October 2017, during the Harvey Weinstein reporting, and Burke became a leader of the movement around the world. *Time* magazine named "the Silence Breakers," Burke among them, its Person of the Year for 2017. In 2018 she started an organization called "me too." International.

Equal pay for the women's soccer team, 2016 to 2022

Five players on the United States women's national soccer team, Hope Solo, Carli Lloyd, Alex Morgan, Megan Rapinoe and Becky Sauerbrunn, filed a complaint in April 2016 that they were paid less because they were women. They filed it with the Equal Employment Opportunity Commission, the federal office that enforces the law against job discrimination.

The players and US Soccer's leaders settled the case on February 22, 2022, for $24 million, and $22 million of it went to the players. Under new contracts signed on May 18, 2022, the women's and men's teams get equal pay and bonuses through 2028.

The Women's March, 2017, and No Kings, 2025

Women marched in cities across the country on January 21, 2017, the day after Donald Trump became president. Teresa Shook, a grandmother in Hawaii, had proposed a march on Washington in a Facebook post the day after the November 2016 election. Between 3.2 million and 5.3 million people marched in the United States, about 500,000 of them in Washington, by the count in Encyclopaedia Britannica.

Erica Chenoweth of Harvard and Jeremy Pressman of the University of Connecticut founded the Crowd Counting Consortium to count this march. Their data showed it was the largest one-day demonstration in American history up to that time. Britannica records that the "No Kings" protests of June 14, 2025, in which about five million people marched, passed that record.

The end of Roe v. Wade, 2022

The justices of the Supreme Court ended the right to an abortion in 2022, when they overruled an earlier decision of their own court. An abortion is a medical procedure that ends a pregnancy. In *Roe v. Wade*, in 1973, the justices had decided that the Constitution protected that right, and the ruling stood for 49 years.

Dobbs. Mississippi's lawmakers banned abortion after fifteen weeks of pregnancy, except in a medical emergency or when the fetus, the medical word for the unborn offspring growing in the womb after the first weeks of pregnancy, had a serious defect.

Justice Samuel Alito wrote for five justices on June 24, 2022, in *Dobbs v. Jackson Women's Health Organization*: "We therefore hold that the Constitution does not confer a right to abortion. Roe and Casey must be overruled, and the authority to regulate abortion must be returned to the people and their elected representatives."

Casey was a 1992 ruling, *Planned Parenthood v. Casey*, that had kept *Roe* in place. Chief Justice John Roberts agreed that the Mississippi law could stand but did not join in overruling *Roe*. Justices Stephen Breyer, Sonia Sotomayor and Elena Kagan dissented together.

The states. After *Dobbs*, lawmakers in each state set their own rules. KFF, a health research group, counted them on August 10, 2026. Thirteen states banned abortion in almost every case. Seven more banned it after six to twelve weeks of pregnancy. Nine states and the District of Columbia set no limit by stage of pregnancy.

The Equal Rights Amendment, 2017 to 2026

Lawmakers in three more states ratified the Equal Rights Amendment after 2000, and in September 2026 it was still not part of the Constitution. The amendment reads: "equality of rights under the law shall not be denied or abridged by the United States or any State on account of sex." When the 1982 deadline ran out, 35 states had ratified it, and 38 were needed.

Three more states. Nevada's lawmakers ratified it in 2017, treating the deadline as one they could ignore. Illinois followed in 2018 and Virginia in 2020. The three states asked the Archivist of the United States, the federal official who certifies and publishes amendments, to add it, and the Archivist did not. Officials of the three states sued in January 2020. A federal judge threw out the suit, and the judges of a federal appeals court agreed in February 2023.

The deadline. Lawyers in the Justice Department's Office of Legal Counsel, which writes legal opinions for the department, wrote in 2020 and 2022 that the deadline "is valid and enforceable." In December 2024 the Archivist, Colleen Shogan, and her deputy, William J. Bosanko, wrote that the amendment "cannot be certified as part of the Constitution due to established legal, judicial, and procedural decisions." Earlier court rulings and rules, they meant, stopped them from declaring it part of the Constitution.

President Joe Biden said on January 17, 2025, three days before he left office: "I affirm what I believe and what three-fourths of the states have ratified: the 28th Amendment is the law of the land." His statement ordered no one to do anything, and Shogan did not publish the amendment.

Hair, 2018 to 2026

Lawmakers in about 30 states passed laws between 2019 and 2026 against punishing people at work or at school for their natural hair, or for styles such as braids, locs and twists. The count of about 30 states comes from the CROWN Coalition, the group of organizations that campaigned for the laws. Dove, a soap and beauty brand, founded it with Color of Change, the National Urban League and the Western Center on Law and Poverty.

Andrew Johnson. The referee Alan Maloney told Andrew Johnson, a junior wrestler at Buena Regional High School, to cut his dreadlocks or forfeit, lose the match without wrestling, at a home match in Buena, New Jersey, on December 19, 2018. Maloney gave him 90 seconds. The team's athletic trainer cut Johnson's hair beside the mat. The New Jersey Division on Civil Rights and the state's school sports association agreed on September 18, 2019, that Maloney would be suspended for two seasons.

The CROWN Act. California's CROWN Act, for Creating a Respectful and Open World for Natural Hair, was written by State Senator Holly J. Mitchell. California's governor signed it on July 3, 2019, the first state law of its kind. It added hair texture and styles such as braids, locs and twists to the state's law against discrimination at work and in schools.

Governor Phil Murphy signed New Jersey's version on December 19, 2019, a year to the day after Johnson's match. Members of the House passed a federal CROWN Act on September 21, 2020, and again on March 18, 2022. Senators never voted on it.

BY 2022: Members of Congress had passed the first federal law against lynching, and the justices had ended the right to an abortion that the Court had protected since 1973.

Disability: narrowed by judges, restored by Congress, dropped in 2026

Disabled Americans fought after 1990 over who the Americans with Disabilities Act covered and whether they could live outside institutions. On a single day in 1999 the justices of the Supreme Court narrowed who counted as disabled and ruled that keeping disabled people in institutions without need was discrimination. Members of Congress restored the wider meaning of disability in 2008. A federal judge struck down the federal rule that carried out the 1999 ruling on institutions in 2026.

Who counted as disabled. The first fight was over who counted as disabled. Twin sisters applied to fly for United Air Lines. Without glasses their eyesight was 20/200 or worse, and with glasses it was 20/20 or better. Perfect ordinary eyesight is called 20/20, and a bigger second number means worse sight. United's hiring rule required 20/100 or better without glasses and turned the sisters down.

The justices ruled on June 22, 1999, in *Sutton v. United Air Lines*, that whether a person is disabled must be judged with glasses or other aids in use. So the airline could refuse the sisters because of their eyes, and they could not sue, because with their glasses on they did not count as disabled.

A second ruling in 2002 narrowed the definition again. Members of Congress later wrote that lower courts had then "incorrectly found in individual cases that people with a range of substantially limiting impairments are not people with disabilities."

The 2008 law. President George W. Bush signed a law to reverse those rulings on September 25, 2008. Its title reads: "To restore the intent and protections of the Americans with Disabilities Act of 1990." In its text, members of Congress named the rulings and said they had "narrowed the broad scope of protection intended to be afforded by the ADA." An illness that comes and goes now counts as a disability.

Whether a person is disabled is decided without counting the help of aids. The aids include medicine, artificial limbs, hearing aids, cochlear implants (devices placed in the ear that help deaf people hear), wheelchairs and other aids for

getting around, or oxygen equipment. Ordinary glasses and contact lenses are the one kind of aid the law leaves off that list.

Where disabled people live. The second fight was over where disabled people live. Lois Curtis and Elaine Wilson were two Georgia women with mental illness and developmental disabilities. They agreed to go into the psychiatric unit, the ward for mental illness, of Georgia Regional Hospital, a state hospital. Mental health workers said each of them was ready to move to a program in the community, and yet each of them remained locked in the state hospital for several years more.

They sued under the ADA. The justices ruled on June 22, 1999, in *Olmstead v. L.C.*, that keeping a disabled person in an institution when the person could live in the community is discrimination. They wrote that "confinement in an institution severely diminishes the everyday life activities of individuals, including family relations, social contacts, work options, economic independence, educational advancement, and cultural enrichment."

Colorado. Justice Department lawyers went on enforcing that ruling. They wrote to Governor Jared Polis on March 3, 2022, that Colorado was breaking the ADA by keeping people with physical disabilities in nursing homes "unnecessarily." More than 15,000 Coloradans received care in the state's 200-plus nursing facilities in a year, and "some individuals have remained in nursing facilities for many years with no movement toward discharge."

The rule struck down. Justice Department lawyers changed sides in 2026. Officials of seventeen states, Texas first among them, sued over the federal rules for Section 504 in September 2024. By 2026 five states were left in the case: Texas, Alaska, Louisiana, Montana and Florida. They asked the judge to strike the rule that disabled people get services in "the most integrated setting," at home or in their community rather than in an institution.

The Justice Department's Office of Legal Counsel wrote on June 18, 2026, that federal law "does not include an integration mandate." In the lawyers' reading, the law does not require officials to offer disabled people services at home or in their community instead of in an institution. Justice Department lawyers

joined the five states on August 31, 2026, in asking the judge to strike the rule. The judge struck it for the whole country on September 23, 2026. The Supreme Court's 1999 ruling and the laws Congress passed still stand.

Today. Census Bureau officials reported on July 22, 2026, that 45.8 million Americans, 13.7 percent, had a disability in 2024, about one person in seven. That figure counts the "civilian noninstitutionalized population," everyone except people who live in institutions. The people the *Olmstead* fight is about are left out of it.

Alice Wong

Who: A disabled organizer who collected disabled people's own accounts of their lives, and who served on the federal council that advises the President on disability.
When and where: San Francisco, California, 2002 to 2025.

She went to the White House by robot.

Alice Wong founded the Disability Visibility Project in 2014 to collect disabled people's accounts of their own lives, in their own words. She used a wheelchair and breathed through a tracheostomy, a hole cut through the front of the neck into the windpipe, with a short tube held in it.

Her tube was connected to a ventilator, a machine that pushed air through the tube into her lungs so that she kept breathing. Neither the University of California, San Francisco, where she studied and worked, nor the National Council on Disability names the condition behind it.

At the university. As a student there she founded the university's Disability Interest Group in 2002. She earned a master's degree in medical sociology, the study of health and illness in society, there in 2004. She worked at three of its research centers: the National Center for Personal Assistance, the Disability Statistics Center and the Community Living Policy Center.

The robot. President Barack Obama appointed her to the National Council on Disability, a federal body whose members advise the President and Congress, on January 25, 2013, and she served until 2015. The White House held a reception in the Blue Room on July 20, 2015, for the 25th anniversary of the Americans with Disabilities Act. Wong could not travel to it, so she took part through a robot, a screen on wheels that carried her face and voice into the room.

The White House photographer Pete Souza took a picture of it. Its caption reads: "President Barack Obama greets Alice Wong, Disability Visibility Project Founder and Project Coordinator via robot."

She edited *Disability Visibility: First-Person Stories from the Twenty-First Century* (2020), a collection of essays by disabled writers, and wrote her own life story, *Year of the Tiger: An Activist's Life* (2022). "Disability is part of the greater continuum of diversity, and we need to allow for variation and not get so focused on what is the norm," she said. She died on November 14, 2025, aged 51.

Transgender Americans and the law, 2020 to 2026

Transgender Americans won one Supreme Court case over jobs between 2020 and 2026 and lost cases over medical care and school sports. The justices also let a military ban and a passport rule take effect while the lawsuits over them went on.

Bostock. The justices ruled six to three on June 15, 2020, in *Bostock v. Clayton County*, that "an employer who fires an individual merely for being gay or transgender violates Title VII." Title VII is the part of the Civil Rights Act of 1964 that bans job discrimination because of sex. Justice Neil Gorsuch wrote the opinion. Three fired workers had brought the cases.

Gerald Bostock had worked for Clayton County, Georgia, for ten years and was fired soon after he joined a gay softball league. Donald Zarda, a skydiving instructor in New York, was fired days after he told his employer he was gay. Aimee Stephens worked at a funeral home in Michigan. She had been hired presenting as a man, and six years later she told her employer she meant to "live and work full-time as a woman." Her employer fired her, saying the arrangement "is not going to work out."

Skrmetti. Tennessee's lawmakers passed a law that stops doctors from giving puberty blockers or hormones to anyone under 18 for two purposes. One is to help the young person live as a gender other than their sex at birth. The other is to treat distress about the mismatch between the two.

A puberty blocker is a drug that pauses the hormones that start puberty, so the body's changes do not begin while the drug is taken. Hormone treatment gives a person the hormone of the sex they identify as, which changes the body in that direction.

Doctors in Tennessee may still give the same drugs to young people for other reasons, such as puberty that starts very early. The justices ruled that the law could stand on June 18, 2025, in *United States v. Skrmetti*. Chief Justice John Roberts wrote the Court's opinion. Justice Sonia Sotomayor dissented, joined by Justice Ketanji Brown Jackson and in part by Justice Elena Kagan, and Kagan also wrote her own dissent.

School sports. Idaho's lawmakers passed the Fairness in Women's Sports Act in 2020, and West Virginia's passed the Save Women's Sports Act in 2021. Both laws say that girls' and women's teams are for students the laws define as female by biology.

Justice Brett Kavanaugh wrote for six justices on June 30, 2026, that Title IX "allows schools to provide separate women's and men's sports teams defined by biological sex." The two laws did not break the promise of equal protection, he wrote. The majority gave "the inherent physical differences between the sexes" as a reason, along with the safety and fairness of the competition. It also wrote that "27 States and various sports-governing bodies have all drawn the same line."

B.P.J. The West Virginia student is named in the record only as B.P.J., and the case was brought by her mother, Heather Jackson. Justice Sotomayor described her in dissent as "a transgender girl who wants to live her life consistent with her gender identity." When B.P.J. was 11, Sotomayor wrote, "she sought the opportunity to do what she and so many other children love to do: play sports." She wanted to run on the cross-country and track teams.

Sotomayor wrote that "B. P. J. is the only transgender girl publicly identified in the State who has sought to play sports with other girls" in the five years the ban had been in place. She agreed that the Title IX claim failed. On the equal protection question, she wrote that the trial court should have been allowed to find the facts first.

Executive orders. President Donald Trump acted on his first day back in office. He signed an executive order on January 20, 2025, titled "Defending Women From Gender Ideology Extremism and Restoring Biological Truth to the Federal Government." On January 27 he signed an order on the military, and on February 5, 2025, he signed one titled "Keeping Men Out of Women's Sports." National Park Service officials took the words "transgender" and "queer" off the Stonewall National Monument's website in February 2025.

The military ban. Defense Department officials issued a military ban on February 26, 2025. It disqualifies "anyone who either has gender dysphoria or has undergone medical interventions to treat gender dysphoria." Gender

dysphoria is the medical term for the distress a person feels when the sex recorded at their birth does not match their own sense of their gender.

Commander Emily Shilling, a Navy pilot for nearly twenty years, led a lawsuit by transgender service members, and District Judge Benjamin Settle blocked the ban. The justices let the ban take effect while the case went on, on May 6, 2025. Justices Sotomayor, Kagan and Jackson would have kept it blocked.

Passports. The justices let the government's new passport rule take effect on November 6, 2025. Every new passport now shows the holder's sex at birth. "Displaying passport holders' sex at birth no more offends equal protection principles than displaying their country of birth," the order reads. Justice Jackson dissented, joined by Sotomayor and Kagan.

Chiles v. Salazar. The justices ruled for Kaley Chiles, a licensed counselor in Colorado who uses only talk therapy, on March 31, 2026. A 2019 Colorado law barred licensed counselors from "conversion therapy" with young people, meaning any practice that tries to change a person's sexual orientation or gender identity. Justice Gorsuch wrote for eight justices that the law, as used against her talk therapy, regulated her speech based on her point of view. The case went back to the lower courts. Justice Jackson dissented alone.

BY SEPTEMBER 2026: The justices had let states ban some medical care for transgender young people and keep transgender girls off girls' teams, and a federal judge had struck down the rule that disabled people get services at home or in their community.

Standing Rock: the right to protest, 2016 to 2026

Members of the Standing Rock Sioux Tribe and their supporters protested the Dakota Access oil pipeline in 2016, and police officers answered with tear gas, rubber bullets and a fire hose. The route chosen by Energy Transfer, the company building the pipeline, ran under Lake Oahe, less than a mile north of the Standing Rock Reservation. In treaties signed in the 1800s, officials of the United States agreed that the land the route crosses belonged to the Sioux Nation, and the Sioux never gave that land up.

The police command. North Dakota's governor, Jack Dalrymple, declared an emergency on August 19, 2016, when about 1,500 people were at the protest and 28 had been arrested. He organized a joint police command. Three police forces took part: the Morton County Sheriff's Office under Sheriff Kyle Kirchmeier, the Stutsman County Sheriff's Office under Sheriff Chad Kaiser, and the Mandan police under Chief Jason Ziegler. Each chief left decisions about using force to his individual officers.

The bridge. Officers had blocked the Highway 1806 bridge with two dump trucks chained to concrete barriers and barbed wire. On the night of November 20, 2016, protesters used a semi-trailer truck to drag one dump truck away, and the crowd grew to several hundred. The officers fired tear gas canisters, rubber bullets and bags filled with lead into the crowd. They sprayed protesters with a fire hose from a Mandan fire truck. A lawsuit for the protesters says more than 200 people were hurt.

Sophia Wilansky. Sophia Wilansky was hit that night. In 2026 the judges of a federal appeals court set out her account, which they accepted as true for the appeal. Officers Dvorak, Arndt and Hanson fired rounds at her as she ducked behind a metal sheet near the remaining truck, and one hit her arm.

She ran. About 30 yards away, as she bent to pick up a piece of plywood, Officer Jonathan Moll fired a round called an aerial warning munition. "It tore the flesh off her arm, and she fell to the ground," the judges wrote.

A footnote in their ruling describes that round as "a flashbang embedded in a less-lethal bullet," a bullet made to hurt rather than kill. A flash-bang is an explosive device that makes a loud noise and a bright flash of light, and aerial ones are made to be fired above a crowd. Protesters carried her away. Her account says officers laughed and congratulated Moll, and the officers dispute that. "Her left hand and forearm are permanently and severely injured," the judges wrote.

No one held responsible. No officer or police agency was held responsible for the injuries that night. Judges of the federal appeals court ruled against the injured protesters in 2023, and again on June 24, 2026, in Wilansky's case. They said that in 2016 the law had not yet made it clear that firing at a crowd to drive it off was a "seizure" under the Constitution, a way of stopping or holding a person by force.

That mattered because of a rule called qualified immunity. It shields government officials from being sued unless the right they broke was already clearly established, meaning already made clear in the law.

Police made hundreds of arrests at the protests. A Morton County judge, Allan Schmalenberger, threw out many trespass cases, charges of going onto private land without permission, because no one had told the protesters to leave.

The pipeline. Federal officials changed their decision more than once. The Army's Assistant Secretary for Civil Works refused permission to cross under the lake on December 4, 2016. President Donald Trump ordered the Army on January 24, 2017, to approve the pipeline "in an expedited manner," quickly. Army officials gave permission on February 8, 2017, and oil has flowed since June 2017.

A federal judge, James Boasberg, ruled in 2020 that Army officials had broken the law by approving the crossing without a full study of its effects. The pipeline kept running for about five years while the Army Corps of Engineers did the study. Corps officials finished it in December 2025, and in May 2026 Brigadier General William C. Hannan signed a decision to grant permission again.

Tribal leaders asked the judges of a federal appeals court to drop the tribe's own appeal in June 2026, and the judges did. "We will continue to fight for our homelands and the promises the United States made to our Tribe in Treaty," Standing Rock Chairman Steve Sitting Bear said in December 2025.

Greenpeace. Energy Transfer's lawyers sued the environmental group Greenpeace over the protests. A jury in Morton County ordered Greenpeace to pay about $667 million on March 19, 2025, and Judge James Gion cut the amount to $345 million. Greenpeace officials said the group had six employees at the camps and called the lawsuit an attempt to punish the group for supporting the protests. "The oil is still flowing. The pipeline hasn't been shut down," Nola Taken Alive, a member of the Standing Rock tribal council, said in September 2026.

The DREAM Act and DACA, 2001 to 2026, and two killings in Minneapolis

Young people who had been brought into the United States as children, without legal permission to live there, organized from 2010 for a way to become citizens, and members of Congress never passed one. Senator Richard Durbin of Illinois and Representative Howard Berman of California first introduced the DREAM Act in 2001. It would have let these young people become citizens after two years of college or military service.

The walk. Four students from Miami Dade College, Gaby Pacheco, Carlos Roa, Felipe Matos and Juan Rodriguez, set out on January 1, 2010, to walk 1,500 miles from Miami to Washington. Three of them were in the country without legal permission. They said so in public all along the way, which put them at risk of arrest and deportation. They gathered 30,000 signatures.

A Secret Service agent refused to take their petition on April 28, 2010, and White House officials refused them a meeting with President Barack Obama. They walked the last four miles to the White House on May 1, 2010. The DREAM Act came up in the Senate on December 18, 2010. Fifty-five senators voted to end debate and 41 voted against. Sixty votes were needed, so the bill failed.

DACA. Janet Napolitano, the Secretary of Homeland Security, announced a program called Deferred Action for Childhood Arrivals, or DACA, on June 15, 2012. It made no one a citizen. People who had arrived as children could apply if they met rules about age, schooling and criminal records. Those accepted could ask the government to put off deporting them for two years at a time, and could get permission to work. About 700,000 people signed up, by the Supreme Court's count.

Attorney General Jeff Sessions wrote in September 2017 that the program should end, and the acting Secretary of Homeland Security, Elaine Duke, ended it. DACA holders, universities and states sued. The justices of the Supreme Court ruled five to four on June 18, 2020, that federal officials had ended the program unlawfully, so DACA stayed.

Texas. Officials of Texas and other states also sued. A federal appeals court ruled in January 2025 that DACA's work permits were unlawful in Texas. By July 2026 the judge in Texas, Andrew Hanen, had not issued the order that would carry that out.

The numbers. Agents of ICE, a federal immigration agency, arrested 261 DACA holders and deported 86 of them in the first year of President Donald Trump's second term, by the count of FWD.us, an immigration advocacy group. About 455,000 people held DACA on March 31, 2026, by government figures reported by the National Immigration Forum, another immigration advocacy group. Federal immigration officials were renewing permits and not approving new ones.

Minneapolis, 2026. Federal officials ran a large immigration operation in Minneapolis in early 2026, called Operation Metro Surge. During it, federal immigration agents shot and killed two American citizens, Renée Macklin Good on January 7 and Alex Pretti on January 24. The *Star Tribune* named ICE officer Jonathan Ross as the man who shot Good. ProPublica named Border Patrol agent Jesus Ochoa and Customs and Border Protection officer Raymundo Gutierrez as the agents who shot Pretti.

Federal officials said Good had used her car as a weapon, and local officials said video contradicted that. Federal officials called Pretti a domestic terrorist, and NPR reported that video contradicted their account of his death.

At the Pretti shooting, federal officials physically blocked state investigators from the scene. Hennepin County Attorney Mary Moriarty and Minnesota Attorney General Keith Ellison sued for the evidence in March 2026 and received it in June and July. Acting Attorney General Todd Blanche said there would be no civil rights investigation into Good's killing. As of September 2026 no one had been charged in either death.

THE THREE QUESTIONS, ANSWERED

1. **How did people without power get the people in power to listen?** They signed petitions, printed pamphlets and spoke to crowds, and later they planned test cases, boycotted, marched, sat in and filmed the police, from the Germantown protest of 1688 to Darnella Frazier's video in 2020.
2. **What did organizing cost the people who did it?** Their jobs, their homes and their freedom, and sometimes their bodies and their lives. A prison doctor fed Lucy Burns by force through a tube, state highway patrolmen had Fannie Lou Hamer beaten in a Mississippi jail, Byron De La Beckwith shot Medgar Evers in his driveway, and Klansmen killed four girls with a bomb in a Birmingham church.
3. **Can a right that has been won be taken away again?** Yes. New Jersey's lawmakers took the vote from women and free Black men in 1807, members of Congress took Utah women's vote in 1887, and the justices of the Supreme Court cut back the Voting Rights Act in 2013 and 2026 and ended the right to an abortion in 2022.

What changed: In 1688 four men's protest against slavery went nowhere, and by 2026 the laws that once shut women, Black Americans, gay Americans and disabled Americans out of voting, schools, marriage

and public buildings had been struck down or rewritten, while the fights over several of them went on.

FIVE DATES TO KEEP

April 18, 1688: Four men at Germantown sign a protest against slavery.

July 19 and 20, 1848: The Seneca Falls convention votes to demand the vote for women.

August 26, 1920: The 19th Amendment becomes part of the Constitution.

May 17, 1954: The justices rule in *Brown v. Board of Education*.

August 6, 1965: President Lyndon Johnson signs the Voting Rights Act.

NOT KNOWN: How many people white Tulsans killed in Greenwood in 1921, because the attackers hid the bodies, and credible estimates run from fifty to three hundred.

Where to go: Haverford College, in Pennsylvania, keeps the 1688 Germantown protest, the paper this chapter began with.

Next: Chapter 26, Health, Disease, and Medicine. It follows illness and healing in America: epidemics, doctors, hospitals and the fight over public health.

PART 7

Health and Safety

Chapter 26: Health, Disease, and Medicine

CHAPTER 26 OF 37 · HEALTH, DISEASE, AND MEDICINE · 10 ERAS · ABOUT 115 MINUTES

For most of American history nobody knew what caused disease, and after doctors learned how to stop it, the people with the least power were often the last to be protected and the first to be tested on.

Cotton Mather, a Boston minister, wrote to scientists in London in 1716 about a scar on the arm of Onesimus, an African man Mather enslaved. Onesimus said it came from an operation that gave him a small case of smallpox, a disease of fever and blisters that often killed. The small case, he said, would keep him from ever catching it again. When Boston doctors tried the method in 1721, about 2 in 100 of the people they treated died, against 14 or 15 in 100 of those who caught smallpox the ordinary way.

This chapter follows sickness and healing through ten eras, from what ancient bones show to COVID-19. In the first eras, look for the new diseases that came after 1492 and emptied whole Native towns. Then for a long stretch doctors guessed at what caused disease and bled and purged their patients, until scientists showed in the late 1800s and in 1900 that germs and mosquitoes spread it. Through all of it, notice who paid for the new knowledge: enslaved women operated on with nothing to stop the pain, Black men in Alabama kept from treatment for 40 years, and children fed a virus on purpose.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. Why did new diseases kill so many Native people after 1492?
2. How did Americans learn to stop smallpox, yellow fever and polio?

3. Who was used in medical experiments without agreeing, and what changed because of it?

Five minutes? Read "The Tuskegee study, 1932 to 1972" in 1900 to 1950, then "The Tuskegee study ends, 1972 to 1997" in 1950 to 2000.

Can skip: "Midwives and surgeons in New Amsterdam", "Medical care for sailors, 1798", "New operations and new pictures of the body, 1954 to 1963". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 4 MINUTES

Almost everything known about sickness in this land before 1500 comes from bones and teeth, because nobody here wrote about illness then. They show that people had diseases, but not the ones that arrived after 1492 and killed great numbers of them. Smallpox, measles, influenza, yellow fever and cholera had never reached the Americas. Neither had mumps, chickenpox, malaria, diphtheria, typhus, leprosy or bubonic plague. Every one of these twelve diseases is an infection caused by a germ, a living thing too small to see.

What do the bones show?

Some diseases leave marks on bone, so archaeologists, scientists who learn about the past from what people left behind, can find them in skeletons hundreds of years old. Two researchers, Debra Martin and Alan Goodman, wrote in 2002 that Native people before 1492 "were most definitely not living in a pristine, disease-free environment," pristine meaning untouched and pure.

Tuberculosis was here. It is caused by bacteria, one kind of germ, and it most often infects the lungs, though it can spread to the bones, including the spine. Skeletons with its damage appear after about the year 900. Most of them come from inland places in the middle of the continent and in the Southwest.

Bones also show diseases in the same family as syphilis, a disease that is passed during sex. Two of them, yaws and bejel, spread mainly by touching skin and mouths, not by sex. Bejel is also called non-venereal syphilis, which means syphilis that is not passed by sex.

A team of scientists studied the DNA of these bacteria, taken from five people buried in the Americas long ago. DNA is the set of chemical instructions inside every living cell. In 2025 the team reported that the bacteria behind syphilis and its whole family most likely began in the Americas. Their results fit that idea for every sample of these bacteria that scientists have studied, ancient or modern.

Martin and Goodman list other illnesses that were present: rabies, whooping cough, polio, hepatitis (an infection of the liver), herpes (a virus that causes sores), tularemia (a fever people catch from animals), and stomach infections from tiny living things called giardia and amoebas. They add that almost all of these were probably rare in any one group of people.

Farming and weak blood. People who took up farming became sicker in some ways. At Dickson Mounds in Illinois, people moved over many years from hunting and gathering to farming. Researchers studied the skeletons of

people buried there, among them farmers who lived in the 1100s. Those farmers came to depend more and more on maize, which is corn, and the body cannot get much iron from maize.

Among the Dickson Mounds people, signs of anemia, having too few red blood cells, rose sharply. Anemia leaves a person weak and tired. In a skull it shows as spongy patches full of tiny holes on the top of the head and in the eye sockets. Those patches form where the marrow, the soft center of the bone, swelled to make more blood. Bone infections among the same people became nearly four times as severe, a team of researchers found in 1977.

Why the crowd diseases were missing

The diseases that later struck this land in epidemics can keep spreading only where great crowds of people live. An epidemic is a disease that spreads to many people in one place at the same time.

A person sick with measles can pass it on for less than two weeks. Then the sick person either dies or becomes immune, which means the body can fight off that disease and will not catch it again. So measles keeps spreading only where new children who have never had it are always being born.

One scientist worked out in 1957 how big a population must be for measles to stay in a place for good. His answer was 200,000 to 300,000 people, with about 7,000 of them still able to catch it. Another put the number at 500,000 in 1975.

In small towns spread far apart, a disease like that infects everyone who can catch it. Then it dies out, because nobody is left to infect. The diseases that last in small towns are slow ones, like yaws and pinta, another skin disease in the syphilis family, the scholar Linda Newson explained in 1993.

When the crowd diseases arrived after 1492, nobody here had been exposed to them and nobody was immune. The historian Alfred Crosby gave what followed a name in 1976: "virgin soil epidemics." In a virgin soil epidemic, everyone in a town can be infected at the same time.

Newson also reported research on genes, the instructions inside every cell that pass from parents to children. It suggested that among Native Americans, the body's defenses against germs varied less from person to person, which may have made whole towns easier to infect. Newson called that a partial explanation.

NOT KNOWN: how many people lived north of Mexico in 1492. Scholars' estimates run from about 1 million, made in 1949, to about 18 million, made in 1983. Others fall between, such as about 1.85 million (made in 1976) and about 3.8 million (made in 1992). How many people died after 1492 depends on which starting number is right.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 6 MINUTES

Three Europeans saw Native people in this land begin dying of diseases they had never had before, and each wrote down what he saw. None of the three could name the disease. One was a Spanish man stranded on the Texas coast in 1528. Another was a Portuguese man in Hernando de Soto's army in 1540. The third was an English scientist on the Carolina coast in 1585 and 1586, and only his account points to who carried the disease.

The Texas coast, 1528 and 1529

About 80 Spanish men came ashore in two boats on or near Galveston Island, on the Texas coast, in November 1528. They were survivors of a Spanish expedition, a group sent out to explore and conquer, led by a commander named Narváez. One of them, Cabeza de Vaca, later wrote an account of what happened. He wrote that the people of the island spoke two languages, and he called them the Capoque and the Han.

The islanders watched most of the Spaniards die. Only 15 of the 80 stayed alive. Five Spaniards camped on the coast grew so desperate that they ate the bodies of their own dead as each one died. Their names were Sierra, Diego López, Corral, Palacios and Gonçalo Ruiz. Nobody ate the body of the last one to die. Cabeza de Vaca wrote that the islanders were in an uproar when they learned of it.

Then a disease of the bowels, the long tube in the belly that food passes through after the stomach, killed half of the island's people, Cabeza de Vaca wrote. He did not name the disease. The islanders believed the Spaniards had caused the deaths, and they planned to kill the survivors. The Native man who had charge of Cabeza de Vaca talked them out of it. He told them that if the Spaniards had such power, they would have saved their own men, whom the islanders had watched die.

Healing for food. The islanders then told the Spaniards to heal the sick, and they gave them no food until they did. Cabeza de Vaca described how the island's own healers worked. A healer made small cuts in the skin over the place that hurt and sucked at the cuts. Healers also burned the skin at the painful spot on purpose, a treatment called cautery, and then blew on it.

Cabeza de Vaca tried the burning on himself and wrote that it helped him. The Spaniards blessed the sick, breathed on them, and said two Christian prayers, the Lord's Prayer and the Hail Mary.

Years later, on a long walk west, people brought Cabeza de Vaca a man with an arrowhead lodged in his chest above the heart. The year and the place are not certain, because accounts of the route differ. Cabeza de Vaca cut open the

man's chest with his knife and pulled the arrowhead out. He closed the cut with two stitches, using a deer bone as a needle, and stopped the bleeding with hair from an animal skin. He wrote that the next day he cut the stitches and the man was well.

Empty towns at Cofitachequi, 1540

The army of the Spanish commander Hernando de Soto reached Cofitachequi in the spring of 1540. It was a town on a river in what is now South Carolina or Georgia, and accounts place it in different spots.

A Portuguese member of the army, known only as the Gentleman of Elvas, wrote that there were large empty towns nearby, grown over with grass. People at Cofitachequi told the Spaniards that a disease had struck the land two years before. The people of those towns had moved away to other towns. The Gentleman of Elvas did not name the disease, and he did not say how many people died.

That disease arrived before de Soto's army did. No record shows where it came from. Accounts differ about whether de Soto's own army carried new diseases inland. The records do show that de Soto's men killed and enslaved Native people and took their food.

Roanoke, 1585 and 1586

English colonists sent by Sir Walter Raleigh lived on Roanoke Island, in what is now North Carolina, in 1585 and 1586. The island lay in the land of the Carolina Algonquian peoples. The colonists visited Algonquian towns, and within a few days after they left a town, people there began to die quickly.

The scientist Thomas Harriot, who was with the colonists, wrote down the deaths. In some towns about 20 people died, in some 40, in some 60, and in one town 120. Harriot wrote that, as far as he could learn, the deaths happened only in towns the English had visited. The oldest people told him nothing like it had ever happened before. During the same months, he wrote, no English colonist died or became seriously sick.

Harriot did not name the disease. Peter Mires, writing in 1994 in the journal *Historical Archaeology*, compared Harriot's report with John Smith's later accounts. Smith had heard about an epidemic among the Accomac, a people the Roanoke colonists visited in the winter of 1585 to 1586. Mires concluded that the English colonists carried the disease, and that it was probably influenza. He called influenza probable, not certain.

Thomas Harriot

Who: An English mathematician and scientist who wrote down, town by town, an epidemic among the Carolina Algonquians. His name is also spelled Hariot.

When and where: Roanoke Island and the Carolina Algonquian towns, 1585 and 1586. His report was printed in London in 1588.

The Algonquians said invisible bullets were killing them.

Thomas Harriot recorded what the Carolina Algonquians believed was killing them in 1585 and 1586. Some believed the English God was killing people for the English. Others believed that more English people were still to come, to kill them and take their places. These coming English were already in the air, invisible and without bodies, and they were shooting "invisible bullets" into people at the English colonists' request.

Algonquian healers sucked what they called "strings of blood" out of the sick. They said these were the strings tied to the invisible bullets.

Harriot had taught how to find the way across the open ocean at Sir Walter Raleigh's house in London. He sailed with the colony that reached Roanoke Island on June 26, 1585, and there he and the artist John White mapped the area.

Wingina was the wiroans, or chief, of the people the English lived among. Twice he was so sick that he nearly died, and he sent for the English to pray for him. Wingina and others also asked the English to pray that their enemies would die of the same disease. Harriot wrote that he told them such prayers were ungodly. When their enemies did die, they came to thank the English anyway.

Harriot explained the deaths as "the special work of God" for the English. He also described how the Algonquians used a plant they called uppowoc, which is tobacco, as a medicine. They breathed in its smoke through clay pipes, and Harriot believed it kept them healthy.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 10 MINUTES

Epidemics emptied Native towns along the Atlantic coast in the 1600s, sometimes years before colonists settled beside them. English colonists also died in large numbers in their own first years, from disease and hunger. The people who treated the sick in the colonies included a weaver with no known medical training and a minister.

In New Amsterdam, officials of a Dutch trading company paid the town's midwives. At the end of the century yellow fever reached Boston, after the virus that causes it and the mosquito that carries it had crossed the Atlantic on the ships of the slave trade.

Jamestown, 1607

A group of 104 English men and boys built a fort at Jamestown, in Virginia, in 1607. The fort stood in the land of the Paspahegh, one of the nations led by the Powhatan paramount chief, a leader over the chiefs of many nations. By the end of September 1607, half of the 104 colonists were dead, most of them from sickness.

George Percy, one of the colonists, wrote down each death with its date and cause. John Asbie died on August 6 of the "bloudie Flixe," Percy's spelling of bloody flux. Flux was the old word for diarrhea, so a bloody flux was diarrhea with blood in it. Percy also listed "Swellings" and "Burning Fevers," and deaths from wounds in fighting.

Percy blamed hunger most of all. Each day, five men shared one small can of barley boiled in water. They drank from the river. At high tide its water was salty, and at low tide it was "full of slime and filth." Many nights three or four men died.

Then Native people of the area, whom Percy called "our mortall enemies," brought bread, corn, fish and meat to the fort in great plenty. Percy wrote that "divers Kings," meaning several Native leaders, brought more. He did not name them.

The river and the drought. The geographer Carville Earle pointed to the river in 1979. At Jamestown the river water was part salt and part fresh, so the colonists' waste stayed in it instead of washing away. Tree rings show a drought that lasted seven years, from 1606 to 1612. The historian Dennis Blanton wrote that colonists who were hungry and thirsty from the drought were the most likely to fall sick.

Only about 60 of about 240 colonists in the fort lived through the winter of 1609 to 1610. That winter is called the Starving Time.

An epidemic on the New England coast, 1616 to 1619

A disease killed Native people along about 200 miles of the coast of southern New England, as far as Cape Cod, from 1616 to 1619. As far as the records show, the European fishermen and traders nearby did not catch it.

No count of the dead exists. Estimates of the share who died rest on weak records, and they run from one third to nine tenths of the people in the area. Before the epidemic, the Wampanoag Nation had about 21,000 to 24,000 people, and the Patuxet town had about 2,000. The colonist Daniel Gookin later wrote down what Native people told him about the sick. "The bodies all over were exceedingly yellow," they said, both before the people died and after. Gookin's account dates from 1674.

No one has settled what the disease was. The ideas put forward include yellow fever, smallpox, plague, typhus and several other diseases. Two researchers, John Marr and John Cathey, proposed leptospirosis in 2010. Leptospirosis is an infection by bacteria that rats carry in their urine. Marr and Cathey suggested that rats from European ships spread it into the water and soil, and they called their idea a proposal for others to test, not an answer.

When the Plymouth colonists arrived in 1620, the Patuxet town was empty. The colonists built Plymouth on its site. Governor William Bradford wrote that so many had died that the living could not bury the dead. He wrote that in many places in the area, skulls and bones still lay above the ground where houses had stood.

Squanto, also called Tisquantum, was one of the few Patuxet survivors. Bradford wrote that Squanto told other Native people the English kept the plague buried in the ground. Squanto said the English could send it among them whenever they wished.

Plymouth's first winter, 1620 and 1621

In two or three months of their first winter, about half of the roughly 100 Mayflower passengers at Plymouth died. Sometimes two or three died in one day. Bradford blamed the cold, the lack of houses, and scurvy and other diseases from the long voyage. Scurvy is a disease caused by too little vitamin C, which comes from fresh fruit and vegetables. The gums swell and bleed, the teeth loosen, and the person grows too weak to work.

At the worst, only six or seven people were well enough to care for everyone else. They cut wood, made fires, cooked, made beds and washed the sick people's clothes. William Brewster and Myles Standish were two of them.

Samuel Fuller

Who: A wool weaver with no known medical training who came on the Mayflower and became the doctor for Plymouth and its neighbors.
When and where: Plymouth, Salem and Charlestown, in Massachusetts, 1620 to 1633.

A weaver of woolen cloth became the doctor for three towns.

Samuel Fuller treated the sick of Plymouth and the towns near it for about thirteen years, although no record shows he ever trained as a doctor. Before the voyage he lived in Leiden, in the Netherlands, where he wove woolen cloth. He came to Plymouth on the Mayflower in 1620. His brother Edward and Edward's wife died in Plymouth's first winter.

Settlers at Salem fell sick in 1629 with scurvy and with a fever that had spread on their ships. Their leader, John Endicott, asked Governor Bradford to send Fuller. Endicott had heard that Fuller had cured people "by letting blood and other means."

> Letting blood, or bloodletting, meant cutting open a vein, most often in the arm, and letting blood run out into a bowl. Doctors of the time believed it balanced the fluids of the body. It does not cure scurvy or fever, and it left sick people weaker. In 1630 Fuller let blood from about 20 newly arrived colonists at Charlestown.
>
> A fever killed more than 20 men, women and children at Plymouth in 1633, and many Native people nearby. Fuller treated the sick. Then he died of the same fever, sometime between August and late September 1633. The colonist Nathaniel Morton later wrote that Fuller "was their surgeon and physician, and did much good in his place."

Smallpox on the Connecticut River, 1634

About 1,000 Native people closed themselves inside a fort on the Connecticut River in the winter of 1633 to 1634, upriver from Plymouth's trading house. A disease struck them, and more than 950 of them died, Bradford wrote. Many of the bodies lay rotting above the ground, unburied. Bradford did not name the nation or the disease.

That spring, smallpox struck the Native people living near the trading house itself. Smallpox is caused by a virus, a germ even smaller than bacteria, and it spread from person to person through close contact, face to face. It caused a fever and a rash, and the rash turned into blisters and then scabs. In general, about 3 of every 10 people who caught smallpox died, though the share in a single epidemic could be higher or lower. Many survivors had scars for life, most of all on their faces.

Bradford described the sick lying on hard mats. The blisters broke open and ran, and the skin stuck to the mats. When a sick person turned over, the skin of a whole side came off at once. So many were sick that no one could make a fire, fetch water or bury the dead. Some crawled on their hands and knees to get water and died on the way.

The English at the trading house brought the sick wood, water and food, and buried the dead. None of the English there caught the disease. Very few of the Native people survived. Their chief sachem, or leader, died, and so did almost

all of his friends and relatives. Bradford did not write down his name. No record shows who brought the disease to the river.

Midwives and surgeons in New Amsterdam

The officials who ran New Amsterdam paid some of the people who cared for its sick, and in 1658 they set up a place for sick patients. They were officials of the Dutch West India Company, a trading company, and they governed the whole colony of New Netherland. New Amsterdam stood on Manhattan, in the homeland of the Munsee Lenape.

Company officials appointed and paid the town's midwives, women who help other women give birth. The midwife Lysbert Dircksen lived in a house built for her with public money in 1638. The officials also made rules for the town's surgeons, such as Hans Kierstede, who arrived in 1638 and worked there for nearly 30 years. Under rules of 1652 and 1657, barbers from the ships needed permission to treat wounds on shore, and surgeons had to report how each wounded person had been hurt.

The Company surgeon Jacob Hendrichsen Varvanger asked in 1658 for a place to care for sick patients. Members of the colony's council agreed. They made Hilletje Wilbruch the matron, the woman in charge, and paid her 100 florins, which were Dutch coins, a year. Richard Amerman, who wrote about medicine in New Netherland, called it the first hospital.

Tryntje Jonas

Who: A midwife from Amsterdam who served as an official midwife of New Amsterdam.

When and where: New Amsterdam, now New York City, by 1644.

The mother named one man as the father, then another.

Tryntje Jonas was the official midwife of New Amsterdam by 1644. Officials of the Dutch West India Company appointed her and paid her, and she had her own house on Pearl Street. She came from Amsterdam. Her daughter Anneke Jans arrived in New Netherland in 1630.

Tryntje Jonas swore to the colony's secretary on July 7, 1644, what a mother had said about her baby's father. She had been called to help a woman named Hillegont Joris give birth. Hillegont Joris first named "Jan, the pilot" as the father of the child. Afterward she named Laurens Cornelisz. The secretary copied the statement into the colony's record book, where it survives. The record does not say why the midwife was asked to report this.

After Tryntje Jonas died, her daughter Anneke Jans collected the pay that the Company still owed her mother for her work. The date of her death is not known.

Smallpox advice and yellow fever, 1677 to 1693

After smallpox spread through Boston in 1676 and 1677, the minister Thomas Thacher of the Old South Church wrote a guide for families. It was printed in 1677 or 1678 on a single large sheet called a broadside. Librarians at Harvard University's medical library call it the first medical paper published in the American colonies.

Thacher told families not to put a smallpox patient under heavy bedclothes, in a hot room, or give strong hot drinks. He told them to give weak beer, a thin porridge of cornmeal and water, and boiled apples. He warned that bloody or black urine, and diarrhea, were danger signs.

Yellow fever. Yellow fever came from Africa. It is a disease caused by a virus, and a mosquito called Aedes aegypti carries the virus from one person to another when it bites. The virus and the mosquito both crossed the Atlantic aboard the ships of the slave trade, a team of scientists reported in 2007. Nobody knew about the mosquito's part until the early 1900s.

Yellow fever struck Boston in 1693. The makers of the PBS history series *American Experience* call Boston the first British colony in North America to have a yellow fever epidemic. That June a fleet of English warships arrived in Boston, and the first Boston death from the fever came on June 25. No surviving count gives the number of dead. Charleston and Philadelphia had yellow fever soon after.

Smallpox along the slave-raiding paths, 1696 to 1700

Smallpox broke out in Virginia in 1696 and spread south and west along the trading paths. It traveled with Native slave raiders and the captives they took for the colonial slave trade. By 1699 it had reached the Tunica people, in what is now Louisiana. It came back in waves until 1715.

By one estimate, some Native nations lost more than 60 of every 100 people. A South Carolina colonist wrote that smallpox had killed so many Native people that there was "little reason to believe they will be capable of doing any harm to us for several years to come."

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 7 MINUTES

Doctors in Boston and Charleston began protecting people against smallpox in these fifty years by inoculation: giving a healthy person a small case of smallpox on purpose, so that the person would not catch it again. Epidemics still killed thousands of people. Diphtheria killed about 5,000 people in New England, most of them children, and smallpox killed about half of the Cherokee Nation.

Smallpox and inoculation in Boston, 1721

The ship *Seahorse* sailed into Boston from the island of Barbados on April 22, 1721, with sailors sick with smallpox. Boston had about 10,600 people. Close to 5,800 of them caught smallpox that year, and 844 died.

The minister Cotton Mather led the Boston ministers who backed inoculation. He had first heard of it from Onesimus, a man he enslaved. To inoculate someone, a doctor took pus from a smallpox sore and dried it. Then the doctor rubbed or scratched the pus into a cut in a healthy person's skin.

Almost all of Boston's doctors feared that inoculation would spread the disease. Zabdiel Boylston was the one Boston doctor who tried it, starting in June 1721. By the end of the epidemic, about 287 people had been inoculated, most of them by Boylston, and 6 of them died. That is about 2 in every 100. Among people who caught smallpox the ordinary way, about 14 or 15 in every 100 died.

The fight. The doctor William Douglass led the people who opposed inoculation. He called it a "poisonous humor," humor being an old word for a fluid of the body. James Franklin printed attacks on inoculation in his newspaper, the *New-England Courant*. The town's selectmen, its elected officials, ordered Boylston to stop. He started again two days later.

Someone threw a bomb through a window of Mather's house on November 14, 1721. The note that came with it ended with the words "I will inoculate you with this, with a pox on you!" The records do not name who threw it.

Onesimus

Who: An enslaved African man who described inoculation to Cotton Mather years before Boston first tried it.

When and where: Boston, enslaved by Cotton Mather from 1706 to 1716.

He showed his enslaver the scar on his arm.

Onesimus told Cotton Mather how people in Africa protected themselves against smallpox. Mather later used that knowledge to back inoculation during Boston's smallpox epidemic of 1721.

Members of Mather's North Church gave Onesimus to Mather as a gift in December 1706. Another account gives the year as 1707. Mather named him Onesimus, after an enslaved man in the Bible. The name he was born with is not recorded. He was probably Coromantee, one of the Akan peoples of the Gold Coast, which is now Ghana.

Mather wrote to the Royal Society in London, a group of leading scientists, in 1716. He wrote that he had asked Onesimus whether he had ever had smallpox. Onesimus answered "both, Yes, and No." He had "undergone an Operation, which had given him something of the Small-Pox, and would forever preserve him from it." He showed Mather the scar on his arm.

Mather wrote down the method in Onesimus's words: people "take Juice of Small-Pox" and "Cut the Skin, and put in a drop." Mather wrote that he heard this from Onesimus months before he read of the same method in reports from Europe.

Onesimus married and had two children. Both died before they were ten. His son Onesimulus died in 1714. His daughter Katy died of tuberculosis.

Onesimus paid money in 1716 toward buying another enslaved man, Obadiah, to take his place. Mather then freed him, but with conditions. Onesimus still had to work for Mather's household, shoveling snow and

chopping wood, whenever Mather called for him. He also had to repay five pounds that Mather said he had stolen. Few records of his life after 1716 survive.

Zabdiel Boylston

Who: The one Boston doctor who tried inoculation in 1721, when almost all the others feared it.

When and where: Boston, 1721 and 1722. Born 1679, died 1766.

His first three patients were his son and two enslaved people.

Zabdiel Boylston inoculated three people on June 26, 1721. One was his son Thomas, who was about six. The other two were people Boylston enslaved: Jack, a man of 36, and Jack's son Jackey, who was two and a half. By law Jack and Jackey were Boylston's property, so they could not refuse. The accounts of that day do not say whether Jack agreed.

Boylston wrote down how each one's illness went. Thomas and Jack each had about "an hundred" blisters full of pus. On the ninth day Boylston gave them a medicine to make them vomit. All three recovered.

He went on to inoculate between 242 and 248 of the about 287 people inoculated in the epidemic, by different counts. Six of them died. When the selectmen ordered him to stop, he started again two days later. For a time he stayed on his farm, because he could not leave it without risk of being attacked.

Later he sailed to London, where the scientists of the Royal Society made him a member. In 1726 he published a book about his inoculations, *An Historical Account of the Small-Pox Inoculated in New England*.

Elizabeth Phillips

Who: A licensed midwife from London who delivered babies in Boston for more than forty years.

When and where: Boston and Charlestown, Massachusetts, 1719 to 1761.

Her gravestone says she delivered more than 3,000 babies.

The gravestone stands in the Phipps Street Burying Ground in Charlestown, Massachusetts. It says that Elizabeth Phillips "brought into this world above 3000 Children." She delivered them in and around Boston.

She was born in Westminster, in London, in about 1685. The Bishop of London gave her a license to work as a midwife in 1718. She came to Boston the next year and worked there until she died in 1761.

The throat distemper, 1735 to 1740

A disease began in Kingston, New Hampshire, in May 1735, and spread along the coast into Maine and Massachusetts. People called it the throat distemper, distemper being an old word for a sickness. Doctors today identify it as diphtheria, an infection by bacteria.

The bacteria killed the living tissue of the throat and nose. The dead tissue formed a thick coating across the throat, until the child could no longer breathe.

About 5,000 people in New England died of it by 1740, and more than three quarters of them were children. That count comes from Ernest Caulfield's 1939 book on the epidemic. In the town of Hampton Falls, New Hampshire, 210 people had died by July 1736, and 160 of them were under ten. The *Boston Gazette* newspaper printed treatments: bloodletting, borax (a white powder made from a mineral) or honey on the throat, and drinks made from herbs.

In Ipswich, Massachusetts, Mark and Hephzibah Howe lost eight children in November 1736. They were Abijah (1), Mark (2), Aaron (5), Mary (7), Lucy (9), Moses (11), Love (12) and Hannah (13).

Smallpox among the Cherokee and Catawba, 1738 and 1739

Smallpox struck the Cherokee towns in the southern Appalachian Mountains in 1738 and 1739. Between 7,000 and 10,000 Cherokee people died, about half of the nation. About half of the Catawba Nation died too.

How the disease reached them is disputed. The trader James Adair wrote in 1775 that it came into Charleston on slave ships from West Africa. Historians writing for NCpedia, a North Carolina encyclopedia, give two other routes. In one, traders brought it. In the other, Cherokee warriors carried it home after fighting beside the British against the Spanish in Florida.

Cherokee healers treated the sick in sweat houses and then plunged them into icy streams. The NCpedia historians write that this only added to the number who died. Adair wrote that some survivors whom the disease had scarred killed themselves.

In Charleston, during the same epidemic, the doctor James Kilpatrick inoculated 800 to 1,000 people. Eight of them died.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 10 MINUTES

Philadelphia doctors opened a hospital for the sick poor in 1752 and a medical school in 1765, while epidemics went on killing people in the colonies and the Native nations. Smallpox spread through the colonies and the Native nations during two wars, and in 1763 the British commander at Fort Pitt and a trader tried to spread it on purpose.

Yellow fever killed about 4,000 to 5,000 people in Philadelphia in 1793, about one person in ten. Under a 1798 law that members of Congress passed and President John Adams signed, federal officials took money from sailors' pay for their medical care.

Caesar

Who: An enslaved healer whose cure for poison led South Carolina's lawmakers to pay his enslaver for his freedom.

When and where: St. Paul's Parish, South Carolina, near the Edisto River. Freed in 1750. Died in 1754.

Lawmakers paid 500 pounds for one man's cure for poison.

South Carolina's lawmakers bought Caesar's freedom in 1750 in exchange for his cure for poison. Caesar was enslaved by John Norman of Beach Hill, near the Edisto River. He was known for curing people of poisoning and of rattlesnake bite.

White South Carolinians feared that the enslaved people who cooked their food would poison them. In 1740 the colony's lawmakers had made poisoning a crime punished by death. In November 1749 the members of the Commons House, the colony's lawmaking body, voted to pay Norman 500 pounds for Caesar's freedom. They made the payment final on May 31, 1750. The lawmakers also promised Caesar 100 pounds a year for life, and he received his first payment in 1751.

> The *South Carolina Gazette* newspaper printed Caesar's cure in May 1750. It was made by boiling plantain roots, horehound and goldenrod with rum, sugar, tobacco and lye made from wood ash.
>
> The same lawmakers passed a law in 1751 aimed at enslaved healers, "commonly called doctors." Under it, enslaved healers could not give anyone medicine without permission from white people.
>
> Caesar died in early 1754, at about 77 years old. He left an estate worth 62 pounds, and it included an enslaved woman. The record of his estate does not give her name or say how he came to own her. His wife Lilly and his daughter Hannah were never freed by the lawmakers. They were still enslaved by John Norman.

Pennsylvania Hospital and the first medical school

Dr. Thomas Bond and Benjamin Franklin founded Pennsylvania Hospital in Philadelphia on May 11, 1751. They founded it to care for "the poor, sick and insane." Franklin's petition, a written request, described people "deprived of their rational Faculties," meaning they had lost their reason. It stated that they could be "contained and confined" there.

The first patients came on February 6, 1752, to a house on Market Street that the hospital used until its own building was ready. Writers for the Mütter Museum, a museum of medical history in Philadelphia, give the year as 1753. The permanent building opened in 1756. Its basement held rooms for patients with mental illness. The first floor was for men, and the second floor was for women.

Older places in the colonies also housed people in need. Philadelphia's almshouse, a home for the poor, opened in 1732. A New York workhouse of 1736, a place where poor people lived and were put to work, later became Bellevue Hospital. The place for the sick that Dutch officials set up in New Amsterdam in 1658 was older than both.

Dr. John Morgan founded a medical school at the College of Philadelphia, now the University of Pennsylvania, in 1765. The museum's writers call it the first medical college in the colonies. Students learned at the bedsides of the hospital's patients.

Smallpox as a weapon at Fort Pitt, 1763

Two British men at Fort Pitt gave two Delaware men blankets from a smallpox hospital in 1763, hoping to spread the disease. Fort Pitt was a British fort where Pittsburgh stands now. That year Delaware, or Lenape, and Shawnee and Mingo warriors surrounded the fort, during the war led by the Ottawa leader Pontiac. Smallpox had broken out among the soldiers inside.

The blankets. Captain Simeon Ecuyer, the fort's commander, and the trader William Trent met two Delaware men, Turtle's Heart and Mamaltee, on June 24, 1763. Most accounts give that date, though one copy of Trent's journal dates the entry May 24. Ecuyer and Trent gave them two blankets and a handkerchief taken from the fort's smallpox hospital. Trent wrote in his journal, "I hope it will have the desired effect." Ecuyer signed the bill that charged the army for the blankets.

The letters. In July, General Jeffery Amherst, the British commander in North America, wrote to Colonel Henry Bouquet. He asked: "Could it not be contrived to send the Small Pox among those disaffected tribes of Indians?" By contrived he meant arranged, and by disaffected, unfriendly. Bouquet answered that he would "try to inocculate the Indians by means of Blankets."

Amherst also wrote of trying "to extirpate this Execrable Race," which means to wipe out completely a people he called hateful. Ecuyer and Trent had given away the blankets in June, before these letters, and on their own.

KNOWN:	Smallpox spread among the Native nations, and a man named Gershom Hicks reported in 1764 that about 100 people died of it between the spring of 1763 and April 1764.
NOT KNOWN:	whether the blankets caused any of it. The historian Elizabeth Fenn writes that no one can know whether the attempt worked, and a month after the meeting Turtle's Heart and Mamaltee showed no sign of smallpox.

Smallpox in the Revolution, 1775 to 1782

Lord Dunmore, Virginia's royal governor, promised freedom in 1775 to people enslaved by the rebels if they joined his army. In the spring and summer of 1776, smallpox and other fevers spread through his camps. An estimated 500 Black soldiers of his Ethiopian Regiment died on Gwynn's Island, in Virginia, along with about 150 white soldiers.

General George Washington ordered the Continental Army to be inoculated on February 6, 1777. He wrote that if smallpox spread through the army, "we should have more to dread from it, than from the Sword of the Enemy." Dr. William Shippen ran the inoculations in secret, in winter, at Morristown, New Jersey, and in Philadelphia, so the British would not learn of them.

What started the Doctors' Riot of 1788?

Medical students in New York were digging up the dead. To learn how the body is built, students cut open dead bodies and studied the parts, which is called dissection. They dug up bodies from the Negroes Burial Ground, where Black New Yorkers buried their dead ("Negro" was a word for Black people used at the time). They also dug up bodies from the paupers' graveyard, where the poor were buried.

Free and enslaved Black New Yorkers asked the city's Common Council, the group that ran the city, to stop it in February 1788. Their petition described "young gentlemen in this city who call themselves students of the physic," meaning students of medicine, who were digging up "bodies of our deceased friends and relatives." The council members took no action to stop the digging.

The riot. Boys outside New York Hospital saw a human arm from the dissecting room in April 1788. Crowds attacked the hospital. The mayor had a doctor and medical students taken to the city jail to protect them, and about 5,000 people then gathered at the jail.

Militiamen, ordinary citizens called up to serve as soldiers, had orders not to fire. A rock hit the politician John Jay in the head, a brick hit General Baron von Steuben, and the militiamen opened fire. The accounts of the riot do not name an officer who gave the order. As many as 20 people were killed, among them at least 3 rioters and 3 militiamen.

New York lawmakers banned grave robbing in 1789. The same law let judges order that the bodies of executed murderers, arsonists and burglars be dissected.

Yellow fever in Philadelphia, 1793

Yellow fever killed 4,041 people in Philadelphia from August to November 1793, by the count of Mathew Carey, who wrote a book about the epidemic. Other counts run to about 5,000, which was about one person in every ten in the city. About 20,000 people left the city. Nobody in 1793 knew that mosquitoes carried the disease.

Dr. Benjamin Rush treated patients by bleeding them heavily and giving them purges, medicines that emptied the bowels. Rush's purges were made with mercury, a metal. Losing that much blood could send a weak patient into shock, which happens when too little blood is left in the body. A person in shock becomes confused, the heart beats fast, and the blood pressure drops. A French doctor, Jean Devèze, used milder treatment at the Bush Hill hospital.

Mayor Matthew Clarkson issued a public order about the epidemic on September 10, 1793. From September 14, a committee of 26 citizens worked with him to run the city's response.

Absalom Jones and Richard Allen, two Black Philadelphians who led volunteers in nursing the sick, printed an account of the epidemic in 1794. They wrote that some prisoners were let out of jail after the elders of the African church asked, on the condition that they nurse the sick at Bush Hill. Two thirds of those prisoners were Black. Jones and Allen's account does not name the officials who let them out.

Benjamin Rush

Who: A Philadelphia doctor who treated patients in the 1793 yellow fever epidemic, and a signer of the Declaration of Independence.

When and where: Philadelphia, 1793. He worked at Pennsylvania Hospital from 1783 to 1813.

He told Philadelphians that Black people could not catch yellow fever.

Benjamin Rush printed that belief in the newspapers. In fact Black Philadelphians caught the fever and died of it while they nursed the sick.

Rush bled his patients heavily during the 1793 epidemic and gave them purges made with mercury. Several doctors died, and most of the rest were worn out by sickness or work. Then Rush asked Absalom Jones and Richard Allen, who both knew how to bleed a patient, to care for the sick. He told them where to get medicine, how to give it, and at what stage of the fever to bleed. When they could not tell what to do, he came himself or sent his student Edward Fisher.

At Pennsylvania Hospital, Rush moved patients with mental illness out of the basement and onto hospital floors with windows.

Absalom Jones and Richard Allen

Who: Two Black Philadelphians who led Black volunteers to nurse the sick and bury the dead.

When and where: Philadelphia, September to November 1793. Their account was printed in 1794.

They buried several hundred people and never asked for pay.

Absalom Jones and Richard Allen led members of the Free African Society, a group of Black Philadelphians, in nursing the sick and burying the dead in 1793. In early September a notice in the newspapers asked "the people of colour" to help the sick. It stated that they could not catch the fever. Jones, Allen and a few others met to talk over how to act. The next day they asked the mayor how they could help.

They carried away and buried the dead, several hundred poor people and strangers in all. Five men they hired helped them, and two of those men were Allen's brothers. Rush taught them when to bleed a patient, and they bled more than 800 people.

The fever killed Black Philadelphians too. In 1792, 67 Black people were buried in the city. In 1793 the number was 305. When some Black nurses fell sick, the families they worked for put them out of their houses. Jones and Allen knew of one who died in a stable.

Mathew Carey wrote that Black nurses had overcharged the sick and stolen from them. In 1794 Jones and Allen printed their own account to answer him. For burying the dead, they wrote, they had "never received, nor never asked any compensation," meaning any pay. They also named Mary Scott, a Black nurse who refused to take more than her wage from a Mrs. Mason. Mrs. Mason then gave her six pounds a year for life.

Medical care for sailors, 1798

President John Adams signed the Act for the Relief of Sick and Disabled Seamen on July 16, 1798, after members of Congress passed it. Under it, federal officials took 20 cents a month out of every merchant sailor's pay to pay for sailors' medical care. For a time, the first marine hospital, a hospital for sailors, stood on Castle Island in Boston Harbor. Today's United States Public Health Service began as this program.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 12 MINUTES

A safer protection against smallpox reached the United States in 1800, and in 1846 surgeons learned to operate on patients who felt no pain, but neither one reached everybody. The new protection, vaccination, scratched matter from cowpox, a mild disease of cows, into the skin. A federal official left the Mandan people out of a vaccination program, and in 1837 smallpox killed at least nine in ten of them on the upper Missouri River.

A Boston dentist showed surgeons in 1846 that a drug called ether, breathed as a vapor, could keep a patient from feeling an operation. From 1845 to 1849 an Alabama doctor, J. Marion Sims, operated again and again on enslaved women to work out a new surgery, and he gave them nothing to stop the pain during the operations.

Cholera, a disease spread in dirty water, killed thousands of people in the growing cities in 1832 and 1849. In 1849 Elizabeth Blackwell became the first woman in the United States to earn a medical degree.

Vaccination arrives, 1800 and 1802

To vaccinate a person, a doctor scratched fluid from a cowpox sore into the skin, and it protected the person against smallpox. In the older method, inoculation, doctors put pus from a real smallpox sore into a cut in the skin, and some inoculated people died of smallpox.

Dr. Benjamin Waterhouse of Cambridge, Massachusetts, vaccinated his young son Daniel Oliver and a servant, Samuel Carter, on July 8, 1800. He used cowpox matter on threads sent from England. It is the first recorded vaccination in the United States. Doctors in other places claimed earlier ones, but Waterhouse kept official records. He then vaccinated three more of his children and a second servant, Kesiah Flag.

Waterhouse sent vaccine to other doctors and to President Thomas Jefferson. Jefferson vaccinated his family, the enslaved people at his plantation, Monticello, and his neighbors. The enslaved people were Jefferson's property by law, so they could not refuse. The accounts of these vaccinations do not say whether they agreed.

The test. Waterhouse and six other doctors vaccinated nineteen boys on August 16, 1802. That fall the boys, whom the record calls volunteers, were exposed to smallpox to test the vaccine. The Harvard medical library's account of the test does not say who exposed them, whose sons they were, or whether their parents agreed. The members of Boston's Board of Health then reported that cowpox was "a complete preventive against all the effects of the Small-pox." That meant it kept a person from getting smallpox at all.

Smallpox on the upper Missouri, 1832 and 1837

President Andrew Jackson signed a law on May 5, 1832, that set aside $12,000 to vaccinate Native people. Members of Congress had passed it. Secretary of War Lewis Cass designed the program and ran it through federal Indian agents, the government officials sent to deal with each Native nation. By February 1833, more than 17,000 Native people had been vaccinated. Some Army doctors refused to take part because the pay was too low.

Cass left the Mandan, Hidatsa and Arikara nations on the upper Missouri River out of the program. The accounts of the program do not give his reason.

The steamboat. The American Fur Company's steamboat *St. Peters* stopped at Fort Clark, beside the Mandan villages in what is now North Dakota, on June 18, 1837. A deckhand had shown signs of smallpox weeks earlier, and three Arikara women who had caught it had boarded to go home to their village. The fort's trader, Francis Chardon, learned from the captain that people on the boat had smallpox. The crew unloaded goods and loaded furs in less than a day, and the boat went on upriver.

The historian R. G. Robertson blames the captain, Bernard Pratte Jr., who would not keep the sick apart from other people. Robertson calls that "criminal negligence," a failure to take care so serious that it should count as a crime.

Chardon wrote on July 14 that a young Mandan had died that day of smallpox. Later he wrote that the Mandan "die so fast that it is impossible" to keep count. About 2,000 Mandan lived in the villages in the spring. By October only 23 to 138 were alive, and the counts differ.

The Arikara lost between half and two thirds of their people, by different counts, and the Hidatsa lost many people too. Along the Missouri River more than 17,000 people died. About two thirds of the Blackfoot died, about half of the Assiniboine, about one third of the Crow and about one quarter of the Pawnee.

The Mandan leader Four Bears caught smallpox. Before he died he accused white people of ingratitude, of giving no thanks in return for kindness. As Chardon recorded his words: "I have loved the Whites ... and how have they

repaid it! With ingratitude!"

Cholera in the river cities, 1832 and 1849

Cholera is an infection of the gut. People catch it from food or water that carries its germ. It causes diarrhea that can start two hours after a person swallows the germ, and the body loses so much water and salt that the person can die. Cholera first reached the United States in 1832. It killed about 3,500 of New York City's roughly 250,000 people that year, about 1 New Yorker in 70.

Two steamboats from New Orleans reached St. Louis, on the Mississippi River, on January 2, 1849, with 66 passengers sick with cholera. In the spring more boats and gold seekers headed for California came through, and deaths rose. St. Louis had grown from about 5,000 people in 1830 to 77,000 by 1850, and it had no sewers. About three of every four people drank from shallow wells, often dug near outhouses. Pigs rooted through the garbage in the streets.

Doctors did not know what caused cholera. They blamed night air, bad food and alcohol, and told people to stop eating vegetables and then meat. At night they lit fires to clean the air. Some bled their patients, which left the sick person weaker.

Cholera killed 65 people in St. Louis on June 13, 1849, and 85 on June 21. In early July more than 100 a day died.

The cleanup. The city's lawmakers gave a Committee of Public Health $50,000 on June 27. The committee members stopped steamboats at a quarantine station, a place where people who may carry a disease are kept apart from others, on an island in the river. The city engineer drained standing water, and city officials banned hogs from the city. By late July, deaths had dropped to about 10 a day.

Reports from 1849 give 4,557 cholera deaths in St. Louis that year. Many deaths were never reported, so the real number was higher. About 7 of every 10 of the dead were Irish and German immigrants. Two researchers identified the germ that causes cholera in 1854 and showed that it spreads in dirty water.

Ether, 1842 and 1846

Before anesthesia, the use of a drug so that a patient does not feel pain during an operation, surgeons worked as fast as they could. A long operation could send a patient into shock.

Dr. Crawford Long of Jefferson, Georgia, cut a tumor, a lump of tissue that grows where it should not, from the neck of James Venable on March 30, 1842, while Venable breathed ether. Long had noticed that people who breathed ether for fun at parties felt little pain when they got hurt. He did not publish what he had done until 1849.

The dentist William T. G. Morton gave ether to Edward Gilbert Abbott, a young house painter, at Massachusetts General Hospital in Boston on October 16, 1846. Abbott breathed the vapor through an inhaler, a breathing device, that Morton had made. Dr. John Collins Warren cut a tumor from Abbott's neck. Abbott said afterward that he had not been fully asleep but "had felt no sensation of pain."

J. Marion Sims's operations on enslaved women, 1845 to 1849

Dr. J. Marion Sims of Montgomery, Alabama, operated again and again on enslaved Black women and girls from 1845 to 1849 to work out a new surgery. He gave them nothing to stop the pain.

The women had an injury called a vesicovaginal fistula. It is a hole torn through the wall between the bladder, where urine is held, and the vagina, the passage a baby is born through. A long, blocked childbirth crushes the tissue and makes the hole. Afterward urine runs out of the woman's body all the time. Her skin becomes sore and infected, and she smells of urine. Some women also had a hole into the bowel, so stool leaked too.

The women's enslavers sent them to Sims. The enslavers paid for their clothes and taxes, and Sims fed and housed them in a small hospital behind his office.

Seven of the women and girls are known by name. Sims named three of them, Anarcha, Betsey and Lucy. Another doctor, Nathan Bozeman, later named four more: Ann McRee, 16, Lavinia Boudurant, 13, Delia, 23, and Julia McDuffie,

20. How many there were in all is not settled. One count gives twelve. A museum of the history of anesthesia says that Sims left six or seven women unnamed.

Sims wrote that he promised to operate only with "the full consent of the patients." An enslaved woman had no power to refuse.

No drug for the pain. Ether was shown in Boston in 1846, partway through these years. Sims still used nothing to stop the pain during any of the operations. He wrote that the operations were "not painful enough to justify the trouble, and risk attending their administration." He meant the trouble and risk of giving a drug against the pain. Many white doctors of the time wrongly believed that Black people felt less pain. After the operations Sims often gave the women opium, a drug that dulls pain and brings sleep.

For each operation Sims had the woman placed naked on her knees and elbows so that he could see inside her. Sims operated on Lucy, who was about 18, for about an hour while about twelve doctors watched. Sims left a sponge inside her bladder to draw off urine. She nearly died of an infection that spread through her blood. Sims wrote: "Lucy's agony was extreme."

Sims closed the hole in Anarcha in 1849, on about the thirtieth operation. He sewed it shut with silver wire, which caused fewer infections than silk thread. A sponge or a tube drained urine from her bladder while it healed. He published the method in 1852.

The babies. Sims also operated on enslaved babies sick with neonatal tetanus, an infection in newborn babies that locks the jaw and other muscles in spasms. He believed the bones of the baby's skull had been pushed in on the brain. The historian Stephen Kenny later studied Sims's own reports of these cases.

Sims kept the baby son of an enslaved woman named Ann at his home in 1847. He cut through the baby's scalp with the point of a knife and pried a skull bone outward. Over the next two months he went on puncturing the same baby's scalp from time to time. Now he used the point of a crooked awl, a pointed tool for punching holes, to pry the skull bones outward. Kenny does not say whether Ann's baby lived.

Sims blamed the baby's illness on Ann. He said she had carried her son with his head pressed against her arm. He also blamed an enslaved nurse for not following his orders.

Sims used the awl in the same way on the baby of another enslaved woman, Frances, prying up the skull bone on one side and then the other. Her baby died twelve hours later, and Sims then cut open the body.

In his reports, every baby he operated on or cut open after death was enslaved. When a white baby, the daughter of Wyatt Peters, had the same disease, Sims gave no medicine and had her laid on her side on a pillow. Sims's two articles on the disease report 27 cases, 17 of them from his own notes. Kenny's study of those articles does not give a total of how many enslaved babies Sims operated on or how many died.

New York City officials voted in April 2018 to take down Sims's statue in Central Park.

Anarcha

Who: An enslaved young woman on whom J. Marion Sims operated about thirty times, with nothing to stop the pain, to work out his fistula surgery.
When and where: Montgomery, Alabama, 1845 to 1849.

Sims operated on her about thirty times before his surgery worked.

Anarcha's childbirth had been long and blocked. It tore two holes, one from her vagina into her bladder and one into her rectum, the end of the bowel. Urine and stool leaked from her body all the time. The accounts of her age differ. Some give 17 when she gave birth. One estimate says she was 13 when Sims first treated her.

Her operations went on for about four years, until the one in 1849 closed the hole into her bladder. The records do not show what happened to Anarcha, Betsey and Lucy after Sims finished with them.

Elizabeth Blackwell

Who: The first woman to earn a medical degree in the United States.

When and where: Geneva, New York, 1847 to 1849, then New York City. Born in Bristol, England, in 1821. Died in Hastings, England, in 1910.

About 29 medical schools turned her down before one said yes.

Elizabeth Blackwell graduated at the head of her class from Geneva Medical College in New York on January 23, 1849. She was the first woman in the United States to earn a medical degree.

The yes came in 1847, when the men studying at Geneva Medical College voted to let her in. Two accounts explain the vote. In one, the students thought the question was a joke by their teachers. In the other, they thought it would be funny to have a woman in the class.

Later in 1849 she worked at La Maternité, a hospital in Paris. She caught an eye infection from a baby she was treating and lost the sight of that eye, so she had to give up her plan to become a surgeon.

With her sister, Dr. Emily Blackwell, and Dr. Marie Zakrzewska, she opened the New York Infirmary for Indigent (poor) Women and Children in 1857. In 1868 she added a medical college for women beside it.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 9 MINUTES

Disease killed more Civil War soldiers than fighting did, and in peacetime too Americans died of sicknesses spread by dirty water, filthy streets and unwashed hands. Smallpox killed more than 60,000 people who had just been freed from slavery between 1862 and 1868. Officers of New York's new health board ordered filth cleared from the streets in 1866, and cholera killed a smaller share of the city than in earlier years. Yellow fever killed about 20,000 people along the Mississippi River in 1878.

Most American doctors did not yet kill germs on their hands and tools. When President James Garfield was shot in 1881, his doctors probed his bullet wound with unwashed fingers. He died weeks later, and the doctors who examined his body found it full of infection. By 1900 women were training as nurses and doctors. Among them were the first Black woman to earn a nursing license and the first Native American woman to earn a medical degree.

Disease in the Civil War armies, 1861 to 1865

Between about 620,000 and 850,000 soldiers died in the Civil War, and the count is disputed. For every three soldiers killed in battle, about five died of disease.

The diseases that killed them included diarrhea and dysentery, which are infections of the gut. Others were typhoid fever, an infection spread by food and water that has touched human waste, and pneumonia, an infection of the lungs. Measles, malaria (a fever spread by mosquitoes) and scurvy killed soldiers too.

Soldiers dug latrine trenches, the ditches they used as toilets, too shallow, and they did not cover the waste with dirt. Waste could then wash into the water the soldiers drank. One army surgeon found a camp's latrine uphill of "the stream, from which all water in the camp is obtained."

Clara Barton

Who: A clerk at the US Patent Office who took supplies to Civil War battlefields and later founded the American Red Cross.

When and where: Antietam, Maryland, September 17, 1862. Born in North Oxford, Massachusetts, on December 25, 1821.

A bullet passed through her sleeve and killed the soldier she helped.

Clara Barton brought a wagon of bandages and supplies to the battlefield at Antietam, Maryland, on September 17, 1862. She had spent a year collecting them. At a farmhouse she held wounded men's heads, gave them water and cooked for them. The lanterns she brought let surgeons keep operating after dark.

She was giving a soldier a drink when the bullet went through her sleeve. She wrote that it cut "through his chest from shoulder to shoulder." A surgeon there, Dr. James Dunn, called her "the angel of the battlefield."

Before the war Barton had been a teacher and then a clerk. She and others formed the American Association of the Red Cross, the group now called the American Red Cross, in Washington, D.C., on May 21, 1881. She was its president until 1904, when she resigned after growing criticism.

Hannah Ropes

Who: The head nurse of a Civil War hospital in Washington, who reported a thief on the staff to the Secretary of War and died of typhoid caught at work.

When and where: Union Hotel Hospital, Georgetown, Washington, D.C., 1862 and 1863. Born in 1809 in New Gloucester, in what is now Maine.

She took her complaint about a thief to the Secretary of War.

Hannah Ropes ran the nurses at a Civil War hospital in Washington until typhoid killed her in January 1863. Her son Edward was a Union soldier. In 1862 she volunteered as a nurse. She became matron, the woman in charge of the nurses, at the Union Hotel Hospital. It was an old hotel turned into a hospital for 300 to 400 patients.

The writer Louisa May Alcott nursed under her from December 1862. "A more perfect pestilence-box than this house I never saw," Alcott wrote in her diary, a pestilence being a deadly disease that spreads.

Ropes found that the hospital steward, the man in charge of supplies, was stealing supplies meant for the wounded. The chief surgeon ignored her complaints. She took them to the Secretary of War, Edwin Stanton, and the steward and the surgeon were both arrested. The accounts of her life do not say who arrested them.

She caught typhoid in late December 1862 and died on January 20, 1863. Alcott fell sick in the same outbreak and went home on January 21, 1863. Ropes's diary and letters were printed as a book in 1980.

Smallpox among freed people, 1862 to 1868

Smallpox killed more than 60,000 people who had just been freed from slavery from 1862 to 1868, the historian Jim Downs counts. Women and children died at higher rates than men.

During the war, people who escaped slavery came to camps the Union army set up for them. The army called them contraband camps, contraband meaning goods taken from an enemy in war. The camps were crowded and dirty, and many people in them lacked the basic things they needed to stay alive. Smallpox broke out in Washington, D.C., in 1862 and spread to nearby Alexandria, Virginia.

Doctors already knew how to stop smallpox. They could vaccinate people and keep the sick apart from the healthy. Union army officers and officials of the Freedmen's Bureau, a federal office set up to help people freed from slavery, ran the camps. They put sick freed people in tents made of old, ripped army tarps, with blankets full of insects. Sick white soldiers went to army hospitals. The accounts of the epidemic do not name the men in charge.

Harriet Jacobs, who had escaped slavery herself, came to Alexandria to open a school and worked against the epidemic.

Health boards and yellow fever, 1866 to 1879

New York State lawmakers passed a law in February 1866, and Governor Reuben Fenton signed it, giving New York City a Metropolitan Board of Health. The doctor Stephen Smith had worked to get it passed. By April its officers had given 7,000 orders to clear away piled horse manure, dead animals and heaps of garbage. Crews spread chloride and lime, chemicals that kill germs, where cholera struck. Cholera killed 1,137 New Yorkers in 1866. That was a smaller share of the city than in 1832 or 1849.

Yellow fever spread up the Mississippi River from New Orleans in 1878. It began after the ship *Emily B. Souder* arrived in New Orleans in late May, and crew members fell ill and died. The first official yellow fever death in the city that year was a four-year-old girl, in July. Along the river about 120,000 people caught the fever and about 20,000 died.

In Memphis, Tennessee, about 25,000 to 27,000 of the city's 47,000 people fled. More than 5,000 people died in the city. Annie Cook ran a brothel, a house where men paid women for sex. She turned it into a hospital, nursed the sick, and died of the fever.

Members of Congress set up a National Board of Health in 1879. Nobody proved that a mosquito spreads yellow fever until 1900.

Germs and the death of President Garfield, 1881

The English surgeon Joseph Lister urged doctors to kill germs on their hands and tools, to stop wounds from getting infected. Most American doctors thought this was too much trouble.

Charles Guiteau shot President James Garfield at a railroad station in Washington, D.C., on July 2, 1881. Doctors pushed their unwashed fingers and unwashed tools into the wound to search for the bullet. Dr. Willard Bliss, who took charge, probed the wound several times a day and never cleaned his hands first. One doctor punctured Garfield's liver while probing. The accounts of Garfield's care do not name him.

Garfield died on September 19, 1881. Doctors who examined his body found pneumonia in both lungs and his body full of pus. A medical paper of 2013 argues instead that a burst artery near his spleen killed him. An artery is a large tube that carries blood from the heart, and the spleen is an organ beside the stomach. Candice Millard, who wrote a 2011 book about Garfield's death, said in an interview that Garfield "would have been better off if they had just left him alone."

Women become nurses and doctors

Mary Eliza Mahoney had worked at the New England Hospital for Women and Children in Boston for 15 years before she began its nursing course. The hospital had only women doctors, and the course took 16 months. Of 42 students who began in 1878, four finished in 1879, and Mahoney was one of them.

She became the first Black woman in the United States to earn a professional nursing license. In 1908 she helped found a group for Black nurses, the National Association of Colored Graduate Nurses ("Colored" was a word then used for Black people).

Susan La Flesche Picotte

Who: An Omaha woman who became the first Native American woman to earn a medical degree, and went home to be the doctor for her own nation.

When and where: The Omaha Reservation, Nebraska. Born 1865, graduated 1889, died 1915.

As a child she watched a white doctor refuse to treat a dying woman.

The woman was a sick Native woman, and she died because the local white doctor would not treat her. Susan La Flesche had been born in 1865 on the Omaha Reservation in northeastern Nebraska. Her father was Chief Joseph La Flesche, and her mother was Mary, also called One Woman.

She studied at the Woman's Medical College of Pennsylvania. She finished its three-year course in two years and graduated first in her class. In 1889 she became the first Native American woman in the United States to earn a medical degree.

> Back on the reservation she cared for more than 1,300 people spread over 450 square miles. In 1913 she opened a hospital at Walthill, Nebraska, on the reservation. She died in 1915.

Typhoid in the army camps, 1898

During the war with Spain in 1898, soldiers in army camps in the United States caught typhoid. There were 20,738 cases and 1,590 deaths in the camps. Typhoid caused 87 of every 100 deaths from disease in those camps. Major Walter Reed and two other army doctors, Victor Vaughan and Edward Shakespeare, studied the camps. They found that the disease spread mostly from man to man, and some of it by flies.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 20 MINUTES

The first American patient saved by penicillin, a drug made from a mold that kills bacteria, was Anne Miller. She got her first dose in 1942. In the same years, government doctors kept that same drug from Black men in Alabama who had syphilis. Army doctors proved in 1900 that a mosquito spreads yellow fever.

An influenza epidemic, a flu that spread to huge numbers of people at once, killed about 675,000 people in the United States in 1918. A medicine mixed with a poison killed more than 100 people in 1937, and in 1938 a new law required drug makers to prove a drug safe before selling it.

Doctors of the United States Public Health Service began their study of 399 Black men in Alabama who had syphilis in 1932. For 40 years the doctors kept the men from being treated, while telling them they were being treated. Public Health Service doctors also exposed 1,308 people in Guatemala to diseases passed during sex, on purpose, from 1946 to 1948.

Proving the mosquito, 1900 and 1901

Four army doctors near Havana, Cuba, proved in 1900 that mosquitoes pass yellow fever, a disease caused by a virus, from sick people to healthy ones. Major Walter Reed led the four, and the others were James Carroll, Jesse Lazear and Aristides Agramonte.

Lazear raised mosquitoes and let them feed on yellow fever patients. A mosquito that had fed on a patient at least 12 days before passed the disease on when it bit someone else. Carroll and a soldier who volunteered caught yellow fever from these bites in late August. Lazear was probably bitten by an infected mosquito himself, and he died of yellow fever on September 25, 1900.

Two buildings. The doctors tested two buildings in November 1900. In one, volunteers slept in bedding soiled by yellow fever patients, and they stayed well. In the other, a clean building, infected mosquitoes bit volunteers, and several caught yellow fever. All of them recovered. The volunteers signed written contracts that named the danger, and they were paid. After workers killed the mosquitoes in Havana, yellow fever there nearly stopped.

Clara Maass

Who: A New Jersey nurse who died after letting infected mosquitoes bite her in a yellow fever experiment.

When and where: Havana, Cuba, 1901. Born in East Orange, New Jersey, in 1876.

She let infected mosquitoes bite her twice.

Clara Maass died of yellow fever at 25, after she let infected mosquitoes bite her in Havana in 1901. She came from a poor German immigrant family in East Orange, New Jersey. She started training as a nurse at 17, at the Newark German Hospital, and she was its head nurse by 21. She nursed soldiers in the 1898 war with Spain and then in the Philippines.

In Havana volunteers were paid $100, and $200 if they caught the fever. Maass let infected mosquitoes bite her in March 1901. She had a mild case and got well. In August 1901 she volunteered again, caught yellow fever, and died on August 24.

Soon after her death, the yellow fever commission was ordered to break up. The museum account of her life does not name who gave the order.

Mary Mallon, held on an island

Mary Mallon was a cook in New York who carried the germs of typhoid, a fever spread through food and water, in her body without being sick herself. Health officials counted 47 people infected through her cooking, and 3 of them died.

Officials of the New York City Board of Health held her on North Brother Island, in the East River, from 1907. In a letter in June 1909, she wrote that they kept her "a prisoner without being sick nor needing medical treatment." She also wrote, "I have been in fact a peep show for everybody."

The officials let her go in February 1910, after she signed a promise not to work as a cook again. In October 1914 she took a job as a cook at the Sloane Maternity Hospital, under the name Mary Brown. Early in 1915 typhoid broke out there, and 25 people caught it and 2 died. Health officials found her in March 1915 and sent her back to the island. She stayed there until she died on November 11, 1938, and she became known as "Typhoid Mary."

Fewer medical schools, 1910

Abraham Flexner published a survey of the country's 148 medical schools in 1910. Leaders of the Carnegie Foundation had hired him to do it. He called several schools "beyond repair." In the years after, the number of medical schools fell to 66.

Writers at JSTOR Daily, a history magazine, say that members of the American Medical Association, most of them white men, used the report to close schools and protect their own jobs and earnings. Seven medical schools had trained Black doctors. Only two were left: Howard University in Washington, D.C., and Meharry Medical College in Nashville, Tennessee.

Polio in New York, 1916

Polio is a disease caused by a virus that can attack the nerves in the spine. It can leave a person unable to move the arms, the legs or the muscles used for breathing, a loss of movement called paralysis.

In the summer of 1916 polio spread through New York City. More than 9 of every 10 of the city's cases were in children five or younger. One count gives more than 27,000 cases and more than 6,000 deaths across the whole country. Accounts of New York City alone differ, from about 2,000 deaths to about 6,000.

Dr. Haven Emerson was the city's health commissioner. Every day the names and addresses of the sick appeared in the newspapers. Signs went up on their houses, and the accounts of the epidemic do not say who put them up.

Shut in. A team of Health Department workers led by Dr. Simon Blatteis kept the families shut inside. Under Health Department rules, a family that could not give the sick child a separate room, a separate toilet and a nurse had to let the department take the child to a hospital, free of charge. Police stood at the railroads, roads and rivers to turn back anyone trying to leave the city.

Writers in the *New York Times* blamed Italian immigrants for the disease. Italian immigrants were shunned, cursed and beaten up, and the accounts of the epidemic do not name who beat them.

The 1918 influenza

Influenza, or flu, is a disease caused by a virus that infects the nose, throat and lungs. In 1918 a new kind of influenza spread around the world. About 500 million people caught it, and at least 50 million died. About 675,000 of the dead were in the United States. Many of them were healthy adults between 20 and 40.

There was no vaccine against it, no medicine that trains the body to fight off a germ before the germ can make a person sick. There was no antibiotic either, a medicine that kills bacteria. Many people died of pneumonia, with their lungs full of fluid.

The parade. In Philadelphia, Dr. Wilmer Krusen, the city's director of public health, let a parade to sell war bonds go ahead on September 28, 1918. People bought the bonds to lend money to the government for the war. About 200,000 people crowded onto Broad Street. Krusen said in public that the flu was not a threat, although army camps nearby were full of it.

Within three days every bed in the city's 31 hospitals was full. City officials closed schools, churches and theaters on October 3. More than 12,000 people in Philadelphia died within weeks.

The flu reached Brevig Mission, an Alaska Native village, in 1918. Within five days, 72 of the 80 villagers were dead. Miners from the town of Nome thawed the frozen ground with steam and dug one grave for all of them.

Josie Mabel Brown

Who: A Navy nurse from Missouri who worked the influenza wards at Great Lakes, Illinois, and described them in an interview when she was about 100.

When and where: Great Lakes Naval Training Station, Illinois, fall 1918 to 1919. Born on a Missouri farm in 1886.

The ambulance brought four sick men and took away four dead.

Josie Mabel Brown nursed sailors dying of influenza at the Great Lakes Naval Training Station in Illinois in 1918. At the worst of the epidemic, 6,000 of the 173,000 men there were in the hospitals. She had finished nurse training in 1917 and been called into the Navy, and in the fall of 1918 she was ordered to Great Lakes.

On her first ward, one man lay dying on the bed and another lay on the floor. A third waited on a stretcher for the bed. The nurses wrapped each dead man in a sheet and tied a shipping tag to one big toe. The ambulance, she said, "would bring us four live ones and take out four dead ones."

The nurses had no time to take temperatures. Patients had nosebleeds so strong that "the blood would just shoot across the room," she said. In some men, air leaked from torn lungs into the body, and she could see bubbles under the skin of their arms.

She worked 16 hours a day until just before Christmas 1918. In March 1919 she caught a fever of 104 or 105 herself, and she recovered. She told her story to her niece in 1986 and died at 104.

BY 1920: Army doctors had proved that mosquitoes carry yellow fever, and influenza had just killed about 675,000 Americans. Doctors still had no vaccine against the flu and no drug that killed bacteria.

Radium in the body, 1917 to 1932

Radium is a metal that gives off radiation, a stream of energy that damages living cells. Radium belongs to the same family of elements as calcium, so growing bones take it up as if it were calcium. There it keeps giving off radiation from the inside.

Women painted watch dials with glowing radium paint at the U.S. Radium factory in Orange, New Jersey, from 1917. They shaped their brushes into a point with their lips. The radium destroyed their bone marrow, the soft tissue inside bones that makes blood, so their bodies could not make enough blood. Their jaw bones died and broke apart. Some grew cancers of the bone. In 1924 a dentist, Theodor Blum, examined the dial painter Grace Fryer. Her jaw bone was wasting away, and he called the damage "radium jaw."

Chapter 13, The Elements, tells the dial painters' story and their lawsuit in full. Five of them, Grace Fryer among them, signed an agreement with the company on June 8, 1928. Each woman received $10,000, though some accounts give $15,000, plus $600 a year for as long as she lived, and her medical costs. The company's officers never admitted that the company was to blame.

A radium medicine. William Bailey sold radium dissolved in water as a medicine called Radithor. He falsely claimed to have medical training and paid doctors to tell their patients to take it. Eben Byers, a Pittsburgh businessman, drank about 1,400 bottles from 1927 to 1930. A government investigator found in 1931 that the bone in Byers's body was falling apart and holes were forming in his skull. He died on March 31, 1932, of a cancer of the jaw bone caused by the radium.

Native health, 1928

A team of investigators led by Lewis Meriam reported in 1928 on the lives of Native people on reservations and in government boarding schools. They wrote that "the health of the Indians as compared with that of the general population is bad." They wrote that the share of Native people who died each year was high, and so was the share of babies who died.

The investigators found tuberculosis, the lung disease that spreads by coughing, "extremely prevalent," which means very common. They found trachoma, an eye disease that "produces blindness," to be "a major problem." In the government boarding schools the children's food was "deficient in quantity, quality, and variety": there was not enough of it, and it was poor and the same every day. "The medical service rendered the boarding school children is not up to a reasonable standard," they wrote, meaning the care doctors gave the children was not good enough.

The Tuskegee study, 1932 to 1972

Doctors of the United States Public Health Service watched hundreds of Black men in Alabama live with syphilis for 40 years, from 1932 to 1972, and they kept the men from being treated. They wanted to see what the disease did to a body when no one treated it.

What syphilis does. Syphilis is a disease caused by bacteria. It is passed during sex, or from a mother to her unborn baby. Left untreated, it goes through stages. At first the person gets a painless sore where the germ entered. Weeks later the person gets a rash, a fever and a sore throat.

Then the germ can hide in the body for years with no signs. After 10 to 30 years it can damage the heart and the large blood vessels, the brain and the nerves. It can cause blindness, and it can cause dementia, which is the loss of memory and reason. It can kill, and a baby born with syphilis can die.

Who ran it. Dr. Taliaferro Clark began the study in 1932. He was head of the Public Health Service's office for diseases passed by sex. The study took place in Macon County, Alabama, near the town of Tuskegee. Dr. Raymond

Vonderlehr ran it there and later took Clark's place. Most of the men were poor farmers. Many were sharecroppers, who farmed someone else's land for a share of the crop.

The doctors chose 399 men who had syphilis and 201 men who did not, to compare them. They planned no treatment at all for the infected men. The study was planned to last six months, and it ran for 40 years.

The lie. The doctors told the men they had "bad blood" and that they were being treated for it. They did not tell the men that the disease was syphilis, and they never asked whether the men agreed to be studied. The men got free exams, hot meals on exam days and rides. From 1935 they were also promised about $50 toward their burials, if they let doctors cut open their bodies after death to study them.

Eunice Rivers, a Black nurse, kept in touch with the men for all 40 years. She gave them aspirin and a "spring tonic" that did nothing against syphilis. Dr. Oliver Wenger, who ran the clinic in the region, wrote, "we have no further interest in these patients until they die."

The exams also included spinal taps. In a spinal tap a doctor pushes a needle between the bones of the lower back and draws out fluid from around the spinal cord. The doctors wanted to see whether syphilis had reached the brain and nerves. A spinal tap often causes a lot of pain and other harm. The doctors' letter to the men called it their "Last Chance For Special Free Treatment."

Keeping the cure away. Keeping treatment away from the men was part of the study. Its doctors gave local doctors lists of the men's names and asked them not to treat them. In 1941 army officials drafted some of the men and told them to start treatment. Public Health Service officers gave the draft board, the group that chose men for the army, a list of 256 names to leave untreated, and the board members did as they asked.

Accounts differ on when penicillin, the drug made from a mold, became the usual cure for syphilis: 1943, by 1947, or the early 1950s. The study doctors never offered it to the men. Vonderlehr later wrote, "I hope that the availability of antibiotics has not interfered too much with this project."

What their own reports show. Reports that the study doctors printed show what the disease did to the men. In 1936 the doctors reported that the infected men had much more disease of the heart and blood vessels than the men without syphilis. Only 16 of every 100 infected men showed no sign of illness, against 61 of every 100 of the uninfected men.

About ten years later, nearly twice as many infected men as uninfected men had died. The doctors worked out that the disease had cut the men's lives by about a fifth.

Their 1955 report covered the infected men whose bodies they had cut open after death. More than 30 of every 100 had died because syphilis destroyed their heart and blood vessels or their brain and spinal cord.

A reporter made the study public in 1972. By then, by one count, at least 28 of the men had died of syphilis itself and 100 more of problems it caused. Forty of their wives had caught it. Nineteen of their children were born with it.

Charles Pollard

Who: An Alabama farmer who was kept in the Tuskegee study for 40 years without being told he had syphilis, and who then brought the lawsuit for the men.
When and where: Near Tuskegee, Macon County, Alabama, 1932 to 1972.

At 66, he learned from the news that he had syphilis.

That was in July 1972, and Charles Pollard had had syphilis for 40 years. He farmed 66 acres of land he had inherited, about three miles from Tuskegee. His father was the son of two enslaved people.

Men from the study told Pollard in 1932 that he could get a free physical exam at a one-room school the next afternoon. "So I went on over and they told me I had bad blood," he said. "And that's what they've been telling me ever since." For 40 years doctors came around "from time to time and check me over."

> Pollard went to Fred Gray, a lawyer in Tuskegee. Their lawsuit, *Pollard v. United States*, ended in a settlement of $10 million. In 1997 Pollard was one of the survivors at the White House when President Bill Clinton apologized to them.

A poison sold as medicine, and a new law, 1937 and 1938

A poison in a new medicine killed more than 100 people in 1937, and the next year a new law required drug makers to prove a drug safe before selling it. The S. E. Massengill Company of Bristol, Tennessee, sold a liquid medicine called Elixir Sulfanilamide for strep throat. Its chemist, Harold Watkins, dissolved the drug in diethylene glycol, a chemical used in antifreeze and a poison. No law required the company to test the medicine for safety before selling it.

The medicine killed more than 100 people in 15 states in September and October 1937, many of them children. It shut down their kidneys. They stopped passing urine and had strong stomach pain, vomiting and seizures before they died.

A mother wrote to President Franklin Roosevelt about her daughter Joan: "we can see her little body tossing to and fro and hear that little voice screaming with pain." The owner, Dr. Samuel Massengill, said, "I do not feel that there was any responsibility on our part." Watkins killed himself.

President Roosevelt signed the Federal Food, Drug, and Cosmetic Act on June 25, 1938, after members of Congress passed it. Under it, a company had to prove to officials of the Food and Drug Administration, the FDA, that a new drug was safe before it could sell the drug.

Penicillin, 1942

Penicillin is a drug made from a mold. It kills many kinds of bacteria, the germs behind infections such as blood infections and syphilis. It was the first antibiotic made in large amounts.

Anne Miller of New Haven, Connecticut, had an infection of the blood in March 1942, after a miscarriage, the loss of a baby before it can live outside the womb. For weeks her fever stayed at 103 degrees or higher. Her doctors got 5.5 grams of penicillin, half of all the penicillin in the United States at the time. She got her first dose on March 14. By the next morning her temperature was back to normal. She was the first patient in the United States whose life was saved by penicillin.

Exposed on purpose in Guatemala, 1946 to 1948

Doctors of the United States Public Health Service, led by Dr. John Cutler, gave people in Guatemala syphilis, gonorrhea and chancroid on purpose, or tried to, from 1946 to 1948. All three are diseases passed during sex. The doctors infected people without asking whether they agreed.

The doctors exposed 1,308 people to these diseases: prisoners, soldiers and patients in the national mental hospital. They ranged from 10 to 72 years old. The records show some kind of treatment for 678 of them.

How they did it. The doctors used women who were paid for sex to pass on the diseases. They infected most of these women first, then sent them to the prisoners. They also rubbed pus from sick men painfully onto people's genitals and into the opening where urine leaves the body. They injected germs into people's spinal fluid.

For tests, the doctors also took blood or spinal fluid from 5,128 people, among them children in orphanages and schools and people with leprosy, a disease caused by bacteria that damages the skin and nerves.

The money came from the Public Health Service, the National Institutes of Health and the Pan American Sanitary Bureau. Guatemalan officials supplied staff and buildings. Cutler's records note 83 deaths while the experiments went

on. A presidential commission studied the experiments in 2011 and found it unclear how many of those deaths the experiments caused. The doctors never published their results. The public learned of the experiments in 2010.

Federal money for hospitals, 1946

The Hospital Survey and Construction Act became law on August 13, 1946. People call it the Hill-Burton Act, after the two senators who put it forward, Lister Hill of Alabama and Harold Burton of Ohio. Over the years, federal lawmakers set aside $3.7 billion under it to build hospitals, and states and towns added $9.1 billion.

Under the law, the people who ran hospitals built with the money could keep Black and white patients apart, as long as the separate care was called equal. Accounts differ on who asked for that rule. Judges struck it down in 1963.

Pellagra, silica dust and forced sterilization

A disease of diet. Pellagra killed about 100,000 Americans between 1900 and 1940, out of about 3 million who had it, about 1 in 30. Pellagra is a disease caused by too little niacin, a vitamin, in the diet. Most of the sick were poor farmers, sharecroppers and cotton-mill workers in the South who lived on little but cornmeal, molasses and dried pork. Scientists identified niacin in 1937.

Silica dust. Almost 5,000 workers dug the Hawks Nest tunnel in West Virginia from 1930 to 1932, and Chapter 14, Work and Workers, tells its story in full. It was the Union Carbide company's tunnel, and the contractor was Rinehart and Dennis. Most of the workers were Black men who had come from other parts of the South. The rock was full of silica, the mineral in sand.

The men drilled through it with no masks and no way to control the dust. The West Virginia Encyclopedia's account of the tunnel does not name the company men who made that choice. Breathing silica's fine dust scars the lungs until a person cannot breathe, a disease called silicosis. Death counts run from 476 to close to 1,000.

Forced sterilization in Puerto Rico. Eugenics was the false idea that a country could improve its people by stopping some people from having children. In Puerto Rico, under a law that took effect in 1937, members of a government Eugenics Board ordered 97 women sterilized by force. Sterilized means that a person can never become pregnant. Doctors did it by cutting or tying the tubes that carry eggs to the womb, or by removing the womb.

Many thousands of other women were pressured into the same operation. Clarence Gamble, an heir to the Procter and Gamble soap fortune, set up birth control clinics in Puerto Rico with money from the Puerto Rico Reconstruction Administration, a federal office. Gamble made sterilization a rule in his clinics. A woman with three living children could be seen there only if she agreed to be sterilized, historians on the history podcast DIG report.

Some women were told the operation could be undone. Factory owners hired sterilized women first, and some women were told they would not get a job unless they were sterilized. Some employers opened clinics inside their factories where workers could be sterilized. Pregnant women were sometimes turned away from hospitals unless they agreed to be sterilized right after giving birth. The historians' accounts do not name the factories or the hospitals.

BY 1950

If you remember one thing: Doctors learned how to stop yellow fever and got penicillin to cure infections, and in the same years government doctors kept that cure from the Tuskegee men and infected people in Guatemala on purpose.

- 1900: Army doctors near Havana prove that mosquitoes spread yellow fever.
- 1932: Public Health Service doctors begin the Tuskegee study of 399 Black men with syphilis.
- 1942: Penicillin saves Anne Miller's life in New Haven.

Next: After 1950 a vaccine ended polio in the United States, and the Tuskegee study went on until a reporter made it public.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 24 MINUTES

A vaccine ended polio in the United States in these fifty years, and new federal insurance paid for the care of older and poorer Americans, while reporters, judges and investigators exposed what doctors had done to people who never agreed. Doctors reported more than 21,000 Americans paralyzed by polio in 1952. A vaccine tested on about 1.8 million children was announced in 1955, and the last polio case caught inside the United States came in 1979.

President Lyndon Johnson signed Medicare, health insurance for people 65 and older, and Medicaid, for people with little money, in 1965. A reporter exposed the Tuskegee study in 1972, and a federal health official announced its end that November.

In the 1970s doctors in federally paid clinics sterilized poor Black women and girls, and doctors in the Indian Health Service sterilized Native women. Many of these women and girls never gave permission. Doctors reported the first cases of the disease later named AIDS in 1981. By the end of 2000, 448,060 Americans had died of it.

Henrietta Lacks

Who: A Black woman whose cancer cells doctors took without asking her. Her cells were the first human cells to keep growing in a laboratory.

When and where: Johns Hopkins Hospital, Baltimore, 1951. Born Loretta Pleasant in Roanoke, Virginia, on August 1, 1920.

Movie: *The Immortal Life of Henrietta Lacks* (2017), a drama made for HBO about her and her daughter Deborah.

Doctors cut two samples from her cervix without asking her.

Doctors at Johns Hopkins Hospital in Baltimore cut cells from Henrietta Lacks's body in 1951 without her permission or knowledge. Her cells were the first human cells to keep growing and dividing in a laboratory. At that time no rule required doctors to ask.

She grew up in Clover, Virginia, in a log cabin that had been slave quarters on a plantation. Her white great-grandfather and great-uncle had owned it. In January 1951 she went to Johns Hopkins with a lump in her womb. Doctors found cancer of the cervix, the opening of the womb. They treated her with radium placed inside her body, and then with X-rays. During her treatments, doctors cut the two samples.

Dr. George Gey grew the cells. They kept dividing, and they were named HeLa, from the first two letters of her first and last names. By 1954 Jonas Salk's team used HeLa cells in its polio vaccine work.

Another doctor, Chester Southam, injected HeLa cells into cancer patients, prisoners and healthy people to see whether cancer could be passed on. He did not tell the people he injected that the cells were cancer cells, and prisoners were hardly free to refuse.

The members of New York's Board of Regents, the state board that licenses doctors, later found Southam guilty of fraud, deceit and unprofessional conduct. Those are legal words for cheating, lying and breaking the rules of his profession. They put him on probation, a trial period under watch, for a year.

> She died on October 4, 1951, at 31, after the cancer spread through her body. Her family did not learn about the cells until 1975. In 2021 her family sued a company, Thermo Fisher Scientific, for making money from HeLa cells without her permission, and the two sides settled in 2023.

The polio vaccine, 1952 to 1979

Doctors in the United States reported more than 21,000 people paralyzed by polio in 1952. Fewer than 1 in 100 children who catch polio are paralyzed. When polio paralyzes the muscles used for breathing, the person needs a machine to breathe. The iron lung was a metal tube about seven feet long, and the patient lay inside it. Bellows, a pump with folding sides, changed the air pressure inside the tube to pull air into the lungs.

Jonas Salk of the University of Pittsburgh made a vaccine from polio virus that had been killed. The money for his work came from the National Foundation for Infantile Paralysis, a charity that later became the March of Dimes.

The test. Dr. Thomas Francis Jr. of the University of Michigan ran the test in 1954. About 1.8 million children in the United States, Canada and Finland took part, counting children who got no shot and were only watched. From April 26 to July 10, 1954, more than 443,000 children got at least one shot of vaccine. More than 210,000 got a placebo, a shot with no medicine in it. Neither the child nor the nurse knew which one it was.

The children were called Polio Pioneers, and their parents signed permission forms. The results were announced at the University of Michigan on April 12, 1955: the vaccine was 80 to 90 percent effective. It was approved for use the same year.

The bad batch. That April, Cutter Laboratories in Berkeley, California, made 120,000 doses that still held live virus. About 40,000 children who got it had a mild form of polio. Fifty-six were paralyzed, and five died.

The children passed the virus to others, and 113 more people were paralyzed and 5 more died. Cutter's managers took the vaccine off the market on April 27, 1955. At a hearing that June, members of Congress said the staff of the

federal laboratory that was supposed to check the vaccine were mostly to blame, because they had not checked it closely.

Albert Sabin's vaccine, which people swallowed instead of getting a shot, was approved for use from 1961 to 1963. The last case of polio caught inside the United States was in 1979. Between 15 and 40 years after they got sick, 25 to 40 of every 100 people paralyzed by polio as children get new muscle pain and new weakness, which is called post-polio syndrome.

Jonas Salk

Who: The doctor who made the first polio vaccine and did not patent it.
When and where: University of Pittsburgh, 1947 to 1955. Born in New York City in 1914.

"Could you patent the sun?" he asked.

Jonas Salk made the polio vaccine that was approved for use in 1955. He never took out a patent on it, the legal right to be the only one allowed to make and sell an invention.

He started work at the University of Pittsburgh School of Medicine in 1947. In 1952 he made a vaccine from polio virus that had been killed, so that it could not cause the disease.

Thomas Francis Jr. ran the 1954 test. Salk had first learned about viruses in Francis's laboratory in 1941. At first Salk did not want some children to get a dummy shot, because the dummy shot could not protect them against polio. He gave way, because only that kind of test could prove the vaccine worked.

The television reporter Edward R. Murrow asked Salk who owned the patent, and the question about the sun was Salk's answer. People at the charity that paid for the work and at the university had looked into a patent. They judged that the method was probably not new enough to patent. Salk died in La Jolla, California, in 1995.

Paul Alexander

Who: A Dallas boy paralyzed by polio at six who lived in an iron lung for more than 70 years and became a lawyer.

When and where: Dallas, Texas, 1952 to 2024. Born in Dallas on January 30, 1946.

He lived inside an iron lung for more than 70 years.

Polio paralyzed Paul Alexander in 1952, during an outbreak in Dallas, when he was six. Within days he could not move below his neck or breathe on his own. Doctors saved him with a tracheotomy, an operation that cuts an opening in the front of the neck into the windpipe so that air can get in. Then they put him in an iron lung.

He learned to breathe outside the machine for hours at a time, starting in 1954, by swallowing air into his lungs. Every night he went back into it.

He held a stick in his mouth to turn pages, to paint, and later to type. He studied at Southern Methodist University and the University of Texas, earned a law degree in 1984, and worked as a lawyer in Dallas. In 2020 he published a book about his life, *Three Minutes for a Dog*.

"I've never thought of myself as a cripple," he said in 2017, using an old, unkind word for a person who cannot use part of the body. "I'm Paul Alexander, human being." Guinness World Records named him the longest-surviving iron lung patient. He died in Dallas on March 11, 2024, at 78.

The Indian Health Service, 1954 to 1976

President Dwight Eisenhower signed the Indian Health Transfer Act in 1954. Under it, Public Health Service officials took over health care for Native people from the Bureau of Indian Affairs, the federal office that ran the government's dealings with Native nations. The new office was called the Indian Health Service.

That same year Dr. Thomas Parran reported to the Interior Department on the health of Alaska Natives. He wrote that they suffered "sickness, crippling conditions and premature deaths to a degree exceeded in very few parts of the world," meaning that people in very few places anywhere were sicker or died younger. Health care for Alaska Natives moved to the Indian Health Service in 1955, and its staff led the work against tuberculosis.

Under a 1959 law, Public Health Service workers could bring clean water and ways to get rid of sewage to reservations, and tribes took part in the decisions. In 1976 President Gerald Ford signed the Indian Health Care Improvement Act. Under it, Medicare and Medicaid could pay the Indian Health Service for the care its staff gave.

BY 1955: Doctors had a polio vaccine that worked, and Public Health Service officials ran health care for Native people through the new Indian Health Service.

New operations and new pictures of the body, 1954 to 1963

Dr. Joseph Murray moved a healthy kidney from Ronald Herrick into his identical twin brother, Richard, at a Boston hospital on December 23, 1954. Richard was dying of kidney disease. The body's defenses attack an organ from almost anyone else, which is called rejection. Because the twins were identical, Richard's body accepted the kidney. He lived eight more years, married and had two children.

Scientists at Brookhaven National Laboratory in New York built the first machine to make technetium-99m, a radioactive chemical, in 1958. A doctor injects a tiny amount into a patient. It gives off rays that a camera outside the body picks up, to make pictures of the bones, the heart and other organs. Doctors in the United States first reported scans with it in 1963. Doctors around the world now use it in tens of millions of scans a year.

Fallout on Rongelap, 1954

United States scientists set off a hydrogen bomb called Castle Bravo at Bikini Atoll in the Marshall Islands on March 1, 1954. It was nearly three times as strong as they expected. Fallout, the radioactive dust and ash that falls after a nuclear blast, came down on Rongelap, an island of the Marshallese people about 110 miles away. It looked like snow, and children played in it.

Twenty-three Japanese fishermen on the boat *Lucky Dragon* got sick, and one died. More than 230 people were moved off Rongelap, Rongerik and Utirik. The Rongelap and Utirik people were moved about 72 hours after the blast. The accounts of the evacuation do not name who moved them or who decided when.

Radioactive iodine from the fallout collected in their thyroid glands, which sit in the neck. In the years after, doctors found more thyroid lumps and thyroid cancers among them. Staff of the Atomic Energy Commission, the federal office in charge of nuclear weapons and nuclear power, studied the exposed people. Doctors working for the United States government later gave them follow-up medical care.

Radiation tested on people, 1944 to 1974

President Bill Clinton appointed a committee in 1994 to investigate radiation experiments paid for by the federal government. He acted after reports that doctors had injected plutonium, a radioactive metal, into hospital patients who did not know it. In its 1995 report the committee counted nearly 4,000 such experiments from 1944 to 1974. Researchers paid by the federal government had also run experiments on children and on prisoners.

The committee wrote that in the 1940s and 1950s it was common for doctors to use patients in research "without their awareness or consent." In some studies on children, the radioactive doses raised the children's lifetime risk of thyroid cancer. The committee also found studies in which patients died soon after receiving radiation doses as large as those given to treat disease.

Miners who dug uranium underground breathed radon, a radioactive gas that comes off uranium ore. At least several hundred of them died of lung cancer. The committee found that federal officials neither required the mines to be ventilated, which means fresh air pumped in, nor properly warned the miners. Under a 1990 law, the Radiation Exposure Compensation Act, some of the miners get payments from the government.

Thalidomide, 1960 to 1962

Dr. Frances Kelsey, a new FDA reviewer, refused to approve thalidomide because the company's evidence was weak. The drug company Richardson-Merrell had asked the FDA for permission to sell it in 1960. It was a sleeping pill that doctors also gave pregnant women for morning sickness, and it was already sold in more than 20 other countries. For more than a year, under steady pressure from the company, Kelsey kept asking for more.

Doctors in Europe linked thalidomide in November 1961 to babies born with arms and legs that were very short or missing. Around the world more than 10,000 babies were born harmed by it, and about 40 of every 100 died at birth or soon after.

Richardson-Merrell staff had already given more than 2.5 million tablets to more than 1,000 American doctors to "test." Nearly 20,000 patients took them, and several hundred of those patients were pregnant. At least 17 American babies were born with thalidomide damage.

Company officials withdrew the application in March 1962. Members of Congress passed the Kefauver-Harris Amendments with no votes against in October 1962. Drug makers then had to prove that a drug worked, report its harms to the FDA, and get people's permission before testing drugs on them.

Smoking and asbestos, 1954 to 1998

Surgeon General Luther Terry, the country's top public health doctor, released a report on smoking on January 11, 1964. Ten experts had written it after reading more than 7,000 articles. They found that smokers died at a rate 70 percent higher than non-smokers. The average smoker was 9 to 10 times as likely to get lung cancer, and a heavy smoker at least 20 times.

Smoking was the main cause of chronic bronchitis, a long-lasting swelling of the air passages, the experts found, and it was linked to emphysema and to heart disease.

Ten years earlier, in January 1954, the big tobacco companies had paid for an advertisement in more than 400 newspapers that disputed the studies linking cigarettes to lung cancer. In 1957 Surgeon General Leroy Burney said the evidence showed that smoking caused lung cancer.

Lung cancer grows in the cells that line the air passages of the lungs. It causes a cough that does not go away, trouble breathing, and coughing up blood. Smoking causes about 9 of every 10 lung cancers in men and 8 of every 10 in women. In emphysema, a lung disease, the thin walls between the lungs' tiny air sacs break down, so the person cannot get enough air.

Under a 1965 law, every pack of cigarettes had to carry a health warning. From 1970 cigarette ads were banned from television and radio. On April 14, 1994, the heads of seven tobacco companies told Congress that nicotine is not addictive. In a 1998 settlement, a deal to end lawsuits, the tobacco companies agreed to pay 46 states at least $206 billion over 25 years.

Fibers in the lungs. Asbestos is a group of minerals that split into thin fibers. Workers used it to insulate buildings and ships. Its fibers, breathed in, stay in the lungs and scar them. They cause lung cancer and mesothelioma, a cancer of the thin lining of the chest and belly. The sickness can start 10 to 40 years or more after the person breathed the dust.

Shipyard workers, insulation workers, miners and firefighters were among those who breathed it. Johns-Manville, the biggest maker of asbestos, went bankrupt in 1982 while facing thousands of lawsuits.

BY 1965: Surgeon General Luther Terry's report had found smokers 9 to 10 times as likely to get lung cancer, and members of Congress had made drug makers prove that their drugs worked. The Tuskegee study was still running.

Medicare and Medicaid, 1965 and 1966

Two thirds of Americans over 65 had incomes below $1,000 a year in 1950, and only 1 of every 8 had health insurance, a plan that pays doctor and hospital bills.

President Lyndon Johnson signed Medicare and Medicaid into law at the Truman Library in Independence, Missouri, on July 30, 1965. Former President Harry Truman was with him. Truman had asked Congress for national health insurance 20 years earlier. Medicare is health insurance for people 65 and older. Medicaid is health insurance for people with little money. Nearly 20 million people signed up for Medicare in its first three years.

Separate wards. Many hospitals still kept Black and white patients apart. In the South, the people who ran hospitals mostly put Black patients in separate basement wards or separate buildings, or turned them away. In many northern cities, hospital care was just as segregated through unwritten rules.

Judges of a federal appeals court ruled in 1963, in the case *Simkins v. Moses H. Cone Memorial Hospital*, that hospitals built with Hill-Burton money could not keep patients apart by race. The justices of the Supreme Court refused to take up the case in 1964.

The inspectors. The Civil Rights Act of 1964 barred federal money for any place that treated people differently by race, and Medicare payments to hospitals were set to begin on July 1, 1966. Before then, almost 1,000 federal workers volunteered to inspect about 6,000 hospitals. They checked beds, waiting rooms, lunch rooms and hiring.

Inspectors drove at high speed to get away from local groups of the Ku Klux Klan, a secret white group that used terror against Black people and their supporters. Some inspectors were jailed on false charges. Bullets were fired at their rental cars, and crosses were burned on the lawns of at least two of them. Several hospital workers who helped the inspectors had their homes bombed,

and one may have been murdered, the historian David Barton Smith wrote. Smith's account does not name who jailed the inspectors, who fired, who burned the crosses or who set the bombs.

By July 1, hospitals holding 97 of every 100 beds for short-term care in the country had met the rule.

Hepatitis experiments at Willowbrook, 1956 to 1971

Willowbrook State School on Staten Island, New York, was a state home for children with intellectual disabilities. It was built for 4,000 children and held 6,000 by 1965.

Dr. Saul Krugman of New York University and Dr. Robert McCollum of Yale ran experiments with hepatitis, a disease that inflames the liver, on children at Willowbrook from 1956 to 1971. In one study they fed 60 healthy children live hepatitis virus taken from other people's stool, their solid waste. The children's skin and eyes turned yellow, their livers swelled, and they vomited and would not eat. Every one of them became ill, some badly.

Parents signed permission letters, often because signing got their child a place in the crowded school. Critics said the letters played down that the children would be infected on purpose. At times the only beds open were in the study ward.

The television reporter Geraldo Rivera filmed the school's crowded wards and filthy bathrooms in 1972, and staff who beat and sexually abused the residents. That March, parents of 5,000 residents sued the State of New York. The last children left Willowbrook in 1987.

The Tuskegee study ends, 1972 to 1997

The Tuskegee study ended in November 1972, four months after a reporter made it public. Peter Buxtun, a Public Health Service worker in San Francisco, had written in 1966 to the head of the service's office for diseases passed by sex, saying the study was wrong.

Officials of the CDC, the federal disease agency, ran the study by then. They decided to keep it going until every man had died. They also decided that doctors should then cut open each man's body and examine it. Members of local chapters of two doctors' groups, the National Medical Association and the American Medical Association, backed that decision. At a review in 1969 CDC officials decided again to keep it going.

The story breaks. In the early 1970s Buxtun went to the press. Jean Heller, a reporter for the Associated Press, wrote the story. It ran in the *Washington Star* on July 25, 1972, and on the front page of the *New York Times* the next day.

At the start of that year, 74 of the untreated men were still alive. In October a government panel advised stopping the study. In November 1972 Dr. Merlin DuVal, the top health official in the federal health department, announced the end of the study.

Senator Edward Kennedy held hearings in 1973, and federal officials began paying for the survivors' medical care. Their wives, widows and children were added in 1975. The men's lawsuit ended in a $10 million settlement out of court in 1974. Some accounts date it 1973.

The new rule. Members of Congress passed the National Research Act in 1974. Since then, a study on people that uses federal money must be approved by a review board. Every person in it must first be told what will be done and what the risks are, and must agree, which is called informed consent.

President Bill Clinton apologized at the White House on May 16, 1997, to five of the survivors, Charles "Charlie" Pollard, Herman Shaw, Carter Howard, Fred Simmons and Frederick Moss. "What the United States government did was shameful, and I am sorry," he said.

Sterilized without consent, the 1970s

To sterilize a person is to operate so that the person can never have a baby. In an operation called a tubal ligation, a surgeon cuts or ties the two tubes that carry eggs from the ovaries to the womb. In a hysterectomy, a surgeon cuts out the womb.

A federal judge ruled in 1974 in the case of Minnie Lee and Mary Alice Relf, two Black sisters in Alabama who had been sterilized as children. The judge found that doctors in programs paid for by the federal government were sterilizing an estimated 100,000 to 150,000 poor people a year. Some doctors told women on welfare, government money for poor families, that they would lose it unless they agreed. The judge barred federal money for sterilizing people against their will, and barred the threats to cut off welfare.

The Indian Health Service. Investigators of the General Accounting Office, which checks how federal money is spent, reported on the Indian Health Service in 1976. In four of its 12 regions, its doctors had sterilized 3,406 Native women from 1973 to 1976. Writers for the National Library of Medicine and the National Archives describe the operations as done without the women's permission. Thirty-six of the women were under 21, although a federal judge had ordered that women that young not be sterilized.

The investigators' report does not name the doctors. Two years before it, in 1974, Dr. Connie Pinkerton-Uri, who is Choctaw and Cherokee, had found in her own study that 1 in 4 Native women had been sterilized without consent.

One woman's case. Norma Jean Serena, who was Shawnee and Creek, gave birth in Armstrong County, Pennsylvania, on August 16, 1970. Two days later Drs. Donald Carter and James Houston cut out her fallopian tubes, the tubes that carry eggs to the womb. She said no doctor ever told her. A welfare caseworker, Jean Burgess, had advised the operation. Burgess later said, "This was a burden on society. I felt that Mrs. Serena should have no further children."

Burgess and two other county child welfare workers, Patricia Walker and Natalie Leezer, had also taken three of Serena's children from her in 1970. Serena sued in 1974. The jurors found that the welfare workers had given a

false picture of the children's health and of how long the children would stay in foster homes. They awarded her $17,000 for the taking of her children.

On the operation, the same jurors found against her. They decided that she had agreed to it, though she said no doctor ever told her about it.

In Puerto Rico, about 1 in 3 women of child-bearing age had been sterilized by 1968, and 37.4 of every 100 by 1976, historians on the history podcast DIG report. Some chose it because it was the only birth control offered to them. Others were told it could be undone, or were pushed into it by their employers.

Minnie Lee and Mary Alice Relf

Who: Two Black sisters in Alabama who were surgically sterilized as children through a federally paid clinic, after their mother was told they would get birth control shots.
When and where: Montgomery, Alabama, June 1973.

Their mother was told the girls would get birth control shots.

Surgeons in Montgomery, Alabama, sterilized Minnie Lee and Mary Alice Relf in June 1973. The girls were 12 and 14, and accounts differ on which sister was older. The surgeons tied or cut the tubes that carry eggs to the womb, so the girls could never have children. No record names the surgeons.

Nurses from a family planning clinic had told their mother, Minnie Relf, about the shots. Montgomery Community Action ran the clinic with federal money. She could not read or write, and she signed the form with an X. Both girls had intellectual disabilities. The family lived in public housing that the same agency had found for them in 1971. In all, 11 children from the same clinic's program were sterilized, and 10 of them were Black.

Their father, Lonnie Relf, saw the scars when the girls came home from the hospital. The same day a nurse asked their sister Katie, who was 17, to agree to be sterilized. Katie locked herself in her room.

> Lawyers from the Southern Poverty Law Center sued for the family. The federal officials they sued included Caspar Weinberger, the Secretary of Health, Education and Welfare, and Alvin Arnett of the Office of Economic Opportunity. The judge barred federal money for sterilizing people against their will, and barred doctors from threatening to cut off welfare money.

AIDS, 1981 to 2000

CDC doctors reported a rare kind of pneumonia in five young gay men in Los Angeles on June 5, 1981. Two of them had died. The disease was later named AIDS. It is caused by HIV, a virus that destroys the white blood cells that fight infection. As those cells die, other infections and cancers kill the person. HIV passes through blood, semen and other body fluids, not through touch.

More Americans were diagnosed with AIDS in 1985 than in all earlier years together. By early 1986 about half of the adults ever diagnosed had died, and patients died about 15 months after they were diagnosed. People with hemophilia, whose blood does not clot, took a clotting medicine made from blood given by many donors. Of those treated with it between 1979 and 1984, nearly 9 in 10 caught HIV, hepatitis C or both.

ACT UP. The writer Larry Kramer started ACT UP, the AIDS Coalition to Unleash Power, in New York in March 1987. That month FDA officials approved AZT, the first drug for AIDS. On October 11, 1988, more than 1,000 ACT UP members shut down FDA offices in Maryland, and police made 176 arrests. Eight days later FDA officials announced rules to approve drugs faster.

AIDS was the leading cause of death for Americans aged 25 to 44 in 1994. From 1996, doctors gave several drugs together, and the next year AIDS deaths fell by 47 percent. By the end of 2000, 774,467 Americans had been reported with AIDS, and 448,060 of them had died.

Ryan White

Who: An Indiana teenager who caught HIV from his hemophilia medicine, was kept out of school, and then spoke across the country about AIDS.

When and where: Kokomo and Cicero, Indiana, 1984 to 1990. Born in Kokomo on December 6, 1971.

Movie: *The Ryan White Story* (1989), a film made for ABC television. Ryan White had a small part in it.

When he came back to school, 151 of 360 students stayed home.

Ryan White was 13 when doctors told him, on December 17, 1984, that he had AIDS. They gave him six months to live. He had hemophilia and took a clotting medicine made from blood given by many people. Some of it carried HIV.

James O. Smith, the head of his school district, refused in 1985 to let him back into Western Middle School. In all, 117 parents and 50 teachers signed a petition, a written request, to keep him out. Health officials of the state and the CDC said he was no danger to anyone. When he went back for one day in February 1986, 151 of the school's 360 students stayed home.

After he returned, school staff made him use throwaway forks and spoons and a separate bathroom. Someone fired a bullet through his family's living room window while no one was home.

The family moved to Cicero, Indiana. On his first day at Hamilton Heights High School, the principal, Tony Cook, and students who had learned about AIDS shook his hand. In 1988 he spoke to a presidential commission on AIDS. He died on April 8, 1990, at 18. That August, members of Congress passed the Ryan White CARE Act. Under it, federal money pays for care for people with HIV.

BY 2000

If you remember one thing: A vaccine ended polio in the United States and Medicare paid for older Americans' care, while reporters and judges exposed experiments and operations done to people who never agreed.

In 1952: Polio paralyzed more than 21,000 Americans, and the Tuskegee men were being kept from penicillin.

In 2000: No one had caught polio inside the United States since 1979, Medicare paid for the care of people 65 and older, and a federally paid study on people needed each person's informed consent.

Next: After 2000 doctors learned to edit genes, and COVID-19 killed more than a million Americans.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 9 MINUTES

COVID-19 and drug overdoses cut American lives short in these years, even as doctors learned to edit the genes in a patient's own cells to treat sickle cell disease. COVID-19 killed 1,245,791 people in the United States from 2020 to September 19, 2026, by the early count of the CDC, the federal disease agency. Drug overdoses killed more than 100,000 Americans a year in 2022 and 2023.

Life expectancy, the average age a newborn would reach if that year's death rates held, fell from 78.8 years in 2019 to 76.4 in 2021. It was back to 79.0 in 2024, federal health officials who count births and deaths reported in January 2026. President Barack Obama signed the Affordable Care Act in 2010. In 2025, 26.7 million people had no health insurance all year, the Census Bureau reported in September 2026.

Reading and editing genes, 2003 to 2023

A genome is the full set of DNA instructions in a person's cells. Scientists of the Human Genome Project, begun in 1990, finished the first reading of the human genome in April 2003.

Sickle cell disease bends red blood cells into a curved shape like a sickle, a farm tool with a curved blade. The bent cells slow the flow of blood in small blood vessels and carry less oxygen. That causes attacks of severe pain, and it can disable or kill a person. About 100,000 people in the United States have it, the Food and Drug Administration reported in 2023. It is most common in African Americans.

FDA officials approved Casgevy on December 8, 2023. It was the first treatment made with the gene-editing tool called CRISPR that the FDA has approved. Doctors take some of the patient's blood-making cells and edit their DNA. Then the patient gets high doses of chemotherapy, strong drugs that kill the cells left in the bone marrow. Doctors put the edited cells back in a single drip into a vein.

The Affordable Care Act and the uninsured, 2010 to 2026

The Census Bureau counted 49.9 million people in the United States with no health insurance in 2010. That was 16.3 percent of everyone, about 1 person in 6.

President Obama signed the Patient Protection and Affordable Care Act on March 23, 2010. Members of the House had passed it 219 to 212. Most of its parts started in January 2014. Lawmakers in many states opened Medicaid to more adults with low incomes, and people could buy insurance on new insurance marketplaces, websites where people compare plans and sign up. By 2016, about 20 to 24 million more people had insurance, and the share without it had fallen by about half.

The Census Bureau reported on September 15, 2026, that 26.7 million people, or 7.9 percent, had no insurance for the whole of 2025. That is about 1 person in 13. Census Bureau staff changed their survey questions in 2013, so the 2010 and 2025 counts were not measured in exactly the same way.

New Medicaid rules. President Donald Trump signed a budget law with new rules for keeping Medicaid on July 4, 2025. From 2027, adults who got Medicaid when their state widened it under the Affordable Care Act must show 80 hours a month of work or similar activity to keep it. They can instead show a reason they are excused. In July 2025 staff of the Congressional Budget Office, which estimates the cost of laws for Congress, estimated that 10 million more people would have no insurance in 2034 because of the law.

Extra federal help with the price of marketplace insurance ended after 2025. In 2026, sign-ups fell by more than a million, to 23.1 million, the health research group KFF reported. The average monthly payment rose from $113 to $178.

Rural hospitals have closed too. Since 2005, 197 rural hospitals have closed or stopped keeping patients overnight, by the December 2025 count of the Sheps Center at the University of North Carolina.

COVID-19, 2020 to 2026

COVID-19 is an illness caused by a coronavirus. It spreads when an infected person breathes out droplets and tiny particles that carry the virus. It causes fever, cough, shortness of breath and loss of taste or smell. In severe cases the person has trouble breathing and pain or pressure in the chest, becomes confused, and the lips or skin turn pale, gray or blue.

The first case in the United States was confirmed in a laboratory on January 20, 2020. On March 11, 2020, officials of the World Health Organization declared a pandemic, a disease spreading around the world. FDA officials allowed the first vaccine on December 11, 2020. Recorded deaths in the United States passed 500,000 on February 21, 2021, and 1 million on May 12, 2022. The federal health emergency ended in May 2023.

The CDC's early count, as of September 24, 2026, is 1,245,791 COVID-19 deaths from 2020 to September 19, 2026. The year with the most deaths was 2021, with 463,267. In 2025 there were 20,682. These early counts rise as late death records come in.

For American Indian and Alaska Native people, life expectancy fell from 71.8 years in 2019 to 65.2 in 2021. That was a drop of 6.6 years, federal health officials who count births and deaths reported in 2022, and it brought them to the same life expectancy that all Americans had in 1944. COVID-19, accidents and liver disease caused most of that drop.

Sandra Lindsay

Who: A nurse who led the intensive care nurses at a hospital in Queens through the pandemic, and was the first American outside a vaccine trial to get a COVID-19 vaccine.

When and where: Long Island Jewish Medical Center, Queens, New York, 2020 and 2021. She came from Jamaica.

She got the first COVID-19 vaccine given outside a trial.

Sandra Lindsay got that shot on Monday, December 14, 2020, the first given in the United States outside a trial. She directed the nurses who cared for the sickest COVID-19 patients at Long Island Jewish Medical Center in Queens, New York.

She had questions about the vaccine at first. She did her own research and listened to experts before she decided. "We needed a more powerful tool," she said.

During the pandemic her aunt died, and she could not be with her mother. Her grandson Avery was born too soon, in March 2020, and spent about four and a half months in a hospital unit for newborns. Lindsay could not sleep or focus, and she began to meditate.

President Joe Biden gave her the Outstanding Citizen By Choice award, which honors immigrants who became citizens, on July 2, 2021. Her hospital scrubs and her ID badge went to the Smithsonian's National Museum of American History.

Opioids and overdose deaths, 1999 to 2026

Opioids include strong painkillers such as oxycodone and fentanyl, and the illegal drug heroin. Too much of one slows a person's breathing, and the person can die. Fentanyl is 50 to 100 times stronger than morphine. A drug called naloxone reverses an overdose if someone gives it quickly.

The CDC describes three waves of deaths. The first came from pain pills, after doctors in the 1990s began writing more prescriptions, or written orders, for opioids. The second came from heroin, from 2010. The third came from fentanyl made illegally, from 2013. From 1999 to 2023, about 806,000 Americans died of opioid overdoses, the CDC counted in 2026.

Guilty pleas. Purdue Pharma, the maker of the pain pill OxyContin, pleaded guilty in 2007 to misleading the public about how easily people became addicted to it. It paid $600 million. Three of its leaders, Michael Friedman, Howard Udell and Paul Goldenheim, pleaded guilty too. Purdue pleaded guilty to federal crimes again in 2020.

Fifty-five attorneys general, the top lawyers of state and territory governments, joined a $7.4 billion settlement with Purdue and the Sackler family, who owned it, on June 16, 2025. In the settlement, Purdue and the Sacklers agreed to pay money to end lawsuits against them.

FDA officials approved a naloxone nasal spray for sale in stores without a doctor's order on March 29, 2023. Overdose deaths from all drugs peaked at about 112,000 in the 12 months ending August 2023. The CDC's early count for the 12 months ending April 2026 is about 67,000. About 42,000 of those deaths involved opioids.

Smoking, measles and vaccines, 2006 to 2026

US District Judge Gladys Kessler ruled on August 17, 2006, that the big tobacco companies had cheated the public. In her words, they had "defrauded the American people by lying for decades about the health risks of smoking and their marketing to children." Smoking and breathing other people's smoke still kill more than 480,000 Americans a year, by the CDC's count last updated in 2024. That is nearly 1 of every 5 deaths in the country.

Measles is a disease caused by a virus. It spreads through the air when an infected person coughs or sneezes, and a person can catch it in a room up to 2 hours after the sick person has left, CDC doctors write. It starts with a high fever, a cough and red, watery eyes, and then a rash spreads down from the face.

As many as 1 of every 20 children with measles gets pneumonia, the most common way measles kills young children. About 1 child in 1,000 gets a swelling of the brain.

Measles had stopped spreading nonstop inside the United States for at least a year by 2000, which health officials call elimination. In 2025 there were 2,289 confirmed cases and 3 deaths, by the CDC's count. In an early count of 2,144 of those cases, 93 of every 100 were in people who had not been vaccinated. In 2026, by September 24, the CDC had counted 3,659 cases and 1 death.

The vaccine panel. Robert F. Kennedy Jr., the Secretary of Health and Human Services, removed all 17 members of the panel of experts that advises the CDC on vaccines on June 9, 2025. He wrote that the panel had become "little more than a rubber stamp for any vaccine," meaning a panel that approved every vaccine it was shown. Leaders of the American Medical Association said the move "upends a transparent process that has saved countless lives," meaning it threw out an open way of deciding about vaccines.

The last of the Tuskegee men

The last man from the Tuskegee study died in January 2004. The last widow in the benefit program died in January 2009. CDC officials report that 10 of the men's children receive medical care through the program.

THE THREE QUESTIONS, ANSWERED

1. **Why did new diseases kill so many Native people after 1492?** The crowd diseases, such as smallpox and measles, had never reached the Americas, so nobody here was immune and a whole town could fall sick at once. Smallpox killed about half of the Cherokee in 1738 and 1739.
2. **How did Americans learn to stop smallpox, yellow fever and polio?** Boston doctors tried inoculation in 1721, using a method Onesimus described, and safer vaccination followed in 1800. Army doctors proved in 1900 that mosquitoes spread yellow fever, and after the Salk and Sabin vaccines the last polio case caught inside the country came in 1979.
3. **Who was used in medical experiments without agreeing, and what changed because of it?** Enslaved women operated on by J. Marion Sims, the Black men of the Tuskegee study, prisoners and patients in Guatemala, and children at Willowbrook. After the Tuskegee study became public, members of Congress passed the National Research Act in 1974, and researchers in a federally paid study on people must now get each person's informed consent.

What changed: At the start of this chapter nobody knew what caused disease, and by its end doctors could prevent polio and measles with vaccines and edit the genes in a patient's own cells.

FIVE DATES TO KEEP

1721: Boston doctors inoculate against smallpox.

1900: Army doctors near Havana prove that mosquitoes spread yellow fever.

1932: Public Health Service doctors begin the Tuskegee study.

1955: The polio vaccine is shown to work and approved for use.

2020: COVID-19 reaches the United States.

NOT KNOWN: Nobody knows how many people lived north of Mexico in 1492, so nobody knows how many died of the new diseases.

Where to go: Elizabeth Phillips's gravestone, in the Phipps Street Burying Ground in Charlestown, Massachusetts, says she "brought into this world above 3000 Children."

Next: Chapter 27, Disasters and Rescue. It follows fires, floods, storms and other sudden disasters, and what people changed after them.

Chapter 27: Disasters and Rescue

CHAPTER 27 OF 37 · DISASTERS AND RESCUE · 10 ERAS · ABOUT 130 MINUTES

Fires, floods, storms and earthquakes strike suddenly, but people's choices decided how many died and who got help, and most safety rules came only after the deaths.

The South Fork Dam stood 69 feet high, 14 miles up the valley from Johnstown, Pennsylvania. It belonged to a club of rich Pittsburgh men. Their workers lowered its top by as much as 3 feet for a carriage road, and screened the channel that let extra water out, to keep the club's fish in. On May 31, 1889, after the heaviest rain ever recorded there, the dam broke and the flood killed 2,208 people. In court, two club members who were lawyers called it an "act of God," and the survivors lost.

This chapter follows sudden disasters in order, from a volcano in Oregon about 7,700 years ago to a flood in the Texas Hill Country in 2025. Each era has three things to look for. The first is the choice someone made before the disaster: a town built of wood, a locked door, a warning nobody passed on. The second is who got help afterward, and who was made to do the work or left to wait. The third is the rule that came after, from Boston's first fire wardens in 1711 to the smell put into natural gas in 1937.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. What rules did Americans make after disasters, and did they work?
2. Was anyone punished when people's choices killed others?
3. Did everyone get the same help after a disaster?

Five minutes? Read "The Triangle fire, March 25, 1911" in 1900 to 1950.

Can skip: "Fire insurance, 1752", "Hurricanes and the war on the Gulf Coast, 1779 and 1780", "Black Sunday, April 14, 1935". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 5 MINUTES

Sandals woven from sagebrush bark lay under the ash of an Oregon volcano for thousands of years, and they show that people lived through this land's disasters long before anyone wrote one down. Those people belonged to Native nations. When ash buried their fields or the rain stopped for decades, many of them moved away. What is known comes from layers of ash, from the growth rings of old trees, and from the accounts the nations told to each new generation.

Two volcanoes

Mount Mazama is a volcano in the Cascade Range of southern Oregon, about 60 miles north of the California line. About 7,700 years ago it erupted, and its top fell in. The eruption lasted only a few days. Scientists estimate that it was more than forty times as powerful as the eruption of Mount St. Helens in 1980. Its ash fell as far away as what is now central Alberta, in Canada.

Over several hundred years, rain and snow filled much of the hole that the collapse left behind. The water became Crater Lake. It is 1,943 feet deep, the deepest lake in the United States. In the Klamath language its name is *giiwas*.

The sandals. People had lived in the region for about 1,500 years or more before the eruption. In 1938 Luther Cressman, an archaeologist who studied the past from the things people left behind, dug in Fort Rock Cave, in Lake County, Oregon. Under a layer of ash from Mount Mazama, he found dozens of sandals woven from sagebrush bark.

Radiocarbon dating, a test that measures how much of one kind of carbon is left in something that was once alive, later showed that the sandals were more than 9,000 years old. Sandals of the same kind from half a dozen sites date from between about 10,500 and 9,100 years ago. The families who wore them lived there long before the mountain erupted.

The Klamath Tribes say that they have lived in the Klamath Basin for 13,000 years. They tell the eruption as a battle between Llao, chief of the Below World, and Skell, chief of the Above World. In their account, Llao attacked the people with fire after a chief's daughter refused him. Skell defended the people, and two holy men gave up their lives. Skell drove Llao back into Mount Mazama, the mountain fell in, and water filled the basin.

Sunset Crater. A second volcano, Sunset Crater, near what is now Flagstaff, Arizona, erupted around the year 1085. Scientists fixed the date from chemical changes in the growth rings of trees that were alive then. Ash fell on land 12 to 15 miles away and buried people's homes. Crops cannot grow in ash deeper than about 6 to 8 inches.

The Sinagua farmers who lived closest to the volcano were ancestors of today's Pueblo peoples. National Park Service scientists think they had to leave their fields because of the eruption and move farther away. Where the ash lay thin, it worked as a mulch, a covering that keeps soil from drying out, and crops there grew better. No record counts any dead. The people of the area told stories of the eruption, and those stories are still told today.

How do tree rings show a drought?

A tree adds one ring of new wood each year, and in a year of drought, with too little rain for crops, the ring is thin. Scientists read those rings in very old trees and wooden beams to find out which years were dry.

The rings show that the Colorado Plateau, in the dry Southwest, had too little rain from about 1130 to 1180. From 1140 to 1162 there were 23 dry years in a row. Susan Ryan, a researcher at the Crow Canyon Archaeological Center in Colorado, calls it the greatest drought recorded for North America. The Colorado River carried less water in the middle 1100s than at any other time in the past 1,200 years.

At Chaco Canyon, in present-day New Mexico, builders had stopped putting up the large stone buildings called great houses by about 1130. In the decades after that, the people of the Chaco towns moved away.

The Great Drought. A second drought, called the Great Drought, lasted from 1276 to 1299. Ryan found it less severe than the drought of the 1100s. By about 1300 the Pueblo people of the Mesa Verde region, in present-day southwestern Colorado, had moved south. They went to the Rio Grande valley, to Zuni and Acoma, and to the Hopi mesas, where rain came more reliably.

Archaeologists at Crow Canyon count the drought as one cause of that move among several. Other causes on their list are changes in how the communities got along, how they were ruled and how they made a living. In their view, the drought probably caused food shortages in a region crowded with people, and the hard times that followed may have led to quarrels and fighting.

Attackers killed at least 41 people at Castle Rock Pueblo and at least 8 at Sand Canyon Pueblo around 1280. Both places are in the Mesa Verde region. Kristin Kuckelman and two other scientists studied the skeletons. They found that someone had cut the bodies apart and broken, crushed and burned the bones, during or after the fighting. They also found signs that people probably ate human flesh there. No evidence shows who the attackers were, or who cut up the dead.

A fault under the northwest coast

The outer layer of the earth is broken into huge slabs called plates. Off the coast of present-day Washington, Oregon and northern California, one plate slides under another. The line where they meet is a fault, a crack in the earth's crust where the rock on each side can move. Scientists call this one the Cascadia Subduction Zone, from subduction, one plate sliding down under another.

When the rock along a fault moves suddenly, the ground shakes. Scientists have found signs of 19 great earthquakes on this fault in the last 10,000 years. The most recent one struck in January 1700.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 7 MINUTES

A hurricane in Pensacola Bay sank six Spanish ships in 1559 with the food for 1,500 colonists still on board. Spanish and English colonists of the 1500s wrote down the disasters they lived through, and this storm is one of them.

Two kinds of disaster hit the colonists hardest. Hurricanes, huge storms that form over warm ocean water with winds that spin in a circle, sank their ships and flooded their towns. Droughts left the colonists and their Native neighbors short of corn, and hungry colonists went looking for food in Native towns.

A hurricane wrecks a colony, 1559

A hurricane in September 1559 sank most of the ships of the largest Spanish colony yet sent to the Southeast. Nearly all of the colony's food went down with them. The colonists had landed on August 15, 1559, at Pensacola Bay in present-day Florida. The Native name of the bay was Ochuse. They came from Veracruz, in Mexico, on 11 ships, towing a 12th, smaller ship behind them.

About 1,500 people made the voyage. They included an army of 500 soldiers and about 200 Aztec warriors and craftsmen from Mexico City. Servants, enslaved Africans, and some wives and children came too. For five weeks they unloaded people and tools and began building a town on high, flat ground above the bay. They left the food for all 1,500 people on board the ships, because they thought it was safer there than on land.

The storm. One of the 11 ships, a galleon, had already sailed back to Mexico in late August or early September. On the night of September 19 to 20, 1559, a hurricane came into the bay. It sank six ships and pushed a seventh a short way onto the land. Three of the 11 ships came through the storm, and the small towed ship later carried supplies on relief voyages. The people who drowned were mostly the sailors and passengers still on board. No record gives their number.

After the storm the colonists did not have enough to eat. One ship came from Havana, in Cuba, with supplies soon after the hurricane. Relief ships from Mexico came after that, one every five to seven months. The colonists sent about 200 men inland to look for towns with food to spare. The men found a large town called Nanipacana, on the Alabama River in present-day central Alabama. Its people left before the Spaniards arrived. As they went, they destroyed the food they had stored.

Many colonists grew sick and died from lack of food. Native people attacked and killed others, and the records do not state which Native people they were. The colonists shipped many survivors back to Mexico. By September 1560, 362 people were left at the bay, and another 200 were far inland.

A new commander, Ángel de Villafañe, arrived in April 1561. He took most of the roughly 150 settlers still at the bay to Havana. Two small ships of his fleet later sank in another storm off Cape Hatteras, with everyone aboard. The last Spanish soldiers left the bay in August 1561. In February 1562 the viceroy, the Spanish king's governor in Mexico, gave up the colony.

Tristán de Luna y Arellano

Who: A Spanish noble and soldier who led the colony at Pensacola Bay when the hurricane of 1559 destroyed its ships and food.

When and where: Pensacola Bay, Florida, and the Alabama River, 1559 to 1561.

Luna ordered his hungry soldiers to march, and every one refused.

Tristán de Luna y Arellano led the colony at Pensacola Bay. It was the largest Spanish attempt up to that time to settle the Southeast, and the one with the most money behind it. Years before, Luna had marched with the Spanish explorer Coronado.

Looking for food. From February to June 1560, Luna moved most of his people inland to Nanipacana, the town the first search party had found. In April he sent a second group of 200 men, under Mateo del Sauz, farther north to look for food. They went to Coosa, a chiefdom, a group of towns under one head chief, in present-day northwestern Georgia. They stayed there until November.

The refusal. Luna ordered 100 soldiers and 50 servants to march to Coosa in late summer 1560, on short rations, meaning with less food than they needed. All of his soldiers refused, and the march never took place.

When Ángel de Villafañe arrived at the bay with a small fleet in early April 1561, he dismissed Luna and ordered him back to Spain. Luna died in New Spain, the Spanish colony in Mexico, on September 16, 1573.

The droughts behind the Lost Colony

Tree rings from old bald cypress trees on the border of Virginia and North Carolina show two long droughts in the 1500s. A team of scientists led by David Stahle published the record in 1998. The first drought lasted from 1562 to 1571 and was worst from 1565 to 1569.

A Spanish priest in the Chesapeake Bay region, Father Juan Batista de Segura, wrote about it in September 1570. He wrote that the region had gone six years with too little corn and wild fruit, with hunger, death and dry soil.

The driest years. From 1587 to 1589 came the driest three years in the whole 800-year record. English colonists on Roanoke Island, in present-day North Carolina, disappeared during those years. They are known as the Lost Colony. The Stahle team counts the drought as one of several causes of the colony's end. An earlier English colony on Roanoke had come in wetter years, 1585 and 1586. Only 4 of its 108 people died.

The Croatan people were allies of the English colonists, and in 1587 their crops were poor. That same year the people of the town of Dasemunkepeuc killed George Howe, an adviser to the English governor, John White. They spoke an Algonquian language, one of a large family of Native languages along the coast.

They killed Howe in revenge. Men under Ralph Lane, leader of the earlier colony, had attacked and killed their leader, Wingina, in June 1586. After Howe's death the people of Dasemunkepeuc left their town.

The wrong people. John White led his soldiers in an attack on Dasemunkepeuc before daylight on August 8, 1587. The people they found there were Croatan, who had come to the empty town looking for food. White's men killed one of them and wounded many before they saw their mistake. The Stahle team links the killing to the drought, because hunger had brought the Croatan to the empty town.

St. Augustine burns and floods

St. Augustine, in present-day Florida, was burned, raided or flooded again and again in its first 35 years. Spanish soldiers and colonists founded it in 1565 at Seloy, a town of the Timucua people. The Timucua were tired of the Spaniards living in their town. In 1566 Timucua warriors shot flaming arrows at the fort. On April 1, 1566, the fort was half burned, and all its supplies were lost. The records do not state whether the arrows started that fire.

Thirty-five hard years. The colonists moved the town across the bay to Anastasia Island that year. In 1570 soldiers there rose against their officers and destroyed the fort. The sea was washing away the rebuilt fort by 1572. Native people attacked the town in 1577 and burned many houses. Then, in 1586, the English privateer Francis Drake, a ship captain who raided enemy ships and towns with his own government's permission, burned the whole town and its fort with his men.

A fire swept through the town in March 1599. It was built of wood, with roofs of thatch, meaning dried plants. In September of the same year a hurricane flooded the buildings that the townspeople had not yet repaired.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 8 MINUTES

Of the 104 English colonists who landed at Jamestown in 1607, only 38 were alive a year later. The English colonies of the 1600s were that small, and one drought or one storm could kill a large share of the people in them.

Colonists built their towns mostly of wood, so a fire in one house could spread to the next. After two big fires, Boston's leaders bought a fire engine from England and ordered new buildings made of brick, with roofs of slate or tile. Governors and ordinary colonists wrote down what they lived through, in letters and journals full of detail.

Jamestown: drought and a hurricane

English colonists landed at Jamestown, in present-day Virginia, in April 1607. They built their fort inside Tsenacomoco, the land of the Powhatan people. Tsenacomoco was a paramount chiefdom, a group of many towns and chiefs under one head chief. Its head chief was Powhatan.

Chapter 26, Health, Disease, and Medicine, tells how salty river water, sickness and hunger killed most of the first colonists. Tree rings show that the colonists arrived during the driest seven years in 770 years, from 1606 to 1612. The drought hit the Powhatan towns as well as the English.

The relief fleet. The leaders of the Virginia Company of London, the business that ran the colony, sent nine ships and about 600 people to Jamestown on June 2, 1609, with farm animals and enough food to last a year. It was the largest English fleet yet to sail west.

A hurricane struck the fleet on July 24, 1609, about seven days from land. It drove the lead ship, the *Sea Venture*, away from the others. The ship began to leak so badly that one passenger wrote, "we almost drowned within."

The *Sea Venture* reached Bermuda, an island in the Atlantic. All 150 people on board got ashore, among them the colony's new governor, Sir Thomas Gates. Before the ship sank, the crew saved many of the supplies. The castaways

stayed on Bermuda for ten months and built two small ships, the *Patience* and the *Deliverance*. The playwright William Shakespeare drew partly on their story for his play *The Tempest*.

The other eight ships reached Jamestown in late August 1609. Many passengers were sick, and the crews had thrown many of their supplies overboard in the storm.

Why Jamestown starved, 1609 to 1610

Most of the people at Jamestown starved to death in the winter of 1609 to 1610, the winter called the Starving Time. The colonists had not farmed, hunted or fished to feed themselves. They lived on supplies from England and on food they bargained for from the Powhatan people, or often stole from them. In the drought the Powhatan towns had little food to spare.

The killing began on both sides in the autumn of 1609. The colonist Francis West cut off the heads of two warriors of the Patawomeck people while he was trading with them. In November 1609 warriors ambushed a party of colonists led by John Ratcliffe at Orapax. They tortured Ratcliffe to death. That same month Powhatan ordered his people to surround Jamestown and cut off its food.

How many died. Counts of the colonists differ. The historian Martha McCartney counts 240 people at Jamestown at the start of the winter. Other counts record about 500 in the colony. By May 1610 about 60 were alive. Some survivors dug up and ate the bodies of dead colonists and of Native people the colonists had killed.

The *Sea Venture* castaways reached Jamestown in their two small ships on May 24, 1610. Gates decided to give up the colony and sail home with the survivors. On the river they met Thomas West, Lord De La Warr, an English nobleman. He was bringing a year's supply of food, and everyone went back to Jamestown. Between 1607 and 1625, the company's leaders sent about 6,000 people to Jamestown. About 4,800 of them died.

The Great Colonial Hurricane, August 1635

A hurricane struck New England on August 15, 1635. The English then used an older calendar that ran ten days behind the one used today. By today's calendar the date was August 25. William Bradford, the longtime governor of Plymouth Colony, wrote that no one living there, "either English or Indeans, ever saw" a storm like it (*Indeans* is his spelling of Indians).

South of Plymouth the sea rose more than 20 feet above its normal height. Bradford wrote that many Native people climbed into trees to escape the water. No record gives the number of Native people who drowned. The wind blew down houses and, in Bradford's words, "many hundered thowsands of trees." The worst of the storm lasted five or six hours.

The same storm wrecked the *Angel Gabriel*, a ship full of English settlers, at Pemaquid, in present-day Maine. Three or four passengers and one sailor died. Off Cape Ann, in Massachusetts, it wrecked a small boat carrying two families.

Anthony Thacher

Who: An English colonist who survived the wreck of a small boat in the hurricane of 1635 and described it in a letter to his brother Peter.

When and where: Off Cape Ann, Massachusetts Bay Colony, August 11 to 15, 1635.

Of 23 people on the boat, only he and his wife lived.

Anthony Thacher wrote down what happened in a letter to his brother Peter, a few days after the wreck. On August 11, 1635, Thacher and his wife, Elizabeth, and their family left Ipswich, in Massachusetts, for the town of Marblehead. With them went his cousin John Avery, a minister, and Avery's family. The people of Marblehead had asked Avery to be their minister, and they sent a pinnace, a small sailing ship, to carry the two families.

Thacher's letter lists 23 people on board: 11 in Avery's family, 7 in his own, a man named William Elliot, and four sailors.

On the rock. At about 10 on the night of August 14, the wind split the pinnace's old sails. Before daylight the hurricane struck. The anchor dragged along the bottom, and the storm drove the boat onto the rocks of a small island. A wave threw Thacher onto a rock with his oldest daughter, Mary. His cousin Avery and Avery's oldest son joined them there.

The next wave broke the boat to pieces. It carried his wife toward the shore on a piece of the deck. All the others still on board drowned. Thacher's letter names four of his children who died. They were his oldest daughter Mary, his son William, his daughter Edith, and baby Peter, whom Edith was holding in her arms.

Another wave swept the four on the rock into the sea: Thacher, Mary, Avery and Avery's son. Thacher was in the water for at least a quarter of an hour before he crawled ashore.

On the island. He and his wife found a knapsack with a flint, a piece of steel for striking sparks from it, and dry gunpowder. They also found a drowned goat, two cheeses, some butter, a hat and his son William's coat. He struck a fire and they cooked some of the goat. They had only salty water to drink. He found the body of Avery's oldest daughter on the shore. She is buried on the island.

On the following Monday a passing boat picked them up. Thacher named the island "Thatchers Woe" and the rock "Avery's Fall." On September 3, 1635, the colony's lawmakers, meeting as the Massachusetts General Court, voted him 40 marks, an English unit of money, from the treasury toward his losses. In March 1637 they gave him the island. It is still called Thacher Island.

An earthquake, 1638

An earthquake shook New England on about June 1, 1638, by the old calendar. Bradford wrote that people heard it before they felt it. He compared the sound to faraway thunder. Dishes rattled and fell from shelves. People outdoors could not stand without holding on to posts. Native people felt it inland, and ships along the coast shook.

How strong. Scientists at Boston College's Weston Observatory estimate the 1638 earthquake at about magnitude 6.5, on the scale scientists use for an earthquake's strength. Each step up the scale, such as from 6 to 7, means the ground moves about ten times as far, and the quake lets out about 32 times as much energy.

The scientists think it was centered in central New Hampshire, but the few reports of the time make that uncertain. People felt the aftershocks, smaller quakes that follow a large one, for 20 days. No deaths were recorded.

Bradford wrote that the shaking looked like a sign that God was displeased. He added that for years afterward the summers were not warm enough for the corn to ripen well. He left the cause, in his words, "to naturallists to judge," meaning people who study nature.

Boston burns, and the town buys a fire engine

A fire in Boston on January 14, 1653, destroyed many buildings and killed three children. After it, town officials hired the owner of a water engine, a pump that sprays water, to bring it to fires. They bought six long ladders, four strong iron hooks and fire buckets. They required every property owner to keep a ladder and a swab pole, a long pole with a mop on the end for putting out sparks on roofs.

A fire in Boston's North End destroyed 45 buildings on November 27, 1676. Among them were several warehouses, the North Meeting House, a church, and the home of its minister, Increase Mather.

The first paid firefighters. Town officials brought a fire engine from England in 1678 and hired men to run it. A Boston Public Library guide calls them the first paid fire department in what is now the United States. Officials also made a law that roofs be slate or tile and walls be brick. Large fires burned parts of Boston again in 1679, 1682 and 1691.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 9 MINUTES

Every member of Philadelphia's Union Fire Company kept six leather buckets ready for the next fire. In these fifty years townspeople began to organize against the fires that kept burning their wooden towns. In 1722 about two-thirds of Boston's nearly 3,000 houses were built of wood. Boston got its first fire wardens after a fire in 1711, and neighbors in Boston and Philadelphia formed fire companies.

When a fire came, the help and the blame did not fall evenly. After Charleston burned in 1740, most of the money from London went to rich merchants. After a string of fires in New York in 1741, officials blamed enslaved Black people and poor white people and put at least 30 people to death. On the coasts, an earthquake in 1700 sent a tsunami across the Pacific to Japan, and a hurricane in 1715 wrecked a Spanish treasure fleet off Florida.

How Japan's records dated the Cascadia earthquake, 1700

The Cascadia fault broke along about 620 miles of the Pacific coast at about 9 at night on January 26, 1700. The break ran from Vancouver Island, in present-day Canada, to northern California. Scientists at the Pacific Northwest Seismic Network call it one of the largest earthquakes known anywhere in the world. They put its size at about magnitude 9.

The coast dropped when the fault broke. Salt water flooded forests of cedar trees that had grown above the reach of the tides. The salt water killed the trees. Their dead trunks, called ghost forests, still stand along rivers and bays in Washington and Oregon.

The waves in Japan. The earthquake also set off a tsunami, a series of huge waves that can cross a whole ocean. The waves reached Japan the next day. At Miyako the water destroyed 13 houses, and a fire afterward burned 20 more. Near Nakaminato the waves drove a ship carrying rice onto rocks, and two sailors died.

The Japanese records describe the waves but no shaking. In 1996 scientists used those Japanese records to work out the day and the hour of the earthquake. Tree rings from the ghost forests confirmed the year.

No one counted the dead on the American coast. The Native nations there had no written records then. In their accounts, whole villages were lost. The Makah, in present-day Washington, tell of a great earthquake at night. The Quileute tell of a flood that carried canoes far inland. Archaeologists have found Native villages on the coasts of Washington and Oregon that sank, flooded and were left empty after 1700.

The raised water. Annie Miner Peterson, a Coos woman from Oregon, told what her grandfather had seen. Melville Jacobs, a scholar who was writing down Coos stories, recorded her words in 1933. Her grandfather had seen an old woman who survived the "raised water."

When the old woman was a girl, the water had left her hanging high in a tree. She tied her pack line, the rope she used to carry loads, to a branch to climb down, and she fell. The fall broke her back, and she had a humped back for the

rest of her life. Scientists who studied the account date the flood she described to between 1690 and 1805.

A hurricane sinks the Spanish treasure fleet, 1715

A hurricane drove eleven Spanish treasure ships onto the reefs of Florida's east coast early on July 31, 1715. At least 1,000 people died. The fleet of twelve ships had left Havana, in Cuba, a few days before, bound for Spain. The 1715 Fleet Society gives the day it sailed as July 24, and a NOAA writer gives July 27.

The eleven Spanish ships carried silver and gold from Spain's colonies in the Americas. They were wrecked along the coast from present-day Fort Pierce to Wabasso, north of Vero Beach. The twelfth ship, the French *Grifon*, escaped, because its captain had sailed farther from shore.

The count. About 2,500 people were on board the fleet. Scientists at NOAA, the US government's ocean and weather agency, count about 1,000 dead. The 1715 Fleet Society, a group that studies the wrecks, says well over 1,000. Spanish records from Cuba state about 1,500. The fleet's commander, Juan Esteban de Ubilla, was among the dead.

The survivors camped on the beach in the land of the Ais people. The Ais lived along the coast from Cape Canaveral to the Indian River. On August 6, Admiral Francisco Salmón sent the pilot Nicolás de India and 18 men in a small boat to Havana for help. They reached it 11 days later.

Ships from Havana and from St. Augustine brought emergency supplies, officials, soldiers and tools for salvage, which means bringing up goods from a wreck. By late October 1715 the salvagers had raised more than 5 million pieces of eight, the silver coins of Spain.

A man the records call Captain Barrett came for the silver too. Ned Grant was an enslaved man, and his enslaver hired him out to Barrett. Barrett took Grant to the wrecks to work as a diver.

The pirates. The pirates Henry Jennings and John Wills attacked the Spanish salvage camp in the winter of 1715 to 1716. The 1715 Fleet Society dates the raid to early January 1716 and says the pirates took about 120,000 pieces

of eight. Other accounts put the raid in December 1715, name the pirate Charles Vane beside Jennings, and give the haul as about 87,500 pounds in English money.

Boston's first fire wardens, 1711

Boston's fire of 1711 began in a building of rented rooms off Cornhill on the evening of October 2. A Scottish woman named Mary Morse was working there with oakum, old rope fiber picked apart and used to seal the seams of ships. A flame nearby set it on fire.

By 2 in the morning the fire had burned about 100 buildings. Among them were the Town House, where the colony's government met, and the town's first meeting house, a building used as a church. The fire left 110 families without homes.

Four sailors climbed the meeting house steeple to save its bell. The roof fell in, and they died. Other people died when they went too close to the fire. Still others died in gunpowder blasts, because people fighting the fire blew up houses in its path so that it would have nothing to burn. The full count of the dead is not known.

After the fire. Members of Boston's churches raised 700 pounds, in English money, for the families who lost their homes. A few months after the fire, 12 men became Boston's first board of fire wardens. Each was in charge of the firefighting tools in one part of the town. Bostonians rebuilt the Town House and the meeting house in brick. The new Town House is known today as the Old State House.

Charleston: a hurricane in 1700 and a fire in 1740

A hurricane struck Charleston, South Carolina, on September 3, 1700. It knocked down thousands of trees and dozens of buildings. The Scottish ship *Rising Sun* sank at anchor. It carried people from a failed Scottish colony at Darien, in Panama. About 100 people on board drowned, including the captain.

A fire broke out in Charleston at 2 in the afternoon on November 18, 1740. A strong wind from the northwest carried burning pieces across the town. In less than a day the fire destroyed more than 300 houses and shops and several docks. The officers and crews of British navy ships in the harbor pulled down and blew up houses to stop it. The records that survive do not say whether anyone died.

Lieutenant Governor William Bull ordered every townsman to fight the fire, "by themselves and slaves." Townsmen were to send the people they enslaved to fight it as well. He called out the militia, the colony's armed citizens, to stop people from stealing from the ruins.

Who got the money. Most of the help from London after the fire went to the rich. Officials in London promised 20,000 pounds, in the king's name, for the people "most affected." They paid it out by the size of each person's losses, so most of it went to wealthy merchants, whose losses were large. Poorer people depended on gifts and loans from the vestry, the governing board of St. Philip's Church.

Mary Bedon, an innkeeper with three children, and Catharine Joor, a shopkeeper, lost their businesses in the fire and opened again in rented houses. By February 1741 the two women needed aid from the St. Philip's vestry to get through the winter.

New York, 1741: fires and blame

Thirteen fires broke out in lower Manhattan in March and April 1741. The first, in March, burned the governor's house and its chapel inside Fort George. Accounts give its date as March 8 or March 18. New York officials claimed that enslaved Black people and poor white people had plotted together to burn the city. A witness named Mary Burton told the court that the fires were such a plot.

Three judges, James De Lancey, Daniel Horsmanden and Frederick Philipse, tried about 200 people. Officials burned 13 Black men alive at the stake, which means they tied each man to a post and set a fire around him. They hanged 17 Black men and 4 white people, two men and two women. Counts of the people put to death range from 30 to 34. Officials shipped 70 to 84 more people to the Caribbean islands to be sold into slavery there.

Historians disagree about whether any plot existed. Judge Horsmanden had offered Mary Burton, a young servant bound to a tavern keeper, an end to her years of service and a reward in money. Other enslaved witnesses spoke after they were promised their lives. Two of the men burned at the stake, Quack and Cuffee, had no lawyers at their trial. Chapter 24, Slavery and Freedom, tells the trials in full.

An earthquake in New England, 1727

An earthquake shook New England at about 10:40 on the night of October 29, 1727. By today's calendar the date was November 10. Scientists at the Weston Observatory estimate it at about magnitude 5.6. At Newbury, Massachusetts, it knocked down many stone walls and the tops of almost all the chimneys.

Some solid ground turned to mud, and some marshes dried up. People felt it from Maine to the Delaware River, and smaller shocks went on for months. The records that survive show no one badly hurt.

What the ministers said. In Boston the minister Cotton Mather heard "a horrid rumbling like the noise of many coaches." Ministers in New England preached that God had sent the earthquake to show his anger. Writers blamed it on sins such as swearing and failing to keep the Sabbath, the day of rest. Towns such as Medford, Massachusetts, held a day of fasting, when people went without food and prayed.

John Barnard, a minister at Marblehead, came to a different view. He decided that the surface of the earth had moved because of shocks deep underground.

Who came when a house caught fire?

In Boston, groups of neighbors formed mutual fire societies. Members promised to help save one another's houses, and only those. On December 7, 1736, Benjamin Franklin and about 25 other men in Philadelphia signed the articles, or rules, of the Union Fire Company. Every Union member kept six leather buckets for water and two linen bags for carrying goods out of burning houses. They promised to come to every fire in the town, not only to the houses of members.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 8 MINUTES

Massachusetts lawmakers voted 3,000 pounds in 1760 for the Boston families whose homes had burned, and lawmakers in Pennsylvania and New York sent money too. Help after a disaster was starting to come from public money that lawmakers voted, and not only from churches and neighbors.

Philadelphians started a company to insure houses against fire in 1752. After big fires, officials in Boston and New Orleans ordered new buildings made of brick. During the Revolutionary War, hurricanes sank Spanish warships and troop ships on the Gulf Coast, and a fire burned a large part of New York while British troops held it.

Charleston under water, 1752

A hurricane pushed the sea more than 10 feet above the normal high-water mark at Charleston, South Carolina, on the morning of September 15, 1752. The water covered the whole town. People fled to the upper floors of their houses. Before 11 o'clock nearly every ship in the harbor had been thrown onto land. Only one, the British warship *Hornet*, rode out the storm.

About 500 buildings were destroyed. No one kept an exact count of the dead. Many people drowned, and others died when houses fell apart around them. A second storm on September 30 ruined crops and killed farm animals. Officials then limited how much corn, peas and rice could be shipped out of the colony, to keep food prices down.

Fire insurance, 1752

Benjamin Franklin organized the Philadelphia Contributionship, a fire insurance company, in Philadelphia in 1752. Under fire insurance, many owners each pay a small amount into a shared fund, and the company that keeps the fund pays any owner whose house burns. The Contributionship's inspectors looked at each house before insuring it. They set the price by how likely the house was to burn. Insured houses carried a sign showing four hands.

Owners who insured with the Contributionship had to remove the trees from their land, because trees got in the way of firefighters. A rival company, the Mutual Assurance Company, let its customers keep their trees. People called it the Green Tree.

The Cape Ann earthquake, 1755

An earthquake centered in the ocean about 25 miles off Cape Ann, Massachusetts, shook New England at about 4:30 in the morning on November 18, 1755. Scientists estimate it at about magnitude 6.2. In Boston the shaking lasted more than a minute. It threw down about 100 chimneys and damaged as many as 1,500 more. Some church steeples were left leaning. People felt it from Nova Scotia, in present-day Canada, to South Carolina. No deaths were recorded in the Boston area.

The argument. After the quake, a Boston minister and a Harvard professor argued in public over what had caused it. Seventeen days before the Cape Ann quake, a large earthquake had struck Lisbon, in Portugal. New England ministers held prayer services, and officials named days of fasting. Writers in New England published at least 27 sermons (talks given in church), poems and accounts about earthquakes after the one at Cape Ann.

The Boston minister Thomas Prince wrote that Boston had more lightning rods, metal rods on buildings that carry lightning into the ground, than any other New England town. He argued that the rods had drawn electricity into the ground and made the shaking worse. John Winthrop, a professor at Harvard College, answered him in lectures. He said that heat and gases deep in the earth had caused the earthquake.

Boston burns, and other colonies send help, 1760

A fire started in a house on Cornhill in Boston at about 2 in the morning on March 20, 1760. No one ever found the cause. The fire burned 349 buildings, 174 of them homes. It left 220 families, more than 1,000 people, without homes. No one was killed. A Boston Public Library guide describes it as the worst fire in the American colonies up to that time.

Lawmakers in Massachusetts voted 3,000 pounds for the families who lost their homes. Lawmakers in Pennsylvania and New York voted to send money too. People in Nova Scotia raised money for Boston, and people as far away as London sent gifts. Afterward Massachusetts lawmakers passed a law that any building more than 7 feet high had to be made of brick or slate.

Fires in wartime: New York, 1776, and Charleston, 1778

British troops under General William Howe took New York City in September 1776, during the Revolutionary War. On the night of September 20, a fire broke out near the southern tip of Manhattan. Accounts differ on the exact spot. John Joseph Henry, an American prisoner on a British ship, said it began in the Fighting Cocks Tavern, near Whitehall Slip.

Dry weather and strong winds spread the fire north and west. By morning it had burned between 400 and 1,000 buildings. That was between one tenth and one quarter of the city. Trinity Church burned.

Killed without a trial. British commanders blamed rebel arsonists, people who set fires on purpose. British soldiers and sailors killed a few men they suspected of setting the fire. They killed them on the spot, without a trial. The records do not give the men's names or an exact number. British officers questioned more than 200 suspects and charged none of them.

Historians still disagree about how the fire started. The historian Barnet Schecter found that no accusation of arson holds up. The historian Benjamin Carp argued in 2023 that rebels most likely set the fire on purpose. Gene Procknow, who reviewed Carp's book, wrote that Carp's evidence is not strong enough to prove it for certain.

Charleston, 1778. In Charleston, people found a fire in a bakery at 4 in the morning on January 15, 1778. By noon it had destroyed more than 250 houses and killed six people, both Black and white. People who had lost their homes got beds and food in the city's public buildings, paid for with public money. The next day South Carolina's lawmakers, meeting as the General Assembly, voted 20,000 pounds to help them.

Hurricanes and the war on the Gulf Coast, 1779 and 1780

Spain's leaders joined the war against Britain on June 21, 1779. That year Bernardo de Gálvez, the Spanish governor of Louisiana, was getting ships ready to attack the British fort at Baton Rouge. A hurricane destroyed the ships in less than three hours. Gálvez had to put off his attack for ten days.

Another hurricane struck a Spanish fleet of 64 ships under Admiral José Solano on October 20, 1780. The fleet was carrying Gálvez and 4,000 soldiers from Havana to attack the British town of Pensacola, in Florida. An unknown number of the ships sank. A NOAA writer counts half of the soldiers, about 2,000, as lost. The NOAA account does not say how many of them drowned. The attack on Pensacola did not go ahead that year.

A different storm that same month crossed the islands of the Caribbean. It is called the Great Hurricane of 1780. About 22,000 people died in the Lesser Antilles, the chain of small islands at the eastern edge of the Caribbean, from October 10 to 16. The storm also struck Puerto Rico. Scientists at NOAA count 1780 as the deadliest Atlantic hurricane season on record.

Why New Orleans was rebuilt in brick

New Orleans was a Spanish town in 1788. On March 21 of that year, a fire started at about 1:30 in the afternoon in the house of Vicente José Núñez, the army treasurer. That day was Good Friday, the Christian holy day before Easter. Church bells were the town's fire alarm, but the priests refused to let the bells ring on Good Friday. The fire burned 856 of the town's 1,100 buildings. Governor Esteban Miró set up tents for the people who lost their homes.

Another fire burned 212 more buildings on December 8, 1794. Spanish officials then required new buildings to be built with thick brick walls. Builders rebuilt the town in brick, with courtyards and iron balconies.

Charleston, 1796

A fire started in Lodge Alley in Charleston on the afternoon of June 13, 1796, and burned until nearly dawn. It burned the buildings on more than 250 lots and left at least 300 families without homes. A committee of church leaders and town leaders handed out the money that other townspeople gave, according to what each family needed. The fire reached the roof of St. Philip's Church. An enslaved man named Will climbed up and saved it.

Will

Who: An enslaved man in Charleston who put out the fire on the roof of St. Philip's Church, and whom the church's leaders then bought and freed.

When and where: Charleston, South Carolina, June to September 1796.

The church's leaders bought him for $707.14, then set him free.

Will put out the fire on the bell tower of St. Philip's Church during the Charleston fire of June 13 to 14, 1796. He climbed to the very top of the tower and tore off the burning wooden shingles of its roof. In 1854 the writer Charles Fraser wrote that he did it "at the risk of his life."

Will was enslaved by Charles Lining. Lining was a member of the vestry, the board that ran St. Philip's Church. On August 14, 1796, two months after the fire, the vestry's members voted to reward Will by making him free.

The next month they bought Will from Charles Lining for $707.14. Then they freed him with a deed of manumission, a legal paper that freed an enslaved person.

The vestry's records include only his first name. A later history of the church describes the man who saved it as a Black boatman.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 11 MINUTES

All four boilers of the steamboat *Moselle* burst at once near Cincinnati in April 1838, and about 150 people died. Between 1800 and 1850, steam engines brought a new kind of sudden death to the country's rivers and lakes. Boilers exploded, and the steamboat *Erie* burned on Lake Erie. In 1838 members of Congress passed the first federal law, a law for the whole country, to inspect steamboats, but no federal officer enforced it.

Earthquakes, a city fire and a tornado killed hundreds more people. After the New Madrid earthquakes of 1811 and 1812, members of Congress voted to give land to people whose farms the quakes had ruined. Most Missourians came to believe that speculators who moved fast got most of the benefit.

The New Madrid earthquakes, 1811 and 1812

Three strong earthquakes shook the middle Mississippi Valley in the winter of 1811 to 1812. They are named for New Madrid, Missouri, the largest town on the Mississippi River between St. Louis and Natchez. The first struck northeast Arkansas at about 2:15 in the morning on December 16, 1811. The others came on January 23 and February 7, 1812.

Experts at the U.S. Geological Survey estimate these quakes at about magnitude 7.3 to 7.5, on the scale scientists use for an earthquake's strength. The seismologist Susan Hough, a scientist who studies earthquakes, has argued that they were closer to magnitude 7.0.

The shaking threw down log cabins and chimneys as far away as Cincinnati and St. Louis. The first quake woke people in New York City, Washington, D.C., and Charleston, South Carolina. The Encyclopedia of Arkansas states that the shaking rang church bells in Boston. No story about it appeared in Boston's newspapers of the time. Susan Hough thinks the story began with bells that rang in Charleston, South Carolina, and that someone mixed up Charleston with Charlestown, a part of Boston.

The river. On the Mississippi River, high banks and whole islands fell into the water. Huge waves sank boats or threw them onto the shore. The river ran backward. Most accounts say it did so for a few minutes, and others say for up to three days.

Land sank near the St. Francis River in Arkansas. In the northwest corner of Tennessee the ground sank and formed Reelfoot Lake, about 18 miles long and 5 miles wide. Aftershocks, the smaller quakes that follow a large one, went on into 1816.

Reports of the time counted fewer than 100 deaths on land. No one counted the dead on the river or in the Native towns of the region. The historian William E. Foley writes that recent scholars believe the real number of deaths was far higher. Groups of Cherokee people who had already moved west from their homelands farmed along the St. Francis River. The earthquakes ruined their land. They left their farms and cattle and moved west again, where the Osage people living there resisted them.

Who got the land. Missouri was then a territory, land that belonged to the country but was not yet a state. In 1814 its governor, William Clark, and two other leaders asked Congress for help. In February 1815 members of Congress passed a law for people whose land the quakes had ruined. Each owner could claim the same amount of public land somewhere else, up to 640 acres. It was one of the country's earliest laws to help people after a disaster.

Speculators, people who buy things cheaply to sell them later for a profit, learned of the law first. In the spring of 1815 they hurried to New Madrid. They bought the ruined land at low prices from owners who had not yet heard of the law. Most Missourians came to believe that the speculators got most of the benefit. The records do not identify them by name.

Fire in the cold: New York, 1835

A gas pipe burst in New York's business district on the night of December 16, 1835. A coal stove lit the gas. The temperature that night fell as low as 17 degrees below zero. The rivers were frozen. Firefighters cut holes in the ice to reach water, and the water froze again in their hoses. They had fought two large fires two days before, and the city's water tanks were nearly empty.

The fire burned 17 blocks and between 530 and 700 buildings in New York's business district. Two people died. At about 3 in the morning, U.S. Marines and sailors brought gunpowder from the Brooklyn Navy Yard. They blew up buildings in the fire's path so that it had nothing left to burn. The damage came to about 20 million dollars. Twenty-three of New York's 26 insurance companies went out of business. The people who investigated the fire blamed no one.

Why steamboat boilers exploded, 1838

A steamboat's boiler is a large metal tank where a fire turns water into steam to drive the engine. A boiler can burst if the steam pressure grows too high. It can also burst if the water inside runs low and someone then lets cold water in on the hot metal.

All four boilers of the steamboat *Moselle* burst at once on April 25, 1838, as it pulled away from a landing just east of Cincinnati. The captain, Isaac Perin, had kept the boilers at full steam during the stop, to impress people watching from shore. Many witnesses said he was racing another boat, the *Ben Franklin*. The blast threw Perin onto the riverbank and killed him.

A committee of Cincinnati citizens met the next day. Its members counted at least 280 passengers on board and estimated about 150 dead. Later accounts give 160.

The *Pulaski*. The steamship *Pulaski* ran between Savannah, Georgia, and Baltimore, Maryland. On June 14, 1838, it left Charleston, South Carolina, for Baltimore. At about 11 that night, about 40 miles off the coast of North Carolina, its starboard boiler, the one on the ship's right side, exploded. The ship broke in two and sank in about 45 minutes.

About 128 people died, and 59 were saved. The records of the numbers do not agree. One record lists 168 people on board, 37 crew and 131 passengers. Yet 128 dead and 59 saved add up to 187.

Investigators at the end of 1838 found that the engineers had run the boilers wrongly. An account written with the help of two survivors identifies the cause. The second engineer let the water boil away in the boiler and then let a full load of cold water in on the hot copper. The account does not include his name.

Families on the *Pulaski* brought enslaved people with them. The passenger list does not name them. It puts the word "servant" after the family's name. The list also names three Black women, Jenny, Priscilla and Sallie Middleton, and does not say whether they were enslaved or free. The records do not say how many enslaved people died.

Rebecca Lamar

Who: A survivor of the *Pulaski* explosion who lived on a floating piece of the wreck from Thursday night until the next Tuesday, and later wrote down what happened.
When and where: Off the coast of North Carolina, June 14 to 19, 1838.

She tore her dress into squares to cool the children's heads.

Rebecca Lamar survived on a floating piece of the *Pulaski* from Thursday night, June 14, until the next Tuesday, and later wrote down what happened there. She was traveling north with her brother, the Savannah banker Gazaway Bugg Lamar. With them were his wife, Jane, and their six children. Another niece of hers was also on board. Her brother owned shares in the ship.

The explosion woke her in her cabin. Her bed had jammed the door, so she began to climb out through the small window above it. Her brother put her and a niece into a small boat. A moment later something struck her, and she was in the sea. She caught hold of a piece of wood and pulled

herself onto a floating section of the ship. Her niece Martha and her nephew Charles reached her there. A stranger brought her nephew Thomas to her.

On the wreck. The people on that section of the wreck had almost no food or water. They saved the wine and peppermint for the children. Rebecca Lamar tore strips from her dress into squares. She wet them and laid them on the children's heads during the day, to keep the children from getting thirsty. On the second day six men who could swim took the best small boat to row for help. Her brother was one of them. They reached the beach 40 miles above Wilmington, North Carolina.

People on the wreck died one by one. A man named Mr. Brown drank sea water. In a storm a woman named Mrs. Woart died, and a wave carried off her body and her husband, the Reverend Woart. Two men became delirious, which means confused and out of their minds, and walked into the sea.

A man named Mr. Smith set off on a raft he had built and was never heard from again. On the Monday night her nephew Thomas died in her lap.

The third search. On the following Tuesday the schooner *Henry Cameron*, a sailing ship with two masts or more, under Captain Eli Davis, found them. The *Pulaski*'s sailing master, the officer in charge of sailing the ship, Captain Pearson, was already on board, rescued from another piece of the wreck. That group numbered 23 people in all. He asked Davis three times to search for more survivors. The third search found Rebecca Lamar's group.

Her brother's wife, five of their six children and a niece died. Her brother and his son Charles, age 14, lived. Charles later led the investors who paid for the ship *Wanderer* to smuggle captive Africans into Georgia in 1858. Chapter 24, Slavery and Freedom, tells that voyage.

> Rebecca Lamar later married Hugh McLeod. She wrote her account of the wreck without planning to publish it. The *Georgia Historical Quarterly* later printed it.

A safety law no one enforced, 1838

Members of Congress passed a law "to provide better security of the lives of passengers" on steamboats on July 7, 1838. It was the first federal law that required steamboats to be inspected. Under it, federal judges named engineers as inspectors. The inspectors checked each boat and gave the owner two certificates, signed papers the owner needed to get a license to run the boat. Owners paid 5 dollars for each inspection, repeated every 6 or 12 months.

No one to enforce it. No federal officer enforced the law. Only a person who sued the owner in court could make an owner obey it. After 1838 steamboat disasters came more often and killed more people.

A tornado at Natchez, 1840

A tornado, a spinning column of wind that reaches down from a storm cloud to the ground, struck the Mississippi River at Natchez, Mississippi, at about 1 in the afternoon on May 7, 1840. It struck Vidalia, Louisiana, across the river, too. At the Natchez landing it threw 116 of the 120 flatboats into the river. Flatboats were large, flat-bottomed boats that carried farm goods and people downriver, and their crews and passengers drowned.

At least 317 people died, 269 of them on the river and 48 on land. The courthouse at Vidalia fell and killed Judge Keeton. Many bodies were never identified. By that count it is the second deadliest tornado in the country's history.

Left out of the count. The count of 317 leaves out the enslaved people killed on plantations in Louisiana. P. M. Lapice reported that on his plantation below Vidalia the tornado blew down all the houses of the enslaved workers. Four or five people were killed outright. About twenty were badly hurt, and some of them had wounds so bad that they were dying.

The *Mississippi Free Trader*, a Natchez newspaper, printed reports of hundreds of enslaved people killed on plantations up to 20 miles away, but no one made an exact count.

After the storm Stephen Duncan, a planter, the owner of a large farm worked by enslaved people, paid to turn the Tremont House hotel into a hospital. Doctors and several thousand dollars came from New Orleans. Other slaveholders in the area sent large groups of enslaved people to clear the ruins and pull out the bodies.

The steamboat Erie burns, 1841

The steamboat *Erie* carried passengers between Buffalo, New York, and Chicago. On the evening of August 9, 1841, it left Buffalo with about 340 people on board. The boat had just been painted and varnished.

A group of six painters, hired by William G. Miller of Buffalo, planned to ride only to the first stop, in Pennsylvania. They had left jugs of paint, varnish and turpentine, a paint thinner that burns easily, on the deck, near the boiler's vent pipe. That spot on the deck had caught fire three times before.

At about 8 p.m., off Silver Creek, New York, on Lake Erie, the turpentine exploded. Fire spread over the freshly painted boat within seconds. Two of the lifeboats turned over. The third carried the captain, Thomas Jefferson Titus, and four others. At 10 p.m. the crew of another steamboat, the *DeWitt Clinton*, arrived and pulled survivors from the lake. Fewer than 100 people were saved. The first counts put the dead at about 170. Later counts found as many as 254. All six painters died.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 17 MINUTES

More than 2,000 Union soldiers were crowded onto the steamboat *Sultana*, built to carry 376, in April 1865. Its sinking, the Peshtigo fire and the Johnstown Flood each killed more than 1,000 people. They are still the country's deadliest shipwreck, deadliest wildfire and deadliest dam failure. After the *Sultana* and Johnstown, survivors and investigators blamed named men, and no court punished any of them.

In the same years Americans built groups whose job was to warn people of danger or to help them afterward. Under a law of 1870, Army soldiers took on the job of warning people about storms. Clara Barton founded the American Red Cross in 1881.

What the Steamboat Act of 1852 changed

Steamboat explosions and fires went on after the law of 1838. From 1847 to 1852, boiler explosions caused a long run of disasters. On August 30, 1852, members of Congress passed a stronger law, the Steamboat Act. Under it, officials of the Treasury Department enforced the rules through supervising inspectors, who were in charge of the local inspectors. Under the old law, only a lawsuit could make an owner obey.

Inspectors had to test every boiler by filling it with water under pressure, to see whether it leaked or burst before it was used with steam. Owners had to fit each boiler with a safety valve, a part that lets steam out before the pressure gets too high. Pilots and engineers had to earn a license from the inspectors. The law left out freight boats, ferries and tugboats. A law of 1871 covered all steam vessels and their crews.

The Sultana, 1865: 2,000 men on a boat built for 376

The worst shipwreck in the country's history happened on the Mississippi River in April 1865, just as the Civil War was ending. The steamboat *Sultana* was built to carry 376 passengers. At Vicksburg, Mississippi, Union Army officers crowded more than 2,000 Union soldiers onto it. Most of the soldiers had just been freed from Confederate prison camps at Cahaba, Alabama, and Andersonville, Georgia.

The deal. Army officials paid boat owners for each soldier they carried home. They paid 2 dollars and 75 cents for each enlisted soldier, meaning one who was not an officer, and 8 dollars for each officer. Captain Reuben Hatch was the Army's chief quartermaster, or supply officer, at Vicksburg. He offered the *Sultana*'s captain, J. Cass Mason, a full load of about 1,000 soldiers. In return Hatch wanted a kickback, a secret payment for the favor.

One of the boat's boilers was leaking. Mason had it patched instead of making the longer repairs a full fix would take. Captain George Williams, the officer in charge of loading, put every man at the Vicksburg parole camp, where freed prisoners waited to go home, on board. He believed there were fewer than 1,500.

The explosion. The boilers exploded at about 2 in the morning on April 27, 1865, about seven miles north of Memphis, Tennessee. The boat caught fire. Investigators blamed low water in the boilers while the overloaded boat leaned to one side, along with the patched boiler. Men who were thrown into the river floated past Memphis in the dark.

Crews of other steamboats and of U.S. Navy ships pulled survivors from the water. On the Arkansas shore, the Fogelman family tied logs into a raft and took 25 soldiers off the burning boat. Franklin Hardin Barton, a Confederate soldier of the 23rd Arkansas Cavalry, was among the rescuers. The *Sultana* burned and sank at about 7 a.m.

Almost everyone on board was a Union soldier. Counts of the dead range from about 1,100 to about 1,800. General William Hoffman investigated for the Army and counted 1,238 in May 1865. Officials of the Customs Service, who

kept records of ships, counted 1,547. The researcher Jerry Potter estimates about 1,800. About 200 of the men pulled out alive later died of their burns. Mason and most of the boat's officers died.

No one punished. Captain Frederic Speed of the Army was tried and found guilty of overcrowding the boat. The Army's top lawyer, the Judge Advocate General, overturned the verdict. He found that Speed had spent the whole day at the camp and had not put a single soldier on board. Hatch quit the Army and refused three orders to come and testify. No one was punished.

Fire on October 8, 1871: Chicago and Peshtigo

On the evening of October 8, 1871, two fires began that together killed well over a thousand people. The smaller one burned the city of Chicago. The larger one burned the forests and towns of northeastern Wisconsin and Michigan's Upper Peninsula.

The Chicago fire started at about 8:30 p.m. in or near a small barn that belonged to Catherine O'Leary's family. More than two-thirds of the buildings in Chicago were made entirely of wood, and most had roofs of tar or wooden shingles, which burn easily. Only 1 inch of rain had fallen since early July. Strong winds from the southwest carried burning pieces toward the center of the city.

The fire burned until October 10. It destroyed about 17,500 buildings over more than 3 square miles and left 90,000 to 100,000 people without homes. Searchers found 120 bodies. The county coroner, the official who looks into deaths, said that an exact count was impossible. The death toll may have been as high as 300.

The cow story. A newspaper reporter, Michael Ahern, wrote that Catherine O'Leary's cow and a lantern had started the fire. She was a poor Irish Catholic immigrant, which made her an easy person to blame. In 1893 Ahern admitted that he had made the story up. In 1997 the members of the Chicago City Council voted to clear her name. The historian Richard Bales has suggested that a man named Daniel Sullivan started the fire.

Mayor Roswell B. Mason put the city under martial law, rule by the army, and placed General Philip Sheridan in charge from October 11 to 24. He also gave a private charity, the Chicago Relief and Aid Society, control of the relief. Donors in New York City gave $450,000 and donors in St. Louis $300,000. Money came from London too.

Peshtigo. The fire in Wisconsin began with people who were clearing forest for farms and railroads. They set small fires to burn away the brush. On October 8 a cold front, the edge of a large mass of cold air, moved east and made the wind stronger, and the wind joined several of those fires into one.

It burned about 1.2 million acres. It destroyed Peshtigo, Wisconsin, a town of about 1,700 people, and 16 other towns. People jumped into the Peshtigo River, into wells and into other water nearby to escape the flames. Some drowned, and others died of cold in the water.

The fire burned the town's records, so no one knows exactly how many people died. Estimates run from 1,200 to 2,400. In 1873 a report to Wisconsin's lawmakers listed 1,182 names of people who died or went missing. More than 350 bodies were buried in one grave, because no one was left alive who could name them. It is the deadliest wildfire in the country's recorded history.

Peshtigo stood on forest land that had belonged to the Menominee Nation. Henry Dodge, the governor of Wisconsin Territory, signed a treaty, a written agreement between nations, with the Menominee in 1836, at a place called The Cedars, on the Fox River. Under the Treaty of the Cedars, the Menominee handed over about 4 million acres to the United States, and United States officials agreed to pay $700,000. Loggers and white settlers then moved onto the land.

The Red Cross, 1881, and an earthquake in Charleston, 1886

Clara Barton and a group of supporters founded the American Red Cross in Washington, D.C., on May 21, 1881. On September 5, 1881, forest fires burned more than a million acres in the Thumb, the part of Michigan shaped like a thumb. The fires killed 282 people and left thousands without homes. Red Cross workers sent money, clothes and furniture to about 14,000 people in need there. It was the Red Cross's first disaster relief.

An earthquake of about magnitude 7 shook Charleston, South Carolina, at about 9:50 on the night of August 31, 1886. It killed 60 people and damaged about 2,000 buildings. Most of the damage, 81 percent of it, was to brick buildings. Wooden buildings were damaged much less than brick ones.

Storm warnings and the blizzards of 1888

President Ulysses S. Grant signed a law on February 9, 1870, that started a national weather service inside the Army's Signal Service, the branch that handled signals and telegraph messages. The law required the Secretary of War to have weather readings taken and to send notice of coming storms, by telegraph and signals, to the northern lakes and the seacoast.

The Schoolchildren's Blizzard. A blizzard, a snowstorm with very strong wind and bitter cold, struck the northern Great Plains without warning on January 12, 1888. The morning had been warm, near 50 degrees. In Huron, Dakota Territory, many children left for school without winter coats. About 235 people died in Dakota Territory, Nebraska, Minnesota and Iowa, by one count. Other estimates range from 250 to 500, and some go as high as 1,000. People call it the Schoolchildren's Blizzard.

Near Ord, Nebraska, the wind tore the door and the roof off the schoolhouse of Minnie Freeman, a teacher of 19. The schoolhouse was made of sod, blocks of earth held together by grass roots. Freeman tied her students together with twine and carried the youngest in her arms. She led them to a farmhouse about half a mile away, and all of them lived.

In Plainview, Nebraska, the teacher Loie May Royce tried to lead three students to her home, less than 90 yards from the school. The wind-driven snow blinded them, and they lost their way. Searchers found them the next morning. The three children were dead. Royce's arms and legs were frostbitten, which means the cold had frozen and damaged the flesh.

In Turner County, in present-day South Dakota, five boys were found dead four days after the storm. They were John Albrecht, Peter Graber, and Henry, John and Elias Kaufman.

A new Weather Bureau. Another blizzard struck the Northeast in March 1888 and killed about 400 people. Forecasters of the Signal Service had predicted brisk winds and rain, then fair weather. After the two storms, members of Congress passed a law on October 1, 1890. Under it, weather forecasting moved from the Army to a new Weather Bureau in the Department of Agriculture. The bureau's forecasters were civilians, people who were not in the army.

Who weakened the Johnstown dam?

The dam that broke above Johnstown, Pennsylvania, belonged to a private club of wealthy Pittsburgh men. The changes they made had weakened it. The South Fork Dam was 69 feet high and held back a lake 14 miles up the valley from Johnstown. Henry Clay Frick led a group of Pittsburgh businessmen who bought the lake for the South Fork Fishing and Hunting Club. The club had more than fifty members, most of them steel, coal and railroad owners.

Workers the club hired lowered the top of the dam by as much as 3 feet to make room for a road for carriages. They put a screen across the spillway, the channel that lets extra water out, to keep the club's fish in the lake. Someone had removed the pipes at the bottom of the dam, which could let water out, before the club bought it, and club members never replaced them. The club's members had no way to lower the lake in an emergency.

May 31, 1889. The heaviest rain ever recorded in that part of the country fell on western Pennsylvania on May 30 and 31. Army weather officers estimated 6 to 10 inches in 24 hours. The dam broke in the afternoon of May 31, 1889.

Earlier that day the club's president, Elias Unger, had twice sent a man named Parke on horseback to a telegraph office to warn Johnstown. The people who received the warnings did not pass them on to the town's leaders, because there had been many false alarms before.

The water rushed down the valley. The railroad engineer John Hess drove his engine backward toward East Conemaugh with the whistle blowing the whole way. His warning saved many people. At the Stone Bridge in Johnstown, the wreckage piled up against the bridge and caught fire. At least 80 people died there, and the fire burned for three days.

The dead. The flood killed 2,208 people. The first count was 2,209, until Leroy Temple, counted among the dead, turned up alive eleven years later. Ninety-nine whole families died. National Park Service staff count 396 children under the age of 10 among the dead. Of all the dead, 777 were never identified.

Who was left. The flood left 124 women and 198 men widowed. It left 98 children orphaned, and by the Park Service's count 568 children lost one or both parents.

Who paid. The American Society of Civil Engineers, a group of engineers, released a report in 1891. It stated that the dam would have failed even if the club had kept it as first built. The group's president in 1890, William Shinn, had been a business partner of Andrew Carnegie. The report was kept from the public for two years. The authors of a study published in 2016 found that the club's changes cut the amount of water the dam could safely let out by half.

Survivors sued the club. Two of its members, the lawyers Philander Knox and James Hay Reed, defended it in court. They argued that the flood was an "act of God," a natural event that no person could be blamed for. The survivors lost, and no one ever paid them for their losses. Frick and about half of the club's members gave money to help the survivors. Andrew Carnegie built the town a new library.

Victor Heiser

Who: A 16-year-old who rode the Johnstown Flood on a barn roof, lost both his parents, and later became a doctor.

When and where: Johnstown, Pennsylvania, May 31, 1889.

From a barn roof he watched his house crushed at 4:20 p.m.

Victor Heiser was 16 when the Johnstown Flood destroyed his home and killed his parents. As the river rose that afternoon, his father sent him to the barn to untie the horses. He heard what he called a "dreadful roar." He looked back and saw his parents at a window of the house. His father waved at him to climb onto the barn roof.

From the roof he saw his house "crushed like an eggshell." He noted the time: 4:20 p.m. The barn floated away with him on its roof. When it was about to hit a neighbor's house, he jumped onto that house. It began to fall in, and he fell back onto the barn roof. The water carried him down to the Stone Bridge.

He spent the night in a house with 19 other people. The next day he went looking for his parents. He tried to help people trapped in the burning wreckage at the bridge. For two weeks he searched among the bodies of the dead. He found the body of his mother, Mathilde Heiser. He was never able to identify his father, George.

Heiser later studied at Jefferson Medical College and became a doctor. He worked in many countries against diseases such as leprosy, cholera and malaria. In 1936 he told his story in a book, *An American Doctor's Odyssey*.

The Sea Islands hurricane, 1893

A hurricane came ashore near Savannah, Georgia, on August 27, 1893, and drove the sea over the low Sea Islands of South Carolina. Between 1,000 and 2,000 people died, most of them drowned. Most people on the islands were Black. On St. Helena Island about 6,000 Black people lived, and most of them owned their land. Many of their houses stood no more than 2 feet above the ground.

Who got the food. Red Cross workers arrived on October 1, more than a month after the storm, and ran a relief effort for 10 months. By the Red Cross's own count, Clara Barton's workers helped about 30,000 people left homeless by the storm, most of them Black. The historian Caroline Grego wrote about the relief work in 2019. She found that South Carolina politicians and newspaper writers pushed Red Cross leaders to send supplies to white farmers instead of to Black islanders. The Democratic Party leaders who ran the state government worked against the efforts of Black islanders to earn a steady living again.

In an online exhibit for the College of Charleston, Grego names some of the people involved. In March 1894 Eugene Gregorie, a white farmer at Pocotaligo, asked the politician William Elliott to tell Clara Barton that the free food the Red Cross handed out was hurting the white planters. Gregorie wrote that Black workers were refusing to work in the planters' fields while the Red Cross fed them, and he wanted the food stopped before planting time in May.

Black farmworkers on the rice plantations nearby sent seven petitions, written requests signed by many people, to Barton that spring. They wrote that they wanted to work, but the planters had little work to give and paid about 40 cents a day.

The *Columbia Daily Register* printed an article titled "Cursing the Red Cross!" in May 1894. It said that outside the towns of Beaufort and Port Royal, not a dozen white men in Beaufort County had a good word for the Red Cross. Governor Benjamin Tillman backed a collection of money for white farmers at Bluffton, after newspapers claimed that the Red Cross was discriminating against white sufferers.

Clara Barton

Who: The founder of the American Red Cross, who led its relief work after fires, floods and hurricanes.

When and where: Michigan, 1881. Johnstown, Pennsylvania, 1889. The South Carolina Sea Islands, 1893. Galveston, Texas, 1900.

Her house was built from the lumber of Johnstown's Red Cross buildings.

Chapter 26, Health, Disease, and Medicine, tells how Clara Barton carried supplies to Civil War battlefields and founded the American Red Cross. She led its relief work after disasters for more than 20 years.

She reached Johnstown on June 5, 1889, five days after the flood. She was 67. About 50 Red Cross workers came with her from Washington, D.C., and they stayed five months. Her workers built "Red Cross hotels" where people who had lost their homes could stay. Most of the people who rented rooms in them were merchants and businessmen. Red Cross workers gave out supplies worth $211,000 and helped about 25,000 people.

A separate Red Cross group from Philadelphia ran a hospital in Johnstown. The historian David McCullough wrote that Barton "spoke her mind once or twice" to the head of that group. Within a few days neither group would have anything to do with the other.

After the Sea Islands hurricane of 1893 she led the Red Cross relief on the islands. Her last relief work came after the Galveston hurricane of September 1900.

Her house in Glen Echo, Maryland, was built partly from lumber of the Red Cross buildings at Johnstown. She lived there from 1897 to 1912.

BY 1900

If you remember one thing: The deadliest shipwreck, wildfire and dam failure in the country's history all came in these fifty years, and no one was punished for the *Sultana* or for Johnstown.

- 1865: More than 2,000 freed Union prisoners crowd onto the *Sultana*, and between 1,100 and 1,800 of them die.
- 1871: The Peshtigo fire kills between 1,200 and 2,400 people on the same night that Chicago burns.
- 1889: The South Fork Dam breaks, and 2,208 people die in Johnstown.

Next: In September 1900 a hurricane flooded Galveston, Texas, and killed more people than any other natural disaster in the country's history.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 25 MINUTES

The Galveston hurricane of September 1900 killed between 6,000 and 12,000 people, more than any other natural disaster in the country's history. In the fifty years after it, many more people died because of choices other people made.

Witnesses said the owners of a New York blouse factory kept an exit door locked. Near Los Angeles the city's chief engineer and his assistant judged a leaking dam safe, and in Texas members of a school board piped waste gas into a school to save money. After the Triangle fire, the *Titanic*, the New London school explosion and the Cocoanut Grove fire, lawmakers wrote new safety rules for factories, ships, gas lines and nightclubs.

In three disasters, the people in charge treated Black survivors and Black victims worse than white ones. In Galveston, members of an armed militia forced Black workers at gunpoint to bury the dead. In the 1927 Mississippi flood, the local leaders who ran many relief camps gave supplies to white

people first and forced Black people to work. After the 1928 hurricane in Florida, officials saved the few coffins for white victims, and the bodies of Black victims were burned in piles or thrown into mass graves.

Galveston, September 8, 1900

A hurricane flooded Galveston, Texas, on September 8, 1900, and killed more people than any other natural disaster in the country's history. Galveston was a port city of about 38,000 people on an island in the Gulf of Mexico. At about 6:30 that evening, a storm wave put the city under as much as 15 feet of water. The highest water mark was 15.7 feet. The storm destroyed a third of the city, including between 2,636 and about 3,600 homes by different counts.

Between 6,000 and 8,000 people died in the city. Estimates for the whole island and the nearby coast run from 10,000 to 12,000. The *Galveston News* printed a list of 4,263 dead in early October, months before searchers found the last body.

Searchers found about 70 bodies a day during the first month. The last body was found on February 10, 1901. Galveston's leaders put the city under martial law, which means soldiers or armed guards take over from the police and courts. A volunteer militia, a group of armed citizens, patrolled the streets against looters, people who steal from damaged buildings. Some accounts say that men accused of looting were shot, but the records do not give their names or a count.

Forced at gunpoint. Too few volunteers came forward to handle the dead, so armed men rounded up other men at gunpoint or bayonet point to do it. The writer Elizabeth Blasius found that members of the volunteer militia did this, and that many of the men they forced were Black workers. About one fifth of the people of Galveston were Black. Even before the storm, the city's segregation rules, which kept people apart by race, kept Black Galvestonians from drinking at the public fountains or going to the public schools.

At first, workers loaded bodies onto barges, tied heavy rocks to them and dropped them into the Gulf. Days later, some of the bodies floated back to shore. After that, workers burned the dead in large fires. The fires burned into November.

Clara Barton, 78, arrived with Red Cross workers on September 17, nine days after the storm. Mayor Walter C. Jones led a Central Relief Committee that included the banker John Sealy. The committee's members spent its money on 483 new houses and on partial help toward 1,114 more.

The seawall. Afterward, workers built a seawall that stood 17 feet above the low-tide line. Its first section ran three and a half miles. Workers then raised the ground under the city by as much as 17 feet. They lifted about 2,000 buildings on jacks first. St. Patrick's Church, which weighed 3,000 tons, went up five feet.

Isaac Cline

Who: The chief of the U.S. Weather Bureau office in Galveston, whose pregnant wife died in the 1900 hurricane.
When and where: Galveston, Texas, September 8, 1900.

He had called a hurricane harming Galveston "a crazy idea."

Isaac Cline took charge of the Galveston weather office in 1889, when the Army's Signal Service still ran the country's weather service. The office passed to the new Weather Bureau in 1890, and his brother Joseph joined him there in 1892. Isaac wrote an article for the *Galveston Daily News* in 1891, nine years before the storm. In it he called the thought of a hurricane seriously harming Galveston "a crazy idea." Many people in the city had asked for a seawall. His article was one reason no seawall was built before the storm.

The flags. On September 8, 1900, water began flooding the low parts of the city. Around noon, Cline raised the hurricane warning flags without waiting for approval from the Weather Bureau's main office in Washington. Weather Bureau rules required that approval.

Cline later wrote that he drove a horse-drawn cart along the beach and warned people to leave. No eyewitness ever reported seeing him do it. The writer Erik Larson argued that Cline warned no one before his office sent out its official warning.

> Cline's wife, Cora, was pregnant with their fourth child, and she died in the storm. Cline nearly drowned. He saved his youngest daughter, Esther, who was 6. Joseph saved the two older girls, Allie May, 12, and Rosemary, 11.
>
> Cline moved to New Orleans in 1901. Between 1900 and 1924 he charted the paths of 16 storms.

San Francisco, 1906: the fire after the earthquake

Fire did most of the damage after the San Francisco earthquake of April 18, 1906. The earthquake struck at 5:12 in the morning. It had a magnitude, the number scientists use for an earthquake's strength, of about 7.9, and it shook the city for about 42 seconds. It broke gas pipes, and within three days more than 30 fires had spread across the city. Between 80 and 95 percent of the damage came from the fires.

Firefighters tried to blow up buildings with dynamite to make empty gaps the fire could not cross. They had no training with dynamite, and some of their blasts started new fires. The city's fire chief, Dennis T. Sullivan, had been hurt in the earthquake itself, when a building next door fell onto the fire station where he lived. He died four days later.

General Frederick Funston sent in Army soldiers. Some building owners set fire to their own damaged buildings, because their insurance paid for fire damage and not for earthquake damage.

More than 80 percent of the city was destroyed. Between 227,000 and 300,000 people lost their homes, out of about 410,000. The first counts of the dead ran from 375 to more than 500. Those counts left out hundreds of deaths in Chinatown that no one recorded. In 2005 the members of the Board of Supervisors, San Francisco's city lawmakers, voted to accept more than 3,000 as the official count. They voted for a written statement by the novelist James Dalessandro and the city historian Gladys Hansen.

On the day of the earthquake, Mayor Eugene Schmitz announced that he had given soldiers and police permission "to kill any and all persons found engaged in Looting or in the Commission of Any Other Crime." The records do not say how many people they killed. People also accused soldiers themselves of looting.

Chinatown. About 15,000 Chinese people lived in Chinatown, and they lost nearly everything. Even before the earthquake, some city officials had wanted to move the Chinese out of Chinatown to Hunters Point. After it, they tried to use the ruins to take Chinatown's land for business buildings.

The Chinese were the only group that officials kept apart in the camps for people who had lost their homes. Army officers moved the Chinese survivors to camps farther and farther from Chinatown. Most Chinese survivors left for Oakland, and only about 400 stayed in the city. The officials' plan to move Chinatown failed. Chinese residents rebuilt Chinatown.

Hugh Kwong Liang

Who: A 15-year-old in San Francisco's Chinatown who lived through the 1906 earthquake and fire.
When and where: San Francisco, April 1906.

He was 15, and the building across the street fell down.

Hugh Kwong Liang was 15 when the earthquake woke him in Chinatown. He is one of the few Chinese survivors whose own account of the earthquake has lasted to today. He remembered seeing "pieces of plaster falling down like water." He ran out into Washington Street, and the building across from his home fell down.

As the fire spread, city officials who were directing the people fleeing told him and his family to go to the open ground of the Presidio. The Presidio was an Army post by the Golden Gate, the entrance to San Francisco Bay. He remembered the moment he left: "I turned away from my dear old Chinatown for the last time."

> At the Presidio, Army officers kept the Chinese survivors apart from everyone else. They moved them from camp to camp. The last camp stood in a cold, windy corner of the Presidio near Fort Point.

The Triangle fire, March 25, 1911

A fire at the Triangle Waist Company in New York City killed 146 workers on March 25, 1911. Witnesses said the owners kept one of its exit doors locked. The company made women's blouses on the top three floors of the ten-story Asch Building. Most of its workers were young immigrant women, and many were teenagers. The youngest who died, Kate Leone and Rosaria Maltese, were 14.

The fire started on the eighth floor just before the 4:45 p.m. quitting time. Workers ran down the Greene Street stairs, crowded into the elevators, and climbed onto the one fire escape, which collapsed.

The locked door. On the ninth floor, the door to the Washington Place stairs would not open. Witnesses told the court that the owners, Max Blanck and Isaac Harris, kept it locked so workers could not leave with stolen blouses. Harris later admitted that all the blouses ever stolen were worth less than 25 dollars.

The firefighters' ladders reached only to the seventh floor. Workers trapped on the ninth floor could not get past the fire, and many jumped from the windows. A crowd in the street watched 62 people jump or fall to their deaths. Joseph Flecher, who worked in the company office, watched from the roof and saw his workers "hit the sidewalk spread out and still."

On the tenth floor, workers climbed to the roof. A law professor at New York University, Frank Sommer, and his students found ladders that painters had left and set them across to the school's roof. Workers climbed over them to safety.

The trial. Blanck and Harris were put on trial for manslaughter, the crime of killing a person without meaning to, through carelessness. Judge Crain told the jury it had to find that the owners knew the door was locked. On December

27, 1911, after less than two hours, the jury found them not guilty. One juror, Victor Steinman, said he believed the door was locked, "but we couldn't find them guilty unless we believed they knew the door was locked."

The families in 23 lawsuits against the building's owner settled on March 11, 1914, which means they agreed to take money and end the lawsuits. They got an average of 75 dollars for each life.

New York lawmakers set up a nine-member Factory Investigating Commission. From 1911 to 1914 they passed 36 new laws to change the state's rules for workplaces. A state law already in force at the time of the fire had required factory doors to open outward where possible and to stay unlocked during working hours.

Kate Alterman

Who: A worker who escaped the Triangle fire and told the jury how another worker, Margaret Schwartz, died at the locked door.
When and where: New York City, March 25, 1911, and the trial in December 1911.

With her coat turned inside out, she ran through the flames.

Kate Alterman saw another worker, Margaret Schwartz, catch fire at the locked Washington Place door, and she told the jury what she saw. Margaret died in the fire. Kate worked on the ninth floor. She had lived in Philadelphia for nine years, and she had been in New York and worked at the Triangle factory for four months.

When the fire reached the ninth floor, the two women ran to the Washington Place door. The manager's brother, whose last name was Bernstein, tried it and could not open it. Margaret tried next. Then Kate pulled the handle "in and out, all ways," and it still would not open.

Kate saw Margaret kneel down by the door. She saw the hem of Margaret's dress and the ends of her loose hair start to burn. Margaret screamed, "Open the door! Fire! I am lost, there is fire!"

> Kate turned her coat inside out and put it over her head with the fur against her face. She covered her head with a bunch of dresses. Then she ran out through the flames. "The whole door was a flame right to the roof," she said.
>
> **In court.** At the trial the prosecutor, Charles Bostwick, used her account to show that the locked door caused Margaret Schwartz's death. The owners' lawyer, Max Steuer, made her tell the story again and again. She used almost the same words each time. In this way Steuer made her story seem less believable without ever saying she was lying. She said she told it the same way "because he asked me the very same story over and over."

BY THE END OF 1911: Thousands had died in Galveston and San Francisco, a jury had found the Triangle owners not guilty, and New York lawmakers were writing new rules for the state's factories.

Ships: the Titanic, 1912, and the Eastland, 1915

The *Titanic* carried lifeboats for only some of the people on board, and United States senators blamed British officials for that. The *Titanic* was a British passenger ship. It hit an iceberg in the North Atlantic and sank on April 15, 1912. More than 1,500 passengers and crew died. The ship *Carpathia* picked up about 710 survivors.

The ship had too few lifeboats for everyone, but it met the rules of the British Board of Trade, the government office in charge of British ships. Senator William Alden Smith of Michigan led a Senate investigation. It began in New York on April 19, four days after the sinking. The senators found that Captain Edward Smith's "indifference to danger" was one of the direct causes of the deaths. They blamed the Board of Trade's officials for the missing lifeboats.

The senators called for ships to slow down near ice, to carry enough lifeboats for all on board, and to keep a radio operator on duty day and night. In March 1915, after the *Titanic* sinking, members of Congress passed the Seamen's Act, pushed by Senator Robert La Follette of Wisconsin.

The *Eastland*. The Great Lakes passenger ship *Eastland* rolled over on July 24, 1915, while it was tied to a dock in the Chicago River. It was taking workers of the Western Electric Company and their families to a company picnic in Indiana, and it had already filled to its limit of 2,500 passengers.

The ship had tipped badly before, including in 1906. Under the new law, its owners had added a full set of lifeboats so it could carry more people. That added weight may have made the ship more dangerous. At 7:28 a.m. it rolled onto its side and settled on the river bottom, only 20 feet down. In all, 844 people died. Many of the dead were immigrants, and 220 of them were Czech.

A deckhand, Peter Boyle, drowned while saving people. A nurse, Helen Repa, led much of the rescue work on shore. An Illinois grand jury, a group of citizens who decide whether there is enough evidence for a trial, charged the president of the steamship company and three other company officers with manslaughter. It charged the captain and the engineer with criminal carelessness.

No trial. The men were outside Illinois, and a federal court refused to send them there for trial. The court found "barely a scintilla of proof," meaning almost no evidence, because the four company officers had not been on the ship. None of the men was ever tried in Illinois.

Who was helped first in the 1927 flood?

About 637,000 people had to leave their homes in the Mississippi River flood of 1927. In the relief camps, local leaders gave supplies to white people first and forced Black people to work. In the spring the river broke through its levees, walls of earth built along a riverbank to hold the water in, in at least 145 places. Water covered 27,000 square miles, as deep as 30 feet. About 500 people died.

The dynamite. A group of New Orleans bankers arranged to set off about 30 tons of dynamite on the levee at Caernarvon, Louisiana, below their city, on April 29. They wanted to let the river out there to keep it from badly damaging New Orleans. The water flooded St. Bernard Parish and part of Plaquemines Parish, as Louisiana calls its counties. Blowing up the levee turned out to be unnecessary. The New Orleans businessmen never paid the people whose homes and land they flooded.

In the camps. About 325,000 people lived in relief camps, and 69 percent of them were Black. Near Greenville, Mississippi, more than 13,000 people escaped to the top of a levee that had held. Many of them were stranded there for days without food or clean water.

Local leaders from the countryside ran many of the camps. They gave supplies and boats to white people first, and Black people got what was left. A Black person got supplies only by giving the name of a white employer. Black people in the camps were forced to work and were not allowed to leave. The records do not name the camp leaders who gave these orders.

A white police officer ordered a Black man at gunpoint to unload a relief boat. The man refused, and the officer shot and killed him. The records do not give the name of the man who was killed.

Near Helena, Arkansas, a plantation overseer, the man who bossed the workers, tried to force a Black man, Owen Flemming, to rescue the plantation owner's mules. Flemming killed the overseer. Then he was lynched, which means he was killed by a mob without a trial. The records do not name the men who killed him.

Herbert Hoover, the Secretary of Commerce, led the national government's relief work. A group of Black leaders headed by Robert Russa Moton studied the camps and reported what was happening in them. Hoover asked that their reports be kept out of the newspapers, and they were. After the flood, members of Congress passed the Flood Control Act of 1928.

Two disasters of 1928: the St. Francis Dam and Lake Okeechobee

The St. Francis Dam in northern Los Angeles County broke just before midnight on March 12, 1928. That same day its builder had looked at a new leak and judged it safe.

William Mulholland was the chief engineer of the city's Bureau of Water Works and Supply. His workers had built the dam from 1924 to 1926. Leaks and cracks showed up in 1927 and 1928. That morning the dam keeper, Tony Harnischfeger, found a new leak. Mulholland and his assistant, Harvey Van Norman, looked at it and decided it was not dangerous.

The dam gave way at about 11:57 that night. Harnischfeger and his family were probably among the first people killed. The flood ran 54 miles to the Pacific Ocean and killed at least 431 people. Among them were 84 workers of the Southern California Edison company at a construction camp beside the river.

At the investigation afterward, the *Express* newspaper reported that Mulholland said, "the only ones I envy are those who are dead." The *Los Angeles Times* printed his words as "on an occasion like this I envy the dead."

The jury's finding. A coroner's jury, a group of citizens who decide how people died, ruled on the collapse on April 12, 1928. The jurors found an error in engineering judgment about the rock under the dam, and they put that blame on Mulholland's bureau and its chief engineer. They found a second error, in the rules meant to keep the public safe. They put that blame on the people the chief engineer answered to: the city's water and power commissioners, the lawmakers of the city and the state, and the public.

The jurors wrote that a great dam should never be left "to the sole judgment of one man, no matter how eminent," meaning no matter how famous and respected. They found no crime and recommended that no one be charged.

Mulholland's career as chief engineer ended after the dam broke.

Lake Okeechobee. Six months later, early on September 17, 1928, a hurricane came ashore near West Palm Beach, Florida. It had already killed 312 people in Puerto Rico. The storm pushed the water of Lake Okeechobee over the low dike, a bank of earth built to keep water back, at the lake's south end. Floods more than 20 feet deep covered the farm towns of Belle Glade, Canal Point, Chosen, Pahokee and South Bay.

At least 2,500 people died in the United States. For many years the official count was the Red Cross estimate of 1,836. About three out of four of the dead were migrant farm workers, people who moved from farm to farm to pick crops. Most of them were Black.

Black workers did most of the cleanup after the storm. Officials saved the few coffins they had for the bodies of white people. White victims were buried with a service, in a shared grave at Woodlawn Cemetery in West Palm Beach. The bodies of Black victims were burned in piles or thrown into mass graves. One mass grave at Port Mayaca holds 1,600 bodies. The records do not name the officials who made these decisions.

Robert Hazard of West Palm Beach started a group to win recognition for the Black victims buried in the city's mass grave. The city bought the grave site back in 2000. In 2003 a state historical marker was put up there.

BY 1929: The Mississippi flood had driven about 637,000 people from their homes, the St. Francis Dam and the Okeechobee hurricane had killed thousands more in 1928, and members of Congress had passed the Flood Control Act of 1928.

Black Sunday, April 14, 1935

A wall of blowing dirt swept across the southern Great Plains on April 14, 1935, with winds of up to 60 miles an hour. It reached Beaver, Oklahoma, at about 4 p.m. and Boise City, Oklahoma, at about 5:15 p.m. For a short time the sky was so black that people could not see their own hands in front of their faces. The day became known as Black Sunday.

An Associated Press reporter, Robert Geiger, and a photographer, Harry Eisenhard, were caught in the storm six miles from Boise City. The next day Geiger wrote a news story that began, "Residents of the southwestern dust bowl marked up another black duster today." A duster was a dust storm. His story is generally accepted as the first use of the words "dust bowl."

Why natural gas smells: New London, 1937

A gas explosion destroyed a school in New London, Texas, on March 18, 1937, and killed about 298 people, most of them children. Members of the school board had piped in the gas to save money. Early that year, board members canceled the school's contract for natural gas. They had plumbers connect the school to a pipe of leftover waste gas from a nearby company, the Parade Gasoline Company.

Natural gas that has not been treated has no smell and no color. Gas leaked from the new connection and built up in the closed crawlspace, the low space under the floor, which ran the whole 253-foot length of the building's front. Students had been complaining of headaches for some time, but few people paid attention.

About 500 students and 40 teachers were in the building that afternoon. At 3:17 p.m. Lemmie R. Butler, who taught shop, turned on an electric sander. A spark from its switch probably set off the gas. The *Handbook of Texas*, published by the Texas State Historical Association, records about 298 dead. Other counts run from 294 to more than 400, and the exact number is not known.

More than 70 lawsuits were filed. Judge Robert T. Brown dismissed the ones that came to trial, for lack of evidence, and no one was ever found responsible. The school superintendent, W. C. Shaw, whose son was killed, resigned. Texas lawmakers gave the state's Railroad Commission the power to require a chemical with a strong smell in natural gas, so that people can smell a leak. Within weeks of the explosion, that chemical was being mixed into the gas.

The Hindenburg, 1937, and the Cocoanut Grove, 1942

The German passenger airship *Hindenburg* caught fire on May 6, 1937, as it came in to land at the Naval Air Station in Lakehurst, New Jersey. An airship is a giant aircraft held up by a gas lighter than air, with engines to push it and a cabin for passengers. The *Hindenburg* was filled with hydrogen, a gas that burns very easily. Of the 97 people on board, 35 died. A man working on the ground, Allen Hagaman, died too.

Cameramen from four newsreel companies, which made short news films shown in movie theaters, were filming the landing and filmed the fire. None of them caught the moment the fire started. The radio reporter Herbert Morrison recorded what he saw as it happened. What caused the first spark has never been settled. Passenger travel by giant airship ended after the fire.

The Cocoanut Grove. Fire spread through the Cocoanut Grove nightclub in Boston at about 10:15 p.m. on November 28, 1942, and killed 492 people. Many of them were trapped behind doors that were locked, hidden or blocked. More than 1,000 people were inside a club that was allowed to hold 460. The owner, Barnett Welansky, had locked some exits, hidden others behind curtains, and bricked one up.

The main entrance was a single revolving door. Bodies piled up on both sides of it and jammed it until it broke. Other doors opened inward, so people could not open them against the crush of the crowd. Fire officials later told the court that if the doors had swung outward, at least 300 lives could have been saved. How the fire started is not known.

Welansky was found guilty of manslaughter and spent nearly four years in prison. Lawmakers then passed new laws that banned decorations that burn easily. The laws required emergency exits to stay unlocked, and a revolving

door could no longer be a building's only exit.

Explosions at the docks: Port Chicago, 1944, and Texas City, 1947

Two ships being loaded with ammunition blew up at the Port Chicago Naval Magazine in California, a Navy base for storing explosives, on July 17, 1944. The blast killed 320 men, and 202 of them were Black sailors. Navy officers had given Black sailors the job of loading the ships without enough training or equipment.

Texas City. A fire broke out in the cargo of the French ship *Grandcamp* at the docks of Texas City, Texas, on the morning of April 16, 1947. The ship carried about 2,300 tons of ammonium nitrate, a chemical used as fertilizer that can explode.

The ship's captain ordered his crew not to use water on the fire, so that the cargo would not be ruined. The crew closed the hatches and pumped in steam. The unusual smoke drew a crowd of about 500 people to the shore to watch, many of them children.

At 9:12 a.m. the ship exploded. Flying pieces of metal set fire to oil refineries and chemical tanks along the waterfront. The Monsanto chemical plant beside the ship took the worst of the blast, and seven broken oil tanks at the Republic Refinery caught fire. Another ship, the *High Flyer*, which carried 961 tons of ammonium nitrate, blew up at 1:10 the next morning.

At least 581 people died. The first explosion killed 26 of the town's volunteer firefighters, all but one member of the fire department, and destroyed all of the city's firefighting equipment. The anchor monument in Texas City lists 576 people known to have died. Sixty-three of them were buried without names.

More than 8,000 people sued the United States government. They used a 1946 law that let people sue the government for harm caused by the carelessness of its workers. In 1953 the justices of the Supreme Court ruled against them, 4 to 3. In 1955 members of Congress voted to pay the claims anyway. The government paid 1,394 awards, worth nearly 17 million dollars in all.

BY 1950

If you remember one thing: People's choices turned fires, floods and gas leaks into mass deaths in these fifty years, and of all the owners and officials blamed, one went to prison: Barnett Welansky, who locked the Cocoanut Grove's exits.

In 1900: Galveston had no seawall, and natural gas had no smell to warn anyone of a leak.

In 1950: Galveston stood behind a seawall 17 feet high, Texas officials could require a strong smell in natural gas, and a revolving door could no longer be a building's only exit.

Next: After 1950 forecasters began giving hurricanes names, and a president put most of the national government's disaster work under one office.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 17 MINUTES

Hurricane Audrey killed at least 416 people on the Louisiana coast in June 1957. Warnings got faster after 1950, and help got organized. Weather Bureau forecasters began giving hurricanes human names in 1953. In 1979 President Jimmy Carter put much of the national government's disaster work under one new office, the Federal Emergency Management Agency, called FEMA.

Choices made by owners and engineers still killed hundreds of people. A coal company's waste dam in West Virginia broke in 1972 and killed 125. Two hotel walkways in Kansas City fell in 1981 and killed 114, after an engineer approved a design change without checking the math. News reporters broadcast a rescue from a frozen river in Washington, D.C., live as it happened. After Hurricane Andrew in 1992, Florida got a single building code, a set of rules for how strong buildings must be.

Hurricanes with names: Audrey, 1957, and Camille, 1969

By the time Hurricane Audrey struck in 1957, hurricanes had names. In 1953 forecasters of the U.S. Weather Bureau began giving human names to storms. In 1956 Weather Bureau officials opened a hurricane center in Miami.

Forecasters warned the whole Louisiana coast at 10 a.m. on June 26, 1957, that a hurricane was coming. About 75,000 people left. Audrey came ashore the next day near Cameron, about 24 hours after the warning. The storm had sped up and arrived sooner than forecasters or residents expected.

Its storm surge, the wall of seawater that a hurricane's winds push onto land, rose as high as 12 feet. The water did damage as far as 25 miles inland. At least 416 people died, most of them in Cameron Parish. The final count may never be known.

Camille. Hurricane Camille came ashore near Bay St. Louis, Mississippi, late on August 17, 1969, with winds of 175 miles an hour. The water rose 24.6 feet at Pass Christian, Mississippi. Camille killed 172 people in Mississippi and 9 in Louisiana. As the storm moved north, its rain caused floods in Virginia that killed more than 153 people there. At least 343 people died in all.

The Alaska earthquake, March 27, 1964

The strongest earthquake ever recorded in North America struck southern Alaska at 5:36 p.m. on March 27, 1964. Most of the people it killed drowned in the giant waves it caused. The earthquake had a magnitude of 9.2 and lasted four minutes and 38 seconds.

The shaking and underwater landslides sent tsunamis, giant waves set off by an earthquake or a landslide under the sea, into the coast. Scientists of the U.S. Geological Survey count 131 dead: 122 killed by the tsunamis and 9 by the shaking. Other counts reach 139. At Valdez, 32 people died when the town's harbor and docks collapsed. Tsunamis also reached Oregon and California. In Crescent City, California, one killed 10 people.

Chenega. Chenega was a village of Chugach Alutiiq people, also called Sugpiaq, on an island in Prince William Sound. Their people had lived there since before Russians came to Alaska. About four minutes after the shaking began, a wave 27 feet high struck the village. It knocked down every building except the school and one house.

Between 23 and 26 of the roughly 70 people who lived there died, by different counts. Scientists of the Geological Survey found that Chenega lost a larger share of its people than any other town. The survivors outran the wave and climbed to high ground.

Rescuers took the survivors to Cordova. Officials of the federal Bureau of Indian Affairs later moved them for good to the village of Tatitlek. In 1971 members of Congress passed the Alaska Native Claims Settlement Act. Under it, Alaska Natives received 44 million acres and $962.5 million, held by companies that Alaska Natives own. Former Chenega residents formed one of them, the Chenega Corporation, and won the right to choose 76,093 acres of land. People began living in a new village, Chenega Bay, in 1984.

President Lyndon Johnson declared all of Alaska a disaster area the day after the earthquake. Army engineers of the U.S. Army Corps of Engineers led the work of rebuilding roads, clearing wreckage and laying out new town sites, at a

cost of 110 million dollars. The people of Valdez moved their town to higher ground four miles to the west. In 1967 federal scientists of the Coast and Geodetic Survey opened a tsunami warning center at Palmer, Alaska.

Floods of 1972: Buffalo Creek and Rapid City

The Pittston Company's coal waste dam above Buffalo Creek, West Virginia, broke at about 8 a.m. on February 26, 1972, and the flood killed 125 people. The Buffalo Mining Company, part of Pittston, owned and ran three dams made of coal waste on the creek's Middle Fork.

The third dam sat on a layer of soft coal mud instead of solid rock. Neither Pittston nor the mine's earlier owner had sent the dams' plans to the state for approval. Four days before the flood, a federal mine inspector called the dam "satisfactory."

The dam gave way and let out 132 million gallons of water, coal waste and mud. The flood ran down the narrow valley through 16 coal towns. It killed whole families, injured about 1,000 people, and destroyed 507 houses and 44 mobile homes. About 4,000 of the 5,000 people who lived along the creek lost their homes.

"An act of God." Pittston officials blamed three days of rain and called the flood "an act of God," meaning a natural event that no person could have prevented. Members of the governor's commission that investigated wrote that "the Pittston Company, through its officials, has shown flagrant disregard for the safety of residents of Buffalo Creek," meaning that its officials had openly ignored the residents' safety.

Members of a separate commission formed by citizens said the company was guilty of murdering at least 124 people. The records show no Pittston official charged with a crime.

Pittston paid 13.5 million dollars in 1974 to settle a lawsuit by survivors and family members. One count gives 645 of them, and another gives 625. That came to about 13,000 dollars each after the lawyers were paid. Governor

Moore settled the state's own lawsuit in 1977 for 1 million dollars. Members of Congress and West Virginia lawmakers passed new laws on how such dams must be built and kept up.

Rapid City. Less than four months later, on June 9 and 10, 1972, about 15 inches of rain fell on part of the Black Hills of South Dakota. Rapid Creek flooded Rapid City, where people had built houses and businesses on the creek's flood plain, the low land beside a river that the river covers when it floods. The flood killed 238 people. Afterward, new zoning rules set what could be built where, and most of the flood plain was rebuilt as parks.

FEMA and Three Mile Island, 1979

President Jimmy Carter put much of the national government's disaster work under one new office in 1979, the Federal Emergency Management Agency, or FEMA. Before then, officials of more than 100 separate federal offices could each claim a part in the response to a single disaster. On April 1, 1979, Carter signed two executive orders, written orders from the president, that started FEMA. In July he signed another order that moved disaster relief into it.

Members of Congress passed the Stafford Act in 1988. It set the rules for when a president may declare a disaster, so that federal money and help can be sent.

Three Mile Island. Four days before FEMA started, the worst accident in the history of the country's nuclear power plants began at Three Mile Island, near Harrisburg, Pennsylvania. A nuclear reactor makes heat from uranium fuel in its core, and water must keep flowing around the core to cool it.

At 4 a.m. on March 28, 1979, a small fault in the cooling system of the Unit 2 reactor set off a chain of failures. A relief valve stuck open and let cooling water escape. The operators had no instrument that showed them the valve was open. They thought the system held too much water, so they cut the flow of new water. The core overheated, and at least 45 percent of it melted.

The operators at the plant, officials of Metropolitan Edison, the power company that ran it, and state and federal officials gave the public unclear and conflicting reports. Station manager Gary Miller declared an emergency at the plant. Federal nuclear officials had no power to order people to leave.

On March 30, Governor Richard Thornburgh advised pregnant women and small children within five miles to leave. He told people within ten miles to stay indoors. About 140,000 people left on their own. In at least 12 studies since 1981, scientists have found no deaths and no health harm that can be measured from the radiation that escaped. A commission of 12 members, led by John G. Kemeny, reported on the accident on October 31, 1979.

Mount St. Helens, 1980, and the Hyatt Regency walkways, 1981

Mount St. Helens, a volcano in Washington State, blew out its north side at 8:32 a.m. on May 18, 1980, and killed about 57 people. An earthquake loosened the side of the mountain, and the whole weakened north face slid away. Hot gas and shattered rock blasted north toward Spirit Lake. The blast turned hundreds of square miles into wasteland. Most of the people who died were suffocated, and a few died of burns.

Among the dead were Harry R. Truman, who owned a lodge at Spirit Lake, the photographers Reid Blackburn and Robert Landsburg, and David Johnston, a volcano scientist of the U.S. Geological Survey. Johnston was on duty at a lookout post about six miles north of the mountain.

The walkways. Two walkways fell onto a crowd in the lobby of the Hyatt Regency Hotel in Kansas City, Missouri, on the evening of Friday, July 17, 1981. Engineering mistakes caused the fall. About 1,600 people had come to a dance in the lobby. The two walkways hung over the lobby. They killed 114 people and injured 216.

Engineers at Jack D. Gillum and Associates, the firm of the engineer Jack D. Gillum, designed the walkways. Their first design was already too weak. It could hold only 60 percent of the weight that Kansas City's building code required.

Then the makers of the steel parts, at a company called Havens Steel, proposed a change in how the walkways hung. The engineer Daniel M. Duncan accepted the change in a phone call without doing the math to check it. The change doubled the load on the walkway beams on the fourth floor. Investigators found that the walkways would have failed under one third of the weight they held that night.

Members of a Missouri state board found the engineers to blame for gross negligence, which means a serious failure to take the care their job required. They also found them guilty of misconduct and unprofessional conduct, meaning they had broken the rules of their profession. Gillum's company lost its engineering licenses in Missouri, Kansas and Texas. The engineers were cleared of the crimes they were first charged with, and no one was convicted of a crime.

Air Florida Flight 90, January 13, 1982

Air Florida Flight 90 took off from Washington National Airport on the snowy afternoon of January 13, 1982, with snow and ice on its wings. It crashed into the Potomac River. The captain, Larry Wheaton, 34, and the first officer, Roger Pettit, 31, had not turned on the engines' ice protection. The jet hit the 14th Street Bridge, struck seven cars with people in them, and fell through the ice of the river. Of the 79 people on the plane, 74 died. Four drivers on the bridge died too.

In the water. Six people held on to the wreck in water of about 34 degrees. The rescuers who reached the riverbank had no equipment that could reach them. Roger Olian, the boss of the sheet-metal workers at St. Elizabeths Hospital, was the first to jump into the water to try. A U.S. Park Police helicopter arrived at about 4:20 p.m. and pulled most of the survivors out.

One passenger, Arland D. Williams Jr., 46, was a bank examiner, a person who checks that banks follow the rules. He was strapped into the wreckage and could not free himself. Twice he passed the rescue line to others. When the helicopter crew came back for him, the wreckage had rolled and he was under the water. The coroner, the official who finds out how people died, found that he was the only passenger who drowned. The bridge span was later renamed for him.

The Carnegie Hero Fund, which gives medals for bravery, says that its staff could not firmly establish who the sixth person in the water was. The coroner and the renamed bridge name Williams.

A passenger, Priscilla Tirado, was badly hurt and blinded by jet fuel, and she was too weak to grab the line when the helicopter came back to her. Lenny Skutnik, an assistant at the Congressional Budget Office, took off his coat and boots, swam out in short sleeves and pulled her to shore. "Somebody had to go into the water," he told *Time* magazine. News reporters recorded the rescue and broadcast it live.

The cause. Investigators of the National Transportation Safety Board, the federal office that looks into crashes, found that the pilots caused the crash. The investigators blamed the pilots' failure to use the engines' ice protection and the pilots' decision to take off with snow or ice on the wings. The captain did not listen when the first officer told him the engine readings looked wrong. He did not stop the takeoff while there was still room on the runway. Both pilots died in the crash.

Melvin Windsor

Who: A U.S. Park Police officer who stood on a helicopter's skid over the frozen Potomac River to pull a survivor out.
When and where: Washington, D.C., January 13, 1982.

Patricia Felch had been in the frozen river for 30 minutes.

Melvin E. "Gene" Windsor, 41, pulled the last survivor of Air Florida Flight 90 out of the Potomac. He did it standing on one of the helicopter's skids, the long metal bars it lands on, with no safety line. He had joined the Park Police in 1971, and by 1982 he was a rescue technician.

He flew with the chief pilot, Donald W. Usher, 31. Earlier that day Usher had decided that no routine flights would go up. At about 4:09 p.m. a radio call came in. They took off at 4:16 and reached the river at about 4:20. Usher steered by watching the highway below through the windows in the helicopter's floor.

The people holding on to the wreck were in water up to their shoulders and necks. Windsor dropped life jackets and lines to them while Usher flew so low that the skids went under the water.

> **The last one out.** The last survivor out of the water was Patricia Felch. She had been in the river for 30 minutes. Windsor unbuckled his seat belt and stepped out onto the right skid, which was under the water. He grabbed her with one arm and held the back of her head with the other.
>
> Of the passenger who twice passed the line to others, Windsor told *Time*: "In a mass casualty, you'll find people like him, but I've never seen one with that commitment." A mass casualty is an event in which many people are hurt or killed at once. Windsor, Usher, Skutnik and Olian each received the Carnegie Medal for bravery. Windsor served 22 years with the Park Police.

Hurricane Hugo and the Loma Prieta earthquake, 1989

Hurricane Hugo hit two U.S. territories before it reached the mainland in September 1989. On St. Croix in the U.S. Virgin Islands, it damaged more than 90 percent of the buildings and killed three people. In Puerto Rico it killed eight people and left nearly 28,000 without homes. On September 22 it came ashore on Sullivan's Island, South Carolina. The storm surge reached 20.2 feet near McClellanville, and 13 people died in South Carolina.

Loma Prieta. An earthquake of magnitude 6.9 struck about 10 miles northeast of Santa Cruz, California, at 5:04 p.m. on October 17, 1989, and killed 63 people. A World Series baseball game was about to begin at Candlestick Park in San Francisco.

In Oakland, the upper deck of the Cypress Street Viaduct fell onto the lower deck, and 42 people were crushed to death in their cars. The viaduct was a two-level section of the Nimitz Freeway, a highway raised above the ground. A section of the San Francisco-Oakland Bay Bridge also fell, and a 23-year-old woman, Anamafi Moala, died there.

Why help was slow after Hurricane Andrew, 1992

Hurricane Andrew struck Florida on August 24, 1992, and destroyed more than 63,500 houses. Help from the national government was slow to come. Andrew came ashore at Homestead with winds as high as 165 miles an hour. It damaged more than 124,000 other houses and wrecked 99 percent of the mobile homes in Homestead. It killed 44 people in Florida. Fifteen died in the storm itself and 29 from its effects afterward. In all, the storm left 65 people dead.

"Where in the hell is the cavalry?" Three days after the storm, Dade County's emergency management director, Kate Hale, went on national television. "Where in the hell is the cavalry on this one?" she asked. "They keep saying we're going to get supplies. For God's sake, where are they?" The cavalry were soldiers on horseback, and she meant the rescuers and supplies that had not come.

Many people criticized FEMA for the slow start. Some critics blamed Florida's governor, Lawton Chiles, instead. FEMA officials believed they could not act until he sent a formal request for federal help. By that account, he waited five days to send it.

Engineers who surveyed the damaged roofs found that concrete roof tiles had been glued to felt paper and shingles stapled on the wrong way. A single building code for the whole state of Florida was set up in 1998, and it took effect in 2002.

Northridge, 1994, and the Chicago heat wave, 1995

The Northridge earthquake, magnitude 6.7, struck Los Angeles at 4:30 a.m. on January 17, 1994. The official count of the dead is 57, and other counts run from 60 to 72. Sixteen people died when the Northridge Meadows apartment building collapsed. Buildings with parking on the bottom floor held up poorly in the shaking.

The heat wave. A heat wave in Chicago in mid-July 1995 killed 739 more people in one week than usually die in a week. Most of the dead were poor, old people. Many had no air conditioning, or had it and could not afford to run it. Many kept their windows shut and would not sleep outside, because they were afraid of crime. Black residents were more likely to die than white residents.

City officials did not issue a heat emergency warning until the last day of the heat wave. The records do not say who made that choice. Few people used the city's five cooling centers.

The morgue run by the medical examiner, Edmund Donoghue, a doctor who examines the dead to find out how they died, could hold 300 bodies, and it filled. Refrigerated trucks were parked outside to hold the rest.

Donoghue said later that his office was not allowed to hold press conferences, and that Mayor Richard M. Daley was not told until the weekend. A later study counted 692 deaths above normal over the whole summer, from June 21 to August 10. That is fewer than the worst week's 739, because some of the people the heat killed would have died later that summer anyway, the study found. In August, 41 victims whose bodies no one claimed were buried together in one grave in Homewood, Illinois.

BY 2000

If you remember one thing: Warnings and federal help got faster after 1950, but the choices of owners and engineers still killed hundreds of people, and no one in these fifty years was convicted of a crime for those deaths.

More than 100: the number of federal offices that could each claim a part in the response to a single disaster before 1979. That year President Carter put most of that work under one office, FEMA.

Next: After 2000, people waited days for help in New Orleans and months for electricity in Puerto Rico, and fires started by power lines burned whole towns.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 20 MINUTES

Ethel Freeman, 91, died in her wheelchair outside the New Orleans Convention Center in September 2005, waiting for a bus that police had said would come.

In the disasters after 2000, many of the dead were old or sick, like her, and many died in the days and months after the storm or the fire, waiting for help, for electricity or for a warning. Hurricane Katrina killed 1,392 people in 2005, by the National Hurricane Center's count as corrected in 2023. Most of them died in Louisiana, many of them in New Orleans, where floodwalls broke. Investigators found that the U.S. Army Corps of Engineers was responsible for those floodwalls.

After Hurricane Maria struck Puerto Rico in 2017, officials of the island's government counted 64 dead. In 2018 they raised the official count to 2,975, after a study of deaths in the months after the storm. Power lines owned by utility companies started deadly fires in California in 2018 and 2025 and in Hawaii in 2023. In late September 2026, members of Congress were still debating whether to keep FEMA.

September 11, 2001, and the illnesses afterward

Three hundred forty-three members of the New York City Fire Department died in the attacks on the World Trade Center on September 11, 2001, and by 2026 more of its members had died from breathing the dust of the ruins.

That morning 19 hijackers from the group al-Qaeda took over four passenger jets by force. They flew two into the Twin Towers of the World Trade Center in New York City and one into the Pentagon, near Washington, D.C. On the fourth plane, United Airlines Flight 93, passengers and crew fought back, and it crashed into a field near Shanksville, Pennsylvania.

The attacks killed 2,977 people, not counting the 19 attackers. Seventy-one police and other law officers also died in New York.

The dust. For months afterward, firefighters, police officers, construction workers and volunteers dug through the ruins. They breathed dust of crushed concrete, glass fibers, asbestos, lead and mercury. Asbestos is a mineral whose tiny fibers lodge in the lungs and can cause cancer years later. Fires in the ruins burned for three months.

Many of the workers later got cancer or lung disease. In September 2026 leaders of the Fire Department reported that 453 more of its members had died of illnesses tied to the dust. That is more than the 343 it lost on the day of the attacks.

In December 2010 members of Congress passed the James Zadroga 9/11 Health and Compensation Act. President Barack Obama signed it on January 2, 2011. It set up the World Trade Center Health Program, which gives medical checkups and treatment to responders and survivors with illnesses tied to the attacks. Members of Congress renewed it in December 2015.

Hurricane Katrina, August 29, 2005

Most of the people Hurricane Katrina killed died in Louisiana, where New Orleans flooded after its floodwalls broke. On August 28, 2005, Mayor Ray Nagin ordered the first mandatory evacuation in the city's history, meaning everyone was ordered to leave. Governor Kathleen Blanco opened all lanes of the highways to traffic leaving the city, and about one million people left. Between 100,000 and 150,000 people stayed in the city. City officials opened the Superdome stadium as a "refuge of last resort," a place to go when there was nowhere else.

Katrina came ashore on August 29. The levees and floodwalls broke in more than 50 places, and water covered 80 percent of the city. In the Lower Ninth Ward, a neighborhood where most homeowners were Black, the water was more than 10 feet deep.

Who built the floodwalls. Members of Congress had put the Corps of Engineers in charge of the city's flood protection in a law of 1965. Investigators found that the Corps was responsible for the floodwalls that broke, and that the flood protection system the national government built had engineering flaws. Judges of a federal appeals court later ruled that, under a law of 1928, the Corps could not be made to pay for the damage.

Scientists at the National Hurricane Center lowered their count of the dead from 1,833 to 1,392 in 2023, after new studies. Other studies found that most of the dead in New Orleans were old people who lived near the broken levees, in the Lower Ninth Ward and Lakeview neighborhoods.

Waiting. Coast Guard crews rescued more than 33,500 of the roughly 60,000 people stranded in the city. People waited for days at the Convention Center, which had no food, water or medical help. Early news reports of mass crime at the Superdome later turned out to be false or exaggerated.

Federal officials did not begin to act in earnest to help the people at the Convention Center until September 2. Michael Brown, the head of FEMA, lost charge of the relief work to Vice Admiral Thad Allen and resigned on September 12.

Guns on the bridges. Some police officers turned their guns on survivors. On September 1, police from the city of Gretna and from the Crescent City Connection bridge police, with deputies of the Jefferson Parish sheriff, blocked the bridge over the Mississippi River. They turned back people walking out of New Orleans at gunpoint. Gretna's police chief, Arthur Lawson, made that decision with the sheriff's office and the bridge police.

On September 4, New Orleans police officers shot six unarmed Black people on the Danziger Bridge. They killed James Brissette, 17, and Ronald Madison, 40, a man with a mental disability. Madison was shot seven times, five times in the back. Among the officers were Kenneth Bowen, Robert Gisevius, Anthony Villavaso and Robert Faulcon. Police officers then tried to cover up the killings. In 2016 five former officers pleaded guilty and were sentenced to between 3 and 12 years in prison.

Memorial Medical Center. Patients, visitors and workers were trapped in Memorial Medical Center, a New Orleans hospital, during the flood. After the storm, 45 bodies were found there. In July 2006, the office of Charles Foti, Louisiana's attorney general and top lawyer, finished an investigation of nearly a year. A judge then ordered the arrest of a doctor, Anna Pou, and two nurses, Lori Budo and Cheri Landry, for murder, which Louisiana law called second degree murder.

They were accused of giving deadly doses of morphine and midazolam to four patients: Emmett Everett Sr., 61, Hollis Alford, 66, Ireatha Watson, 89, and Rose Savoie, 90. Morphine is a strong painkiller, and midazolam is a drug that makes people calm and sleepy. In large doses, both slow and then stop a person's breathing. In 2007 a grand jury refused to charge any of the three. The state later paid Pou's legal bills of more than 450,000 dollars.

Herbert Freeman Jr.

Who: A New Orleans man who took his 91-year-old mother, Ethel Freeman, out of their flooded home by boat, then stayed beside her body outside the Convention Center after she died waiting for help.
When and where: New Orleans, August 31 to early September 2005.

He borrowed a friend's boat to get his mother out.

Herbert Freeman Jr. rescued his mother from their flooded house, and she died the next day outside the New Orleans Convention Center, where police had sent them to wait for a bus. Ethel Mayo Freeman was 91. She had a pacemaker for her heart and a feeding tube, and she used a wheelchair. She was often sick, and she decided to stay home when Katrina came.

The floodwater filled her house several feet deep. On August 31, Herbert, 58, borrowed a friend's boat. He put his mother in her wheelchair, lifted her into the boat and took her to dry ground. New Orleans police officers there sent them to the Convention Center. Herbert told officers his mother needed a doctor. They told him a bus would come.

At the Convention Center. The Convention Center had no food, no water, no medical help and no way out. "She was calling out for a doctor or a nurse, but there was nothing there," Herbert said. Ethel Freeman died at the Convention Center on September 1. Her body stayed outside for days, slumped in the chair and covered with a poncho. Pictures of it were shown on national television.

Herbert watched over his mother's body for nearly four days, until he was ordered onto a bus. The NBC News report of his story does not say who gave the order. Before he left, he put a note with his name and phone number in her pocket. It took him seven weeks to find her body, at a morgue in St. Gabriel, Louisiana. Her funeral was held in New Orleans in November 2005.

> He and the families of two other people who died sued the national government. In 2009 federal appeals judges ruled that, under the Stafford Act, the government could not be sued over decisions like these in a disaster, and they threw out the case.

How many died after Hurricane Maria, 2017?

Hurricane Maria left all 3.4 million people in Puerto Rico without electricity on September 20, 2017, and thousands died in the months that followed. Puerto Rico is a U.S. territory, and its people are U.S. citizens. Maria struck two weeks after Hurricane Irma crossed the region. It caused the worst blackout in U.S. history. Some customers did not get their power back until August 2018, 11 months later.

After Irma, FEMA officials had shipped many of the supplies they kept in Puerto Rico to the U.S. Virgin Islands. After Maria, they admitted to failures in moving supplies, too few staff and poor communication.

The mayor of San Juan, Carmen Yulín Cruz, spoke of the national government's relief work on September 29, 2017: "We are dying and you are killing us with the inefficiency." On October 3, President Donald Trump compared the count of dead at that time, 16, with "a real catastrophe like Katrina."

How many died. Officials of Governor Ricardo Rosselló's government counted 64 dead for months. Researchers found that many more people than usual died in the months after the storm. People who needed dialysis, a treatment that cleans the blood of people whose kidneys have failed, could not reach emergency care for long stretches of time.

Researchers at George Washington University estimated between 2,658 and 3,290 extra deaths from September 2017 to February 2018. On August 28, 2018, Rosselló's officials accepted their study and raised the official count to 2,975. A Harvard University study in 2018 estimated 4,645 extra deaths from September to December 2017, with a very wide range, from 793 to 8,498.

Trump wrote on Twitter on September 13, 2018, that "3000 people did not die" and blamed Democrats for the number. The official count of 2,975, based on the George Washington University study, has stood since August 28, 2018.

Jesse Vazquez

Who: A retired veteran in Bayamón, Puerto Rico, who lived for months without electricity after Hurricane Maria with his 89-year-old mother, Mercedes Mercado.

When and where: Calle Alameda, Bayamón, Puerto Rico, September to December 2017.

His children flew in from New York with a generator.

Jesse Vazquez and his mother, Mercedes Mercado, went 96 days without electricity after Hurricane Maria. Maria cut the power to their house on Calle Alameda in Bayamón on September 20, 2017. For weeks the family ran electric fans and charged their phones from the battery of Jesse's car.

A small generator cost about 600 dollars on sale, more than Jesse could afford. In October his son, also named Jesse, and his daughter, Megan, flew in from New York to bring him a generator. "It's basically cheaper to buy a flight, get a generator and bring it down here," his son said. Running it five hours a day took about 80 dollars of gasoline a month.

Exhaust from a neighbor's generator blew into the family's living room. Megan said they needed a detector for carbon monoxide, a poison gas in engine exhaust that has no smell.

By Christmas the house had been without power for 96 days. Jesse and his mother used the generator to run the refrigerator, and fans at night so they could sleep. A FEMA inspector told Jesse he could not get help to fix his damaged roof. "It's kind of humiliating," he said. With his son's help he bought four solar panels. He and his mother decided to stay in Puerto Rico.

BY 2018: Puerto Rico's officials had raised the count of Maria's dead from 64 to 2,975, and federal judges had thrown out the lawsuit that Herbert Freeman Jr. and two other Katrina families brought against the national government.

Floods: Harvey, 2017, Helene, 2024, and the Texas Hill Country, 2025

Hurricane Harvey struck Texas in late August 2017 and dropped more rain than any other hurricane or tropical storm in U.S. records. Scientists at the National Hurricane Center recorded 60.58 inches near Nederland, Texas. Rescuers made more than 17,000 rescues. Their report records at least 68 people killed by the storm's direct effects in Texas and about 35 more by causes such as electric shock, car crashes and being cut off from medical care.

Hurricane Helene came ashore in Florida, near Perry, late on September 26, 2024. The next day its rain fell on North Carolina and Tennessee. Busick, North Carolina, got 30.78 inches of rain, and the rain set off more than 2,000 landslides. Scientists at the National Hurricane Center count at least 250 dead in the United States, 107 of them in North Carolina.

The plastics factory. In Erwin, Tennessee, six people died at the Impact Plastics factory as the Nolichucky River rose on September 27. The flood swept 11 people away, and five were rescued. A worker who survived and the families of the dead spoke out. They said the workers were not told they could leave until floodwater had covered the road to the plant and the power had gone out. Five employees and a contractor who cleaned the offices were killed.

Inspectors of Tennessee's workplace safety agency found in April 2025 that the company had "exercised reasonable diligence," meaning it had taken reasonable care, and that the deaths were not work-related. They issued no citations, which are official notices that a company broke a safety rule. District Attorney General Steven Finney filed no charges against the company's president, Gerald O'Connor, in July 2025, after a review by the Tennessee Bureau of Investigation.

The investigators said they found no evidence that workers were told they could not leave or that they would be fired for leaving, and that the workers had a little more than an hour to get out. The family of Johnny Peterson, one

of the dead, sued the company.

Camp Mystic. As much as 20 inches of rain fell on the Texas Hill Country early on July 4, 2025, and the Guadalupe River rose about 26 feet in 45 minutes. The flood killed 136 people, 117 of them in Kerr County, by counts reported in July 2026. At Camp Mystic, a Christian summer camp for girls, 25 campers, two counselors, Chloe Childress and Katherine Ferruzzo, and the camp's owner and director, Dick Eastland, died.

The first flash flood warning for Kerr County went out at 1:14 a.m. At 4:03 a.m. a flash flood emergency, a more urgent alert, told people in the towns of Hunt and Ingram to "seek higher ground now!"

Kerr County had no warning system built just for floods. In 2016 the county sheriff had asked for one, with sirens. County Commissioner H. A. "Buster" Baldwin said, "I think this whole thing is a little extravagant for Kerr County, with sirens and such."

After appeals from the camp, FEMA officials took 15 of its buildings on the Guadalupe River off the federal map of land likely to flood in 2013. They took 15 buildings at a newer camp site off the map in 2019 and 2020, the Associated Press reported.

Texas lawmakers passed new camp safety laws in September 2025, at an extra meeting called a special session, among them the Heaven's 27 Camp Safety Act. On June 18, 2026, members of the Texas Senate and House investigating committees released a report. The lawmakers found that the camp had no written emergency plans, which state rules required. They also found that the camp's leaders did not move the campers out in time even though they had chances to.

By July 2026 Kerr County had six new sirens. In the week before July 18, when floods came to the Hill Country again, officials sounded three of them to warn people, an official of the Upper Guadalupe River Authority said.

Fires started by power lines: Paradise, 2018, Lahaina, 2023, and Los Angeles, 2025

A single metal hook broke on a power line tower owned by Pacific Gas and Electric, called PG&E, on the morning of November 8, 2018. The tower was part of a line built in the early 1900s, and it was poorly maintained. The line started a fire. The Camp Fire burned through the town of Paradise, California. It killed 85 people and destroyed more than 18,000 buildings. On June 16, 2020, the company pleaded guilty in court to 84 counts of involuntary manslaughter, the crime of killing people through carelessness.

Lahaina. A wildfire destroyed the town of Lahaina on the island of Maui, Hawaii, on August 8, 2023, and killed 102 people. That is the most people killed in a U.S. wildfire since 1918. High winds knocked down power lines of Hawaiian Electric, and the lines started a fire that morning. Maui firefighters declared that fire under control and left. Less than an hour later, embers from it started the fire again.

Firefighters lost water pressure in the hydrants. Many people died in their cars. Some jumped into the ocean to escape the flames.

The fire destroyed a town that had been the capital of the Kingdom of Hawaii for 35 years. It burned the homes of many Native Hawaiian families who could afford to live in Lahaina only because they had inherited houses that were already paid for.

Maui has more than 80 outdoor warning sirens, and none of them sounded. Herman Andaya, the head of the Maui County Emergency Management Agency, said the sirens would have sent people toward the mountains and into the fire. He resigned the next day.

In an October 2024 report, federal fire investigators and the Maui Fire Department called the fire accidental, meaning no one set it on purpose. They found that the power lines brought down by the wind had started it, but they did not hold any person or company responsible.

Under a settlement of the survivors' lawsuits, Hawaiian Electric, Maui County and others agreed to pay 4 billion dollars. As of August 2026, none of that money had been paid, because of a court fight over the lawyers' fees, the

Honolulu Star-Advertiser reported.

Los Angeles. Fires pushed by winds of up to 100 miles an hour burned parts of Los Angeles in January 2025. They killed at least 31 people and destroyed more than 18,000 homes and other buildings. The Eaton Fire in Altadena killed 19 people. In August 2026 Los Angeles County and state fire investigators reported that it started from electric sparks on an unused Southern California Edison tower.

Seventeen of the 19 died in west Altadena, a neighborhood with a long history as a Black community. Reviewers from the firm Citygate Associates found in May 2026 that county officials' orders to leave reached west Altadena hours after the fire turned toward it. The records do not name the officials who made those decisions. The dead had an average age of 77. California's attorney general, Rob Bonta, opened an investigation into whether race, age or disability affected how officials warned people.

The Palisades Fire killed 12 people. In October 2025 Jonathan Rinderknecht, 29, was arrested and charged with starting it. Prosecutors say he set a small fire on January 1, and that strong winds rekindled it, or started it burning again, on January 7 as the Palisades Fire. Firefighters had thought the January 1 fire was out. A Los Angeles Fire Department battalion commander ordered crews to leave that site, although they reported that the ground was still burning slowly.

His first trial ended in June 2026 when the jury could not agree: ten jurors voted not guilty and two voted guilty. Prosecutors charged him again with arson, the crime of setting a fire on purpose, and he pleaded not guilty. As of October 26, 2026, his second trial had not begun, and he had not been convicted of any crime.

Cold, a collapse and FEMA's future: 2021 to 2026

A winter storm struck Texas in February 2021, and more than 4.5 million homes and businesses lost power, some of them for days. Officials of the Texas Department of State Health Services counted 246 deaths from the storm. Almost two-thirds of the dead died of hypothermia, which means the body gets so cold that it stops working. Some estimates run as high as 702 deaths. Cristian Pavón Pineda, 11, died of carbon monoxide poisoning in his family's mobile home in Conroe, Texas. The home had no power.

Surfside. Part of Champlain Towers South, a 12-story apartment building in Surfside, Florida, fell down at 1:22 a.m. on June 24, 2021, and killed 98 people. For years, water had seeped into the concrete and steel supports of the parking garage under the pool deck, and the steel had rusted.

Engineers of the firm Morabito Consultants reported the damage in 2018. They warned that if the waterproofing was not replaced soon, the damage to the concrete would spread fast. Each family owned its own apartment, and the owners together had a board. On April 9, 2021, Jean Wodnicki, the president of that board, wrote to the residents that "the concrete deterioration is accelerating," meaning the concrete was breaking down faster. A 15-million-dollar repair had been approved, but the main work had not started.

What followed. In June 2022 Judge Michael Hanzman approved a settlement of the lawsuits. The families of the dead and the people who were hurt shared nearly a billion dollars, paid by 20 defendants, the people and companies they had sued, among them insurance and engineering companies. None of the defendants admitted doing anything wrong. The apartment owners split about 96 million dollars from the sale of the land.

Florida lawmakers passed a law in May 2022. Under it, apartment buildings owned by their residents, three stories or taller, must have a safety inspection of their structure when they turn 30, or 25 if they stand within three miles of the coast, and every 10 years after. The owners must also set aside money for the repairs that a study says the building will need.

In June 2026 engineers of the National Institute of Standards and Technology, a federal science office, reported that the collapse began in early June 2021, when two connections between garage columns and the pool deck broke. They found that the original design strayed widely from the building rules of its time, and that the builders did not follow the drawings. Changes to the pool deck and years of rust weakened the building further.

FEMA's future. President Trump called for getting rid of FEMA. On February 17, 2025, officials of the Trump administration fired more than 200 FEMA workers. On March 24, 2025, Homeland Security Secretary Kristi Noem said she would move to eliminate FEMA. The acting head of FEMA, Cameron Hamilton, told members of Congress: "I do not believe it is in the best interest of the American people to eliminate the Federal Emergency Management Agency." He was removed from his job the next day.

More than 180 current and former FEMA workers signed a public statement of protest in August 2025 that they called the "Katrina Declaration." On May 7, 2026, a review council the president had set up approved a report with ten recommendations. On September 15, 2026, members of a House committee voted for one bill to change FEMA, the Post-Disaster Protection Act. In late September 2026, FEMA still existed, and members of Congress were still debating its future.

BY TODAY

If you remember one thing: Since 2000 many of the dead were old or sick, and many died waiting: for a bus at the Convention Center, for electricity in Puerto Rico, for an order to leave west Altadena.

Still open: As of August 2026 none of Lahaina's 4 billion dollars had been paid, and in late September 2026 members of Congress were still debating whether to keep FEMA.

Next: The chapter closing is below. Chapter 28, Drugs and Alcohol, follows.

THE THREE QUESTIONS, ANSWERED

1. **What rules did Americans make after disasters, and did they work?** Some worked, some failed and some are still being tested. Lawmakers and officials wrote new rules after many disasters, from Boston's fire wardens in 1711 to one building code for Florida after Hurricane Andrew. The rule to put a smell in natural gas after the New London school explosion was in use within weeks, but the 1838 steamboat law had no one to enforce it. In late September 2026 members of Congress were still debating FEMA's future.
2. **Was anyone punished when people's choices killed others?** Rarely. No one was punished for the *Sultana*, the Johnstown club won in court, a jury found the Triangle owners not guilty, and no Pittston official was charged after Buffalo Creek. Barnett Welansky went to prison for the Cocoanut Grove fire, and PG&E pleaded guilty to 84 counts of involuntary manslaughter after the Camp Fire.
3. **Did everyone get the same help after a disaster?** No. Officials paid out London's money for Charleston in 1740 by the size of each loss, so most of it went to rich merchants. Armed men forced Black workers to handle Galveston's dead in 1900, and camp leaders forced Black people to work in the 1927 flood. In 2005 police turned back people walking out of New Orleans at gunpoint, and in 2025 orders to leave reached west Altadena hours late.

What changed: Over ten eras, help after a disaster moved from neighbors and churches to public money and a national office, and warnings moved from church bells to the telegraph and sirens. After 2000, FEMA's help was slow at Katrina, its officials admitted failures after Maria, and none of Maui's sirens sounded in 2023.

FIVE DATES TO KEEP

January 26, 1700: The Cascadia fault breaks, and its tsunami reaches Japan the next day.

May 31, 1889: The South Fork Dam breaks, and 2,208 people die in Johnstown.

September 8, 1900: A hurricane floods Galveston, the deadliest natural disaster in the country's history.

March 25, 1911: The Triangle fire kills 146 workers in New York.

August 29, 2005: Hurricane Katrina comes ashore, and New Orleans floods when its floodwalls break.

NOT KNOWN: No one knows how many people died in the Galveston hurricane of 1900, and the estimates run from 6,000 to 12,000.

Where to go: Clara Barton's house in Glen Echo, Maryland, built partly from the lumber of the Red Cross buildings at Johnstown, is now the Clara Barton National Historic Site.

Next: Chapter 28, Drugs and Alcohol. It follows the drinks, tobacco and drugs Americans have used, and the laws they made to control them.

Chapter 28: Drugs and Alcohol

CHAPTER 28 OF 37 · DRUGS AND ALCOHOL · 10 ERAS · ABOUT 110 MINUTES

People in this land have used tobacco for at least 12,000 years, and when Americans turned against a drug, the punishment fell hardest on the people who had the least power.

Judges in the Massachusetts Bay Colony ordered a colonist named Robert Coles in 1634 to wear a letter D for a year. The D was made of red cloth, set on a white background, and it hung from his neck over his clothes whenever he was among other people. It was his fourth punishment for drunkenness in three years. Governor John Winthrop wrote in his journal that Coles, "having been oft (often) punished for drunkenness, was now ordered to wear a red D about his neck for a year."

This chapter follows tobacco, alcohol and other drugs through all ten eras, from a fire pit 12,300 years old to the fentanyl deaths of the 2020s. Again and again a drug is sold freely, then feared, then taxed or banned, and sometimes allowed again.

Each time, look at who gets punished. Coles was a free colonist with the right to vote. The laws that came later fell on Native people, Chinese immigrants, Black Americans and poor drinkers. No member of the Sackler family, which owned the company that made the painkiller OxyContin, has been charged with a crime. The businessman whose ginger medicine left tens of thousands of people unable to use their hands and feet never served a day in jail. Look, too, for the people who quit and then helped others quit.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. How long have people here used tobacco, and what did they use it for?
2. What happened when the whole country banned alcohol from 1920 to 1933?
3. Who has been punished for drugs, and who has not?

Five minutes? Read "Poisoned alcohol and jake leg" in 1900 to 1950.

Can skip: "Drinks for voters" and "The tavern as the town's meeting place" in 1700 to 1750, and "Chewing tobacco" in 1800 to 1850. The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 6 MINUTES

People in this land used plants that change how the body and the mind feel for thousands of years before Europeans came. The oldest one found so far is tobacco. In the records written later, many of these uses were part of prayer and ceremony. Native people offered tobacco in prayer, men in the Southeast drank Black Drink to make themselves pure, and the O'odham drank cactus wine at a rain ceremony. The Apache drank their corn beer mostly at everyday social times.

Beer and wine, but no liquor. Before Europeans came, people made beer and wine mainly in the Southwest, and people elsewhere used alcohol only here and there. Nobody in this land made distilled liquor, such as rum or whiskey. To distill a drink, people heat it and catch the steam, which cools into a liquor stronger than beer or wine.

How old is tobacco use here?

People in North America were using tobacco about 12,300 years ago. Scientists found burned tobacco in a hearth, an old fire pit, at the Wishbone site, in the desert of western North America. The find is 9,000 years older than any earlier evidence of tobacco use, and it was first published online in October 2021. How the people at that fire used the tobacco is not known.

A pipe found in central Washington State is about 1,430 years old. Chemists found nicotine, the drug in tobacco, inside it. The pipe also held traces of a wild tobacco that grows here, mixed with a plant called smooth sumac.

Tobacco as an offering. The "Keep It Sacred" program of the Inter-Tribal Council of Michigan describes tobacco used as an offering, which it calls traditional tobacco. People grow or gather it for ceremony or for medicine. It is the plant known by its Latin name, *Nicotiana rustica*. People offer it to the Creator, or to another person, place or being, by burning it in a fire or smoking it in a pipe.

In the program's words, the smoke carries "thoughts and prayers to the spirit world." The smoke is generally not breathed into the lungs. The program's writers state that traditional tobacco used this way is not linked to addiction, a need for a drug so strong that stopping is very hard, or to harm to health. They set it apart from commercial tobacco, the kind sold in stores. The ways people used tobacco differed from one nation to another.

Black Drink, cacao, peyote and datura

Black Drink was a tea made from the leaves of yaupon holly or dahoon holly, two kinds of holly bush. It contains caffeine, the drug in coffee that keeps people awake. Chemists found traces of it inside beaker cups from Cahokia, in what is now Illinois, dated from 1050 to 1250. These hollies grow far to the south of Cahokia, so people carried the leaves north. Records from later centuries describe men in the Southeast drinking Black Drink in a ceremony to make themselves pure.

Chocolate from the south. Cacao is the bean that chocolate is made from, and it grows in Mexico and Central America. Jars at Pueblo Bonito, in Chaco Canyon in New Mexico, held traces of a cacao drink. They date from about 1000 to 1125, and the beans came north by trade. It is the first known use of cacao drinks north of the Mexican border. Drinks made from cacao or holly turn up at 18 sites in the Southwest and northern Mexico, from about 750 to 1400.

Peyote. Peyote is a small cactus whose top holds mescaline, a drug that causes visions. Two dried peyote tops kept at the Witte Museum in San Antonio are about 5,700 years old. They were probably found in Shumla Cave, on the Rio Grande in Texas. When chemists tested them, they still held mescaline. The chemists wrote that Native North Americans knew what peyote does as long as 5,700 years ago.

Datura. Datura is a flowering plant that holds two drugs, scopolamine and atropine. They cause hallucinations, which means seeing and hearing things that are not there. In Pinwheel Cave in California, people chewed wads of datura and pressed them into the painted ceiling. Records from later times show Native Californians using datura to enter a trance, a state like a dream while awake. People used the cave from before 1500 into the years after Europeans arrived, so the wads have no exact date.

Who made alcohol before 1500?

Native nations in the Southwest made beer and wine before Europeans came, and other nations used alcohol only here and there. Patrick J. Abbott, a doctor, found this in a 1996 study of how Native nations used alcohol before Europeans came. Most Native people first met alcohol when Europeans brought it in the 1500s and 1600s.

Cactus wine. The Akimel O'odham and the Tohono O'odham made wine from a cactus. Older books call them the Pima and the Papago. Each late summer the women gathered the red fruit of the saguaro cactus. They made most of it into jam and the last of the harvest into wine. People drank the wine at the rain ceremony held at their New Year, late in the summer. When Abbott wrote, many Tohono O'odham villages still held that ceremony.

Corn beer. The Apache made a corn beer called tiswin, which they learned to make from peoples of northern Mexico. They drank it mostly in everyday dealings with one another, and only sometimes in ceremony. The Apache reached the Southwest sometime between 1000 and 1550. For that reason, nobody knows whether they made tiswin here before 1500.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 4 MINUTES

Europeans learned to use tobacco from the peoples of the Americas in the 1500s and carried the habit home. A French official sent tobacco seeds to the queen of France in 1560, and English colonists at Roanoke smoked it the Algonquian way in 1585. Spanish colonists brought wine with them to Florida.

Most Native people in this land first met alcohol in the 1500s and 1600s, when Europeans arrived. A regular trade in alcohol with Native nations began in the 1600s.

Why nicotine is named after a Frenchman

Jean Nicot was the French ambassador to Portugal, the official who spoke for the king of France there. In 1560 he sent tobacco seeds to Queen Catherine de Médicis of France, with a letter about the plant's uses as a medicine. The next year he gave her tobacco leaves and showed her how to grind them into a powder to sniff for headaches. The people around the French king and queen took up the powder and sniffed it too.

The word nicotine comes from Nicot's name. So does *Nicotiana*, the name the Swedish scientist Carl Linnaeus gave the tobacco plants in 1753.

Tobacco reached England in 1565, perhaps brought from Florida by Sir John Hawkins. By 1588 English men and women of high rank were using it, and so were some well-trained doctors.

Thomas Hariot

Who: An English mathematician who smoked tobacco the Algonquian way at Roanoke and wrote down how the Algonquian people used it.

When and where: Roanoke Island, in what is now North Carolina, 1585 to 1586. London until his death in 1621.

He smoked the Algonquian plant uppowoc and died of nose cancer.

Thomas Hariot studied mathematics and the stars. In 1585 he sailed to Roanoke Island with a group of English ships and men sent to start a colony. Most of the colonists were soldiers. Hariot and the artist John White were the best known of the few who were not.

Whose island it was. Roanoke Island was the land of the Roanoke, Secotan and Croatoan peoples. Their leading werowance, or chief, was Wingina, and he let the English build a fort on the north end of the island. Hariot learned the Algonquian language from two Native men of the region, Manteo and Wanchese.

The plant. The people called it uppowoc. They planted it in plots of its own, dried the leaves, ground them to powder and drew the smoke through clay pipes. They believed the smoke opened the passages of the body and kept them healthy. As an offering, they threw the powder into sacred fires, and onto the water in storms and after escaping a danger.

Hariot wrote that the English "vsed to suck it after their maner" on the island. In today's words, they smoked it the way the Algonquian people did, and they went on smoking it after they came home.

The killing of Wingina. Wingina had let the English build their fort in 1585, and the next year they killed him. On June 1, 1586, men under the English commander Ralph Lane attacked his village. They shot Wingina and chased him down, and an Irishman named Edward Nugent cut off his head. A week later the English sailed home, and Hariot went with them.

> Hariot described uppowoc in a book printed in 1588, *A Briefe and True Report of the New Found Land of Virginia*. In it he also wrote that near the end of the colony's year, some of the English had been "too fierce, in slaying some of the people." In the same sentence he wrote that the people had "iustly deserued" (justly deserved) it. He did not name the dead.
>
> Hariot died in London on July 2, 1621, of cancer of the nose. The writers of Encyclopedia Virginia state that the cancer was "probably caused by heavy tobacco use."

Spanish wine in Florida

Pedro Menéndez de Avilés and his Spanish colonists founded St. Augustine, in Florida, on September 8, 1565. They built it at Seloy, a town of the Timucua people.

Wine and olive oil came by ship in big Spanish storage jars called olive jars. Historians at the Florida Museum of Natural History write that the two were perhaps even more important to the Spanish than wheat and beef. They also write that the Spanish soon turned to the Timucua for food, cooking pots and wives. Their account does not say whether the Timucua women chose these marriages.

Alcohol as a gift. The historian Peter C. Mancall writes that some Europeans surely offered alcohol to Native people when they first met, though no record from this century names a case. No record from the 1500s describes the Spanish trading wine to Native nations as a regular business.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 9 MINUTES

Drinking came over on the first English ships, and colony leaders spent the 1600s trying to keep it in bounds. The colonists' first drinks were cider and beer, and they believed alcohol kept the body warm and strong. Their leaders licensed taverns and punished drunks with fines, iron shackles, the stocks and public shame. In Virginia, planters grew tobacco to sell in England, and the smoking habit spread.

Liquor for furs. English traders sold rum and French traders sold brandy to Native nations in exchange for furs. Colony leaders passed laws against these sales, and traders kept breaking them.

Beer, cider and bad water

The first drinks the colonists made were cider and beer. They brewed beer from corn, wheat, oats, persimmons and green cornstalks. They tried to grow grapes for wine, but the vines they brought from Europe died of American pests and diseases.

Colonists believed that alcohol warmed the body, helped digestion and made people strong. The land here had plenty of clean water, but some colonists drank from dirty sources and got sick. At Jamestown, George Percy wrote that the settlers drank river water that was salty at high tide and "full of slime and filth" at low tide. He called it "the destruction of many of our men." In Europe, where rivers were often dirty, people drank alcohol in place of water, and the colonists kept that habit.

Officials of the Virginia Company of London complained about it. In a letter to Governor Francis Wyatt in 1622, they wrote that the colonists' drinking was harming the colony.

Bolts, fines and the stocks

Virginia's first lawmakers passed a law against drunkenness in 1619, at the colony's first General Assembly. The first time a man was found drunk, the minister scolded him in private. The second time, the minister scolded him in public. For a third offense he had to lie for 12 hours in bolts, iron shackles, in the house of an officer called the provost marshal, and pay the marshal's fees.

If he still kept drinking, the governor and his council, the men who advised him, could give him whatever harsh punishment they chose.

Massachusetts. The lawmakers of Massachusetts passed a set of drinking laws between 1633 and 1647. Nobody could run a tavern without a license from the county court. A tavern keeper could not serve one person more than half a pint of wine at a time. Nobody could sit drinking for more than half an hour, or stay after nine at night.

The fine. A person found drunk in Massachusetts paid 10 shillings, half a pound in English money. The law defined drunk as unable to think clearly, which showed in the way the person talked or moved. A person who could not pay was to be jailed, or set for up to three hours in the stocks, a wooden frame that locked a person's ankles while the person sat in a public place.

Prices. The lawmakers also set what an innkeeper could charge. In Boston in 1634 a meal cost sixpence and a quart of beer a penny, with a fine of 10 shillings for charging more. A traveller named John Josselyn reported that a constable, a town officer who kept order, would stop a stranger in a Boston tavern from ordering more drink than the constable thought right.

Samuel Cole

Who: The keeper of the earliest tavern in Boston known to have had a license. He is not Robert Coles, whom Massachusetts judges punished for drunkenness.

When and where: Boston, in the Massachusetts Bay Colony, 1634 to 1638.

About twenty Narragansett men ate their peace-treaty meal at his inn.

Samuel Adams Drake, a historian of Boston's taverns, dates the opening of Samuel Cole's tavern to March 4, 1634. A tavern was then called an ordinary.

Cole was a comfit-maker, a maker of sugar-coated sweets. He came to Boston in 1630, in the fleet of ships that brought Governor John Winthrop. His ordinary stood on Washington Street, and the house had a brew-house, a building for making beer.

The Narragansett visit. The English and the Narragansett people made a peace agreement in 1636, and Governor Henry Vane hosted Narragansett leaders in Boston. The Narragansett leader Miantonomi and two sons of the leader Canonicus ate at the governor's house. About twenty other Narragansett men ate their meal at Cole's inn.

The colony's judges let Cole sell his house as an inn in 1638, and he sold it to Robert Sedgwick. Cole died in 1666.

Robert Coles

Who: A colonist whom judges in Massachusetts punished four times for drunkenness, the last time by making him wear a red letter D. He is not Samuel Cole, the Boston tavern keeper.

When and where: Roxbury and Agawam, now Ipswich, in the Massachusetts Bay Colony, 1631 to 1634.

A paper on his back said DRUNKARD in large letters.

The first fine. Robert Coles came to Massachusetts in 1630 with Governor John Winthrop's fleet. In 1631 the colony's judges fined him five marks, about 3 pounds, 6 shillings and 8 pence, for being drunk on the ship *Friendship* and at Winnisimmet, now Chelsea. The *Friendship* was carrying a spiced wine made from honey.

The paper. At Agawam in 1633 he was charged with drunkenness for the third time. He had been drunk, had encouraged John Shatswell's wife to drink, and had urged her to be unfaithful to her husband. The judges fined him 10 pounds and made him stand in public with a paper on his back. On it the word drunkard was written in large letters.

The red D. He was drunk again at Roxbury in 1634. This time the judges ordered him to wear the red D for a year, and they took away his right to vote.

Afterward. Coles got back his right to vote about two months later, on May 14, 1634. The records show no later charge of drunkenness against him, though the Roxbury church later put him out.

By 1637 he had moved to Providence, a town built on land that Roger Williams got in 1636 from the Narragansett leaders Canonicus and Miantonomi. Coles was one of the 13 men who first owned land there, and in 1640 he helped write the Providence Combination, a written plan for governing the town. He died in Warwick, Rhode Island, in 1655.

Liquor for furs

Henry Hudson used liquor to test a group of Mahican leaders in September 1609. His ship lay near what is now Albany, in Mahican land. Hudson and his mate took the leaders into the ship's cabin and gave them "so much Wine and Aqua vitae," a strong liquor like brandy, "that they were all merrie."

Why Hudson did it. Robert Juet, who kept a journal on the ship, wrote that Hudson and the mate wanted to find out whether the leaders were planning "treacherie," a plan to betray them. In the end one of the men got drunk. Juet wrote that this was strange to the Mahican, "for they could not tell how to take it." The next day the people came back with tobacco and beads for Hudson, and a platter of venison.

The regular trade. The historian Peter C. Mancall dates the start of a regular trade in alcohol to the middle of the 1600s. From 1650 on, he writes, liquor was a common item in the fur trade. English traders sold rum to Native nations, and French traders sold brandy, in exchange for furs. Mancall writes that young men who controlled the furs from a season's hunt traded them for liquor, and more families became poor.

What the liquor did. Native and colonial witnesses both wrote down what happened when Native people drank the trade liquor. Drinkers fought each other and members of their own families. Some fell into fires or off cliffs, some drowned, and some killed other people. No one counted the deaths.

The bans. Colony leaders passed laws against the trade. In New Netherland, the Dutch colony that is now New York, Director General Willem Kieft, the colony's governor, and his council banned selling liquor to Native people on June 18, 1643. Their order said that "large quantities of strong liquors are daily sold to the Indians." The fine was 25 guilders, a guilder being a Dutch coin.

They passed the ban again in 1645. The next Director General, Petrus Stuyvesant, and his council passed it a third time in 1647, and raised the fine to 500 guilders plus the cost of any damage. The laws of the colonies name the officials who banned the trade. They rarely name the traders who broke the bans.

A false belief. Mancall writes that Native people organized against the trade themselves. Some colonists came to believe that Native people were born more likely to become alcoholics, people who cannot stop drinking. Mancall states that no evidence supports that belief.

Tobacco and rum

King James I of England attacked smoking in 1604, in a pamphlet called *A Counterblaste to Tobacco*. He called it "lothsome (disgusting) to the eye, hatefull to the Nose, harmefull to the braine, dangerous to the Lungs." In the same pamphlet he insulted Native people. He mocked the English for copying "the barbarous and beastly maners of the wilde, godlesse, and slauish Indians."

A milder leaf. The tobacco that the Powhatan people grew tasted dark and bitter to the English. John Rolfe, a colonist at Jamestown who smoked heavily, got seeds of a milder Spanish tobacco from Trinidad and Caracas. He was growing it by July 1612. The colonists shipped 20,000 pounds of it to England in 1617 and grew 60,000 pounds in 1622. After 1622 English planters took over land that the Powhatan had already cleared, to grow more tobacco.

Smoking rules in Massachusetts. Massachusetts officials told constables in 1633 to report "tobacco takers" as idle people. By 1638 the lawmakers had canceled their earlier laws against tobacco, and that year they wrote that since then smoking was "more abused than before." So they banned smoking near any house, barn, corn or haystack, because a pipe that close might set them on fire.

They also banned smoking outdoors in the streets and fields, except on a journey or at a meal, and in the public rooms of an inn. They passed these rules again in 1647, and that version put the distance from buildings and crops at about 330 feet.

Rum. Rum is a strong liquor made from molasses, the thick syrup left over when sugar is made from sugarcane. The first known name for rum comes from the island of Barbados, in about 1651. A planter there called it "Kill-Divill" and "a hott hellish and terrible liquor." In the 1600s New England merchants began shipping fish and lumber to the islands of the West Indies. They traded them for molasses and made the molasses into rum at home.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 7 MINUTES

Colonists drank more rum than any other strong drink between 1700 and 1750, and it was cheap. A gallon of rum made in the colonies cost 1 shilling 8 pence in Philadelphia in 1740. People drank in taverns, and they also met there to do the town's business. Colony leaders controlled drinking with tavern licenses and with rules for elections.

Georgia's ban. A Yamacraw leader named Tomochichi asked Georgia's leaders to stop the sale of rum, and they banned strong liquor for seven years, from 1735 to 1742. Nobody counted how much colonists drank in these years. The first estimates come from the 1770s.

Rum, molasses and tobacco

Colonial distillers made rum from molasses shipped in from the sugar plantations of the Caribbean. Some of the molasses came in legally, and some was smuggled, which means merchants brought it in secretly without paying the tax on it. In Philadelphia in 1740, a gallon of colonial rum cost 1 shilling 8 pence. A gallon of rum from the Caribbean cost 2 shillings 5 pence.

The Molasses Act. At the urging of large sugar planters on the British islands in the Caribbean, the members of the British Parliament, the lawmakers of Britain, passed the Molasses Act in 1733. Under it, importers owed sixpence a gallon on molasses from the French islands. Colonial merchants kept smuggling French molasses anyway, much of it from Saint Domingue, now Haiti. The tax should have brought in 25,000 pounds in British money each year. British officials collected 259 pounds in 1735.

Rum for people. Rum was part of a trade in people. New England ships carried rum to Africa, enslaved Africans to the West Indies, and molasses back to New England. Distillers made an extra-strong rum for this trade, so that ships could carry more of it in less space. When the ships reached Africa, the captains added water to the rum. They traded it for people to sell into slavery.

Tobacco and slavery. Enslaved Africans outnumbered white indentured servants, workers bound to a master for a set number of years, on Virginia's tobacco farms by 1700. Virginia planters grew 29 million pounds of tobacco in 1709, the most the colony ever grew.

Drinks for voters

Only white men aged 21 or older who owned land could vote in colonial Virginia. Enslaved people, free Black people, Native people, servants, white men with no land and all women could not. Each voter said his choice out loud in front of the crowd. Voters expected the men running for office to give them liquor and food.

The dry weeks. Virginia's lawmakers limited these gifts, called treats, in a law of 1705. Candidates could give treats before the sheriff read out the notice of an election, and again after the voting. The weeks in between were supposed to be "dry," with no treats. Some candidates got around the rule. They stayed away and had a friend, a servant or even a wife hand out the drinks.

The tavern as the town's meeting place

Boston men used taverns as meeting places for a lodge, for the colony's lawmakers, and for signing up sailors in wartime. Francis Holmes kept the Bunch of Grapes on King Street, now State Street, from 1712. One traveller called it the best punch house in Boston. Punch was a mixed drink made with liquor.

The first grand lodge. Henry Price, a Boston tailor, organized a grand lodge of Freemasons at the Bunch of Grapes on July 30, 1733. The Freemasons were a society of men who met in lodges, and a grand lodge was a head lodge over the others.

Vardy's. Luke Vardy kept the Royal Exchange tavern. When Boston's town-house burned in the winter of 1747, the colony's lawmakers finished their meetings at Vardy's.

A duel. Two young men quarrelled at Vardy's in July 1728, over their cards or their wine. They fought with swords on Boston Common, and one of them killed the other, a man named Woodbridge. The killer's friends put him on a ship that sailed at once. The historian Samuel Adams Drake, who told the story in 1886, does not give the killer's name.

Signing up sailors. During a war between Britain and France in 1745, notices posted in Boston told sailors who wanted to join a privateer to report to the Widow Gray's Crown Tavern. A privateer was a privately owned ship allowed to attack enemy ships. Women kept several of Boston's taverns. Drake's list includes the Widow Gray, the Widow Anna Swords, a Mrs. Wardwell and a Mrs. Glover.

Georgia bans rum, 1735 to 1742

James Oglethorpe and the first colonists of Georgia settled on Yamacraw Bluff, where Savannah stands today, in February 1733. Tomochichi, the leader of a Yamacraw town of about 200 Creek and Yamasee people, gave them the land on the bluff.

Tomochichi's request. Tomochichi saw more of his people drinking heavily. In 1734 he asked Oglethorpe and the Trustees, a board of men who met in London and ran the colony from there, to ban the sale of rum.

The Trustees banned rum and brandy in Georgia in 1735, and King George II and his council approved the law. It called these liquors "hurtful and pernicious (harmful) to Man's Body." The Trustees named an officer to enforce the ban and set fines that grew larger with each offense. Taverns could still sell beer and wine with a license.

The Malcontents. Colonists soon accused the officials who ran the ban of being dishonest, and they protested the ban. A group known as the Malcontents, a word for people who are unhappy and complain, argued that the ban hurt trade. Georgia merchants, they said, needed rum to trade for timber and other goods, which they then shipped to the British islands in the Caribbean. The Trustees ended the ban on September 29, 1742, and let rum in again for use in the lumber trade. Oglethorpe disagreed with their decision.

Traders from South Carolina had kept carrying rum up the Savannah River all along, against the Trustees' order. In a letter of 1737, Oglethorpe wrote that the Creek had learned drunkenness "from our Traders."

Dr. Alexander Hamilton

Who: A Scottish-born doctor from Annapolis, Maryland, who kept a diary of the taverns and drinking clubs he saw on a long ride north. He is not the Alexander Hamilton who later ran the Treasury.

When and where: From Maryland to York, Maine, and back, May 30 to September 27, 1744.

He drank three "bumpers" with the Hungarian Club and left at ten.

Dr. Alexander Hamilton had moved to Annapolis in 1738 to work as a doctor, and in 1743 he was very sick. Mainly to get his health back, he set out on horseback on May 30, 1744. He rode 1,624 miles, from Maryland to Maine and back, and reached home on September 27.

Crooked riders. On May 31, at Tradaway's inn in Maryland, he met "a drunken Club" leaving. Most of the men had climbed onto their horses and sat on them crooked. At an inn near Philadelphia on June 5, the landlady did all the work because the landlord was drunk. Hamilton wrote that the liquor had taken away "the use of his tongue." The landlord sat without moving in a corner, smoking his pipe.

The Hungarian Club. On June 15 he ate supper in New York with the Hungarian Club at Todd's tavern. After supper the men drank "bumpers," glasses filled to the brim and drunk off at once, at each round. Hamilton did not want to drink and drank only three. He left at ten, "pretty well flushed (red in the face) with my three bumpers."

Some of the men, he wrote, thought nothing was finer than being able "to pour down seas of liquor, and remain unconquered, while others sank under the table." He wrote that some members were "very fond of making a stranger drunk."

The doctors' club. In Boston he met with a club of doctors at the Sun Tavern. "We drank punch, smoaked tobacco, and talked of sundry physical matters," he wrote, meaning various matters of medicine. In

> 1745 he started a club of his own in Annapolis, the Tuesday Club. He died on May 11, 1756.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 13 MINUTES

Rum made fortunes in the colonies before the Revolution, and whiskey took its place after. By 1770 the colonies had more than 140 rum distilleries, making about 4.8 million gallons a year. Ship captains from Rhode Island carried rum to Africa and traded it for African people to sell into slavery. After the war, Americans switched to whiskey made from their own corn and rye.

Who pushed back. Native leaders asked colonists from the 1750s on to stop selling them liquor. The Philadelphia doctor Benjamin Rush argued in 1785 that heavy drinking was a disease. When members of Congress taxed whiskey in 1791, armed men in western Pennsylvania attacked the tax collectors, and President George Washington called up nearly 13,000 militiamen, part-time citizen soldiers, against them. In 1799 Handsome Lake, a Seneca religious leader, stopped drinking and preached against it.

How much did the colonists drink?

Nobody measured how much colonists drank before the 1770s, and the estimates made since then each measure something different. The writer Ed Crews, in the *Colonial Williamsburg Journal*, reports an estimate that the average grown man in the 1770s may have drunk as much as three pints a week. The writer Ian Williams gives 3.7 gallons of rum a year for each colonist by the time of the Revolution. The historian Peter C. Mancall cites an estimate of perhaps seven shots of liquor a day by 1770.

The first government count. Government figures for 1790 showed that the average American over the age of 15 drank 34 gallons of beer and cider, 5 gallons of liquor and 1 gallon of wine in a year.

Drink as medicine. People believed alcohol was good for the body. They took whiskey for stomach pain and for a sore throat, and hot brandy punch for cholera, a disease that causes severe diarrhea. Pregnant women and women in labor drank a shot of liquor to ease the pain. Benjamin Franklin collected more than 200 words that meant drunk.

Rum and the slave trade

Rhode Island had about 30 rum distilleries by 1764, 22 of them in the town of Newport. Rhode Island merchants traded the rum on the coast of West Africa for African people to enslave. In the hundred years before 1807, Rhode Islanders made at least 1,000 voyages to buy and carry enslaved people. They carried more than 100,000 Africans into slavery.

The *Sally*. Chapter 16 tells the voyage of the slave ship *Sally* stage by stage. Here is the rum's part in it. In 1764 the brothers Nicholas, John, Joseph and Moses Brown of Providence sent the ship to West Africa with 17,274 gallons of rum to trade, along with chains, shackles and guns. Its captain, Esek Hopkins, used the rum to buy 196 people.

At least 109 of the 196 died, by the count in Brown University's report on the voyage. Several were children, and one woman hanged herself below deck. When the captives rose up against the crew at sea, Hopkins's men fired on them. The ship's account book records that the crew "Destroyed 8," which means they killed eight people. After that, the account book says, "Some Drowned themselves Some Starved and others Sickened & Dyed."

The Sugar Act. Rum was made from molasses. Since the Molasses Act of 1733, colonial merchants had smuggled molasses from the French islands to avoid its tax of sixpence a gallon. In 1764, the year the *Sally* sailed, members of the British Parliament cut the tax on foreign molasses to threepence a gallon, in a law called the Sugar Act. They also pushed the British navy to stop the smuggling, and navy officers who caught smugglers could seize half of the smuggled goods they found.

From rum to whiskey. During the Revolution, British warships stopped much of the shipping, and molasses became costly and hard to get. Scotch-Irish farmers in Pennsylvania, Maryland, western Virginia and western North Carolina made whiskey from rye and corn instead. Before 1800, distillers in Kentucky were shipping whiskey down the rivers to New Orleans.

Native leaders against the liquor trade

Hagler, a leader of the Catawba people in the hill country of the Carolinas, spoke to officials sent by North Carolina in 1754. He told them, "You Rot Your grain in Tubs, out of which you take and make Strong Spirits." Hagler and other Native leaders asked the colonists to stop the liquor trade, because it brought violence and despair.

What the British official wanted. Sir William Johnson, the British superintendent of Indian affairs for the northern colonies, handled dealings with Native nations, and he wanted the trade to go on. In 1764 he wrote to his bosses in London, the Lords of Trade, that rum could cause problems. He also wrote that "the Trade will never be so extensive" without rum. After the Revolution, traders carried liquor farther west, and they added water to it so they had more to sell.

Handsome Lake. United States troops burned the villages of the Haudenosaunee, also called the Iroquois, in New York in 1779. After the war, at Fort Stanwix in 1784, American negotiators backed by soldiers took huge sections of land from the Six Nations of the Haudenosaunee. By 1799 the Haudenosaunee had lost most of their land in New York and Pennsylvania, and many of them drank heavily.

One was Handsome Lake, a Seneca man from the Genesee River. In 1799, sick after many years of heavy drinking, he had visions. Soon after, he stopped drinking and began preaching against drunkenness. His teaching became the Longhouse Religion, which Haudenosaunee people still practice.

Benjamin Rush

Who: A Philadelphia doctor who signed the Declaration of Independence and wrote that heavy drinking was a disease.

When and where: Philadelphia, 1785 to 1790.

His chart put water at the top and the gallows at the bottom.

Before Benjamin Rush, most Americans thought a drunkard simply lacked the will to stop. Rush argued that heavy drinking was an addiction.

The book. In 1785 he published a book about ardent spirits, meaning strong liquor such as rum, gin and whiskey. Its title was *An Inquiry into the Effects of Ardent Spirits Upon the Human Body and Mind*, and some records date the first printing to 1784.

Rush wrote that a person begins drinking by free choice, and the habit then becomes a need. In his words: "The use of strong drink is at first the effect of free agency. From habit it takes place from necessity." He said the only cure was to stop drinking completely. His advice to heavy drinkers was "Taste not, handle not."

The thermometer. An edition of 1790 added a chart that Rush called "A Moral and Physical Thermometer." Water and milk stood at the top. Lower down, punch led to "idleness, sickness and debt." At the bottom, gin, brandy and rum taken every day led to "murder, madness" and the gallows.

Few people changed their drinking at the time. The historian Mark Lender says that "the conception we have of addiction today can generally be traced back to Benjamin Rush."

Why farmers went to war over a whiskey tax

Farmers in western Pennsylvania turned their grain into whiskey and used the whiskey as money. From 1791 some of them fought a new federal tax on whiskey, and in 1794 hundreds of them took up guns against it. The fight is called the Whiskey Rebellion.

Why whiskey. The roads over the mountains to the east were bad, and grain spoiled on the way. Whiskey kept, and it was easier to carry. Coins were scarce on the frontier, so people paid for goods and paid their workers in whiskey.

Whose land it was. The whiskey farmers worked land that the Shawnee, Delaware and Mingo peoples had used. Representatives of the Six Nations of the Haudenosaunee had signed that land over to Britain in 1768, at Fort Stanwix in New York. That was an earlier treaty than the one made at the same fort in 1784. The Shawnee and Delaware, who lived on much of the land, were at the meeting but did not sign.

The tax. Alexander Hamilton, the Treasury Secretary in charge of the country's money, asked for a tax on whiskey made in the United States in January 1791, to pay the debt from the Revolutionary War. Members of Congress voted it into law. The law set the tax at 7 cents a gallon, but big distillers paid less than that and small ones paid more.

A big distiller could instead pay a flat fee for each still, the equipment used to distill liquor, and that came to as little as 6 cents a gallon. A farmer with a small still paid about 9 cents a gallon. The law required payment in coin, which the farmers rarely had.

Two men tarred and feathered. A gang of armed men in disguise caught Robert Johnson, a new tax collector, at Pigeon Creek in Washington County, Pennsylvania, on September 6, 1791. Some records give the date as September 11. They tarred and feathered him, which meant pouring hot tar on his skin and sticking feathers to the tar. They cut off his hair and took his horse, so he had to walk a long way. Hamilton's 1794 report on the attacks names none of the men.

Officials sent a man named John Connor to serve court papers on Johnson's attackers. Men seized Connor, whipped him, and tarred and feathered him too. They took his money and his horse, blindfolded him and tied him up in the woods, where he stayed for five hours. No surviving record names who did it.

The fight at Bower Hill. John Neville, the regional tax inspector, went with a United States marshal to serve court papers on July 15, 1794. A marshal was an officer who carried out the orders of the national courts. At a farm about 10 miles south of Pittsburgh, men fired warning shots at them.

The next day, at least 30 men from the Mingo Creek militia surrounded Neville's house, called Bower Hill. Neville shot and killed one of them, Oliver Miller. Neville had the people he enslaved help him defend the house. They could not refuse.

The men came back on July 17, this time between 400 and 600 of them, led by Major James McFarlane, who had fought in the Revolution. By then 10 United States soldiers from Pittsburgh had come to defend the house, and Neville had left to hide nearby.

After about an hour of shooting, McFarlane called a stop. When he stepped into the open, someone in the house shot and killed him. The records do not say who fired. The attackers burned Neville's house and the quarters where the enslaved people lived. The soldiers surrendered, and the attackers sent them away.

KNOWN:	The dead at Bower Hill included McFarlane and one or two other militiamen.
NOT KNOWN:	How many men died there in all, and whether one of the soldiers later died of his wounds.

The army. Washington called up 12,950 militiamen from New Jersey, Maryland, Virginia and Pennsylvania. He went with them as far as Bedford, Pennsylvania, and Fort Cumberland, Maryland, then went back to Philadelphia. He left Henry Lee, the governor of Virginia, in command, and Hamilton went along as an adviser. The rebels scattered without a battle. About 12 soldiers died of illness or accidents.

The Dreadful Night. Soldiers under Lee broke into houses on the night of November 13, 1794, and seized people, rebels and witnesses alike. The soldiers drove the prisoners barefoot, in their nightclothes, over muddy roads and through streams, and locked them in animal pens and in cellars with no floors. The soldiers ruined the health of some of the prisoners, and at least one prisoner died. In all, the soldiers arrested about 150 men during the march west.

The trials. Soldiers marched twenty of the prisoners to Philadelphia and paraded them down Broad Street on Christmas Day 1794, as trophies of the march. Ten were tried for treason, the crime of making war against one's own country, and two were found guilty. Members of Congress voted to end the whiskey tax in 1802.

Philip Vigol

Who: A man from western Pennsylvania, one of the first two Americans found guilty of treason against the United States, for attacking whiskey-tax officers.

When and where: Westmoreland and Fayette counties, Pennsylvania, 1794. Philadelphia, 1795.

His party carried guns, beat drums and burned a tax officer's house.

The court report spells Philip Vigol's name this way. Other records spell it Wigle, Weigel or Wigal.

Reigan. During the rebellion, Vigol went with an armed party, carrying guns and beating drums, to the house of Reigan, a tax officer in Westmoreland County. They forced Reigan to hand over his official papers and made him swear never to collect the tax again.

Wells. The same party then rode to the house of Wells, the tax officer in Fayette County, and swore to destroy Wells and his house. Wells had run and hidden. The men ransacked his house, which means they tore

through it and wrecked it. Then they burned it, with everything inside, including the tax records. Later they found Wells, locked him up and made him swear to quit his job.

The trial. A jury in the United States court in Philadelphia found Vigol guilty of treason in 1795, and the judges sentenced him to death by hanging. At the trial, Justice William Paterson told the jury that fear excused a crime only when a person's life was in real danger at that moment. John Mitchell, the other man found guilty, was also sentenced to hang.

The pardon. President Washington pardoned Vigol and Mitchell in November 1795, which means he freed them from their punishment. The records differ on the day, November 2 or November 14. In his yearly message to Congress, Washington wrote, "The misled have abandoned their errors."

George Washington's rum and whiskey

George Washington used alcohol to win votes and to keep soldiers working, and he handed it out to the people he enslaved on the days they worked. At the end of his life he owned one of the largest whiskey distilleries in the country.

Votes. Washington ran for the Virginia House of Burgesses, the colony's elected lawmaking body, in Frederick County in 1758. He gave the voters 28 gallons of rum, 50 gallons of rum punch and 82 gallons of wine, beer and cider. He won the seat.

Soldiers and the enslaved. As commander of the Continental Army, he wrote in June 1779 that he wanted "a pretty good stock of rum" at the forts for soldiers on work duty.

At his plantation, Mount Vernon, he gave the people he enslaved an allowance of liquor for each day's work. They could not refuse the work. Once he accused his overseer, James Butler, the man who ran their work, of giving the enslaved people 36 pints of rum. Butler answered that he had given "no more than a pint of rum & a pound of Meat to each man."

The distillery. His farm manager, James Anderson, advised him to build a whiskey distillery at Mount Vernon in 1797. It made 600 gallons that first year. In 1799, the year Washington died, it made almost 11,000 gallons, worth $7,500, when the average distillery in Virginia made about 650 gallons. Anderson's son, John, ran it with an assistant distiller and six enslaved workers. Their names were Hanson, Peter, Nat, Daniel, James and Timothy.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 9 MINUTES

Americans of the early 1800s drank almost three times as much alcohol as Americans do now, and the first big campaign against drinking began. The average American of drinking age drank 7.1 gallons of pure alcohol in 1830, against 2.48 gallons in 2023. People drank at breakfast, in the fields and at work.

Ministers and reformers began asking people in 1826 to sign a pledge, a written promise not to drink, and more than a million signed. By the 1840s and 1850s drinking had fallen to about 3.5 gallons, half the 1830 figure.

Other drugs. Anyone could buy laudanum, a painkiller made of opium and alcohol, without a doctor's order, and doctors gave it to adults and to children. Among Native nations, leaders such as Little Turtle of the Miami asked members of Congress to stop the traders who sold liquor to their people.

A dram with breakfast

Men, women and even children in the early 1800s drank "a healthful dram" with breakfast. A dram was a small drink of liquor. Farmers took cider, beer or whiskey into the fields. Employers stopped work in the middle of the morning so their workers could drink. When people got sick, a doctor's first medicine was often a drink of alcohol.

Counting the alcohol. Beer, cider, whiskey and rum hold different amounts of alcohol, so the usual way to compare them is to count only the pure alcohol inside the drinks. By the count of the historian W. J. Rorabaugh, Americans of drinking age drank an average of 5.8 gallons of pure alcohol each in 1790 and 7.1 gallons in 1830. In 2023 Americans aged 14 and older drank an average of 2.48 gallons each, by the count of the National Institute on Alcohol Abuse and Alcoholism.

Drinking fell to about 3.5 gallons of pure alcohol a person each year between 1840 and 1860. Those were the years when the temperance societies were most active.

Temperance and the pledge

People in Connecticut, Virginia and New York had formed temperance societies, groups that urged drinking little or no alcohol, by 1808. Lyman Beecher, a minister in Connecticut, began giving talks against all drinking of liquor in 1825.

The American Temperance Society. Reformers in Boston founded the American Temperance Society on February 13, 1826. Its members signed a pledge not to drink liquor, such as whiskey and rum. The pledge still allowed beer, wine and alcohol taken as medicine. Within five years the society had 2,220 local groups and 170,000 members. By the late 1830s it had more than 8,000 groups and more than 1,250,000 members.

No alcohol at all. The reformers split in the late 1830s. Many moved to total abstinence, which means no alcohol at all, not even beer or wine. Some stopped trying to talk people out of drinking and began asking lawmakers to ban the sale of liquor.

The first laws. Massachusetts lawmakers banned selling hard liquor, such as whiskey and rum, in amounts of less than 15 gallons in 1838. Only people with money could buy 15 gallons at once, so under this law only the rich could buy hard liquor. The lawmakers canceled the law within two years. In the 1840s, lawmakers in many states let voters in each town or county decide on liquor licenses, the papers from the government that allowed a person to sell liquor.

The Navy's ration. Sailors in the Navy got a daily ration of liquor, a set share handed out each day. Almost 400 people signed a petition, a paper people sign to ask for something, to members of Congress in 1843, asking them to end it. The petition was more than 10 feet long.

The Washingtonians, 1840

Six drinkers met at Chase's Tavern on Liberty Street in Baltimore on April 2, 1840, and began keeping each other sober. They were William K. Mitchell, John F. Hoss, David Anderson, George Steers, James McCurley and Archibald Campbell. They called their group the Washington Temperance Society.

Telling stories. The members stayed sober by telling each other the stories of their own drinking. Then they went looking for other drinkers and told them the same stories. Estimates of how many people joined run from tens of thousands up to 600,000. Within a few years the group faded away.

Lincoln's speech. Abraham Lincoln, then 33 years old, spoke to the Washingtonians of Springfield, Illinois, on February 22, 1842. He said that people had blamed and scolded drinkers, and the men who sold them liquor, too much, and that this was both unwise and unfair. "If you would win a man to your cause," he said, "first convince him that you are his sincere friend." He also said that "a drop of honey catches more flies than a gallon of gall," a bitter liquid.

John B. Gough

Who: An English-born bookbinder, a worker who sews and covers books, whose drinking cost him his work. His wife and baby died while he was drunk. He signed the temperance pledge and spent his life asking others to sign it.

When and where: New York, and Worcester, Massachusetts, 1829 to 1845.

Sent out to buy two quarts of rum, he drank them himself.

Drinking. John B. Gough was born in Sandgate, England, in 1817, and came to America at the age of 12, landing in New York in August 1829. He learned bookbinding in New York City. After his mother died, he began drinking heavily. He lost one job after another and sang comic songs in theaters.

Delirium tremens. Once, when he stopped drinking all at once, he had delirium tremens, an illness of heavy drinkers who suddenly stop. The body shakes and the mind is confused, and the person sees things that are not there. The illness can kill. In *An Autobiography*, printed in 1845, Gough wrote: "Hideous faces appeared on the walls, and on the ceiling, and on the floors." He saw "millions of monstrous spiders" around him.

His wife. When his wife fell sick, the women nursing her sent him to buy two quarts of rum. He drank it himself. Ten days later his wife and their baby both died. Gough wrote that the whole town learned "that my wife and child were lying dead, and that I was drunk!"

The pledge. In Worcester, Massachusetts, in late October 1842, a stranger touched his shoulder and asked, "Why do you not sign the pledge?" The man was Joel Stratton, a waiter at the town's temperance hotel. The next evening Gough told his story to a meeting at the Worcester town hall. Then he signed the pledge.

About five months later he drank again, and then he signed the pledge a second time, in public. Between May 1843 and January 1845, he wrote, he traveled more than 12,000 miles and gave 605 talks. At those talks,

> 31,760 people signed the pledge.

Whiskey and enslaved people at Christmas

Frederick Douglass, who was enslaved in Maryland in the 1830s, wrote in his book of 1845 that slaveholders used whiskey to control the people they enslaved. Enslaved people had the days between Christmas and New Year's off work. Slaveholders wanted them to spend those days drunk.

"It was deemed (thought to be) a disgrace not to get drunk at Christmas," Douglass wrote. Slaveholders made "bets on their slaves, as to who can drink the most whisky without getting drunk." In this way, Douglass wrote, they got "whole multitudes to drink to excess," which means far too much.

Why they did it. Douglass wrote that the slaveholders did this to keep enslaved people from rising up in an armed revolt. He wrote that he and the others felt "that we had almost as well be slaves to man as to rum."

Liquor and Native nations

Little Turtle, also called Michikinikwa, was a leader of the Miami people. He urged members of Congress to stop traders from selling liquor to Native nations. Congress members gave the president the power to stop those sales in 1802. War Department officials then made rules that banned traders from bringing liquor onto Native land, and did little to enforce them.

The traders. Traders kept selling because they made more money on liquor than on other goods. They also watered it down. Members of Congress made it a crime in 1834, with a fine of up to $300, to bring liquor onto Native land.

Native leaders. Native leaders worked against drinking among their own people. The Shawnee religious leader Tenskwatawa and a Delaware woman named Beate told their followers to give up alcohol. Pawnee leaders limited drinking in their towns.

Leaders of the Mohican-Stockbridge people wrote to Congress in 1827. They had been living on part of the Oneida Reservation in New York. They wrote that one reason they had agreed to move to what is now Wisconsin was to "flee

from" liquor in their community. The land in Wisconsin was the homeland of the Menominee people.

Opium sold as medicine

Opium is a drug made from the opium poppy. It stops pain and brings sleep, and a person who takes it every day comes to need it. Laudanum was opium dissolved in alcohol. Until the early 1900s, anyone could buy laudanum without a doctor's order.

For colds and for babies. Doctors gave laudanum for colds, for heart disease and for pain, to adults and to children. Nurses fed it to babies with a spoon. Patients having surgery in the late 1700s and early 1800s got laudanum and alcohol first. Then the surgeon's helpers held them down while the surgeon cut.

Morphine. A German druggist named Friedrich Sertürner took a drug called morphine out of opium in 1804. In 1817 he tested morphine on himself and three boys, and all four nearly died. A German pharmacy that later became the drug company Merck began making morphine for sale in 1827.

Chewing tobacco

The English writer Charles Dickens visited the United States in 1842. In his book *American Notes*, he complained about how common it was in Washington to chew tobacco and spit out the juice. In the courts of law, he wrote, "the judge has his spittoon, the crier his, the witness his, and the prisoner his." A spittoon is a bowl for spitting into, and the crier was the officer who called the court to order.

In hospitals, Dickens saw signs asking medical students to spit their tobacco juice into boxes and not onto the stairs. On a steamboat, he watched two young men chew and spit on the deck for a quarter of an hour before breakfast.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 16 MINUTES

Lawmakers in thirteen states banned liquor between 1851 and 1855, while drugstores went on selling opium, morphine and cocaine openly in medicine bottles. Maine's lawmakers were the first of the thirteen, in 1851. In Portland, Maine, in 1855, soldiers fired on a crowd at the mayor's order and killed a young sailor. In the Civil War, surgeons gave wounded soldiers morphine and opium, and thousands of veterans came home addicted.

Medicine and the law. Their medicines held opium, morphine, cocaine (a drug made from coca leaves) and alcohol, and the labels did not have to say so. City, state and federal lawmakers passed laws against opium. A federal law of 1887 named Chinese people outright, and accounts differ about whom San Francisco's opium law of 1875 was aimed at.

Women against the saloon. Women marched into saloons to pray, and in 1874 they founded the Woman's Christian Temperance Union. In 1880 Kansas voters approved a ban on liquor in their state constitution, the state's highest set of laws.

The Maine Law and the Portland Rum Riot

Lawmakers in Maine banned the sale of all alcoholic drinks on June 2, 1851. The law still allowed alcohol for medicine and for use in factories. Neal Dow, the mayor of Portland, had helped write it. By 1855, lawmakers in twelve more states had passed bans of their own. Judges threw out some of these laws, and lawmakers passed them again.

Dow and the Irish. For years Dow had ordered police raids on saloons in Portland. A saloon was a bar, mostly for men, that sold drinks by the glass. Irish immigrants ran many of the saloons Dow raided, and he gave speeches about "rum-swilling foreigners." About one in nine of Portland's 21,000 people was an Irish immigrant in 1850.

The liquor at City Hall. Dow was mayor again in 1855. He had city officials buy $1,600 worth of liquor for medicine and for use in workshops and factories, and he stored it at City Hall. The law required a city committee to make such a purchase, and no committee had been named.

Under the Maine Law, any three voters could ask a judge for a search warrant, a paper from a judge that allows a search. Three men got a warrant to search City Hall on June 2, 1855. The police would not let them in. By evening a crowd of between 1,000 and 3,000 people, most of them Irish, stood outside. Some threw stones at the door.

The shooting. Dow called out the militia, a force of part-time soldiers, and ordered them to fire. John Robbins, a 22-year-old sailor from Deer Isle, Maine, broke a hole in the door of the room where the liquor was kept. The soldiers shot him dead. He had planned to marry the next day. The soldiers kept firing as the crowd ran and wounded seven more people. The New England Historical Society's account of the riot does not name the soldiers who fired or their officers.

Dow was tried for buying the liquor improperly and found not guilty. Voters turned him out of office, and Maine lawmakers ended the ban in 1856.

How the Civil War made thousands of addicts

Soldiers in the Civil War were given whiskey as a "stimulant," a drink to give them energy. Members of Congress put a tax on liquor and tobacco in 1862 to help pay for the war. Navy officials ended the sailors' daily ration of liquor on September 1, 1862.

The needle. Doctors had begun using a new tool just before the war, between 1853 and 1855. The hypodermic syringe is a hollow needle for pushing a drug under the skin, and with it doctors gave more morphine. In the war, surgeons gave morphine shots and opium pills to soldiers with gunshot wounds and to soldiers whose arms or legs they had cut off. Diarrhea spread through the army camps, and doctors gave opium for that too.

Withdrawal. Morphine and opium stop pain, and a person who keeps taking them comes to need them. When the drug stops, the body goes into withdrawal, the sickness that comes when the body loses a drug it depends on. The person sweats, aches and cannot sleep. Later come stomach cramps, diarrhea, sick stomach and vomiting.

"Opium slavery." Thousands of veterans came home addicted, and they called it "opium slavery." Addicted veterans found little sympathy. Many of them could not get medical care, and many died of accidental overdoses. An overdose is too much of a drug at once, enough to make a person very sick or kill them.

NOT KNOWN:	how many veterans were addicted. The historian Jonathan S. Jones, who read their letters and records, says there were thousands.
DISPUTED:	a claim that 400,000 veterans came home with a "soldier's disease" of morphine addiction. The earliest known use of the phrase "soldier's disease" is from 1915, fifty years after the war.

John Tackett Goolrick

Who: A soldier for the Confederacy, the Southern states that broke away to keep slavery, in a unit that fired cannons, whose family's letters record his 30 years of morphine addiction.

When and where: Petersburg and Richmond, Virginia, 1864. Fredericksburg, Virginia, 1865 to 1925.

His family locked him in a farmhouse room for weeks.

The wound. John Tackett Goolrick served in the Fredericksburg Artillery in Robert E. Lee's army, and he strongly supported the Confederacy's fight to keep slavery. In August 1864, at the siege of Petersburg, an attack in which an army surrounded the city to force it to give up, a bullet hit him in the left leg.

He was taken to Chimborazo, a hospital in Richmond. Jones, who read the family's letters, writes that surgeons there apparently gave him morphine for the pain. At Chimborazo, or in the years after, he became addicted. He stayed in the army until Lee surrendered at Appomattox in April 1865.

The breakdown. After the war he worked as a lawyer in Fredericksburg. His wife was Frances Bernard Goolrick. He took larger and larger doses of morphine. In 1896 he broke down and could no longer work, and the family ran short of money.

Frances told him that she would divorce him unless he gave up morphine completely. On February 5, 1896, she wrote to her brother, "I can bear neither for myself or the children, this life any longer."

The locked room. The family could have sent him to a state hospital for the mentally ill, which took addicted veterans. His brother wrote that sending him there would be "commented upon and asked about" in the newspapers. So the family took him to his brother's farmhouse outside Fredericksburg instead. They locked him in a room, and nurses they paid

> kept him there for several weeks while he went through withdrawal. His sister-in-law Nora wrote on March 10, 1896, "my heart aches to look at him."
>
> Goolrick got well and went home. The family's letters suggest that he went back to morphine several times before he died in 1925.

What was in the medicine bottle?

Many medicines sold in stores held opium, morphine, cocaine or alcohol, and some held mercury and lead, which are poisons. These were patent medicines, sold under a brand name. Their makers did not have to tell buyers what was in them.

A syrup for babies. Jeremiah Curtis and Benjamin A. Perkins began selling Mrs. Winslow's Soothing Syrup in 1849, as a medicine for babies who were teething. Each ounce held about 65 milligrams of morphine. One teaspoon held enough morphine to kill a young child. Writers for the American Medical Association, a group of doctors, called it a "baby killer" in 1911. No record gives a count of the children who died after taking it.

A medicine for women. Lydia E. Pinkham's Vegetable Compound was sold to women from the 1870s. It was 18 to 20 percent alcohol. The label said the alcohol was there only to dissolve the other ingredients and to keep the medicine from spoiling. Critics pointed out that women who had signed temperance pledges took it.

Who was addicted. The historian David T. Courtwright writes that people addicted to opium drugs in these years were most often middle-class or rich women who had started taking morphine for an illness. Surveys in the late 1800s found that two out of every three people addicted to laudanum or morphine were women. There was also a "hard core" of opium smokers, mainly Chinese workers and white criminals.

Courtwright writes that, for the size of the population, addiction to these drugs was at least as common in the late 1800s as in 1992. Most of the people who took these medicines left no record of what happened to them.

Cocaine. Cocaine came to America as a medicine in 1884, and doctors used it to numb the eye for surgery. Soon there were reports of doctors and druggists addicted to it. Oregon lawmakers banned cocaine in 1887, the first in any state to do so. Lawmakers in Montana, Colorado, Illinois and Massachusetts passed bans by 1898.

John Stith Pemberton

Who: A Georgia druggist, addicted to morphine after a war wound, who invented Coca-Cola.

When and where: Columbus and Atlanta, Georgia, 1865 to 1888.

The first Coca-Cola had cocaine in it and cost five cents.

The wound. John Stith Pemberton had a medical degree and ran a drugstore in Columbus, Georgia. He fought for the Confederacy at the Battle of Columbus in April 1865 and took a sword wound to the chest. He took morphine for the pain and became addicted.

The drink. From 1866 he tried to make a painkiller that had no morphine in it. In 1885 he registered Pemberton's French Wine Coca, a wine mixed with coca, at his drugstore in Columbus. A ban on liquor took effect in Atlanta and Fulton County in 1886, so Pemberton made a version of his drink without wine and called it Coca-Cola. Jacob's Pharmacy in Atlanta first sold it on May 8, 1886, for five cents a glass. Pemberton claimed it cured headaches and morphine addiction.

The makers of Coca-Cola stopped using fresh coca leaves in 1903. They took out the last traces of cocaine by 1929.

The end. Pemberton was still addicted and poor when he sold his rights to the drink in 1888. He died of stomach cancer on August 16, 1888. His son Charles was addicted to opium. In June 1894 Charles was found unconscious with opium beside him, and he died ten days later, at the age of 40.

Opium laws and Chinese immigrants

Chinese immigrants came to California during the Gold Rush, and some of them brought the habit of smoking opium. Opium dens opened in San Francisco's Chinatown in the 1850s. An opium den was a room where people paid to lie down and smoke opium.

San Francisco, 1875. The members of San Francisco's Board of Supervisors, the city's lawmakers, made it a crime in 1875 to keep or visit an opium den. Reporters for the *San Francisco Chronicle* wrote that the supervisors acted after they learned that Chinese owners were running dens for white customers. The police chief, Phillip Crowley, said his officers would "keep them from opening places where whites might resort to smoke." His officers often left alone the dens that sold only to Chinese people.

Why they passed it. Writers disagree about the reason for the 1875 law. George Fisher, of Stanford Law School, argues that the supervisors wanted to protect white opium smokers. Writers for the Drug Policy Alliance, a group that works to change drug laws, point out that the dens the law closed were mainly in Chinese immigrant neighborhoods.

A false story. Irish members of the Church of the Transfiguration, a Catholic church in New York, and its assistant pastor, a priest who helped lead the church, spread a false story in 1883. They said that Chinese men were luring girls as young as 11 and 12 into opium dens. Writers for the *New York Times* called the story "preposterous," which means too silly to believe. About a week later the story was shown to be a hoax, a lie made up on purpose.

Laws that named race. Later laws named race and nationality outright. Idaho lawmakers in 1887 set punishments for "every white person" who kept or used an opium den. Fisher calls the early drug laws "laws about whites." In his view, their makers cared only about what drugs did to white people.

In the same year as Idaho's law, members of Congress named Chinese people in a law of their own. They banned any "subject of the Emperor of China" from bringing opium into the United States. By 1896, lawmakers in 22 states had banned opium dens.

Praying in the saloons: the WCTU

Eliza Jane Thompson led groups of women into the saloons of Hillsboro, Ohio, after she heard the lecturer Diocletian Lewis speak against drink on December 23, 1873. The women sang hymns and prayed until the owners closed. Women in 22 other states copied them. In Anoka, Minnesota, a saloon keeper and his wife poured cold water from an upstairs window onto the praying women.

The WCTU. Women met in Cleveland in November 1874 and founded the Woman's Christian Temperance Union, or WCTU. Its members worked to ban the making and selling of liquor. Frances Willard led the WCTU from 1879 until she died in 1898. She argued that women needed the vote to protect their homes from drunk men who beat women.

Black women in the WCTU. WCTU leaders set up a Department of Work Among Colored People in 1880. "Colored" was a word for Black people at the time. From 1883 Frances Watkins Harper, a Black poet and public speaker, ran it in the North.

Willard let the southern branches follow "states rights" on race, the idea that people in each state should settle such questions for themselves. In the 1880s Willard and the other national leaders let state and local branches form separate groups for Black women and white women. They did it to win over white women in the South, and Willard said women of both races wanted it. In practice, white members could use the separate groups to keep Black women out of their branches.

Harper called the split a short-term measure. She said it should last only until white members in the Deep South gave up "the spirit of caste," their belief that one race ranked above another.

Ida B. Wells and Willard. On speaking tours in Britain in 1893 and 1894, the journalist Ida B. Wells said that Willard had stayed silent about lynching, the killing of people by mobs without any trial. Wells said that the only public words Willard had spoken on the subject excused lynching. When people in Britain asked for proof, Wells sent them a copy of an interview Willard had given a New York newspaper in 1890, after a trip to the South.

In it, Willard said that "the colored race multiplies like the locusts of Egypt," comparing Black people to the swarms of insects sent on Egypt in the Bible. She said that "the grog shop (saloon) is its center of power" and that "the safety of woman, of childhood, of the home, is menaced (threatened)."

Defenders of lynching claimed that mobs killed Black men for raping white women, and Wells said Willard's words had been used to support that claim. Willard denied that she had stayed silent. She later spoke against lynching.

The Anti-Saloon League. Howard Hyde Russell, a minister, founded the Anti-Saloon League in Oberlin, Ohio, in 1893. Its leaders judged lawmakers only by how they voted on liquor, even if the lawmakers drank themselves. The league became a national group in 1895.

Kansas goes dry, 1880

Kansas voters were the first in any state to put a ban on liquor into their state constitution. They elected John St. John, who wanted a ban, as governor in 1878. Kansas lawmakers wrote a ban on making and selling liquor into a change to the constitution, and voters approved it in November 1880.

The ban began on May 1, 1881. Two years later Topeka, the state capital, still had 43 illegal bars. Their owners stayed open by paying a fine of $100 each month. The ban stayed in the Kansas constitution until 1948.

Liquor laws and Native nations

Members of Congress changed the 1834 law against bringing liquor onto Native land in 1854. The change stated that Native people themselves could not be charged under it. In 1895 they made it a crime to sell or give alcohol to anyone in Indian Territory, now Oklahoma, punished by a fine and one month to five years in prison.

Allotments. Members of Congress set a punishment of at least 60 days in prison, with no upper limit, in 1897 for giving alcohol to Native people who held allotments under the Dawes Act. Under that law of 1887, federal officials broke up land that a Native nation had held together into plots for single families, called allotments, and sold off the land that was left over. Native nations held about 138 million acres in 1887 and about 48 million by 1934.

Who was in prison. By 1900, about one in every 20 people in federal prisons had been found guilty under these liquor laws. The count does not say how many of them were Native people. Native people could not be charged with bringing liquor onto Native land. Under the law of 1895, though, anyone who sold or gave alcohol in Indian Territory could be charged, Native people included.

Native leaders' own rules. Native religious leaders made their own rules about drink and drugs. The Paiute religious leader Wovoka told followers of the Ghost Dance, a religious movement he led, not to drink. On the Comanche reservation in Oklahoma, Quanah Parker led ceremonies in which people took peyote, the small cactus that causes visions, as a sacred act of worship. He argued for the right to use peyote in this way.

A gold cure and a cigarette machine

Dr. Leslie Keeley opened a clinic for heavy drinkers in Dwight, Illinois, in 1879. He gave them shots of his medicine four times a day, and other patients got it by mail. He called it the "Gold Cure" and said the shots held "bichloride of gold," a chemical made with gold. By 1900 more than 300,000 people had taken it. Other doctors criticized it.

The cigarette machine. A skilled worker rolling by hand could make about four cigarettes a minute. In 1880 James Albert Bonsack of Virginia built a machine that rolled about 200 a minute. James Buchanan Duke signed a deal with Bonsack to use the machines, in 1884 or 1885 by different accounts. By 1890 Duke sold 40 percent of the cigarettes in the country. That year he joined his four biggest rivals with his own business to form the American Tobacco Company.

BY 1900

If you remember one thing: By 1900 states were banning liquor and cities were banning opium dens, while anyone could still buy opium, morphine and cocaine in a medicine bottle that did not have to say so.

- 1851: Maine lawmakers ban the sale of all alcoholic drinks. Four years later soldiers in Portland shoot dead a sailor, John Robbins, at the mayor's order.
- 1874: Women in Cleveland found the Woman's Christian Temperance Union.
- 1887: Members of Congress ban any "subject of the Emperor of China" from bringing opium into the country.

Next: In 1906 drug makers had to start listing what was in the bottle, and in 1920 a ban on alcohol covered the whole country.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 20 MINUTES

Drugs and alcohol came under federal control in the first half of the 1900s, first through labels and then through bans. From 1906, drug makers had to list opium, morphine and alcohol on their labels. From 1915, everyone who sold opium or cocaine had to register and keep records, and Treasury officials, who worked in the department that handles the government's money and taxes, took doctors to court for giving addicts their drug. In 1937 members of Congress taxed marijuana.

Prohibition. Under federal law, making, selling and carrying alcoholic drinks was banned anywhere in the United States from 1920 to 1933. This ban is called Prohibition. People kept drinking in hidden bars and made liquor at home, and federal agents made more than half a million arrests a year. Treasury officials had more poison added to factory alcohol. Bootleggers, people who made or sold liquor against the law, stole that alcohol and sold it as drink, and the poison killed thousands of drinkers.

Cigarettes. Americans smoked an average of 54 cigarettes a year each in 1900, and by 1963 the figure was 4,345.

Carry Nation

Who: A Kansas woman who smashed saloons to force officials to enforce the state's ban on liquor.

When and where: Kiowa, Wichita and Topeka, Kansas, 1900 to 1901, and Kansas City, Missouri, 1901. Arrested more than 30 times through 1910.

She walked into Dobson's Saloon carrying rocks.

Kansas voters had put a ban on liquor into their state constitution in 1880, and it took effect in 1881, but saloons stayed open.

Her name. She was born Caroline Amelia Moore in Garrard County, Kentucky, in 1846. Official records spell her name Carrie. Later she spelled it Carry, and she said her name meant "Carry A Nation for Prohibition."

Two husbands. In 1867 she married Charles Gloyd, a doctor who drank heavily. They separated before their daughter, Charlien, was born in 1868, and Gloyd died of alcoholism, the illness of being addicted to alcohol, in 1869. In 1874 she married David A. Nation, a lawyer and minister. In Medicine Lodge, Kansas, she started a branch of the Woman's Christian Temperance Union and pressed officials to enforce the ban. She kept at it for about five years.

Kiowa. On June 5, 1900, she wrote later, she heard a voice telling her, "GO TO KIOWA." Two days later she walked into Dobson's Saloon in Kiowa, Kansas, carrying rocks. She said, "Men, I have come to save you from a drunkard's fate," and smashed the saloon's stock of liquor. She smashed two more saloons in Kiowa.

The hatchet. She wrecked a saloon in Wichita in January 1901 and spent two weeks in jail. Her husband joked that she should use a hatchet next time. "That is the most sensible thing you have said since I married you," she answered. In February 1901, in Topeka, she met the governor and spoke to Kansas lawmakers.

> She was arrested more than 30 times between 1900 and 1910. She paid her fines with money from her speeches and by selling small pins shaped like hatchets. In 1901 she opened a home in Kansas City, Missouri, for the wives and children of men who drank. Kansas officials did not really enforce the ban until 1907. She died on June 9, 1911.

Why the label had to say morphine

The reporter Samuel Hopkins Adams wrote 11 articles about patent medicines, the brand-name medicines whose makers did not have to say what was in them, for *Collier's* magazine in 1905. He wrote that Americans would spend about $75 million that year on medicines that held large amounts of alcohol and opium.

By official tests, Hostetter's Bitters was 44 percent alcohol. One bottle of a medicine called Peruna, he wrote, held as much alcohol as five bottles of beer. He called the opium syrups sold for babies medicines "which stunt or kill helpless infants."

The 1906 law. President Theodore Roosevelt signed the Pure Food and Drug Act on June 30, 1906. Under it, drug makers had to print on the label whether a medicine held any of 10 drugs. They included alcohol, morphine, opium and cannabis, the plant marijuana comes from. The law did not ban any of these drugs. Chemists led by Harvey W. Wiley, at the Department of Agriculture, enforced it.

What changed. After the law passed, the makers of Mrs. Winslow's Soothing Syrup took out the morphine. The historian David T. Courtwright writes that after 1900 fewer people became addicted through medicine. Doctors had grown more careful, and after the 1906 law and the articles of reporters like Adams, more people were wary of dosing themselves.

The Harrison Act, 1914: doctors and addicts

Members of Congress passed the Harrison Narcotics Act in 1914. Under it, every seller of opium and cocaine had to register with the government and keep records.

The claims. In the years before the law passed, some officials and newspaper writers blamed drug use on Black and Chinese people. A citizens' panel called the Committee on the Acquirement of the Drug Habit wrote in 1903 that if a Chinese man "cannot get along without his dope we can get along without him." In place of "a Chinese man," the panel used an insulting name for Chinese people.

Hamilton Wright. Theodore Roosevelt named Dr. Hamilton Wright the first United States opium commissioner, the official in charge of the country's work against opium, in 1908. Wright told members of Congress that cocaine was often "the direct incentive to the crime of rape of white women by Negroes." He was claiming that cocaine drove Black men (Negroes, in the word of the time) to rape white women, that is, to force them to have sex.

A *New York Times* headline of 1914 read "Negro Cocaine 'Fiends' Are a New Southern Menace."

The dispute. Historians disagree about how much these claims shaped the drug laws. David T. Courtwright writes that cocaine became linked in the public mind with crime sprees, especially by Black men. George Fisher of Stanford Law School points out that the first state cocaine bans, from 1887 to 1898, came before these newspaper stories. He argues that racial hatred came later, in the way police and other officers enforced the laws.

The law. Representative Francis Burton Harrison of New York proposed the law, and President Woodrow Wilson signed it on December 17, 1914. It took effect on March 1, 1915. In the law, narcotics meant drugs made from opium or from coca, the plant that cocaine comes from. Doctors and druggists who handed out these drugs had to register too, and every seller had to pay a small tax.

Doctors in court. Treasury officials read the law to mean that a doctor could not give an addict regular doses of a drug, and they took doctors who did to court. The justices of the Supreme Court agreed with them on March 3, 1919, in the case of *Webb v. United States*. A doctor could not write a prescription, a doctor's written order for a drug, for an addict just to keep the addict comfortable. Dr. Webb had written more than 80 morphine prescriptions a week, at 50 cents each.

The clinics. City officials then opened 35 public clinics that sold morphine cheaply to addicts who registered. Treasury officials closed every one of them. The last, in Shreveport, Louisiana, closed on February 10, 1923. After that, an addict could get drugs only from dealers, or go to prison.

Heroin. Heroin is a drug made from morphine. Young men in the poor immigrant neighborhoods of cities began sniffing small packets of heroin powder in the 1910s and early 1920s. President Calvin Coolidge signed a law on June 7, 1924, that banned bringing opium into the country to make heroin. Representative Stephen G. Porter of Pennsylvania had introduced it.

The narcotic farm. Officials of the Public Health Service, the federal health agency, opened a hospital for addicts in Lexington, Kentucky, in 1935. It was called a "narcotic farm," and prisoners could be sent there. One doctor remembered it as "more like a prison than a hospital and more like a hospital than a prison." Courtwright writes that several studies found that 90 percent or more of the people released from Lexington soon went back to drugs.

Cigarettes become an everyday habit

Americans smoked an average of 54 cigarettes a year each in 1900, by the count of the Centers for Disease Control and Prevention. By 1963 the figure was 4,345. The justices of the Supreme Court ordered James B. Duke's American Tobacco Company broken into four smaller companies in 1911.

"Tobacco as much as bullets." General John Pershing led the American army sent to Europe in World War I. Asked what America needed to win the war, he answered, "Tobacco as much as bullets." People in community groups, businesses and relief groups such as the Red Cross, the Salvation Army and the Young Men's Christian Association set up "tobacco funds" to send cigarettes to soldiers. Editors at the *New York Sun* asked readers to give as a way of "proving your patriotism."

The first cancer studies. The scientist Ernst Wynder and others began studies in the 1940s that linked smoking cigarettes to lung cancer.

Prohibition: the law and the people who wrote it

Wayne Wheeler of the Anti-Saloon League played a major part in winning a national ban on liquor. Wheeler and other prohibitionists gained support from the fight to win the vote for women. Frances Willard of the WCTU had joined the two causes in 1879, when she asked for votes for women as a way to protect their homes from drink.

The war. In World War I, League leaders also used Americans' anger at Germany to win support. German Americans had been a major force against a ban, and after members of Congress declared war on Germany in April 1917, their protests were ignored.

The amendment. Members of Congress approved the Eighteenth Amendment to the Constitution on December 18, 1917. An amendment is a change added to the Constitution. Lawmakers in the 36th state voted for it on January 16, 1919, which made it part of the Constitution. Only the lawmakers of Connecticut and Rhode Island never voted for it.

What it banned. The amendment banned making, selling and carrying alcoholic drinks. It did not ban owning them or drinking them. Wheeler helped draft the Volstead Act, the law that set out the rules for the ban. It is named for Andrew Volstead of Minnesota, who led the House committee in charge of laws about courts and crimes. President Wilson refused to sign it and sent it back, and members of Congress passed it anyway on October 28, 1919. The ban began on January 17, 1920.

The gaps. A family could make up to 200 gallons of wine and cider a year at home. Doctors could prescribe whiskey as medicine, and they wrote about 11 million prescriptions for it a year through the 1920s. Officials caught 1,000 doctors and 400 druggists selling signed prescription forms to bootleggers in 1931. Twelve of the doctors and 13 of the druggists were charged with crimes.

Speakeasies. People drank in speakeasies, hidden bars that sold liquor against the law. By the end of the 1920s New York City alone had about 30,000 of them, by the count of the writer Deborah Blum. Officials in some states, among them Maryland and New York, refused to enforce the federal ban.

Izzy Einstein

Who: A Jewish immigrant and former postal clerk who became a federal Prohibition agent. He arrested people while wearing disguises.

When and where: New York City, 1920 to 1925.

Movie: *Izzy and Moe* (1985), a television film directed by Jackie Cooper, with Jackie Gleason as Izzy Einstein and Art Carney as Moe Smith. It is about the two agents.

One Sunday he and his partner made 71 raids in 12 hours.

Eight languages. Isidor "Izzy" Einstein was born in 1880 to a Jewish family in Austria-Hungary. He came to the United States around 1901, speaking Yiddish, Hungarian, Polish and German, and some Russian, French, Spanish and Italian. He worked as a salesman and then as a postal clerk, and he struggled to support his family on a clerk's pay.

More than 100 disguises. With no police training, he joined the new federal Prohibition service in 1920. He brought in his friend Moe Smith, who owned a cigar store. The two men said they used more than 100 disguises, among them a streetcar conductor, a gravedigger, a fisherman, an iceman and an opera singer. They usually carried no guns. Sometimes Einstein told a doorman that he was a Prohibition agent. The doorman laughed and let him in.

The count. One Sunday, with reporters following them, they made 71 raids in a little more than 12 hours. Together they made 4,932 arrests by one count, and more than 5,000 by the count of the National Archives. Of the people they arrested, 95 percent were found guilty. Thousands of bartenders, bootleggers and speakeasy owners went to jail because of their work.

Fired. Their boss, General Lincoln C. Andrews, fired them along with 36 other men in November 1925, when he reorganized the New York office. Writers at *Time* magazine suggested that their fame in the newspapers

had annoyed their bosses. Both men went on to sell insurance. In 1932 Einstein published a book, *Prohibition Agent No. 1*. He died on February 17, 1938.

Prohibition agents: who enforced the ban

The federal government had 1,450 front-line Prohibition agents in 1930. From 1921 to 1930 the agents made more than half a million arrests a year and seized more than 45,000 cars, by the count of the historian Richard F. Hamm.

Political jobs. Politicians handed out many of the agents' jobs. Judge William S. Kenyon said in 1927 that "three-fourths of the 2,500 dry agents are ward heelers and sycophants named by the politicians." He meant that most agents were political helpers and flatterers. When agents had to pass a civil service test, the kind of test used to give out many government jobs, 60 percent failed it.

Fired for bribes. In the six years from 1920, 752 Prohibition officials were fired, most for drunkenness or for taking bribes. Mabel Walker Willebrandt was the Assistant Attorney General, a top lawyer in the Justice Department, in charge of Prohibition cases from 1921 to 1929. She said the agents were "as devoid of honesty and integrity" as the lawbreakers, meaning they were just as dishonest.

The dead. By their own count, Prohibition agents killed 89 people. The Association Against the Prohibition Amendment, a group working to end the ban, counted about 1,000 people killed in enforcing it. Near the Capitol in Washington in 1924, an agent shooting at a bootlegger's car hit Senator Frank L. Greene of Vermont in the head. Greene never got back the full use of one arm.

The writer Daniel Okrent describes the first agent to kill a suspected bootlegger. That agent had joined under a false name. He had killed a man at the age of 14, and he got his badge while he was still locked up in Dannemora State Prison.

Poisoned alcohol and jake leg

Prohibition, the national ban on alcohol, lasted from 1920 to 1933. In 1926 and 1927, Treasury Department officials under President Calvin Coolidge ordered more poison put into factory alcohol, and the poison killed thousands of people who drank it.

Factory alcohol, used for fuel and in factories, had chemicals added to it so that no one could drink it. This is called denatured alcohol. Bootleggers, people who made or sold liquor against the law, stole it, paid chemists to take the chemicals out and sold it as liquor.

More poison. The officials then ordered makers to add far more poison. By 1927 the mixes included kerosene, gasoline, benzene and mercury salts, and up to 10 percent methyl alcohol, also called wood alcohol, which blinds and kills people who drink it. *Time* magazine reported in January 1927 that three ordinary drinks of the new mix could cause blindness. The records do not name the official who signed the order.

Christmas 1926. More than 60 people had come to Bellevue Hospital in New York sick from poisoned liquor by dusk on Christmas Day 1926, and eight of them had died. In the next two days, 23 more people died in the city.

KNOWN:	the poisoned alcohol killed thousands of Americans.
DISPUTED:	how many. Deborah Blum gives 400 dead in New York City in 1926 and 700 in 1927, and another count gives 585 in the city in 1926. For the whole country, one estimate gives more than 5,000 dead, and Blum gives an estimate of at least 10,000 by 1933.

What officials said. Charles Norris was New York City's chief medical examiner, the doctor in charge of finding out why people in the city died. He said, "The government knows it is not stopping drinking by putting poison in alcohol." The government, he said, "must be charged with the moral responsibility for the deaths that poisoned liquor causes, although it cannot be held legally responsible."

Seymour Lowman, the Treasury official in charge of Prohibition from 1927 as Assistant Secretary of the Treasury, said drinkers were "dying off fast from poison 'hooch.'" If the result was a sober America, he said, "a good job will have been done." Wayne Wheeler said that a person who drank this alcohol "is a deliberate suicide." Senator Edward I. Edwards of New Jersey called the program "legalized murder."

Jake leg. Tens of thousands of people were poisoned in 1930 after they drank Jamaica ginger, a medicine that was 70 to 80 percent alcohol. Under Prohibition one form of it could still be bought without a doctor's order, so people drank it to get alcohol.

The poison came from Harry Gross, the president of Hub Products Corporation in Boston, who wanted a cheaper ingredient for his Jamaica ginger. He chose a chemical called TOCP, used in making lacquer, a shiny coating for wood and metal. People at the Celluloid Corporation, which made TOCP, told him it was not poisonous.

TOCP destroys nerve cells in the spinal cord, the bundle of nerves inside the backbone that carries signals from the brain to the body. People who drank Gross's Jamaica ginger lost the use of their hands and feet. They walked with their toes flopping down. People called the illness "jake leg" and the walk the "jake walk." For most of them the damage never healed.

NOT KNOWN: the exact number harmed. The figure most often given is between 30,000 and 50,000. Most were poor, and many were immigrants.

Gross's sentence. A judge fined Gross and his partner Max Reisman $1,000 each. The judge also gave each of them a two-year jail sentence that they did not have to serve. Blues singers recorded songs about jake leg in 1930.

Alcoholics Anonymous, 1935

Two heavy drinkers named Bill Wilson and Dr. Bob Smith met in Akron, Ohio, in 1935, through a Christian group called the Oxford Group. Together they started Alcoholics Anonymous, or AA (anonymous means without names), where drinkers help each other stop drinking. At meetings, members share their own stories of drinking and of getting sober.

AA members published the group's Twelve Steps, a list of steps for staying sober, in 1939, in a book that members call the Big Book. Wilson and Smith had never heard of the Washingtonians, the Baltimore drinkers of 1840 who also helped each other stay sober by telling their stories.

Did drinking fall under Prohibition?

Drinking fell under Prohibition, and then much of it came back. The economists Miron and Zwiebel found in a 1991 study that drinking fell at first to about 30 percent of what it had been before the ban. Over the next several years it rose again, to about 60 to 70 percent. Deaths from cirrhosis, damage to the liver from heavy drinking, fell by nearly two-thirds. Blum writes that insurance companies charted a rise in alcoholism of more than 300 percent in the 1920s.

KNOWN:	drinking fell sharply when the ban began.
NOT KNOWN:	how much drinking changed over the whole ban, because the counts point different ways.

Pauline Sabin. Pauline Sabin, a leader of the Republican Party in New York, first backed the ban. "I felt I should approve of it because it would help my two sons," she said. She changed her mind. By 1929 she said that "children are growing up with a total lack of respect for the Constitution and for the law." In May 1929, in Chicago, she founded the Women's Organization for National Prohibition Reform to end the ban.

Repeal. President Franklin Roosevelt signed a law on March 22, 1933, that allowed beer with 3.2 percent alcohol by weight. Delegates in Utah made it the 36th state to approve the Twenty-first Amendment, which ended national Prohibition, on December 5, 1933. After that, lawmakers in each state and town made their own rules about when, where and to whom alcohol could be sold. Liquor stayed banned in Kansas until 1948.

Marijuana and the 1937 tax

Marijuana is made from the dried leaves and flowers of the cannabis plant. Harry J. Anslinger ran the Federal Bureau of Narcotics, the federal drug police, from 1930 to 1962. "The best cure for addiction? Never let it happen," he said.

Anslinger's stories. His articles against marijuana in the 1930s often told stories that blamed the drug for crimes by Black and Mexican people. One story in his files began, "Two Negroes took a girl fourteen years old..." The historian Courtwright writes that Anslinger played on Americans' fear of immigrants and of other races. Anslinger told the story of Victor Licata, who killed his family with an axe in Florida in 1933, as a marijuana crime. Doctors had found that Licata had a severe mental illness when he was young.

The tax. Anslinger drafted the Marihuana Tax Act, and doctors of the American Medical Association objected to it. President Franklin Roosevelt signed it on August 2, 1937, and it took effect on October 1. Selling marijuana without a federal tax stamp, which cost $1 an ounce, became a crime.

The first arrests. Federal narcotics agents and Denver police arrested Samuel R. Caldwell, a 57-year-old laborer, for selling marijuana on October 2, 1937. They arrested Moses Baca, 26, for having it. The tax stamps had not yet been printed. Judge J. Foster Symes sentenced Caldwell to four years of hard labor at Leavenworth prison and a $1,000 fine, and Baca to 18 months. "Under its influence men become beasts," Symes said of marijuana. Caldwell was released in 1940 and died in 1941.

A study. Mayor Fiorello La Guardia of New York named a committee to study marijuana in 1938. In their report of 1944, the committee's members disputed Anslinger's claims.

Liquor laws and Native nations

Federal bans on liquor on Native land stayed in force through all of these years. Members of Congress made it a crime in 1910 to bring alcohol onto the land of the Pueblo nations of New Mexico, as a condition of New Mexico becoming a state.

That same year Attorney General George Wickersham, the nation's top lawyer, asked for lighter punishments for selling, giving or bringing liquor to Native people. He wanted these to be lesser crimes, which his lawyers could charge without a grand jury, a group of citizens who decide whether there is enough proof for a trial. The punishments stayed as they were.

The Native American Church was organized in Oklahoma in 1918. Its members take peyote as a sacred act of worship.

BY 1950

If you remember one thing: In these fifty years federal lawmakers took charge of drugs and alcohol, with labels in 1906, a drug law in 1914, a national ban on alcohol from 1920 to 1933 and a tax on marijuana in 1937.

One number: Americans smoked 54 cigarettes a year each in 1900 and 4,345 in 1963, about 80 times as many.

Next: After 1950 scientists showed that cigarettes cause cancer, and a president declared a war on drugs.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 15 MINUTES

Americans learned in these fifty years that smoking kills, and the federal fight against drugs grew from $81 million a year in 1969 to $18.4 billion in 2000. About 42 of every 100 American adults smoked cigarettes in 1965, and by 1997 the number was about 25. In 1996 a fired tobacco scientist told a national television audience that his company changed its tobacco to strengthen the effect of nicotine. Drinking rose until 1981 and then fell.

The war on drugs. President Richard Nixon called drug abuse "public enemy number one" on June 17, 1971, and reporters named his program the war on drugs. Candy Lightner started Mothers Against Drunk Driving in 1980, after a drunk driver killed her daughter, and by 1988 lawmakers in every state had set the drinking age at 21.

Under a 1986 law passed by members of Congress and signed by President Ronald Reagan, 5 grams of crack, a kind of cocaine that can be smoked, carried the same prison term as 500 grams of powder cocaine. A company owned by the Sackler family began selling a strong painkiller called OxyContin in 1996.

How much people drank and smoked

Americans aged 15 and over drank an average of 2.04 gallons of pure alcohol each in 1950. From 1970 the count covers people aged 14 and over, and by that count the figure rose to 2.76 gallons in 1981, the highest since Prohibition. By 1995 it had fallen to 2.15 gallons.

Scientists at the National Institute on Alcohol Abuse and Alcoholism work these figures out from sales of alcohol, not from asking people what they drank. Between 1974 and 1981, 68 to 71 of every 100 adults told the Gallup company, which asks adults questions about what they think and do, that they drank.

Cigarettes. Cigarette smoking peaked in 1963, at 4,345 cigarettes a year for each person. By 1998 the figure was 2,261. In the late 1990s the Centers for Disease Control and Prevention (CDC) counted about 430,000 deaths a year from tobacco, one of every five deaths in the country.

The Surgeon General's report. The studies that Ernst Wynder and others began in the 1940s went on into the 1950s. In 1964 a committee of experts working for the Surgeon General, the nation's top public health doctor, concluded that smoking causes lung cancer and cancer of the voice box. Nixon signed a law on April 1, 1970, that banned cigarette ads on radio and television from January 2, 1971.

Billie Holiday and the narcotics agents

The singer Billie Holiday was arrested for drugs three times. Federal narcotics agents made the last two arrests, the last one in her hospital bed.

New York, 1947. Holiday was arrested on May 16, 1947, for having narcotics in her New York apartment. In court she said, "It was called 'The United States of America versus Billie Holiday'. And that's just the way it felt." She pleaded guilty, and a judge sent her to Alderson Federal Prison Camp in West Virginia.

After she was found guilty, she lost the police license she needed to sing in New York City clubs that sold alcohol. The federal agent George Hunter White arrested her again in a San Francisco hotel on January 22, 1949.

The hospital bed. Holiday was in Metropolitan Hospital in New York in 1959, being treated for liver and heart disease. On May 31, Harry Anslinger ordered agents of his Federal Bureau of Narcotics to arrest her there for having drugs. The agents handcuffed her to her hospital bed. A police guard stayed at her room until a judge ordered the handcuffs taken off.

She died in that room on July 17, 1959, at the age of 44. The cause was heart failure and fluid in her lungs, which came from cirrhosis, scarring of the liver. She had 70 cents in the bank.

DISPUTED: why the agents went after her. The writer Johann Hari has argued that Anslinger's agents targeted Holiday from 1939 because of her song "Strange Fruit," which is about lynching, killing by a mob. The jazz writer Lewis Porter disputes this. He points out that the claim first appears in Hari's own book, in 2015.

Native nations and the end of the federal ban, 1953

Members of Congress changed the federal liquor laws for Native people on August 15, 1953. Since 1834 it had been a federal crime to bring liquor onto Native land. Under later laws it was also a crime to sell or give alcohol to many Native people even off that land. After the 1953 change, Native people could buy alcohol off their land like anyone else.

The law's title states its purpose: "to eliminate certain discriminatory legislation against Indians," meaning laws that treated Native people worse than others. The federal ban on liquor on Native land had lasted 20 years longer than national Prohibition.

Each nation's choice. On a nation's own land, a sale of alcohol now had to follow both state law and a law passed by that nation's government, approved by the Secretary of the Interior, the head of the federal department that handles dealings with Native nations.

Members of Congress gave each nation the choice of keeping its ban, and some nations kept it. The Oglala Sioux Tribe, on the Pine Ridge Reservation in South Dakota, was one, according to the National Alcohol Beverage Control Association, a group of state alcohol officials.

LSD and marijuana

LSD is a drug that makes people see and hear things that are not there, and in the early 1960s it was legal. Timothy Leary, a teacher at Harvard University who studied how the mind works, ran experiments from 1960 in which he gave people psilocybin, a drug from certain mushrooms that causes visions. He also used LSD.

Harvard officials stopped paying him on April 30, 1963, and Harvard's president, Nathan Pusey, said he had "failed to keep his classroom appointments." Nixon later called Leary "the most dangerous man in America."

Marijuana. A man named Lowell Eggemeier lit a marijuana cigarette in San Francisco's Hall of Justice in 1964 and asked to be arrested. The writer Martin A. Lee dates the start of the modern campaign to make marijuana legal to that act. Oregon lawmakers made having a small amount of marijuana punishable by a fine instead of jail in 1973. In November 1996, California voters approved Proposition 215, 56 percent to 44 percent, and California became the first state to allow marijuana as a medicine.

Nixon declares the war on drugs, 1970 and 1971

Nixon signed a law on October 27, 1970, that sorted drugs into five lists, called schedules. The lawmakers put marijuana and heroin on Schedule I, the list for drugs with a high risk of abuse and no accepted use as medicine. Under the same law, having a small amount of a drug became a lesser crime, with at most one year in jail for a first offense. Selling drugs carried harsher punishments than before.

Heroin in Vietnam. Two members of Congress, Morgan Murphy and Robert Steele, came back from the war in Vietnam in May 1971. They reported that "as many as 10 to 15 percent of our servicemen are addicted to heroin."

"Public enemy number one." Nixon spoke at the White House on June 17, 1971. "America's public enemy number one in the United States is drug abuse," he said. He asked for $155 million in new money, for a total of "over $350 million" a year to fight drugs. When he took office in 1969, the federal drug budget had been $81 million. While Nixon was president, about 70 of every 100 federal dollars spent against drugs went to treatment and prevention.

Arrests. Agents of Nixon's new Office of Drug Abuse Law Enforcement made 6,000 drug arrests in 18 months, from 1972 to 1973, and most of the people arrested were Black. In 1973 Governor Nelson Rockefeller of New York signed laws that set 15 years to life in prison for selling two ounces, or holding four ounces, of heroin, cocaine or marijuana.

The Ehrlichman quote. The journalist Dan Baum published notes in 2016 of a 1994 interview with John Ehrlichman, one of Nixon's top advisers. In Baum's notes, Ehrlichman said that "by getting the public to associate the hippies with marijuana and blacks with heroin," and then making both a crime and punishing them heavily ("criminalizing both heavily"), "we could disrupt those communities." Ehrlichman had died in 1999. His children and other officials who had worked for Nixon disputed the quote.

Betty Ford

Who: The wife of President Gerald Ford. She told the country she was addicted to pills and alcohol, and then she founded a treatment center.
When and where: Long Beach and Rancho Mirage, California, 1978 to 1982.

At times she took as many as 20 pills a day.

The pills. A pinched nerve in Betty Ford's neck put her in the hospital for two weeks in 1964. Doctors gave her drugs for the pain, including strong painkillers and Valium, a drug that calms people. At times she took as many as 20 pills a day. She also drank. Her father and her brother Bob had both been addicted to alcohol.

The intervention. Her family held an intervention, a meeting to ask her to go into treatment, on April 1, 1978, after the Fords had left the White House. On April 11 she checked into the Naval hospital in Long Beach, California. She had arthritis, a disease that makes the joints swell and hurt, and a family spokesman read her statement: "I have found I am not only addicted to the medication I have been taking for my arthritis, but also to alcohol."

She later wrote, "I liked alcohol, it made me feel warm. And I loved pills. They took away my tension and my pain."

The center. She and Leonard Firestone, a former ambassador, founded the Betty Ford Center in Rancho Mirage, California, in 1982, for people recovering from addiction to alcohol and other drugs. It opened on October 4, 1982. She died on July 8, 2011.

Why the drinking age is 21

Clarence Busch was drunk when he hit and killed 13-year-old Cari Lightner with his car on May 3, 1980. She was walking to a church festival in Fair Oaks, California. He drove away and left her body there. He had a long record of arrests for drunk driving.

The sentence. A judge ruled that Busch's alcoholism had made it harder for him to control his decisions. The judge gave him two years in prison for involuntary manslaughter, the crime of killing someone without meaning to. He entered prison in December 1980 and was paroled nine months later, which means he was let out early under watch.

He went back to prison in 1982 for breaking the rules of his parole, and he was freed again in February 1983. Police arrested him again in April 1985, drunk and driving without a license, after a crash.

MADD. Cari's mother, Candy Lightner, founded Mothers Against Drunk Driving, or MADD, in 1980. By MADD's count, nearly 25,000 people were killed in crashes involving alcohol in 1980. That was half of all traffic deaths.

The drinking age. Lawmakers in 29 states had lowered the drinking age to 18, 19 or 20 between 1970 and 1975, after the voting age was lowered to 18. Senator Frank Lautenberg of New Jersey wrote a law to raise the drinking age again, and Reagan signed it on July 17, 1984. Under it, a state that let people under 21 buy alcohol lost part of its federal money for highways. By 1988 every state had set the age at 21.

DISPUTED: how many lives the higher drinking age saved. A review for the Institute of Medicine, a national group of health experts, found strong evidence that it worked. The economists Jeffrey Miron and Elina Tetelbaum found in 2009 that the effect faded after a year or two.

Crack cocaine and the 1986 law

Nancy Reagan, the president's wife, began a campaign in the early 1980s, with help from an advertising company, in which she told young people to "Just Say No" to drugs. Later studies found little or no change in how many young people used drugs after the campaign. The FBI's budget for fighting drugs rose from $8 million in 1980 to $95 million in 1984.

Crack. Crack is cocaine that dealers cooked with water and baking soda and dried into small rocks that can be smoked. Smoked crack reaches the brain in 6 to 8 seconds, and the high lasts 5 to 15 minutes. Around 1984 a dose cost as little as $2.50 in some cities. Hospital emergencies from cocaine more than doubled in one year, from 26,300 in 1985 to 55,200 in 1986.

The 1986 law. The basketball player Len Bias died from cocaine on June 19, 1986. Afterward, Speaker of the House Tip O'Neill had Democratic leaders write a new drug law, and Reagan signed it on October 27, 1986. In it, members of Congress added $1.7 billion to the fight against drugs and set 29 new minimum prison terms that judges had to give. The law set five years in federal prison for 5 grams of crack, the same as for 500 grams of powder cocaine.

Who went to prison. Most of the people sentenced for crack were Black. In 1992, 91 of every 100 people sentenced in federal court for crack were Black and about 3 were white, by the count of the US Sentencing Commission.

The people treated for crack were a more mixed group. Of those who entered treatment for crack in 2004, 53 of every 100 were Black and 38 were white. The historian Elizabeth Hinton writes that Reagan "led Congress in criminalizing drug users, especially African American drug users."

The bag on television. President George H. W. Bush held up a bag of crack on television on September 5, 1989. He said it had been "seized a few days ago in a park across the street from the White House." It came out later that agents of the Drug Enforcement Administration had been asked to make an arrest there, and that they had to lure the seller to the park to do it. So the sale across from the White House was one the agents had set up.

The cost. By 2000 the federal government spent $18.4 billion a year against drugs, more than 200 times the $81 million of 1969. Nearly half went to law enforcement, the police and agents who catch lawbreakers, and one-sixth went to treatment.

Jeffrey Wigand

Who: A scientist who ran research at a tobacco company and then told the public that the company changed its tobacco to strengthen the effect of nicotine.

When and where: Brown & Williamson Tobacco, Louisville, Kentucky, 1989 to 1996.

Movie: *The Insider* (1999), directed by Michael Mann, with Russell Crowe as Jeffrey Wigand. It is about Wigand.

He said his company added ammonia to boost nicotine's effect.

Fired. Jeffrey Wigand trained as a biochemist, a scientist who studies the chemistry of living things. He became vice president for research at Brown & Williamson Tobacco in Louisville, Kentucky, in January 1989. Brown & Williamson fired him on March 24, 1993. That September the company sued him and cut off his health insurance. In November 1993 he signed an agreement not to talk about his work.

Testimony. Under a judge's order, Wigand gave sworn testimony in Pascagoula, Mississippi, in late November 1995, for the state's lawsuit against the tobacco companies. The company's lawyers got a Kentucky court order against him and sued him for "theft, fraud, breach of contract," which means they said he stole, cheated and broke his agreement with the company. Lawyers for the CBS television network stopped the news program *60 Minutes* from showing an interview with him that November.

On the air. *60 Minutes* showed the interview on February 4, 1996. Wigand said the company added chemicals such as ammonia to its tobacco to increase the effect of nicotine. He said he had been harassed and had received death threats from people who did not give their names.

> The company hired investigators, who wrote a 500-page report attacking him and gave it to reporters. The reporters checked it and found that many of its charges were unproven or small.
>
> After he was fired, Wigand taught science and Japanese at a high school in Louisville. He was named Kentucky's Teacher of the Year for 1996.

OxyContin goes on sale, 1996

Opioids are strong painkillers made from the opium poppy, or from chemicals that act the same way in the body. Too much of an opioid slows a person's breathing until it stops.

The Sacklers. Three doctors, the brothers Arthur, Mortimer and Raymond Sackler, bought a drug company called Purdue Frederick in 1952. Their company, later named Purdue Pharma, began selling OxyContin in 1996. OxyContin is a pill of oxycodone, an opioid, made to release the drug slowly. Purdue sold it to be taken every 12 hours, but most patients found that it wore off after eight hours or less.

The approval. Dr. Curtis Wright, of the Food and Drug Administration (FDA), reviewed OxyContin before it went on sale. He approved a label that said the slow release "is believed to reduce the abuse liability of a drug," meaning the risk that people would misuse it. A year later Wright left the FDA and went to work for Purdue.

The sales push. Purdue's managers trained its salespeople to tell doctors that the risk of addiction was "less than one percent." More than 5,000 doctors, pharmacists and nurses went to Purdue meetings with all their costs paid. Richard Sackler, Raymond's son, ran the company's sales and marketing, and he became its president in 1999.

Prescriptions of OxyContin for pain not caused by cancer rose from about 670,000 in 1997 to about 6.2 million in 2002. From 1995 to 2001, Purdue took in $2.8 billion from sales of OxyContin. David Kessler, who led the FDA when the pill was approved, later called the approval "one of the worst medical mistakes."

BY 2000

If you remember one thing: Federal spending against drugs grew from $81 million a year in 1969 to $18.4 billion in 2000.

- 1964: A committee of experts working for the Surgeon General reports that smoking causes lung cancer.
- 1986: A new law gives a person caught with crack the same prison term as one caught with 100 times as much powder cocaine.
- 1996: The Sackler family's company starts selling the painkiller OxyContin.

Next: After 2000, deaths from opioids, starting with pills such as OxyContin, rose for more than twenty years.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 14 MINUTES

Opioids, first pain pills such as OxyContin, then heroin, then fentanyl, killed about 806,000 Americans from 1999 to 2023, by the count of the Centers for Disease Control and Prevention (CDC). An overdose is too much of a drug at once, enough to make a person very sick or kill them.

Most of the deaths from 2013 on came from fentanyl made outside the law. Overdoses of all drugs killed 107,941 people in 2022, the peak year in the CDC's final figures. By the CDC's early count, the yearly total had fallen to about 67,000 in the 12 months ending in April 2026.

The rest of the story. A federal judge sentenced Purdue Pharma, the maker of OxyContin, in 2026, and the company shut down. No member of the Sackler family, who owned it, has been charged with a crime. Over the same years, voters and lawmakers in 24 states made marijuana legal for adults. In July 2026, 54 of every 100 adults told Gallup pollsters that they drink, the lowest share since Gallup began asking in 1939. About 9 of every 100 adults smoked cigarettes in 2025, by the CDC's count.

Overdose deaths, 1999 to 2026

CDC scientists describe the opioid deaths as coming in three waves. The first wave began in 1999, after doctors wrote more and more prescriptions for opioid pills in the 1990s. Deaths from heroin rose from 2010. From 2013, deaths rose from opioids made in labs, mostly fentanyl made and sold outside the law.

The death rate. About 6 of every 100,000 Americans died of a drug overdose in 1999, by the CDC's count. The rate rose to about 33 of every 100,000 in 2022 and fell to about 23 in 2024.

The counts. Overdose deaths from all drugs rose to a peak in 2022 and then fell. CDC scientists give two kinds of count. The final count for a year is published about a year later. The early count is published within months, and the scientists warn that it is often incomplete.

By the final count, overdoses killed 107,941 Americans in 2022, about 300 a day, and opioids were involved in about three of every four of those deaths. The final count for 2024 was 79,384. The early count for the 12 months ending in April 2026 is 66,937.

Who dies. Some groups die at far higher rates than others. American Indian and Alaska Native people died of overdoses at a rate of 51.6 of every 100,000 in 2024, by the CDC's count. The rate was 33.8 for Black Americans and 24.7 for white Americans. By age, people aged 35 to 44 died at the highest rate, 44.2 of every 100,000.

Fentanyl

Fentanyl is an opioid made in a lab. By the CDC's count, it is 50 to 100 times stronger than morphine. Too much of it slows a person's breathing until the breathing stops. A drug called naloxone can undo the overdose and save the person if someone gives it fast enough. Officials of the Food and Drug Administration (FDA) approved a naloxone spray for the nose that anyone can buy without a doctor's order on March 29, 2023.

The rise and fall. Deaths from fentanyl and similar lab-made opioids rose from 1 of every 100,000 Americans in 2013 to 22.7 in 2022, by the CDC's count. In 2024 the rate fell to 14.3.

Who makes it. Most of the illegal fentanyl sold in the United States has come from Mexico since about 2019. A 2025 report by the Congressional Research Service, which studies problems for members of Congress, names the makers. Mexican crime groups called cartels, especially the Sinaloa Cartel and the Jalisco New Generation Cartel, make it outside the law. Companies in China are the largest source of the chemicals they need. The cartels' members use machines to press fentanyl into fake pills made to look like real medicine.

Why no Sackler went to prison

No member of the Sackler family has gone to prison. When Judge Madeline Cox Arleo sentenced Purdue Pharma in 2026, she said she could not send its leaders or owners to prison because Justice Department lawyers had charged only the company.

The first guilty plea. Purdue Pharma pleaded guilty in May 2007 to misleading the public about OxyContin. The company admitted that it had sold OxyContin as less addictive and less likely to be abused than other painkillers. It paid $600 million. Three of its leaders also pleaded guilty: its president, Michael Friedman, its top lawyer, Howard Udell, and its former chief medical officer, Paul Goldenheim. Together they paid $34.5 million. In 2009 Purdue changed OxyContin into a form that was harder to crush and snort or inject.

Bankruptcy. Purdue filed for bankruptcy, a court process for a business that cannot pay its debts, on September 15, 2019. Purdue hired a firm called AlixPartners to check the company's money records. In December 2019 the firm reported that members of the Sackler family had taken $10.7 billion out of the company after lawsuits and investigations began.

The second guilty plea. Purdue pleaded guilty to three federal crimes on November 24, 2020. One was a plot to cheat the United States. The other two were plots to pay doctors and others to push its pills. In that case, no company leader and no Sackler was charged.

The settlement. Five justices of the Supreme Court threw out a bankruptcy plan on June 27, 2024, because it would have protected the Sacklers from lawsuits. A year later, on June 16, 2025, 55 attorneys general, the top lawyers of states, agreed to a $7.4 billion settlement with Purdue and the Sacklers, a deal that ended lawsuits in return for money.

The sentence. Judge Arleo, in Newark, New Jersey, sentenced Purdue to $5.5 billion in fines and penalties for its 2020 guilty plea on April 28, 2026. For nearly seven hours she heard from people harmed by the crisis. More than 40 spoke in court, and more than 200 sent letters.

Ed Bisch's son Eddie died of an overdose in 2001. "Punishment by a fine means 'legal for a price,'" Bisch said. Alexis Pleus said her son Jeff had first been prescribed OxyContin for a football injury, before he died of an overdose. "We still deserve justice, and this isn't it," she said. "Your government failed you," Arleo told the families.

Who gets the money. Most of the $5.5 billion in fines and penalties will never be paid. Federal officials collect $225 million of it. Purdue's other money goes to the states and towns it owes, as part of the $7.4 billion settlement. Purdue and the Sacklers pay the settlement over 15 years, to fund treatment, prevention and recovery. It includes $865 million for people harmed one by one. Many victims said they could not qualify because they could not find their old prescription records.

Purdue shuts down. New York Attorney General Letitia James announced three days after the sentence, on May 1, 2026, that Purdue had shut down. A new company, Knoa Pharma, owned by a charity, took over. As part of the $7.4 billion, the Sacklers must pay $2.9 billion by 2029, and none of them may sell opioids in the United States. The Sackler family has always said it did nothing wrong.

Other companies. The three largest companies that ship drugs to pharmacies, McKesson, Cardinal Health and AmerisourceBergen, agreed in 2021 to pay up to $21 billion over 18 years. The drug maker Johnson & Johnson agreed to pay up to $5 billion. In 2022 the drug makers Teva and Allergan and the pharmacy chains CVS, Walgreens and Walmart agreed to pay up to about $18.5 billion more among them. Under the settlements, states and towns must spend at least 85 of every 100 dollars they get on the overdose crisis.

Nan Goldin

Who: A photographer who became addicted to OxyContin after surgery, overdosed on fentanyl, went through treatment, and led protests against the Sackler family.

When and where: Berlin and New York, the 2010s to 2021.

Movie: *All the Beauty and the Bloodshed* (2022), a documentary by Laura Poitras about Goldin's life and her protests.

She threw OxyContin bottles into a museum's temple pool.

Addicted. Nan Goldin is a photographer known for her book of photographs *The Ballad of Sexual Dependency* (1986). A doctor in Berlin prescribed OxyContin for her after surgery on her wrist. "Though I took it as directed I got addicted overnight," she wrote in the magazine *Artforum* in January 2018. "I went from three pills a day, as prescribed, to eighteen."

The overdose. When her doctors stopped prescribing it, she bought pills from a dealer in New York. "When I ran out of money for Oxy I copped dope," she wrote, which means she bought illegal drugs from dealers. "I ended up snorting fentanyl and I overdosed." She waited a year before she went into treatment, because she was afraid of withdrawal, the sickness that comes when the body loses a drug it depends on. Then she spent two and a half months in treatment.

The protest. Goldin started a group called P.A.I.N., which stands for Prescription Addiction Intervention Now, in 2018. On March 10, 2018, she and other members protested in the Sackler Wing of the Metropolitan Museum of Art in New York. They threw pill bottles labeled OxyContin into the pool around the Temple of Dendur, an Egyptian temple about 2,000 years old that stands in the wing. Then they lay on the floor and chanted, "Sacklers lie, people die."

The names come down. Officials at the National Portrait Gallery in London turned down a £1 million gift from the Sacklers in 2019, after Goldin threatened to pull her show. Leaders of the Tate galleries in

> London said they would take no more Sackler gifts. Officials of the Metropolitan Museum and members of the Sackler families announced on December 9, 2021, that seven of the museum's spaces would no longer carry the Sackler name.

Marijuana becomes legal in 24 states

Voters in Colorado and Washington made marijuana legal for adults on November 6, 2012, the first two states to do so. Washington's law took effect first, on December 6, 2012. In 2018 Vermont's lawmakers became the first to make it legal without a vote of the public.

The count. By the count of the National Conference of State Legislatures, a group that serves state lawmakers, 24 states and the District of Columbia allow adults to use marijuana. The group's page was last updated in September 2026.

The 24 states are Alaska, Arizona, California, Colorado, Connecticut, Delaware, Illinois, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Montana, Nevada, New Jersey, New Mexico, New York, Ohio, Oregon, Rhode Island, Vermont, Virginia and Washington. By the same count, 41 states allow marijuana as medicine. In November 2024, voters in Florida, North Dakota and South Dakota voted against making it legal.

Federal law. Under federal law, marijuana was still on Schedule I, the list for drugs with a high risk of abuse and no accepted use as medicine. President Donald Trump ordered officials on December 18, 2025, to speed up moving it to Schedule III, a list of drugs that doctors may order as medicine.

The Acting Attorney General moved marijuana sold under state medical licenses to Schedule III on April 28, 2026. All other marijuana stayed on Schedule I. In June 2026 officials of the Drug Enforcement Administration began hearings on moving the rest. As of late September 2026, they had not decided.

Crack sentences. Punishments for crack also changed. President Barack Obama signed the Fair Sentencing Act, written by Senator Dick Durbin, in 2010. Under it, the difference between crack and powder cocaine sentences dropped from 100 to 1 to 18 to 1. Under the First Step Act, which President Trump signed in 2018, the change also covered people already in prison. In its first year, more than 2,000 federal prisoners had their sentences shortened.

Vaping and smoking

An e-cigarette heats a liquid, usually one with nicotine in it, into a mist that the user breathes in. Using one is called vaping. About 27.5 of every 100 high school students vaped in 2019, by the count of a national survey released by the CDC.

The lung injuries. A lung injury from vaping put 2,807 people in the hospital or killed them in 2019 and early 2020, by the CDC's count. Of them, 68 died. CDC scientists found that vitamin E acetate, a chemical added to illegal marijuana vaping liquids, was strongly linked to the injuries. They linked most cases to those liquids, which most of the sick people had bought from friends, family or dealers. The records do not name who made them.

Age 21. President Trump signed a law on December 20, 2019, that raised the age to buy any tobacco product, including e-cigarettes, from 18 to 21. By 2024 the share of high school students who vaped had fallen to 7.8 of every 100, by the CDC's count. The newest survey, released by the FDA in June 2026, counted middle school and high school students together: 5.2 of every 100 of them vaped in 2025.

Cigarettes. About 9.1 of every 100 adults smoked cigarettes in 2025, by the CDC's count, against 42.4 in 1965. Smoking and secondhand smoke, the smoke other people breathe in, still kill more than 480,000 Americans a year, by the CDC's newest count, from 2024.

Drinking today

Americans aged 14 and over drank an average of 2.48 gallons of pure alcohol each in 2023, by the count of the National Institute on Alcohol Abuse and Alcoholism. That is below the peak of 2.76 gallons in 1981. Americans now drink more liquor and less beer than in 2000. Pure alcohol from beer fell from 1.23 gallons a person in 2000 to 0.99 in 2023, and pure alcohol from liquor rose from 0.64 gallons to 1.08.

Fewer drinkers. Gallup pollsters asked adults about drinking in July 2026, and 54 of every 100 said they drink, the lowest share since Gallup began asking in 1939. In 2023 the figure was 62. In the same 2026 poll, 51 of every 100 adults said that one or two drinks a day is bad for health.

The harm. The CDC counts about 178,000 deaths a year from drinking too much, from data for 2020 and 2021. On average, each of those people lost 24 years of life. Surgeon General Vivek Murthy reported on January 3, 2025, that alcohol causes about 100,000 cases of cancer and 20,000 cancer deaths a year in the United States. He asked Congress to put a cancer warning on alcohol labels.

Federal health officials dropped their old advice in January 2026, which had been to drink no more than one drink a day for women and two for men. The new advice says only, "Consume less alcohol for better health."

Young people and AA. About 41 of every 100 high school seniors said in 2025 that they had drunk alcohol in the past year, by the count of the Monitoring the Future survey. Alcoholics Anonymous estimates that it has more than two million members in more than 123,000 groups around the world.

THE THREE QUESTIONS, ANSWERED

1. **How long have people here used tobacco, and what did they use it for?** For at least 12,300 years, since the fire at the Wishbone site. Native people offered it in prayer, burning it or

smoking it in pipes, and the Algonquian people at Roanoke smoked it to keep the body healthy.

2. **What happened when the whole country banned alcohol from 1920 to 1933?** Drinking fell at first to about 30 percent of what it had been, then rose to about 60 to 70 percent. Treasury officials had more poison added to factory alcohol, and the poison killed thousands of drinkers before delegates in Utah ended the ban on December 5, 1933.
3. **Who has been punished for drugs, and who has not?** Robert Coles with his red D, the laborer Samuel Caldwell with four years of hard labor, Billie Holiday handcuffed to her hospital bed, and the people sentenced for crack, 91 of every 100 of them Black in 1992, were all punished. Harry Gross never served his jail sentence, and no member of the Sackler family has been charged with a crime.

What changed: Tobacco went from an offering in prayer to a habit that kills more than 480,000 Americans a year, and opium, cocaine and liquor went from open sale in the 1800s to bans in the 1900s, with liquor made legal again in 1933.

FIVE DATES TO KEEP

1634: Massachusetts judges order Robert Coles to wear a red D for a year.

February 13, 1826: Reformers in Boston found the American Temperance Society.

January 17, 1920: National Prohibition begins.

June 17, 1971: President Nixon calls drug abuse "public enemy number one."

1996: Purdue Pharma begins selling OxyContin.

NOT KNOWN: The number of people killed by poisoned alcohol during Prohibition is not known, and the estimates run from more than 5,000 to at least 10,000.

Where to go: The Temple of Dendur stands in the Metropolitan Museum of Art in New York, in the wing where Nan Goldin's group threw pill bottles into the pool in 2018 and that no longer carries the Sackler name.

Next: Chapter 29, Religion. It follows the many faiths of this land and the fight for the freedom to worship.

PART 8

Faith, Learning, and News

Chapter 29: Religion

CHAPTER 29 OF 37 · RELIGION · 10 ERAS · ABOUT 200 MINUTES

Freedom of worship in the United States grew one fight at a time, and most of those fights were started by people who were being punished for their faith.

A statue of a Pueblo man named Po'pay stands in the US Capitol in Washington. New Mexico gave it to the National Statuary Hall Collection in 2005. The sculptor, Cliff Fragua of Jemez Pueblo, carved scars on its back. In 1675 Spanish officials had Po'pay whipped in public for taking part in Pueblo ceremonies. Five years later he led the rising that drove the Spanish out of New Mexico for twelve years.

This chapter follows faith in America from the sun posts at Cahokia to the shootings of worshippers at prayer in this century. First, watch who was punished for the way they worshipped, and who did the punishing: Quakers hanged in Boston, Catholic churches burned in Philadelphia, Native dancers whose food was cut off, Black churches bombed. Then watch the people who pushed back, from Baptists who organized against the church tax to families who took their cases to the Supreme Court. Revivals, meetings meant to stir people to a stronger faith, run through the chapter too. By the early 1800s the Presbyterians, Baptists and Methodists who backed them were the largest Protestant churches in the country.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. Why did colonists who crossed the ocean to worship freely punish other people for their faith?
2. How did Americans stop paying taxes to support churches?

3. How long did US officials treat Native ceremonies as crimes?

Five minutes? Read the Mary Dyer story in The 1600s, "How Virginia ended its church tax" in 1750 to 1800, and "Hiram Price's rules against ceremonies, 1883" in 1850 to 1900.

Can skip: "Three more colleges with church backing", "Laws against teaching evolution, 1921 to 1929", "Worship on a screen", "Teaching religion at home". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 5 MINUTES

Hundreds of Native nations lived on this land before 1500, and each one had its own religious life. So there were hundreds of Native religions, and many are still practiced today. The nations shared no holy book and no single founder. Each held its ceremonies in a set place, at a set season, with its own community.

No written account of these religions survives from before the 1500s, because the written record of this land begins with the Europeans who came then. What is known comes from two places. One is what people built and buried. The other is the traditions that the nations kept and still keep.

What the ground can show, and what it cannot

Archaeologists, scientists who dig up and study old buildings, graves and objects, can measure which way a doorway faces. They can check whether the sun rises in line with it on a certain day. A wall lined up with the midwinter sunrise shows that the builders lined it up on purpose. It does not show what the builders believed.

The nations themselves hold spoken histories that go back before 1500, and the people of each nation decide how much of that to make public. Written descriptions of Native religions begin after 1500. Europeans wrote them from the outside, and most of those writers were hostile to the religions they described. Many were missionaries, people sent to turn others to their own religion.

Chaco Canyon

Chaco Canyon, in what is now northwestern New Mexico, holds large stone buildings of many stories. People there began building them in the middle and late 800s, and today they are called great houses. Three of the first were Pueblo Bonito, Una Vida and Peñasco Blanco. Building went on in the canyon for more than 300 years.

The builders lined many great houses up with the sun, the moon, and north, south, east and west. They also built roads out from the canyon. The roads joined it to more than 150 other great houses across the region.

Pueblo people are the descendants of the people of Chaco. They say Chaco was a gathering place where many peoples and clans, groups of families who count themselves as related, came together to share their ceremonies and knowledge. Many Native people of the Southwest also say that Chaco is an important stop on their clans' sacred migration paths. Those are the routes their peoples traveled as they moved from one home to another.

Cahokia and its circle of posts

Cahokia stood in what is now Illinois, a few miles east of the Mississippi River and of present-day St. Louis, Missouri. People lived there mainly between about 800 and 1400. It was the largest town in North America north of Mexico before Europeans came. National Park Service figures put the number of people living in Cahokia itself at 10,000 to 20,000.

The people of Cahokia built about 120 mounds of earth. Some held public buildings on top, and others held graves. The biggest is now called Monks Mound, and no earth structure that Native people built north of Mexico is larger. It went up in fourteen stages. It rises in four steps, called terraces, to about 100 feet.

Woodhenge. Near Monks Mound stood a circle of upright wooden posts, called Woodhenge today. Posts in the circle marked where the sun came up on the longest day of the year and on the shortest. Others marked the two equinoxes, the days in spring and fall when day and night are the same length. The post for the equinox sunrise lines up with the front of Monks Mound.

Bill Iseminger, an archaeologist at the Cahokia site, gives these figures for the circle. The people rebuilt it about five times. It measured from about 240 to 480 feet across. The first circle had 24 posts, and each new circle had twelve more than the one before.

NOT KNOWN: what the people said or believed as they watched the sun rise over the posts. No record of it survives.

The earthworks of Ohio

People in the woodlands of eastern North America built long walls of earth between about the years 1 and 400. They laid the walls out in geometric shapes and built mounds of many shapes beside them. Many of these earthworks are in Ohio. In 2023 they were added to UNESCO's list of World Heritage Sites as the Hopewell Ceremonial Earthworks, ceremonial meaning built for religious gatherings and ceremonies. UNESCO is the part of the United Nations that keeps that list of important places.

Objects found at the earthworks came from far away. There is mica, a shiny rock that splits into thin sheets. There are shark's teeth, sea shells, copper, and obsidian, a black glass made by volcanoes. The builders had contacts with peoples from the Atlantic coast to the Rocky Mountains, and these things reached Ohio through them.

Whose name? Archaeologists call the builders the Hopewell culture, but that is not the name of any Native nation. Mordecai C. Hopewell owned a farm near Chillicothe, Ohio, where some of the mounds stood. Warren K. Moorehead dug into twenty-eight mounds on that farm, and the objects he took out went on show at the world's fair in Chicago in 1893. After that, archaeologists used the farmer's name for the builders. The National Park Service's account of the earthworks states that different Native groups built them.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 8 MINUTES

Spanish priests, with Spanish soldiers at their side, set out in the 1500s to turn the peoples of this land into Catholics, Christians who follow the pope in Rome. The priests belonged to orders, groups of Catholic men who promised to live by one set of rules. The Jesuits were one order. The Franciscans were another, and their priests and brothers are called friars.

Franciscan friars built missions, churches they ran inside Native towns, among the Timucua and Guale peoples of what is now Florida and Georgia. From 1598 they built missions among the Pueblo nations of what is now New Mexico as well. In each mission town the friars baptized the people, washing them with water in the Christian ceremony that makes a person a member of the church. They also taught them Catholic beliefs.

Missions and government. Spanish officials used the missions to bring the Native towns under the Spanish government. The officials demanded that the people promise loyalty to that government, and they ordered each mission town to send men to work for the Spanish. Nearly all of the written record of the missions in this century comes from the missionaries themselves, so it records their view.

The missions in Florida and Georgia

Luis Cáncer de Barbastro, a Dominican friar from Spain, argued that friars should bring Native people to Christianity without soldiers. He had come to the Caribbean in 1518. King Charles V of Spain gave him a written order to try it in Florida, and he sailed from Havana, Cuba, in early June 1549. On June 26 he went ashore near Tampa Bay to greet a group of Tocobaga people, and they killed him. The Tocobaga left no account of why.

The Jesuits tried missionary work in Florida from 1568 to 1571 and left without success. Franciscan friars came next. After a new group of them arrived from Spain in 1587, they began building missions up the coast into what is now Georgia.

San Pedro de Mocama, on the coast of what is now Georgia, was the first successful mission there. By the end of 1595 the friars had missions in at least five main towns of the Guale people, who spoke a Muskogee language.

A mission town with a friar living in it was called a *doctrina*. There the friar baptized people and led Mass, the main Catholic church service. Friars also taught the catechism, a set of questions and answers about Christian beliefs that people learn by heart. The friar Francisco Pareja had a catechism in Spanish and in the Timucua language printed in Mexico City in 1612.

Workers for St. Augustine. Spanish officials used the mission towns to get workers as well. Under a system called the *repartimiento*, each mission town had to send a set number of unmarried men to St. Augustine every year to work for the Spanish.

Killed for refusing to change faith, 1565

Spanish soldiers killed French Protestants, Christians whose churches had broken away from the pope, in Florida in 1565 because of their religion. It was the first killing over religion between Europeans in what became the United States.

The first group. A hurricane wrecked the French ships that year, and about 127 French Protestants came ashore with no food and no weapons. They surrendered to Pedro Menéndez de Avilés, the Spanish commander. Menéndez told them to give up their Protestant faith, and they refused. His soldiers killed 111 of them. Menéndez spared 16 men: a few who said they were Catholic, some sailors forced onto the ships, and four craftsmen St. Augustine needed.

Of the others, Menéndez wrote to the king of Spain on October 15, 1565: "I had their hands tied behind them and put them to the knife." That meant his men killed them with knives.

The second group. About two weeks after the first killing, a second group of Frenchmen under Jean Ribault surrendered. They refused the same demand, and Menéndez's soldiers killed 134 of them. The two killings are dated September 29 and October 11 or 12, 1565.

Guale, 1597

Guale people killed five Franciscan friars and destroyed their missions in the autumn of 1597. One of the five was Blas Rodríguez, the friar at the town of Tupiqui. A sixth friar was held captive and freed in 1598.

NOT KNOWN: which Guale people killed the friars, and why.

The historians J. Michael Francis and Kathleen Kole translated the earliest Spanish records of the uprising and published them in 2011. They wrote that those two questions cannot "be answered with any certainty." Older retellings name a young leader and give a reason. In the earliest records, only two of the seven witnesses named that young man at all, and neither said he alone ordered the killings.

The governor's revenge. Gonzalo Méndez de Canzo, the Spanish governor of Florida, led soldiers into Guale country himself. On October 27 people at the town of Ospo shot arrows at his men. Over the next ten days the governor and his officer Alonso Díaz burned Ospo and four more Guale towns, with their houses and storehouses, some of them full of corn. The governor could not capture anyone, so he ordered his men to destroy the corn fields and other crops as well. The records describe the burning and give no count of Guale people killed.

Lucas. The governor took seven young Guale captives in July 1598. Francis and Kole describe them as boys. One was Lucas, the son of don Felipe, the chief of Tupiqui. Spanish officials questioned Lucas a second time on July 27, now under the threat of torture, and he confessed that he had been there when Blas Rodríguez was killed. They sentenced him to death on July 28. He was hanged at St. Augustine on July 29, 1598, and the records do not name the man who hanged him.

Lucas was the only Guale person the Spanish officially charged and punished for the uprising. Spanish officials divided the other six boys among themselves as personal servants. The boys were captives and had to do forced labor for the men who held them. The Spanish left the northern missions empty until 1604.

New Mexico, 1598

Juan de Oñate claimed for Spain the land the Spanish called New Mexico in early May 1598, at a crossing of the Rio Grande near what is now El Paso. It was the homeland of the Pueblo nations, and Franciscan friars traveled with him.

That autumn Oñate went to every pueblo, as the Spanish called each Pueblo town. Through translators he demanded that the people of each town promise loyalty to the Spanish government. At those meetings he gave each town a missionary, and the Franciscan missions in New Mexico began that way.

Acoma. The friars also gave their approval for a war on Acoma Pueblo. In December 1598 Oñate's nephew, Juan de Zaldívar, went up to Acoma Pueblo with soldiers to demand food. In the Acoma people's own account, the soldiers raped an Acoma woman, forcing her into sex. The Acoma killed Zaldívar and eleven to fourteen of his men.

What the friars said. Oñate then asked the Franciscan friars whether a war against Acoma would be just. The friars answered that he "possessed both the authority and sufficient cause." That meant the friars said he had the right to make war and a good enough reason.

The killing. Oñate's soldiers attacked in January 1599. They killed Acoma men, women and children and burned much of the town. No one counted the dead, and estimates run from about 300 to about 1,500.

The sentences. Oñate sentenced the men over twenty-five to have one foot cut off. He sentenced them and every other captive over twelve to twenty years of forced labor, and he handed the old people to the Plains Apache as slaves. Whether the feet were really cut off is disputed.

The children. On Oñate's orders, Acoma children under twelve were taken from their parents and given to the friars. About seventy of the girls were sent south to convents in Mexico, houses of nuns, women who have promised their lives to the Catholic church. The records do not name the men who took them. Almost certainly none of the girls ever came home.

Doña María Meléndez

Who: The Timucua chief of Nombre de Dios, the town beside St. Augustine, and a Catholic.

When and where: Spanish Florida, the late 1500s and early 1600s.

The friars' success in her town was "largely owing to" her.

Doña María Meléndez ruled Nombre de Dios, a Timucua town just outside St. Augustine. The Spanish called her the *cacica*, their word for a woman chief. Her mother ruled the town before her and was one of the first Timucua people to become Christian. Doña María was a Christian too. She married a Spanish soldier named Clemente de Vernal, who lived with her and their children at Nombre de Dios.

The Franciscans set up their first *doctrina* at Nombre de Dios after 1587. Staff at the Florida Museum of Natural History write that the Franciscans' success there "was largely owing to" her. By 1606 she ruled the Timucua towns along the coast from St. Augustine north to about Cumberland Island, in what is now Georgia.

NOT KNOWN: how she gained that wider rule. The National Park Service's account says she may have had Spanish help, and the records do not settle it. Spaniards wrote down everything known about her, nothing survives in her own words, and no record says why she became a Christian.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 25 MINUTES

English Protestants founded several colonies in the 1600s so that they could worship in their own way, and in some of those colonies the leaders punished people who worshipped differently. The Puritans ran Massachusetts. They were English Protestants who wanted to clear the Church of England of what they saw as Catholic leftovers. Among the people they punished were Quakers, members of a Protestant group begun in England in 1652. Puritan leaders had the ears of some Quakers cut off, and they hanged four Quakers in Boston.

Other colonies set other rules. Maryland's lawmakers protected worship for Christians in a law of 1649, and the same law ordered death for anyone who denied the Trinity, the Christian belief that God is three persons in one. Roger Williams in Rhode Island let people of every faith live as neighbors with equal rights. William Penn wrote freedom of worship into Pennsylvania's Frame of Government, his plan for running the colony.

New Mexico. Spanish friars and governors punished Pueblo people for holding their own ceremonies. They whipped religious leaders and hanged some of them. In 1680 the Pueblo nations rose up and drove the Spanish out.

Why the Puritans left England

In England in the 1620s, the men who ran the church and the government ordered the Puritans to follow church practices they hated. Those leaders put Puritan ministers out of their jobs and threatened them with "extirpation from the earth," which means being wiped out.

Bishops, the high officials who ran the Church of England, had their critics punished hard. English judges had Protestants who wrote against the bishops whipped, cut and branded.

Alexander Leighton. The judges of a London court called the Star Chamber sentenced a Scottish minister named Alexander Leighton in June 1630, for writing a book against the bishops. They fined him 10,000 pounds and ordered him whipped. He was to stand in the pillory, a wooden frame that locked a person's head and hands in a public place. The judges ordered one of his ears cut off and one side of his nose slit open.

They also ordered his face branded with the letters S.S. Branding means pressing red-hot metal onto the skin to burn in a mark that never goes away. The letters stood for "sower of sedition," a person who stirs people up against the government.

Leighton escaped the night before the punishment, but he was caught again in Bedfordshire. The first part of the sentence was carried out on him on November 26, 1630.

> **NOT KNOWN:** which punishments that first part included, and who carried them out. The account of his life in the Dictionary of National Biography, a British book of life stories printed between 1885 and 1900, does not say.

He was held in the Fleet, a London prison, until 1640. That year the members of Parliament, England's lawmakers, set him free, canceled his fine and voted to pay him 6,000 pounds.

Crossing the ocean. As many as 20,000 Puritans left England for America from 1630 on, looking for the freedom to worship as they believed they should. John Winthrop's company of about 1,000 arrived in 1630 and settled on the Shawmut Peninsula, where Boston stands now.

It was the land of the Massachusett people, who called it Mushauwomuk, "the boat landing place." Between 1616 and 1618 an epidemic, a disease that spread fast from person to person, had killed all but about 25,000 of the roughly 100,000 people of that region. That is three people in every four. In 1633 the Massachusett leader Chickataubut signed a treaty with Winthrop that gave up his rights to the peninsula.

The Pilgrims who landed at Plymouth in 1620 were a different group. They had left the Church of England completely and formed churches of their own. The Puritans believed the Church of England was a true church that needed to be fixed.

Joining a church. In Massachusetts a person could not simply join a church. At first, only men and women who had gone through a conversion experience, a moment when a person feels that God has changed him or her, could become members. Each new member also had to convince the other members that it was real.

The Bay Psalm Book. Richard Mather and two other ministers turned the Psalms of the Bible into verses that church members could sing. Stephen Daye printed their book at Cambridge, Massachusetts, in 1640, and it was the first book printed in the English colonies of North America. Eleven copies still exist.

Reading for God

New England children were taught to read for a religious reason. In 1642 the men of the Massachusetts General Court, the colony's lawmakers, ordered parents and masters to teach their children and apprentices, young people learning a trade from a master, to read. The law required them to learn enough "to read the English tongue" and to know the colony's "Capital Lawes," the laws that set death as the punishment for a crime. The colonists pointed to the Bible as the authority for many of their criminal laws.

The Old Deluder Satan Act. A second law, in 1647, ordered towns of 50 households to hire someone to teach reading and writing. Towns of 100 families had to set up a grammar school, a school that prepared young people for "the university," which meant Harvard College. The law's opening words state that it is "one of the chief projects of that old deluder Satan to keep men from the knowledge of the Scriptures."

A deluder is someone who tricks people, and the law has been called the Old Deluder Satan Act ever since. The colonists wanted every child to be able to read the Bible without a minister in between.

Harvard College was founded in 1636 to train ministers. A pamphlet by its founders, *New Englands First Fruits*, printed in England in 1643, states the college's purpose. The founders were "dreading to leave an illiterate Ministery to the Churches, when our present Ministers shall lie in the Dust." They feared that when their ministers died, no trained ministers would be left to replace them.

New England children learned to read from *The New England Primer*, made by the printer Benjamin Harris. Staff at the American Antiquarian Society, a research library, date its first printing between 1687 and 1690, because the only evidence left is booksellers' advertisements. Harris placed his first advertisement for it in 1690. No copy printed before 1727 survives.

The picture of the fire. One page of the Primer showed John Rogers being burned alive at Smithfield, in England, on February 4, 1555. He was the first Protestant put to death under Mary, the Catholic queen of England. The

picture showed his wife and ten children beside the fire. A long poem next to it, written as his last advice to his children, told them to "Abhor the arrant Whore of Rome," which meant to hate the Catholic Church.

Library of Congress staff write that generations of New England children read these pages. In their words, the pages "doubtless helped to fuel" New Englanders' prejudice against Catholics, a dislike of a whole group of people without knowing them. That prejudice stayed strong there well into the 1800s.

BY 1650: Puritan leaders ran Massachusetts by their reading of the Bible, only people who had felt God change them could join its churches, and every town of 50 households had to hire someone to teach reading.

Praying towns and Deer Island

New England ministers also tried to bring the Native nations around them to Christianity. John Eliot, the minister at Roxbury, translated the whole Bible into the Algonquian language of the Massachusett people. It was printed at Cambridge in 1663, the first Bible printed in any language in North America. At one time Eliot ministered to about 1,100 Christian Native people, whom the English called Praying Indians. They lived in fourteen towns laid out in the English style.

Deer Island. The English were fighting what they called King Philip's War in 1675. That year the members of the Massachusetts General Court ordered the Christian Native people of Natick taken from their homes and put on Deer Island in Boston Harbor. Daniel Gookin, the Massachusetts official in charge of dealings with the Praying Indians, wrote that the order came from "false informations" given to the court to stir its members up against the people of Natick.

Samuel Shrimpton of Boston held the island, and he agreed to the plan as long as they did not cut down any trees. Captain Thomas Prentiss and a party of horsemen brought the Natick people to the Charles River.

About 200 people from Natick were put on three boats about midnight on October 30, 1675, under the court's order, and carried to Deer Island. Gookin does not name the men who took them. John Eliot met them at the landing and prayed with them. They were afraid they would never come home and would be shipped out of the country.

The winter. Massachusetts officials then sent the Punkapog people to the island too, "upon as little cause as the Naticks were," Gookin wrote. By late December about 500 people were held there. Gookin wrote that they lived mostly on clams and shellfish dug out of the sand at low tide. The island was cold, their wigwams, or houses, were poor, and they had few clothes, and thin ones.

Gookin wrote that the island kept them safe "from the fury of the people." His account of that winter gives no count of the dead. In 2025 the Episcopal bishops of Massachusetts and Western Massachusetts wrote that hundreds of Native people from the praying towns died on Deer Island from the cold and from starvation in the winter of 1675 to 1676.

Quakers punished in Massachusetts

The Quakers formed around a preacher named George Fox in England in 1652, and they call themselves the Religious Society of Friends. They taught that the Spirit, or "Light of Christ," lives inside every person. Quaker women spoke and preached at Quaker meetings for worship, and other colonists found this offensive. Many people at the time called Quaker teaching heresy, a belief that goes against the teaching of the church.

English officials had put 10,000 Quakers in prison by 1680. According to the Library of Congress, 243 of them died in the king's jails "of torture and mistreatment."

The Puritan lawmakers of Massachusetts passed law after law against Quakers, starting on October 14, 1656. They called Quakers "the cursed sect of heretics." They fined ship captains who brought Quakers into the colony and people who owned Quaker books.

Ears and tongues. A law of 1657 set the punishment for a Quaker who came back after being thrown out of the colony. A man would have one ear cut off the first time, and the other ear the second time. A woman would be whipped. A third return was to be punished by boring a hole through the person's tongue with a hot iron.

Christopher Holder, John Copeland and John Rous were Quakers who came back. The judges sentenced each of them to have his right ear cut off by the hangman. On September 16, 1658, the deputy of the colony's marshal, a law officer, came to the prison with a group of men and shut the door. Then he had the right ear of each of the three men cut off. Afterward the three men said: "They that do it Ignorantly, We desire the Lord from our hearts to forgive them."

Two children for sale. Massachusetts officials also punished the children of Quakers. Daniel and Provided Southwick were the son and daughter of Lawrence and Cassandra Southwick, Quakers of Salem. Judges at Salem and Ipswich fined them ten pounds for not going to the town's church meetings,

and they had no property to pay it with. The members of the General Court then gave the county treasurers the power to sell the two children to any English buyer, in Virginia or Barbados, to pay the fine.

The county treasurer, Edmond Batter, looked for a ship's captain to carry them to Barbados. The captain he found refused. He asked, "will ye offer to make Slaves of so harmless Creatures?" Batter sent the children home, and the order to sell them was never carried out.

Death for coming back. The lawmakers set the punishment of death on October 19, 1658, for any Quaker who came back after being banished, which means ordered out of a place and forbidden to return. Between 1659 and 1661 the colony's officials hanged four Quakers in Boston under that law: William Robinson and Marmaduke Stephenson in 1659, Mary Dyer in 1660 and William Leddra in 1661. The governor, John Endecott, sentenced three of them. The story of Mary Dyer, after this section, describes the first three hangings.

King Charles II ordered the Massachusetts lawmakers to stop punishing Quakers on September 9, 1661, after Quakers in England pressed him. By 1677 Quakers could hold their meetings openly in Massachusetts.

Virginia's lawmakers passed their own laws against Quakers from 1659, including death for Quakers who would not obey them. No one was put to death under them. Thomas Jefferson later wrote that the reason was not that the church held back or that the lawmakers went easy. In his words, it "was not owing to the moderation of the church, or the spirit of the legislature."

BY 1677: Quakers met openly in Massachusetts, and no Quaker had been hanged there since 1661.

Mary Dyer

Who: A Quaker woman hanged on Boston Common for returning to Massachusetts after she had been banished.

When and where: Massachusetts and Rhode Island. Hanged in Boston on June 1, 1660.

She stood on the ladder with the rope around her neck.

Her first trouble with the Massachusetts leaders came when she supported Anne Hutchinson, a Boston woman who was banished for her religious teaching. In 1638 the Massachusetts leaders forced Dyer and her family out, and they moved to Rhode Island. In the 1650s, in England, she became a Quaker.

She came back to New England to spread Quaker beliefs. The Massachusetts officials arrested her and banished her three times. In the spring of 1657 her husband, William Dyer, got her out of the Boston jail by confronting Governor John Endecott. Endecott let her go on the condition that she never return.

The first sentence. She returned anyway, and in October 1659 Endecott sentenced her to death along with two Quaker men, William Robinson, a merchant from London, and Marmaduke Stephenson, a farm worker from Yorkshire. He told them they would "be hanged until you are dead." On October 27, 1659, the officials led all three to the gallows and made Dyer watch the two men hanged. She stood on the ladder with the rope around her neck.

Then the officials announced a reprieve, which called off her hanging. Endecott had agreed to it the day before. The officials sent her out of the colony.

She came back once more in May 1660, and Endecott sentenced her to death a second time. Massachusetts officials hanged her on Boston Common on June 1, 1660.

Maryland, 1649: freedom for Christians, death for others

Most people in England hated the Catholic Church all through the 1600s, and they made life hard for Catholics and punished them. In 1632 George Calvert got a charter, a written grant of land and of the right to govern it, from King Charles I for the land that became Maryland. According to the Library of Congress, Calvert wanted a safe place for his fellow Catholics.

Two ships, the *Ark* and the *Dove*, carried about 200 settlers there. Two Catholic priests had to sneak on board to get away from England's laws against Catholics.

Maryland's colonists first landed on March 25, 1634. They later bought land from the Yaocomaco people and built St. Mary's City there. The records do not say what the Yaocomaco were paid or how they understood the sale. By 1649 the colony belonged to Cecil Calvert, the second Lord Baltimore.

The Toleration Act. Cecil Calvert sent the Maryland assembly, the colony's lawmakers, a set of proposals about religion in 1649. The members met at St. Mary's City from April 2. They rewrote part of what he sent, and on April 21 they voted it into law as An Act Concerning Religion. It has been called the Toleration Act ever since, toleration meaning letting people hold beliefs that others do not share.

The act protected only Christians. It stated that no person "professing to believe in Jesus Christ" should be "in any ways troubled, molested, or discountenanced" for his or her religion. Molested here meant bothered or attacked, and discountenanced meant treated with disapproval.

Death for other beliefs. The same act ordered death for anyone who cursed God, or denied that Jesus was the Son of God, or denied the Trinity of the Father, the Son and the Holy Ghost. Such a person "shall be punished with death," and the person's land and goods would be taken and given to Lord Baltimore. Under this law a Jew, or a Christian who did not believe in the Trinity, could be put to death.

The act also punished insults about religion. Calling someone a heretic, a Puritan, a Presbyterian, a "Popish Priest" or a similar name as an insult cost a fine of ten shillings (a shilling was an English coin). Half of the fine went to the

person insulted. A person who could not pay was "publickly whipt" and kept in jail until he or she asked forgiveness in public.

Puritans took control of Maryland in 1654 and threw out the act. They took legal rights away from Catholics, Jews, Quakers and others. Maryland's colonists canceled the Puritan laws in 1661, and the act was in force again. After 1689 the Church of England became Maryland's official church by law, and officials there enforced English laws that kept Catholics from voting, holding office or worshipping in public.

Two colonies that left worship alone

Roger Williams founded Providence in 1636, on land of the Narragansett people. He wanted it to be "a shelter for persons distressed for conscience." In Rhode Island, Anglicans (members of the Church of England), Puritans, Quakers, Catholics, Jews and people with no religion lived as neighbors with equal rights.

William Penn was a Quaker. In 1681 King Charles II owed a debt to Penn's father, and Penn turned it into a charter for Pennsylvania. The Lenape people, also called the Delaware, lived on both sides of the Delaware River. Beginning in 1682, the Lenape gave up land on the west bank of the river to Penn in exchange for cloth, guns, gunpowder, alcohol and other goods. By 1685 as many as 8,000 Quakers had moved to Pennsylvania.

Penn's plan. In 1682 Penn wrote a Frame of Government for the colony. It stated that everyone who believed in "One Almighty and eternal God" would "in no wayes be molested," meaning bothered, for their religion. It also stated that no one would "be compelled at any time to frequent or maintain any Religious Worship, Place or Ministry whatever." That meant no one in Pennsylvania had to attend a church, and no one had to pay for one.

The first group of Germans reached Philadelphia in 1683, from the town of Krefeld. They were Mennonites and possibly some Dutch Quakers. Mennonites, Dunkers, Schwenkfelders, Moravians and German Baptists followed. These were small Protestant groups from Germany and nearby lands,

and their members had been punished for their religion in Europe. People described Pennsylvania as "an asylum for banished sects," a safe place for religious groups that had been driven out.

Twenty-three Jewish refugees from Dutch Brazil arrived in New Amsterdam, the Dutch town that became New York, in 1654. Within a year they were holding religious services there. By 1658 Jews had also settled at Newport, Rhode Island, where they could worship freely.

Roger Williams

Who: A minister thrown out of Massachusetts who founded Rhode Island, where the government stayed out of religion.

When and where: Born in London about 1603. Massachusetts from 1631. Founded Providence in 1636. Died in Providence in 1683.

"Forced worship stinks in God's nostrils," he wrote in 1644.

Roger Williams taught that a government has no right to force religion on anyone. He called the freedom to follow one's own conscience "soul liberty," and he built a colony on that idea.

He had studied at Cambridge University and become a minister in the Church of England, and he disliked the church's ranks of officials, its wealth, its power in government and its decorations. He reached Massachusetts Bay in 1631, one year after the Puritans settled it. There, Puritan religious rules covered every part of daily life, and colony officials enforced them. Williams preached that the government should not enforce anyone's religion, and that a person's spiritual life should be kept separate from public life.

Thrown out. The judges of the colony's General Court ordered him out of Massachusetts for preaching these ideas. He fled in the winter, because he might have been put to death if he had been sent back to England. Wampanoag people took him in and kept him alive through that winter. He had traded with them and learned their language.

Providence. With help from Wampanoag and Narragansett people, he traveled by canoe to a freshwater spring at a place called Moshassuck. He settled there in 1636 with the permission of the Narragansett and named the place Providence. In 1638 the Narragansett leaders Canonicus and Miantonomi signed a deed with Williams for the settlement, a deed being a paper that hands over land. Under it, the Narragansett kept the right to trade inside the settlement.

In Rhode Island, people of every faith lived as neighbors with the same rights. Williams thought many of them were wrong about religion. He believed that correcting them was not the government's job.

His books. In 1643 he published *A Key into the Language of America*, a book about the Native languages of New England, mostly Narragansett, and about Narragansett daily life. In 1644 he published *The Bloudy Tenent of Persecution*, an argument against forced worship. In it he wrote: "God requireth not an uniformity of Religion to be inacted and inforced in any civill state." He meant that God does not require everyone to be made to follow the same religion.

Members of England's Parliament granted Rhode Island a patent, a paper that recognized the colony, in 1644. King Charles II granted it a new charter in 1663, at the request of John Clarke, a Rhode Island colonist who had stayed on in England to act for the colony. The charter stated that no one in the colony would be punished "for any differences in opinion in matters of religion."

Williams died in Providence in 1683. In 1965 members of Congress voted to set up the Roger Williams National Memorial in Providence.

Anne Hutchinson

Who: A Boston woman who held religious meetings in her home, taught her own reading of the Bible, and was banished and put out of her church for it.

When and where: Born in Alford, England, about 1591. Boston from 1634. Banished in November 1637. Killed in 1643.

Her church said she had "rather been a Husband than a Wife."

The leaders of Massachusetts put Anne Hutchinson out of the colony for what she taught about God, and then the members of her church put her out of the church. She had sailed to Boston in the autumn of 1634 with her husband, William, and their children, following their minister, John Cotton.

The meetings. From 1636 she held a meeting in her home once a week to talk over the Sunday sermon. At first only women came. Then men came too, including important men of the colony. In Massachusetts the minister's sermon in the meeting house was the official teaching, and a second meeting in a private house, led by a woman, was a rival to it.

What she taught. She taught that God's grace, God's free gift of love and forgiveness, alone decides who is saved, meaning who goes to heaven. She said good behavior played no part.

She also said she could tell which ministers and which neighbors had received God's grace and which had not. That second claim put her in judgment over the colony's ministers. Her opponents called her teaching antinomian, a word that means "against the law." They meant that her teaching let a saved person ignore the rules.

At her trial she said that God had spoken to her directly, by "an immediate revelation," and that God would curse the Puritans if they harmed her. The judges called that blasphemy, speaking against God.

Two trials. She faced two trials, five months apart. In November 1637 the members of the General Court tried her at Newtown, now Cambridge, and banished her. In March 1638 the members of the church at Boston

tried her separately and excommunicated her, which means they put her out of the church.

The church's charges said she had "rather been a Husband than a Wife and a preacher than a Hearer." The same charge went on: "and a Magistrate than a Subject," an official who governs or judges rather than a person who is governed.

Her death. In the spring of 1638 she moved to Aquidneck Island in what became Rhode Island and founded the town of Portsmouth. After her husband died, she moved in 1642 to land on Long Island Sound that the Dutch claimed for their colony.

A war broke out there the next year. In February 1643 soldiers of the Dutch governor, Willem Kieft, killed at least eighty, and perhaps as many as 120, Munsee people in one night, and that killing began the war. In August or September 1643, during that war, Siwanoy people attacked her home. They killed her and several of her children. One daughter survived.

Baptism and slavery in Virginia, 1667

Some colonists argued that a Christian could not be held as a slave. In September 1667 the members of Virginia's lawmaking assembly settled the question in favor of slavery. Their law said that being baptized "doth not alter the condition of the person as to his bondage or ffreedome," bondage meaning slavery. The law's own words state the lawmakers' reason. Once enslavers were sure that baptism would not free the people they held, they would be more willing to let them be baptized.

New Mexico: punished for their ceremonies

The Pueblo nations of New Mexico hold their religious ceremonies in kivas, rooms set aside for worship. Some of their ceremonies are masked dances. For about eighty years the Franciscan friars demanded that the kivas be destroyed and the masked dances ended. The friars called the dances idolatry, which means worshipping false gods.

Alonso de Posada, the head of the Franciscan missionaries from 1656 to 1665, forbade Pueblo ceremonies. He ordered the missionaries to go into the kivas, burn the masks, and take or destroy the sacred objects. In 1661 Spanish soldiers as well as friars raided kivas and burned sacred masks.

Whippings and hangings. Will Hansen and Analú María López, who work at the Newberry Library, a research library in Chicago, write that missionaries almost certainly whipped Native people who did not take part in Christian services. Spanish investigations in New Mexico between 1620 and 1680 recorded many cases of missionaries punishing Native people severely. According to the Architect of the Capitol's account of Po'pay, Pueblo people "found practicing their religion were tortured and sometimes executed."

Juan Francisco Treviño, the Spanish governor, ordered the arrest of 47 Pueblo medicine men in 1675. The charge was sorcery, using magic to cause harm, which is what Spanish officials called the medicine men's ceremonies. Spanish officials sentenced four of them to be hanged. Three were hanged, and the

fourth killed himself. Spanish officials whipped the others in public and put them in prison. The records do not name the men who did the hanging and the whipping.

Po'pay. One of the men whipped was Po'pay, of Ohkay Owingeh, also called San Juan Pueblo. He was born about 1630, and his name means "ripe squash" in the Tewa language. He was a farmer and a member of a medicine society, and his work was healing and the spiritual life of his people. Spanish officials had him flogged in public. Flogging is beating a person on the back with a whip. The whip leaves wounds that heal into scars.

When Pueblo leaders heard about the arrests, they sent armed men to Santa Fe, where the prisoners were held. Many Spanish soldiers were away at the time, so Treviño gave in and released the prisoners. Po'pay was one of them.

The rising. Po'pay led a rising of the Pueblo nations against the Spanish in 1680, and he planned it from Taos Pueblo. The leaders set it for August 13 and sent runners to the pueblos with knotted cords. Chapter 2, Native Nations, describes the rising in full, including what the knots meant.

On August 9 the Spanish captured two of the runners, Pedro Omtua and Nicolás Catua of Tesuque Pueblo. Spanish officials tortured them to make them explain the cords, and later hanged them. The records do not name the men who did it. With two of their runners in Spanish hands, the Pueblo leaders began the rising three days early, on August 10, 1680.

The Pueblo fighters killed about 400 people, including 21 of the 33 Spanish priests in New Mexico, and burned mission churches across the province. The Pueblo nations kept the Spanish out of New Mexico for twelve years.

The Pueblo nations run their own museum, the Indian Pueblo Cultural Center. Its account of those eighty years of Spanish rule states that "the Pueblo people suffered violence, cruelty, and hunger." It lists "exploitation of labor and resources," and "harassment and persecution for practicing long-held religious traditions that are interwoven in daily life." That means the Spanish forced Pueblo people to work for them, took what they had, and troubled and punished them again and again for keeping their own religion.

The statue. In 2005 a statue of Po'pay, given by the state of New Mexico, was placed in the National Statuary Hall Collection in the United States Capitol. Of all the people in that collection who were born on land that later became the United States, Po'pay was born the earliest.

No picture or written description of Po'pay survives, so the face is the sculptor's own work. The sculptor, Cliff Fragua of Jemez Pueblo, wrote: "On his back are the scars that remain from the whipping he received for his participation and faith in the Pueblo ceremonies and religion."

BY 1700

If you remember one thing: English colonists crossed the ocean to worship in their own way, and the leaders of Massachusetts, like the friars of New Mexico, punished people who worshipped any other way.

- 1636: Roger Williams founds Providence, where people of every faith live as neighbors.
- 1660: Massachusetts officials hang Mary Dyer on Boston Common.
- 1680: Po'pay leads the Pueblo rising that drives the Spanish out of New Mexico.

Next: In the 1700s traveling preachers held revivals across the colonies, and church members split over them.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 14 MINUTES

Traveling preachers held revivals, series of meetings meant to stir people to a stronger faith, across the colonies in the 1730s and 1740s. People in many colonies took part in the same religious movement at the same time, and it is called the Great Awakening.

Most colonists already went to church. By one estimate, 75 to 80 percent of colonists attended church between 1700 and 1740, and colonists were building new churches fast. The revival preachers wanted each person to go through the new birth, a conversion that a person could feel happening inside. Church members split into two sides over whether the new birth was real. Critics said many of the conversions were false, and even the work of the devil.

Killings over religion came in these years too. English colonists from Carolina and Creek fighters under James Moore destroyed the Spanish missions among the Apalachee of Florida in 1704. In 1741 New York officials hanged a man they called a Catholic priest.

The Apalachee missions destroyed, 1704

English colonists from Carolina and their Creek allies destroyed the Spanish missions among the Apalachee people in 1704. The Apalachee lived around what is now Tallahassee, Florida. Many of them were baptized Catholics who lived in fourteen Franciscan mission towns.

The members of the Carolina assembly approved the attack in September 1703 and asked James Moore, a former governor of Carolina, to lead it. Moore promised that the attack would cost the colony nothing, because he would pay for it "by the taking of loot and slaves." That meant stealing goods and capturing people to sell as slaves. He led fifty Englishmen and about one thousand Creek men, also called Muscogee.

Ayubale. Moore's men destroyed nearly all of the fourteen mission towns. At the church of Ayubale, on January 25, 1704, a friar named Angel de Miranda and 26 men held off the attackers for about nine hours. They surrendered when they ran out of arrows.

A magazine account based on the work of the historian John Hann describes what the attackers did there. They burned one friar alive and cut off his head, and the account does not give his name. They also tortured two Native people and burned them at the stake.

Patale. In a later raid that year, on June 23, 1704, attackers killed the friar Manuel de Mendoza at the Patale mission and burned the church. At Patale they tied prisoners to the Stations of the Cross, a set of markers used in Catholic prayer, and cut them with knives. Then they pushed burning sticks into the wounds and burned the prisoners to death. The records name James Moore as the commander of the January raid. They do not name the men who tortured and burned the prisoners.

How many were taken. The counts vary widely. Moore reported that his army killed more than 1,100 men, women and children and captured more than 4,300 people as slaves, most of them women and children. Moore had promised to pay for the raid with captives.

Other counts of the people captured run from hundreds to about 1,400. The historian John Hann counts about 2,000 Apalachee who went into exile after the raids, forced to live far from their homeland, and he writes that an unknown number were enslaved. In 1680 the fourteen mission towns had held about 8,000 people.

Many Apalachee were unhappy with the forced labor the Spanish demanded, which included carrying goods about 100 miles to St. Augustine. The Spanish had also forbidden mission Apalachee to own guns. Many Apalachee left with Moore. In his report, Moore said that most of the people of seven villages chose to join him.

New Lights and Old Lights

Church members argued over the revival, and many churches divided into two sides. People who supported the revival were called New Lights, and people who opposed it were called Old Lights. Those were the names among the Congregationalists, the members of the churches the Puritans had founded in New England. Among the Presbyterians, another family of Protestant churches, the two sides were called the New Side and the Old Side.

The revival had ended in New England by the middle of the 1740s. Preachers carried it south, where it started revivals that went on into the 1800s. The Presbyterians, Baptists and Methodists had backed the revival, and by the early 1800s they were the largest Protestant churches in the country. According to the Library of Congress, the Anglicans, the Quakers and the Congregationalists "were left behind."

A small number of colonists, among them Thomas Jefferson and John Adams, went a different way. They were deists, who stressed living a good life and rejected the Christian teaching that Jesus was God.

Drawings of New York City from 1690, 1730 and 1771 show the churches multiplying. The 1690 view shows an empty skyline. The 1771 view shows eighteen steeples, the tall towers on top of churches.

A college founded by revival supporters

Only graduates of Harvard or Yale could become Presbyterian ministers in the colonies in these years. Under that rule, the young men taught by William Tennent could not become Presbyterian ministers, so revival supporters set out to found new colleges.

Tennent was a Presbyterian minister, born in Ireland and educated in Edinburgh, Scotland. From 1726 until he died in 1745 he ran a school at Neshaminy, in Bucks County, Pennsylvania. People called it the Log College, because it was a log house about twenty feet long and almost as wide. He taught his students ancient languages and the Bible. Several of them became revival preachers anyway, among them his four sons.

Princeton. A group of New Lights planned a college in New Jersey in early 1746 to train young men for the ministry. On October 22, 1746, John Hamilton, the acting governor of New Jersey, granted a charter for the College of New Jersey. It is now Princeton University, and Princeton's own historians call its founding "a direct outgrowth" of the Great Awakening. Six months after the charter, three Log College graduates became trustees, the men in charge of running the college. They were Samuel Blair and two of Tennent's sons, Gilbert Tennent and William Tennent Jr.

Should enslaved people be taught Christianity?

Revival preachers pressed enslavers to let enslaved people be taught Christianity, and enslavers resisted. In 1740 George Whitefield printed an open letter in the *Pennsylvania Gazette* to the enslavers of Maryland, Virginia and the Carolinas. He wrote down their reason for keeping enslaved people from Christianity: that "teaching them Christianity would make them proud, and consequently unwilling to submit to Slavery."

Whitefield called that "a dreadful Reflection" on their own religion. He did not say in the letter that slavery was wrong, and he later held enslaved people himself.

Leah, who was enslaved in the household of the minister Jonathan Edwards, became a full member of the church at Northampton, Massachusetts, during the revival. Kenneth Minkema of the Jonathan Edwards Center at Yale records her membership.

George Whitefield

Who: An English preacher whose tours of the colonies were the high point of the Great Awakening, and who worked to make slavery legal in Georgia.

When and where: Born in Gloucester, England, December 16, 1714. Seven visits to America from 1738. Died in Newburyport, Massachusetts, September 30, 1770.

People in the crowd threw rotten eggs and pieces of dead cat.

George Whitefield drew crowds of up to 30,000 people in the Great Awakening, and he also pushed to make slavery legal in Georgia. He was a minister in the Church of England and was often in conflict with its leaders.

The tour. His preaching tour of the colonies from 1739 to 1741 was the high point of the Great Awakening in America. A sermon he gave in Boston drew as many as 30,000 people.

Many churches would not let him preach inside, so he preached outdoors from a folding pulpit that he carried with him. The first recorded use of it was at Moorfields, in England, on April 9, 1742, in front of a crowd estimated at twenty or thirty thousand. People in the crowd threw stones, rotten eggs and pieces of dead cat at him. He preached about two thousand sermons from that pulpit, by one estimate.

Why crowds came. He preached the new birth. In a printed sermon of 1739 he admitted that "how this glorious Change is wrought in the Soul cannot easily be explained." The Library of Congress lists the reasons crowds came to hear him: a strong voice, a way of speaking like an actor on a stage, the strong feelings he stirred up, simple messages, and clever use of the new ways of advertising.

Someone in London made an engraving, a printed picture, in 1763 that mocked his eye disease by calling him "Dr. Squintum." The picture's maker also accused him of sexual wrongdoing and of getting rich from

his preaching.

Bethesda. In 1740 he founded an orphanage called Bethesda near Savannah. Slavery was against the law in Georgia at that time. In 1741 he wrote that farming more land than his hired servants and older boys could manage was "impracticable without a few negroes." ("Negroes" was a word of his time for Black people.)

He wrote to a donor in 1747 that friends in South Carolina were giving money toward buying "a plantation and slaves" to support Bethesda. He added: "One negroe has been given me." He wrote that he planned to buy more that week.

Slavery in Georgia. From 1747 he pressed the trustees who ran Georgia to lift the ban on slavery. He wrote that "Georgia never can be a flourishing province, unless negroes are employed." He told them that unless the ban ended, he could not "cultivate the plantation in any manner." The trustees gave way.

Slavery became legal in Georgia in the early 1750s. The Penn and Slavery Project at the University of Pennsylvania dates it to 1752, when Georgia became a royal colony, run directly by the king's officials instead of the trustees. Other accounts give 1751.

Whitefield died at Newburyport, Massachusetts, on September 30, 1770. In his will he left 4,000 acres of land in Georgia and fifty enslaved people to the Countess of Huntingdon. Phillis Wheatley, a girl of about seventeen who was enslaved in Boston, wrote a poem about his death that was printed that year.

Jonathan Edwards

Who: The minister of the Northampton revival, whom the historian Perry Miller called "the first and greatest homegrown American philosopher." He bought and held enslaved people from 1731 until at least 1756.

When and where: Born in East Windsor, Connecticut, October 5, 1703. Northampton, Massachusetts, from 1726. Died in Princeton, New Jersey, March 22, 1758.

He compared his listeners to a spider held over a fire.

Jonathan Edwards led a revival in his own church at Northampton, Massachusetts, and wrote the books that other revival preachers learned from. He was the fifth of eleven children of a minister, and he finished first in Yale's class of 1720.

He joined his grandfather, Solomon Stoddard, as a minister of the church at Northampton in 1726. It was the largest church in Massachusetts outside Boston. He later took his grandfather's place. In 1727 he married Sarah Pierpont, and they had ten children.

A revival took place in his congregation, the people of his church, in 1734 and 1735. Edwards wrote a book about it, *A Faithful Narrative of the Surprising Work of God*. Revival preachers in America and Britain used it as a model, and it made him famous.

The sermon. On July 8, 1741, he preached a sermon at Enfield, Connecticut, called "Sinners in the Hands of an Angry God." He told the people that their own care and goodness had "no more influence to uphold you and keep you out of hell than a spider's web would have to stop a falling rock."

He also told them that God hated them: "The God that holds you over the pit of hell, much as one holds a spider or some loathsome insect over the fire, abhors you, and is dreadfully provoked."

He preached that God controls everything, that people are sinful by nature, that hell is real, and that a person has to be born again. Critics said many of the revival's conversions were false, or even the work of the devil. Edwards answered them in four books between 1741 and 1749, among them *A Treatise Concerning Religious Affections* in 1746. In them he tried to set out how a person could tell a real change of heart from a false one.

The people he enslaved. Edwards bought and held enslaved people from 1731 until at least 1756. Kenneth Minkema, of the Jonathan Edwards Center at Yale, lays out the record. The first was a teenage girl named Venus, whom Edwards bought at Newport in 1731. The last was a child named Titus, in 1756. Others whose names are known were Leah, Rose, and a married couple, Joseph and Sue.

His wife, Sarah, actively tried to get enslaved people from family members and from her husband's fellow ministers. Edwards defended slavery as allowed by the Bible. He argued that it was a way to bring enslaved people to Christianity. Late in his life he came to oppose the slave trade, writing that it was unjust to take away the freedom of people born free. After his death his son, Jonathan Edwards Jr., and his student Samuel Hopkins called for ending slavery completely.

Stockbridge. The members of his congregation dismissed him in 1750, after he tried to make the rules stricter for who could take communion, the Christian ceremony of sharing bread and wine in memory of Jesus. From 1751 to 1757 he worked at Stockbridge, a Mohican town on the western edge of Massachusetts. He preached to a small English congregation and was a missionary to about 150 Mohican and Mohawk families.

Stockbridge had 218 Mohican people living there in 1749. By 1774 the Mohicans had lost all but 1,200 of their 23,000 acres there, and in 1783 the Mohicans were forced to leave the rest. Their own history does not

name the people who took the land or forced them out. The Jonathan Edwards Center at Yale states that Edwards was "an agent in depriving Native Americans of their lands and culture."

His death. In late 1757 Edwards agreed to become president of the College of New Jersey. A few months after he arrived, he was inoculated against smallpox, given a small dose of live smallpox on purpose so that he would have a mild case and be safe afterward. A few of the people inoculated died from it, and Edwards was one of them. He died on March 22, 1758.

A man hanged as a Catholic priest, New York, 1741

Under a law the members of the New York assembly passed in 1700, any Catholic priest who came to New York faced prison for life.

The fires of 1741. After a string of fires in 1741, New York City officials claimed that enslaved people and poor white people had plotted to burn the city. By the end of August the judges had sentenced 30 people to death, by the count of the Historical Society of the New York Courts. They also sentenced 70 people to be sold as slaves in the Caribbean.

The historian Jill Lepore counts 34 people put to death. By her count, officials burned 13 Black men at the stake and hanged 17 Black men, two white men and two white women.

The hunt for priests. While those trials were going on, James Oglethorpe, the governor of Georgia, wrote to New York's lieutenant governor, the deputy governor. He warned that the Spanish had sent agents to burn English towns in North America, and that "many priests were employed" in disguise, pretending to be doctors or dancing masters. New York officials began hunting for hidden priests. They arrested John Ury, a schoolteacher who knew Latin. Ury said he was a minister of the Church of England.

Mary Burton, a servant, had been a witness in the earlier trials. A judge, Daniel Horsmanden, had promised her money and an end to her years of service. She had never mentioned Ury before. Now she said he was the leader of the plot

and had performed Catholic ceremonies for the plotters. Two more witnesses backed her. One was William Kane, a soldier Burton had accused, who went along to save himself. The other was Sarah Hughson, who was brought from the cell where she waited to be executed.

The trial. New York's attorney general, the colony's top lawyer, was a man named Bradley. At the trial he attacked the Catholic religion as "murderous" and read Oglethorpe's letter to the jury. Ury had no lawyer. His own witnesses said he was not a Catholic priest and that he had been elsewhere on the nights in question.

The jury took less than fifteen minutes to find him guilty. New York officials hanged John Ury on August 29, 1741. Before he died he said he was innocent and forgave the men who had prosecuted him. He was the last person executed for the supposed plot.

BY 1750

If you remember one thing: Traveling preachers set off the Great Awakening, and the argument over their new birth split churches into New Lights and Old Lights.

- In 1739: George Whitefield begins the preaching tour of the colonies that was the high point of the Great Awakening.
- In 1746: New Lights who backed the revival get a charter for a college of their own, now Princeton.

Next: After 1750 Americans argued over whether anyone should be taxed to pay for a church, and Black Americans born into slavery founded churches of their own.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 21 MINUTES

Americans spent these years arguing over whether the government should make people pay taxes to support a church. Before 1776, several colonies had an established church, one that the government supported with tax money. In Massachusetts it was the Congregational church. In Virginia it was the Church of England, also called the Anglican church, and people there had to attend its services as well as pay for its ministers.

Baptists and other people outside the tax-supported churches still had to pay those churches' ministers, and they organized against the church taxes. After the Revolution the lawmakers of each state decided for themselves whether to keep a church tax. The Baptists won in Virginia in 1786 and lost in Massachusetts, where the tax lasted until 1833. The First Amendment, the first of the changes added to the national Constitution in 1791, barred Congress, the national lawmakers, from setting up a national church.

New churches and new missions. Black Americans who had been born into slavery founded churches of their own in these years. On the Pacific coast, Spanish Franciscans built missions from 1769 on the lands of many Native nations. To keep people in the missions, missionaries and soldiers whipped them, locked them in the stocks, wooden frames that hold the feet or hands, and hunted down those who ran away.

Three more colleges with church backing

Three more colleges were founded with church backing in these years. Rhode Island College was founded in 1764 with the support of the Philadelphia Baptist Association, a group of Baptist churches, and it was renamed Brown University in 1804. Queen's College, tied to the Dutch Reformed Church, received its charter on November 10, 1766. It is now Rutgers University. Dartmouth College received its charter on December 13, 1769. Its founder was Eleazar Wheelock, a Congregational minister.

How Virginia ended its church tax

A parish was the area served by one church. In Virginia the men who ran each parish also cared for poor people and orphans, so they did the work of a local government as well as running a church.

The members of the Virginia assembly stopped the tax that paid Church of England ministers in 1779. Patrick Henry put forward a bill, a proposed law, for a new religious tax on December 24, 1784. Under his plan, each taxpayer could send his share to the church of his choice.

Some leading Virginians backed a religious tax. Richard Henry Lee wrote that "the experience of all times shows religion to be the guardian of morals." John Marshall, who later became Chief Justice of the United States, voted to move Henry's bill forward rather than put it off. George Washington wrote to George Mason that he did not object to "making people pay towards the support of that which they profess." He thought the bill would stir up trouble, though.

Madison's protest. James Madison led the other side. He got the vote put off until the autumn of 1785. On June 20, 1785, he published a long argument against religious taxes, without his name on it, called the *Memorial and Remonstrance*, a remonstrance being a formal protest.

Baptists and most Presbyterians were on his side. They argued that tax money spoils a church, and that a government has no right to control a person's religion. By the autumn of 1785 Madison had the votes, and the members of the assembly voted Henry's bill down.

Jefferson's law. In its place Madison brought back a bill that Thomas Jefferson had written in 1777. The members of the assembly passed it on January 16, 1786, and it became law three days later. It is called the Statute for Establishing Religious Freedom, a statute being a law. It states: "no man shall be compelled to frequent or support any religious worship, place, or ministry whatsoever."

Jefferson wrote that it was meant to protect "the Jew and the Gentile" (a person who is not Jewish), the "Mahometan" (an old word for a Muslim), the "Hindoo" (an old spelling of Hindu), and the "Infidel of every denomination," meaning people who believe in no religion at all.

Lawmakers in most states did not follow Virginia in these years. Those of Massachusetts, Connecticut and New Hampshire set up religious taxes that people had to pay. Maryland's and Georgia's lawmakers passed religious taxes but never collected them.

No religious test, and the First Amendment

The Constitution written in Philadelphia in 1787 says almost nothing about religion. Its one rule about religion is in Article VI. It states that "no religious Test shall ever be required" for a job in the national government. That meant no one could be made to swear an oath about religious beliefs before taking office. Charles Pinckney of South Carolina proposed the rule on August 20, 1787. The delegates at the convention, the meeting in Philadelphia that wrote the Constitution, adopted it on August 30.

Franklin's motion. Benjamin Franklin, who was eighty-one, asked the convention on June 28, 1787, to open each day with prayers. He told the delegates: "the longer I live, the more convincing proofs I see of this Truth." He went on: "that God governs in the Affairs of Men." The delegates did not approve his motion. According to reports of the time, the convention had no money to pay local ministers to lead the prayers.

Some people complained that the Constitution contained "no recognition of his mercies to us . . . or even of his existence," meaning God's. Many of the voters in Madison's part of Virginia were Baptists, and they wanted freedom of

religion protected in writing. On June 8, 1789, Madison introduced a set of amendments, or changes, to the Constitution. In his notes for that speech he wrote against a "national" religion.

The members of both houses of Congress voted on September 28, 1789, to send twelve amendments to the states. By December 1791 the lawmakers of three fourths of the states, the number needed, had approved ten of them. The first of the ten begins: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." Those words mean that Congress may not set up an official church, and may not stop people from practicing their religion.

The last church tax

Massachusetts lawmakers kept their state's church tax for forty-two years after the First Amendment was approved. Article III of the state's 1780 constitution required every town and parish to pay for "public Protestant teachers of piety, religion and morality." It also allowed the lawmakers to order people to go and listen to those teachers.

If a man asked, his church tax went to the minister of his own church, as long as he went to hear that minister preach. If he had no such minister, his tax could go to the minister of the parish where the tax was collected.

The argument. Article III was the part of that constitution people argued about most. Phillips Payson, a Congregational minister at Chelsea, argued for it in a sermon on May 27, 1778. He warned that if "the restraints of religion" were "once broken down," nothing could "support and preserve order and government in the state." He meant that without religion, no one could keep order.

Isaac Backus, the leader of the Baptists of New England, answered him that year in a pamphlet. He argued that government money spoils churches, and that the best thing a government can do for religion is to leave it alone.

The Baptists lost. There was strong doubt that Article III had won the two thirds of the vote that it needed, and in 1780 the state's officials declared it adopted anyway.

Article III stood for fifty-three years. In 1833 a new amendment to the state constitution replaced it. Churches could still choose their ministers and agree to pay them, but they had to raise the money themselves. Any member could leave a church by handing its clerk a written notice. Massachusetts was the last state to end its church tax.

BY 1791: Virginia had ended its church tax and the First Amendment kept Congress from setting up a national church, but Massachusetts towns still had to pay Protestant ministers.

Black Baptists in Savannah

George Liele was born into slavery in Virginia in 1750. In 1775 he was ordained a Baptist minister, which means church leaders officially made him a minister, and he preached at plantations along the Savannah River. In 1778 he gathered a congregation of Black Baptists in Savannah, Georgia.

During the Revolution Liele told his followers to side with the British, who promised to treat African Americans as free people. When the British left their headquarters on Tybee Island, near Savannah, in 1782, many of Liele's followers went with them. They founded settlements and churches in Jamaica, Nova Scotia and Sierra Leone. Liele went to Jamaica.

Andrew Bryan kept the Savannah congregation going. He was born at Goose Creek, South Carolina, and was enslaved by a man named Jonathan Bryan. On January 20, 1788, in a barn at Brampton plantation, a white minister named Abraham Marshall and a Black minister named Jesse Peter baptized more than forty of Bryan's followers. They made the group a church and ordained Bryan as its minister. The church was named the Ethiopian Church of Jesus Christ.

Whipped for worshipping. Many white people in Savannah feared that any gathering of enslaved people could be the start of a revolt. A letter written from Savannah in 1790 by Jonathan Clarke describes what they did. White people of Savannah broke up the worship and took many of the worshippers before magistrates, local judges. The worshippers were jailed twice. About fifty

were severely whipped. Andrew Bryan was cut and "bled abundantly," which means he bled heavily. The letter does not say who used the whip or who gave the order.

Clarke wrote that Bryan said he "rejoiced not only to be whipped, but would freely suffer death for the cause of Jesus Christ." The chief justice, Henry Osborne, questioned the worshippers along with James Habersham and David Montague, and they released them. Another man, George Walton, said the treatment of the worshippers "would be condemned even among barbarians." Osborne then allowed them to worship between sunrise and sunset.

Bryan counted about 575 followers in 1790. Of those, 225 were full members. About 350 others were converts, and many of them did not have their enslavers' permission to be baptized. Bryan later bought freedom for himself and his family, and he bought land for the church. He died in 1812.

Richard Allen

Who: A preacher born into slavery who bought his freedom, walked out of a white-run church in Philadelphia, and founded the African Methodist Episcopal Church.

When and where: Born into slavery on February 14, 1760, held by a Philadelphia lawyer. Delaware, then Philadelphia. Died in Philadelphia, March 26, 1831.

A trustee pulled a praying man up off his knees.

Richard Allen founded Bethel Church in Philadelphia after a white trustee, one of the men who ran the church, pulled a Black member up off his knees during prayer. Allen was born enslaved by Benjamin Chew, a Philadelphia lawyer, who sold Allen and his family to Stokely Sturgis, a farmer near Dover, Delaware. Allen began preaching as a teenager, while he was still enslaved.

Buying freedom. In 1780 he bought his freedom for $2,000. He earned the money by working in his own time for about five years. The dollars were Continental money, paper money printed during the Revolution, which by 1780 had lost most of its value.

Philadelphia. He came to Philadelphia in February 1786. He wrote: "I frequently preached twice a day, at 5 o'clock in the morning and in the evening, and it was not uncommon for me to preach from four to five times a day." That year he gathered a group of forty-two members.

Absalom Jones, William White and Dorus Ginnings joined him in wanting a church for Black Philadelphians. The elder, the church leader in charge at St. George's Methodist Church, where they worshipped, forbade their prayer meetings. Allen wrote that the Black members "were considered as a nuisance."

The gallery. At St. George's, Allen wrote, the Black members were moved out of their usual seats and placed along the wall. He does not say who moved them. Then one Sunday the sexton, the church's caretaker, sent them up to the gallery, a balcony above the main floor. As they knelt there to pray, a trustee took hold of Absalom Jones and pulled him up off his knees.

Allen wrote down the words. The trustee said, "You must get up," and then, "you must not kneel here." Jones answered, "Wait until prayer is over, and I will get up and trouble you no more." The trustee said, "No, you must get up now, or I will call for aid and force you away." A second trustee went to pull up William White.

Allen wrote: "By this time, prayer was over, and we all went out of the church in a body, and they were no more plagued with us in the church." He added that the Black members had helped pay for the church, "in building the gallery and laying new floors."

When it happened. The date of the walkout is disputed, and Allen's own account gives none. The traditional date is 1787. The historian Richard S. Newman argues for 1792 or 1793, which would make it a planned protest rather than a sudden one. The Encyclopedia of Greater Philadelphia places it "in the early 1790s."

The group rented a storeroom for worship. Allen wrote that they were threatened with being "read publicly out of meeting," which meant expelled in front of the whole church, if they kept worshipping there. Benjamin Rush and Robert Ralston gave money for a new church. On their first day collecting money, Allen and Jones raised $360. Allen called it "the greatest day's collection that we met with."

Bethel. Allen bought a lot at Sixth and Lombard Streets in 1791. The first building was an old blacksmith's shop, and he opened Bethel Church there in July 1794. In 1799 he became the first Black man ordained a Methodist minister.

In Philadelphia in 1816 he brought together African Methodist churches from Pennsylvania, New Jersey, Delaware and Maryland. They formed a new church body, the African Methodist Episcopal Church, and elected Allen its first bishop, a leader over many churches. He died at his home on March 26, 1831, and was buried in the basement of Mother Bethel, as his church came to be called.

Absalom Jones

Who: A man born into slavery who taught himself to read and became the first priest of African descent in the Episcopal Church in the United States.

When and where: Born in Delaware, November 6, 1746. Philadelphia from 1762. Died 1818.

When he was sixteen, his mother, sister and five brothers were sold.

Absalom Jones was the first priest of African descent in the United States. He was born into slavery in Delaware and taught himself to read, and the New Testament was one of the books he learned from. When he was sixteen, his mother, his sister and his five brothers were sold. The records do not name who sold them. The man who enslaved Jones took him to Philadelphia in 1762, and there he went to a Quaker night school for Black people.

He bought his freedom in 1784. In 1787 he and Richard Allen started the Free African Society, which worked to end slavery and helped widows, orphans and poor people. In 1792, with help from local Quakers and Episcopalians, Jones and Allen set up the First African Church in Philadelphia.

St. Thomas. After the walkout from St. George's, Jones and Allen went separate ways. Jones led the congregation into the Episcopal Church, while Allen stayed a Methodist and opened Bethel Church in 1794. On October 17, 1794, Jones's congregation was formally received into the Episcopal Diocese of Pennsylvania, the group of churches under that state's bishop, as the African Episcopal Church of St. Thomas. Jones was ordained a deacon, a minister one rank below a priest, in 1795.

Bishop William White, a different man from the William White who walked out of St. George's, ordained Jones, then fifty-six, a priest. The Episcopal Church's own archives give the year as 1802, and Delaware's

> state historical marker gives 1804.
>
> Jones also started a day school, a Female Benevolent Society and an African Friendly Society. In 1800 he sent a petition, a written request, to Congress about slavery. He died in 1818.

Christian Lenape killed at Gnadenhutten, 1782

American militiamen, part-time soldiers from the local area, killed about 96 Christian Lenape and Mohican people at Gnadenhutten, in the Tuscarawas Valley of Ohio, on March 8, 1782. Chapter 22, War, tells the killing in full. The people killed were converts of the Moravian church and lived in Moravian mission villages. They had refused to fight for either side in the Revolution. Colonel David Williamson led between 100 and 200 militiamen.

The militiamen falsely accused the Christian converts of taking their goods in raids. They held them in houses and voted to kill them. Williamson asked the militiamen who wanted to spare the prisoners to stand apart, and only sixteen or eighteen did. The prisoners, knowing what was coming, prayed and sang hymns.

The militiamen tied them up and killed them by smashing their heads with a mallet, one after another, taking turns as each man got tired. Then they cut off their scalps, the skin and hair of the top of the head. They killed 62 adults and 34 children. Two boys escaped. One of them, named Thomas, lived after he was scalped.

The California missions

Spanish soldiers and Franciscan friars began building missions in Alta California, which is now the state of California, in 1769. Spain's officials wanted to hold the Pacific coast against Russia and England, and they had little money. They sent missionaries to live on Native homelands because it was a cheap way to claim the land. Soldiers and missionaries came together. The missionaries' job was to make Native people Catholics and to change their whole way of life.

Father Junípero Serra led the Franciscans. He was born in 1713 at Petra, on the island of Mallorca, and he had worked as a missionary in Mexico for seventeen years. He founded Mission San Carlos Borromeo at Monterey in 1770 and lived there until he died in 1784. By the end of 1800 the Franciscans had founded eighteen missions. By 1823 there were twenty-one.

Whose land. About 310,000 Native people lived in California in 1769. Each mission was built in the homeland of a people with its own government and language. By 1800 the missions stood on the lands of more than a dozen peoples, among them the Kumeyaay at San Diego, the Tongva at San Gabriel, the Chumash at Santa Bárbara and La Purísima, and different Ohlone peoples around Monterey Bay and San Francisco Bay.

Baptism and force. Serra's writings describe a plan to baptize young children first. He expected the children to learn Spanish and translate for their parents. Edward Ketchum, a tribal historian, has said that once a child was baptized, the child was the "property" of the church.

Researchers wrote a report on the missions for the state of California in 2023, with advisers from 19 California tribes. Drawing on the scholars Cook and Madley, it describes persuasion in the early years and more force after about 1790 to 1800. Native accounts make clear that force was used in many baptisms. When Native people kept resisting, the missionaries called in soldiers, who captured runaways and people who had not been baptized.

Missionaries punished baptized Native people to keep them from leaving the missions or to force them to come back. They punished people for running away, stealing, fighting and drinking, and for other acts they called disobedience. The missionaries sometimes gave the punishments themselves. They also had soldiers or Native officials deliver them. Soldiers patrolled the countryside around the missions and punished people there too.

Whipping. The 2023 report describes flogging, beating a person with a whip that cuts and bruises the skin, as "probably the most common" form of violence at the missions. It was done in the open, in front of others. Some Franciscans, Serra among them, whipped themselves as a religious practice, so whipping seemed to them a fair punishment for others.

Serra wrote to the military commander Fernando de Rivera y Moncada on July 31, 1775, about four men who had run from Mission Carmel. He asked to have them whipped "two or three" times. He offered to send shackles, iron rings locked around the legs or wrists. The journalist Elias Castillo, who has written against the missions, quotes the letter from Serra's collected writings.

Missionaries and soldiers used other punishments too. People were locked in the stocks, sometimes for days. People were hobbled, which means their legs were tied so they could only shuffle, and they were made to keep working. Others were beaten with a cudgel, a heavy club, or jailed and put to hard labor. For plotting, murder or armed rebellion, some people were executed. Soldiers raped Native women at missions including Soledad, San Luis Obispo, San Diego and San Gabriel.

Baptisms and deaths. The missionaries recorded 85,840 baptisms of Native people at the 21 missions from 1769 to 1834, and in the same years they recorded 59,538 Native deaths. That is about seven deaths for every ten baptisms. The death records for two missions are missing, so the real number of deaths is higher. These counts come from the Early California Population Project at the Huntington Library, and they run past 1800.

Other record collections cover different years and people, so their totals differ. One gives about 101,000 baptisms and 71,000 deaths. Another gives 95,493 baptisms and 56,776 deaths. The 2023 report lists the causes of death. They

include forced moves, hard labor, the banning of Native ways of life, poor living conditions, violence, and new diseases brought in from outside.

The Kumeyaay attack on Mission San Diego, 1775

Kumeyaay fighters burned Mission San Diego on the night of November 4 to 5, 1775. They came from fifteen of the twenty-five villages nearest the mission. Spanish soldiers estimated that 600 to 1,000 people took part.

Why they attacked. The attackers left no account of their own, but the Spanish records list what the Kumeyaay had been complaining about. From 1769 to the end of 1774 the friars had baptized only 100 people, and then they pushed much harder. On October 3, 1775, the friars baptized sixty people in a single day.

Spanish soldiers had raped Kumeyaay women, and at least one of those women was also murdered. Father Luis Jayme, a friar at the mission, had reported the rapes. Spanish cattle had destroyed village land. Writers at the Smithsonian's National Museum of the American Indian list the Spanish destruction of Native food sources and the Spanish taking of Native land among the causes. Disease was also spreading.

The attackers burned the mission and took goods from the church. They killed three people: Father Jayme, and a carpenter and a blacksmith from Mexico. They shot Jayme with an arrow and then beat him to death.

After the attack, Spanish soldiers took violent revenge. They went through the villages in force and singled out the people they believed had led it. The records give no number of the people they punished or killed, and the 2023 report does not say what the soldiers did to the people they singled out. The mission was rebuilt.

Toypurina

Who: A Tongva woman, often called a religious leader, who helped plan an attack on Mission San Gabriel.

When and where: Japchivit and Mission San Gabriel, near what is now Los Angeles, 1785.

The soldiers were warned and arrested twenty-one rebels before the attack.

Toypurina was a Tongva woman from the village of Japchivit who had never been baptized. She had influence and standing in her community, and writers often call her a shaman, a religious or spiritual leader. In October 1785 she helped plan an attack on Mission San Gabriel. Soldiers at the mission were warned, and they arrested twenty-one of the rebels before the attack began.

The plan. The plan started with Nicolás José, a baptized Tongva man. He had lost a son and two wives. He asked Toypurina to call together the leaders of the other villages. One of those village leaders carried her message into the mission. People from the mission and from up to eight Tongva villages joined the plan.

When they were questioned, Nicolás José and Toypurina gave their reasons. Nicolás José said that the ban on dancing kept him from holding the ceremonies of mourning for the dead. Toypurina said she was angry with the Spanish settlers. She was also angry with the Native people who had moved to the mission, which stood on her land.

All of the leaders were held in jail for two and a half years. Then Spanish officials freed two of the village leaders with a warning. They exiled Nicolás José and Toypurina, sending them away from their homes.

NOT KNOWN: the year of her birth and the rest of her life. The records of the plot do not give them.

BY 1800

If you remember one thing: Americans argued over whether anyone should be taxed to support a church, and in Virginia the side against church taxes won.

One number: 59,538 Native deaths recorded at the California missions from 1769 to 1834, against 85,840 baptisms. That is about seven deaths for every ten baptisms, and the real count of deaths is higher.

Next: After 1800 revivals spread across the whole country, and Protestant mobs turned on Catholics and Latter-day Saints.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 28 MINUTES

Protestant revivals were held in almost every corner of the country between 1800 and 1850, so many that one religious magazine stopped reporting them in 1827. Its editors wrote that revivals "are becoming too numerous in our country to admit of being generally mentioned in our Record." In 1833 Massachusetts lawmakers stopped using tax money to pay for churches, and no other state still did.

The kind of Protestant faith that spread in these years is called evangelicalism. Evangelical preachers called on each listener to be converted, to turn to God and become a true believer, and they called this change the "new birth." Converted people started societies to hand out Bibles and religious papers, teach children, and send out missionaries. Some of the societies worked to get people to stop drinking, because their members believed a sober person was readier to be converted.

A Library of Congress exhibit lists the six largest of these societies in 1826 and 1827, among them the American Sunday School Union and the American Tract Society.

Mobs and splits. In the same fifty years, Protestant mobs burned a school run by Catholic nuns near Boston and Catholic churches in Philadelphia, and a Missouri governor ordered the members of a new church driven from his state. Methodists and Baptists in the South broke away from their national churches over slavery and formed churches of their own. In California the whippings at the missions went on, and the Mexican officials who took the missions away from the friars often whipped people too.

Camp meetings

Big revivals began at both ends of the country in 1800, in New England and in Kentucky. A Library of Congress exhibit calls the New England revival "decorous," which means calm and proper, and the Kentucky revival "exuberant," which means full of wild feeling. In Kentucky, Presbyterian ministers started a new kind of gathering, the camp meeting.

The ministers copied the long outdoor "communion seasons" of the Church of Scotland, gatherings for communion, the church service in which believers share bread and wine in memory of Jesus. Families loaded wagons, drove to the meeting, pitched tents, and stayed for several days of preaching.

Cane Ridge. One camp meeting was held at Cane Ridge, near Lexington, Kentucky, in the summer of 1801. A Presbyterian minister named Barton Stone organized it. In 1832 Stone and Alexander Campbell left the Presbyterians and formed a new church, the Disciples of Christ.

Lorenzo Dow was a traveling Methodist preacher. While he preached, people in his crowds often jerked their bodies about, which was called the jerking exercise. The Presbyterians and Baptists who had started camp meetings soon turned against them because of the strong feelings they stirred in people. The Methodists kept them and carried them east, and for decades camp meetings were a Methodist practice.

A drawing from 1809. Benjamin Henry Latrobe drew a plan of a Methodist camp meeting in Fairfax County, Virginia, on August 8, 1809. His drawing shows the men's seats apart from the women's and the tents of Black worshippers apart from the tents of white worshippers. At one side of the

camp, the organizers had built a pen of boards filled with straw. Latrobe wrote that "the converted were thrown" into it "that they might kick about without injuring themselves."

A Library of Congress exhibit calls this drawing an example of separation by race. That separation led Black Methodists, a few years later, to leave and form a Methodist church of their own.

Mother Ann Lee, who founded the Shakers, came to America from England in 1774. The Shakers' full name was the United Society of Believers in Christ's Second Coming. They danced in worship, often in circles inside circles, and got their nickname from shaking and whirling during services. In the early 1800s Shakers from New York went to Kentucky to see the revivals, and they gained a small number of converts there.

Sunday schools taught reading

The first Sunday schools taught poor children to read. Sunday schools began in England in the 1780s. In 1791 a group of pastors and merchants in Philadelphia started the First Day Society. Its members paid schoolmasters to teach boys and girls, and grown men and women who could not read, to read and write. The Bible was the textbook. Sunday was the day poor working children were not at work, and there were no free public schools yet.

A group of Philadelphia businessmen started the Sunday and Adult School Union in 1817, with volunteer teachers instead of paid ones. Within a year they had opened forty-three Sunday schools in the city, with 5,970 pupils. The group grew into the American Sunday School Union. Its leaders hired missionaries who started Sunday schools in cities, in the countryside and on Native reservations, and it became a large publisher of children's books.

Tracts. The American Tract Society began in 1825 to print tracts, short papers about religion. A Library of Congress exhibit gives an estimate that its members handed out 35 million books and tracts in its first ten years. Its leaders printed papers that urged readers to be converted and to give up drinking and gambling, which the leaders believed kept people from being converted.

Rebecca Gratz started the first Hebrew Sunday School, a Sunday school for Jewish children, in Philadelphia in 1838.

The African Methodist Episcopal Church grows

The African Methodist Episcopal Church, which Richard Allen and other Black Methodists formed in 1816, grew fast. It began with 8 ministers and 5 churches. By 1846 it had 176 ministers, 296 churches and 17,375 members.

Women preached in the church from its early years. Many people objected to women preaching, in the A.M.E. Church as in the white churches. An engraving made in Philadelphia in 1844 by P. S. Duval, from a painting by Alfred Hoffy, shows one of these women: Juliann Jane Tillman, a preacher of the A.M.E. Church.

The convent burned at Charlestown, 1834

Some Protestants in these years turned to violence against Catholics. In Charlestown, Massachusetts, near Boston, Ursuline nuns, Catholic women who make religious promises and live together in a convent, ran a convent school from 1819. The Ursulines are an order of nuns who teach, and their students were girls.

The stories. Stories about the convent spread in Boston. Rebecca Reed, a Protestant woman, had entered the convent in 1832 and left after less than six months. Her stories about life inside went around before her book, *Six Months in a Convent*, came out in 1835.

A nun named Sister Mary John, whose name before she joined the order was Elizabeth Harrison, left the convent on July 28, 1834. Bishop Fenwick, the church leader in charge of all the Catholic churches of the area, talked her into going back. Rumors spread that she was being held against her will.

The Protestant minister Lyman Beecher preached against Catholic schools in three Boston churches on Sunday, August 10. The next day a group of Charlestown officials toured the convent, and Sister Mary John guided them. Historians disagree about whether Beecher's sermons led to what happened

that night. Ira Leonard argues that they did. Ray Billington points out that the workmen had met before the sermons. Beecher himself said that probably no rioter had heard him.

The fire. A mob of mostly Protestant workmen from Charlestown burned the convent school on the night of August 11 to 12, 1834. The nuns and 47 girl students were inside when the mob came, and only six of the girls were Catholic. The mob also broke open the convent's tomb, where several dead nuns were buried. Firemen stood by and watched. No deaths are recorded.

Police arrested 13 men. Juries found 12 of them not guilty, including John R. Buzzell, who admitted he had led the mob. The one man found guilty was 16 years old, and Governor John Davis pardoned him, which means he freed him from his punishment.

Whose Bible? Philadelphia, 1842 to 1844

Pennsylvania's lawmakers passed a law in 1838 that made the King James Bible, the Bible that Protestants used, a required textbook in the public schools. In Philadelphia, Protestant teachers also led their pupils in Protestant hymns, or church songs.

The bishop's letter. Bishop Francis Patrick Kenrick, the Catholic bishop of Philadelphia, wrote to the board that ran the city's public schools in 1842. He objected to the hymns and to the Bible readings. He asked that Catholic children be allowed to read the Douay Bible, the translation Catholics use, and that they not be made to join in Protestant worship.

Early in 1843 the board members agreed that children could be excused from the King James Bible and could use any Bible "without note or comment." The Douay Bible has notes and comments. Under the board's rule, the one Bible the Catholic bishop had asked for was still not allowed.

The rumor. Hugh Clark, a Catholic school director in the Kensington neighborhood, suggested in February 1844 stopping Bible reading until the board could write a rule both sides accepted. A rumor spread that Clark had ordered a teacher, Miss Bedford, to stop reading the Protestant Bible. Witnesses later showed that the rumor was false.

Nativists, people who opposed Catholic immigration and saw Catholics as a danger to the Protestant faith, spread it anyway. A newspaper editor named Lewis Levin had founded their group in Philadelphia, the American Republican Association, in December 1843.

The May riots. The nativists held a rally on May 3, 1844, and marched into Kensington, where Irish Catholic families lived. On May 6 a nativist named George Shiffler was shot dead. By the end of that day a second man, who seems to have been a bystander, had been shot dead. Two more nativists were shot that day and later died of their wounds. The Encyclopedia of Greater Philadelphia does not name who shot any of them.

Nativist crowds burned St. Michael's Church, St. Augustine's Church and Irish Catholic homes, including Hugh Clark's house, on May 8. They also burned a Catholic seminary, a school for training priests.

The July riots. Fighting started again in July, at the Church of St. Philip de Neri in the Southwark neighborhood. State militia, part-time soldiers called up by the state, fought the crowd with cannon under General George Cadwalader. By the morning of July 7, four militiamen and probably about a dozen rioters were dead, and many more were wounded.

Counts of the dead in the two riots differ. Counts for May run from at least 14 dead to 20, and one count gives at least 100 wounded. Counts for July run from at least 14 dead to about 16.

Who was blamed. A grand jury, a group of citizens who decide whether there is enough proof for a trial, charged 19 rioters with crimes, and only a few were found guilty. The grand jury blamed the May riots on "the efforts of a portion of the community to exclude the Bible from the public schools." The jurors meant the Catholics who had been attacked.

Catholics answered that the grand jury had called no Catholics to testify. After the riots, Catholics decided to build a school system of their own.

BY 1844: Protestant mobs had burned a convent school near Boston and two Catholic churches in Philadelphia, and Catholics had decided to build schools of their own.

The Latter-day Saints driven out of Missouri

Joseph Smith founded the Church of Jesus Christ of Latter-day Saints on April 6, 1830, at a farmhouse near Fayette, in western New York. Its members were often called Mormons. In 1831 Smith said that God had chosen western Missouri as the place where his people would gather. Church members moved there, and their Missouri neighbors drove them out twice.

Jackson County, 1833. The first time was in Jackson County in 1833. The older settlers feared that the newcomers would control the county's politics and trade, and they objected to the newcomers' religious beliefs. An article in the church newspaper about free Black converts coming to Missouri, a state that allowed slavery, also angered them.

A mob attacked the church's printing office on July 20, 1833, threw the press out of the window, and scattered the type in the street. They tarred and feathered Edward Partridge, the church's bishop in Missouri, and Charles Allen in the public square. In tarring and feathering, men tore off a person's clothes and smeared hot pine tar on the bare skin, which burned it. Then they covered the person with feathers, which stuck to the tar. The church's account does not describe the injuries the two men suffered.

Mobs drove the church members out of the county in November 1833. Three people were killed on November 4, one of them a church member, and the church's account does not say who killed them.

Caldwell County, 1836 to 1838. The Missouri lawmakers created Caldwell County in 1836 as a place for church members to live. More converts kept arriving and settled beyond its borders. In 1838 both sides used violence. The Missouri State Archives states that "Old Settler mobs and Mormon paramilitary units roamed the countryside," paramilitary units being armed groups organized like an army.

Some Latter-day Saint men formed the Danites, a group of vigilantes, people who act as their own police and punish others outside the law. In the middle of October, Mormon forces raided the towns of Gallatin and Millport and burned property there. Shortly before the end of October, at Crooked River, church

members attacked a unit of the state militia that they took for a mob. One Missourian and two church members were killed. One of the dead was David W. Patten, an apostle, one of the church's highest leaders.

The governor's order. Governor Lilburn Boggs issued an order on October 27, 1838. It said the Latter-day Saints must be driven from the state or "exterminated," killed every one, if necessary.

Haun's Mill. Three days later, on October 30, between about 200 and 240 armed men attacked the small church settlement at Haun's Mill at about 4 in the afternoon. Colonel Thomas Jennings of Livingston County commanded them, and Captain Nehemiah Comstock led one of the companies.

Boggs had not ordered this attack. The Missouri State Archives says it happened "even without official sanction," which means without the governor's approval. The historian Alma Blair writes that the governor's order "was now widely known."

Many of the Mormon men took cover in the blacksmith shop, and the attackers shot them through the cracks in its walls. The attackers then hacked some of the wounded men to death with corn knives, long blades used for cutting cornstalks. One of them shot Thomas McBride with McBride's own rifle as he surrendered, and then the attackers hacked him.

They killed seventeen or eighteen men and boys. The Missouri State Archives gives eighteen, and Blair and the church's history give seventeen. Among the dead was Sardius Smith, age 10. Charles Merrick, age 9, died of his wounds five weeks later. One woman was wounded. No record shows that anyone was ever tried for the killings at Haun's Mill.

General Samuel D. Lucas arrested Joseph Smith and other church leaders on October 31. Over the next year about 8,000 church members, driven out under the governor's order, went from Missouri to Illinois. The Missouri State Archives describes them as "often ragged and deprived of their property." Governor Boggs's order stayed in force until June 25, 1976, when Governor Bond canceled it.

Joseph Smith

Who: The founder of the Church of Jesus Christ of Latter-day Saints, whose followers were driven from state to state. A mob killed him in 1844.

When and where: Lived 1805 to 1844. Western New York, Ohio, Missouri, and Nauvoo, Illinois. Killed at Carthage, Illinois, on June 27, 1844.

About 100 men broke into the jail at Carthage, Illinois.

Joseph Smith founded a new American church in 1830, and a mob killed him fourteen years later. He grew up in a part of western New York that people called the Burned Over District, because so many revivals had passed through it. A Library of Congress exhibit states that his church did not split off from an older church, and it describes the church as the only one of its kind.

The Book of Mormon. E. B. Grandin of Palmyra, New York, published the Book of Mormon for Smith in 1830. Smith said the book came to him through revelations, messages he said came from God, on a set of gold plates written in a language he called reformed Egyptian. He said he had translated it. Eleven men signed statements saying that they had seen and handled the plates.

The book tells of Israelites, the people of ancient Israel in the Bible, who were led out of Jerusalem to the Americas about 600 years before the birth of Jesus. It also tells of Jesus appearing to their descendants in America. Smith's followers believed his church brought back the earliest form of Christianity. Church members accept the Book of Mormon as scripture, a holy book, alongside the Bible.

Nauvoo. The church moved from New York to Ohio, from Ohio to Missouri, and from Missouri to Illinois. In 1839 church leaders bought land on the Mississippi River in Illinois, at a nearly empty town called Commerce, and they renamed it Nauvoo in 1840. A large Meskwaki village had stood there, and accounts of how its people lost it differ.

The Illinois Department of Natural Resources runs the state park at Nauvoo. Its page about the park states that the site was signed away in a treaty in 1824, but it does not name who signed it. Another account states that a man named James White bought it from the Sauk leader Quashquame for liquor and corn, and that Quashquame's people moved across the river.

In Illinois, trouble grew again. Neighbors resented the church members' business dealings and the way they all voted together. Some accused them of theft. They were angry about Smith's plans in politics. News spread that some church leaders had more than one wife, and church members also argued among themselves about it.

Carthage. Men who opposed Smith started a newspaper in Nauvoo, and Smith ordered its printing press destroyed. He was jailed at Carthage, Illinois, for it. On June 27, 1844, about 100 men broke into the jail and killed Smith and his brother Hyrum. The men came from three units of the Illinois militia: the 59th Regiment, the Warsaw Independent Battalion and the Warsaw Rifle Company.

The militiamen guarding the jail barely resisted. Accounts of the killing differ. A Library of Congress exhibit states that Smith was "apparently" shot, and that one man in the mob came at him meaning to cut off his head and was stopped.

The trial. Nine men were charged with the murders in October 1844. Four ran away and were never arrested. Five were tried in May 1845: Thomas C. Sharp, the publisher of an anti-Mormon newspaper, and four militia officers, Levi Williams, Mark Aldrich, William N. Grover and Jacob C. Davis, who was also a state senator. The jury found all five not guilty.

The prosecutor, Josiah Lamborn, said of Davis: "I have no doubt in my own mind, not a particle, that Davis cooperated in the murder, but there is no legal evidence to convict him."

> After Smith's death, men attacked Mormon farms around Nauvoo. Brigham Young, who led the church after Smith, planned to move about 15,000 people west. On February 4, 1846, the first wagons crossed the Mississippi into Iowa.

The religion enslavers taught

In the South, enslavers did not let enslaved people attend the regular preaching with them on working days. Charles Colcock Jones was a Presbyterian minister in Liberty County, Georgia. In 1842 he wrote that enslaved people "were not permitted, on working days, to attend the public administration of the word in company with their masters." By "the public administration of the word" he meant the regular preaching. Where they did attend, part of the white church was set apart for them.

Jones wrote a book to urge planters and ministers to have Christianity taught to the people they held in slavery. In *The Religious Instruction of the Negroes in the United States*, finished on July 4, 1842, Jones told ministers which parts of the Bible to use. ("Negro" was the common word for a Black person in his time, and it is no longer used.)

He chose verses about obedience. One verse says "servants" should "count their masters worthy of all honor," and Jones used it to teach enslaved people to obey. He wrote that a minister should teach them "the duties of their station," meaning their duty to obey.

Frederick Douglass. Frederick Douglass, who had been enslaved in Maryland, wrote down what this religion looked like to the people it was used on. Thomas Auld, the man who held Douglass, was converted at a Methodist camp meeting in Talbot County, Maryland, in August 1832. Douglass hoped Auld would free him, or at least treat him better. "I was disappointed in both these respects," he wrote. "I believe him to have been a much worse man after his conversion than before."

Douglass wrote that after his conversion, Auld "found religious sanction and support for his slaveholding cruelty," sanction meaning approval. Auld became a leader in his church, and visiting preachers stayed at his house. Douglass

wrote: "while he starved us, he stuffed them."

At St. Michael's, Maryland, a young white man named Wilson started a Sunday school to teach enslaved people to read the New Testament. They met three times. Then Garrison West and Wright Fairbanks, two class leaders, each in charge of a small group of church members, came with many other men carrying sticks and other things to throw. The men drove the students away and forbade them to meet again.

Henny. Douglass saw Auld whip Henny, a young woman whose hands had been burned so badly in a fire when she was a child that she could not use them. Auld tied her up and whipped her bare shoulders with a heavy cowskin, a whip made of cowhide, "causing the warm red blood to drip." To justify it, he quoted the Bible: "He that knoweth his master's will, and doeth it not, shall be beaten with many stripes."

He left her tied up for four or five hours at a time. He whipped her before breakfast, went to his store, and came back and whipped her again at dinner "in the places already made raw." At last, in Auld's own words, he "set her adrift to take care of herself."

Douglass also named one minister, George Cookman, whom the enslaved people loved and believed was working to free them.

What Douglass was against. In 1845 Douglass added a note to the end of his book to explain that he was not against religion. He was against what he called "the slaveholding religion of this land." He wrote: "The man who wields the blood-clotted cowskin during the week fills the pulpit on Sunday." He wrote that the man who called it a religious duty to read the Bible denied him "the right of learning to read the name of the God who made me."

The churches split over slavery

Members of two of the largest Protestant churches in the country divided them over slavery more than fifteen years before the Southern states left the Union.

The Methodists. Bishop James Osgood Andrew of Georgia held enslaved people, whom he had gained through his marriage. Methodist leaders met for their national meeting in 1844. The delegates, the men chosen to speak and vote for their churches, voted to stop Andrew from working as a bishop for as long as he held enslaved people.

A few days later the delegates adopted a Plan of Separation. Under the plan, the Methodist conferences in the slave states, the regional groups of churches there, could form a church of their own. Delegates from those conferences met at Louisville, Kentucky, in 1845 and created the Methodist Episcopal Church, South.

The Baptists. The Baptists split the same year. Georgia Baptists put forward an enslaver, James E. Reeve, to be a missionary, and Northern Baptists refused to appoint him. From May 8 to 12, 1845, Baptists from the South met at Augusta, Georgia, and formed the Southern Baptist Convention. William Bullein Johnson was its first president.

BY 1845: Missouri's governor had ordered the Latter-day Saints driven out, a militia mob had killed their founder in Illinois, and Southern Methodists and Baptists had formed churches of their own over slavery.

Charles Grandison Finney

Who: A young lawyer who gave up the law after his conversion and became a revival preacher. His book on revivals became a handbook for other revival preachers.

When and where: Born in Warren, Connecticut, August 29, 1792. Upstate New York, then Oberlin, Ohio. Died 1875.

He told a client he now worked for "the Lord Jesus Christ."

Charles Grandison Finney taught that a person could choose to be converted, and he built new methods of preaching on that idea. He grew up in Oneida County, New York, which was then, in his words, "to a great extent, a wilderness." His parents did not belong to a church. He wrote that there were few religious books where he grew up and that he "seldom heard a sermon."

The retainer. He was training to be a lawyer at Adams, New York, when he was converted in 1821. The next morning a client came to ask whether he was ready to argue the client's case in court. The client was a deacon, an officer of his church. Finney answered with a lawyer's word, retainer, the money paid to a lawyer to take a case: "Deacon B, I have a retainer from the Lord Jesus Christ to plead His cause, and I cannot plead yours."

The anxious seat. He preached across upstate New York. From September 1830 he spent six months in Rochester. He preached every day of the week and three times on Sunday, and he spent most of each day praying with people one at a time. In Rochester he began using what was called the anxious seat, a set of seats at the front of the church where people who felt worried about their souls came and sat, in front of everyone.

Finney explained that people of the "higher classes" were "too proud to take any position that would reveal them to others as anxious for their souls." He wanted "something that would commit them publicly to the service of Christ."

His methods were called the New Measures. Finney taught that a person could decide to be converted, and his meetings stirred strong feelings in the people who came. Both things angered other ministers. Asahel Nettleton, a New England revival preacher, objected that Finney had changed the older Presbyterian teaching on how God saves people. Lyman Beecher feared that Finney's meetings let feelings run wild.

As early as July 1827, before Rochester, ministers had met at New Lebanon, New York, to look closely at the New Measures. Finney's *Lectures on Revivals*, published in 1835, became a handbook for revival preachers across the country.

Oberlin. Oberlin College in Ohio was close to shutting down in 1835. Arthur Tappan, a businessman in New York who worked to end slavery, agreed to rescue it on two conditions. Finney had to be made its teacher of theology, the study of religious belief. And the college had to admit Black students on the same terms as white students.

Finney took the job and also became minister of the Oberlin church. He was president of the college from 1851 to 1866 and stayed on as minister until 1872. He taught that the sign of God's grace in a person "was a person's benevolence toward others," meaning kindness and help given to other people. He died in 1875.

The California missions, 1800 to 1848

The California missions, run by Franciscan friars, went on through these years, and so did the whippings. Missionaries had Native people whipped for running away, stealing, fighting and drinking, for living with a partner without a church marriage, and for other acts that mission officials counted as disobedience. They often had soldiers or Native officials give the whippings, and some of them whipped people themselves. Father de la Peña did at Mission Santa Clara.

Santa Cruz, 1812. A 2023 report on the missions for the state of California says that at Mission Santa Cruz, Father Andrés Quintana used a whip tipped with metal for floggings, beatings on the bare back that cut and bruise the skin. In 1812 he had just beaten two men nearly to death with it when a group of Awaswas Ohlone people from the mission killed him. The records name five of them: Lacah, Yaquenonsat, Yachacxi, Ules and Lino.

For two years his death was taken to be a natural one. Then a guard overheard an argument, and the plan came out. Spanish officials tried sixteen men and found nine guilty. Seven of the men died while held at the presidio, the Spanish fort, four of them before they were sentenced. The story of the plan comes from Lorenzo Asisara, an Ohlone man whose father took part in it.

Punished for having no children. Diseases brought by the Spanish made Native women less able to have children, or made them lose their babies before birth. Some missionaries believed that women did this on purpose. Lorenzo Asisara told what Father Olbes did at Santa Cruz to a married couple who had no children. Olbes demanded to inspect the couple's genitals, the parts of the body used to make babies.

When the woman resisted, he had her flogged and made her stand in front of the church for nine days holding a wooden doll. Olbes also had her husband put in shackles, iron rings locked around the legs or wrists, and made him stand in front of the church wearing horns. At Mission San Gabriel, Father Zalvidea punished women whose babies were born dead. He had their heads shaved, made them carry a wooden doll, had them flogged, and kept them in iron ankle cuffs for three months.

The Chumash rising, 1824. Native people fought back. In February 1824 Chumash people rose against three missions, Santa Inés, La Purísima and Santa Bárbara, in the largest planned revolt in California in the mission years. It began at Santa Inés on February 21, a day earlier than planned, after soldiers whipped a Native man from La Purísima who had come to visit a relative in jail. The Chumash attacked the soldiers and burned mission buildings.

The next day troops from the Santa Bárbara fort burned the adobe houses, made of sun-dried mud bricks, where the rebels were camped. Up to nineteen Chumash people and one Mexican soldier were killed at Santa Inés. At Santa Bárbara the Chumash leader Andrés Sagimomatsee called people to fight. At least two Chumash were killed there, and more than 1,000 people fled the mission for the inland country of the Yokuts people.

At La Purísima, led by Pacomio, the rebels held the mission for almost a month. One Chumash man and four settlers were killed when the rebels took it. In March troops took it back and killed 16 Chumash people. Mexican officials then had seven Chumash men executed for killing the four settlers. They sentenced four leaders to ten years in prison followed by exile from their homeland, and eight more men to eight years.

Estanislao and Yozcolo. Hundreds of Yokuts people left Missions San José and Santa Clara in 1828 and 1829 under two mission leaders, Estanislao and Cipriano. They built a fort in the marshes of the San Joaquin River. Mexican officials sent soldiers, Native fighters and armed settlers against them, and these forces defeated them in a battle. The records give no count of the dead and do not name the commander. Estanislao later bargained for a pardon.

A man named Yozcolo freed the young women who were locked in the women's building at Mission Santa Clara in 1839, and fled to the hills. Soldiers defeated him. The records do not say who cut off his head. The Mexican officials there set it outside the mission church for people to see.

The end of the missions. Mexicans won their independence from Spain in 1821. Mexican officials then began to take the missions away from the Franciscans and turn them into ordinary parish churches, the local churches of

a town. This was called secularization, and Governor José Figueroa put it in place in 1833 and 1834.

The officials who took over the missions often used punishments like the friars' punishments, including whipping. At most missions, colonists got most of the land and supplies. Under Figueroa's rules, Native people had no right to their own homelands. In 1845 officials passed the final law ending the missions.

The historian Cook estimated that about 310,000 Native people lived in California before 1769, give or take about a tenth. By 1845, by his estimate, their number had dropped by about half, to no more than 150,000. That count includes all Native Californians, not only the people held at the missions.

BY 1850

If you remember one thing: Mobs burned Catholic churches and drove out the Latter-day Saints, and almost none of the attackers were ever found guilty.

A question for the next era: would any tax money help pay for the schools Catholics planned to build?

Next: Between 1850 and 1900 the numbers of Catholics and Jews grew fast, slavery ended, and federal officials made Native ceremonies a crime.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 19 MINUTES

Some Protestants met the fast growth of Catholics and Jews after 1850 with mobs, school laws and state constitutions. Catholics were about one person in twenty in the United States in 1850. By 1906 there were 14 million of them, about one person in six. Catholics answered by building their own schools. Jews started schools to train rabbis, the teachers and leaders of Jewish congregations.

The end of slavery. Census takers counted 3,953,760 enslaved people in the United States in 1860. Many were freed as the Union army advanced during the Civil War. In December 1865 enough state lawmakers had approved the Thirteenth Amendment, a change to the Constitution, to make it law. It bans slavery everywhere except as a punishment for a crime. Black members already ran some large churches of their own, and in 1865 their ministers spoke for the freed people of Savannah.

On the reservations. United States officials made Native religious ceremonies a crime in 1883, and that ban could be enforced until 1978. Churches also ran many of the government's boarding schools for Native children, with government money.

Bloody Monday in Louisville, 1855

A political party called the Know-Nothings, or the American Party, grew large in the 1850s. Its members opposed Catholic immigration, and they feared that Catholics were a danger to Protestant faith and to democracy.

On election day, Monday, August 6, 1855, in Louisville, Kentucky, mobs led by Know-Nothing members attacked the German immigrant neighborhoods east of downtown and the Irish neighborhoods to the west. The mobs set fires and robbed homes and businesses.

An armed crowd set out to attack St. Martin of Tours, a German Catholic church, and the mayor, John Barbee, who was himself a Know-Nothing, turned it back. The Kentucky Historical Society's marker counts at least 22 dead and does not say who they were. Five people were later charged with crimes, and none was found guilty.

Mountain Meadows, 1857

Members of the Church of Jesus Christ of Latter-day Saints killed about 120 people at Mountain Meadows, in Utah Territory, about 35 miles southwest of Cedar City, in September 1857. The victims belonged to the Baker-Fancher wagon train, a company of families mostly from Arkansas on their way to California. Only 17 children, all six years old or younger, were spared.

The killers were local militiamen, part-time soldiers of the territory, who were also church members, and Paiutes joined them. A statement from the church identifies five of the leaders: Isaac Haight, John D. Lee, William Dame, John Higbee and Philip Klingensmith. They held both church posts and militia or town posts. Haight was the regional church leader at Cedar City and second in command of the county militia. Dame was the colonel in command of the southern Utah militia. Higbee was the major in command at the meadows.

The white flag. The attack began on September 7, by Paiutes and by Mormon men dressed to look like Native Americans. On September 11, John D. Lee and William Bateman came to the wagon train under a white flag, the sign of a truce. They promised the travelers safe passage if they gave up their guns.

The militiamen walked the men of the wagon train out in a single line, each man beside an armed militiaman. Higbee called out, "Halt! Do your duty!" and each guard shot the man beside him. On the other side of the field, Nephi Johnson ordered the killing of the women and the older children.

Why. Douglas Linder of the University of Missouri-Kansas City gives three things behind the killings. Federal troops were marching on Utah that year, in what is called the Utah War. That spring, on May 13, 1857, Hector McLean had shot and stabbed Parley Pratt, a church leader, in Arkansas. Eleanor McLean had left her husband and become Pratt's twelfth plural wife, one of several wives he had at the same time. And in 1856 church leaders had held a preaching campaign called the Reformation.

DISPUTED: whether Brigham Young, the church's president, ordered the killings. In 2007 a church leader, Henry B. Eyring, said that Young's message telling local leaders not to interfere with the travelers arrived too late. Linder writes that Young reportedly said afterward, "It is all right. The only fear I have is from traitors."

The trials. Nine men were charged with crimes, and only John D. Lee was found guilty. A jury of church members found him guilty of murder on September 20, 1876. He was executed at Mountain Meadows on March 23, 1877, by a firing squad, a group of men who shoot a condemned person at the same time.

Speaking for the church on September 11, 2007, Eyring expressed "profound regret." He called the killings "a terrible and inexcusable departure from Christian teaching and conduct."

Synagogues, schools for rabbis, and an order to expel Jews

About 2,500 Jews lived in the United States in 1800. By 1860 there were between 125,000 and 200,000, and by 1880 between 230,000 and 300,000, about a hundred times as many as in 1800.

Czar Alexander II, the ruler of Russia, was murdered in 1881, and pogroms followed in Russia. A Library of Congress timeline defines a pogrom as a "massacre often with government collusion," which means a mass killing of Jews, often with the help of government officials. After that, Jews from Eastern Europe came to America in great numbers.

Schools for rabbis. American Jews divided in these years into a traditional wing and a Reform wing, which was less traditional, and both wings built schools to train rabbis. Isaac Leeser, a leader of the traditional wing, founded Maimonides College in Philadelphia in 1867, the first school in America to train rabbis.

In 1873 thirty-four congregations, groups of Jews who worship together, formed the Union of American Hebrew Congregations. Its founders hoped it would take in every synagogue, or Jewish house of worship, in the country, and it became the union of Reform congregations instead. Two years later Isaac Mayer Wise, a leader of the Reform wing, founded Hebrew Union College in Cincinnati, which became the Reform wing's school for rabbis.

The dinner. The food served in 1883 at a dinner for the first class of rabbis from Hebrew Union College was not kosher, which means it broke Jewish food laws. Traditional guests walked out. The argument that followed led to calls for a more traditional seminary, and in 1887 the Jewish Theological Seminary opened in New York.

General Orders No. 11. During the Civil War, on December 17, 1862, General Ulysses S. Grant issued General Orders No. 11. It said that "The Jews, as a class," were "hereby expelled from the department within twenty-four hours," and it accused them of "violating every regulation of trade." The order applied to Jewish civilians in Kentucky, Tennessee and Mississippi, the area under his command.

Eleven days later, Cesar Kaskel and all the other Jews known in Paducah, Kentucky, got papers from the army ordering them to leave within twenty-four hours. Kaskel sent a telegram to President Lincoln and went to Washington. He met Lincoln on January 3, 1863, and Lincoln had General Henry Halleck cancel the order. The historian Jonathan Sarna's account of the order gives no count of the people expelled.

That same year, 1862, Jacob Frankel became the first Jewish chaplain in the United States Army, a religious leader who serves soldiers.

Turned away at Saratoga. Henry Hilton, the manager of the Grand Union Hotel in Saratoga, New York, turned away Joseph Seligman, a New York banker, and his family in 1877 because they were Jewish. Hilton blamed a drop in the hotel's business on guests who did not want to stay where Jews were let in.

A Library of Congress timeline describes it as a sign of "the growth of social anti-Semitism in America," anti-Semitism being hatred of Jews. That same year New Hampshire's lawmakers gave Jews the same political rights as other citizens.

The ministers who spoke for the freedpeople

Secretary of War Edwin Stanton and General William Sherman met twenty Black men in Charles Green's house in Savannah, Georgia, on January 12, 1865, and asked them what freedom should look like. Thirteen of the twenty were ministers, ordained or licensed, which means their churches had made them ministers or given them permission to preach. The others included deacons, class leaders and other church officers.

The notes of the meeting record how large their churches already were. William J. Campbell, who had been freed by a will, was pastor of the First Baptist Church, with about 1,800 members. John Cox, who had bought his own freedom, led the Second African Baptist Church, with 1,222 members.

Another of the twenty, Jacob Godfrey, had been a class leader and a steward, a man who helped look after the church's business, in the Methodist church since 1836. Until the Union army came, he had been held as property by James E. Godfrey, a Methodist preacher who was serving in the Confederate army.

Garrison Frazier

Who: A Baptist minister who had bought his own freedom, chosen by the other Black church leaders at a meeting to tell the Secretary of War what freedom meant.

When and where: Born in Granville County, North Carolina, about 1798. Savannah, Georgia, January 12, 1865.

He said his people needed "land, and turn it and till it."

The twenty church leaders at the Savannah meeting chose Garrison Frazier to answer for all of them, and his answers were written down.

He was 67 years old. Eight years before the meeting he had bought his own freedom and his wife's for $1,000 in gold and silver. He had been an ordained Baptist minister for thirty-five years, but by 1865 his health was so poor that he no longer led a congregation of his own.

Slavery and freedom. Asked what slavery was, he said it was "receiving by irresistible power the work of another man, and not by his consent." Asked what freedom was, he said it was "taking us from under the yoke of bondage, and placing us where we could reap the fruit of our own labor."

Asked how his people could best take care of themselves, he answered: "land, and turn it and till it by our own labor." He added: "that is, by the labor of the women and children and old men."

Asked whether Black people would rather live among white people or by themselves, he said: "I would prefer to live by ourselves, for there is a prejudice against us in the South that will take years to get over." Each of the other men was then asked the same question, one at a time, and all of them agreed with him. At one point Sherman left the room, and the men were then asked what they thought of him.

Forty acres. Four days after the meeting, Sherman issued Special Field Orders No. 15. In it he set aside about 400,000 acres of land along the coast, from Charleston to northern Florida, for freed families in plots of

> forty acres, and about 40,000 people settled there. In the fall of 1865 President Andrew Johnson reversed the order and gave the land back to its former owners.

A Chinese temple in Weaverville, 1874

In Weaverville, in Trinity County, California, a temple of Taoism, a Chinese religion and way of life, burned down, and Chinese men there built a new one to replace it. Work began in February 1874, and the temple was dedicated that April. They named it the Temple of the Forest Beneath the Clouds.

It is the oldest Chinese temple in California that has been used without a break, and people still worship there. In 1956 Moon Lim Lee, a descendant of the men who built it, and his wife, Dorothy, gave it to California State Parks.

A second school system

In Philadelphia, Bishop Kenrick had asked the public school board to let Catholic children read their own Bible, and under the board's rule the Douay Bible was still not allowed. So Catholics built parish schools, schools run by a local Catholic church. In 1834 there had been fewer than a dozen parish schools in the whole country, for about half a million Catholics. In the 1850s Bishop John Neumann began building parish schools in Philadelphia.

Baltimore, 1884. The Catholic bishops of the United States met at the Third Plenary Council of Baltimore from November 9 to December 7, 1884. They declared that every parish that could afford a school should run one. Their letter to Catholics said that parish schools should be as good as "the best schools of the country." It also said: "A Catholic congregation without a Catholic school is like a family without a mother."

The Blaine amendment. Congressman James G. Blaine of Maine, at President Grant's suggestion, proposed an amendment to the Constitution in 1875. Its words said that no money raised by taxes for public schools "shall ever be under the control of any religious sect," a sect being a religious group.

Members of the House voted for it. In the Senate it fell four votes short. Lawmakers in thirty-seven states later put their own versions into their state constitutions.

Justice Clarence Thomas of the Supreme Court wrote about the amendment in 2000, in the case *Mitchell v. Helms*, for himself and three other justices. He said it came at "a time of pervasive hostility to the Catholic Church," a time when dislike of Catholics was everywhere. He wrote that "it was an open secret that 'sectarian' was code for 'Catholic,'" an open secret being something many people know but few say out loud.

Blaine ran for president in 1884. A pastor who supported him called the Democrats the party of "rum, Romanism and rebellion," Romanism being an insulting word for the Catholic Church. Blaine did not reject the remark. Lyle Denniston, writing for the National Constitution Center, says the remark and Blaine's amendment cost him many Irish Catholic votes. Blaine lost the election.

Belief and practice: the Reynolds case

George Reynolds, a Latter-day Saint in Utah Territory, married a second wife while his first wife was still living, which was the crime of bigamy. A court found him guilty and sentenced him to two years in prison at hard labor, forced heavy work, and a $500 fine. He argued that his religion required him to have more than one wife. In a case decided in the Supreme Court's 1878 term, *Reynolds v. United States*, the justices ruled against him.

Chief Justice Waite wrote that laws "cannot interfere with mere religious belief and opinions," but "they may with practices." He wrote that excusing a crime because of religious belief would "permit every citizen to become a law unto himself."

Hiram Price's rules against ceremonies, 1883

Hiram Price, the Commissioner of Indian Affairs, issued a set of rules on March 30, 1883, for the Court of Indian Offenses, which tried Native people for breaking them. He wrote them after the Secretary of the Interior, Henry M. Teller, sent him a letter on December 2, 1882. In it Teller objected to the work of medicine men, Native healers and religious leaders. He called Native dances "heathenish," his insult for the ways of people who were not Christian.

Price's rules named ceremonies as crimes: "The 'sun-dance,' the 'scalp-dance,' the 'war-dance,' and all other so-called feasts assimilating thereto, shall be considered 'Indian offenses.'" The words "assimilating thereto" mean "like those dances." For a first offense, officials took away the person's rations for up to ten days. For a second, they took away rations for fifteen to thirty days, or jailed the person for up to thirty days.

Food as punishment. Rations were the food that United States officials had agreed by treaty to give to Native nations whose hunting lands United States officials had taken. So the punishment for dancing was that a family went without food for as long as a month.

Another rule said that "the usual practices of so-called 'medicine-men' shall be considered 'Indian offenses.'" A medicine man could be jailed for at least ten days, and kept there until he showed that he had given up his practices. These rules could be enforced for ninety-five years, until 1978, when members of Congress passed the American Indian Religious Freedom Act.

Alaska. Missionaries worked against Native ceremonies in Alaska too. In 1885 missionaries of the Moravian Church, a Protestant church, arrived at Quinhagak, a Yup'ik village. They called Yup'ik masked dancing "heathen rites" and "idol worship," and they recruited Yup'ik helpers as missionaries. After the missionaries came, no traditional dancing took place in Quinhagak for more than a hundred years, until 2013. The 2015 *Archaeology* magazine report on the village does not say who stopped the dancing or how.

The churches and the boarding schools

Federal officials handed many of the Indian boarding schools, schools where children live as well as study, to churches to run, and they paid the churches to do it. Federal officials used these schools to assimilate Native children, which means to make them give up their own nations' ways of life. In a report published in 2024, investigators at the Department of the Interior counted 417 federal Indian boarding schools. A religious group ran 210 of them, about half.

At least 59 different religious groups received federal money to run or support the schools. That count leaves out the schools that churches ran without any federal money.

What staff did to the children. The same federal investigation recorded what staff at the schools did to the children. Staff cut the children's hair, took away their clothes for uniforms, gave them English names and forbade their own languages. Punishments included beatings, solitary confinement, which means being locked up alone, withheld food, and mouths washed out with soap.

At least 973 children died at the schools, and investigators found at least 74 marked and unmarked burial sites at 65 schools. The report states that the true number of deaths is higher.

Which churches. The investigators counted 132 schools tied to Protestant churches, 77 to the Catholic Church, and 5 to other groups. Some schools were tied to more than one. The Presbyterians had the most, with 31 schools. The Quakers, the American Board of Commissioners for Foreign Missions, the Methodists and the Episcopalians each had 12 or more.

On the Catholic side, the Jesuits, an order of priests, had 10. Many orders of Catholic nuns are on the list, among them the Sisters of Mercy, the Sisters of St. Joseph, the Ursulines and the Grey Nuns.

The money. The payments began long before. In the Civilization Fund Act of March 3, 1819, members of Congress set aside $10,000 a year to teach Native nations "the habits and arts of civilization." Officials often gave that money to religious groups, until members of Congress stopped the yearly payment in

1873. From 1871 to 1969, by the investigators' estimate, members of Congress set aside more than $23.3 billion, in 2023 dollars, for the boarding schools and related programs.

Government records show how much power officials handed to the churches. Each reservation was run from an office called an agency, by a government agent. In 1872 the Commissioner of Indian Affairs wrote that the agencies had been divided among the churches. Each church could put forward the person to be the agent in charge and could "assume charge of the intellectual and moral education of the Indians."

A Senate report of 1969 describes this as "an unprecedented delegation of power by the U.S. Government to church bodies," a handing over of power never done before. The report states that the "military was frequently called in to reinforce the missionaries' orders," which means soldiers were often brought in to back up what the missionaries ordered.

The Ghost Dance, 1889 and 1890

Wovoka's vision. A Northern Paiute man named Wovoka, whose English name was Jack Wilson, had a vision on January 1, 1889, during an eclipse of the sun. By one account, he saw a world made new, with the dead alive again, the buffalo back, the land restored, the settlers gone and everyone living in peace.

A young Arapaho man, Casper Edson, wrote down Wovoka's message for a group of visitors. In it Wovoka said: "You must not hurt anybody or do harm to anyone. You must not fight. Do right always." He said that "the dead are all alive again" and told people to dance every six weeks.

He also warned: "Do not refuse to work for the whites and do not make any trouble with them until you leave them." The dance and its teaching spread across the reservations of the Plains, and the religion became known as the Ghost Dance.

The teaching changed as it spread. At the end of October 1890, the Lakota leader Short Bull told a gathering near Pine Ridge that "the whites were interfering so much in the religious affairs of the Indians" that he would make

the great change, the new world of Wovoka's vision, come sooner. In that change, he said, "the white race itself would soon be annihilated," wiped out completely. He told the dancers to keep dancing even if soldiers surrounded them, because "the guns of the soldiers would be rendered harmless."

The agent's fear. Daniel F. Royer became the government agent at Pine Ridge in October 1890. On October 12 he reported that more than half of the 6,000 Lakota people at his agency were dancing, and he suggested calling in the army. General Miles told him the excitement would die down. On October 30 Royer wrote that 600 or 700 soldiers were needed.

Royer sent a telegram on November 15 saying "that the Indians were wild and crazy and that at least a thousand soldiers were needed." The Lakota called Royer "Young-man-afraid-of-Indians." Officials in the Indian Office passed his request to the War Department. In the middle of November 1890, President Benjamin Harrison ordered troops onto the reservations.

Wounded Knee. Soldiers killed between 250 and 300 Lakota people at Wounded Knee on December 29, 1890, most of them women and children. Chapter 2, Native Nations, tells what happened there.

BY 1900

If you remember one thing: As Catholics and Jews grew in number, some Protestants answered with mobs and with laws that kept tax money from Catholic schools.

- In 1850: about one American in twenty was Catholic.
- In 1906: about one in six was, 14 million people.

Next: After 1900 a new kind of worship began in Los Angeles, and a new Ku Klux Klan made opposing Catholics and Jews one of its central beliefs.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 23 MINUTES

New kinds of worship spread across the United States between 1900 and 1950. In the same years some Americans attacked other Americans because of their religion. A Black preacher, William J. Seymour, led a revival in Los Angeles in 1906, and Pentecostal worship began there. Pentecostals believe that God's Spirit fills a person, who then speaks in sounds he or she never learned. Aimee Semple McPherson preached from her Los Angeles church to listeners at home by radio.

Attacks. A new Ku Klux Klan, open only to white Protestant men born in America, made opposing Catholics and Jews one of its central beliefs. In 1915 a group of men in Georgia hanged a Jewish factory superintendent named Leo Frank. In 1940 mobs attacked Jehovah's Witnesses for refusing to salute the flag. Christians also argued with other Christians about how to read the Bible, and in 1925 both sides made their case at a trial in Tennessee.

On the reservations. Federal officials went on punishing Native people for holding their ceremonies. In the 1930s John Collier, the new Commissioner of Indian Affairs, the head of the federal office in charge of Native affairs, ordered the punishments stopped, but the rules of 1883 that made the ceremonies crimes stayed in the law.

Native ceremonies still punished, 1902 to 1940

Era 7 tells how Hiram Price's rules of 1883 made Native dances and the work of medicine men, Native healers and religious leaders, into crimes punished by the loss of food rations or by jail. Federal officials kept enforcing those rules after 1900. Commissioners of Indian Affairs kept issuing new orders against Native dances into the 1920s.

Hair and dances, 1902. Commissioner William A. Jones wrote to the superintendents, the officials in charge of each reservation, on January 11, 1902. He told them that "Indian dances and so-called Indian feasts should be prohibited," which means banned. He also wanted Native men to cut their long hair, and he suggested that superintendents hold back the men's rations and jobs until they did.

Charles Burton was the superintendent for the Hopi and the Navajo. The historian Tisa Wenger writes that he reportedly used "whips, guns, and sheep shears" to force men to obey the order. The surviving accounts do not say how many men were forced to cut their hair. People objected in print, including in the magazine *Harper's Weekly*, and officials then sent new directions advising "persuasion and example, rather than force."

The Kiowa Agency. At the Kiowa Agency, the federal office that ran the Kiowa reservation in Oklahoma, Superintendent C. V. Stinchecum held back people's own money to stop them from dancing. Kiowa families had trust money, money that belonged to them and that the government held for them. Stinchecum ruled that a man would not "receive his money until he has given his word of honor to the Superintendent that he will not again indulge in either a ghost dance or a give-away dance."

The Ghost Dance was the religion that spread across the Plains reservations in 1889 and 1890, and a give-away dance is a gathering at which people give gifts, such as horses, to others. By early December 1916 Stinchecum had held back the money of about ninety people.

Stinchecum sent the Indian Office, the federal office in charge of Native affairs, a list of 109 names in January 1917. Among them were Humming Bird, George Mopope and Silver Horn. To get their money, they had to sign a sworn paper promising not to dance.

Eleven horses were given away at a Fourth of July dance near Anadarko in 1921. Stinchecum accused nine Kiowa men of "the reckless giving away of property" and held their money until they signed a promise never to do it again. By early November only three of the nine had signed.

Orders from Washington. Charles Burke, the Commissioner of Indian Affairs, sent out Circular 1665, an order sent to every office at once, on April 26, 1921. It was titled "Indian Dancing." It allowed any superintendent to stop a dance he judged immoral or against the community's interest. Burke added a supplement on February 14, 1923, and a message "To All Indians" ten days later.

Collier's order. John Collier became Commissioner of Indian Affairs in April 1933. In 1934, with the approval of Harold Ickes, the Secretary of the Interior, Collier sent every agency a circular titled "Indian Religious Freedom and Indian Culture." It stated that "no interference with Indian religious life or ceremonial expression will hereafter be tolerated." The scholar Lee Irwin calls it the federal government's first policy statement protecting Native religious rights. At the Kiowa Agency, the punishments for dancing stopped soon after Collier took office.

Federal officials could still punish people under the 1883 rules until 1978. In 1940 federal rules under the Bald Eagle Protection Act also made it a federal crime to have eagle feathers. Under those rules, federal prosecutors took traditional practitioners, people who kept the old ceremonies, to court for holding eagle feathers.

Nicholas Black Elk

Who: An Oglala Lakota holy man who was also a Catholic catechist for decades.

When and where: Born December 1863 on the Little Powder River. Pine Ridge, South Dakota. Died August 1950.

"The only thing I really believe is the pipe religion," he said.

Nicholas Black Elk kept his standing as a Lakota holy man while he worked for decades as a Catholic catechist, teaching the faith and preparing people for baptism, the Christian ceremony with water in which a person joins the church.

The vision. He was born on the Little Powder River, in land that later became Wyoming, and in his ninth year he had a vision. In it, in the words of the National Park Service, he "met with a council of the Six Grandfathers representing the four cardinal directions as well as the earth and sky," the four directions being north, south, east and west. The vision gave him the power to heal and a pipe made of pipestone.

He was at the Battle of the Little Bighorn on June 25, 1876, when he was twelve. There he took his first scalp, cutting the skin and hair from a person's head. He also collected guns, ammunition and clothing from dead and dying soldiers.

Abroad. In 1886 he joined Buffalo Bill's Wild West, a traveling show, and performed at Madison Square Garden in New York. The next year the show sailed to England for Queen Victoria's Golden Jubilee, the celebration of her fifty years as queen. He was separated from the show, traveled around Europe on his own, found Buffalo Bill again and came home.

Wounded Knee. He was back at Pine Ridge in 1889 and took part in the Ghost Dance ceremonies. On December 29, 1890, soldiers of the 7th Cavalry, a regiment of soldiers on horseback, opened fire on a band of Lakota people at Wounded Knee Creek. They killed between 250 and 300

of them, most of them women and children. Black Elk heard the cannon and gunfire. He came to Wounded Knee, helped the survivors and wept for the dead.

He married Katie War Bonnet in 1892, and their children were baptized. Katie died in 1903. In 1904 he was baptized a Catholic and took the name Nicholas. In 1930 the poet John G. Neihardt interviewed him, and the book *Black Elk Speaks* came out in 1932.

He died in August 1950. Near the end of his life he told his daughter Lucy, "The only thing I really believe is the pipe religion." In 2017 Catholic leaders of the Diocese of Rapid City, the church's area centered on that city, opened his cause for sainthood, the first step toward the church naming him a saint.

Azusa Street, 1906

A new kind of Christian worship began in Los Angeles in April 1906, at meetings led by a Black preacher named William J. Seymour. It is called Pentecostal. The name comes from the Day of Pentecost, when, the Bible says, the first Christians were filled with the Holy Spirit, the Spirit of God. Pentecostals held that this still happens, and that speaking in tongues, speaking sounds that the speaker has not learned and does not understand, is the proof.

The first speaking in tongues came on April 9, 1906, at a house at 214 North Bonnie Brae Street, after a month of prayer and fasting.

312 Azusa Street. In mid-April the meetings moved to 312 Azusa Street, into a room about 40 feet by 60 feet. The building had been put up as a church of the African Methodist Episcopal Church, the church that Black Methodists formed in 1816. Biddy Mason, a woman who had been enslaved and won her freedom in a California court, had founded that church. By 1906 the building had been used as a tenement, a crowded apartment house, and as a livery stable, where horses were kept for hire.

The first people at the meetings were Black washerwomen, maids and laborers. Later most of the members and visitors were white. The University of Washington's architecture records call it "one of the first religious congregations in the U.S. that consisted of black and white parishioners together under a African-American pastor." That means Black and white worshippers met together under a Black pastor. The mission met there from 1906 to 1931.

William J. Seymour

Who: The Black preacher who led the Azusa Street revival in Los Angeles, where Pentecostal worship began.

When and where: Born May 2, 1870, at Centerville, Louisiana. Los Angeles from early 1906. Died September 28, 1922.

He learned the teaching sitting in a hallway outside the classroom.

William J. Seymour's parents, Simon and Phyllis Seymour, had both been enslaved.

Houston, 1905. In Houston in 1905 he asked to study at a Bible school run by a preacher named Charles Fox Parham. Under Texas law, Black and white students could not sit in the same classroom, so Parham had Seymour sit in the hallway and listen to the lectures through the doorway. There Seymour learned the teaching that speaking in tongues is the proof that the Holy Spirit has filled a person.

Locked out. Early in 1906 he came to Los Angeles. Julia Hutchins had invited him to help lead a Holiness church there, a church of one of the Protestant groups of the time. He preached what he had learned in Houston, and the congregation locked him out of the building. He kept preaching at a house on Bonnie Brae Street, where the speaking in tongues began on April 9, 1906. Within days the meetings moved to Azusa Street.

> The people of Seymour's mission began printing their own newspaper, *The Apostolic Faith*, in September 1906. It was sent out free, and at its height it went to about 50,000 subscribers around the world.
>
> Seymour ran the Apostolic Faith Mission at Azusa Street. He died on September 28, 1922, and the mission kept meeting there until 1931. The building is gone. A plaque on the spot reads "Site of the Azusa St. Revival from 1906 to 1931. Cradle of the Worldwide Pentecostal Movement."

Leo Frank, 1913 to 1915

A group of men in Georgia kidnapped and hanged Leo Frank, a Jewish factory superintendent, in 1915, after the governor spared his life. Frank ran the National Pencil Company in Atlanta. In 1913 a jury convicted him of murdering Mary Phagan, a thirteen-year-old girl who worked at the factory. The Georgia Historical Society's marker at the site describes it as "a highly controversial trial fueled by societal tensions and anti-Semitism," anti-Semitism being hatred of Jews.

Crowds outside the courthouse cheered the prosecutor. Much of the newspaper coverage was anti-Semitic in tone, according to The Temple, the Atlanta Jewish congregation that Frank belonged to. It is a Reform congregation, part of the less traditional branch of Judaism. Tom Watson, the publisher of a paper called *The Jeffersonian*, campaigned against Frank and against Jews in general, and more people bought his paper.

The lynching. Governor John M. Slaton commuted Frank's sentence from death to life in prison, changing it to a lighter one. On August 17, 1915, a group of men took Frank from the state prison at Milledgeville. They took him to Marietta, Mary Phagan's hometown, and hanged him before a local crowd. This was a lynching, a killing by a mob that had no legal right to kill.

The men called themselves the Knights of Mary Phagan. The New Georgia Encyclopedia describes them as twenty-five prominent citizens of Marietta. No one was ever tried for killing Frank.

The pardon. Georgia officials granted Frank a pardon, an official act that forgives a crime or cancels its punishment, in 1986, after his death. This pardon was given "without addressing guilt or innocence," so it did not say whether he had killed Mary Phagan. The marker says the pardon recognized the state's failure "to either protect Frank or bring his killers to justice." Georgia's officials had not protected him, and they had never put his killers on trial.

The Temple's own history says that no Jew ran for office for more than twenty years after the lynching. The New Georgia Encyclopedia says that after the case, Jewish southerners were afraid and watched their own behavior closely for the next fifty years. Some of the Knights of Mary Phagan later took part in the ceremony that started a new Ku Klux Klan.

BY 1915: Pentecostal worship had spread out from Azusa Street, federal officials were still punishing Native dances, and a Georgia mob had lynched Leo Frank.

A Klan that called itself Protestant

William J. Simmons and sixteen other men climbed Stone Mountain in Georgia on Thanksgiving evening in 1915. They set a cross on fire and announced the rebirth of the Knights of the Ku Klux Klan. Only white, American-born Protestant men could join. Opposing Catholics and Jews was one of its central beliefs, according to the New Georgia Encyclopedia. By 1924 it had an estimated five million members.

Robes and altars. Klan members borrowed the forms of Protestant worship. The historian Kelly J. Baker describes their white robes and masks, their "elaborate initiation ceremonies," which means ceremonies with many detailed steps for new members, their burning crosses, and their altars draped with the American flag.

In the middle of revival services, robed Klansmen gave money to the preachers. The traveling preacher Billy Sunday received $50 and a letter from Klansmen in Indiana. In Spokane, Washington, two robed Klansmen gave $50 to the traveling preacher George Wood, the *Idaho Daily Statesman* reported in March 1922. Other Protestants spoke against the Klan. In October 1922 the *Savannah Tribune* reported that the Federal Council of Churches, a group of Protestant churches, had condemned it.

The year Oregon voted to close the Catholic schools

Oregon's voters passed a law in 1922 that would have closed the state's Catholic schools, along with its other private schools, for children aged eight to sixteen. The law was an initiative, a law that citizens propose and then vote on themselves. It was proposed on June 26, 1922. Klan members put it on the ballot through the Scottish Rite Masons, a men's club.

The voters passed it on November 7, 1922, 115,506 to 103,685. It required children aged eight to sixteen to attend a public school, starting September 1, 1926. There were a few exceptions, such as a child who had finished the eighth grade, a child who lived far from a public school, or a child who was physically unable to attend school.

Fines and jail for parents. The penalties in the law were for parents, not for schools. A parent who kept a child out of public school could be fined $5 to $100, or jailed in the county jail for two to thirty days, or both. Each day a child stayed away counted as a separate crime. A child could be taught at home only with written permission from the county superintendent, renewed every year.

The Society of Sisters of the Holy Names of Jesus and Mary had run schools in Oregon since 1880. Their schools taught the Catholic religion along with the ordinary subjects. The Sisters sued. So did Hill Military Academy, a boys' school that was not religious at all. The National Catholic Welfare Conference, a Catholic organization, paid for the case to be carried to the Supreme Court.

The ruling. The justices of the Supreme Court struck the law down on June 1, 1925, in *Pierce v. Society of Sisters*, before it could take effect. They held that it "unreasonably interferes with the liberty of parents and guardians to direct the upbringing and education of children under their control."

Christians arguing with Christians at Dayton, 1925

The 1925 trial at Dayton, Tennessee, was an argument between two groups of Christians about how to read Genesis, the first book of the Bible. Governor Austin Peay of Tennessee signed a law, the Butler Act, on March 21, 1925. It made it a crime to teach "any theory that denies the story of Divine Creation of man as taught in the Bible," and to teach instead that people came "from a lower order of animals."

That was a ban on teaching evolution, the scientific theory that living things, people included, developed over very long ages from earlier forms of life. Tennessee prosecutors put John T. Scopes, a science teacher and football coach at Dayton's high school, on trial under the law. The trial opened on July 10, 1925.

Both sides of the argument were Christians, and both put their beliefs on the record. On one side were Christians often called fundamentalists, who read the Bible word for word. One of them was William Jennings Bryan, one of the lawyers against Scopes. On the other side, two scientists for the defense, both of them Christians, wrote that God works through evolution and that the Bible and evolution do not conflict.

Bryan on the stand. The prosecutor William Jennings Bryan took the witness stand himself on July 20, the seventh day of the trial. The defense lawyer Clarence Darrow questioned him about the Bible. Bryan said, "I accept the Bible absolutely." He said Darrow's purpose was "to cast ridicule on everybody who believes in the Bible."

Darrow answered that his purpose was "preventing bigots and ignoramuses from controlling the education of the United States." By bigots he meant people who hate or look down on those who believe differently, and by ignoramuses people who know very little.

Bryan had written a closing speech, but both sides gave up their closing speeches, so he never gave it. It was printed afterward with the trial record. In it he asked, "Can the fathers and mothers of Tennessee be blamed for trying to

protect their children from such a tragedy?" The tragedy he meant was a child losing "faith in God, trust in the Bible, and belief in the supernatural character of Christ."

The scientists' statements. The defense could not put its expert witnesses in front of the jury, so the defense lawyer Arthur Garfield Hays read their written statements into the record. Kirtley F. Mather led the geology department at Harvard and had graduated from Denison University, a Baptist college. He wrote: "Evolution is not a power, nor a force. It is a process, a method. God is a power, a force."

The zoologist Maynard M. Metcalf, a scientist who studied animals, wrote: "There is no conflict, no least degree of conflict, between the Bible and the fact of evolution." In the same sentence he went on to call the word-for-word reading of the Bible childish and "insulting, both to God and to human intelligence."

The verdict. The jury found Scopes guilty, and he was fined $100. In 1927 the judges who heard his appeal threw out the verdict on a technicality, a small point about how the case was handled. Chapter 20, Government, Law, and Politics, describes the case in full.

Laws against teaching evolution, 1921 to 1929

Lawmakers in twenty states introduced bills against teaching evolution between 1921 and 1929. Tennessee's passed in 1925. Oklahoma's lawmakers passed one and canceled it in 1926. Mississippi's law was still in force in 1968. Lawmakers in Florida and Texas passed resolutions against teaching evolution, which are statements of opinion rather than laws.

In Arkansas the voters passed the law themselves in 1928. It made it a crime "to teach the theory or doctrine that mankind ascended or descended from a lower order of animals," or to use a textbook that taught it. A teacher found guilty could be fined up to $500 and had to leave the job. In the forty years it stood, there is no record that anyone was prosecuted under it. Tennessee's lawmakers canceled the Butler Act in 1967.

BY 1929: Oregon's voters had passed a Klan-backed law to close the state's Catholic and other private schools, the Supreme Court had struck it down, and lawmakers in twenty states had tried to ban the teaching of evolution.

Aimee Semple McPherson

Who: A Pentecostal preacher who built the Angelus Temple in Los Angeles and preached from it by radio.

When and where: Born 1890 near Ingersoll, Canada. Los Angeles from 1918. Died 1944.

She rode a motorcycle onto the stage dressed as a policewoman.

Aimee Semple McPherson built a church in Los Angeles with seats for 5,300 people and preached from it by radio. She grew up in the country near Ingersoll, Canada. Her mother was a member of the Salvation Army, a Christian group, and her father led a Methodist choir. As a child she sang, prayed and recited Bible passages at Salvation Army services. She was the only child in her public school who belonged to the Salvation Army, and the other children taunted her for it.

In high school she was taught evolution and began to doubt her faith. After that she started going to a Pentecostal church. She married Robert Semple, a Pentecostal minister, and went with him to China as a missionary. He died there, and her first child was born a month after his death. Later she married Harold McPherson and lived in Providence, Rhode Island. In 1916 she left him and went preaching across the country.

The Angelus Temple. She settled in Los Angeles in 1918. The Angelus Temple on Glendale Boulevard opened in 1923, built and paid for with money from her preaching tours. The National Park Service writes that she "fell squarely into the fundamentalist camp." She called on believers to leave the old churches that she believed had been "tainted with Darwinian modernism," meaning they had accepted evolution. A newspaper in 1926 reported radio towers on top of the Temple carrying her words to listeners.

The National Park Service writes that she brought the entertainment of Hollywood films and vaudeville, stage shows of songs, comedy and acts, into her preaching. Once she dressed as a policewoman and rode a motorcycle onto the stage, and she preached on the subject "Stop! You are breaking God's law!" In 1926 she opened a Bible college. By 1944 more than 3,000 of its graduates, men and women, had become ministers or missionaries.

Each week, members brought an item to stock the Temple's shelves, and the staff gave the goods to anyone in need. During the Great Depression the Temple's workers gave out more than 1,500,000 meals.

In Florida she held special meetings for Black people because, in her words, "the dear colored people did not feel free to attend the white meetings." ("Colored" was a common word for Black people at the time, and it is no longer used.) In Oakland, California, she preached to the Ku Klux Klan.

Five weeks missing. She went into the ocean at Ocean Park, on the Santa Monica coast, on May 18, 1926, and did not come back. Police, lifeguards, lifeboats, motorboats and an airplane searched for her. Two days later her friends had given up hope that she was alive.

She walked out of the desert near Douglas, Arizona, on June 23 and was taken to a hospital. She said that two men and a woman had kidnapped her at the beach and held her in Mexico for half a million dollars in ransom. Armed search parties, including Mexican soldiers, searched the flats of Sonora for the shack she described.

California prosecutors brought a case against her afterward. On January 10, 1927, a judge dismissed the case at the request of District Attorney Asa Keyes, the county's chief prosecutor, who pointed to "the constantly conflicting stories" of a witness. No court ever decided what happened in those five weeks. She died in 1944.

Jehovah's Witnesses and the flag, 1940 to 1943

Jehovah's Witnesses, a Christian group, would not salute the American flag, and in 1940 people in towns across the country attacked them for it. They believed that saluting a flag was the same as bowing down to a graven image, an idol, which the Bible forbids.

The justices of the Supreme Court ruled 8 to 1 in 1940, in *Minersville School District v. Gobitis*, that school officials in Minersville, Pennsylvania, could expel two Witness children, Lillian and William Gobitas, for refusing to salute. A court clerk misspelled the family's name as Gobitis.

The attacks. After the ruling the attacks grew. The First Amendment Encyclopedia at Middle Tennessee State University lists beatings, the destruction of Kingdom Halls (the Witnesses' places of worship) and at least one castration. Castration means cutting off a man's testicles, the glands that make sperm. A man who loses both can never father a child. The encyclopedia does not name the man or say where or how it was done.

The encyclopedia states that the American Legion, a club of military veterans, was linked to more than 100 attacks by vigilantes, people who punish others with no legal right to do so.

Richwood, West Virginia. One attack was recorded in detail, at Richwood, West Virginia, on June 29, 1940. Deputy Sheriff Martin Catlette and Police Chief Bert Stewart held seven Witnesses whose loyalty local Legion members had questioned. According to West Virginia Public Broadcasting, members of the American Legion forced four of the seven to drink doses of castor oil.

Castor oil is a laxative, a medicine that makes the muscles of the bowels push out their contents. It can cause diarrhea, which is watery emptying of the bowels, along with stomach pain, sickness to the stomach and vomiting. The accounts do not give the size of the doses. Then the Legion members marched all seven through a jeering crowd to the post office, where the Witnesses refused to salute the flag.

Catlette and Stewart were found guilty in federal court at Charleston in 1942 of violating the Witnesses' civil rights, the rights the Constitution promises every citizen. Appeals judges upheld Catlette's conviction. West Virginia Public

Broadcasting calls it the only federal conviction for any of the hundreds of attacks on Witnesses in 1940.

Reversed in 1943. Three Witness families in Kanawha County, West Virginia, whose children had been expelled from school, took their case to the Supreme Court. In 1943, in *West Virginia State Board of Education v. Barnette*, the justices reversed their ruling of 1940 by a vote of 6 to 3.

Justice Robert Jackson wrote that "no official, high or petty, can prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion." That means no official can order which beliefs are the correct ones. He called that rule the "fixed star in our constitutional constellation."

BY 1950

If you remember one thing: People who were attacked or punished for their faith began to win their cases in the Supreme Court.

- 1906: speaking in tongues begins at a house on Bonnie Brae Street in Los Angeles.
- 1925: the justices strike down Oregon's law to close its Catholic and other private schools.
- 1943: the justices rule that schools cannot force Witness children to salute the flag.

Next: After 1950 Black churches held the meetings of the civil rights movement, and men bombed them for it.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 30 MINUTES

Families took their fights over religion in the public schools to court between 1950 and 2000, and the justices of the Supreme Court drew the lines. Church membership held steady. About seven American adults in ten told the Gallup polling company that they belonged to a church, a synagogue or a mosque, the Jewish and Muslim houses of worship. Members of Congress added "under God" to the Pledge of Allegiance in 1954 and made "In God we trust" the national motto in 1956.

Churches and courts. In the South, Black churches held the meetings of the civil rights movement, and men bombed their buildings and killed their members. Families of several faiths, and some with none, brought the cases over prayer, Bible reading and the teaching of evolution. The justices of the Supreme Court ended official prayer and Bible reading in public schools. They also ruled for Amish fathers who kept their children out of high school for religious reasons.

Native religion allowed. Members of Congress declared in 1978 that Native Americans had a right to practice their own religions. Federal officials had been able to punish Native ceremonies under the 1883 rules for ninety-five years before that.

Deaths in two religious communities. Jim Jones, the leader of Peoples Temple, ordered the members at Jonestown, in Guyana, to take poison in 1978. Parents and nurses squirted it into the mouths of more than 200 children, and the adults drank it while armed guards surrounded them. In all, 909 people died there.

More than 70 Branch Davidians, 22 of them children, died in a fire near Waco, Texas, in 1993. A Special Counsel later found that some of the Davidians had set the fire, and that some had shot their own people.

God in the country's official words, 1954 and 1956

Members of Congress changed the Pledge of Allegiance, the promise of loyalty to the flag, by law on June 14, 1954. They added the words "under God." The pledge now reads: "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation under God, indivisible, with liberty and justice for all."

They passed a joint resolution, a kind of resolution that becomes a law, on July 30, 1956. It is one sentence long: "That the national motto of the United States is hereby declared to be 'In God we trust.'" A motto is a short saying chosen to stand for a group or a country.

Gallup is a private polling company, and its pollsters record what people say about themselves. Since 1937 they have asked Americans whether they belong to a church, synagogue or mosque. In 1937, 73 percent said they did. The figure stayed near 70 percent through the 1990s and was 70 percent in 1999.

A church that was bombed three times

Bethel Baptist Church in Birmingham, Alabama, served as the headquarters of a civil rights movement from 1956 to 1961, and it was bombed three times. The church stood in Collegeville, a Black working-class neighborhood six miles north of the center of the city. Fred L. Shuttlesworth had been its pastor since March 1953.

A movement in the churches. An Alabama judge banned the NAACP, a national civil rights organization, from working anywhere in the state on June 1, 1956. Four days later, on June 5, about a thousand people met at Sardis Baptist Church and started the Alabama Christian Movement for Human Rights. Shuttlesworth said that officials could outlaw an organization but not a movement.

He said the word "Christian" set the group apart from groups being called Communist, Communists being people who wanted the government to own the land and the businesses. He also said the word gave the group "a foundation and Christian orientation." Members met every Monday night in churches around the city. The National Park Service describes the meetings as

"emotional testimony, soul-lifting music, impassioned preaching, and fundraising." By 1958 weekly meetings were being held in 55 other working-class churches in Birmingham.

Christmas night, 1956. Someone set off twelve sticks of dynamite on Christmas night, December 25, 1956, in the space between the church and the parsonage, the pastor's house. The blast destroyed the parsonage. Shuttlesworth was inside talking with a deacon, a member who helps run the church, and his family was watching television. He had a minor head injury.

The bomb went off the night before the movement's members had said they would ride Birmingham's segregated buses, where Black riders had to sit apart from white riders. The next day 250 people rode the buses, and police arrested 22 of them.

A second bomb came on June 29, 1958, and a third in 1962, which broke the church's windows. The 1958 bombing was not solved until 1980, when J. B. Stoner was convicted of it. No one is recorded as convicted of the 1956 bomb or the 1962 bomb.

Other churches. Other Black churches were bombed and burned in these years. On September 15, 1963, a bomb at the 16th Street Baptist Church in Birmingham killed four girls: Addie Mae Collins, 14, Denise McNair, 11, Carole Robertson, 14, and Cynthia Wesley, 14. Robert Chambliss was convicted of the bombing in 1977, Thomas Blanton in 2001 and Bobby Frank Cherry in 2002.

Jason Wollschleger, a sociologist at Whitworth University who studies how groups of people live together, and his research team have mapped about 145 attacks on Black churches across the South from about 1954 to 1970. It is one team's count, not an official one.

In Albany, Georgia, in 1961 and 1962, four Black churches connected with the Student Nonviolent Coordinating Committee, a civil rights group of young people, were burned to the ground. Among them were Shady Grove Baptist and High Hope Baptist. Wollschleger's account does not name who set the fires.

The Revis family of Bethel Baptist Church

Who: A church deacon and his two daughters, whose front porch became the guard post for a church that kept being bombed.

When and where: Collegeville, Birmingham, Alabama, 1956 to the early 1960s.

Laverne Revis saw a bomb smoking beside the church.

The Revis family turned their own front porch into a guardhouse so that armed volunteers could watch Bethel Baptist Church day and night. James Revis was a deacon of the church and sat on the executive committee of the Alabama Christian Movement for Human Rights. His house stood across the street from the church.

The porch. After the bomb of Christmas night 1956 destroyed the pastor's house, members of the church and the movement volunteered to guard the church and the new parsonage. In 1957 the Revis family closed in their porch to make a room for the guards.

His daughter Robbie Revis Smith described it years later: "with our house sitting on the corner, it gave a very good view several ways that they could see because they had the glass out there and they put a little gas heater out there so they wouldn't be too cold sitting up. They did this year round."

Her sister Laverne Revis Martin said their parents made the room "just so the guards would be able to watch."

The guards. The volunteers were called the Civil Rights Guards. They worked in two shifts, from six in the evening to midnight and from midnight to six in the morning. They carried rifles, which they called their "nonviolent Winchesters." Women of the movement took a weekly shift, among them Desta Brooks, a florist, and Minnie Eaton, a schoolteacher.

The night of the bomb. At about half past one in the morning on Sunday, June 29, 1958, Laverne was coming home from work when she saw a bomb smoking beside the church. She told the guards. They carried it into the street, where it went off. It blew a hole in the road and broke

church windows, and the building stood. Afterward Birmingham police came to the Revis house and took four rifles from the guards on the porch.

Robbie Revis Smith said of coming home in those years: "So it was kind of a good feeling coming home because you never came home without a person out there watching you, so you didn't have to worry about that."

Billy Graham

Who: A Southern Baptist preacher who held large public revival meetings, which he called crusades, from 1949 to 2005.

When and where: Born in Charlotte, North Carolina, November 7, 1918. Died at Montreat, North Carolina, February 21, 2018.

Martin Luther King Jr. gave the opening prayer at his 1957 crusade.

Billy Graham held revival meetings from 1949 to 2005, and in 1957 Martin Luther King Jr. gave the opening prayer at one of them. Graham grew up on a dairy farm near Charlotte, North Carolina. In 1934, after hearing a traveling preacher in Charlotte, he decided to give his life to God. In 1943 he married Ruth Bell.

Crusades. From 1944 to 1948 he traveled the country speaking at rallies for a group called Youth for Christ. In 1949 he held a campaign in Los Angeles that was planned for three weeks and ran for seven. He then started the Billy Graham Evangelistic Association and a weekly radio program, *Hour of Decision*. He preached for twelve weeks in London in 1954, and every night for sixteen weeks at Madison Square Garden in New York in 1957.

King's prayer. On July 18, 1957, at the New York crusade, Martin Luther King Jr. gave the opening prayer. Graham and King had spoken by telephone, and on July 5 the evangelist Leighton Ford, a traveling

preacher, had sent King a telegram asking him to come. King asked for help "for a warless world and for a brotherhood that transcends race or color." Then he led the crowd in the Lord's Prayer.

King wrote to Graham on August 31, 1957: "You have courageously brought the Christian gospel to bear on the question of race." He wrote again on July 23, 1958, this time to object. Graham had shared a platform with Governor Price Daniel of Texas, and King called that an "endorsement of racial segregation and discrimination." At Easter in 1964, Graham held crusades in Birmingham, Alabama, that Black and white people attended together.

Honors. Members of Congress voted Billy and Ruth Graham a gold medal in 1996, and it was presented to them in the Capitol Rotunda on May 2. In the law, members of Congress wrote that his crusades had reached 100 million people in person and more than 2 billion on television. He stepped down from his association in 2000 and held a last crusade in Queens, New York, in 2005.

He died on February 21, 2018, aged 99. On February 28 his body lay in honor in the Rotunda, the round hall under the dome of the Capitol, where people could come to pay their respects. According to the House of Representatives, he was the fourth private citizen to be given that honor.

Dynamite at an Atlanta synagogue, 1958

Fifty sticks of dynamite exploded in the entrance of the Hebrew Benevolent Congregation in Atlanta, called The Temple, in the early hours of October 12, 1958. It was the congregation Leo Frank had belonged to. No one was hurt. Its rabbi, the congregation's religious leader, was Jacob Rothschild. He had preached against segregation in his sermons since 1947.

Within days police arrested five men, all members of anti-Semitic groups, groups that spread hatred of Jews. Only one of them, George Bright, was tried. His first trial ended in a mistrial, a trial stopped without a verdict, because the jury split 9 to 3. At his second trial the jury found him not guilty. The charges against the other four men were dropped. No one was ever convicted of the bombing.

BY 1958: Bombs had gone off at Bethel Baptist in Birmingham twice and at The Temple in Atlanta once, and no one had yet been convicted of any of them.

Prayer and the Bible in public schools, 1962 and 1963

The justices of the Supreme Court ended official prayer and Bible reading in public schools in 1962 and 1963. The families who brought the cases came from several faiths, and some had none.

Two rulings. On June 25, 1962, in *Engel v. Vitale*, the justices ruled that New York's public schools could not have pupils say a prayer written by the New York State Board of Regents, the state officials in charge of its schools. On June 17, 1963, in *School District of Abington Township v. Schempp*, they ruled that public schools could not open the day with Bible reading as a religious exercise.

The parents of ten pupils brought the New York case. They said the official prayer went against their own beliefs and their children's. Judges in a New York court had already found that the prayer did not fit the teachings of Jewish, Unitarian or Ethical Culture groups.

Unitarians belong to a church that does not teach the Trinity, the belief that God is three persons in one, and the Ethical Culture society is a group that meets to teach right conduct. One parent was an agnostic, a person who holds that no one can know whether God exists.

The Schempps. The Schempps, who brought the 1963 case, went to church. Edward and Sidney Schempp and their children Roger and Donna were members of the Unitarian church in Germantown, Philadelphia, and so was their son Ellory, who had started the case. Under Pennsylvania law, public schools had to read ten verses from the Bible each morning. A child could be excused if a parent asked, and Edward Schempp decided not to ask.

He testified that teachers and classmates would label his children "odd balls" every school day. He said classmates would lump every religious difference together as "atheism," the belief that there is no God, and in 1962 atheism was tied to communism and called un-American. He also said that an excused child had to stand in the hall outside the homeroom, which looked like a punishment for bad behavior.

Two scholars. Two scholars testified about the Bible itself. Solomon Grayzel, for the families, said the Jewish scriptures have no New Testament. He said that from the standpoint of Jewish faith, calling Jesus the Son of God is "practically blasphemous," which means close to an insult against God. Read to children without explanation, he said, parts of the New Testament had been "psychologically harmful to the child."

Luther A. Weigle, for the school district, said the Bible was "non-sectarian," meaning it belonged to no single religious group. He later said he meant non-sectarian among Christian churches.

A second case was decided with the Schempps'. In Baltimore, schools opened each day with a chapter from the Bible or the Lord's Prayer. Madalyn Murray and her son William J. Murray III were atheists. They argued that the rule threatened their religious liberty "by placing a premium on belief as against non-belief," which means it rewarded believers over people who do not believe.

The day after, and the years after

Calls to undo it. The day after the 1962 ruling, a member of Congress introduced an amendment, a change to the Constitution, to undo it, and others were drafting more. The *Evening Star* newspaper of Washington, D.C., reported on June 26, 1962, that Representative Taylor of North Carolina was first. The paper noted that Billy Graham was one of his constituents, the people he represented.

Senator Beall of Maryland had one ready for the Senate. Representative Chelf of Kentucky said that if he could not get a law passed, he would try to limit Supreme Court justices to a set number of years instead of life.

In Washington, D.C., the school board's rules required a Bible reading and the Lord's Prayer to open the school day. Superintendent Carl F. Hansen said that "on the surface it appears that it does invalidate the board's rule," meaning that the ruling seemed to cancel it. None of the proposed amendments became part of the Constitution.

Earlier limits. The justices had set some limits before 1962. In 1948, in a case brought by a mother named Vashti McCollum, the justices ruled against a program in Champaign, Illinois. There, Catholic, Protestant and Jewish teachers came into the public school buildings once a week to teach religion for thirty to forty-five minutes. Children whose parents asked had to attend.

The justices allowed a program in New York City in 1952 in which children left the school buildings to go to a church or synagogue for the lesson. So the justices ruled out religion lessons inside the school building, and they allowed lessons that children left the building to attend.

Justice Clark also wrote, in the 1963 ruling, that teaching *about* religion was allowed. He wrote that "it might well be said that one's education is not complete without a study of comparative religion or the history of religion and its relationship to the advancement of civilization." He wrote that the Bible "is worthy of study for its literary and historic qualities."

A moment of silence. After 1963 Alabama's lawmakers tried a moment of silence. They passed a law in 1978 for one minute of silence "for meditation." In 1981 they changed it to "for meditation or voluntary prayer," and in 1982 they let teachers lead "willing students" in a prayer to "Almighty God." In 1985, in *Wallace v. Jaffree*, the justices struck down the 1981 law because its purpose was to support religion. They left the 1978 law for plain silence in place.

The justices struck down a Kentucky law in 1980, in *Stone v. Graham*, that required the Ten Commandments to be posted in every public classroom.

A graduation prayer. The justices ruled in 1992 that a principal could not invite a member of the clergy, such as a minister or a rabbi, to pray at a school graduation. Principal Robert E. Lee of Nathan Bishop Middle School in Providence, Rhode Island, had invited Rabbi Leslie Gutterman of Temple Beth El to pray at Deborah Weisman's graduation. The principal gave the rabbi a pamphlet of guidelines and told him to keep the prayers non-sectarian. The rabbi began, "God of the Free, Hope of the Brave."

Deborah's father, Daniel Weisman, sued. In *Lee v. Weisman*, the justices held that by handing over the pamphlet and the instruction, the principal "directed and controlled the content of the prayers."

Evolution in court again, 1968 and 1987

Two state laws about teaching evolution reached the Supreme Court, in 1968 and 1987. The justices struck down both, and both times they named the religious belief behind the law.

Susan Epperson. Susan Epperson had gone to school in Arkansas and earned a master's degree in zoology. Little Rock school officials hired her in the autumn of 1964 to teach tenth-grade biology at Central High School. For the 1965 to 1966 school year, school officials adopted a new biology textbook with a chapter on evolution. Teaching that chapter was a crime under the Arkansas law of 1928. She sued, and H. H. Blanchard, a parent of children in the public schools, joined her case.

The justices struck the law down on November 12, 1968, in *Epperson v. Arkansas*. They wrote that "fundamentalist sectarian conviction was and is the law's reason for existence," meaning that the law existed because of one group's religious belief. They also wrote that the First Amendment requires the government to be neutral "between religion and religion, and between religion and nonreligion."

No justice voted to keep the law. They did not all agree on the reasons, and Justice Black wrote separately that he doubted the Court's reading of why Arkansas had passed it.

Creation science. Louisiana's lawmakers passed a different kind of law. It stated that a public school that taught evolution also had to teach "creation science," and a school that taught creation science also had to teach evolution. Creation science was the teaching that a supernatural being created humankind. The people who sued to stop the law included Louisiana parents, Louisiana teachers and religious leaders.

Religious groups stood on both sides. Groups may send the Court a friend-of-the-court brief, a written argument from people who are not in the case. Three groups, among them the Catholic League for Religious and Civil Rights and the Christian Legal Society, sent briefs asking the justices to keep the law. The New York Committee for Public Education and Religious Liberty sent one asking them to strike it down.

The justices struck the law down by 7 votes to 2 on June 19, 1987, in *Edwards v. Aguillard*. They held that "the preeminent purpose of the Louisiana Legislature was clearly to advance the religious viewpoint that a supernatural being created humankind." The justices meant that Louisiana's lawmakers passed the law mainly to promote one religious belief.

BY 1987: The justices had ended official prayer and Bible reading in public schools and struck down two state laws about teaching evolution, each time naming the religious belief behind it.

Jonas and Frieda Yoder

Who: An Old Order Amish father who would not send his daughter to high school, and the daughter, who told the court that the decision was her own religion too.

When and where: Green County, Wisconsin, 1968 to 1972.

Frieda Yoder, fifteen, was the only child who testified.

Frieda Yoder was the only child who testified in her family's case, which went to the Supreme Court and asked whether Amish parents could keep their children out of high school. Her father, Jonas Yoder, belonged to the Old Order Amish, a Christian church whose members keep apart from the outside world. They lived in Green County, Wisconsin.

Wisconsin law required children to stay in school until they turned sixteen. Frieda was fifteen and had finished the eighth grade at the public school. Her father did not send her on to high school.

One line from the Bible. His reason was one line from the Bible. In his letter to the Romans, Paul, an early leader of the Christian church, wrote, "be not conformed to this world." The Amish take that line as a rule for daily life. They did not object to the first eight grades, because a child needs to read the Bible, farm and deal with people outside the community. They saw the high school as the world they were told not to join.

The case. Jonas Yoder was charged, tried and convicted in the Green County Court along with two other fathers, Wallace Miller and Adin Yutzy. Miller was also Old Order Amish, and Yutzy belonged to the Conservative Amish Mennonite Church. On May 15, 1972, in *Wisconsin v. Yoder*, the justices of the Supreme Court decided for the three fathers.

Frieda testified that her own religious beliefs were the reason she had stopped going to school after the eighth grade. Neither side called the other children. Justice Douglas agreed with the ruling for her father. He disagreed with it for the other two fathers, because no one had asked their children, Barbara Miller and Vernon Yutzy, what they believed. He said the Court had never answered whose religion counts when a family's religion decides a child's schooling, the parents' or the child's.

Ministers on both sides of a textbook fight, 1974

Ministers spoke up on both sides of a fight over schoolbooks in Kanawha County, West Virginia, in 1974. During the protests people fired guns, and attackers firebombed and dynamited schools. The county had 46,000 pupils in 124 public schools. In April 1974 the five members of the county school board voted to adopt 325 language-arts textbooks and other books.

The next month a board member, Alice Moore, objected to what some of the books said and taught. She was the wife of a minister, and she had been elected in 1970 after campaigning against sex education. She and several ministers campaigned against the books. Twenty-seven ministers condemned them as immoral and indecent, and petitions carried 12,000 signatures. Another minister, Jim Lewis of Charleston, spoke out most strongly for the books. In June the board voted 3 to 2 to accept most of them.

The boycott. When school opened on September 3, 1974, a fifth of the pupils stayed home in a boycott, a refusal to take part. Picket lines, groups of protesters standing outside with signs, spread from the schools to businesses and coal mines, and 3,500 miners walked off the job in support.

The West Virginia Encyclopedia lists gunfire, firebombs and dynamite attacks on schools, and it does not name who carried them out. Police made 11 arrests. The schools were closed for four days starting September 12. The records of the protest give no count of the injured.

The protests went on into 1977, and outside groups joined them, among them the Ku Klux Klan and the John Birch Society, a political group. The Reverend Marvin Horan was tried for plotting to bomb schools, and the violence ended with his trial. Board members set up committees that gave parents a part in choosing textbooks.

The law that said Native religion was allowed, 1978 to 1997

Members of Congress passed the American Indian Religious Freedom Act on August 11, 1978. In it they declared that it was the policy of the United States to protect the right of Native people "to believe, express, and exercise the traditional religions of the American Indian, Eskimo, Aleut, and Native Hawaiians." That included the right to visit sacred sites, to have sacred objects, and to worship "through ceremonials and traditional rites."

The act came ninety-five years after the 1883 rules that made the Sun Dance, a sacred ceremony of the Plains nations, a crime.

What Congress admitted. The members of Congress wrote down what had been happening. Federal laws and policies "often deny American Indians access to sacred sites required in their religions, including cemeteries." They wrote that "traditional American Indian ceremonies have been intruded upon, interfered with, and in a few instances banned." Federal officials had done this, as Price's rules of 1883, Jones's order of 1902 and Burke's circular of 1921 show.

For example, a Native person had needed a federal permit since 1962 to hold an eagle feather for worship. Without one, the penalty was up to $500 or six months in prison.

Chimney Rock. The 1978 Act stated a policy. In 1988 the justices of the Supreme Court ruled that it created no right a court could enforce, in the case *Lyng v. Northwest Indian Cemetery Protective Association*.

Officials of the U.S. Forest Service planned to build a six-mile paved road through the Chimney Rock area of Six Rivers National Forest in California, and to allow logging there. The Yurok, Karuk and Tolowa had long used this high country for worship. Justice Brennan, who disagreed with the ruling, wrote that they had held it sacred "for at least 200 years and probably much longer." It is land of the Yurok, Karuk and Tolowa that the Forest Service holds as federal land.

The authors of a study that the Forest Service itself paid for found that the road "would cause serious and irreparable damage to the sacred areas" and advised against building it. In 1982 Forest Service officials chose a route through Chimney Rock anyway.

The justices ruled 5 to 3 that the Constitution did not stop the road. Justice O'Connor wrote that even if the road would "virtually destroy the Indians' ability to practice their religion, the Constitution simply does not provide a principle" for stopping it. The justices' opinion also records that the Native people of the area did not all oppose the road.

Peyote. Alfred Smith and Galen Black were members of the Native American Church. Their employer, a private drug treatment program, fired them because they ate peyote at a church ceremony. Peyote is a small cactus that causes hallucinations, which means it makes a person see or feel things that are not there. Members of the church take it as a sacrament, a sacred act of worship.

Oregon officials refused to pay the men unemployment money. The justices ruled 6 to 3 in 1990, in *Employment Division v. Smith*, that Oregon could ban peyote even for worship and deny the payments. Justice Scalia wrote that leaving such questions to lawmakers "will place at a relative disadvantage those religious practices that are not widely engaged in."

Congress answers. Members of Congress answered twice. In 1993 they passed the Religious Freedom Restoration Act. It stated that government officials could not put a heavy burden on a person's religion unless they had a reason of the highest importance, and that they had to choose the way that restricted religion least.

Members of Congress also amended the 1978 Act on October 6, 1994. They wrote that 28 states protected the peyote ceremony and 22 did not, and they made it lawful everywhere in the country for a Native person to use peyote in traditional religious ceremonies. In 1997, in a case brought by Archbishop Patrick Flores of San Antonio, the justices ruled that the 1993 act went beyond Congress's power over the states. That ruling did not touch the 1994 peyote law.

Jonestown, 1978

Jim Jones, the leader of an American congregation called Peoples Temple, ordered its members at its settlement in Guyana, in South America, to take poison on November 18, 1978. More than 900 people died. Jones had founded Peoples Temple in Indianapolis in the 1950s and moved it to San Francisco in 1971. Members then moved to a settlement they called Jonestown.

That day Temple members shot and killed Congressman Leo Ryan of California and four other people at the Port Kaituma airstrip, among them an NBC cameraman and a newspaper photographer.

How the children died. At Jonestown, at Jones's order, parents and nurses used syringes to squirt a mix of cyanide, sedatives and powdered fruit drink into the children's mouths. Cyanide is a poison that stops the cells of the body from using oxygen, so the cells cannot make the energy they need to live. Sedatives are drugs that make a person calm and sleepy.

More than 200 children were killed this way, according to the Association for Diplomatic Studies and Training, an organization of former American diplomats. The children could not choose, and the association calls them murdered. Then the adults drank the mix while armed guards surrounded the pavilion, the large roofed meeting place where they had gathered. In all, 909 members died at Jonestown, all but two of them from what appeared to be cyanide poisoning. One or two people there, among them Jim Jones, had bullet wounds instead.

Houses of worship attacked, 1991 to 2000

Gunmen shot nine people dead at Wat Promkunaram, a Thai Buddhist temple near Phoenix, Arizona, on August 10, 1991, during a robbery of the monks. Johnathan Doody and Alessandro Garcia were later convicted of the killings. The dead were six monks, a nun, a novice, who is a person training to become a monk, and a boy who helped at the temple. Each was shot in the head.

Doody was 17 at the time. His first conviction was thrown out because federal appeals judges found that his confession had been coerced, which means forced out of him. At his third trial he was convicted of nine counts of first-degree murder, a killing planned ahead of time, one for each person killed. He was sentenced to 249 years in prison on March 14, 2014. Alessandro Garcia pleaded guilty and was sentenced to life, NBC News reported.

Church fires. People set fire to churches across the country in the middle of the 1990s. Members of Congress passed the Church Arson Prevention Act on July 3, 1996, arson being the crime of setting a fire on purpose. They wrote that fires set at places of worship had increased, "especially in the context of places of religious worship that serve predominantly African-American congregations," which means mostly Black congregations.

Agents of a federal task force from the Justice and Treasury departments counted 297 arsons, bombings or attempted bombings at houses of worship in 1996. The count fell every year after that, to 140 in 1999. Between January 1995 and August 2000 the agents arrested 431 suspects, and courts found 305 people guilty.

Jay Scott Ballinger pleaded guilty on July 11, 2000, to setting fire to 26 churches in eight states between 1994 and 1999.

Mount Carmel, near Waco, 1993

A standoff between federal agents and a religious community near Waco, Texas, ended in 1993 when some of the Davidians set fire to their own building. More than 70 people died in it, 22 of them children, according to a report by members of Congress. A Special Counsel, an outside lawyer appointed to investigate, later found that some of the Davidians had spread fuel through their building and set it on fire.

The Branch Davidians lived at a property called Mount Carmel, outside Waco, and their leader was Vernon Howell, who called himself David Koresh.

The raid. Agents of the federal Bureau of Alcohol, Tobacco and Firearms, the ATF, stormed the building on February 28, 1993. There were 76 of them, and they had warrants, papers from a judge that allowed them to arrest people and search the building. The Davidians had learned of the raid in advance. The gun battle lasted almost 90 minutes.

The Special Counsel found that Davidians shot and killed four ATF agents, Conway C. LeBleu, Todd W. McKeehan, Robert J. Williams and Steven D. Willis, and wounded 20 others. Six Davidians were killed that day, by the Special Counsel's count. The House report says that ATF agents killed at least two of them.

DISPUTED: who fired first. In their 1996 report, members of two House subcommittees, small groups of members of the House of Representatives, found that the question could not be settled for certain, but that "It appears more likely, however, that the Davidians fired first." ATF agents testified that the Davidians did. The Davidians' lawyers said they believed an ATF gun went off by accident.

Fifty-one days. Agents of the FBI then took over and talked with the Davidians for 51 days. By March 23, 35 people had come out. The House majority report records 21 of them as children, and the minority report records 14. After March 23 no one else left.

A six-year-old girl, Melissa Morrison, told an FBI negotiator that she could not leave because "David won't let me." She died in the fire.

April 19. FBI agents in armored vehicles began punching holes in the walls and spraying tear gas inside at about 6 in the morning on April 19, 1993, and Davidians fired on the vehicles. At about 12:07 in the afternoon a fire broke out in the building. Two more began within two minutes, and within eight minutes the whole building was burning.

What the Special Counsel found. Former Senator John C. Danforth was the Special Counsel. The Attorney General, the head of the Justice Department, appointed him, and he studied the case for ten months. In 2000 he reported that government agents did not start or spread the fire and did not shoot at the Davidians.

He found that some of the Davidians spread fuel through the building and set it on fire in at least three places. Danforth placed the responsibility for the deaths on "certain of the Branch Davidians and their leader, David Koresh." He counted at least 80 dead in all, including the six Davidians killed on February 28.

Danforth found that some Davidians shot and killed their own people, among them at least five children. At least twenty Davidians were shot dead on April 19, many of them in the head or mouth at close range. A three-year-old, Dayland Gent, was stabbed in the chest and died. Danforth's report does not name who stabbed him.

Danforth also reported that an FBI agent had fired three tear-gas rounds of a kind that can start fires at 8:08 that morning, toward a pit about 75 feet from the living quarters. Government officials did not reveal this until August 1999. Danforth found that those rounds did not start the fire four hours later. A Texas jury later found eight Davidians guilty of gun crimes.

BY 2000

If you remember one thing: Families of many faiths, and some of none, won Supreme Court cases that ended official prayer and Bible reading in public schools.

One number: about 145, the attacks on Black churches across the South from about 1954 to 1970 that one research team has mapped.

Next: After 2000 a smaller share of Americans belonged to a congregation, and gunmen killed worshippers in a Sikh gurdwara, in churches and in a synagogue.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 29 MINUTES

Fewer Americans have belonged to a congregation since 2000. In a survey taken in 2023 and 2024, 29 percent of American adults said they had no religion, up from 16 percent in 2007. People attacked worshippers inside gurdwaras, the houses of worship of the Sikh religion, and inside churches and synagogues, and killed them where they prayed.

Abuse and courts. Records made public in these years showed that more than 10,000 people had told Catholic officials that priests sexually abused them as children. A grand jury in Pennsylvania, a group of citizens who hear evidence gathered by prosecutors, found that church leaders in six dioceses, the regions led by bishops, had hidden the abuse there.

A report on the Southern Baptist Convention found that its leaders had pushed back against people who reported abuse, and sometimes met them with outright hostility. Families and teachers kept going to court over what a public school may teach about religion and whether public money may pay for religious schools.

How many people say they have no religion

Twenty-nine percent of American adults, more than one in four, said they had no religion when researchers at the Pew Research Center, a private polling organization, asked 36,908 of them in 2023 and 2024. In Pew's study of 2007 the share was 16 percent. This group, often called the "nones," includes atheists, agnostics and people who answer "nothing in particular."

Sixty-two percent said they were Christian, down from 78 percent in 2007. Fewer than two adults in a hundred said they were Jewish, and about one in a hundred each said they were Muslim, Buddhist or Hindu. Pew's own report states that the fall in the Christian share had slowed and may have stopped, because it had stayed about the same for four or five years.

Gallup's question. Gallup's pollsters ask a different question: whether people belong to a church, synagogue or mosque. In 2020, for the first time since Gallup began asking in 1937, fewer than half said yes. The share was 47 percent, down from 70 percent in 1999.

Older Americans belonged far more often than younger ones. In the years 2018 to 2020, about two in three Americans born before 1946 belonged to a congregation, against a little more than one in three of those born between 1981 and 1996.

Killed where they were worshipping, 2001 to 2025

FBI officials count the crimes that police report as motivated by hatred of a group. Their report for 2001, the year of the September 11 attacks, records 481 incidents aimed at Muslims, with 554 victims. That was more than 1,600 percent higher than in 2000, or about seventeen times as many. Crimes aimed at Jews were still the largest group, at more than half of all religious hate crimes that year.

Oak Creek, 2012. A white supremacist, a person who believes white people are better than others and should rule over them, walked into the gurdwara at Oak Creek, Wisconsin, on Sunday morning, August 5, 2012. He carried a loaded gun, and he killed six people. Paramjit Kaur was sitting for morning prayers when he shot her. The others killed were Sita Singh, Ranjit Singh, Prakash Singh, Suvegh Singh Khattra and Satwant Singh Kaleka, the gurdwara's president, who was killed fighting the gunman.

Santokh Singh and Punjab Singh were shot and lived through the attack, but Punjab Singh later died of his wounds. In 2022 Senator Tammy Baldwin of Wisconsin introduced a resolution in the United States Senate that counts him as the seventh person killed. The resolution also names Lieutenant Brian Murphy, a police officer who was shot 15 times at close range.

Harpreet Singh Saini

Who: A young man whose mother was shot dead at morning prayers, and who asked the United States Senate to start counting crimes against Sikhs.

When and where: Oak Creek, Wisconsin, and Washington, D.C., August and September 2012.

He asked for his mother "the dignity of being a statistic."

Harpreet Singh Saini asked the United States Senate to count crimes against Sikhs, forty-five days after a gunman killed his mother at prayer. His parents brought him and his brother, Kamaljit, from India to the United States in 2004, when he was ten. "Like many other immigrants," he said, "they wanted us to have a better life, a better education."

His mother was Paramjit Kaur, the woman shot at morning prayers in the Oak Creek gurdwara. The five men killed with her all wore turbans, as Harpreet does.

The last rotis. Two days after the shooting, Harpreet and his brother ate the last rotis, a kind of flatbread, that their mother had made from scratch the night before she died. He said that with the last bite he understood it was the last food made by her hands that they would ever eat. He had just started college, and she was not there to send him off.

Before the Senate. On September 19, 2012, he testified before a subcommittee of the United States Senate. He said: "I want to tell the gunman who took her from me: You may have been full of hate, but my mother was full of love."

He told the senators what his mother's faith taught her. "My mother was a devout Sikh. Like all Sikhs, she was bound to live in Chardi Kala," which he described as "a state of high spirits and optimism." He said, "She was also taught as a Sikh to neither have fear of anyone nor strike fear in anyone."

> Then he asked for one thing. "I came here today to ask the government to give my mother the dignity of being a statistic. The FBI does not track hate crimes against Sikhs. My mother and those shot that day will not even count on a federal form. We cannot solve a problem we refuse to recognize."
>
> The FBI's report for 2015 was the first to list crimes against Sikhs. It counted 6 offenses against Sikhs that year.

Charleston, Sutherland Springs and Pittsburgh, 2015 to 2018

Charleston, 2015. A 21-year-old man named Dylann Roof killed nine members of Mother Emanuel church in Charleston, South Carolina, at their weekly Bible study on Wednesday evening, June 17, 2015. Mother Emanuel is an African Methodist Episcopal church, part of the denomination, a group of churches sharing one set of teachings, that Richard Allen and other Black Methodists formed in 1816. Twelve members were meeting in the fellowship hall, and Roof came in at about 8:16.

Judges of a federal appeals court later wrote that "the parishioners welcomed Roof, handing him a Bible and a study sheet," and that for 45 minutes he "worshipped with the parishioners." Then: "They stood and shut their eyes for closing prayer. Roof then took out his gun and started shooting." He fired about seventy-four shots.

The nine killed were the Reverend Sharonda Coleman-Singleton, Cynthia Hurd, Susie Jackson, Ethel Lee Lance, the Reverend DePayne Middleton-Doctor, the Reverend Clementa Pinckney, Tywanza Sanders, the Reverend Daniel Simmons Sr. and the Reverend Myra Thompson. Roof told the FBI that he had looked up African American churches in Charleston, visited this one beforehand, and learned from a member that the Bible study met on Wednesday nights.

A federal jury convicted him on 33 counts, among them nine counts of obstructing religion resulting in death. That federal crime means using force to stop people from practicing their religion, in a way that kills someone. He

was sentenced to death, and appeals judges upheld the sentence on August 25, 2021.

Sutherland Springs, 2017. Devin Patrick Kelley walked into the First Baptist Church of Sutherland Springs, Texas, on Sunday, November 5, 2017, and opened fire. He killed twenty-six people and wounded twenty-two more, then died of his own gunshot after fleeing. Among the dead were Emily Hill, 11, and Megan Hill, 9. Kelley had been convicted of a crime of domestic violence while he was in the U.S. Air Force. In 2012 a military court found him guilty of attacking his wife at the time, Tessa Brennaman, and his stepson.

The missing record. Air Force agents and jail staff never sent his fingerprints or his conviction to the FBI. A gun store must run a background check, a search of national criminal records, before it sells a gun, and a reported conviction like his would have stopped the sale. Without the record, Kelley passed the check each time he bought a gun from a store.

Judge Xavier Rodriguez, a federal judge, found in 2021 that federal officials had failed "to exercise reasonable care" in sending his criminal record to the FBI. He held the United States government 60 percent responsible for the harm. He wrote that if the government had reported the record, it was "more likely than not" that Kelley would have been deterred, or put off, from the shooting.

Pittsburgh, 2018. Three Jewish congregations, Tree of Life, Dor Hadash and New Light, were at prayer in one building in Pittsburgh, Pennsylvania, on Saturday morning, October 27, 2018. Twelve Tree of Life members were in the chapel, partway through the opening prayers. Audrey Glickman had begun the service. David Rosenthal, who could not read but had memorized every prayer and song, was helping to lead it, and his brother Cecil was one of the greeters.

In Dor Hadash's room, three men were setting out prayer books and copies of the Torah, the Jewish scriptures: Jerry Rabinowitz, a doctor, Daniel Leger, a hospital chaplain, a minister who serves patients, and Martin Gaynor. Downstairs, Richard Gottfried and Daniel Stein of New Light were in the kitchen making a meal for a breakfast the next day.

Robert Bowers came in with three handguns and a rifle and killed eleven people: Jerry Rabinowitz, David Rosenthal, Cecil Rosenthal, Rose Mallinger, Bernice Simon, Sylvan Simon, Joyce Fienberg, Irving Younger, Richard Gottfried, Daniel Stein and Melvin Wax. The youngest was 54, and Rose Mallinger was 97.

Two more worshippers were badly wounded, and five police officers were injured going in after him. Federal prosecutors charged him with eleven counts of obstructing the free exercise of religious beliefs resulting in death, among other crimes. He was sentenced to death on August 3, 2023.

BY 2018: Gunmen had killed worshippers at morning prayers in a gurdwara in Oak Creek, at a Bible study in Charleston, at a Sunday service in Sutherland Springs and at Saturday prayers in Pittsburgh.

Two attacks on churches in 2025

Minneapolis. Children at the Church of the Annunciation in Minneapolis were at an all-school Mass, the Catholic worship service, on Wednesday, August 27, 2025, in the first week of school. A shooter fired through the church windows at them in the pews. Two children were killed. Twenty-six children and three adults were wounded by gunfire, and one more person was hurt in another way, according to the City of Minneapolis.

NPR reported that the shooter was Robin Westman, 23, who then fatally shot themself at the scene, according to police. NPR reported that FBI officials called it an act of domestic terrorism, an attack meant to frighten people inside the country. They said it was driven by a "hate-filled ideology," a set of hateful ideas.

Grand Blanc Township. Members of the Church of Jesus Christ of Latter-day Saints were at services in their meetinghouse in Grand Blanc Township, Michigan, on Sunday, September 28, 2025. Thomas Jacob Sanford, 40, of Burton, Michigan, drove his pickup truck through the front doors. He opened fire and set the building on fire. He killed four people: Craig Hayden, Pat Howard, John Bond and Thelma Armstrong.

Nine others, aged 6 to 78, were wounded. Police shot him dead within 3 minutes and 43 seconds of the first 911 call, the television station WNEM reported. The reports of the attack give no settled reason for it.

The count for 2025. FBI officials released their count of hate crimes for 2025 in August 2026. By the reading of the Anti-Defamation League, a group that speaks out against anti-Semitism, police reported 2,408 hate-crime incidents based on religion, and 1,528 of them, or 63 percent, were aimed at Jews. Staff of the Sikh Coalition, a group that speaks up for Sikhs, counted 177 incidents aimed at Sikhs in the FBI's figures for 2025, up from 142 in 2024.

What priests did to children, and what bishops did about it

More than 4,000 Catholic priests in the United States were accused of sexually abusing children between 1950 and 2002. Sexual abuse of a child means an adult using a child's body for sex. Church officials reported few of these priests to the police, and in Pennsylvania a grand jury found that church leaders in six dioceses had hidden the abuse.

The John Jay report. In 2002 the Catholic bishops of the United States asked John Jay College of Criminal Justice, in New York, to study how many of their priests had done it. Researchers at the college published their report in February 2004. It was based on surveys covering 98 percent of the country's diocesan priests, the priests who serve in a bishop's region.

The report records accusations against 4,392 priests for the years 1950 to 2002, about 4 percent of all the priests who served in those years, or one in twenty-five. These were accusations that had not been withdrawn and were not known to be false. In all, 10,667 people said they had been abused. Half of them were between 11 and 14 years old when it happened. Sixteen percent were between 8 and 10, and nearly 6 percent were younger than 7. Eighty-one percent were boys.

What was done to them. The acts reported most often were touching the child over or under the clothes. Next came the priest putting his mouth on the child's sex organs, the child being undressed, and rape, which means forcing sex on a person, or attempted rape. Rape or attempted rape was reported in 22.4 percent of the cases.

Most of the accused priests were said to have done more than one of these things to the same child. It happened most often in the priest's own home or the parish house, the house beside the church where priests live, and next most often inside the church.

Who was told. Only 384 of the 4,392 priests were ever charged with a crime. Victims reported fifteen percent of the priests to the police. The report says that dioceses and religious orders, the groups of priests, brothers or sisters who live under shared religious promises, reported "a much smaller number." Before 1993, church officials knew of only a third of the cases at all.

The dioceses and religious orders reported that they had already paid $472 million for victims, for treating priests and for lawyers, and 14 percent of them gave no figure.

Accusations after 2004. People kept coming forward after the report, and most of them told of abuse from decades before. Researchers at the Center for Applied Research in the Apostolate at Georgetown University sort the accusations made since 2004 by the years in which the abuse is said to have happened. They count 4,216 for the ten years of the 1960s, 2,813 for just the five years from 1970 to 1974, and 36 for the three years from 2020 to 2022.

These are accusations made years afterward. They are not a count of everything that happened in each period, and one priest can be accused by more than one person.

Pennsylvania, 2018. A grand jury in Pennsylvania released a report on six of the state's Catholic dioceses in August 2018. The jurors read half a million pages of the dioceses' own internal records. They found believable accusations against more than three hundred priests. They identified more than one thousand children from the church's own records, and they wrote that they believed the real number was in the thousands.

The jurors wrote that most of the victims were boys and some were girls, some were teenagers, and many were young children whose bodies had not yet begun to grow into adult bodies. Some were raped. "But all of them were brushed aside, in every part of the state, by church leaders who preferred to protect the abusers and their institution above all."

The playbook. The grand jury set out what it called a playbook for hiding the truth. Its first item was to use mild words instead of real ones in church documents: never to write "rape," but "inappropriate contact" or "boundary issues" instead. In the grand jury's account, church officials let fellow priests ask the questions rather than trained investigators. When they removed a priest, they told his parish he was on "sick leave," or said nothing.

They kept paying for his housing and living costs. If people found out, they moved him to a new place "where no one will know he is a child abuser." The last item was "Finally and above all, don't tell the police." Because of this hiding, the jurors wrote, "almost every instance of abuse we found is too old to be prosecuted."

The bishops released their own yearly audit, a check of their records, for July 2024 to June 2025 in May 2026. It records 1,070 new accusations made by 973 people, OSV News, a Catholic news service, reported. Only 24 of them came from people who were still children. Most of the rest concerned abuse that had happened decades earlier. Diocesan officials reported $389.9 million in costs connected with abuse that year.

The Southern Baptists. Members of the Executive Committee of the Southern Baptist Convention, a large group of Baptist churches, hired an outside firm, Guidepost Solutions, to look at how they had handled abuse. The firm published its report in May 2022. It states that people who reported abuse "were met, time and time again, with resistance, stonewalling, and even outright hostility," stonewalling meaning refusing to answer or act.

The firm's investigators found that two former leaders, D. August Boto and Roger Oldham, had kept a private list of ministers accused of abuse. On May 26, 2022, the committee released the list, 205 pages long, NBC News reported.

A sacred place traded to a mining company, 2014 to 2026

Members of Congress ordered in 2014 that Oak Flat, a place where Apache people pray, be traded to a mining company, and in March 2026 the trade was completed. Oak Flat, called Chí'chil Biłdagoteel in Western Apache, is a place in the Tonto National Forest in Arizona where Apache people hold ceremonies, among them the Sunrise Ceremony. It was listed on the National Register of Historic Places in 2016.

The company is Resolution Copper, owned by the mining companies Rio Tinto and BHP. Members of Congress put the order into the yearly bill that pays for the armed forces. With the exchange of about 2,400 acres in March 2026, the land became private property. Company officials expect the mine to leave a crater about two miles wide within about forty years, the radio station KJZZ reported.

A church divides, 2019 to 2024

More than a quarter of the United Methodist Church's American congregations left it between 2019 and the end of 2023. Its members had argued over gay members and gay ministers, gay meaning attracted to people of the same sex, since at least 1984. That year a ban on making gay people ministers went into the church's rule book.

The way out. At a special General Conference in 2019, the gathering where delegates write the church's rules, delegates added a rule. Under it, a congregation could leave the denomination, the whole group of United Methodist churches, and keep its buildings for "reasons of conscience" over the church's decisions about homosexuality, another word for being gay. The rule ran out on December 31, 2023. By then more than 7,600 congregations in the United States had left under it, about 26 percent of the church's American congregations.

The ban lifted. Delegates at the General Conference in Charlotte, North Carolina, voted 692 to 51 on May 1, 2024, to remove the ban that had been in the church's rule book since 1984. It had banned making gay people ministers, in the rule's words "self-avowed practicing homosexuals," meaning gay people

who said so openly and lived as gay people. Delegates at the same conference also removed the ban on ministers and churches holding weddings for same-sex couples.

BY 2024: Researchers working for the Catholic bishops had counted 10,667 people who said priests abused them as children, Southern Baptist leaders had released a private list of accused ministers, and about a quarter of United Methodist congregations had left their church.

A prisoner's dreadlocks, 2020 to 2026

Damon Landor was a prisoner at the Raymond Laborde Correctional Center in Louisiana. In 2020, on the warden's order, guards there handcuffed Landor to a chair and shaved off his dreadlocks. Landor had grown them for decades under a Rastafarian vow, a religious promise not to cut his hair. He showed the guards a court decision, and they threw it away. He had three weeks left to serve.

Landor sued under the Religious Land Use and Institutionalized Persons Act, a federal law that protects the religious practice of people held in prisons. The justices of the Supreme Court ruled 6 to 3 on June 23, 2026, that he could not sue the individual officers for money under that law. Justice Neil Gorsuch wrote for the majority. Justice Ketanji Brown Jackson disagreed, joined by Justices Sotomayor and Kagan. Published accounts of the case do not name the guards.

Worship on a screen

Twenty-seven percent of American adults were watching religious services on a screen by November 2022. Researchers at the Pew Research Center asked 11,377 adults how they took part in worship between November 16 and 27, 2022, and Pew published the answers in June 2023.

Sixteen percent were regularly going to services in person only, 10 percent were regularly watching only on a screen, and 17 percent were doing both. In all, 43 percent were attending or watching at least once a month, and 57 percent were doing neither. Among those who did both, 76 percent said they would rather be in the room. The reason people gave most often for watching on a screen was that it was convenient.

The churches answer for the boarding schools, 2022 to 2024

Catholic leaders apologized between 2022 and 2024 for the church's part in the boarding schools for Native children. Religious groups ran 210 of the 417 federal Indian boarding schools in the United States. At the 417 schools, staff cut children's hair, forbade their languages and beat them, and at least 973 children died, by the count of investigators at the Department of the Interior.

The pope. In Canada on July 25, 2022, Pope Francis asked forgiveness for the ways that church members "cooperated, not least through their indifference, in projects of cultural destruction and forced assimilation," forced assimilation meaning making people give up their own ways of life. He was speaking of Canada's schools.

The Doctrine of Discovery. Officials at the Vatican, the headquarters of the Catholic Church in Rome, rejected the Doctrine of Discovery on March 30, 2023. Catholic News Service described it as a set of old writings by popes that "appeared to bless the efforts of explorers to colonize and claim the lands of any people who were not Christian." The Vatican officials said it "is not part of the teaching of the Catholic Church."

The bishops' apology. The bishops of the United States Conference of Catholic Bishops voted 181 to 2 on June 14, 2024, to adopt a document called "Keeping Christ's Sacred Promise." It is a formal apology for the Catholic

Church's part in the schools in the United States. The Interior Department's 2024 report on the schools states that its authors know of no support from the bishops' conference for a Pope's apology for the schools in the United States.

Prayer at a football game, 2000

Families went to court again and again from 2000 on over religion in public schools and public money for religious schools. One case, decided on June 19, 2000, was about football.

At Santa Fe High School in Texas, before 1995, a student elected as chaplain of the student council said a prayer over the loudspeakers before every home game of the school's top football team. District officials then set up two student elections. One decided whether to have prayers at the games, and the other chose who would give them. Two families sued, one Mormon and one Catholic. In *Santa Fe Independent School District v. Doe*, the justices of the Supreme Court struck down the policy.

Public money and religious schools, 2022

The justices of the Supreme Court ruled in 2022 that Maine's officials could not refuse to pay for a child's schooling because the school taught religion. Under Maine law, the state pays the fees for children who live in towns with no high school of their own. Since 1981 it had paid only for schools that were nonsectarian, meaning not tied to any religious group.

David and Amy Carson of Glenburn, Maine, sent their daughter to Bangor Christian Schools, which Bangor Baptist Church had founded in 1970. They paid her fees themselves. Troy and Angela Nelson of Palermo, Maine, sent their son to Temple Academy, a school connected with Centerpoint Community Church. They could not afford its fees for their daughter too, so she went to a private school that was not religious. On June 21, 2022, in *Carson v. Makin*, the justices ruled 6 to 3 for the families.

What the schools taught. Justice Breyer, who disagreed, quoted the two schools' own descriptions of their teaching. One of Bangor Christian's goals is "lead[ing] each unsaved student to trust Christ as his/her personal savior," an

unsaved student being one who did not yet believe in Christ. School officials said there was no way to separate its religious teaching from its other teaching.

Temple Academy said the Bible is used in every subject it teaches. In mathematics that meant teaching that a creator made the universe so that "one plus one is always going to be two."

Joseph Kennedy

Who: A high school football coach who was put on paid leave over his prayers on the field after games, and who won his case in the Supreme Court.

When and where: Bremerton, Washington, 2008 to 2022.

He knelt at the 50-yard line after every game.

Joseph Kennedy was put on paid leave from coaching over prayers he said on the football field. In 2022 the justices of the Supreme Court ruled 6 to 3 that the school district's officials could not punish him for those prayers. He spent nearly twenty years in the Marine Corps. In 2008 he began coaching football at Bremerton High School in Washington State. After each game, once the players and coaches had shaken hands, he knelt at the 50-yard line and prayed for about thirty seconds.

At first he prayed alone. Then players asked whether they could join him, and he told them, "This is a free country. You can do what you want." After some games most of the team knelt with him. Sometimes players from the other team were invited to join. He began adding short speeches to encourage the players when others were there. No one complained for more than seven years.

The letters. In September 2015 an employee of another school praised the practice to Bremerton's principal, and the district's superintendent found out. District officials wrote to Kennedy on September 17, 2015. On October 16 they wrote again, forbidding "any overt actions" while he was on duty that could look like the school supporting prayer.

He prayed after the games of October 16, 23 and 26. On October 16 most of his players were singing the school fight song, and players from the other team and people from the crowd joined him before he finished. On October 23 no one joined him. On October 26 other adults gathered around him while he knelt. After that game, district officials put him on paid leave and barred him from the football program.

Two readings of one record. On June 27, 2022, in *Kennedy v. Bremerton School District*, the justices ruled for him, 6 to 3. Justice Gorsuch wrote for the majority that the First Amendment protects "an individual engaging in a personal religious observance from government reprisal," which means punishment by government officials.

Justice Sotomayor, who disagreed, described what happened differently. She wrote: "To the degree the Court portrays petitioner Joseph Kennedy's prayers as private and quiet, it misconstrues the facts," the petitioner being the person who brings a case to the Court. She wrote that the record showed that he "consistently invited others to join his prayers and for years led student athletes in prayer at the same time and location." The nine justices read the same record and described the events in two different ways.

The Ten Commandments in the classroom, 2024 to 2026

Louisiana's lawmakers passed a law requiring every public school classroom to display the Ten Commandments, and Governor Jeff Landry signed it on June 19, 2024. Families of several faiths sued to stop it. The justices of the Supreme Court had struck down a Kentucky law that required the same thing in 1980, in *Stone v. Graham*.

Louisiana's law requires a poster or framed copy at least 11 inches by 14 inches, with the Commandments as its "central focus" in large print. The law sets out the exact wording, which begins "I AM the LORD thy God."

The parents. The parents who sued include ministers and Jewish parents, and the case is named for one of them, the Reverend Darcy Roake. A Jewish parent swore that the law "misappropriates a Jewish text, ripping it from its Jewish context," which means it takes and misuses something that belongs to Jews.

The parent said it then requires the changed text to be shown to non-Jews, "in violation of core Jewish tenets that oppose proselytizing." Tenets are the main rules of a faith, and proselytizing means trying to convert people to a religion.

Another Jewish parent objected that Louisiana's version leaves out the freeing of the Jews from slavery in Egypt, "a key piece of the Ten Commandments and of the Jewish story." A Presbyterian minister who is also a parent objected to the state putting its "stamp of approval" on one version.

In the courts. A federal judge blocked the law, and on June 20, 2025, three judges of the Fifth Circuit Court of Appeals, the federal appeals court for Louisiana, Texas and Mississippi, agreed. Then all the judges of the Fifth Circuit reheard the case, and on February 20, 2026, they lifted the order blocking the law.

The law is called House Bill 71, or H.B. 71. The judges wrote that the question before them was "not whether H.B. 71 is constitutional, but whether that issue is fit for judicial resolution at this time." They held that it was too early to decide. Three judges disagreed in writing. As of September 2026, no court had decided whether Louisiana's law breaks the Constitution.

Texas. Texas's lawmakers passed a similar law. Rabbi Mara Nathan is one of the parents suing over it. She objects that the required text "erases this foundational Jewish tenet and historical context."

The full Fifth Circuit's judges ruled 9 to 8 on April 21, 2026, that the Texas law does not violate the First Amendment's religion clauses, the two parts of the amendment about religion. On August 17, 2026, the Texas families asked the Supreme Court to hear their case. As of late September 2026 the Court had not said whether it would.

Storybooks and parents' faith, 2025

Members of the school board of Montgomery County, Maryland, added five storybooks with LGBTQ+ characters, a short name for lesbian, gay, bisexual, transgender and queer people and others, for children from kindergarten to fifth grade in the 2022 to 2023 school year. At first board members let parents take their children out of those lessons. Then they ended that choice.

The parents. Parents of several faiths sued. Tamer Mahmoud and Enas Barakat are Muslims. Jeff Roman is Catholic and Svitlana Roman is Ukrainian Orthodox. Chris and Melissa Persak are Catholics.

The justices of the Supreme Court ruled 6 to 3 on June 27, 2025, in *Mahmoud v. Taylor*, that the parents were entitled to have their children excused while the case went on. Justice Alito wrote for the majority. He relied on the 1972 Amish case, *Wisconsin v. Yoder*, and its holding that parents have a right "to direct the religious upbringing of their children."

Justice Sotomayor wrote for the three who disagreed. She wrote that public schools "offer to children of all faiths and backgrounds an education and an opportunity to practice living in our multicultural society." She warned that this "will become a mere memory if children must be insulated from exposure to ideas and concepts that may conflict with their parents' religious beliefs."

Fewer sisters to teach in the Catholic schools

Members of religious orders built and staffed the Catholic school system of the 1800s. By 2025 there was about one Catholic sister, or nun, in the United States for every five there had been in 1965. The Center for Applied Research in the Apostolate at Georgetown University takes its figures from the Catholic Church's own yearly directory. Its researchers counted 178,740 religious sisters in the United States in 1965, 79,814 in 2000, and 33,135 on January 1, 2025.

Schools, priests and Mass. Over the same sixty years, Catholic elementary schools fell from 9,366 to 4,606, and Catholic high schools from 1,986 to 1,178. Priests fell from 59,426 to 33,462. In 1965, 530 parishes had no priest living there as pastor. In 2025, 3,674 did not. The same center estimates from surveys that 54.9 percent of Catholics went to Mass every week in 1970, and 17.6 percent in 2025.

Teaching religion at home

Some parents teach their children at home so that they can teach them religion. The National Center for Education Statistics, part of the U.S. Department of Education, surveyed parents of homeschooled children aged 5 to 17 about the 2022 to 2023 school year and published the answers in September 2024.

Fifty-three percent said that wanting to give religious instruction was an important reason for homeschooling, and 11 percent said it was the most important reason. More parents named a concern about the environment of other schools. That was important to 83 percent and the most important reason for 28 percent.

THE THREE QUESTIONS, ANSWERED

1. **Why did colonists who crossed the ocean to worship freely punish other people for their faith?** The Puritans wanted freedom for their own way of worship, and they ran Massachusetts

by it. Their leaders banished Roger Williams and Anne Hutchinson and hanged four Quakers in Boston.

2. **How did Americans stop paying taxes to support churches?** Baptists and James Madison defeated a new church tax in Virginia, where Jefferson's religious freedom law passed in 1786. Massachusetts ended the last state church tax in 1833.
3. **How long did US officials treat Native ceremonies as crimes?** For ninety-five years, from Hiram Price's rules of 1883 until members of Congress passed the American Indian Religious Freedom Act in 1978.

What changed: In the 1600s officials in New Mexico and Massachusetts punished people for how they worshipped, and later Americans fought for freedom of worship in court, sometimes winning and sometimes losing.

FIVE DATES TO KEEP

August 10, 1680: Po'pay leads the Pueblo rising in New Mexico.

January 16, 1786: Virginia's lawmakers pass Jefferson's religious freedom law.

December 1791: the First Amendment becomes part of the Constitution.

April 1906: Pentecostal worship begins at Azusa Street in Los Angeles.

August 11, 1978: the American Indian Religious Freedom Act passes.

NOT KNOWN: Nobody knows what the people of Cahokia believed as they watched the sun rise over Woodhenge.

Where to go: The statue of Po'pay, whipping scars carved on its back, stands in the US Capitol in Washington, D.C.

Next: Chapter 30, School and Education. It asks who got to go to school in America, and what they learned there.

Chapter 30: School and Education

CHAPTER 30 OF 37 · SCHOOL AND EDUCATION · 10 ERAS · ABOUT 225 MINUTES

School in America grew from a reading lesson for a few children into a right for every child. At every step, the adults in charge decided which children could come in and what could be done to them there.

On the grounds of Colonial Williamsburg, in Virginia, stands the oldest surviving schoolhouse for Black children in the United States. From 1760 to 1765, enslaved and free Black children as young as three learned to read in it. The men who ran the London charity that paid their teacher, Ann Wager, wanted them taught that slavery was God's will. In 1774 one of her former pupils, Isaac Bee, ran away. The man who claimed to own him warned in a newspaper that Isaac could read. The building was moved to Colonial Williamsburg on February 10, 2023.

This chapter follows American schooling through ten eras, from Native children learning beside their elders to the empty school buildings of 2020 and the fights that came after. Watch two things. First, watch who was let in. Lawmakers made it a crime to teach enslaved people to read. Officials sent Black, Chinese and Mexican American children to separate schools, took Native children far from home, and turned disabled children away, until families went to court or lawmakers changed the rules. Second, watch what adults were allowed to do to the children inside. You can follow the rules about hitting children from Ezekiel Cheever's birch rods in the 1600s to a Florida paddle in 1970.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. When did school become free, and required, for every child?
2. Which children were kept out of school, and how did they get in?

3. Is it still lawful for a teacher to hit a child?

Five minutes? Read "Punished for speaking Spanish" in 1950 to 2000.

Can skip: "The academies", "Catholic schools become a system", "The school year and the school day", "The last one-room schools". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 3 MINUTES

Native children in this land learned from their own families and communities, with no school buildings, no grades and no school year. Nobody taught as a full-time job. A child learned a skill by working beside an adult who had it. Children learned their nation's history by listening to the adults who kept it in memory.

Learning by doing and by listening

The Blackfeet are one nation whose way of teaching is on record. A National Park Service account states that "Blackfeet children learned by doing, by example, and through apprenticeship to their elders." That meant working beside the older people of the community until a child had their skills. On long winter evenings, the same account says, adults passed on the nation's history and ways of life around a fire the whole group shared.

This teaching by the spoken word, called oral tradition, never stopped. A teaching page from the Smithsonian's National Museum of the American Indian states that "the oral tradition continues to be an integral part of Indigenous teaching and learning," a necessary part of how the first peoples of this land teach. Native families and teachers still teach this way.

Memory in place of writing: wampum

No writing system was in use in this land before 1500. Without writing, people kept their nation's agreements and history in their memories, in speech, and in objects made to help them remember. Some people were trained to hold those memories and recite them.

Later, Spanish priests and English ministers wrote some Native languages down in the letters of their own alphabet. The first writing system invented for a language spoken in what is now the United States was the Cherokee syllabary of 1821, made by Sequoyah, a Cherokee man. It is a set of written signs in which each sign stands for one syllable.

The belts. The Haudenosaunee Confederacy is a union of five nations: the Seneca, Cayuga, Onondaga, Oneida and Mohawk. Its people record agreements and history in wampum, beads cut from the white and purple parts of clam shells, strung on strings or woven into belts. The Onondaga Nation says it was made the Wampum Keeper, the nation that looks after the belts, when the five nations joined under the Great Law of Peace.

How a belt holds a record. In the Onondaga Nation's own account, "The speaker puts the words of the agreement into the wampum as the strings or belts are woven together." After that, "each speaker thereafter uses the

wampum to remember the initial agreement and the history that has happened to date." The Onondaga call the belts "our living history." A speaker had to hold the agreement in memory and recite it, with the belt as the reminder.

DISPUTED: when the Great Law of Peace was agreed. Haudenosaunee oral tradition places it between about 1000 and 1400, and some scholars argue for the late 1100s, inside that range. Accounts based on written records put it at about 1450. No record settles it.

No names survive

NOT KNOWN: the name of any pupil or teacher in this land before 1500. With no writing, nobody made a list of who taught or who learned, and nobody counted them or the people who could recite a record.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 4 MINUTES

Spanish priests did the only European teaching in this land in the 1500s. They taught at their missions, settlements where they worked at conversion, the changing of a person's religion, to make Native people Catholic. At some missions they taught reading too.

The missions stood in Florida and, from 1598, in New Mexico. For a few months of 1570 and 1571, Spanish priests also ran one in Virginia. No schoolhouse stood anywhere in this land. Outside the missions, Native children went on learning from their families by the spoken word.

Mission teaching in Florida

Father Francisco Pareja taught Native people to read at a Spanish mission in Florida. He wrote of his own pupils: "many Indian men and women have learned to read in less than six months, and they write letters to one another in their own language." His mission, San Juan del Puerto, was one of the largest. It stood on Fort George Island among the Mocama, a coastal people who spoke Timucua.

At a mission the friars, Catholic men of the Franciscan order who had promised to live in poverty, taught Catholic doctrine, meaning the beliefs of the church. They also taught European customs, farming, and reading and writing, in Spanish and in Timucua, the local language.

How the missions began. Pedro Menéndez de Avilés and about 800 Spanish colonists, among them an unknown number of enslaved Africans, settled in the Timucua town of a chief named Seloy in September 1565, and the settlement became St. Augustine. Spanish priests began trying to convert Native people in Florida within a few years, and by the 1580s the Franciscans had missions across Florida. The National Park Service's history of San Juan del Puerto states only that it began "sometime in the 1570s."

New Mexico, 1598

Juan de Oñate led a Spanish expedition of colonists to the upper Rio Grande in 1598. Franciscan missions in New Mexico, and the religious teaching at them, began that year.

Paquiquineo (Don Luís de Velasco)

Who: A young man from the Chesapeake Bay country who spent years among Spanish priests and came home with a Jesuit mission.
When and where: 1561 to 1572. The Chesapeake, Spain, Mexico, and back.

He left home at about seventeen and came back nine years later.

Why this story is here: he is the one person of the 1500s whose schooling by Europeans is recorded by name and date. No pupil of a mission school in Florida or New Mexico is known by name.

He sailed from the Chesapeake on a Spanish ship in late June 1561. Whether he went willingly or was kidnapped is disputed, and the record does not settle it. Spanish captains of the time regularly captured boys and young men to serve as interpreters, people who translate between two languages. He came from the Powhatan chiefdoms, groups of towns each led by a chief.

Spain and Mexico. He reached Seville in September 1561, met King Philip II in Madrid that autumn, and sailed to Mexico in 1562. He fell so ill there that he was close to death, and he was baptized in Mexico City, the Christian ceremony of joining the church. He took the name of the viceroy of New Spain, the king's ruler in Mexico: Don Luís de Velasco.

The promise. He studied in Seville with the Jesuits, an order of Catholic priests, from 1566 to 1570. No surviving record says what they taught him. He promised Father Juan Bautista de Segura, the Jesuit leader in Florida, that many people in his homeland would become Christians, and Segura planned a mission on that promise.

Paquiquineo landed on the James River with Segura's party in September 1570, and his own people welcomed them. Encyclopedia Virginia states that soon after, he "appears to have left the missionaries" and gone back to his own family.

February 1571. Segura sent Father Quirós and two Brothers, Jesuits who were not priests, to meet him. The Brothers were Gabriel de Solís and Juan Baptista Méndez. On February 4, Paquiquineo killed the three Jesuits. Then he and his companions surrounded the mission house and killed Father Segura and the other Spaniards. The only one left alive was the altar boy, Alonso de Olmos, who helped the priests during church services.

What the soldiers did. Menéndez, the founder of St. Augustine and now the Spanish governor of Florida, sent soldiers to the James River in August 1572. They captured some of Paquiquineo's people in a fight and hanged several of them from the yardarms of their ship, the wooden beams that cross the masts.

One of the hanged men wore around his neck a paten, the metal dish the priests used in the Mass, their main church service. The Spanish records do not give the names of the men the soldiers hanged. The Powhatan people handed Alonso de Olmos back. The soldiers did not find Paquiquineo, and no European record mentions him again.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 11 MINUTES

English colonists in Massachusetts made teaching children to read a duty under law, and the men who wrote the laws gave a religious reason: every child had to be able to read the Bible. Schooling was not free. Parents or masters paid the teacher, and the Latin schools took only boys.

Outside New England, children learned at home, as apprentices, or at a few schools such as a Dutch one in Manhattan. New England colonists also opened schools and a college building for Native students, to make them Christian. Teachers beat children with rods, and one pupil wrote down what that was like.

Boston Latin School, 1635

Boston Latin School opened on April 23, 1635, and it is still open. It is the oldest public school in the country, which means a school that a town or a state runs for its children.

Whose land. Boston stood on the Shawmut peninsula, part of the land of the Massachusett nation, who called it Mushauwomuk, "the boat landing place." Between 1616 and 1618 an epidemic, a disease that spreads fast through a population, killed about three of every four people in the region, by the West End Museum's count. John Winthrop and about 1,000 English settlers arrived on the peninsula in 1630.

The first schoolmaster. Boston's townsmen met on April 13, 1635, and agreed to ask Philemon Pormort to teach. The town record states that he "shall be intreated (asked) to become scholemaster for the teaching and nourtering (bringing up) of children with us." It gives the date as "the second month," which was April, because the English year then began on March 25. The first classes met in Pormort's own house, and the boys learned Latin and Greek.

DISPUTED: which school is oldest. The leaders of Collegiate School in New York City, which Dutch colonists founded, say theirs is. In 1982 they moved its founding date back from 1638 to 1628, the year the minister Jonas Michaelius began teaching in Manhattan. The two schools' claims to be oldest of all have never been settled.

The two Massachusetts school laws

The 1642 law. The men of the Massachusetts General Court, the colony's lawmakers, passed the first law in this land that ordered children to be taught to read. Parents, and the masters that apprentices lived with and worked for, had to teach their children and apprentices to "read the English tongue." Children also had to know the "Capital Lawes," the colony's list of crimes punished by death.

The lawmakers set up no school and hired no teacher. Selectmen, the men elected to run a town's business, visited homes to check. A family that failed could be fined. The selectmen could also take a child or an apprentice away and place the child with another master who would do the teaching.

The Old Deluder Satan Act. Many families ignored that law, so the men of the General Court passed a second one in 1647. Its opening words give the reason: it is "one of the chief projects of that old deluder (trickster) Satan to keep men from the knowledge of the Scriptures," meaning the Bible. That line gave the law its nickname. The lawmakers wanted every child able to read the Bible without help.

Under the 1647 law, the men of every town of 50 households had to choose someone to teach children to read and write, and the parents or masters paid that teacher's wages. Every town of 100 families also had to set up a grammar school, a school that taught Latin, to prepare boys "for the university." That meant Harvard College, founded in 1636.

A town whose men did not obey had to pay 5 pounds, in English money, every year to the nearest school until they did. Lawmakers in the other New England colonies passed similar laws, except in Rhode Island.

The New England Primer

The English printer Benjamin Harris made *The New England Primer*, a first reading book, for buyers in the colonies by 1690. No copy printed before 1727 is known to survive, and the American Antiquarian Society holds a copy of that 1727 edition.

The book mixed lessons in reading, spelling and religious rules for behavior. Each letter of the alphabet had a small woodcut, a picture printed from a carved block of wood. After the alphabet, the 1727 edition tells the teacher, "let him learn these and such like Sentences by Heart." Children were expected to memorize the sentences and recite them.

Ezekiel Cheever

Who: A schoolmaster who taught Latin and Greek for 70 years, the last 38 of them as head of the Boston Latin School.

When and where: Born in London in 1615. Died in Boston on August 21, 1708. Taught at New Haven, Charlestown and Boston.

He taught Latin and Greek for 70 years without a break.

The Database of Classical Scholars, kept at Rutgers University, states that no one else in the history of this country has taught that long. Cheever ran the schools at New Haven from 1638 and taught at Charlestown from 1661. On December 29, 1670, he was invited to head the Boston Latin School. He was still teaching there when he died at 93.

His classroom. Accounts describe a smoky fireplace, poor light, and "a bundle of birch rods beside his desk." Birch rods were thin sticks, or bundles of twigs, cut from a birch tree and used to beat children.

Cotton Mather had been one of his pupils. He preached at Cheever's funeral and called him a teacher "than whom New England had known no better." Cheever's Latin textbook, *A Short Introduction to the Latin Tongue*, was printed in Boston in 1708, the year he died. Schools used it for nearly 200 years, longer than any other Latin textbook printed in this country.

Beaten at school: John Barnard

The rod was standard equipment in a schoolroom of the 1600s, and one of Cheever's pupils wrote down what it was like. John Barnard was born in Boston on November 6, 1681. He was seven when he was sent to Cheever's school, in the spring of 1689. He left after a few weeks, came back about a year and a half later, and stayed until he entered Harvard at fifteen.

Cheever told Barnard openly that he played too much and kept his classmates from their lessons. "If any of them cannot perform their duty," Cheever said, "I shall correct you for it." In the words of that time, to correct a child meant to beat him. Cheever was warning Barnard that he would be beaten whenever a classmate failed.

Beaten for a classmate. Then one classmate did not know his lesson, and "our master beat me," Barnard wrote. The classmate saw this and neglected his book on purpose, "for which I was still corrected, and that for several days." Barnard beat the classmate after school, and the classmate never came to school again.

Barnard wrote that he was "often beaten for my play." Once Cheever set the class to turn Aesop's fables, a set of old animal stories, into Latin verse. Barnard could not do it. Cheever beat him for it "two or three days going," until Barnard told him he had tried his hardest, and then Cheever stopped asking it of him.

NOT KNOWN: what Cheever hit him with, or how many times. Barnard does not say. He wrote his account as an old man, in the late 1760s, and it was printed in 1836.

Spare the rod. The saying "spare the rod and spoil the child" is not in the Bible, though Proverbs 13:24 comes close: it says that whoever spares the rod hates their children. The wording people use now comes from a comic poem of the 1660s by the English writer Samuel Butler.

Natick's school, and Deer Island

The English minister John Eliot and a group of Native leaders founded Natick, in Massachusetts, on a bend of the Charles River in 1651. Waban and Cutshamekin of the Massachusett nation and John Speen of the Nipmuc nation worked on it with him. Natick was the first of more than a dozen "praying towns," towns set up for Native people who had become Christians. Its meetinghouse had a school inside, and the schoolmaster was a Massachusett man named Monequassun.

Eliot printed schoolbooks in the Massachusett language: a catechism in 1653, which is a list of religious questions and answers that a pupil learns by heart, and an *Indian Primer* in 1669. In each of them the reading lessons were also lessons in Christian belief.

Deer Island. War began in 1675 between the English colonists of New England and a group of Native nations led by Metacom, a sachem, or leader, of the Wampanoag. The English called him King Philip, so they called it King Philip's War. On October 13, 1675, the men who governed the Massachusetts colony ordered the Christian Native people of the praying towns taken to Deer Island in Boston Harbor and held there as prisoners.

Colonists set up the prison camp, starting with the people of Natick. The surviving accounts do not name the men who voted for the order. The National Park Service's page on the island states that about 500 to 1,100 people were held there that winter, most of them women and children.

The prisoners starved and froze through the winter without shelter. The Park Service page states: "Due to starvation, freezing temperatures and lack of shelter, very few survived internment (imprisonment in a camp)." Members of a Boston history group, the Partnership of Historic Bostons, estimate that more than half of them died. Colonists released the survivors in May 1676.

An unknown number of people were smuggled off the island and sold into slavery in the West Indies or in Tangier, in North Africa. No record names the men who took them and sold them, and none says what became of Monequassun, the Natick schoolmaster. Every year, descendants of the Native nations of that war hold a remembrance of their ancestors on Deer Island.

Harvard, the Indian College, and the people Harvard men enslaved

Harvard's charter of 1650, the official paper from the colony's government that created the college, promised "the education of the English and Indian youth of this Country." A building called the Indian College stood in Harvard Yard from 1655. Accounts differ on when it came down: 1695 by Harvard Magazine's account, 1698 by that of Harvard's Native American Program. A printing press kept inside it printed the first Bible published in North America, in 1663, in the Algonquian language.

Only a handful of Native students came to the Indian College, and Caleb Cheeshahteaumuck, who graduated in 1665, was the only one of his time who finished. His classmate Joel Iacoomes drowned in a shipwreck just before the graduation ceremony. Two more students died of disease before they finished, and one left to become a sailor.

The people Harvard men enslaved. Harvard's leaders and staff enslaved people. In April 2022 a Harvard committee led by Tomiko Brown-Nagin reported records of "at least 79 people who were enslaved by Harvard presidents, overseers, and faculty and staff members" before slavery was outlawed in Massachusetts in 1783, the overseers being the men on one of Harvard's governing boards.

A woman named Jane was enslaved by the college steward, Andrew Bordman, the man in charge of food and supplies, who enslaved at least eight people. A woman named Cicely was enslaved by William Brattle, who taught students at the college and kept its money. Titus, Venus, Juba and Bilhah were enslaved at Wadsworth House, where they were made to live and work for two Harvard presidents.

Caleb Cheeshahteaumuck

Who: A Wampanoag student from Martha's Vineyard, the first Native American to graduate from Harvard.

When and where: Graduated in 1665 in Cambridge, Massachusetts. Died in 1666.

One letter in Latin is all he left in his own words.

Caleb Cheeshahteaumuck came from a Wampanoag community on Martha's Vineyard, an island off the coast of Massachusetts. His letter is addressed to the English donors who paid for the Indian College. It begins "Honoratissimi benefactores," Latin for "most honored benefactors," the people who gave the money. It is often described as the earliest surviving writing by a Native person on this continent.

He died in 1666, within a year of graduating, of a disease people then called consumption. One account says he died at Watertown, Massachusetts, at about twenty. Martha's Vineyard Magazine states that the disease was "presumably" tuberculosis, a disease of the lungs, which means the writer judged it likely. No record from his time names the disease that way.

Timucua in print

In Florida, Father Francisco Pareja wrote the Timucua language down in books printed in the early 1600s. He published three catechisms, a grammar explaining how the language works, and a book of questions for confession, dated 1613. In confession a person tells a priest their sins. Those books are now the only record of the Timucua language, which nobody speaks now.

About 200,000 people who spoke Timucua lived in what is now northern Florida and southern Georgia in the 1500s, by the estimate of the historian Matthew Holt Jennings. Nobody counted them. By the 1650s about 2,000 were left, one in every hundred. Most died in epidemics of diseases the Spanish had brought.

Raids, then exile. After the English founded Charles Town in Carolina in 1670, Carolina slave traders and Native groups allied with them raided the Spanish missions again and again to capture people and sell them. In 1763, at the end of a war, Spain's rulers gave Florida to Britain, and Spanish officials shipped the last Timucua people to Cuba. The last Timucua of full descent died there in 1767.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 12 MINUTES

Most children in these fifty years learned at home, at a small school in a neighbor's kitchen, or as apprentices. The schools that did exist mostly took boys whose families could pay. Church societies in London paid for charity schools and for schoolmasters to cross the Atlantic.

South Carolina's lawmakers made one kind of teaching a crime. In 1740 they banned teaching an enslaved person to write, the first law in these colonies that punished someone for teaching. In Virginia, two traders brought four captive Native boys to a college to be its first Native pupils.

The law against teaching, 1740

The law. South Carolina's lawmakers passed "An Act for the Better Ordering and Governing Negroes and Other Slaves in This Province" on May 10, 1740. In that title, "Negroes" is an old word for Black people.

The uprising before it. They passed it the year after the Stono Rebellion of 1739. In that uprising about 20 enslaved men near Charleston took up weapons and marched toward Spanish Florida, where they hoped to be free. They killed about 25 white colonists. William Bull, the lieutenant governor, or deputy governor, called out armed planters, who killed about 35 to 50 of the rebels. Colonists cut off the heads of some rebels and set them on stakes along the roads.

The act names the men who made it law: Bull, who was acting as the colony's head, and the King's Council and the Commons House of Assembly, the colony's two groups of lawmakers. It does not name the members who drafted it.

Section 45 of the act gives its reason: "the having of slaves taught to write, or suffering them to be employed in writing, may be attended with great inconveniences." Anyone who taught an enslaved person to write, had one

taught, or used one as a scribe, a person who writes documents for someone else, "shall, for every such offense, forfeit (lose as a punishment) the sum of one hundred pounds current money."

The teacher owed the fine, not the pupil. Under another section of the act, a person could collect the fine by suing the teacher in court. Half the money went to the colony and the other half to whoever reported or sued, which gave anyone a reason to watch for a teacher and turn the teacher in.

Why writing. Under the act, teaching writing was a crime and teaching reading was not, and the act gives only "great inconveniences" as its reason. Enslavers feared forged passes. A pass was the note from an enslaver that let an enslaved person travel, and a person who could write could forge, or fake, one and escape with it. One enslaver's newspaper advertisement of 1774, for a young man who had run away, warns that someone might forge a pass for him.

Harry and Andrew's school in Charleston

A school for Black pupils opened in Charleston, South Carolina, about three years after the law. The historian Carter G. Woodson wrote about it in 1915. In his account, leaders of the Society for the Propagation of the Gospel bought two young Black men named Harry and Andrew, and from then on the Society owned them as slaves.

The Society was a London group run by members of the Church of England, England's own Protestant church, one of the Christian churches that broke away from the Catholic Church. Woodson does not say who sold the two men.

The Society's leaders bought Harry and Andrew to train them as teachers "to their people." Alexander Garden, a Church of England official in Charleston, had a schoolhouse built for about 308 pounds, and Harry and Andrew taught in it.

Accounts give 1743 or 1744 for the opening. The school began with about sixty young pupils and ran in the evenings for people who worked in the day. Woodson judged it "highly probable" that after the 1740 law only free Black

people attended. The school closed in 1763, by Woodson's account in a later book, and some accounts give 1764. One of the two teachers had died, and the men who ran the Society judged that the other was not doing the job well.

Where a small child started: the dame school and the hornbook

In New England a small child usually learned to read first from a woman in her own home, at what was called a dame school, from an old word for a woman. The teacher took children from about three or four years old for a few hours a day, for a small fee.

Often she was a widow or an unmarried woman who needed the money. Families paid her in eggs, firewood, or washing and ironing instead of cash. She taught the letters, reading, the catechism and the Lord's Prayer, and sewing for girls.

The town schools of New England would not take a boy until he could "stand up and read words of two syllables and keep their places." Somebody had to teach him that first, and that somebody was usually a woman in her kitchen. Women were already teaching, for very little pay, before a woman could hold a teaching job in a town school.

The hornbook. A child's first reading tool was often a hornbook, a wooden paddle about the shape of a table-tennis bat with one printed sheet tacked to it. A thin, clear sheet of animal horn covered the paper so that it would not wear out. A leather cord through the handle let a child hang it from a belt.

The sheet showed a cross, then the alphabet in capital and small letters, then the vowels joined to consonants, then the Lord's Prayer. Because of the cross at the top, the alphabet row was called the "Christ's Cross row," later shortened to "crisscross row." The Smithsonian Institution holds a hornbook made in the 1700s.

Charity schools

Some schools in the colonies were paid for from London. King William III gave a charter to the Society for the Propagation of the Gospel in Foreign Parts on June 16, 1701. The minister Thomas Bray pushed for it, along with Bishop Henry Compton and others.

The Society's stated job was to send priests and schoolmasters to the colonies, and across the 1700s its members paid for more than 300 of them to cross the Atlantic. Members of a separate group, the Associates of Dr. Bray, founded in 1724, set up schools of their own.

These were charity schools. A society in London paid the teacher so that pupils could read the catechism and the Bible, and the town did not run them.

How many people could read and write

Nobody surveyed how many colonists could read. Historians such as Kenneth Lockridge count signatures instead, on wills, the papers saying who gets a person's belongings after death, and on deeds, the papers showing who owns land. A person who could write signed a name. A person who could not made a mark, such as an X. The method undercounts readers, because many children were taught to read and never taught to write, which was common for girls.

Men. Lockridge counted men's signatures in New England. Between 1650 and 1670 about 60 of every 100 white men could sign their names, and between 1787 and 1795 about 90 of every 100 could.

Women. Lockridge's counts, and later counts built on his method, cover women too. Of women born in the 1650s and 1660s, about 27 of every 100 could sign. Of women born in the 1730s and 1740s, about 81 of every 100 could. More people could sign in New England and the middle colonies than in the South, and more in towns than in the countryside.

Enslaved people. An article in Encyclopedia Virginia estimates that by 1775 as many as 5 percent of enslaved people in Virginia could read, one in twenty. The enslavers' own advertisements give one check on that number. Between

1736 and 1776 enslavers placed about 1,000 advertisements in the *Virginia Gazette*, a newspaper, to hunt for people who had run away. Fifty-five of them said the person could read or write.

Girls' schools: New Orleans and Pennsylvania

A group of Ursuline nuns, an order of Catholic women, came to New Orleans from France in 1727 and started a school for girls. New Orleans was then a French colony and became part of the United States in 1803. The school's own history states that it is the oldest Catholic school in the United States and the oldest school for girls that has run without stopping. It states that the nuns taught the first classes for enslaved Black women, free women of color and Native women.

Countess Benigna von Zinzendorf started classes for twenty-five girls at Germantown, near Philadelphia, in May 1742. She belonged to the Moravian Church, a Protestant church. The school moved to Bethlehem, Pennsylvania, in 1745 and settled there in 1748, taking in mainly the daughters of traveling Moravian church workers. The Moravian schools' own histories describe it as the first Protestant boarding school for girls in what became the United States, a school where pupils live as well as study.

Franklin's plan for an academy, 1749

Benjamin Franklin published *Proposals Relating to the Education of Youth in Pensilvania* in October 1749. He argued for a school that taught in English instead of Latin and Greek, with geography, natural history and modern languages. People called this kind of school an academy: a school for older pupils, a step above the town school and a step below a college.

What a school day was like, and what is not known

KNOWN:	the men of a town appointed one man to teach, the parents or masters paid him, and children of every age sat in the same room because there was only one teacher.
NOT KNOWN:	much more about the school day of these fifty years. The one-room school with a stove, slates to write on, and a bench where pupils stood to recite is described in records of the 1800s, and the records of 1700 to 1750 contain less.

The Indian school at William & Mary

The College of William & Mary in Virginia received its royal charter in 1693. The charter lists three purposes for the college, and the third was to teach Native students "in the Christian Religion." The money for this Indian school came from rents on a country estate in Yorkshire, England, bought in 1695 with 5,400 pounds from the estate of the scientist Robert Boyle.

Four captive boys. Governor Francis Nicholson tried to recruit Native pupils in 1700 and failed. William & Mary's own history states that about 1702 two traders, Robert Hicks and John Evans, "purchased or acquired four young Indian captives from the Catawba Nation." The traders got the boys along with deerskins and furs. The same history states that the boys were "likely destined to be sold by the Catawba as forced laborers."

The four boys became the school's first Native pupils, and the college's published records do not give their names. The Meherrin Nation's account states that the college "resorted to buying their pupils from local Native Americans who captured the boys from other tribes."

The college had twenty Native pupils besides the four captive boys by 1712, a third to a half of all its pupils. Enslaved workers built a building for the Indian school, the Brafferton, finished in 1723. More than 125 Native students from at least 26 nations lived and studied there between 1723 and 1776. They learned reading, writing, arithmetic and the prayers of the Church of England. The published records do not say how many of them died at the school.

The college's leaders bought people too. They paid 150 pounds for a tobacco plantation of 2,119 acres in Virginia in 1718, and 476 pounds more for seventeen enslaved people to work it.

Christopher Dock

Who: A Mennonite schoolmaster in Pennsylvania who wrote the first book about how to teach written in this country.

When and where: Skippack and Salford, Pennsylvania, from no later than 1718 until his death in 1771.

He rewarded good pupils with a penny or a sugar pretzel.

Christopher Dock wrote the first book about how to teach written in this country, and most of it is about how he punished children and how he rewarded them. He was a member of the Mennonite church, a Christian church.

He came to Pennsylvania between 1710 and 1714 and taught on Lenape land. The Lenape homeland covered southeastern Pennsylvania, central and southern New Jersey and Delaware. Between 1682 and 1684 William Penn bought land for his colony from the Lenape, paying at least 1,200 pounds in goods.

Dock opened a school at Skippack no later than 1718. He taught for ten years, then farmed for about ten more. In 1738 he went back to teaching and taught for the last 33 years of his life, running two schools, at Skippack and at Salford, on alternate days.

The book. He finished *Schul-Ordnung*, German for "school management," on August 8, 1750. He did not want it printed while he was alive, and the printer Christopher Saur printed it anyway. Accounts differ on the date. The historian Martin Brumbaugh, who wrote Dock's life in 1908, gives 1769 for the first printing and 1770 for the second, and other reference works give 1770 for the first. It was still being printed in English in the 1900s.

Penny, pretzel, rod. Dock sorted children by what worked on each one. He gave praise to children who wanted it, a penny for hard study to children who wanted money, and a sugar pretzel for good learning to children who wanted sweets. In Brumbaugh's words, "The ill-intentioned,

who were not affected by the promise of a penny or a cooky, he threatened with whipping," which means hitting a child again and again with a whip, a rod or a strap.

Brumbaugh names the rod: "With some he had to use the rod." When a child failed at a task, Dock would say "I no longer love you," and in Brumbaugh's words the children "wept until he comforted them."

He put a yoke, a wooden frame worn over the neck and shoulders, on a child who swore, and he made some children sit alone. Dock was milder than the schoolmasters around him, and he still used whipping and the threat of it.

One evening in the autumn of 1771 Dock did not come home from school at the usual time. In Brumbaugh's account, people went to look for him, and "he was found in his schoolroom on his knees," dead.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 12 MINUTES

The men who founded the United States argued that the new country needed schools, and they mostly did not pay for them. Thomas Jefferson wrote a plan for public schools in Virginia, and Virginia's lawmakers never passed it. The new schools of these fifty years included private academies, the first school for girls with a charter from a government, church charity schools, and a charity school and a college meant for Native students.

At a charity school in Williamsburg, Virginia, enslaved and free Black children learned to read, and their schoolhouse still stands.

Jefferson's plan, and who was left out

Thomas Jefferson wrote "A Bill for the More General Diffusion (spreading) of Knowledge." It went to the Virginia House of Delegates, the lower house of the state's lawmakers, on June 18, 1779. Jefferson described the plan in his book *Notes on the State of Virginia*.

The plan. Each county would be divided into districts five or six miles square, called hundreds, with a school in each one. Every free family could send its children for three years free, and longer if they paid. The district schools would teach reading, writing and arithmetic. Above them, grammar schools would teach Greek, Latin, geography and harder arithmetic.

Jefferson set out how poor boys would be chosen for more schooling. Each year, officials called visitors would "chuse (choose) the boy, of best genius (ability) in the school, of those whose parents are too poor to give them further education." In this way, he wrote, "twenty of the best geniusses will be raked from the rubbish annually (each year)." By the rubbish he meant the children of poor families.

Who was left out. The plan in *Notes on the State of Virginia* does not mention girls, and every reference in it is to boys. Enslaved children are not in it either, because it was a plan for free children only.

Virginia's lawmakers never passed the bill. James Madison brought it forward again while Jefferson was in Paris, and it failed again. In 1796 the lawmakers passed a much-changed version, an "Act to Establish Public Schools." Under that act the men who sat on each county's court chose whether to open schools, and in most counties they did nothing.

The Land Ordinance of 1785: school money from Native land

Members of Congress set aside land to pay for public schools in 1785. US commissioners had taken that land from Native nations by a treaty that the Shawnee and other nations refused to accept. The members passed the law, called the Land Ordinance, on May 20, 1785.

Under the Land Ordinance, surveyors were to cut the western land into townships six miles square, each split into 36 numbered sections of one square mile. The law states: "There shall be reserved the lot N 16, of every township, for the maintenance of public schools, within the said township."

Section 16 sat near the middle of each township. Under the law it was not to be sold to a settler, and the money it earned was to pay for a school. US officials sold the rest of the land to settlers.

Whose land. The first land surveyed under the Ordinance was in what is now eastern Ohio, where Wyandot, Lenape, Ojibwe, Odawa and Shawnee people lived. At Fort McIntosh on January 21, 1785, US commissioners signed a treaty with Wyandot, Lenape, Ojibwe and Odawa leaders. The commissioners' terms stated that most of the Ohio nations had to stay inside a reserve, an area set aside for them, between the Cuyahoga and Maumee rivers. Surveyors began measuring the land in September 1785, guarded by troops from Fort McIntosh.

George Knepper, an Ohio historian, writes that the Ohio nations, especially the Shawnee, refused to obey the treaty. In his words, it had been "negotiated under duress by minor tribal chiefs who lacked authority to speak for their people and for other tribes." He means that the treaty was worked out under threat or pressure, with lesser leaders who had no right to speak for everyone else.

The academies

Franklin's academy, the Academy and Charity School of Philadelphia, opened in 1751. Thomas and Richard Penn, the owners of the colony, granted it a charter in 1753, and the College of Philadelphia was chartered two years later.

Samuel Phillips founded Phillips Academy at Andover, Massachusetts, on April 25, 1778, and it opened five days later. Paul Revere cut its seal. John and Elizabeth Phillips signed the papers founding Phillips Exeter Academy in New Hampshire on April 3, 1781. That school opened on May 1, 1783, with one teacher and 56 students.

Girls' academies, and the first with a charter

John Poor founded the Young Ladies' Academy of Philadelphia on June 4, 1787. Officials of the state of Pennsylvania granted the school a charter on January 7, 1792, which made it the first school for the higher education of women in the country to be recognized by a government. Benjamin Rush was among the men who backed it.

Its pupils studied reading, writing, English grammar, mathematics, geography, composition, chemistry and natural philosophy, the old name for physics and the other sciences of how nature works.

Litchfield. Sarah Pierce, born in 1767, opened the Litchfield Female Academy in Connecticut in 1792 and ran it for 41 years. More than 2,000 girls attended over about 30 of those years, from 17 states and territories and from Canada and the West Indies. Researchers at the Litchfield Historical Society have found 1,848 of them by name.

More than 8 in 10 of the girls came from other towns and boarded with Litchfield families. They studied history, geography, arithmetic and composition, and later Latin, logic and natural philosophy. Girls who finished the whole course received diplomas.

Sarah Pierce took up an argument made after the Revolution: that mothers gave children their first moral training and their first lessons, and that the new country depended on it. In this argument, girls needed schooling because

of the children they would raise. Pierce herself believed girls and boys were equally able. She did not argue that women should enter the men's colleges or professions.

The Williamsburg Bray School, 1760 to 1774

Enslaved and free Black children in Williamsburg, Virginia, learned to read at a charity school from 1760 to 1774, and the men who paid for it meant to teach them to accept slavery as God's will. William & Mary's own account states that the school's "faith-based curriculum justified slavery," the curriculum being the set of lessons the school taught.

The Associates of Dr. Bray, a church charity in London, set up the school on Benjamin Franklin's advice. Thomas Dawson, the president of the College of William & Mary, backed it. One teacher, Ann Wager, taught there for all fourteen years.

The pupils were three to ten years old, and thirty or more might crowd into the room on an ordinary day. They learned to spell and to read aloud clearly. They worked up through *The Child's First Book*, the Psalms, which are the songs of the Bible, the New Testament, the Book of Common Prayer, which was the Church of England's prayer book, and the Bible.

Lessons began with the pupils reciting from memory the Apostles' Creed, a short statement of Christian belief, the Lord's Prayer and the catechism. Girls were also taught to sew.

How many pupils. The count is not settled. Colonial Williamsburg's history of the school states that "hundreds of students attended." William & Mary's Bray School Lab states 300 to 400, and an Encyclopedia Virginia article states about 200. The names of more than 80 pupils survive on three school lists, from 1762, 1765 and 1769. One of them is a child named Locust, sent by the Armistead family, who enslaved people near Williamsburg.

The school closed in 1774, when Ann Wager died. A second Bray school, at Fredericksburg, Virginia, ran from 1765 to about 1769 under the merchant Fielding Lewis, with 40 to 50 pupils. It closed because fewer pupils came and local enslavers opposed it.

The schoolhouse. The Williamsburg schoolhouse still stands. Researchers at Colonial Williamsburg and William & Mary confirmed in 2020 that a building on the William & Mary campus, later a private home and then student housing, was the one where the school began. The school met there from 1760 until 1765, when it moved to a larger building.

The house was moved to Colonial Williamsburg on February 10, 2023. William & Mary's Bray School Lab and *Smithsonian* magazine describe it as the oldest surviving schoolhouse for Black children in the United States.

Ann Wager

Who: The only teacher the Williamsburg Bray School ever had, and the teacher of a boy who later ran away from the man who claimed to own him.
When and where: Williamsburg, Virginia, 1760 to 1774.

She earned 20 pounds a year, about a skilled worker's pay.

Ann Wager's husband, William Wager, died in 1748, and she began teaching to support herself. She was born in about 1716, so she was about 44 when the Bray School opened.

Her rent was paid on top of her 20 pounds a year. Colonial Williamsburg's history of the school describes that pay as "roughly equivalent to a journeyman worker's yearly wage," the wage of a skilled worker who had finished an apprenticeship. She died on August 20, 1774.

Isaac Bee. One of her pupils on the 1765 list was Isaac Bee, the runaway named in the chapter opening. In the summer of 1774, at eighteen or nineteen, he ran away from Lewis Burwell, the man who claimed to own him. Burwell placed an advertisement in the *Virginia Gazette* that September. He wrote that Isaac Bee believed he had a right to be free, because his father was a free man.

Burwell offered a reward of 40 shillings, a shilling being one twentieth of a pound, for Isaac Bee's return. He warned that Isaac Bee could read, and that "he may easily get some One to forge a Pass for him." Bray School

researchers at William & Mary matched the runaway to the pupil on the 1765 list.

NOT KNOWN: whether Isaac Bee was caught, or what became of him. The Associated Press report on the researchers' work does not say.

Georgia copies South Carolina's ban

The members of Georgia's colonial House of Assembly passed the colony's first slave code, a set of laws for controlling enslaved people, in 1755. Following South Carolina's act of 1740, they made it a crime to teach an enslaved person to write, or to use one as a scribe. The members passed another slave law in 1770. The records disagree on whether the 1770 law also banned teaching enslaved people to read, or whether that ban came only in 1829.

Moor's school, Samson Occom and Dartmouth

Eleazar Wheelock, a Connecticut minister, opened Moor's Indian Charity School at Lebanon, Connecticut, for Native students in 1754, and from 1761 he took girls as well. Students past and present complained that Wheelock made the Native students do more manual labor, hard work with the hands, than was fair. He quarreled with many of his best students, including Samson Occom, a Mohegan man who had been one of his pupils.

Oneida families took all their children out of the school in 1769. The Dartmouth scholars who edit Wheelock's papers write that the Oneida acted "perhaps due to concerns about corporal punishment," which means hitting a child as a punishment.

The money Occom raised. Occom preached across England and Scotland from 1766 to 1768 to raise money for the school, and he raised 12,026 pounds. Wheelock used the money to start a college in New Hampshire instead. The royal governor of New Hampshire, John Wentworth, signed Dartmouth College's charter in 1769.

The charter stated its purpose as "the education and instruction of youth of the Indian tribes in this land," for "civilizing and christianizing children of pagans," meaning people who were not Christian. Only two Native students went with Wheelock to New Hampshire. Occom never set foot on the campus of the college his tour paid for. About 75 Native students enrolled at Dartmouth before 1972.

Wheelock enslaved people. Dartmouth's own researchers have found papers naming at least seventeen people he enslaved, among them Exeter, Chloe, Hercules, Peggy and Caesar. His papers record that between 1743 and 1769 he bought six men and two women.

Noah Webster

Who: A schoolteacher who wrote the spelling book American children learned from for more than a hundred years, and later a dictionary.
When and where: Born in West Hartford, Connecticut, on October 16, 1758. Died in New Haven on May 28, 1843.

By one count his spelling book sold 60 million copies by 1890.

Noah Webster wrote the spelling book that American children learned from for more than a hundred years. He grew up in the part of Hartford, Connecticut, that is now West Hartford, and finished Yale in 1778.

He taught school in Glastonbury, Hartford and West Hartford, and in 1782 in Goshen, New York. He believed the new country needed its own schoolbooks and one settled way of spelling to hold it together.

The Blue-Backed Speller. He published the first part of *A Grammatical Institute of the English Language* in 1783, and people called it the Blue-Backed Speller. In it Webster kept most spellings as they were. Earlier dictionaries had used some newer spellings only part of the time, and Webster used them every time.

Families and schools used the speller from 1783 into the early 1900s. By one estimate it had sold 15 million copies by 1837 and about 60 million by 1890. Other estimates run as high as 100 million copies in all. Nobody

> kept an exact count.

Teaching as a job

Some men taught for a few years on the way to other work. Noah Webster taught in four schools in about four years on his way to law and writing. Others made teaching their life's work: Ezekiel Cheever taught for 70 years and Christopher Dock for more than 40.

NOT KNOWN: which pattern was more common. No count of teachers from the 1700s is known.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 24 MINUTES

The free public school began as an argument in Massachusetts. Horace Mann made it there for eleven years: schools free to every family, paid for by taxes, with trained teachers. The first school paid for by a state to train teachers opened in 1839. School board members hired more and more women to teach, because they could pay a woman far less than a man. In Massachusetts in 1838 a woman teacher earned $6.49 a month and a man $23.10. Deaf children and blind children got schools of their own.

In the South, lawmakers made it a crime to teach an enslaved person to read. In North Carolina, Georgia and Virginia they wrote whipping into the punishment for Black people who broke these laws. In Boston, school officials kept a five-year-old Black girl out of the school nearest her home, and judges on the state's highest court ruled that the city could keep her out.

Horace Mann and the common school

Massachusetts lawmakers set up a state Board of Education in 1837 to look after the common schools. A common school was meant for all the children of a town and paid for by the town's taxes instead of fees from parents. Horace Mann, a lawyer and state senator, became the board's first secretary. Under the law the board's members could not make any town do anything. Mann's job was to gather facts, write reports and argue, and he did it for eleven years, until 1848.

Mann wrote twelve yearly reports, and in 1838 he started a magazine, the *Common School Journal*. He made the same three arguments again and again. Every child had a right to an education. Taxes on everyone should pay for schools, instead of fees charged to parents. Teachers should be trained before they taught.

Free for whom. The free school Mann argued for was in practice a school for white children. While he was secretary, Boston's school officials ran separate schools for Black children. Two years after he left the board, Chief Justice Lemuel Shaw of the state's highest court ruled that the city could keep them separate.

Horace Mann

Who: The first secretary of the Massachusetts Board of Education, who argued that schools should be free and paid for by taxes.

When and where: Born in Franklin, Massachusetts, on May 4, 1796. Died in 1859.

As a boy he got about ten weeks of school a year.

Horace Mann had very little school in his own boyhood. He grew up in a poor farming family in Franklin, Massachusetts. His father died when he was thirteen, and he braided straw for the hat-makers of Franklin to earn money.

Until he was about fifteen he spent no more than about ten weeks a year in school. A different retelling of his own memories puts it at no more than six weeks a year between the ages of ten and twenty.

A traveling teacher named Barrett taught him Latin and Greek, and he got into Brown University, where he graduated first in his class in 1819. He became a lawyer, then a member of the Massachusetts House of Representatives from 1827 and of the state Senate from 1835, where he became president of the Senate.

Europe. In 1843, as the board's secretary, he visited schools in Prussia and Saxony, two German states, and in Holland. He wrote about that trip in his seventh report, and thirty-one schoolmasters of Boston attacked it in print.

Voters elected him to the US House of Representatives in 1848, to the seat left empty when John Quincy Adams died, and there he spoke against slavery and against letting it spread. In 1853 he became the first president of Antioch College, in Yellow Springs, Ohio. He died in 1859.

The one-room school and the school day

A country school of these years had one room and one teacher. Pupils of every age, from small children to nearly grown young men and women, sat together. A wood stove stood in the middle of the room. Children wrote on slates, thin boards of dark stone, with slate pencils, and wiped them clean to use again.

At the front stood a recitation bench. A pupil came up to the bench and said a lesson out loud to the teacher while the others worked at their desks. Many children walked to school.

Two terms. Accounts of country schools from before about 1900 describe a school year of two terms. A summer term, roughly May to August, was for the younger children, and women taught it. A winter term, roughly November to April, was for the older boys, who could be spared from farm work then, and men were often hired for it to keep order. Children stayed home to plant in the spring and to harvest in the autumn.

Part of a teacher's pay was room and meals. The teacher lived in the house of each family in the district in turn, one family after another, through the term. This was called boarding round.

The first school for teachers, 1839

The first school paid for by a state to train teachers opened at Lexington, Massachusetts, on July 3, 1839, and three students came on the first day. Schools like it were called normal schools, from the French *école normale*, a school that taught the norms, or rules, of teaching. The principal was Cyrus Peirce, a minister whom Horace Mann had persuaded to come from Nantucket. By 1842 the school had 42 students. It moved twice and is now Framingham State University.

Members of the Massachusetts Board of Education set the entry rules for the state's normal schools. A man had to be at least 17 years old and a woman at least 16. Every student had to pass a test in spelling, geography and arithmetic. The course lasted one year and was free to a student who promised to teach in the state's schools.

Mary Elizabeth Miles graduated from the Lexington normal school in 1843, the first African American to graduate from any public teachers college in the United States. She married Henry Bibb, a man who had escaped slavery, and worked with him in Ontario, in Canada, in the movement to end slavery.

Mary Swift

Who: A seventeen-year-old in the first class of the first state school for teachers in America. She kept a journal of it.

When and where: Born in Nantucket, Massachusetts, on June 22, 1822. Died in Cambridge, Massachusetts, on March 2, 1909.

At seventeen she kept a journal of the first teachers' school.

Mary Swift was one of the first people in America trained at a state school for teachers, and her journal of it survives. She entered the new normal school at Lexington in 1839, three weeks after her seventeenth birthday. Her class graduated on April 4, 1840.

She wrote in her journal through the school's first term. The principal, Cyrus Peirce, kept a journal of the same days. Both survive, and in 1926 they were printed together as one book, *The First State Normal School in America: The Journals of Cyrus Peirce and Mary Swift*.

Laura Bridgman. She became the teacher of Laura Bridgman, a deaf and blind girl at the Perkins Institution in Boston, in 1841. Swift spoke to her by spelling words letter by letter into her hand, and she kept the job until she married Edwin Lamson in 1846.

Mary Swift's book about Laura Bridgman came out in 1878. She built it mostly from the journals that Bridgman's teachers had kept. It was called *Life and Education of Laura Dewey Bridgman, the Deaf, Dumb, and Blind Girl*, and in that title "dumb" meant unable to speak.

Why school boards hired women

Members of school boards hired women because they could pay them far less. School journals of the time printed the monthly wages, and a teacher usually got her room and meals on top of the wage.

The pay in 1838. In Massachusetts, where 3,826 women and 2,411 men taught, men were paid $23.10 a month and women $6.49, less than a third as much. In Connecticut women got less than half what men got. The gap was smallest in Pennsylvania, where many more men than women taught.

The officials who made the savings said so in writing. Samuel Lewis, the Superintendent of Common Schools, the official in charge of Ohio's common schools, wrote in his report of 1839 that counties that hired women "are able to do twice as much with the same money."

Lewis went on: "As the business of teaching is made more respectable, more females engage in it, and the wages are reduced." In his fourth report, in 1841, Horace Mann welcomed the "change . . . rapidly taking place" in the hiring of women teachers.

Catharine Beecher

Who: She ran a school for girls, then spent decades arguing that teaching was women's work.

When and where: Born in East Hampton, New York, on September 6, 1800. Died in Elmira, New York, in 1878.

By 1857 her board's own reports counted 452 teachers sent out.

Catharine Beecher spent decades arguing that teaching was women's work, and she helped send hundreds of women out to teach. She was the eldest child of the preacher Lyman Beecher and a sister of Harriet Beecher Stowe. In 1822 the man she was engaged to marry, a Yale mathematics professor named Alexander Metcalf Fisher, drowned when the ship *Albion* wrecked off the coast of Ireland. She never married, and she went into teaching.

Hartford. Accounts differ on when she opened the Hartford Female Seminary in Hartford, Connecticut. Two of them, one from the National Women's History Museum, give May 20, 1823, and say she opened it with her sister Mary. A third gives 1824 and her sister Isabella.

The girls there studied geography, world history, Latin, rhetoric, philosophy and the sciences, while most girls' schools of the time taught manners and fine arts. Within three years the school had 100 full-time pupils. In 1831 she moved west and opened the Western Female Institute in Cincinnati. It ran out of money after a money crisis called the Panic of 1837.

The salt. She published *An Essay on the Education of Female Teachers* in 1835. In it she argued that teaching was part of a mother's work and that women were the right people to raise the next generation. If the country's leading women became "refined, well educated, pious (devoted to religion) and active," she wrote, "the salt is scattered through the land to purify and save." By the salt she meant women like these, spread across the country as teachers.

She founded the Board of National Popular Education in 1847. Its members trained women in Hartford and sent them to teach in the West and the South. In 1852 she founded the American Woman's Educational Association, and by 1857 the board's own reports counted 452 teachers sent.

She opposed giving women the vote. She believed a woman's proper places were the home and the schoolroom.

Hitting children, and an argument about it

Horace Mann argued in his seventh report, in 1843, against beating children as the ordinary way to keep order in a classroom. He argued for teaching reading by whole words, instead of letter by letter, too.

The schoolmasters answer. Thirty-one Boston schoolmasters answered him in print in 1844, in a pamphlet called *Remarks on the Seventh Annual Report of the Hon. Horace Mann*. They attacked his plan to train teachers, and they defended beating. Mann answered them in a second pamphlet that same year, and in 1845 they answered him again. All three pamphlets survive, and the Library of Congress holds copies.

A novel of the time describes the tools of punishment in a village schoolroom. In *The Old Curiosity Shop*, which the English writer Charles Dickens published in 1840 and 1841, a cane and a ruler hang on hooks on the schoolroom wall, and on a shelf sits "the dunce's cap, made of old newspapers," a pointed paper hat that a teacher made a pupil wear to shame him. Nobody counted how often American teachers made a pupil wear one.

BY 1845: Massachusetts had a state Board of Education, a state school for teachers, and more women teachers than men, paid less than a third as much. Horace Mann and thirty-one Boston schoolmasters had argued in print over whether teachers should beat children.

The books children learned from

William Holmes McGuffey taught at Miami University in Ohio from 1826 to 1836. A Cincinnati publishing firm, Truman and Smith, paid him to make a set of reading books, the *Eclectic Readers*, eclectic meaning chosen from many sources. The First and Second came out in 1836, the Third and Fourth in 1837, the Fifth in 1844 and the Sixth in 1857.

The readers mixed proverbs, grammar and passages from Shakespeare with lessons about patriotism, religion, good behavior, games and sports. Librarians at Miami University keep more than 300 editions of the readers. They estimate that the readers sold more than 150 million copies over about a hundred years, most of them in the Midwest.

Children still learned spelling from Noah Webster's speller. In 1828 Webster published *An American Dictionary of the English Language*, with 70,000 words, their meanings and where they came from. A set cost $20.

Schools for deaf children and blind children

Dr. Mason Fitch Cogswell and other Hartford men asked Thomas Hopkins Gallaudet in 1815 to go to Europe and learn how teachers there taught deaf children. In Paris he studied at a school for the deaf, and he came back with Laurent Clerc, a deaf French teacher.

The school in Hartford. With Cogswell and ten other Hartford men behind them, Gallaudet and Clerc opened the American School for the Deaf in Hartford, Connecticut, on April 15, 1817. The first classes met in a hotel building, with seven full-time pupils, among them Cogswell's deaf daughter, Alice. Lessons were in sign language, a language made with the hands.

Connecticut's lawmakers voted the school a yearly grant of money in 1819, which the school's own history describes as the first state aid to a school in America. In 1820 members of Congress gave the school land in the Alabama Territory.

The school in Boston. Dr. John Dix Fisher founded the first school for blind children in the United States, in Boston, on March 2, 1829, after he saw a school for blind children in Paris. It took no pupils for three more years.

Samuel Gridley Howe became its first director in 1831, and in 1832 the school opened in the house of Howe's father, with six pupils. In 1839 Thomas Handasyd Perkins gave money for a larger building, and the school was named for him. It is Perkins School for the Blind now.

Laura Bridgman was born in Hanover, New Hampshire, on December 21, 1829. When she was two, scarlet fever, a disease that causes a high fever and a rash, left her deaf and blind.

She came to the Boston school on October 12, 1837, two months before her eighth birthday. Howe taught her by touch, giving her raised letters and objects together, again and again. After about two months she understood that the letters stood for the things. She was the first deaf and blind person in the United States to receive a formal education.

A Catholic school system begins

In the public schools of Philadelphia, the school day began with a reading aloud from the King James Bible, the Bible used by Protestants. Catholics used a different English Bible, the Douay-Rheims. In New York, Catholic families said the public schools were Protestant schools that mocked their religion.

The first free Catholic school in the country was older than this fight. In 1810 Elizabeth Ann Seton and her Sisters of Charity, a group of Catholic nuns, opened Saint Joseph's Academy and Free School at Emmitsburg, Maryland. They taught the poor girls of the parish, the area served by their church, for no charge.

New York. In New York City a private group called the Public School Society ran the public schools with state money. John Hughes challenged the Society in June 1840. He was a Catholic bishop in New York, a church leader in charge of the priests and churches of a whole area. Governor William Seward suggested that Catholics ask for a share of the school money, and New York Catholics asked for it, to run schools of their own.

State lawmakers shut down the Society in April 1842. They put elected school boards in its place and banned religious teaching in public schools, which was not what Hughes had asked for. During the fight someone threw stones at

Hughes's house. Protestants still controlled the elected boards, and Hughes set out to build a separate system of Catholic schools instead.

Philadelphia. In Philadelphia the fight ended in killings. Bishop Francis Patrick Kenrick asked the city's Board of Controllers of Public Schools in 1842 to let Catholic children read their church's Bible, and he objected that Catholic children had to sing Protestant hymns in school. In February 1844 a school director in Kensington, Hugh Clark, suggested stopping the Bible readings until the board could agree on a rule. A rumor spread that he had ordered the Bible out of the schools.

Nativists, people who opposed immigrants, held a meeting in Kensington on May 6, 1844, and a fight began. George Shiffler, a young nativist, was shot dead. The Encyclopedia of Greater Philadelphia's account of the riots does not say who shot him. By the end of the day a second man had been killed, and that account says he was apparently only watching. Several more people were wounded, and two of them later died.

Mobs burned houses on May 8, along with a Catholic seminary, which is a school for priests, and two Catholic churches, St. Michael's and St. Augustine's. Hugh Clark's house was among the houses burned. The Encyclopedia of Greater Philadelphia does not name the people in the mobs.

Southwark. A Catholic priest's brother stored guns in the basement of the Church of St. Philip Neri, in Southwark, in July. Crowds gathered and demanded the guns, and the sheriff called in the militia, the state's citizen soldiers.

The crowd and the militia fought each other with guns from July 5 to 7. At least two people in the crowd were killed at once. By the next morning four militiamen and probably about a dozen people in the crowd were dead. Counts that add up the dead from May and July put the total at about twenty or more.

Teaching an enslaved person to read becomes a crime

Lawmakers in six Southern states made it a crime to teach enslaved people to read between 1819 and 1834: Virginia, North Carolina, Georgia, Louisiana, Alabama and South Carolina. They wrote the punishments into the laws. South Carolina's law of 1740 had banned only the teaching of writing. The new laws banned reading too, and some reached free Black people as well.

Virginia. Virginia's lawmakers widened their laws in three steps. On January 24, 1804, they barred enslaved people from meeting at night at churches, meetinghouses or anywhere else. On March 2, 1819, they banned enslaved people from "any school or schools for teaching them reading or writing, either in the day or night."

A third law, passed on April 7, 1831, reached free Black people too: "All meetings of free negroes or mulattoes, at any school house…for teaching them reading or writing…shall be considered as an unlawful assembly." That meant a meeting the law banned, which officials could break up. Negro was a word used then for a Black person, and mulatto for a person with one Black parent and one white parent.

Under that law, any judge or justice of the peace, a local judge, could break up a school for free Black people and order up to twenty lashes for each person caught there. A whipping under these laws meant lashes, single blows, across the bare back with a leather whip or a switch, a thin stick cut from a tree, hard enough to break the skin. A white person found guilty of teaching Black people to read or write was fined $50 and could be jailed for two months. Teaching an enslaved person carried a fine of $10 to $100.

North Carolina. North Carolina's lawmakers passed their law in the session of 1830 and 1831. Its opening words give their reason: teaching enslaved people to read and write "has a tendency to excite dissatisfaction in their minds, and to produce insurrection and rebellion," meaning armed uprising. The law set the punishments by who the teacher was:

- A white person who taught an enslaved person to read or write was fined between $100 and $200, or jailed.

- A free Black person who did it could be whipped, with no fewer than 20 and no more than 39 lashes, or else fined or jailed, as the court chose.
- An enslaved person who taught another enslaved person got 39 lashes on the bare back.

Thirty-nine was the usual highest number of lashes in Southern law. Under the same North Carolina law, judges had to instruct grand juries, the groups of citizens who decide whether a person should be charged with a crime, to enforce it.

The other states. Lawmakers in the other four states wrote their own laws:

- Georgia, 1829: a Black person who taught another to read or write was fined and whipped, and a white person was fined up to $500 and could be jailed.
- Louisiana, 1830: anyone who taught an enslaved person to read or write could be sent to prison for one to twelve months.
- Alabama, 1832: anyone who taught any Black person, enslaved or free, was fined $250 to $500.
- South Carolina, 1834: lawmakers widened their law of 1740 from writing to reading as well, and barred Black people from working as clerks or salesmen in shops.

Only the North Carolina, Georgia and Virginia laws set the whip, and only for Black people. Louisiana's and Alabama's laws set the same prison term or fine for every teacher, whatever the teacher's race.

Walker and Turner. Two events fell in the middle of these years. David Walker, a free Black man from North Carolina who ran a used-clothing store in Boston, published his *Appeal to the Coloured Citizens of the World* in 1829. In it he urged Black people to resist slavery, and sailors carried copies into the South.

Nat Turner, an enslaved preacher, led a revolt of enslaved people in Southampton County, Virginia, in August 1831. They killed at least 55 white people. Afterward, militias and other armed white men killed more than 100

Black people, and some estimates run to 200. Many of them had no part in the revolt. A county court led by Judge Jeremiah Cobb sentenced Turner to death, and the sheriff hanged him in Jerusalem, Virginia, on November 11, 1831.

Virginia's laws of 1804 and 1819 came before both events. Every law after them came after Walker's *Appeal*, and Alabama's and South Carolina's came after Turner's revolt too.

Enslaved people learned to read anyway. About 5 percent of enslaved people in Virginia could read by 1775. In the decades before the Civil War, while these laws were in force, the share doubled to about 10 percent.

Federal money for schooling Native children, from 1819

Federal officials began paying for the schooling of Native children in 1819. Members of Congress passed the Civilization Fund Act on March 3 of that year. Under it they set aside $10,000 a year to hire people to teach Native nations farming and to teach their children "reading, writing, and arithmetic." The law states its purpose as "providing against the further decline and final extinction (dying out completely) of the Indian tribes" and "introducing among them the habits and arts of civilization."

Government officials gave much of the money to churches and other religious groups. Lawmakers in Congress kept paying into the fund until 1873. In a report published in 2022, investigators for the US Department of the Interior date the start of the federal Indian boarding school system to 1819.

The Choctaw Academy. The Choctaw Academy in Kentucky was one of these schools. It opened in November 1825 on the farm of Richard Mentor Johnson, a US senator who later became Vice President, and twenty-one Choctaw boys came first. Its first head was a Baptist minister, Thomas Henderson.

The Choctaw Nation's own money paid for it. Under a treaty of 1825, a written agreement between the United States and the Choctaw Nation, the US government owed the Choctaw $6,000 a year for schooling, and that money went to Johnson's school. Choctaw leaders tried to break with the academy and take back control of the money in 1829 and again in 1833. They failed.

More than 600 students from 17 Native nations went to the Choctaw Academy. Johnson enslaved at least sixty people. Among them were Julia Chinn and the two daughters she had with him, Adaline and Imogene. By law he owned Chinn, and she could not refuse him. Enslaved people did most of the farming, building and cleaning at the school.

Inspectors who visited in 1840 "confirmed the many complaints of poor living conditions, inadequate (not good enough) education, food, and clothing, as well as forced manual labor." In 1842 the Choctaw leader Peter Pitchlynn took every Choctaw student out of the school. The last thirteen Chickasaw students left in 1848.

A school open to Black and white students dragged away: Canaan, 1835

Men in Canaan, New Hampshire, drove Black students out of their school in 1835. Noyes Academy in Canaan had opened in March of that year with 28 white students and 14 Black students, after its trustees, the people in charge of the school, voted in 1834 to admit students of every race. The Black students included Henry Highland Garnet, Alexander Crummell, Thomas S. Sidney and Julia Williams.

The oxen. The voters at a Canaan town meeting declared the school a public nuisance, meaning a harm to the town, in July 1835. On August 10, men from Canaan and the towns around it hitched teams of oxen to the school building with chains. They pulled it off its foundation and dragged it down the road. The town's own history says it took two days, and the building ended as a heap near the meeting house.

One account counts about seventy-five men and nearly a hundred oxen. Another gives a hundred yoke of oxen, a yoke being a pair of oxen joined by a wooden frame, so a hundred yoke would be two hundred animals.

Garnet fired a shotgun from a window, and the crowd drew back. The townspeople drove the Black students out of Canaan, and no record shows that anyone was ever punished for it. Garnet, Crummell and Sidney went on to study at the Oneida Institute, near Utica, New York.

Sarah Roberts

Who: A five-year-old Black girl put out of the Boston school nearest her home. Her father sued the city.

When and where: Boston, Massachusetts, 1848 to 1850.

To reach her school she had to walk past five others.

Sarah Roberts was five years old when members of Boston's school committee kept her out of the school nearest her home, because she was Black. She lived on Andover Street. The school city officials let her attend was the Abiel Smith School, the school for Black children, and to get there she walked past five schools for white children.

Her father, Benjamin F. Roberts, asked the Boston Primary School Committee four times to let her into the nearest school, and each time the committee members refused. In 1848 he sent her to the nearest school anyway, and she was put out of it. The National Park Service's account of the case does not name the person who put her out.

The lawsuit. He sued the city under a Massachusetts law of 1845. That law let a child who had been wrongly shut out of a public school claim damages, a payment of money for the harm.

Her lawyers were Charles Sumner and Robert Morris, who was twenty-five and one of the first Black lawyers in the United States. The judges of the Massachusetts Supreme Judicial Court, the state's highest court, heard the case in 1849.

Chief Justice Lemuel Shaw ruled for the city in 1850. He wrote that the school committee "have come to the conclusion, that the good of both classes of school will be best promoted, by maintaining the separate primary schools for colored and for white children," colored being a word used then for Black people.

Black Bostonians kept up the fight. In 1855 Massachusetts lawmakers outlawed separate public schools by race.

BY 1850

If you remember one thing: Horace Mann made the case for free schools paid for by taxes in these fifty years, while Southern lawmakers made it a crime to teach enslaved people to read.

- 1830 to 1831: North Carolina's lawmakers set 39 lashes on the bare back for an enslaved person who teaches another to read.
- 1837: Massachusetts lawmakers set up a state Board of Education, and Horace Mann begins eleven years of arguing for free schools paid for by taxes.
- 1839: the first state school for teachers opens at Lexington, Massachusetts.

Next: After 1850, state lawmakers began to make children go to school, and after the Civil War freed people built schools of their own.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 31 MINUTES

State lawmakers began to order children to go to school, starting with Massachusetts in 1852, and school became a legal duty. Lawmakers in Congress gave states public land, which the United States had taken from Native nations, to found colleges.

Nearly four million people had been enslaved in 1860. Once freed, they built schools, and by 1869 they paid for all or part of 1,094 of them, by the count of a federal inspector. White men burned some of those schools, whipped their teachers and killed at least one teacher, and the same inspector wrote that down too. Southern lawmakers made separate schools for Black and white children the law, and the justices of the Supreme Court let it stand.

Federal officials began sending Native children to boarding schools far from home in 1879, where staff cut their hair, took their clothes and forbade their languages. More than 180 children died at Carlisle, the first federal boarding school built away from the reservations, the lands set aside for Native nations.

When school became the law

Massachusetts lawmakers passed the first compulsory attendance law, a law that requires children to go to school, in 1852. It covered children from 8 to 14 years old. Each child had to attend at least twelve weeks a year, six of them in a row. By 1900, 32 states had such a law, and by 1918 every state had one. Mississippi was the last. How strictly officials enforced the early laws is not known.

Colleges built with Native land: the Morrill Acts

The 1862 law. Under the Morrill Act, which became law on July 2, 1862, each state received 30,000 acres of public land for each of its senators and representatives in Congress. State officials sold the land and used the money to found colleges that taught agriculture and the mechanic arts, meaning engineering and machine work. These were called land-grant colleges, and at them the children of farmers and working people could go to college.

Whose land. The United States had taken the land from Native nations. Two journalists, Robert Lee and Tristan Ahtone, traced it through land records in 2020. By their count it came to about 10.7 million acres, taken from nearly 250 tribes, bands and communities through more than 160 land cessions, agreements in which a nation gave up land. Lee and Ahtone write that these were backed by violence.

US officials paid less than $400,000 for that land. Its sale raised $17.7 million for 52 colleges, more than forty times what the officials had paid.

Members of Congress passed a second Morrill Act in 1890, giving states money instead of land. The law required each state's lawmakers either to admit Black students to the land-grant college the state already had or to set up a separate one for them. Lawmakers in most Southern states set up separate colleges, and some of the historically Black colleges and universities, the colleges first founded for Black students, began that way. Alcorn State University in Mississippi, founded in 1871, is the oldest public historically Black land-grant college.

The schools freed people built

Members of Congress set up the Bureau of Refugees, Freedmen, and Abandoned Lands, called the Freedmen's Bureau, inside the War Department in March 1865. Its officials helped people who had just been freed from slavery. John W. Alvord, its inspector of schools, wrote a report on the schools every six months, from 1866 to 1870.

Freed people paid for many of these schools themselves. In the half year that ended on December 31, 1869, Alvord counted 1,094 schools that freed people "sustained wholly or in part," meaning they paid all or part of the cost. That half year his count reached 210,018 pupils, though a pupil who went to more than one kind of school was counted more than once.

Many children had to pick cotton in the autumn, so many schools did not open until December, and many others ran right through the summer.

Alvord estimated that in its five years the Bureau's schools had given "an elementary education to about one million of pupils." That did not count the parents and other adults who had learned to read at home, many of them from their own children. Bureau officials stopped paying for schools in 1870.

Attacks on the freed people's schools

White men burned freed people's schools, whipped their teachers and killed at least one of them, and Alvord recorded the attacks in his reports. In his report of January 1868 he wrote: "Teachers were proscribed (shut out) and ill-treated, school-houses burned, and threats so strong that many schools could not be opened." In the Oxford district of Mississippi, "A Mr. Borum started a school about twelve miles from this place and it was immediately burned." The report does not say who burned it.

Georgia, 1869. His report of January 1870 names places and people. Late in 1869, bands of "armed and disguised men," which the report calls "K. K. K.," attacked people in county after county in Georgia. K. K. K. stands for the Ku Klux Klan. Men who had fought for the Confederacy, the Southern states that broke away and fought the United States in the Civil War, started the Klan in Pulaski, Tennessee, in December 1865. Its members whipped, burned and murdered freed people and the people who helped them.

At Greensboro, Georgia, men drove the teacher R. H. Gladding out of town. The white man he boarded with was "taken out of his own house in the night and unmercifully whipped." Abram Colby, a Black man who had backed the school and had just been elected as one of the state's lawmakers, "was also taken out of his house and beaten nearly to death." The report does not name the men who did any of this. The mayor told Gladding that the town's officials could not protect him.

Tennessee and Delaware. In Dresden, Tennessee, two students from Fisk University ran a school of about fifty children. On the night of September 2, 1869, "men masked and armed" took them from their boarding house into the woods. The men "severely whipped" them and told them to stop teaching and leave or be killed. The report states that local officials were told about it and "nothing was done in the matter."

At Slaughter Neck, Delaware, drunken white men burned the school. The report states that the evidence was given to the state's attorney and the governor was told, "yet nothing was done to bring the parties to justice." It

does not say who gave the evidence. Black families there rebuilt the school with help from a Delaware charity and some Bureau money.

Memphis and Cross Plains. White mobs and police in Memphis, Tennessee, killed 46 Black people in May 1866. They burned every Black church and school in the city, 8 schools in all, by the count of a committee of Congress.

Members of the Ku Klux Klan lynched William Luke, killing him without any trial, at Cross Plains, Alabama, on July 11, 1870. Luke was a preacher from Flesherton, Ontario, in Canada, who taught freed people for Talladega College. The Klansmen killed Black men with him. One count gives six dead in all, and another gives eight.

BY 1870: Freed people had paid for all or part of more than a thousand schools, and the Freedmen's Bureau had stopped paying for any. White men had burned schools, whipped teachers and lynched one, and the Bureau's reports name none of the attackers.

Charlotte Forten

Who: The first Black graduate of the Salem Normal School and the first Black teacher in Beaufort County, South Carolina.

When and where: Born in Philadelphia in 1837. Died in Washington, D.C., on July 23, 1914.

In October 1862 she sailed south to teach freed people.

Charlotte Forten was the first Black teacher in Beaufort County, South Carolina. She grew up in Philadelphia in a well-off Black family that worked to end slavery. Philadelphia's school officials would not take her, so her family had her taught at home by tutors.

Salem. She moved to Salem, Massachusetts, in 1853 to live with the Remond family and go to school there. In 1856 she graduated from the Salem Normal School, its first African American graduate, having studied subjects from algebra and Latin to optics, the science of light. Her principal, Richard Edwards, found her a job at the Epes Grammar School. She became the first African American teacher in Salem's public schools, teaching white children.

In her journal she wrote that her time in Salem was "the happiest of my life." She also wrote: "I wonder that every colored person is not a misanthrope (a person who hates other people). Surely we have everything to make us hate mankind."

St. Helena Island. She sailed to St. Helena Island, off South Carolina, in October 1862, in the middle of the war, to teach at the Penn School with Laura Towne and Ellen Murray. The school had opened that year with 41 pupils, and by 1865 it had 436 pupils in four buildings. She taught there until the war ended and kept a journal the whole time. In May and June 1864 she published an account of it, "Life on the Sea Islands," in the *Atlantic Monthly*, a magazine.

> After the war she taught in Boston and in Charleston, South Carolina. By 1872 she was teaching in Washington, D.C., at the school that became Dunbar High School.

A teacher jailed in Norfolk, 1854

Officials in Norfolk, Virginia, jailed a white teacher in 1854 for teaching free Black children to read. Margaret Douglass, a white woman in Norfolk, and her daughter Rosa opened a school for free Black children in June 1852. A Mr. Robinson, whose two daughters Margaret Douglass had begun to teach, asked her to do it. The Douglasses charged three dollars for each quarter of a year. Twenty-five boys and girls came, and the school ran openly for about eleven months.

The arrest. The city constable, a town officer who kept order and made arrests, came to the house on the morning of May 9, 1853. His name was Cherry, and a second officer, Cox, came with him. Mayor Simon S. Stubbs had sent them. The officers wrote down the name of every child and every parent and marched the two teachers and the children to the mayor's office.

The mayor read out the Virginia law and told them its highest penalty was a fine of one hundred dollars and six months in jail. Those are his figures, as Margaret Douglass later reported them, and they are higher than the fine of $50 and two months in jail that the 1831 law set for a white teacher. A grand jury charged the two women with meeting with Black children "for the purpose of instructing them to read and to write." Rosa left Norfolk for New York before the trial.

The sentence. A jury found Margaret Douglass guilty in November 1853 and set her fine at one dollar. On January 10, 1854, Judge Baker of the Norfolk court added a month in the city jail. He said the jail term was "an example to all others in like cases disposed to offend." She served the month. Afterward she published her own account of the case, with the court papers printed in it.

Separate schools by law, upheld by the courts

After the Civil War, Southern lawmakers wrote the separation of Black and white pupils into law. Tennessee is one example. Its lawmakers passed a school law that separated the races just after the war. The men who wrote the state's new constitution of 1870 forbade mixed schools in it. In 1873 Tennessee's lawmakers wrote the rule out in full: "white and colored persons shall not be taught in the same school, but in separate schools."

North and West. In much of the North, members of city school boards kept Black children apart by their own rules. In San Francisco, school officials opened a separate school for Black children in 1854 and one for Chinese children in 1859. In 1870 they closed the Chinese school, and Chinese American children were left with no public school at all.

Plessy, 1896. The justices of the United States Supreme Court decided *Plessy v. Ferguson*, a case about train cars, in 1896. Louisiana's lawmakers had required railroads in 1890 to seat Black and white passengers in separate cars. Homer Plessy, a shoemaker in New Orleans, sat in a car for white passengers in 1892. He had arranged his arrest ahead of time, to test the law in court.

The justices ruled 7 to 1 that the law was allowed. In their ruling they called separate schools "the most common instance" of lawful separation by race. The first case they cited was Sarah Roberts's case from Boston. They cited state court rulings from Ohio, Missouri, California, Louisiana, New York, Indiana and Kentucky too, and they pointed out that laws passed by Congress required separate schools in Washington, D.C.

Augusta, 1899. The justices refused in 1899 to stop a Georgia school board that had closed a Black high school. The members of the school board of Richmond County, in Augusta, Georgia, had run the Ware High School for Black students since 1880. They closed it on July 10, 1897, saying they needed the money for Black primary schools, and they kept paying for high schools for white students. Three Black parents, J. W. Cumming, James S. Harper and John C. Ladeveze, sued the board and asked the courts to stop it from paying for the white high schools.

Justice John Marshall Harlan wrote the Court's ruling on December 18, 1899. Cutting off the white schools' money, he wrote, "would only be to take from white children educational privileges enjoyed by them, without giving to colored children additional opportunities." He wrote that school funding was "a matter belonging to the respective states." The board won, and the white high schools kept their money. Harlan did not rule on whether separate schools themselves were lawful, because the parents had not asked the Court to.

Women go to college

College leaders began to admit women in these years, and new colleges opened for women only. The University of Iowa's own archive states that it admitted women "on an equal basis with men" beginning in 1860. The University of Michigan and Cornell University took their first women students in 1870. At Cornell the first one, Jennie Spencer, left because there was nowhere near the campus for a woman to live.

Colleges for women. Matthew Vassar founded Vassar College in Poughkeepsie, New York, and it opened in 1865 with 353 students. Wellesley College and Smith College opened in 1875, and Bryn Mawr College in 1885.

Spelman. Sophia B. Packard and Harriet E. Giles, with the pastor Frank Quarles, started a school in the basement of Friendship Baptist Church in Atlanta on April 11, 1881. It had eleven pupils: ten women, some of whom had been enslaved, and one girl. It became Spelman College.

Sex in Education. Some men argued that study would harm women's bodies. Edward H. Clarke, a professor at Harvard Medical School, published *Sex in Education* in 1873. Smith College's own history states that he warned women against studying "in a boy's way." He warned that it could make a woman's womb and ovaries waste away, make her more like a man, leave her unable to have children, drive her insane, or even kill her. Clarke wrote that the results of such study were "monstrous brains and puny bodies."

Mary Putnam Jacobi answered him with evidence. She sent a thousand lists of questions to women and wrote up the answers. Her essay won Harvard's Boylston Prize in 1876, and she was the first woman to win it.

A one-room school, counted: the Freeman School

The Freeman School near Beatrice, Nebraska, was built of brick in 1872 and used as a school until 1967, for 95 years. It had one main room and a coat hall at the front. Eighteen desks stood in three rows that stepped up toward the back. A wood stove stood in the middle of the room, and a recitation bench stood at the front.

Pupils from 4 to 20 years old learned there together, seated by age. The most pupils in any one year was 33, in 1880. From 1882 to 1900 the teacher was paid $32 to $40 a month. Running the school cost $75 in 1872, and in 1873, $27 went for firewood. The building is now part of Homestead National Historical Park.

Beating children, by the rules

Teachers in this era still hit children, and school rules required them to write each beating down. Boston's school rules stated that each teacher had to send in a written report at the end of every month, a "report of all cases in which corporal punishment has been inflicted," corporal punishment meaning an adult hitting a child on purpose, to hurt the child, as a punishment.

The report had to "state the name of the pupil, the amount of punishment, and the reason for its infliction." The chairmen of the district committees then reported the totals every three months, along with the average for each teacher.

Under the same rules, a teacher had to explain the offense to the child first. The blows were to be only "blows on the hand with a rattan," a thin, bendable cane cut from a kind of palm. That limit did not hold when a pupil refused to take the punishment, and the rules did not say what was allowed then.

No teacher was to shut a child "in a closet or wardrobe." A girl in a grammar school, the school that came after primary school, could not be hit without the approval of the master, the head teacher.

New Jersey's lawmakers banned hitting children in the state's public schools in 1867, the first state lawmakers in the country to do it. No other state followed for 104 years, until Massachusetts in 1971.

BY 1899: Southern lawmakers had written separate schools into law, and the justices of the Supreme Court had called them lawful. Women studied at Vassar, Wellesley, Smith and Bryn Mawr. Only New Jersey's lawmakers had banned hitting children in school.

Josephine Foster

Who: A schoolgirl beaten for whispering in class. Her parents charged her teachers with cruelty, and the school committee took no action.

When and where: The Allston Grammar School, Cambridgeport, Massachusetts, June 12, 1866.

She was hit fifteen to twenty times for whispering in class.

A teacher hit Josephine Foster on the hand fifteen to twenty times for whispering and then refusing to be hit. The members of the Cambridge School Committee ordered four thousand copies of their own account of what happened to her printed.

Her trouble began in her writing lesson on the morning of June 12, 1866, when she refused to do what the master, B. W. Roberts, told her. He made her stand in front of the class.

That afternoon, while he was out of the room, an assistant teacher, Sarah M. Gray, caught her whispering and asked what she thought of whispering. Josephine answered "I don't know" in a way the teacher took as defiance. Miss Gray took her and the other girl to the recitation room. She hit the other girl's hand a few times with a rattan and sent her back. Then she told Josephine to hold out her hand. Josephine said, "I won't be whipped."

The ferule. Roberts came back. He would not hit her himself, and said it would be "less humiliating" for her to be hit by a woman teacher. He told Miss Gray to use his ferule instead of the cane. The committee's report describes a ferule as "a flexible instrument, made of two flat pieces of

leather, sewed together, and filled with some soft substance." It adds that the ferule was "a common implement of punishment in schools," in use in several other grammar schools in the city.

Josephine again said she would not be whipped, and she began to scream before anyone hit her. Another teacher, Miss Hodges, held her left hand down while Miss Gray struck her right hand. The screams carried into the schoolroom and set some of the boys laughing.

Roberts ordered the boys to march to piano music, a regular two-minute exercise, and used those two minutes to come into the recitation room. He held her hand himself and told her she would be hit until she stopped crying out. Miss Gray struck five blows while he was there. After he left, Josephine held out her hand herself and took three to five more light blows.

The report states: "In all, from fifteen to twenty blows were inflicted." For four days afterward, her left arm and thumb showed marks from being held. Red marks on her right hand were gone by eight o'clock that evening.

DISPUTED: her age. On one page the report says she was sixteen. On another it says her teachers thought she was "not over thirteen."

The hearing. Her parents, Charles and Elizabeth Foster, wrote to the school committee the next day. They charged all three teachers "for cruelty in punishment inflicted on our daughter," and asked the committee to "have justice done us." The committee members held a hearing on June 21, 1866, and voted, all of them in favor, that "the case does not require any action on the part of this Board."

James Walker and others sent the committee a separate petition, a written request signed by a group of people, asking its members to end the beating of girls. The committee members did not end it.

Teaching becomes mostly women's work

By the time federal officials first counted teachers across the whole country, most of them were already women. In the school year 1869 to 1870 there were about 201,000 public school teachers, 78,000 men and 123,000 women. By 1899 to 1900 there were about 423,000, of whom 127,000 were men and 296,000 women, seven women in every ten teachers.

The change came at different times in different regions. In 1850, 60 percent of teachers in New England were women. In the South the share was 24 percent, and in the Midwest it was 81 percent. The historians Mary Lou Breitborde and Kelly Kolodny write about school superintendents, the officials in charge of a district's schools. In their account, the superintendents were sure they were hiring young women skilled at managing children "at half the price of men."

After Massachusetts, normal schools for training teachers opened in New York and Philadelphia in the 1840s, and then in other states of the Northeast and the Midwest. By 1870 there were 39 normal schools in 18 states, and by 1900 there were 180.

Where the summer break came from

Many people say that schools close in summer so that children could help bring in the harvest. The historian Kenneth Gold, who wrote a history of summer schooling, says the record shows the opposite. A farming district's school year had a short winter term and a short summer term, because farm families needed their children most in the spring planting and the autumn harvest. Those are the months the school year covers now.

City schools stayed open far longer. New York City's schools were open 248 days in 1842, and since nobody had to attend, children came when they could. Across the whole country, the average school term was 132 days in 1869 to 1870, and the average pupil attended 78 of those days. By 1899 to 1900 the average term was 144 days, and the average pupil attended 99.

The middle ground. Late in the 1800s school reformers worked to make the city and country calendars match. They settled on a long summer break as the middle ground between the two. One reason for it was that teachers could be trained during the break.

Catholic schools become a system

The Catholic bishops of the United States met in Baltimore from November 9 to December 7, 1884. Fourteen archbishops came, an archbishop being a bishop who leads the main church area of a region. With them came sixty-one bishops or their representatives and six abbots, the heads of monasteries.

They declared that Catholic schools were an "absolute necessity" and required every pastor, the priest in charge of a local church, to set up a school, free where possible. They ruled: "Parents must send their children to such schools unless the bishop should judge the reason for sending them elsewhere to be sufficient." With that order the bishops set out to build a system of Catholic parish schools beside the public schools.

BY 1900: Seven of every ten public school teachers were women, and the Catholic bishops had required every pastor to set up a school beside the public schools.

Boarding schools for Native children: Carlisle

Federal officials opened a boarding school for Native children at Carlisle, Pennsylvania, far from the children's homes, in 1879. The man who ran it, Richard Henry Pratt, set out to wipe out the children's languages and ways of life. Speaking in Denver in 1892, he described the aim in his own words: "that all the Indian there is in the race should be dead. Kill the Indian in him and save the man."

Fort Marion. Pratt was an Army officer. In 1875 Army officers arrested 72 people from several Native nations, called them ringleaders, and sent them by train to Fort Marion, a fort in St. Augustine, Florida. War Department officials put Pratt in charge of them.

At Fort Marion, Pratt cut the prisoners' hair, put them in military uniforms, drilled them like soldiers, taught them English, and hired them out as laborers. He sold the things they made and drew. Ten of the prisoners died while he held them, between 1875 and 1878. At Carlisle, Pratt and his staff later did the same to the children: they cut their hair, put them in uniforms, drilled them and taught them English.

Setting up the school. Federal officials approved Pratt's request for a school in August 1879. The Commissioner of Indian Affairs, Ezra A. Hayt, allowed Pratt to choose 70 students from the Sioux nations and 30 from the Kiowa, Comanche, Cheyenne and Arapaho nations. The Secretary of War handed over the empty Carlisle Barracks, an old Army post, for the school.

The first children arrived on October 6, 1879: 83 of them, 24 girls and 59 boys, from the Rosebud and Pine Ridge agencies in Dakota Territory, the federal offices that ran those reservations. Some accounts give 82, and the National Park Service says about 140. The school formally opened a few weeks later.

Arrival. Staff cut the children's hair and took away their clothes, their moccasins and their family belongings. They dressed the boys in military uniforms and the girls in Victorian dresses, the long dresses white women

wore then, and gave the children English names. The published records name Pratt, who ran the school, but not the staff members who did the cutting and the punishing.

Luther Standing Bear, a Lakota boy brought to Carlisle in its first year, wrote later: "Now, after having my hair cut . . . I felt that I was no more Indian but would be an imitation of a white man."

An Army post. Pratt ran the school like one. The day began at six in the morning and ended with Taps, a bugle call, and room inspection at nine at night. The children marched in groups like soldiers in drills, and they changed movements when officials rang a bell. A fence six feet high ran around the grounds. Sunday school, chapel and Bible study were required.

The staff forbade the children to speak their own languages, and they often enforced that rule by hitting the children. Staff sent a child who broke a rule to the guardhouse, the post's old jail, or school officials sentenced the child to hard labor, heavy work given as a punishment. The published records do not name the staff members who did it.

Work without pay. Half of each day was lessons and half was forced work without pay, and the children's work kept the school running. The President's proclamation about Carlisle in 2024, an official statement, describes it as "compulsory labor." Boys worked at blacksmithing, tinsmithing, making wagons, carpentry, tailoring, making shoes and harnesses, baking, painting, printing and farming. Girls cooked, washed laundry and cleaned. The children built a printing office, a gymnasium, a hospital, a laundry and a warehouse with their own hands.

Under what Pratt called the outing system, staff sent children to live with white families and work for them for part of each year. The children's wages went into accounts held by school officials, not into their hands. School officials paid for the gymnasium with money they took from the children's own trust accounts, money federal officials kept for them, and called it donations.

The dead. More than 180 children died at Carlisle, by the federal government's count. The National Park Service counts at least 168 who died of three diseases: tuberculosis, which destroys the lungs, pneumonia, an infection

of the lungs, and influenza, the flu. Both counts are minimums, which means the real number may be higher. Many of the children are buried at the Carlisle Barracks cemetery.

Chief Spotted Tail and other Rosebud Sioux parents asked the government on May 23, 1881, to send their dead children home. Army officials returned the remains of nine of the children to the Rosebud Sioux Tribe on July 14, 2021, 140 years later.

Their names were Dennis Strikes First (Blue Tomahawk), Rose Long Face (Little Hawk), Lucy Take The Tail (Pretty Eagle), Warren Painter (Bear Paints Dirt), Ernest Knocks Off (White Thunder), Maud Little Girl (Swift Bear), Alvan, also called Roaster and Kills Seven Horses, Friend Hollow Horn Bear, and Dora Her Pipe (Brave Bull). The records printed with their names do not give their ages or what they died of.

By the time Carlisle closed in 1918, about 7,800 children from more than 140 Native nations had gone through the school, by the federal count. The National Park Service gives more than ten thousand from over 142 nations. Some children were five years old when they arrived. Carlisle was the first federal boarding school built away from the reservations, and officials opened many more.

Rations. Members of Congress passed a law about food rations, the set amounts of food handed out at the reservations, on March 3, 1893. Under it the Secretary of the Interior could stop the rations of any Native family whose children aged eight to twenty-one had not attended school the year before. That included rations a treaty had promised.

The count. Carlisle was one of 417 federal Indian boarding schools, and at least 973 children died in them, by the count federal investigators finished in 2024. That investigation is described under 2000 to Today.

The punishments. The US Department of the Interior's 2022 report lists the punishments staff used across the system. They locked children alone in a room, which is called solitary confinement, and held back their food. They flogged children, which means beating them hard again and again, and they whipped, slapped and cuffed them, cuffing being hitting with an open hand.

The report does not say how flogging differed from whipping, or what staff beat the children with. Staff sometimes made older children punish younger ones.

The President's 2024 proclamation about Carlisle also states that "many Native children were subjected to sexual abuse at the schools," which means forcing sexual acts on a child. The proclamation does not say who abused the children or how many.

Children kept their languages alive by speaking them in secret. At the schools they made friends with children from other nations, and those friendships were one root of the Native organizing of the next century.

Zitkala-Ša

Who: Quaker missionaries took her from her home at eight to a boarding school in Indiana. She wrote down what was done to her there and published it.

When and where: Born on the Yankton Indian Reservation, South Dakota, on February 22, 1876. Died in Washington, D.C., on January 26, 1938.

At eight she hid under a bed to save her braids.

Zitkala-Ša was eight years old when staff at a boarding school tied her to a chair and cut off her braids, and she later published her own account of it. Her Dakota name means Red Bird. Her English name was Gertrude Simmons.

Quaker missionaries, people sent out by the Quaker church to spread its faith, took her in 1884 from the Yankton Reservation to White's Indiana Manual Labor Institute, a boarding school at Wabash, Indiana. She stayed three years and went home. She went back at fifteen and graduated in 1895.

On her first day there, she learned that the staff meant to cut the girls' hair. She knew what that meant at home: "Our mothers had taught us that only unskilled warriors who were captured had their hair shingled (cut short) by the enemy. Among our people, short hair was worn by

mourners, and shingled hair by cowards!" Her friend Judewin said, "We have to submit, because they are strong." Zitkala-Ša answered, "No, I will not submit! I will struggle first!"

She hid under a bed in a dormitory. "I remember being dragged out, though I resisted by kicking and scratching wildly. In spite of myself, I was carried downstairs and tied fast in a chair."

Then, she wrote, "I cried aloud, shaking my head all the while until I felt the cold blades of the scissors against my neck, and heard them gnaw off one of my thick braids. Then I lost my spirit." She wrote that she "moaned for my mother, but no one came to comfort me," and that she was now "only one of many little animals driven by a herder."

She went on to Earlham College in Indiana and studied violin at the New England Conservatory in Boston. In 1899, at twenty-three, she went to Carlisle to teach music. In 1900 the *Atlantic Monthly* printed three of her essays about her school years.

Where it happened. Her braids were cut at White's Institute in Indiana, years before she worked at Carlisle. The federal proclamation of 2024 places her haircut at Carlisle, and that is wrong.

She spent the rest of her life working for Native people's rights. From 1916 she was secretary of the Society of American Indians, and she edited its *American Indian Magazine*. In 1926 she and her husband founded the National Council of American Indians, and she led it until she died. She is buried at Arlington National Cemetery. The year of death cut into her headstone, 1936, is two years wrong.

Booker T. Washington

Who: Born enslaved, he learned to read first from a number on a salt barrel, and he founded the school at Tuskegee.

When and where: Born at Hale's Ford, Franklin County, Virginia, in 1856. Died on November 14, 1915.

The first thing he learned to read was the number 18.

Booker T. Washington was born enslaved, and he founded a school for Black students at Tuskegee, Alabama, that he ran for 34 years. He grew up on the James Burroughs farm at Hale's Ford, in Franklin County, Virginia. He lived with his mother, Jane, who was the farm's cook, and two half-siblings in a one-room kitchen cabin. As a small boy he carried water to the field workers and carried other children's schoolbooks for them.

Slavery ended for him and his family in 1865. They moved to Malden, West Virginia, where he packed salt, mined coal and worked as a butler. The number 18 was on the salt barrels. It was the number of his stepfather's crew of salt packers.

At sixteen he traveled more than 500 miles to the Hampton Institute in Virginia. He arrived, in his own account, dirty, hungry and with fifty cents. He paid his way by working as the school's janitor, graduated at nineteen, and went home to Malden to teach. In 1879 he went back to Hampton as a teacher.

Tuskegee. He reached Tuskegee in June 1881. On July 4 he opened his school there with thirty students, in a shack lent by a Black church, Butler Chapel A.M.E. Zion. He was its first teacher and its principal, and he stayed principal until he died. The students learned trades and farming along with book subjects, and they made the bricks and put up the school's buildings themselves.

Washington argued that Black Americans should build skills and property first and press for their political rights later. He made that argument in a speech in Atlanta on September 18, 1895. W. E. B. Du Bois, another Black educator, named the speech the Atlanta Compromise and attacked it. In 1901 Washington became the first Black American invited to dine at the White House. He died in 1915, at 59.

BY 1900

If you remember one thing: School became something the law required in these fifty years, and the law also decided which school a child could go to.

In 1850: no state law made children go to school, and in six Southern states it was a crime to teach an enslaved person to read.

In 1900: 32 states made children go to school, Black and white children sat in separate schools by law across the South, and federal officials were sending Native children to boarding schools far from home.

Next: After 1900, finishing high school became ordinary, and school officials began to sort children with intelligence tests.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 42 MINUTES

Finishing high school went from rare to ordinary. In 1900 about 6 American children in every 100 finished high school, and by 1940 about half did. School board members closed one-teacher schools by the tens of thousands and sent buses to carry the children to bigger schools.

School officials also began to sort children. They gave written intelligence tests, sets of questions meant to measure how well a person can think, and put children into classes by the scores. Lewis Terman, a psychologist, a scientist who studies how people think, wrote the American version of the test. In his handbook for teachers he argued that the children with the lowest scores should not be allowed to have children of their own.

In Southern counties, officials paid for Black children's schools at a fraction of what they spent on white children's schools. A survey team reported to the Secretary of the Interior in 1928 that officials were trying to feed each child at the government's Indian boarding schools on eleven cents a day.

Finishing high school becomes ordinary

The high schools filled fast, by the federal government's own figures. In the school year 1899 to 1900, about 6 of every 100 young people aged seventeen graduated from high school. Forty years later, about half did.

The Depression years. The biggest jump came in the 1930s, during the Great Depression, when by 1933 about one worker in four had no job. Graduates rose from 29 for every 100 seventeen-year-olds in 1929 to 1930 to nearly 51 ten years later. Many teenagers stayed in school partly because there were no jobs to leave school for.

During the Second World War the share of teenagers in school fell back, because many older pupils left for wartime jobs. Girls finished high school more often than boys in every decade of this era.

Children also came to school on far more days. By 1949 to 1950 the average school term was 178 days, and the average pupil came on 158 of them, against 99 days in 1899 to 1900.

The one-room school closes

Members of local school boards closed one-room schools district by district in these years. They could close a small school only if its children had a way to reach a bigger one. School buses carried the children past the small school near their homes to a bigger school farther away.

Federal officials began counting one-teacher schools in 1929 to 1930, when there were about 149,000 of them. By 1949 to 1950 there were about 60,000, fewer than half as many. Local histories and popular accounts give a figure of about 200,000 one-room schools at the peak, but that is an estimate and not a count. The number of school districts fell too, by about 35,000 in the twelve years before 1950.

The buses carried more and more of the children. By 1950 tax money paid for nearly a third of the country's schoolchildren to ride to school, up from about 9 of every 100 in 1930.

Mamie Garvin Fields

Who: A Black teacher in South Carolina who started in a one-room school at twenty and taught for about thirty-five years.
When and where: Born in Charleston, South Carolina, in 1888. Died in 1987.

At twenty she took charge of a one-room school near Sumter.

Mamie Garvin Fields took her first teaching job in 1908, at Pine Wood, a one-room school near Sumter, South Carolina. She taught in one-teacher and two-teacher schools for Black children in rural South Carolina, and she kept teaching for about thirty-five years.

She grew up in Charleston and won a scholarship from her church to Claflin College in Orangeburg, first to its high school department and then to the college. In 1909 she came back to Charleston as one of the first Black teachers the county hired for its public schools. She was a principal for two years on Johns Island, and she retired in 1943.

Grown-ups too. She ran classes for adults on James Island and Johns Island in the early 1920s. During the Depression she started the first vacation Bible school for migrant workers in Charleston, farm workers who move from place to place to follow the harvests. From 1958 to 1964 she was president of the South Carolina Federation of Colored Women's Clubs, "colored" being a word then used for Black people.

She and her granddaughter Karen Fields began to record the story of her life in 1978, when she was ninety. Their book, *Lemon Swamp and Other Places*, came out in 1983. Her papers are kept at the Avery Research Center in Charleston. She died in 1987, at ninety-nine.

Children at work instead of at school

Many children in 1900 were at work, not in school. The census of 1900 counted about 2 million children working in mills, mines, fields, factories and stores and on city streets.

Members of Congress tried several times to stop it. They voted for the Keating-Owen Act in 1916, and President Woodrow Wilson signed it on September 1, 1916. Under it, a factory that employed children under 14 could not sell its goods across state lines. Neither could a mine that employed children under 16, or any workplace where children under 16 worked at night or more than eight hours a day.

The courts. The justices of the Supreme Court, the nine judges of the country's highest court, struck the law down in 1918, in *Hammer v. Dagenhart*. They ruled that the Constitution did not give Congress the power to pass it. Members of Congress then put a tax on goods made by children, and in 1922 the justices struck that law down too.

An amendment, a change to the Constitution, was proposed in the 1920s to allow a child labor law, but lawmakers in too few states approved it. Members of Congress finally set federal limits on child labor in the Fair Labor Standards Act of 1938, and in 1941 the justices ruled that this law was allowed.

Every state had a law by 1918 that required children to go to school. As fewer children went to work, more of them stayed in school, and the high schools filled up.

A school prayer case in Nebraska, 1902

A court fight over religious teaching in a public school began at the Freeman School in Nebraska, the one-room brick school near Beatrice. Daniel Freeman, the first person to file a claim for free land under the Homestead Act, sued in 1898 over the religious teaching there. On October 9, 1902, the justices of the Nebraska Supreme Court ruled in his favor. That was sixty years before the justices of the US Supreme Court ruled that public school staff anywhere in the country could not lead official prayers.

Who could hit a child, city by city

For the whole of this era, the law let teachers hit children in the public schools of every state except New Jersey. Members of city school boards wrote rules about who could do it and when, and some of their rule books survive. The rules call it corporal punishment, hitting a child's body as a punishment.

San Francisco. Members of the San Francisco Board of Education printed their rules in 1910. Section 63 said that corporal punishment "shall not be administered in the high schools, nor to girls in any of the schools of the department." Only principals could give it, only "in extreme cases when all other means fail to maintain discipline," and only in front of a witness.

The rule named the tools: "The use of either the rattan or the strap in administering punishment is optional," the rattan being a thin, bendy cane and the strap a long, flat strip of leather. Section 64 said the principal had to keep a book recording "the name and age of the pupil, the offense committed and the character of the punishment." At the end of every school month, the principal sent a copy to the Board and to the Superintendent, the official in charge of the city's schools.

New Haven and Omaha. The New Haven school rules of the same year began, "Teachers shall govern by kindness and by appeal to the better nature of pupils." The next lines set out when a teacher could hit a child anyway. The principal had to approve it first, and the teacher had to record it in the monthly report to the superintendent.

Another line read, "Corporal punishment shall not be inflicted in the presence of a school." In the English of the time, "a school" could mean the whole group of pupils, so a teacher could not hit a child in front of the others. In Omaha the rules of 1909 allowed it "as a last resort," under written instructions from the superintendent.

Each city's rules said who could hit a child and when. Only San Francisco's named the tools, and the rules in both San Francisco and New Haven required a written record of every case. Boston's rules had worked the same way in the 1860s.

BY 1920: Every state required children to go to school, and the high schools were filling as fewer children went to work. Teachers could still lawfully hit children everywhere except New Jersey.

Carlisle's last years: a beating, a petition and a hearing

A Pottawatomie student named Julia Hardin told a committee of Congress under oath in February 1914 how a staff member at the Carlisle boarding school had beaten her. The hearings began with a petition. Gus Welch, an Ojibwe student, gathered more than 200 students' signatures asking the Commissioner of Indian Affairs to look into wrongdoing by the school's leaders and its athletic department.

The hearings. Members of a joint committee of Congress came to the school without warning and held public hearings on the campus for a week. An inspector from the Indian Office, Edward B. Linnen, worked with them. They asked about everything from the laundry to the football team's money, and they heard testimony that the coach, Glenn "Pop" Warner, had used that money for his own gain.

Julia Hardin. She testified on February 7, 1914. She was 18, an orphan from Shawnee, Oklahoma, and a student in the business department, where she studied law, shorthand and typing. Every month she had received the mark "excellent" for her behavior.

She told the committee what had happened on the second day of one June. Under the school's outing program, staff sent students to live with white families and work for them. The outing agent had asked her if she wanted to go and told her, "Come and sign." Julia had answered, "Wait until I get a trunk and some clothes."

A note from the office of the matron, the woman on the staff in charge of the girls, told her she had to leave the next morning. The matron sent her to the superintendent, Moses Friedman, and Friedman sent her back to the matron.

The beating. Then Claude Stauffer, the school's music teacher and band leader, told her to sign a check for her train fare. She refused until her clothes were ready. He slapped her across the face with his hand and told her, "I am going to give you a sound thrashing, and I will stand the responsibility."

He pulled a board off a window sill, about three inches wide and two to two and a half feet long, and pushed her to the floor. Two matrons held her down, and one of them was Anna Ridenour. They pulled down the curtains so nobody could see in, and they locked the door.

Stauffer whipped her with the board "for at least ten minutes," she testified, "on the head, and every place." She lay face down with her hands over her head. Asked how many times he struck her, she said, "About sixty times." He threw her down five or six times, she said.

When Stauffer said again that he would take the responsibility, Ridenour said, "Yes, go ahead." Then he asked, "Shall I whip her some more?" He also said, "I will not let her get ahead of me."

Afterward. Stauffer and Ridenour took her to the school's lock-up and kept her there until after supper. Another staff member, Mr. Whitwell, spoke to her kindly. "Come over and sign this check and go to the country, and show them you are a lady," he said, and she signed the check.

The next morning she went to Mr. and Mrs. Crawford in Merchantville, New Jersey. For three months she did their washing, scrubbing, housecleaning and cooking, for $6 a month, and she paid her own train fare of $3.79. Someone at the school had sent the family a report that she had caused trouble, and she

was never told who sent it. When she arrived, the woman of the house told her, "Julia, we will have to go rather hard on you." The family treated her well after that, she said.

She told the committee that Stauffer had whipped several boys from his band in the guardhouse, and she named one of them, Robert Nash. She had seen Ridenour and another staff member, Miss Knight, whip a young woman named Rose Whipper and lock her up. After the hearings, officials suspended Stauffer. He was not fired, but his job was abolished. Warner left Carlisle.

The end of Carlisle. Officials handed Carlisle over to the War Department on September 1, 1918, and Army officers made it a hospital for the First World War. Federal officials moved the 279 children still at the school to other federal boarding schools.

John Dewey's school: children learn by doing

John Dewey, a professor at the University of Chicago, argued that children learn by doing things, not by sitting still and listening. To test the idea, he and his wife, Alice, ran a small school in Chicago for eight and a half years, from 1896 to 1904.

He described the classroom he was arguing against in his book *The School and Society*, published in 1899.

He had gone around the school supply stores in his city, looking for desks and chairs that children could work at. One dealer told him, "I am afraid we have not what you want. You want something at which the children may work. These are all for listening." Dewey described the ordinary schoolroom as having "rows of ugly desks placed in geometrical order, crowded together so that there shall be as little moving room as possible."

In his school, every child, boy or girl, had cooking, sewing and carpentry for an hour or two a week each. Each group of children cooked its own lunch once a week, set the table and served it to guests. Children also kept gardens and wove cloth.

The teachers planned for reading, writing and arithmetic to grow out of that work. In *The School and Society*, Dewey answered the question of what schools are for: "What the best and wisest parent wants for his own child, that must the community want for all of its children."

John Dewey

Who: A philosopher who started out as a high school teacher, argued that children learn by doing, and ran a school to test it.

When and where: Born in Burlington, Vermont, on October 20, 1859. Died in New York City on June 1, 1952.

On the first day, each child made a paper box for pencils.

John Dewey taught high school before he studied philosophy, and later he ran a school of his own to test his ideas about learning. He graduated from the University of Vermont in June 1879 and went straight to work as assistant principal of Oil City High School in Pennsylvania. There he taught the classics, the old Greek and Latin writers, along with science and algebra. He was nineteen, and he did that job for two years.

He earned a Ph.D., the highest degree a university gives, at Johns Hopkins University in 1884 and then taught at the University of Michigan. In March 1894 he accepted a job at the University of Chicago, and he was 34 when he arrived.

The school. He opened an elementary school in a house on 57th Street in January 1896, with sixteen pupils and two adults in charge. On the first day, the student newspaper reported, each child made a paper box for pencils. Two teachers who worked there later wrote the school's history. They called its first six months a time of trial and error, "chiefly indicative of what not to do."

The school had four homes in eight years. By October 1898 it had 82 children, a gymnasium, two science laboratories and rooms for manual training, which means work with tools. At its largest it had 140 children, 23 teachers and about ten graduate students helping.

The School and Society became a best seller in its first year. In 1916 he published *Democracy and Education*. In it he wrote that teaching which follows how children really grow "always sets out with situations which involve learning by doing."

His wife, Alice Chipman Dewey, resigned as principal of the school on April 5, 1904, and Dewey resigned from the University of Chicago on the same day. In 1905 he began teaching at Columbia University in New York. He retired in 1930 and died of pneumonia in 1952, at ninety-two.

Intelligence tests come to school

School officials began to give children written intelligence tests between 1916 and 1926. One of the men who made the tests wrote that the lowest scorers should be kept in separate classes and should not have children.

Terman's handbook. Lewis Terman published *The Measurement of Intelligence* in 1916. It was a handbook that told teachers how to give his American version of the test and what the scores meant. In it he wrote about two boys he had tested. He claimed that their level of intelligence was "very, very common" among Spanish-Indian and Mexican families of the Southwest and among Black people. He wrote that their low scores seemed "to be racial," meaning that he believed the cause was born into these families.

Then he wrote what he thought should be done, using the word "segregated," which means kept apart from other people. "Children of this group should be segregated in special classes and be given instruction which is concrete and practical," he wrote. "They cannot master abstractions (ideas), but they can often be made efficient workers, able to look out for themselves."

He went on: "There is no possibility at present of convincing society that they should not be allowed to reproduce." He added that "from a eugenic point of view they constitute a grave problem because of their unusually prolific breeding."

By "prolific breeding" Terman meant having many children, and eugenics was the idea that a country could improve its people by stopping those judged unfit from having children. The test makers gave names to ranges of low scores: "feeble-minded," "moron" and "imbecile." School officials used the labels to put children into separate classes.

The Army tests. Army officers gave tests like these to soldiers during the First World War. The psychologist Robert Yerkes gathered a committee at the Vineland Training School in New Jersey in May 1917, with Terman on it. They built tests that could be given to a whole room of soldiers at once. The Army Alpha was for men who could read English, and the Army Beta used pictures, for men who could not. About 1.75 million soldiers took them in 1917 and 1918.

The SAT. The first college entrance test of this kind came from the Army test. Officials of the College Entrance Examination Board gave the first Scholastic Aptitude Test, the SAT, on June 23, 1926, to about 8,000 students. Carl Brigham of Princeton University led the committee that built it. Brigham had already made a test for Princeton out of the Army Alpha, and five of the nine main sections of the first two SATs were copied word for word from that Princeton test.

Brigham had written a book in 1923 that used the Army scores to rank races by intelligence. By 1926 he had come to accept that a person's surroundings affect test scores, and later he took back the claims in his 1923 book. The first SAT was given in June, after most colleges had already chosen their students, so in most cases college officials made that year's choices without looking at the scores.

BY 1926: School officials gave children written intelligence tests and sorted them into classes by the scores, and the first SAT had been given.

Kept out of school: disabled children

No law before 1950 gave a disabled child the right to a public school classroom, and school board members could send a disabled child away. Merritt Beattie of Antigo, Wisconsin, had cerebral palsy, a condition that affects how a person controls the muscles. He could not control his drooling or the movements of his face, and his voice was rough.

He went through first grade to fifth grade in the Antigo public schools from 1914 to 1917 and kept up with the work. When he was thirteen, the members of the Antigo school board voted to put him out of school. The board members said that "his physical condition and ailment produces a depressing and nauseating effect upon the teachers and school children."

They offered him a place in a class for deaf children and children with speech problems. He and his parents refused it and went to court to get him back into his own school. On April 29, 1919, the justices of the Wisconsin Supreme Court ruled for the school board.

Only 161,000 children in the whole country were in special education, classes or programs set up for disabled children, in 1931 to 1932. That was 0.6 percent of public school pupils. In 1947 to 1948 there were 356,000, or 1.5 percent. For the whole of this era, about 1 child in 100 was in any special program. The other disabled children stayed at home, lived in institutions, or sat in ordinary classrooms with no extra help.

A teacher convicted for teaching in German

During and just after the First World War, lawmakers in Nebraska and several other states made it a crime to teach children in any language but English. The lawmakers aimed these laws at communities that spoke German.

Robert Meyer taught at Zion Parochial School, a school run by a church, in Hamilton County, Nebraska. On May 25, 1920, he taught a ten-year-old boy, Raymond Parpart, to read in German. Officials charged him with a crime, and a court found him guilty.

The state's law forbade teaching "any subject to any person in any language than the English language." A school could teach another language only to a pupil who had passed the eighth grade. The punishment was a fine of $25 to $100, or up to thirty days in the county jail, for each offense.

Meyer took his case to the Supreme Court of the United States and won. On June 4, 1923, in *Meyer v. Nebraska*, seven of the nine justices threw out his conviction. The other two, Justice Holmes and Justice Sutherland, would have let it stand.

Oregon voters try to close the private schools

A majority of Oregon's voters approved a law in 1922 to close every private school and church school in the state, and in 1925 the justices of the Supreme Court struck it down. Members of the Ku Klux Klan proposed the measure. After the Civil War the Klan's members had whipped and murdered freed Black people and the people who helped them, and they had burned Black schools and churches. Klan members put the measure on the ballot through another group, the Scottish Rite Masons.

The measure required every child aged 8 to 16 to attend the public school in the child's own district, and it made it a crime for a parent not to send them. Voters passed it on November 7, 1922, by 11,821 votes out of 219,191 cast. The count usually given is 115,506 for it and 103,685 against. It was to take effect in 1926.

Two schools went to court. One was the Society of the Sisters of the Holy Names of Jesus and Mary, a group of Catholic nuns who ran schools. The other was Hill Military Academy, which was not a religious school.

The nuns and the academy won. On June 1, 1925, in *Pierce v. Society of Sisters*, the justices ruled that the Oregon law broke the Constitution. They wrote: "The child is not the mere creature of the state." The people who raise a child, they wrote, "have the right, coupled with the high duty, to recognize and prepare him for additional obligations."

What the textbooks said

Members of the United Daughters of the Confederacy worked to control what school history books said about the Civil War. The group was founded in Nashville, Tennessee, in 1894, and its members were Southern women, all descended from people who had served the Confederacy or helped it.

Its members created an officer called the historian-general in 1908, partly to check school history books for anything the group called "unjust to the South." Mildred Lewis Rutherford held that job from 1911 to 1916, and in 1919 she published *A Measuring Rod to Test Text Books*, a checklist for judging them.

What they wanted the books to say. The group's members wanted the books to say that enslaved people had been faithful to their enslavers and that states' rights, not slavery, caused the war. A Texas chapter of the group wrote a list of questions and answers about the war in 1904, and a Virginia chapter printed it again. One question asked how enslaved people felt about the people who owned them. The answer given was, "They were faithful and devoted and were always ready and willing to serve them."

Mississippi's own leaders had said otherwise when the war began. On January 9, 1861, they voted to leave the United States and gave their reasons in writing: "Our position is thoroughly identified with the institution of slavery." Slavery, they were saying, was the center of everything they were defending.

By the end of the 1930s, officials in many states bought textbooks for every child. Every pupil in a state then read the same account of the Civil War, because all the books came from the state's approved list. Some of the science books stated that races could be ranked.

The Scopes trial. John Scopes, a Tennessee science teacher, was found guilty in 1925 and fined $100 for teaching evolution, the scientific account of how living things change over many generations. He taught from *A Civic Biology*, a high school book by George William Hunter, first printed in 1914 and approved by the state. The trial was about the book's pages on evolution, and no one at the trial was charged over its pages on race and on people it called feeble-minded.

The book listed five races and called "the civilized white inhabitants of Europe and America" "the highest type of all." About families it called feeble-minded and criminal, it states: "If such people were lower animals, we would probably kill them off to prevent them from spreading." It states that such people should be kept apart in asylums, places where people were locked away, and kept from marrying.

What the labels were used for: Carrie Buck

In the same years that school officials sorted children with labels like "feeble-minded," state officials used the same labels to choose people to sterilize. To sterilize a person is to operate on the body so that the person can never have a child. The justices of the Supreme Court said in 1927 that the states could do it.

Carrie Buck was born in Charlottesville, Virginia, on July 2, 1906. Her school records show that she made normal progress every year. Before she finished sixth grade, the foster family she lived with took her out of school to do their housework.

At seventeen she became pregnant. The National Archives states that the pregnancy was later reported to have been the result of rape, sex forced on her, allegedly by a relative of her foster parents. Her foster family then had her committed, which means sent by a court to live in an institution. A court hearing on January 23, 1924, declared her "epileptic and feebleminded," epileptic meaning that she had epilepsy, a disease of the brain that causes seizures.

Virginia's lawmakers passed a law on March 20, 1924, that let state officials sterilize people they found unfit "because of alcoholism, epilepsy, feeblemindedness, insanity, or other factors." Eight days later, on March 28, Carrie Buck's daughter, Vivian, was born. On June 4, 1924, under the court's order, Carrie Buck was locked up in the Virginia State Colony for Epileptics and Feeble-Minded.

The test case. Dr. Albert S. Priddy, who ran the Colony, picked her to be the first case under the new law, so that the courts would decide whether the law was allowed. Priddy died in 1925, and Dr. John H. Bell took over the Colony

and the case. On May 2, 1927, in *Buck v. Bell*, eight of the nine justices of the Supreme Court ruled for Virginia. Justice Butler voted against the ruling and wrote nothing.

Justice Oliver Wendell Holmes Jr. wrote for the others. He began, "It is better for all the world, if instead of waiting to execute degenerate offspring for crime, or to let them starve for their imbecility," and ended the sentence, "society can prevent those who are manifestly unfit from continuing their kind."

In plain words, he wrote that the state did not have to wait until the children of people it judged unfit committed crimes and were executed, or starved. It could stop such people from having children at all.

He went on: "The principle that sustains compulsory vaccination is broad enough to cover cutting the Fallopian tubes." Compulsory vaccination, a law that made people get a shot against a disease, was his comparison. If a state could force people to take a shot, he was saying, it could also force an operation that stopped a woman from ever having children.

Then he wrote, "Three generations of imbeciles are enough." He counted Carrie Buck as the second of the three generations and her daughter, Vivian, as the third.

The operation. Dr. John H. Bell, who ran the Colony and whose name is on the case, operated on her on October 19, 1927. The operation is called a salpingectomy. He cut a piece out of each of her two Fallopian tubes, the tubes that carry an egg from the ovary to the womb. After that, no egg could reach her womb, and she could never become pregnant again. The operation cannot be undone. She was twenty-one.

In April 1931 Vivian, the child Holmes had counted among the imbeciles, was on the honor roll at Venable Elementary School in Charlottesville. She died of an infection of the intestines in July 1932, at eight. Officials in Virginia sterilized about 8,300 people between 1927 and 1972. The law stayed in force until April 1974. The justices of the Supreme Court have never overruled *Buck v. Bell*.

BY 1927: The justices of the Supreme Court had let Virginia sterilize Carrie Buck, thrown out Robert Meyer's conviction for teaching in German, and struck down Oregon's law against private schools. In Tennessee a teacher had been convicted for teaching evolution.

Separate schools, and what separate meant

In the South, county officials spent far less on the schools for Black children than on the schools for white children, and the amounts are on record. In Lowndes County, Alabama, in 1909, white schools received $20 for each pupil and Black schools 67 cents. In Edgecombe County, North Carolina, county officials paid for janitors, electricity, water and transportation at the white schools and paid for none of them at the Black schools.

The 1917 survey. A federal survey published in 1917 measured the whole South. It divided what the Southern states paid their teachers by the number of children aged 6 to 14, which came to $10.32 for each white child and $2.89 for each Black child. The report identifies who made the split. State officials sent each county school money counted on every child, Black and white. "The county officers then divide these funds according to their interpretation of the needs of the white and black pupils."

The gap was widest where most people were Black. In counties where at least three people in four were Black, officers spent $22.22 on each white child and $1.78 on each Black child, more than twelve times as much. In Alabama, Florida, Louisiana, North Carolina and South Carolina, the Black public schools were open less than five months a year.

Rosenwald schools. Black families built schools themselves. Julius Rosenwald, a part-owner of the Sears, Roebuck company, met Booker T. Washington in 1912 and began paying part of the cost of school buildings for Black children. Between 1913 and 1932, more than 5,000 schoolhouses, teachers' homes and workshops went up in fifteen states, and more than 600,000 students went to these Rosenwald schools.

Rosenwald's money never paid the whole cost. Black families had to raise a matching share. They held fish fries and bake sales, and they gave building materials and their own work. The schools had no electricity, so the builders set large windows close together to let in daylight.

Martha Lum. Each state's officials decided which children had to go to the separate schools. Martha Lum was nine years old when she went to the first day of school at the Rosedale Consolidated High School in Bolivar County, Mississippi. At the noon recess the superintendent told her she could not come back.

The school's trustees, the board in charge of it, had ordered her out because she was Chinese, on instructions from the state superintendent of education. Under Mississippi's constitution, the white schools were for white children. Her father, Gong Lum, paid taxes that helped support the school, and he sued. No justice of the Supreme Court took his side. On November 21, 1927, in *Gong Lum v. Rice*, all of them ruled for Mississippi.

Lemon Grove and Bastrop. School officials sent Mexican American children to separate schools too. In Lemon Grove, California, on January 5, 1931, the principal, Jerome T. Green, stood in the school doorway. He let in every pupil except the Mexican American ones and told them to go to a separate two-room building. Their parents kept the children home and sued. On March 30, 1931, Judge Claude Chambers of the San Diego County court ordered the children let back in. Some accounts give March 31.

In Texas, Minerva Delgado and twenty other Mexican American parents sued the Bastrop school district and three others on June 15, 1948. Their lawyer was Gustavo C. Garcia. Judge Ben H. Rice ordered the separation ended by September 1949. His ruling still allowed a school to put first graders in a separate class if a test found that they spoke little English.

By the end of the era, more children of every group were in school. In 1900, 54 of every 100 white children aged 5 to 19 were enrolled, and 31 of every 100 children the government counted as Black and other races. By 1950 the

numbers were 79 and 75. The gap in who went to school had nearly closed, but in the South county officials still kept Black and white children in separate schools and still spent less on the Black ones.

The boarding schools at their largest

Tens of thousands of Native children lived at federal boarding schools in the 1920s. A report written for the Secretary of the Interior in 1928 describes what the children ate, where they slept and how they worked.

The numbers. Of 69,892 Native children enrolled in any school in 1926, 27,361 were in boarding schools, about two in five. Of the children in government schools, more than 4 in 5 were boarders. There were 19 boarding schools off the reservations and 59 on them, the reservations being the lands the United States government set aside for Native nations.

Officials could force parents to send their children. Under a law of February 14, 1920, the Secretary of the Interior could "make and enforce" rules to secure the "regular attendance" of Native children at federal schools or public schools. Under a law of 1929, state officers could go onto reservations to make Native children attend school under state laws.

The Meriam Report. Secretary of the Interior Hubert Work asked for the survey. Lewis Meriam led the team that wrote it, and he handed it to Work on February 21, 1928. "The survey staff finds itself obliged to say frankly and unequivocally (openly and with no doubt)," the report states, "that the provisions for the care of the Indian children in boarding schools are grossly inadequate (far short of enough)."

Food and sickness. Officials were trying to feed each child on eleven cents a day, plus what the school farm grew, the report states. It describes the food as "deficient in quantity, quality, and variety," meaning there was not enough of it, it was not good, and it was the same few things. The Indian Service's own rule was a quart of milk a day for each child, and staff at very few schools met it.

The report names the main diseases among Native people as tuberculosis, a lung disease that spreads by coughing and had no cure in the 1920s, and trachoma, an eye infection. Repeated trachoma infection scars the inside of the eyelid until the lashes turn inward and scrape the eye, and without treatment it blinds people. At the school at Fort Defiance, Arizona, which was set up for children with trachoma, "milk is not part of the normal diet."

The dormitories, the buildings where the children slept, held far more children than they were built for. The report states that they were "crowded materially beyond their capacities," and "the supply of soap and towels has been inadequate."

The children's work. The children's work paid for part of the cost of running the schools. "The boarding schools are frankly supported in part by the labor of the students," the report states. Pupils above the fourth grade worked half the day and went to class the other half. Its authors asked whether much of that work, "notably the work in the machine laundries," would be against the child labor laws of many states.

The authors also judged the idea behind the schools. Taking children, "even very young children, as completely as possible away from their home and family life," went against "modern views of education and social work," they wrote. By those views, children should not be pulled away from home and family. The report states: "Indian parents nearly everywhere ask to have their children during the early years, and they are right."

Uintah. A committee of senators led by Senator Lynn J. Frazier of North Dakota heard what those conditions meant at one school in November 1928, in Salt Lake City. It was the Uintah Boarding School at Whiterocks, Utah, on the Ute reservation.

In late October 1927, an eleven-year-old pupil, Tilford Denver, was climbing the rope of the school swing. The swing had been broken for a long time and had never been fastened down. The frame fell, a bar struck his head, and he died within the hour.

The agency doctor, George McClellan Hamilton, was asked whether officials were to blame. He answered, "Some of the officials of the reservation," and went on, "yes, sir ... Because this swing never had been secured." The record does not name the official in charge of the swing. Tilford's mother, Dulcia Denver, was never paid anything for his death, the doctor said.

Swanson Mowachean was an orphan who had come to the school at about ten. He touched a bare electric wire at the school, fell and hurt his head. His relatives wrote to the Commissioner of Indian Affairs, Charles Burke, on February 17, 1928. They wrote that the superintendent, H. M. Tidwell, "did not think this boy needed to go to the hospital," and "We fear that if we wait for the superintendent to act it will be too late and the boy will die."

Tidwell let him go back to the hospital later that month. The doctor testified that it was too late. Swanson died on March 6, 1928. The doctor also told the senators, "we have had Indians die there for a lack of attention and lack of proper food." It had happened, he said, "more than once."

The whippings. Fred Bruce, a Chippewa man hired in January 1928 to keep order among the boys, testified that the principal, George N. Shafer, wanted him to whip them. He quoted Shafer: "some of these Indians you have got to pound it into them." Shafer went on, "that is the only way they will learn anything." Bruce said he refused. About six months later he lost his job, and the record does not say who fired him.

A parent, Eugene Perank, told the senators through an interpreter what children had told him: "they have whipped them with a stick." He went on, "throw them down and whip them." He took his own children out of the school. The children who were whipped at Uintah are not named in the record.

John Collier, who led the American Indian Defense Association, charged "widespread brutality" at government boarding schools in May 1930. He persuaded senators to look into "flogging and other forms of excessive punishment," flogging meaning beating a person hard, again and again. His charges centered on the Phoenix Indian School in Arizona, whose leaders were accused of "whippings, beatings, and even death."

Officials read the Meriam Report in 1928, and the boarding schools stayed open. The federal count of the children who died at the schools, finished in 2024 and described under 2000 to Today, covers the whole life of the system and is not broken down by decade.

Teaching: colleges for teachers, and the marriage bar

In the first half of the century, many normal schools became teachers colleges. At a normal school, future teachers trained for one or two years after high school. At a teachers college, they studied for a four-year college degree. Between 1911 and 1930, 88 normal schools became teachers colleges, and by the 1950s the last of the normal schools were gone.

The marriage bar. Most teachers were women, and the members of most school boards made a woman choose between teaching and marriage, a rule called the marriage bar. The National Education Association, a teachers' organization, began asking school boards about it in 1928. That year 61 percent of the boards said they would not hire a married woman as a teacher, and 52 percent would not keep a teacher who married while she worked for them. By 1942 the figures had risen to 87 percent and 70 percent.

During the Second World War the number of men teaching in public schools fell from 195,000 in 1939 to 1940 to 127,000 in 1943 to 1944. Board members who had refused married women for years now needed them, and most boards dropped the rule. By 1951, 18 percent of boards still refused to hire a married woman, and 10 percent refused to keep one.

Teachers' pay rose over the fifty years. On average, a teacher earned $325 a year in 1899 to 1900, $1,420 in 1929 to 1930 and $3,010 in 1949 to 1950. Prices rose too, so what that pay could buy about tripled. The number of pupils for each teacher fell from about 37 to about 28.

A school explosion: New London, Texas, 1937

Members of the school board in New London, Texas, canceled the school's contract for natural gas early in 1937. To save money, they had plumbers connect the school to a gasoline company's pipe of leftover gas, which had no smell. On March 18, 1937, the gas exploded. About 540 people were in the building, 500 students and 40 teachers, and about 298 of them died.

No school official was found responsible, and more than seventy lawsuits failed. Texas lawmakers then passed a law requiring companies to add a smell to gas. Chapter 27, Disasters, describes the explosion in full.

School behind a fence: the Japanese American camps

During the Second World War, federal officials held Japanese American children in camps, and more than 30,000 of them went to school there. President Franklin D. Roosevelt signed Executive Order 9066, an order from the president, on February 19, 1942. Under it, Lieutenant General John L. DeWitt, the Army commander on the West Coast, ordered Japanese Americans there out of their homes.

More than 120,000 people were forced to leave under his orders, and two out of every three were American citizens. None of them was charged with a crime or tried. Officials of the War Relocation Authority, the federal agency that ran the camps, ran the camp schools as well.

At Manzanar, in California, more than 2,300 children arrived from over 200 schools, and no one had planned how to teach them. The first classes met in barracks and recreation halls with no furniture, no textbooks and no supplies.

Poston. Poston, in Arizona, held more than 18,000 people in three camps. It was built on the Colorado River Indian Reservation, and the Mohave were the largest of the nations who had lived on that land. John Collier, who was then the Commissioner of Indian Affairs, suggested the site. The reservation's tribal council opposed the camp, and officials built it anyway.

At Poston the people held there made about 750,000 adobe bricks, bricks of mud and straw dried in the sun, and built three school campuses. Elementary classes averaged 48 pupils to one teacher. Of the 100 teachers hired to come to Poston, 70 arrived, and by December 55 were still there.

Four Munemitsu children, Seiko, Saylo, Akiko and Kazuko, had gone to school in Westminster, California, until 1942. Then they were held at Poston. While they were there, the Mendez family leased and worked the Munemitsu family's farm in Westminster, and staff at a Westminster school turned the Mendez children away.

BY 1945: The Indian boarding schools were still open years after the Meriam Report, and Southern county officials still spent far less on each Black child than on each white child. Most school boards had dropped their rule against married women teachers.

Sylvia Mendez

Who: Turned away from a California school at eight, she was one of about 5,000 children in her father's lawsuit, and the families won.
When and where: Westminster, California, 1944 to 1947.

The staff enrolled her cousins and turned her away.

Sylvia Mendez was eight years old when staff at a school in Westminster, California, refused to enroll her, and her father went to court over it. Her family had moved from Santa Ana to a farm in Westminster in 1944. They leased it from the Munemitsus, a Japanese American family whom federal officials had forced into a camp.

Her aunt Soledad took Sylvia, her brothers Gonzalo Jr. and Jerome, and her own children, the Vidaurri cousins, to enroll at the Seventeenth Street School. The staff accepted the Vidaurri cousins, who had lighter skin and a last name that did not sound Spanish. They turned away the Mendez children. Her aunt answered: "My kids, they will not go to your school, if those of my brother cannot go, mine will not go!"

The staff sent the Mendez children to Hoover School, which people called the Mexican school. Teachers there taught the children embroidery, cooking or farm work instead of math and science.

The lawsuit. Her father, Gonzalo Mendez, and four other fathers, William Guzman, Frank Palomino, Thomas Estrada and Lorenzo Ramirez, went to federal court. Their lawyer, David Marcus, sued four Orange County school districts, Westminster, Santa Ana, Garden Grove and El Modena, for about 5,000 children.

After a six-day trial in Los Angeles, Judge Paul J. McCormick ruled for the families on February 18, 1946. On April 14, 1947, the judges of the Ninth Circuit Court of Appeals, a higher federal court, agreed with him.

California's governor, Earl Warren, signed a law in 1947 that made California the first state to ban separate public schools of every kind. In 1953 Warren became Chief Justice of the United States, and in 1954 he wrote the Supreme Court's ruling in *Brown v. Board of Education*.

Sylvia Mendez spoke about the case in public for decades. On February 15, 2011, she received the Presidential Medal of Freedom.

The G.I. Bill sends veterans to college

Members of Congress voted in 1944 to pay for veterans of the Second World War, the men and women who had served in the armed forces, to go to college or job training. President Roosevelt signed the Servicemen's Readjustment Act, called the G.I. Bill, on June 22, 1944.

Veterans made up 49 percent of the students admitted to colleges in 1947, the law's busiest year. By the time the first G.I. Bill ended on July 25, 1956, 7.8 million of the 16 million veterans of the war, about half, had used it for education or training.

Black veterans. The law did not mention race, but Black veterans in the South could not use it the same way. Local officials handled the benefits. A Black veteran in the South with money for tuition, the fee a college charges for classes, still had to find a college that would admit him.

The colleges open to him were separate Black colleges with a limited number of places. Many Black veterans had gone to the Southern schools for Black children, where officials spent far less on each child, and many had not been taught enough there to be ready for college. Many could not get into a college.

The number of Black college students still rose sharply. Medgar Evers was one of the Black veterans who got in. He had volunteered for the Army in 1942, and later he used the G.I. Bill to enroll at Alcorn A&M College in Lorman, Mississippi, a public college for Black students. In 1962 he helped James Meredith become the first Black student at the University of Mississippi.

BY 1950

If you remember one thing: Finishing high school became ordinary in these fifty years, while school officials sorted children by test scores, by race and by disability.

The number: 50.8 of every 100 seventeen-year-olds graduated from high school in 1939 to 1940, against 6.4 in 1899 to 1900, nearly eight times as many.

Next: After 1950 the justices of the Supreme Court ruled that separate schools broke the Constitution, and officials in the South spent years fighting the ruling.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 51 MINUTES

Judges and lawmakers opened the public schools to children who had been kept out or kept apart, and officials in many places spent years fighting them. The justices of the Supreme Court ruled in 1954 that separate public schools for Black and white children broke the Constitution. For the next ten years almost every Black child in the South still went to an all-Black school.

Officials in Arkansas and Virginia closed public schools rather than let Black children in, and two men were killed in a riot on the night federal marshals brought the first Black student onto the campus of the University of Mississippi.

Members of Congress began to pay for schooling on a large scale, for science in 1958 and for schools with poor children in 1965. Judges ruled on prayer in school, on disabled children shut out of school, on children who could not understand English, and on paddling. By 2000 college had become ordinary, and most people who finished a degree had borrowed money to pay for it.

Brown, and how slowly the classrooms changed

All nine justices of the Supreme Court ruled on May 17, 1954, in *Brown v. Board of Education of Topeka*, that separate public schools for Black and white children broke the Constitution. Chief Justice Earl Warren wrote the ruling, seven years after he had signed California's law against separate schools as its governor.

With all deliberate speed. The justices ordered the states on May 31, 1955, to desegregate, to end the separation of Black and white pupils, "with all deliberate speed." The justices set no date and asked only for "a prompt and reasonable start."

Ten years after *Brown*, one study estimated that 99 of every 100 Black children in the South were in schools with no white children. A team led by James Coleman made a national count in the school year 1965 to 1966, as the Civil Rights Act of 1964 required. Across the country, 65 of every 100 Black pupils were in schools that were more than 90 percent Black, and 80 of every 100 white pupils were in schools more than 90 percent white.

The city figures for elementary schools in the same survey record the South. In Mobile, Alabama, every Black child was in a school more than 90 percent Black, and in Charlotte, North Carolina, 96 of every 100 were.

The classrooms of the South changed later. By the mid-1980s, about 43 of every 100 Black students in the South went to schools where most of the students were white. That was the highest share in a count by researchers at the University of California, Los Angeles, that reaches back to 1968.

Little Rock: a year inside Central High, and a year with no high school

Nine Black students entered Central High School in Little Rock, Arkansas, in September 1957, only after President Dwight Eisenhower sent Army soldiers to take them in. The next year Governor Orval Faubus closed the city's high schools. The nine were Elizabeth Eckford, Minnijean Brown, Ernest Green, Thelma Mothershed, Gloria Ray, Jefferson Thomas, Carlotta Walls, Terrence Roberts and Melba Pattillo.

The Guard. Faubus said on television on September 2, 1957, that he had called out the Arkansas National Guard to "preserve order" at Central High. On September 4 the nine tried to go in. Elizabeth Eckford came alone, because she did not know that the others were being taken together.

Guard soldiers refused to let her in, and she walked to a bus stop through a crowd of more than 300 people. The other eight came with ministers that Daisy Bates had arranged, and Lieutenant Colonel Marion Johnson turned them away on Faubus's orders.

A federal judge, Ronald Davies, ruled on September 20 that Faubus had used the soldiers to stop integration, the mixing of Black and white students in one school, and not to prevent violence. Faubus pulled the Guard out that evening.

The mob. More than a thousand white people surrounded the school on September 23 while city police took the nine inside. People in the crowd attacked four Black reporters: Alex Wilson, James Hicks, Moses J. Newsom and Earl Davy. After three and a half hours, school staff took the nine out through a side door. The next day Mayor Woodrow Mann telegraphed the president that the "mob is armed" and the "situation is out of control."

Eisenhower sent 1,000 soldiers of the 101st Airborne Division. At 9:22 on the morning of September 25, the nine walked in through the front doors. More than twenty soldiers walked around them, more than 350 stood around the building, and an Army helicopter flew overhead.

Inside. White students kicked the nine, shoved them and called them names, again and again. Army officers then assigned soldiers to walk them to their classes. The soldiers could not go with them into the restrooms and locker

rooms, and the attacks went on there. On October 3 the vice principal, Elizabeth Huckaby, stopped white students who were harassing them, and about 150 white students walked out. She took 70 names, and all 70 were suspended.

Minnijean Brown dropped chili on two white boys who blocked her way in the cafeteria on December 17, and she was suspended until January 13. Two days after she came back, white students poured chili on her, and they were expelled. The National Park Service's timeline of that year does not say which school officials gave those punishments.

The school board members expelled Minnijean Brown for the rest of the year on February 17, 1958, after she called a white girl who hit her "white trash." They also suspended three white students, among them boys who wore badges that read "One Down and Eight to Go." She finished high school in New York. On May 27, 1958, Ernest Green became the first Black student to graduate from Central High.

The Lost Year. Judge Harry Lemley ruled in June 1958 that Little Rock could put off integration until January 1961, and in September the justices of the Supreme Court overturned his ruling. Faubus closed all four of Little Rock's public high schools on September 15, 1958, under laws that Arkansas lawmakers had passed for him. On September 27 the city's voters chose 19,470 to 7,561 against integration, and the high schools stayed shut for the whole school year. People in Little Rock call it the Lost Year.

White students went to new private schools, to schools in other towns and other states, or took courses by mail from the University of Arkansas. Faubus helped a private school company buy buildings with public money. Most Black students went to schools in other districts or other states. Some took a course by mail run by L. M. Christophe, the principal of the Black high school. State officials kept paying the teachers to sit in empty classrooms, and Central High's football team kept playing all year.

The segregationist members of the school board, people who wanted the races kept apart, voted in May 1959 not to renew the contracts of 44 teachers and school officials. On May 25, 1959, a group of women, the Women's Emergency

Committee to Open Our Schools, won a vote that removed three of those board members. The high schools opened again on August 12, 1959.

Science and languages: the 1958 law

Soviet scientists and engineers launched Sputnik, the first satellite to circle the Earth, on October 4, 1957. The launch shocked experts and ordinary people in the United States, who had hoped the United States would do it first. President Eisenhower signed the National Defense Education Act on September 2, 1958. Under it, federal officials paid for the teaching of science, mathematics and foreign languages, and for loans to college students.

Eisenhower called it "an emergency undertaking to be terminated after four years." Members of Congress did not end it after four years. Its student loans went on under that name until 1972 and then continued under other names.

Virginia closes its schools

Officials in Virginia made the same choice as Faubus. They closed public schools in five places rather than let Black children into white schools, and in Prince Edward County they kept the public schools shut for five years. In late February 1956, Senator Harry F. Byrd called for "massive resistance" against *Brown*, a campaign by Virginia's leaders to block it. Virginia's lawmakers, under Governor Thomas B. Stanley, then passed a law under which the governor would close any school that federal judges ordered to take Black pupils.

Governor J. Lindsay Almond Jr. used that law in September 1958. He closed nine schools in Front Royal, Charlottesville and Norfolk and locked out about 12,000 to 13,000 students. On January 19, 1959, judges of a state court and of a federal court both ruled that the closings broke the Constitution. The state's own scholarship program names five places that closed schools to avoid desegregation: Arlington, Charlottesville, Norfolk, Warren County and Prince Edward County. All but Prince Edward reopened within months.

Prince Edward County. Barbara Johns, who was 16, had led the Black students of Robert Russa Moton High School in Farmville out of their school on April 23, 1951, to protest its condition. Their case became one of the five

cases the justices decided together as *Brown*.

Local leaders spent years getting ready to keep the county's schools separate. From 1954, J. Barrye Wall, the editor of the *Farmville Herald*, and Robert Crawford, a laundry owner, built a group called the Defenders of State Sovereignty and Individual Liberties.

Hours after the second *Brown* ruling, on May 31, 1955, the county supervisors, the officials who ran the county, voted the schools only the legal minimum of $150,000, a fraction of what they needed. A week later about 1,250 people at a public meeting voted for a private fund to pay white teachers if the public schools closed.

Judges of two courts ordered the county to integrate its schools on May 1, 1959, and the supervisors then voted to stop paying for public schools at all. Accounts of that vote differ: two date it June 26, 1959, and a third gives June 2. The schools did not open that September. Roy Pearson of Farmville organized private schools for the white children, who went to Prince Edward Academy, a new private school, paid for partly by tuition grants from the state.

Five years without school. Between 1,700 and 2,000 Black children had no school. One account gives about 1,750, and another gives nearly 2,000. Some children went to live with relatives in other counties or states, and some were taught in church basements.

For one year, starting on September 16, 1963, private donors, backed by President John F. Kennedy's government, paid for free classes for about 1,500 children. On May 25, 1964, in *Griffin v. County School Board of Prince Edward County*, the justices of the Supreme Court ordered the county to reopen its schools. About 1,500 children went back on September 8, 1964.

Virginia's lawmakers voted in 2003 for a statement of "profound regret" for the closings. A news report in *Education Week* stated that some lawmakers would not vote for an apology because they thought an apology could lead to demands for payment. In 2004 the lawmakers set up a scholarship fund for people who had lost those years of school and put in $50,000. John Kluge, a rich donor, then gave $1 million on the condition that the lawmakers match it. They did, and the fund reached $2,050,000.

BY 1964: The justices of the Supreme Court had ordered Prince Edward County to reopen its schools, and Little Rock's high schools had been open again since 1959. Ten years after *Brown*, almost every Black child in the South still went to a school with no white children.

Ruby Bridges

Who: At six she walked into an all-white school in New Orleans, and for months she was the only pupil in it.

When and where: New Orleans, Louisiana, 1960 and 1961.

Every teacher but one refused to teach her.

Four federal marshals, officers who carry out the orders of federal courts, walked six-year-old Ruby Bridges into William Frantz Elementary School in New Orleans on November 14, 1960. For the rest of that school year, one teacher taught her in a classroom by herself. She was born on September 8, 1954, in Tylertown, Mississippi, the eldest child in her family. She grew up in New Orleans and went to a segregated kindergarten in 1959.

The test. A federal judge, J. Skelly Wright, ordered New Orleans in 1960 to desegregate its public schools one grade at a time, starting with first grade. Members of the Orleans Parish School Board made Black children take an entrance test and checked their families, and white children moving the other way had to do neither. Six children passed the test, and two of them chose to stay at their own school.

Ruby Bridges walked in with the marshals and her mother, Lucille. That same morning Leona Tate, Gail Etienne and Tessie Prevost, also six, went into McDonogh No. 19 school nearby with marshals of their own. The four girls were the first Black children in white public schools in Louisiana.

Louisiana's leaders fought the order. That summer the lawmakers had made it a crime, punished by fines and jail, to challenge the state's control over the schools. Under one of their laws, Governor Jimmie Davis took

over every decision about desegregation in New Orleans. Leaders of the White Citizens' Council, a group of white people who wanted the schools kept separate, held a rally of 5,000 people and told white parents to defy the court. On November 16 a riot broke out in front of the school board building.

A crowd stood outside Frantz and screamed at her. A group of young white women who called themselves the Cheerleaders came back day after day. They blocked the children and their parents, spat at the children, shouted racial insults and slashed tires. One protester threatened to poison her lunch. No record names the woman who made the threat.

White parents took their children out. By the end of November, fewer than ten white children attended the two schools together. From January to May 1961, Ruby Bridges was the only pupil at Frantz. Every teacher but one refused to teach her. Barbara Henry, a white teacher from Boston, taught her alone for the year. Ruby Bridges did not miss a day.

What it cost her family. Her father lost his job. Grocers refused to serve her mother. Her grandparents had sharecropped a farm for 25 years, farming land someone else owned and paying the owner with part of the crop, and they were thrown off it. The National Park Service's account does not name the owner who made them leave. Her parents later separated.

Robert Coles, a child psychiatrist, a doctor who treats problems of the mind, met with her through that year and had her draw and talk about what was happening. Norman Rockwell painted her walk to school in 1964 and called it *The Problem We All Live With*. On July 15, 2011, she saw the painting hanging in the White House.

Five years after she walked into Frantz, 96 of every 100 Black elementary pupils in New Orleans were still in schools more than 90 percent Black. She finished elementary school at Frantz and worked in travel for about

> fifteen years. In 1999 she started the Ruby Bridges Foundation. On November 14, 2015, fifty-five years to the day after she first went in, a bronze statue of her was unveiled at the school.

A university, 1962: two men killed

Two men were killed on the night federal marshals brought James Meredith, the first Black student at the University of Mississippi, onto its campus. Meredith was an Air Force veteran. He applied on January 20, 1961, and university officials turned him down after he wrote that he was Black.

Medgar Evers helped him, and Constance Baker Motley and Jack Greenberg, lawyers for the NAACP, a civil rights organization, took his case. On September 10, 1962, Justice Hugo Black ordered the university to admit him. Governor Ross Barnett worked for weeks to stop it.

The riot. About 500 federal marshals brought Meredith to the campus at Oxford on the evening of September 30, 1962, and put him in a dormitory, Baxter Hall. At about 7:25 that evening, State Senator George Yarbrough sent the Mississippi Highway Patrol away from the crowd, and at 7:30 a riot began.

The crowd grew to more than 2,500 people by one count and about 3,000 by another, students and people from off the campus. A former Army general, Edwin Walker, helped lead them. They threw rocks, bottles and firebombs at the marshals and fired guns.

Paul Guihard, 30, a reporter for a French news agency, was shot in the back within about ten minutes of reaching the campus. Ray Gunter, 23, a jukebox repairman from Oxford, was dead when he reached the hospital. Nobody was ever charged with killing Guihard, and no record names who killed Gunter.

The counts of the injured run from at least 75, in the first news report, to more than 300 in a later account, many of them marshals and soldiers. About 3,000 federal soldiers took control of the campus by the next morning, and 108 people were arrested.

Meredith registered as a student on October 1, 1962, and walked to his first class, a lesson in American colonial history. People shouted at him, "Was it worth two deaths?" Marshals went with him everywhere, and some students walked out of his classes. He graduated in August 1963.

Prayer and Bible reading in the school day

The justices of the Supreme Court ruled in 1962 and 1963 that public school staff could not lead pupils in official prayers or Bible readings. In New Hyde Park, New York, the members of the school board of Union Free School District No. 9 had told each class to say a prayer at the start of every day.

Members of the New York State Board of Regents had written it. The whole prayer is 22 words: "Almighty God, we acknowledge our dependence upon Thee, and we beg Thy blessings upon us, our parents, our teachers and our Country."

Engel, 1962. The justices struck it down, six votes to one, on June 25, 1962, in *Engel v. Vitale*. "It is no part of the business of government to compose official prayers for any group of the American people to recite," Justice Hugo Black wrote, "as a part of a religious program carried on by government."

Schempp, 1963. A Pennsylvania law stated that "at least ten verses from the Holy Bible shall be read, without comment, at the opening of each public school on each school day." At the high school in Abington Township, the verses and the Lord's Prayer went out over the school's loudspeakers. In Baltimore a rule from 1905 required a reading from the King James Bible and the Lord's Prayer.

The justices struck down both, eight votes to one, on June 17, 1963, in *School District of Abington Township v. Schempp*. Justice Tom Clark wrote that government must keep "strict neutrality, neither aiding nor opposing religion." It made no difference that a child could ask to be excused.

Yoder, 1972. The justices let Amish parents, members of a Christian church called the Old Order Amish, take their children out of school after the eighth grade.

Wisconsin's law required children to attend school until 16. Jonas Yoder, Wallace Miller and Adin Yutzy kept their children, Frieda Yoder and Barbara Miller, both 15, and Vernon Yutzy, 14, at home, and each father was fined $5. On May 15, 1972, in *Wisconsin v. Yoder*, Chief Justice Warren Burger wrote that the state could not force the parents to send the children to high school.

Federal money for poor children's schools, 1965

Members of Congress began paying in 1965 for schools where poor children studied, and for classes for children too young for school. President Lyndon Johnson signed the Elementary and Secondary Education Act on April 11, 1965, on the front lawn of the old Junction school in Johnson City, Texas, the one-room school he had started at when he was four.

His first teacher, Kate Deadrich Loney, sat beside him. He told her, "I started school when I was 4 years old," and "they tell me, Miss Kate, that I recited my first lessons while sitting on your lap." Members of the House had voted for the law 263 to 153, and senators had voted for it 73 to 18.

Johnson said the law would "bridge the gap between helplessness and hope for more than 5 million educationally deprived children." Under Title I, one part of the law, federal officials send money to schools with poor children. By the end of 1965, the first 100 Title I projects were reaching 347,047 children in 12 states.

Head Start. Head Start began the same year. Sargent Shriver, who ran the federal Office of Economic Opportunity, put together the group that designed it, and Johnson announced it on May 18, 1965. It was a summer program to prepare young children for school in September, and it gave them "medical and dental attention that they badly need."

On that day Johnson spoke of about 530,000 children in 11,000 centers, at a cost of $112 million. By August 31 he reported nearly 560,000 children in 13,400 centers in 2,500 communities.

Title IX. President Richard Nixon signed a new education law with a part called Title IX on June 23, 1972.

Title IX states that "no person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of," and it continues, "or be subjected to discrimination under any education program or activity receiving Federal financial assistance." That means a school or college that gets money from the federal government may not shut anyone out or treat anyone worse because the person is male or female.

BY 1972: Federal money paid for science teaching, student loans, schools with poor children and Head Start, and a new law barred schools that took federal money from treating anyone worse because of sex. Official prayers and Bible readings had been struck out of the public school day.

College for millions, and borrowing to pay for it

Over these fifty years, going to college changed from something a few Americans did to something millions did, and by the end most graduates had borrowed money to pay for it.

In the fall of 1950, about 2.3 million people were enrolled in American colleges and universities. By 1970 there were about 8.6 million, and by 2000 about 15.3 million, about seven times as many as in 1950.

The 1965 law. Federal money paid for much of the growth. Federal loans for students began under the 1958 defense education law. President Johnson signed the Higher Education Act on November 8, 1965, at Southwest Texas State College in San Marcos, Texas.

Under the law, students in need could get grants, money that does not have to be paid back, of up to $1,000 a year. They could get part-time jobs on campus worth about $400 a year, and loans backed by the government that a student did not have to start paying back until after graduating. Johnson said that 140,000 young people would be in college the next year who otherwise would not.

In the same speech he spoke of the year he had taught at the Welhausen Mexican School in Cotulla, Texas, for $125 a month. "I shall never forget the faces of the boys and the girls in that little Welhausen Mexican School," he

said. "And I remember even yet the pain of realizing and knowing then," he went on, "that college was closed to practically every one of those children because they were too poor."

The cost. College cost rose faster than other prices. Measured in dollars of the same value, a year at a public four-year college, with tuition, fees, a room and meals, cost about $7,700 in 1963 to 1964 and about $12,600 in 1999 to 2000. At private four-year colleges the cost rose from about $15,100 to about $31,500, more than double.

More students borrowed. Of the people who finished a four-year degree in 1992 to 1993, 49 in every 100 had borrowed, an average of $12,100. Of those who finished in 1999 to 2000, 65 in every 100 had borrowed, an average of $19,300. Among students from the richest families, the share who borrowed roughly doubled, from 24 to 46 in every 100.

What students could say and wear

Public school students have a right to free speech at school, the justices of the Supreme Court ruled in 1969. Four years later the justices let stand a school rule that punished Native boys for wearing braids.

The armbands. John Tinker, 15, and Christopher Eckhardt, 16, students at high schools in Des Moines, Iowa, and Mary Beth Tinker, 13, in junior high, planned in December 1965 to wear black armbands to protest the Vietnam War.

The Des Moines principals made a rule on December 14, 1965, that any student who wore an armband would be told to take it off and suspended for refusing. Mary Beth and Christopher wore armbands on December 16, and John wore his the next day. All three were suspended until after New Year's Day.

The justices ruled for the students, seven votes to two, on February 24, 1969, in *Tinker v. Des Moines*. Justice Abe Fortas wrote that students do not "shed their constitutional rights to freedom of speech or expression at the schoolhouse gate." He also wrote that the case did not concern rules about "the length of skirts or the type of clothing, to hair style, or deportment (behavior)."

The braids. At Pawnee Junior High School in Oklahoma, Pawnee boys wore their hair parted in the middle with a long braid on each side, to follow "the old traditional ways."

School officials suspended them with no end date on April 24, 1972, under a rule that a boy's hair could not reach his shirt collar or his ears. Federal appeals judges upheld the rule.

The justices of the Supreme Court refused to hear the case, *New Rider v. Board of Education*, on December 10, 1973. Justice William O. Douglas disagreed. He wrote that the boys "were in fact attempting to broadcast a clear and specific message to their fellow students and others, their pride in being Indian."

Black teachers lose their jobs, and the bus

When officials in Southern districts joined Black and white schools, school board members pushed Black teachers out of their jobs. The economist Owen Thompson counted teachers in 781 school districts in the eleven states that had formed the Confederacy. In 1964, 30.6 percent of their teachers were Black. By 1972 the share was 24.2 percent. The number of Black teachers fell by almost a third in eight years.

As districts joined schools together, the school board members let Black teachers go far more often than white ones, and they hired white teachers, many with less experience. Officials in the districts with the fewest Black pupils cut their Black teachers the hardest. Thompson estimates that about half of the teachers who lost their jobs went into work that needed less training, and the rest left the South to teach somewhere else.

The buses. The justices ruled unanimously on April 20, 1971, in *Swann v. Charlotte-Mecklenburg Board of Education*, that a federal judge could order children carried by bus to end separate schools. The Charlotte-Mecklenburg district in North Carolina had more than 84,000 pupils in 107 schools, and about 24,000 of them were Black.

The district's officials already bused children. The year before, its buses carried 26,600 pupils an average of 15 miles each way, a trip of more than an hour. Under the plan, elementary pupils would ride about seven miles, "not over 35 minutes at the most." The justices wrote that an objection to busing counted only when the trip was long enough to risk the children's health or to harm their schooling.

Boston. Fourteen families sued Boston's School Committee in 1972. On June 21, 1974, Judge W. Arthur Garrity ruled that "the entire school system of Boston was unconstitutionally segregated." Under his order, buses began carrying Black students from Roxbury to South Boston High School on September 9, 1974. Of the 800 Black students assigned there, 56 came on the first day. Protesters threw rocks and bottles at the buses.

Phyllis Ellison was one of the Black students bused to South Boston High, and she later described that year. People shouted racial insults at the bus and held up bananas at the students inside. In the school, she said, there were "anywhere between ten and fifteen fights" on an ordinary day. Black and white students sat on opposite sides of the classrooms, the lunchroom and the washrooms.

A white student, Michael Faith, was stabbed during a shoving match outside a classroom on December 11, 1974. Police arrested a Black student from Roxbury, James White. A crowd gathered at the school gates shouting racial abuse, and it threw bricks and bottles and turned over a police car. Boston police and 125 state troopers pushed the crowd back.

The Black students were locked in their classrooms while the white students were let out, Ellison said, and she did not say who gave that order.

Then four empty buses pulled up to the front door as decoys, while the Black students were put on buses at the back and driven home. *Time* magazine reported the decoy buses but did not say who planned them. South Boston High and seven other Boston schools were then closed for a time, and *Time*'s report does not say who closed them. Phyllis Ellison graduated in 1977.

The boarding schools: largest in the 1970s

Enrollment in the boarding schools for Native children reached its highest point about forty-five years after the Meriam Report, and children still died trying to get home from them. By the Heard Museum's count, enrollment peaked at about 60,000 children in 1973. The government's own counts were lower.

Officials of the Bureau of Indian Affairs ran 77 boarding schools in 1969, holding about 35,000 children, and nearly 9,000 of them were under nine years old. On the Navajo Reservation, 7,476 children aged nine and younger lived at 48 boarding schools because no day school was near their homes. One of them, at Tuba City, housed 1,200 elementary pupils.

Crownpoint, 1968. Three brothers ran away from the Crownpoint Boarding School in New Mexico in January 1968, just after the Christmas holiday. They were trying to walk about 50 miles home to Chaco Canyon, and they wore jeans, shorts and light jackets. That night the temperature fell to about 10 degrees below zero.

On January 13, searchers found Ronald Yazzie, who was 9, and Willie B. Yazzie, who was 13, frozen to death about 30 miles from the school. Their brother Ray, 12, lived, with frostbite, damage to skin and flesh from freezing. A Navajo police officer, Stewart Silentman, said, "They were lonesome for home and just took off."

A National Tragedy. A subcommittee of the Senate published a report in November 1969, *Indian Education: A National Tragedy, A National Challenge*. It describes the policy behind the schools as "coercive assimilation," which means forcing people to give up their own ways and take on another people's ways.

The report includes a letter from a teacher at Tuba City. At that school, parents could take a child home for a weekend only if staff judged the child's behavior good, and a child who had run away could be kept from going home for up to a month.

The report also includes the account of an anthropologist, a scientist who studies how groups of people live, of a Navajo boarding school where "Children are beaten" and where "teachers advocate the free labor of Navajo girls in their homes." The report does not name that school or the anthropologist. The senators who issued the report asked that Native nations run their own schools.

Navajo leaders opened Navajo Community College in 1968. The college's own history states that it was the first community college in the country run by a tribe, and it is now Diné College. Under the Indian Self-Determination and Education Assistance Act, which members of Congress passed in January 1975, Native nations could sign contracts to run schools themselves. Many federal boarding schools closed in the 1980s.

Taken from their families. Officials took Native children from their families in other ways too. Surveys by the Association on American Indian Affairs in 1969 and 1974 found that 25 to 35 of every 100 Native children had been separated from their families and put in foster homes, adoptive homes or institutions. State welfare workers, courts, private agencies and officials of the Bureau of Indian Affairs, through their boarding schools, removed them.

In 16 states surveyed in 1969, about 85 of every 100 Native children in foster care were living with non-Native families. The Bureau of Indian Affairs census of 1971 counted 34,538 children living in its boarding schools and dormitories instead of at home. The Indian Child Welfare Act became law on November 8, 1978. Lawmakers wrote it to keep Native children with Native families.

BY 1978: Native nations could contract to run their own schools, and lawmakers had passed a federal law to keep Native children with Native families. Federal judges had ordered buses to carry children to end separate schools in Charlotte and Boston.

Punished for speaking Spanish

In much of the Southwest, school staff punished Mexican American children for speaking Spanish, and in 1972 a federal commission printed how. At the U.S. Commission on Civil Rights' hearing in San Antonio in December 1968, a principal from El Paso testified that children caught speaking Spanish were sent to a Spanish detention class for an hour after school. The commission's report, *The Excluded Student*, includes a copy of the slip used to send a child there. No principal admitted hitting a child for speaking Spanish, but witnesses at the hearing said children were hit.

The children's own words. A class of Mexican American seventh graders in Texas wrote about their elementary schools in October 1964. A Texas teacher, Alonzo Perales, sent the essays to the commission, and the report does not name the children.

One wrote: "If we speak Spanish we had to pay 5 cents to the teacher or we had to stay after school." "In the first through the fourth grade," another wrote, "if the teacher caught us talking Spanish we would have to stand on the 'black square' for an hour or so."

A third had to "write three pages saying, 'I must not speak Spanish in school'." "In the sixth grade," a fourth wrote, "they kept a record of which if we spoke Spanish they would take it down and charge us a penny for every Spanish word." The same child went on: "If we spoke more than one thousand words our parents would have to come to school and talk with the principal."

How common the rule was. The commission surveyed about 5,800 schools with many Mexican American pupils in Arizona, California, Colorado, New Mexico and Texas, and about a third had rules that discouraged children from speaking Spanish in class. The rule was most common in Texas, where two-thirds of the schools surveyed had one, and in schools serving poor barrios, or Mexican American neighborhoods, where half did.

The law in Texas. Texas law had required teaching in English only since 1918. In October 1970 a Mexican American teacher in Crystal City, Texas, was charged with a crime for teaching a high school history class in Spanish, and

the charge was later dropped. On June 3, 1973, Governor Dolph Briscoe signed a law that ended the English-only rule, 55 years after it began.

Some districts kept Mexican American children apart and called it language teaching. In Driscoll, Texas, officials of the school district made Mexican American children spend four years getting through the first two grades. Linda Pérez, who spoke only English, was put in the "Mexican" first grade to learn English. In 1957 a federal judge called the system "arbitrary and unreasonable" and ordered it stopped.

Teachers at the Blackwell School in Marfa, Texas, taught Mexican American children from September 1909 until 1965. The school started in the old school building that district officials had left them in 1892, when they built a new school for white children.

The National Park Service states that schools like it ran in more than 120 Texas school districts in 59 counties, with a "no Spanish in the classroom" rule. Blackwell closed in 1965, when Marfa's school officials opened one elementary school for all children. In October 2022 it became a national historic site.

The walkouts. About 15,000 students walked out of seven schools in East Los Angeles from March 1 to 8, 1968. Mexican American students there faced a dropout rate of 60 percent in high school, bans on speaking Spanish, and being pushed into trade classes instead of classes that prepared them for college. They asked for bilingual teaching, classes taught in both Spanish and English, and for Mexican American school leaders. Members of the Board of Education turned them down and said there was no money.

Later that spring, Los Angeles police arrested thirteen of the organizers on felony conspiracy charges, which means they were accused of planning a serious crime together. One of those arrested was the teacher Sal Castro, and school officials took away his teaching job. After months of sit-ins at the Board of Education, he got his job back. About two years later, judges of a California appeals court threw out the charges against him and the others.

Lau, 1974. President Johnson signed the Bilingual Education Act on January 2, 1968, and it became Title VII of the 1965 school law. In 1974 the justices of the Supreme Court ruled on children placed in classes they could not

understand. In San Francisco about 2,856 pupils of Chinese descent did not speak English. About 1,000 were getting extra lessons in English, which left about 1,800 with none. One of the children was Kinney Kinmon Lau.

Justice William O. Douglas wrote in *Lau v. Nichols*, on January 21, 1974, that leaving those children without help "denies them a meaningful opportunity to participate in the public educational program." The ruling does not require schools to teach in Chinese. It states that a school may not put a child in a class taught only in a language the child did not understand and call that an equal education.

Hawaiian comes back into the schools

Hawaii's lawmakers required schools to teach in English in 1896, and in practice children were stopped from speaking Hawaiian at school. The history written by the Pūnana Leo teachers' group does not say who stopped them. A group of Hawaiian-language teachers met in January 1983 to plan how to keep the language alive, and in August 1984 they opened the first Pūnana Leo preschool, at Kekaha on the island of Kauaʻi. *Pūnana leo* means "nest of voices."

The teachers worked with the state's lawmakers in 1986 to end the 90-year ban on teaching in Hawaiian. In 1987 immersion classes, where children are taught in Hawaiian, opened at Keaukaha Elementary in Hilo and Waiau Elementary in Pearl City. The group's own history describes them as the first elementary classes in the United States taught through a Native language.

New kinds of school

Several new kinds of school began in these years, and two of them, the magnet school and the segregation academy, came out of the fight over desegregation.

Magnet schools. At a magnet school, officials offer special teaching to draw families from across a district. McCarver Elementary in Tacoma, Washington, opened as one in the fall of 1968. Before that, 91 of every 100 of its pupils were Black. Nobody was assigned to go there. School officials used a $200,000 federal grant, moved in the district's best teachers, and let children work through their lessons at their own speed. Counselors visited families at home to ask them to choose the school.

On the first day, about 200 white children enrolled where there had been about 50. By 1970 fewer than half of McCarver's pupils were Black, and there was a waiting list. The second magnet school opened in Boston in 1969. By 1981 there were about 1,000 in the country, and by 1991 more than 2,400.

Segregation academies. White families in the South also started private schools, called segregation academies, so that white children would not have to sit in class with Black children. Mississippi had only three private schools not run by a church before 1954. The state's lawmakers voted grants of $185 for each child to attend such a school in 1964, and in the school year 1964 to 1965 more than 500 children received more than $80,000.

One new school was Citizens' Council School No. 1 in Jackson. The Citizens' Council was a group founded in Indianola, Mississippi, in 1954, months after *Brown*. By the mid-1960s its leaders were promoting private schools as a way to avoid public schools with Black and white pupils together.

The justices of the Supreme Court ruled in 1969 that Mississippi's school districts had to desegregate by 1970. Between 1966 and 1970 the number of private schools in the state rose from 121 to 236, and the number of pupils in them tripled. In 1970 almost every white student in Canton left the public schools for a private academy, and more than 40 of every 100 white students in Jackson left.

The historian Michael Fuquay found that the academies got books, supplies, sports equipment, buildings and money straight from the public school systems, and his account does not name the officials who handed them over. In Tunica and Clay counties, private school teachers stayed on the public school payroll. In Forrest County, private school pupils rode public school buses.

William J. Simmons led the Mississippi Private School Association and took the minutes of its board meeting on January 23, 1971. They record the board's decision that its schools would stay members "until such a time as they accept a Negro student or faculty member," Negro being the usual word for Black people at the time. At that point, the minutes say, a school would be asked to leave the association.

Catholic schools. Catholic schools shrank in the same years. Their enrollment was highest in the school year 1964 to 1965, when 5,601,000 children attended 13,249 Catholic schools. By 1990 to 1991 there were about 2.5 million pupils, fewer than half as many, in 8,587 schools.

Charter schools. The charter school came last: a public school run by its own board under an agreement, called a charter, instead of by the school district. Minnesota's lawmakers passed the country's first charter school law in 1991, after the idea had failed three times in the state House, and it passed the House by one vote. The law allowed only eight charter schools. The first to open was City Academy in St. Paul, founded by Milo Cutter, in the fall of 1992.

Disabled children get a right to school

Until 1975 the officials of an American public school could refuse to take a disabled child. The federal Department of Education states that in 1970 American schools taught only one disabled child in five, and that more than 1 million children with disabilities were shut out of school altogether.

Seven children. Lawyers sued the school board of Washington, D.C., in 1971 for seven children who had been kept out of school. George Liddell was eight. Staff at Maury Elementary School had turned down his application because he needed a special class, and he had never been to school at all.

Janice King was thirteen, with weakness down one side of her body. She had been refused a place since she was old enough for school, because there was no program for her, and she had never been to school either.

Michael Williams, 16, had epilepsy, the brain disease that causes seizures, sudden bursts of activity in the brain that can make a person shake or pass out. He had been out of the Sharpe Health School since October 1969.

The other four had been put out of school or kept out, some of them for years, and two of them had been called "behavior problems." One of the four was Peter Mills, whose name is on the case.

The counts in the case did not agree. The families said perhaps 18,000 disabled children in the city were getting no special teaching, and the city's own report for 1971 estimated that 12,340 would not be served in the coming school year.

The 1975 law. President Gerald Ford signed the Education for All Handicapped Children Act on November 29, 1975. Under it, every disabled child in every state had the right to a free public education suited to that child.

Special education grew before the law as well as after it. The share of pupils in special education rose from 1.5 of every 100 in 1947 to 1948 to 5.9 of every 100 in 1969 to 1970, before the law, and to more than 11 of every 100, more than 1 child in 9, by 1989 to 1990. More than half of the rise in the number of children came before the law. After 1975, schooling was their right under federal law.

The groups children were sorted into changed too. The federal count had no group for children with learning disabilities until 1976 to 1977, and by 1989 to 1990 that group held nearly half of all children in special education. In the twenty years after 1969 to 1970, the number the government counted as "mentally retarded," its word then for children it judged to learn much more slowly than others, fell by about a third.

BY 1991: Every disabled child had a right under federal law to a free public education suited to that child, and more than 1 child in 9 was in special education. The country had more than 2,400 magnet schools, and Catholic schools had lost more than half their pupils since 1965.

Peter Mills

Who: A twelve-year-old put out of his Washington school and kept out, whose name is on the 1972 case in which a judge ruled that the city must teach every disabled child.
When and where: Washington, D.C., 1971 and 1972.

He was twelve, in fourth grade, and shut out of school.

Peter Mills was put out of Brent Elementary School in Washington, D.C., on March 23, 1971, and school officials did not place him in any public school after that. He was in the fourth grade. School staff called him a "behavior problem," in words the court record keeps.

He was a ward of the District of Columbia, which means the city government was legally responsible for him. In the court's words, he was "excluded from any publicly-supported education," and he stayed that way.

The case. The lawyers filed it on September 24, 1971, as *Mills v. Board of Education of the District of Columbia*. Part of the school board's answer was that it did not have the money to teach the seven children.

The ruling. Judge Joseph C. Waddy decided the case on August 1, 1972. He ruled that the District had to give a publicly supported education to every child of school age, whatever the child's disability, and that lack of money was no excuse. He wrote that if there was not enough money for everything, it had to be spent "in such a manner that no child is entirely excluded from a publicly supported education."

Before school officials could put a child out or move the child, they had to tell the family why and hold a hearing, a meeting where the family could answer.

Members of Congress applied the same rule to every state in a federal law in 1975. The federal Department of Education names two court cases as the ones that established that states had to teach disabled children, and *Mills* is one of them. The court record does not say what happened to Peter Mills afterward.

The paddle, in court and in the states

Staff at a public school could paddle a child without any hearing first, the justices of the Supreme Court ruled in 1977. After that ruling, state lawmakers banned school paddling one state at a time. Until 1971, hitting schoolchildren was lawful in every state except New Jersey. In American schools the usual method was a paddle, a wooden board that an adult swung against the child's buttocks.

James Ingraham. James Ingraham was an eighth grader at Charles R. Drew Junior High School in Dade County, Florida, in October 1970. "Because he was slow to respond to his teacher's instructions," the Supreme Court's opinion states, "Ingraham was subjected to more than 20 licks with a paddle while being held over a table in the principal's office." The beating left a hematoma, a pool of blood under the skin from a blow. He needed a doctor, and he missed several days of school.

Staff at the same school paddled Roosevelt Andrews, a ninth grader, several times for small things. He was also hit on the arms, and one blow left him unable to use his arm fully for a week.

The rules allowed paddling but set limits on it. Florida law allowed punishment that was not "degrading or unduly severe." Dade County's own rule described the paddle as "less than two feet long, three to four inches wide, and about one-half inch thick." It set the usual punishment at "one to five 'licks' or blows with the paddle." James Ingraham was hit more than twenty times.

Ingraham v. Wright. The families sued. On April 19, 1977, in *Ingraham v. Wright*, the justices ruled against the children, five votes to four. Justice Lewis Powell wrote that the Eighth Amendment, the part of the Constitution that forbids cruel and unusual punishment, "does not apply to the paddling of children as a means of maintaining discipline in public schools."

Powell also wrote that the Constitution did not require "notice and a hearing prior to the imposition of corporal punishment." He meant that school staff did not have to tell a child why, or hold a hearing, before they hit the child.

Justice Byron White wrote for the four who disagreed. The record, he wrote, showed "beatings so severe that if they were inflicted on a hardened criminal for the commission of a serious crime, they might not pass constitutional muster." He meant that the Constitution might forbid beating even a criminal that hard.

The states. State lawmakers ended school paddling instead, one state at a time. Massachusetts was the first state after New Jersey, in 1971. Hawaii followed in 1973, Maine in 1975, and Rhode Island and the District of Columbia in 1977. New Hampshire banned it in 1983, New York and Vermont in 1985 and California in 1986. Eight states banned it in 1989 and four in 1993.

Twenty-seven states and the District of Columbia had banned it by 1994, and then no state's lawmakers banned it again until 2003. When the century ended, school staff could still lawfully hit children in 23 states.

The districts' own reports to the federal government counted about 1.5 million children paddled in 1976. In 1978, 4 of every 100 American schoolchildren were hit at school. The count fell to 613,514 in 1990 and 342,038 in 2000.

District officials counted the children themselves, and nobody checked their numbers. In 2009 the law professor Deana Pollard Sacks wrote that some researchers had found the true numbers may be twice as high as reported.

Teaching at home

Some parents began to teach their children at home in the 1970s and 1980s, and in several states officials took them to court. Many state attendance laws said that a child had to be taught in a school, or by a teacher with a state certificate. The historian Milton Gaither, who wrote a history of American homeschooling, says the old laws in many states made it "either illegal or dubious (open to doubt)." Six states required parents to hold a teaching license.

Holt and the Moores. Two men who knew each other started the movement for different reasons. John Holt was a writer on school reform. He argued that ordinary schooling trained children to obey, and he told parents to take their children out of school. He started a newsletter, *Growing Without Schooling*, in August 1977, and he made up the word "unschooling." He died in 1985.

Raymond Moore was a researcher on education and a Seventh-day Adventist, a member of a Christian church. He and his wife, Dorothy Moore, argued that school before about age eight or nine harmed children and that they should be taught at home until then. Their book *Better Late Than Early* came out in 1975, and *Home Grown Kids* in 1981.

The courts. In Harrison County, West Virginia, Bobby and Esther Riddle taught their children, Tim and Jill, at home. They were convicted of breaking the state's school attendance law and fined ten dollars each. On December 11, 1981, the justices of the West Virginia Supreme Court upheld the convictions, although their ruling said, "By all accounts in the record below, the Riddles did an excellent job."

Larry Delconte moved to North Carolina in March 1981 with his wife, Michelle, and their four children and taught them at home. Judges of a state appeals court ruled that the attendance law forbade it. On May 7, 1985, the justices of the North Carolina Supreme Court reversed that ruling.

Lawmakers and judges in state after state changed the rules through the 1980s. Some states wrote detailed homeschooling laws, some added a sentence to an old law, and in some judges made the change. By 1989 most states had settled with homeschooling families, and a few held out into the early 1990s.

Mark and Chris DeJonge

Who: Parents in rural Michigan who were convicted of a crime for teaching their own children at home, and who appealed for about ten years.
When and where: Western Michigan, 1984 to 1993.

The trial judge praised their teaching and convicted them anyway.

Mark and Chris DeJonge were convicted in 1985 for teaching their own children at home, and the justices of the Michigan Supreme Court overturned the conviction in 1993. They began teaching their children in August 1984, in rural western Michigan. They used a course from the Church of Christian Liberty and Academy of Arlington Heights, Illinois. Neither parent held a Michigan teaching certificate, the state's license to teach.

Chris DeJonge was in her second week of teaching when officials from the state Department of Social Services came to the house and told the family that the children were truants, children missing school without permission. Under Michigan law, a child between 6 and 16 had to be taught in a public school, or in an approved private school by a certified teacher.

The trial. They were charged and convicted in the Ottawa County District Court in 1985. The trial judge had a "very, very favorable report on the education of the children." He convicted them anyway, because the law was about who did the teaching and not about how well it was done.

Each parent got two years of probation, which means living under a court's watch, and a fine of $200. The judge ordered them to have the children tested and to arrange for a certified teacher. The sentence was put on hold while they appealed.

Their reason was religious. They wanted what they called a "Christ centered education," because, as the court's opinion records, "the major purpose of education is to show a student how to face God, not just show him how to face the world."

Nine times in court. The judges of the Michigan Court of Appeals ruled against them on August 8, 1989. The justices of the Michigan Supreme Court sent the case back on October 17, 1990, and the appeals judges ruled against them again in 1991.

The justices of the Michigan Supreme Court ruled for them on May 25, 1993, four votes to three. Justice Riley wrote that the state had a strong interest in children being educated, but that Michigan had not shown that a certified teacher was necessary for it. The majority held that the rule could not be applied to a family with a sincere religious objection to it.

The case took them to court nine times over about ten years. In 2008 Mark DeJonge said, "We're glad we went through it. We grew as a family and we grew as a couple."

A Nation at Risk, 1983

Members of a federal commission published a report in April 1983 that stated American schools were failing. The modern argument over school standards began with this report. Secretary of Education T. H. Bell had set up the National Commission on Excellence in Education, led by David P. Gardner, on August 26, 1981. After 18 months its members published *A Nation at Risk*.

Its best-known sentences. The report compares weak schooling to an attack by an enemy country. "If an unfriendly foreign power had attempted to impose on America the mediocre educational performance that exists today," it states, "we might well have viewed it as an act of war. As it stands, we have allowed this to happen to ourselves." It states that the foundations of American schooling were "being eroded by a rising tide of mediocrity," meaning work that is only average or poor.

The report lists the commission's reasons. On 19 tests given in many countries, American students were never first or second, and compared with other industrial countries they were last seven times. It stated that some 23 million American adults could not read, write and understand well enough for everyday life. It stated that about 13 of every 100 seventeen-year-olds could not either, and as many as 40 of every 100 among minority youth.

Average SAT scores had fallen almost every year from 1963 to 1980, by more than 50 points in reading and nearly 40 in math. Of seventeen-year-olds, nearly 40 of every 100 could not draw conclusions from something they read, and only about one in three could solve a math problem that needed several steps.

These are the commission's own figures, and other researchers disputed several of them. In 1993 researchers at Sandia National Laboratories, a federal laboratory, published their own study of the same kinds of measures. On most of them, including test scores, dropout rates and college enrollment, they found steady or slight improvement.

Teachers strike, and their pay

Teachers in New York City and in Florida joined unions, groups of workers who join together to bargain with an employer over pay and working conditions, and went on strike in this era.

New York, 1960. Members of the new United Federation of Teachers held the first teachers' strike in New York City's history on November 7, 1960, Election Day. It lasted one day. The union's leaders said it had about a quarter of the city's 39,000 teachers, *Time* magazine reported. New York teachers voted in June 1961 to bargain as a group, and in December they chose the union to bargain for them. Later accounts call it the first big-city teachers' union in the country to win that right.

Florida, 1968. More than 27,000 Florida teachers and school officials handed in letters resigning their jobs and walked out on February 19, 1968. The Zinn Education Project, a group that makes history lessons for teachers, calls it the first strike by teachers across a whole state in the United States. The teachers had asked for better pay and more money for schools, and Governor Claude Kirk had refused.

The strike ended on March 8, when members of the state board of education agreed to more money for schools. Afterward, officials refused to rehire thousands of the teachers because they had gone on strike.

The pay. Measured in dollars of the same value, the average public school teacher earned about $58,700 a year in 1969 to 1970, about $52,900 in 1979 to 1980, and about $63,500 in 1989 to 1990. In 1999 to 2000 the figure was still about $63,500, so real teacher pay did not grow in the 1990s.

The economist Sylvia Allegretto compares teachers' weekly pay with that of other college graduates of the same age and schooling. By her count, teachers earned about 7 percent less in 1979, about 5 percent less in 1993 and about 6 percent less in 1996. After 1996 the gap grew.

The last one-room schools

The one-room school nearly disappeared in these years. The federal count of one-teacher public schools was 59,652 in 1949 to 1950, 20,213 in 1959 to 1960 and 1,815 in 1970 to 1971. By 1990 to 1991 there were 617, about one for every hundred there had been in 1950. The number of school districts kept falling, from 83,718 in 1949 to 1950 to 40,520 in 1959 to 1960 and 17,995 in 1970 to 1971.

BY 2000

If you remember one thing: Judges and lawmakers opened public schools to Black children, disabled children and children who did not speak English in these fifty years, and each change took years of fighting.

One question left open: Would the schools stay desegregated? The share of Southern Black students in mostly white schools was at its highest, about 43 percent, in the mid-1980s. The next era gives the answer.

Next: After 2000, members of Congress made every state test every child in reading and math each year.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 37 MINUTES

The arguments over American schooling after 2000 were about which school a child attended, what was taught there and how learning was measured. Under a federal law signed in 2002, every state had to test every child in reading and math each year from third grade to eighth, and the yearly tests began in the school year 2005 to 2006. More families chose charter schools, private schools paid for with state money, or teaching at home.

State and local officials closed the school buildings in the spring of 2020 because of the coronavirus pandemic, a disease spreading around the world, and children were taught over the internet for the rest of that school year.

Gunmen killed children and teachers inside schools. Federal officials counted the children who had died at the government's own Indian boarding schools, and a president apologized. In 2025 President Donald Trump ordered his Secretary of Education to begin closing the federal Department of Education. Federal officials publish their school counts years after the school year they describe.

Testing every child: No Child Left Behind

Under a federal law signed in 2002, every state had to test every child in reading and math every year from third grade through eighth grade. President George W. Bush signed the No Child Left Behind Act on January 8, 2002, at Hamilton High School in Hamilton, Ohio. The law is called the act "of 2001" because members of Congress passed it in 2001.

The law's first lines state its purpose: "to close the achievement gap with accountability, flexibility, and choice, so that no child is left behind," the achievement gap being the difference between the test scores of different groups of children, such as rich and poor children.

"The fundamental principle of this bill is that every child can learn, we expect every child to learn," Bush said at the signing, "and you must show us whether or not every child is learning."

What the tests covered. The yearly tests in grades 3 through 8 began in the school year 2005 to 2006. Science had to be tested at least once in grades 3 to 5, once in grades 6 to 9 and once in grades 10 to 12. States had to be able to report the scores separately for boys and girls, for each main racial and ethnic group, for children still learning English, for children of migrant farm workers, for disabled children and for children from poor families.

The law also set a deadline. By the end of the school year 2013 to 2014, "all students in each group" were to "meet or exceed the State's proficient level of academic achievement," proficient meaning good enough to meet the standard that officials in each state set. So every child in the country was to reach that level in reading and math by 2014.

The 2015 law. President Barack Obama signed a new law, the Every Student Succeeds Act, on December 10, 2015. The federal Department of Education's own description states that No Child Left Behind's "prescriptive (telling people exactly what to do) requirements became increasingly unworkable for schools and educators."

Under the new law the yearly tests in grades 3 through 8 stayed, along with one test in high school, and the single national deadline went away. Officials in each state now set their own "long-term goals" for all their pupils and for each group of them. Both laws are rewritten versions of the 1965 school law that President Lyndon Johnson signed at his old one-room school in Texas.

How many tests. Children in big cities took many tests. The Council of the Great City Schools, a group of big-city school districts, studied the tests in 66 of those districts in the school year 2014 to 2015. The districts had more than 7 million students in about three dozen states.

According to the Associated Press report of the study, a student took about 112 required standardized tests between pre-kindergarten and twelfth grade, a standardized test being the same test, given and scored the same way, for every child who takes it. Students spent 20 to 25 hours a year taking these tests, about 2.3 percent of class time for the average eighth grader. Eighth and tenth grade had the most required tests.

The researchers Thomas Dee and Brian Jacob called the law's effect on learning "a highly controversial but centrally important question." In 2011 they studied national test scores from before and after the law. They found that the law raised fourth graders' math scores, and eighth graders' math scores to some degree. They found no sign that it raised fourth graders' reading.

Choosing a school: charters, private schools and state money

More families sent their children to schools other than the local public school in these years, and state lawmakers paid for some of those choices with public money. The federal count of every public school records the growth of charter schools. In the school year 2012 to 2013 there were 6,079 charter schools, with 4.6 percent of all public school pupils. In 2022 to 2023 there were 7,998, with 3,717,857 pupils, or 7.6 percent.

Federal statisticians published that table in February 2024. As of September 2026, 2022 to 2023 was still the newest year in the federal count of charter schools.

Private schools. About 1 American child in 11 went to a private school. In the fall of 2021, 4.7 million children from kindergarten through twelfth grade were in private schools, 9 percent of all schoolchildren. Catholic schools had 1.7 million of them, other religious schools 2.0 million, and schools with no church behind them 1.1 million.

Ten years earlier, in the fall of 2011, the total was 4.5 million. Catholic schools had lost about 200,000 children over those ten years, and other religious schools had gained about 300,000. Catholic schools had 5,601,000 pupils in 1964 to 1965, their highest year, so the 1.7 million of 2021 was less than a third of that. The National Center for Education Statistics, the federal office that counts schools, published those figures in May 2024. As of September 2026, they were still the newest full federal count of private schools.

Public money for private school. State lawmakers created three main ways to pay for private schooling with public money.

One is the voucher, a payment from the state that a family can use toward a private school's fees instead of sending the child to the local public school. Another is the education savings account, or ESA, state money set aside for one child that the family can spend on private school fees, a tutor, books or an online course. The third, the tax-credit scholarship, works through taxes: a person or a company gives money to a scholarship fund, and the state takes the same amount off their tax bill.

EdChoice, a group that supports these programs, keeps the national count. It listed 69 programs for the school year 2024 to 2025. By its count, 488,736 children used education savings accounts, 349,923 used vouchers, 217,194 had tax-credit scholarships, and 106,442 in Florida had a tax-credit ESA, about 1,162,000 children in all.

Patrick Wolf, a researcher at the University of Arkansas, has said that studies of the programs open to all children find that about two of every three children using them had never gone to a public school. In Florida, which opened its programs to all children in 2023, *Politico* reported that 69 percent of the new students were already in private schools.

The argument over the money. EdChoice states that its aim is "advancing educational freedom and choice for all," and it quotes the economists Milton and Rose Friedman's idea that "every family could choose the learning environment that best fits their child." The National Education Association, a teachers' union, states that "vouchers take scarce funding from students in public schools and give those resources to unaccountable private schools."

Researchers who studied one program, Louisiana's vouchers, found different things about the children who used them and about the public schools nearby. The researchers Jonathan Mills and Patrick Wolf studied the program's first two years in 2016. Children who used a voucher to go to a private school scored lower in math than similar children who did not. The researcher Anna Egalite found that the public schools that stood to lose the most pupils to the program did the same or slightly better.

Teaching at home: the 2020 jump

The share of children taught at home rose in this era and about doubled after 2020. The federal survey of homeschooling counted 1.7 percent of children aged 5 to 17 taught at home in 1999 and 2.8 percent in 2019, about 1.5 million children.

In the 2019 survey, the reason parents gave most often was worry about the school environment, named for 80 of every 100 homeschooled children. Moral teaching and more family life together came next, at 75 each.

2020. Census Bureau staff asked households the same question twice in 2020, after the school buildings closed. In late April and early May, 5.4 percent of households with school-age children said they were homeschooling, and by early October 11.1 percent did. Among Black households it went from 3.3 percent to 16.1 percent. The staff worded the question so that children taking public school lessons over a screen were not counted.

Most of the rise stayed after the schools reopened. The researchers Genevieve Smith and Angela R. Watson studied the Census Bureau's surveys from September 2022 to August 2023 and found 5.82 percent of school-age children homeschooled, about twice the share before 2020. They wrote that education experts had predicted the number would fall once schools reopened, and it did not. It was highest in Alaska, at 12.6 percent, and lowest in Rhode Island, at 2.9 percent.

The rules. Lawmakers in each state make their own rules for homeschooling, and the rules range from almost none to many. The Coalition for Responsible Home Education, a group that argues for more checks on homeschooling, counted the rules in March 2026.

In 12 states a family does not have to tell anyone that it is homeschooling. In 29 states no one ever has to check a homeschooled child's progress, and only 3 states require a check for every homeschooled child. In 22 states a family does not have to keep any school records.

Texas law requires no notice, no check and no records. New York's requires all three. A parent there must send the local school superintendent a written notice by July 1 each year, and then a teaching plan for the child. Every three months the parent sends a report giving the hours taught and what was covered in each subject. Once a year the parent sends an assessment, a test or written review of how the child is doing.

BY 2023: More than 7 of every 100 public school pupils went to charter schools, about 9 of every 100 children went to private schools, and the share taught at home was about twice what it had been before 2020.

Special education now

About 1 public school student in 7 received special education in the 2020s. The 1975 law under which disabled children have a right to school is now called the Individuals with Disabilities Education Act, or IDEA. In the school year 2022 to 2023, 7.5 million students aged 3 to 21 received special education or related services under it, 15 percent of all public school students, according to the National Center for Education Statistics in May 2024.

The largest group, 32 in every 100, had specific learning disabilities, such as trouble learning to read or to do math. In 1989 to 1990 the count had been 4,641,000, or 11.4 percent.

How separate the schools are now

The schools of the South did not stay as desegregated as they had become by the 1980s. Researchers at the Civil Rights Project at the University of California, Los Angeles, count the Black students in the South who go to schools where most of the students are white. That share was highest, about 43 of every 100, in the mid-1980s. By 2021 it was about 16 of every 100, by their report of April 2024.

Across the whole country, more schools had almost no white students. The same researchers counted schools where 90 to 100 of every 100 students were not white. In 1988, 7.4 percent of American public schools were like that, and in 2021, 19.8 percent were. In 2021, 78 of every 100 students in those schools were poor.

The students themselves had changed. In 1968, about 81 of every 100 American public school students were white. In 2021, about 45 were white, and about 28 were Latino.

In New Orleans, the McDonogh No. 19 school building, where Leona Tate, Gail Etienne and Tessie Prevost walked in with federal marshals on November 14, 1960, reopened on May 4, 2022, as the Tate, Etienne and Prevost Center.

The school year and the school day

In most states that set a minimum, school must run at least 180 days a year, and a few districts have tried other calendars.

Researchers at the Pew Research Center checked state laws in 2023. Of the 38 states that set a minimum number of school days, the laws of 27 states and Washington, D.C., required 180. The laws of seven states set a lower minimum, and Colorado's 160 days was the lowest. The laws of four states set a higher one, and Kansas was highest, at 186 days for kindergarten through grade 11.

Year-round school spreads about the same number of days across the whole year, with shorter breaks. It became less common. The federal count found 4.4 percent of public schools with all their pupils on a year-round calendar in 2007 to 2008, 3.2 percent in 2011 to 2012 and 2.5 percent in 2017 to 2018.

The four-day week. The four-day school week spread instead. In September 2023 Paul Thompson, an economist at Oregon State University, counted about 2,100 schools in almost 900 districts in 26 states on a four-day week. He said that was about double the number ten years before and almost 40 percent more than in 2019.

In Missouri, by the count of Jon Turner of Missouri State University, 105 districts had a four-day week in 2020 and 128 in 2022, a quarter of the state's districts. His count and the state's list differ, so both are estimates.

Start times. In a 2014 policy statement, the American Academy of Pediatrics, a group of children's doctors, said that middle and high schools "should aim for a starting time of no earlier than 8:30 am," because teenagers who start earlier lose sleep. In the school year 2020 to 2021 the average American public high school started at 8:07 in the morning. More than 7 of every 10 started before 8:30.

California's lawmakers wrote a start time into law, and the governor approved it on October 13, 2019. Under Senate Bill 328, middle schools may begin no earlier than 8:00 a.m. and high schools no earlier than 8:30 a.m. Schools had

to change by July 1, 2022, or, where a teachers' contract in force on January 1, 2020, ended later, when that contract ended. The law does not apply to rural districts.

Florida's lawmakers passed a similar law in 2023, to begin in 2026. District officials said they did not have enough buses or drivers to do it. On March 27, 2025, Florida senators voted for Senate Bill 296 with no votes against. Under the bill, the requirement ended, and any district that kept early start times had to file a report on what stood in the way. Governor Ron DeSantis signed it on May 21, 2025.

The paddle and the suspension

The laws of 15 states still let an adult at school hit a child as a punishment in 2026, and in American schools the usual method is the paddle. At the end of the 1990s, 23 states had no ban on it. From 2003 to 2011 lawmakers in four more states banned it: Delaware in 2003, Pennsylvania in 2005, Ohio in 2009 and New Mexico in 2011.

The 2026 count. Reporters at NPR, the public radio network, counted 15 states in August 2026 whose laws allow it, and 30 states plus Washington, D.C., whose laws ban it in all public schools. The other five states neither allow it nor ban it outright. Some have other laws that have been interpreted as bans, and some have no law about it. Other groups count differently for that reason, and they say so.

Federal officials count the children who are hit, in a survey that every public school district must answer, called the Civil Rights Data Collection. In the school year 2021 to 2022, school staff hit about 24,500 public school students as a punishment. NPR counted almost 32,000 reported paddlings in the same data, because some children were hit more than once. Not every district reports it.

Almost all the reported cases were in eight states, most of them in the South. Mississippi had the highest rate in the country and Arkansas the second highest. Officials posted the next survey, for 2023 to 2024, in September 2026, about eight months late. They posted it as raw data files with no national totals, so as of September 2026, 2021 to 2022 was the newest national count.

The same survey records which children were hit: boys far out of proportion to their numbers, and girls of every group less often than their share of students. White boys were 23 of every 100 public school students and 47 of every 100 children hit. Black boys were 8 of every 100 students and 20 of every 100 children hit, and American Indian and Alaska Native boys, fewer than 1 of every 100 students, were 2 of every 100 children hit.

Suspensions. School staff suspend children, keeping them out of class for a set number of days in a separate room at school or at home, far more often than they paddle them. In 2021 to 2022, about 2.3 million children, 5 percent of public school students, were suspended at least once inside school, and about 2.4 million at least once out of school. Districts also reported about 220,000 children to the police. Even in public preschools, out of 1.4 million children, about 2,700 were suspended out of school and about 370 were expelled, which means put out of the school altogether.

School staff punished Black children and disabled children far out of proportion to their numbers. The federal report states that "Black boys were disciplined at higher rates, compared to boys of other races." The survey records each group's share of all students and its share of the children punished:

- Black boys were 8 of every 100 students and 22 of every 100 children suspended out of school.
- Children with disabilities were 17 of every 100 students and 29 of every 100 suspended out of school.
- Black children were 15 of every 100 students and 33 of every 100 children arrested at school.
- Black children were 18 of every 100 preschool children and 38 of every 100 preschool children suspended.
- Preschool children with disabilities were 23 of every 100 preschool children and 74 of every 100 of those expelled.

BY 2024: About 15 of every 100 public school students received special education. In the newest counts, from 2021 and 2022, about 16 of every 100 Black students in the South went to mostly white schools, and school staff hit

about 24,500 children in a year as a punishment.

Shootings at school

Gunmen shot and killed children and teachers inside American schools in these years. Statisticians at the National Center for Education Statistics count every time a gun is fired or shown at a school, or a bullet hits school property, whether anyone is hurt or not. In the school year 2000 to 2001 they counted 30 shootings, with 18 people killed and 29 hurt. In 2021 to 2022 they counted 327 shootings, with 81 people killed and 269 hurt, more than ten times as many shootings.

Both counts include the people who fired. The statisticians warned that 2021 to 2022 was far above every earlier year, and as of September 2026 it was the newest year the federal count covered.

A narrower count. Reporters at Education Week, a newspaper about schools, count only shootings on school grounds, during school or a school event, in which someone other than the shooter was hit. By their count, 7 people were killed in 2025, the fewest since 2020. The two counts use different rules and cannot be joined into one list.

Sandy Hook, 2012. Adam Lanza, who was 20, shot and killed his mother in her bed at their home in Newtown, Connecticut, on December 14, 2012. Then he went to Sandy Hook Elementary School with a rifle and shot his way into the building, killing the principal and the school psychologist in a hallway. In two first-grade classrooms he killed the two adults in each room, 15 children in one room and 5 in the other, and then he shot himself.

Stephen Sedensky investigated. He was the prosecutor for that part of Connecticut, the lawyer who brings criminal charges for the government there. Sedensky wrote that "in fewer than 11 minutes twenty first-grade pupils and six adults had lost their lives." Lanza also wounded two other adults. The report does not print the children's names. Sedensky found no one else criminally responsible.

Parkland, 2018. Nikolas Cruz, a 19-year-old former student, shot and killed 14 students and 3 staff members at Marjory Stoneman Douglas High School in Parkland, Florida, on February 14, 2018, and wounded 17 others. He fired inside one building for about six minutes, from 2:21 to 2:27 in the afternoon.

A state commission investigated. Its members found that Scot Peterson, the sheriff's deputy assigned to the school, "fled to a position of personal safety while Cruz shot and killed ... students and staff." Prosecutors charged Peterson with felony child neglect, a serious crime of failing to protect children, and with other crimes. On June 29, 2023, a jury found him not guilty.

Uvalde, 2022. An 18-year-old gunman went into Robb Elementary School in Uvalde, Texas, with a rifle at 11:33 in the morning on May 24, 2022. He went into two joined classrooms and killed 19 children and 2 teachers, and at least 17 others were wounded. Within 3 minutes, 11 police officers were inside the school. The gunman fired at them, and they pulled back.

The school district's police chief, Pete Arredondo, told officers several times to wait while they looked for keys, and he tried to talk to the gunman. Justice Department officials counted at least 380 officers from 24 agencies at the school, and a committee of the Texas House of Representatives counted 376. Children in the classrooms called 911, and within four minutes of the officers' arrival the dispatchers knew that class was in session.

At about 12:50 p.m. a team of Border Patrol agents and sheriff's deputies went in and killed the gunman, 77 minutes after the first officers entered the school.

Officials of the U.S. Justice Department published their review on January 18, 2024. The review states that the officers' "most significant failure" was how they saw the gunman. They treated the gunman as a "barricaded subject," a person shut in a room, instead of an "active shooter," a person who is still attacking people. The report does not name the gunman.

A grand jury, a group of citizens who decide whether there is enough proof for a trial, charged Arredondo and a former school police officer, Adrian Gonzales, with abandoning and endangering children in June 2024. They were the only officers charged. On January 21, 2026, a jury found Gonzales not guilty. Arredondo's trial on 10 counts was set for February 22, 2027.

Apalachee, 2024. Colt Gray shot and killed two 14-year-old students and two teachers at Apalachee High School in Winder, Georgia, on September 4, 2024. He pleaded guilty, and on July 27, 2026, a judge sentenced him to life in prison with no chance of ever being let out. His father, Colin Gray, had given him the rifle as a Christmas present.

A jury found Colin Gray guilty of two counts of second-degree murder on March 3, 2026. Under Georgia law, that crime means causing a death while, through criminal carelessness, causing a child under 18 "cruel or excessive physical or mental pain." It does not require meaning to kill, and it carries 10 to 30 years in prison.

The jury also found him guilty of two counts of involuntary manslaughter, which means causing a death without meaning to, and of reckless conduct and cruelty to children. On July 30, 2026, he was sentenced to 15 years.

The school buildings close, 2020

State and local officials closed nearly every school building in the country in the spring of 2020 because of COVID-19, an illness caused by a virus. Officials of the World Health Organization had declared it a pandemic on March 11, 2020. On March 17, Governor Laura Kelly of Kansas ordered every school building in her state closed for the rest of the school year, and Kansas was the first state to do that.

Reporters at Education Week tracked the closures from March 6 to May 15, 2020. By their count, at the peak at least 55.1 million students were shut out of 124,000 public and private school buildings. Nearly every state's officials ordered or advised that schools stay closed until the end of the school year.

Teachers taught over the internet, and not every child had a computer at home. In the spring of 2020, 45 percent of public school principals said their school gave pupils a computer or other device to use at home. In a Census Bureau survey in September 2020, 59 percent of adults with a child in school said the school or district had given the child a computer. By September 2021, staff at 96 percent of public schools said they gave devices such as tablets to pupils who needed them, and 70 percent supplied internet service at home.

Tabatha Rosproy

Who: A preschool teacher named National Teacher of the Year in the spring her classroom was shut by the pandemic.

When and where: Winfield, Kansas, 2020.

She put pinwheels in her pupils' yards.

Tabatha Rosproy kept teaching her preschool class from a distance after the governor of Kansas closed its school buildings in March 2020. In May 2020 she was named National Teacher of the Year, the first early childhood teacher to win the award.

She taught for the Winfield Early Learning Center in Winfield, Kansas. Her classroom was not in a school. It was inside Cumbernauld Village, a retirement community and nursing home in the town, and the program was called Little Vikes. Children with disabilities and children without them were in her class together, and residents of the home joined in with the children every day.

Teaching from home. When the Kansas school buildings closed, Rosproy was a co-chair of the state task force of teachers that wrote the guidance for teaching children at home. She recorded her lessons and put them on an app called Seesaw, and once a week she held a video call with each child, one at a time. When a family could not get online, she called them, texted them, or delivered the materials to their home.

For the families of her pupils with disabilities, she prepared materials that showed the parents how to use the methods she used in the classroom. She mailed each child a bin of sensory toys, the part of the classroom they liked best, and she put pinwheels in their yards.

"At first, I was nervous to be named National Teacher of the Year during this pandemic," she told Education Week, "because I wondered if I was able to make a difference." On May 22, 2020, she told the news site Chalkbeat, "Nothing will replace what we are able to do in person. But we are surviving through this and we are looking for the small victories when we have them."

Test scores after 2020

National test scores fell after the school closures and had not recovered by 2024. The National Assessment of Educational Progress, often called the Nation's Report Card, is the same federal test given to a sample of American children decade after decade. It was given from January to March 2022, the first time since the closures.

Compared with 2019, the average math score had fallen 5 points in fourth grade and 8 points in eighth grade. The report on the test called these the largest drops in math since those tests began in 1990.

It was given again from January to March 2024. The average fourth-grade reading score was 5 points below 2019, and 31 of every 100 fourth graders reached the level the test calls Proficient, 4 fewer than in 2019. Fourth-grade math was 3 points below 2019.

Twelfth grade. In twelfth grade, reading and math were each 3 points below 2019. Members of the National Assessment Governing Board, which oversees the test, released those twelfth-grade results on September 9, 2025. They called them "the lowest ever reported on each assessment," which means the lowest since each of these tests began, not the lowest in all of history. Forty-five of every 100 high school seniors scored below the lowest level the test names, called Basic, in math, and 32 of every 100 in reading.

The test does not measure why scores fell. Reading scores had already begun to drop between 2017 and 2019, before the closures.

BY 2025: Fourth-grade reading scores were still 5 points below 2019, and twelfth graders' scores in reading and math were the lowest ever reported on those tests.

Teachers: hard to hire, and paid less than other graduates

Officials at most public schools reported trouble filling teaching jobs in 2023 and 2024, and teachers earned less than other college graduates. Statisticians at the National Center for Education Statistics asked 1,392 public schools in every state in August 2024 how their hiring was going. Seventy-four of every 100 said they had trouble filling at least one teaching job for the school year 2024 to 2025.

Each school had six teaching jobs open on average, and it had filled 79 of every 100 of them with fully certified teachers. The reason schools gave most often was a lack of qualified people, at 64 of every 100 schools, and next was too few people applying, at 62 of every 100. A year earlier, 86 of every 100 schools had reported trouble hiring teachers.

The pay. The National Education Association, a teachers' union, keeps the pay figures. By its count the average public school teacher earned $74,495 in the school year 2024 to 2025, up from $71,985 the year before. A new teacher started at $48,112 on average. Once rising prices are counted, the union reports, teachers were earning about 5 percent less than teachers had ten years earlier.

The economist Sylvia Allegretto compares the weekly pay of public school teachers with that of other college graduates of about the same age, schooling and state. By her count, in 2024 teachers earned 26.9 percent less a week than those other graduates, the widest gap she had measured. In 1996 the gap had been about 6 percent.

Paying for college

A year at college cost tens of thousands of dollars in these years, and 42.3 million Americans owed money on federal student loans. The National Center for Education Statistics gives the full average cost of a year for a new full-time student living at a four-year college in the school year 2022 to 2023. At a public college it was $27,100. At a private college run for profit it was $33,600, and at a private college not run for profit it was $58,600.

Fewer new students borrowed than ten years before. In 2020 to 2021, 38 of every 100 new full-time students received a loan, down from 50 of every 100 in 2010 to 2011. Students who finished a four-year degree in 2015 to 2016 with federal loans still owed an average of $45,300 in 2020.

Canceling loans. Officials in President Joe Biden's Department of Education announced a plan to cancel some federal student loans in August 2022. A borrower who earned less than $125,000 a year could have up to $10,000 canceled, and some could have up to $20,000. About 43 million borrowers qualified. The Congressional Budget Office, which works out costs for Congress, estimated the plan would cancel about $430 billion.

The justices of the Supreme Court struck the plan down, six votes to three, on June 30, 2023, in *Biden v. Nebraska*. Chief Justice Roberts wrote that the law the officials relied on did not let them cancel "$430 billion of student loan principal," the money borrowed, not counting interest. Justice Kagan wrote for the three who disagreed: "Emergencies, after all, are emergencies, and more serious measures must be expected in response to more serious problems."

According to the federal office that runs student aid, 42.3 million people owed more than $1.7 trillion in federal student loans on June 30, 2026. More than 9.3 million of them were in default. Under federal law a loan is in default when the borrower has gone 270 days, about nine months, without making a payment on time.

The boarding schools investigated, and an apology

Federal officials investigated the government's own Indian boarding schools between 2021 and 2024, and in 2024 President Joe Biden apologized for them. Secretary of the Interior Deb Haaland ordered the investigation on June 22, 2021. She is a citizen of Laguna Pueblo and was the first Native person in a president's cabinet, the group of the president's top officials who each run a department.

Her order asked for a report on the government's records of the schools, "with an emphasis on cemeteries or potential burial sites." Her department's announcement said the order followed news from Canada. There, leaders of the Tk'emlúps te Secwepemc First Nation had reported 215 unmarked graves at the former Kamloops Indian Residential School.

The reports. Investigators published a first report in May 2022 and a final report in July 2024, under Bryan Newland, the Assistant Secretary for Indian Affairs. The final report counted 417 federal Indian boarding schools between 1819 and 1969 and at least 973 children who died at them, and it states that the real number of deaths is higher. Investigators found 74 burial sites at 65 of the schools. They named 18,624 children who had attended, and the report states that this list is incomplete. The punishments listed in the first report, from solitary confinement to flogging, are set out under 1850 to 1900.

The apology. Biden spoke at the Gila Crossing Community School in the Gila River Indian Community in Arizona on October 25, 2024, and Haaland introduced him. "I formally apologize today as President of the United States of America for what we did," he said. He also said, "After 150 years, the government eventually stopped the program but never formally apologized."

By a proclamation of December 9, 2024, a formal written order from the president, he made about 24.5 acres of the old Carlisle Indian Industrial School grounds in Pennsylvania into a national monument, a place the federal government keeps for its history. The proclamation states that "nearly 1,000 Native youths died in schools across the system, but the actual number of lives lost is likely much higher."

Members of Congress proposed a commission to study the boarding schools. Senator Lisa Murkowski introduced her bill on February 26, 2025, and Representative Tom Cole introduced his on February 3, 2026. By September 2026 neither the Senate nor the House had voted to pass either one.

Four federal boarding schools for Native students, away from reservations, were still open in 2026, according to the Bureau of Indian Education: Chemawa Indian School in Salem, Oregon, Flandreau Indian School in South Dakota, Riverside Indian School in Anadarko, Oklahoma, and Sherman Indian High School in Riverside, California.

Books taken off the shelves, and limits on teaching

School board members and state officials removed thousands of books from school libraries in the 2020s, and lawmakers or officials in 18 states limited what teachers could say about race and sex. Each side described the removals differently.

Counting bans. PEN America, a writers' group that defends free speech, calls a school book ban any removal of a book, or any limit on reading it, because of what is in it. The removal can follow a complaint from parents or community members, a decision by school officials, or an order or threat from government officials.

By PEN America's count there were just under 3,000 bans a year in the school years 2021 to 2022 and 2022 to 2023, 10,046 in 2023 to 2024, and 6,870 in 2024 to 2025. In 2024 to 2025 Florida had the most, 2,304, then Texas with 1,781 and Tennessee with 1,622.

Officials of the U.S. Department of Education sent out a memo in January 2025 calling book bans a "hoax." They also canceled earlier advice that removing books could break civil rights law. Defense Department officials removed nearly 600 titles in July 2025 from the schools the department runs for children on military bases. According to PEN America, the reason given was that the books did not fit the president's orders on diversity, race and what the orders called "gender ideology extremism."

The American Library Association, the national group for librarians, counts school, public and college libraries together. For 2025 it recorded 4,235 different titles that people tried to have removed. By its count, pressure groups, government officials and other decision makers started 92 of every 100 of those attempts.

Limits on teaching. Education Week reported in March 2024 that lawmakers or officials in 44 states had considered limits since 2021 on how race and gender could be taught, and that 18 states had put such limits in place.

In Florida, Governor Ron DeSantis signed the Parental Rights in Education law on March 28, 2022. Under it, classroom teaching about sexual orientation, which sex a person is attracted to, or gender identity, a person's own sense of being a boy or a girl, a man or a woman, was banned from kindergarten through third grade.

DeSantis said that parents "should be protected from schools using classroom instruction to sexualize their kids as young as 5 years old." Opponents called it the "Don't Say Gay" bill. U.S. Secretary of Education Miguel Cardona said the governor was targeting "some of Florida's most vulnerable students and families, all while under the guise of 'parents' rights,'" a guise being a false cover.

Mahmoud v. Taylor. Members of the Montgomery County school board in Maryland added five storybooks for kindergarten through fifth grade in the school year 2022 to 2023. The books had LGBTQ characters: lesbian, gay, bisexual, transgender and queer, words for people who are attracted to people of their own sex, or whose sense of being male or female differs from the body they were born with. At first board members let parents take their children out of those lessons, and then they ended that choice.

Parents of several religions sued, among them Tamer Mahmoud and Enas Barakat, who are Muslims, and Jeff and Svitlana Roman and Chris and Melissa Persak, who are Christians. On June 27, 2025, in *Mahmoud v. Taylor*, six justices of the Supreme Court ruled that the parents were entitled to have their children excused while their case went on.

Justice Alito, writing for the six, relied on *Wisconsin v. Yoder*, the 1972 Amish case, and wrote that parents have a right "to direct the religious upbringing of their children." Justice Sotomayor wrote for the three who disagreed that public schools "offer to children of all faiths and backgrounds an education and an opportunity to practice living in our multicultural society."

The federal Department of Education, 2025 and 2026

President Donald Trump ordered his Secretary of Education in 2025 to begin closing the federal Department of Education, and in 2026 his officials announced that they would move its special education and civil rights offices to other departments. The people who work in that department send federal money to schools and enforce the laws against discrimination in them. Staff in the department, or paid by it, also collect the civil rights survey, the national test and the other federal school counts in this era.

Secretary of Education Linda McMahon announced layoffs on March 11, 2025, that would cut the department's staff from 4,133 people to 2,183. On March 20, Trump signed an order telling her to "take all necessary steps to facilitate the closure of the Department of Education and return authority over education to the States and local communities."

The order gave his reasons. It cited the 2024 national test, by which "70 percent of 8th graders were below proficient in reading, and 72 percent were below proficient in math." Below proficient includes children who reached the Basic level.

The court fight. A federal judge in Massachusetts blocked the layoffs on May 22, 2025, in a lawsuit later called *McMahon v. New York*. On July 14, 2025, a majority of the justices of the Supreme Court, in an order that no justice signed, let the layoffs go ahead while the case continued.

Justice Sotomayor, joined by Justices Kagan and Jackson, disagreed. She wrote that the case "arises out of the President's unilateral efforts to eliminate a Cabinet-level agency established by Congress nearly half a century ago," unilateral meaning done by one person alone.

In June 2026 officials announced that the office for special education would move to the Department of Health and Human Services. The Office for Civil Rights, which investigates discrimination in schools, would move to the Justice Department. *Education Week* reported in June 2026 that "only Congress can formally close a cabinet agency." By then members of Congress had passed no law closing it.

BY TODAY

If you remember one thing: After 2000 more families left the local public school for charter schools, private schools and teaching at home, while the schools of the South grew more separate again.

- 2002: President Bush signs the law under which every child in grades 3 to 8 is tested each year.
- 2020: State and local officials close nearly every school building in the country.
- 2024: Federal investigators count at least 973 children who died at the government's Indian boarding schools, and President Biden apologizes.

Next: The chapter closing answers the three questions from the start of the chapter.

THE THREE QUESTIONS, ANSWERED

1. **When did school become free, and required, for every child?** It came in steps, not on one date. Horace Mann argued for free schools paid for by taxes from 1837, and Massachusetts lawmakers made school a legal duty in 1852. Every state had done the same by 1918, and disabled children won the right to a free public school only in 1975.
2. **Which children were kept out of school, and how did they get in?** Lawmakers barred enslaved people from learning to read,

and officials separated Black, Chinese and Mexican American children, turned disabled children away and took Native children far from home. Judges first backed keeping them out or apart, in Sarah Roberts's case in 1850, *Plessy* in 1896 and Martha Lum's case in 1927. Later judges let them in, from the Mendez case in 1946 and *Brown* in 1954 to the *Mills* case in 1972, and in 1975 members of Congress passed a law for disabled children and a law that let Native nations run their own schools.

3. **Is it still lawful for a teacher to hit a child?** Yes, in 15 states in 2026. The justices of the Supreme Court ruled in 1977 that the Constitution's ban on cruel and unusual punishment does not cover paddling at school, so state lawmakers have banned it one state at a time.

What changed: Native children learned from their elders before 1500, Massachusetts children had to be taught to read the Bible from 1642, and by 1975 every child in the country, disabled children included, had a right to a free public school.

FIVE DATES TO KEEP

April 23, 1635: Boston Latin School opens.

May 10, 1740: South Carolina's lawmakers make it a crime to teach an enslaved person to write.

1852: Massachusetts lawmakers pass the first law that makes children go to school.

October 6, 1879: The first children arrive at the Carlisle boarding school.

May 17, 1954: The justices of the Supreme Court rule in *Brown v. Board of Education*.

NOT KNOWN: How many children died at the federal Indian boarding schools is not known, because the investigators' own report states that its count of at least 973 is too low.

Where to go: The Williamsburg Bray School building, the oldest surviving schoolhouse for Black children in the United States, stands at Colonial Williamsburg in Virginia.

Next: Chapter 31, News and Communication. It asks how Americans learned what was happening, from messengers and the post to the press, radio, television and the feed.

Chapter 31: News and Communication

CHAPTER 31 OF 37 · NEWS AND COMMUNICATION · 10 ERAS · ABOUT 125 MINUTES

Again and again, from a runner with a knotted cord to a phone, a new way of carrying news in America has come with a fight over who may carry it and what it may say.

One copy of the first newspaper printed in the English colonies is known to survive, and it is in London. It is called *Publick Occurrences, Both Forreign and Domestick*. Benjamin Harris printed it in Boston on September 25, 1690. It has three printed pages and a blank fourth page, where readers could write more news before they passed the paper on. Four days later the governor and his council stopped the paper and ordered every copy handed back. There was never a second issue.

This chapter follows the news through ten eras. Watch two things as you go. The first is speed. In 1775 riders took five days and seven hours to carry the news of Lexington to Philadelphia. In 1860 the first Pony Express run took ten days to reach California. By the 1920s radio brought the news into homes as it happened. The second is who tried to stop the news, and who was kept from carrying it. Look for governors and judges, mobs that wrecked printing presses, a law that let only free white people carry the mail, and station managers who cut the news off the air.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. Did the First Amendment stop the government from punishing people for what they printed?
2. Who was shut out of carrying and printing the news?

3. Why have so many local newspapers closed since 2005?

Five minutes? Read "The station that cut the news: WLBT, 1955 to 1971" in 1950 to 2000.

Can skip: "The telephone, 1876 to 1900", "Newspapers in Chinese, 1854 and 1855", "Pictures by wire, 1935", "Television begins, 1927 to 1941". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 4 MINUTES

News traveled on foot in this land before 1500. Runners carried messages from one nation to another, and nations that spoke different languages talked with their hands. What is known about how they did it comes from two places. One is the accounts that Native nations and Europeans gave later. The other is the old objects that archaeologists, scientists who study the past by digging, have found in the ground.

Runners and wampum

The Haudenosaunee have lived for a thousand years and more in what is now central New York. They are also called the Iroquois, or the Six Nations. Five nations joined together before Europeans came, and the Tuscarora became the sixth in 1722.

The runners. Haudenosaunee runners called the nations to council, a meeting of their leaders. They also carried news from nation to nation and warned of danger. A runner carried a string of wampum, small beads cut from the white and purple parts of a clam shell, to show that his message was official. His pouch held pounded, dried corn mixed with maple sugar.

The Onondaga Nation keeps the wampum records of the Haudenosaunee. Its people describe how a council is called. Each nation receives a string of wampum that stands for the topic the leaders will meet about. A wooden stick is tied to the end of the string. Its notches count the days until the meeting. As each day passes, someone cuts a notch off the stick.

Older beads. Shell beads as old as 4,500 years have been found in the Northeast. Early bead makers drilled them with stone drill bits. Drilling with stone was hard, so their beads were larger than later wampum, and there were fewer of them. After Europeans arrived, Native bead makers drilled with nails and with iron awls, thin pointed tools for making holes.

Hand signs and trade

People in this land spoke many different languages. Near the Gulf coast and in what is now Texas, nations that could not understand each other's speech talked with their hands.

The first and fullest written accounts of this sign language come from the survivors of Cabeza de Vaca's Spanish expedition, which sailed in 1527. They noted which groups spoke the same language and which groups could understand each other only through signs. Scholars who study these accounts, among them Jeffrey E. Davis, think the sign language was in use across that region well before the Spanish came.

Trade goods moved hundreds of miles. Copper from Lake Superior and shells from the Gulf of Mexico have been found far from where they came from. No record survives of what news the traders passed along with the goods.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 5 MINUTES
