Newcomers from Spain, France and England sent their news home across the ocean in letters and printed books, and each side told its own version. On the plains, Native people made themselves understood to the Spanish in hand signs. On Roanoke Island, English colonists left a message carved in a post.

A letter to a king and a book by a survivor, 1565 and 1566

The news of the killings in Florida in 1565 reached Europe in two accounts. One came from the Spanish commander who ordered the killings, in a letter to his king. The other was a book by a French survivor.

The killings. The Spanish commander Pedro Menéndez de Avilés and his soldiers killed French Protestants, Christians who do not belong to the Catholic Church, at Fort Caroline in Florida in September 1565. The fort stood in the homeland of Timucua-speaking peoples. Menéndez's men then killed two more groups of Frenchmen at Matanzas Inlet, south of the fort. Both groups had given up before they were killed. Matanzas is the Spanish word for "slaughters." Menéndez gave his reason himself: the Frenchmen were Protestants.

The letter. Menéndez reported the killings to King Philip II of Spain in a letter dated October 15, 1565. By his own count, his men cut the throats of 132 men at the fort. The next day they cut the throats of 10 more, prisoners they had caught in the woods.

At the inlet, he wrote, the first group of Frenchmen gave up their weapons. "I had their hands tied behind them and put them to the knife." He meant that his men killed them with knives. He spared sixteen men of that group: twelve sailors, and four craftsmen he said he needed.

How many. The National Park Service counts about 245 Frenchmen killed at the inlet, among them their leader, Jean Ribault, on October 11 or 12. By these counts, Menéndez's men killed nearly 390 Frenchmen in about three weeks. Chapter 22, War and the Military, describes the killings in full.

The book. Nicolas Le Challeux, a carpenter who escaped from Fort Caroline, wrote the French account. A printer in Dieppe, France, published it in 1566. Its title describes the killings as the cruelty of the Spaniards against the French king's subjects. Le Challeux told how he fled from the fort into the woods. Two of the men with him climbed a tall tree and signaled to a small French ship, and a boat came to pick them up. The survivors then sailed home to France.

Hand signs on the plains, 1541

Francisco Vázquez de Coronado and his Spanish expedition met a Native nation on the plains of what is now the Texas Panhandle in 1541. The Spaniards called them Querechos. Pedro de Castañeda, a member of the expedition who later wrote its history, recorded that "although they conversed by means of signs they made themselves understood so well that there was no need of an interpreter," someone to put one language into another.

A message carved in a post, Roanoke, 1587 to 1590

John White left 117 English colonists on Roanoke Island, in what is now North Carolina, in 1587 and sailed to England for supplies. The island and the coast around it were the land of peoples who spoke Algonquian languages, a family of related languages. Among them were the Roanoke, the Secotan and the Croatoan.

The signal. Before White left, he and the colonists agreed on a signal. If they moved, they would carve the name of their new place on a tree or a doorpost. If they left because they were in danger, they would carve a cross above the name.

White could not sail back for three years. England's queen took every English ship for her navy in 1588, to fight the Spanish Armada, a great fleet of warships sent from Spain. When White landed on August 18, 1590, the houses were gone and a fence of posts stood around the empty site. The letters CROATOAN were carved on one post "in fayre Capitall letters," old spelling for neat capital letters. The letters CRO were cut into a tree. There was no cross.

White wrote that Croatoan was "the place where Manteo was borne," and he called the people of that island "our friends." Manteo was an Algonquian man who had learned English and interpreted for the English. A hurricane blew White's ship out to sea before he could search there. White never found the colonists.

Books for Europe. Readers in Europe learned about this coast from printed books. Thomas Harriot came to Roanoke Island with the English in 1585, and he and John White explored and mapped the area. Harriot published *A Briefe*

and True Report of the New Found Land of Virginia in London in 1588. Two years later the engraver Theodor de Bry, who cut pictures into metal plates for printing, printed it again in four languages. De Bry made his pictures from John White's watercolor paintings.

Manteo

Who: An Algonquian man, born on Croatoan by John White's account, who learned English and interpreted for the English.
When and where: The Outer Banks of North Carolina, and London, 1584 to 1590.

He crossed to London in 1584 and came home speaking English.

The English captains Philip Amadas and Arthur Barlowe spent six weeks on the Outer Banks in 1584. When they sailed home, Wingina, a leader of the Algonquian people there, chose two men to go with them. They were Manteo and Wanchese.

Both men began to learn English from the sailors during the voyage. The ship reached England in mid-September. In London they met Sir Walter Raleigh, who sent the voyages. By the end of 1584 Manteo could speak enough English to interpret. He sailed home on April 9, 1585, on the *Tyger*, the lead ship of Raleigh's fleet.

Back on Roanoke. Manteo helped the colonists of 1587 set up a village near the old English fort on Roanoke Island. On August 13 that year the English baptized him into their church, a Christian ceremony with water that made him a member. They also named him Lord of "Dasamongueponke." When White came back in 1590, he found neither the colonists nor Manteo.

NOT KNOWN: The National Park Service's account of his life says that what happened to Manteo is unknown.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 8 MINUTES

The men who governed the English colonies in the 1600s decided who could print news, and they stopped printers they had not approved. Virginia's governor, Thomas Culpeper, and his council, a small group of men who advised him, ordered the printer William Nuthead to stop printing in 1683. Seven years later, in Massachusetts, Governor Simon Bradstreet and his council shut down the first newspaper printed in the English colonies.

The colonies also got their first mail service, a rider who carried letters from New York to Boston. In New Mexico in 1680, Pueblo runners carried the plan for a revolt against Spanish rule from town to town.

Letters by ship, by tavern and by planter

Most letters in the early colonies crossed the ocean, between the colonies and the countries in Europe that ruled them. In 1639 the lawmakers of Massachusetts, who met as the General Court, named Richard Fairbanks's tavern in Boston as the place to leave and collect letters sent "beyond the seas." Inside the colonies, people sent letters with friends, with merchants and with Native messengers.

Virginia officials around the middle of the 1600s wrote "for public service" on the outside of government letters. Virginia's rulers required each planter to send such a letter on to the next plantation. A planter who failed to do it had to give up a hogshead, a large barrel, of tobacco as a fine. On the big plantations of the South, Postal Service historians write, the messengers were usually enslaved people.

The first post rider, 1673, and a mail service for all the colonies, 1692

The first post rider, a man on horseback who carried the mail along a set route, left New York for Boston on January 22, 1673. The ride was about 250 miles, through New Haven, Hartford, Springfield and Worcester. Governor Francis Lovelace of New York set up the route with John Winthrop Jr. of Connecticut. The rider was to make the trip once a month. It took him about two weeks.

The monthly service did not last long. The rider's trail became known as the Boston Post Road, and part of it is now US Route 1. In 1683 William Penn set up the first post office in Pennsylvania.

A mail service for all the colonies. A man named Thomas Neale got the right in 1692 to run a mail service for all the colonies for 21 years. The right came from the English Crown, the king or queen of England and the royal government. Neale never came to America. Andrew Hamilton, the governor of New Jersey, ran the service for him.

Virginia: no printing allowed, 1671 to 1730

William Berkeley was the governor of Virginia. In 1671 he wrote to the king's officials in London: "I thank God, there are no free schools nor printing, and I hope we shall not have these hundred years." He gave his reason. Printing, he wrote, had spread new religious groups, disobedience and attacks on the government.

Printing stopped. A merchant named John Buckner brought a printer, William Nuthead, to Virginia in 1682. By February 1683 Nuthead had printed the laws that Virginia's lawmakers had just passed. Governor Thomas Culpeper and his council ordered both men to stop printing, and Nuthead moved on to Maryland.

The next governor, Francis Howard, arrived in 1684 with orders from King Charles II that barred printing in Virginia. The first printing press that Virginia's rulers allowed arrived in 1730, when William Parks opened a print shop in Williamsburg.

The first newspaper, 1690, closed after one issue

Printers in Massachusetts had printed single sheets of news called broadsides since 1667, one at a time, with no plan for a next issue.

Numb. 1. Benjamin Harris printed *Publick Occurrences, Both Forreign and Domestick* in Boston on September 25, 1690. It was the first newspaper in the English colonies. Harris marked it "Numb. 1," number one, and planned to print it once a month.

Four days. Governor Simon Bradstreet and the men of his council ordered the paper "Suppressed and called in" on September 29. That meant it was stopped, and every copy had to be handed back. They said Harris had printed it without their permission.

They also objected to what he had printed. Harris had accused Native allies of the English of "barbarous" cruelty to French prisoners. He had complained that colonial officials told the Mohawks, one of the Six Nations of the Haudenosaunee, too much about the colonists' war plans. The paper also carried a rumor that King Louis XIV of France was having sex with his son's wife.

Bradstreet and his council then ordered that no one could print news in the colony without a license, written permission from the government.

Benjamin Harris

Who: The London printer who printed the first newspaper in the English colonies.

When and where: London, then Boston, 1679 to 1695.

Three arrests in London came before his one Boston newspaper.

In London in the 1670s and 1680s Harris printed pamphlets, short printed booklets, for Protestants who had broken away from the Church of England. He was a Baptist, a member of one of those Protestant groups, and he spoke out against King Charles II.

Harris printed a newspaper without a license in 1679, *The Domestick Intelligence*. English officials jailed him twice. After a third arrest in 1685 he fled to the Netherlands. A year later he sailed to Boston and opened a print shop.

The paper. His opening notice in *Publick Occurrences* said he wanted to stop the "many False Reports, maliciously made, and spread among us." The paper reported a fire that burned about 20 houses. It also reported an outbreak of smallpox, a disease that spreads from person to person and kills many of the people who catch it. The governor and his council forbade Harris to print any newspaper in the colony again.

Harris obeyed. Massachusetts officials named him the colony's official printer in 1692. He went back to England in 1695 and started a London paper, the *London Post*, in 1699. He died in 1720.

Knotted cords and the Pueblo Revolt, 1680

Pueblo leaders in New Mexico planned a revolt in 1680 to drive out the Spanish, and runners carried the plan. Spanish soldiers and settlers had come in 1598 under Juan de Oñate to take Pueblo land, labor and food.

The arrests of 1675. The Spanish governor Juan Francisco Treviño ordered the arrest of 47 Pueblo religious leaders in 1675 for "practicing sorcery," using magic. Spanish officials sentenced four of them to hang. They hanged three, and the fourth man killed himself. They whipped the others in public and put them in prison. Pueblo people went to Santa Fe and demanded that the prisoners be let go, and the Spanish released them. One of the men released was Po'pay, a Tewa leader from Ohkay Owingeh.

The knotted cords. Po'pay planned the revolt with towns that spoke at least five different languages. All of them had to rise on the same day. To set that day, he sent runners with knotted cords. Each town untied one knot a day, and when the last knot was untied, the revolt would begin. The accounts differ on the day planned. The National Museum of the American Indian gives August 11, and the Indian Pueblo Cultural Center gives August 13.

The revolt began on August 10, 1680, earlier than planned, because the Spanish caught two of the runners. Pueblo fighters killed about 400 people, including 21 of the 33 Spanish priests in New Mexico. Governor Antonio de Otermín led about 2,000 Spanish settlers out of Santa Fe on August 21 and south to El Paso. The Spanish did not return until 1692.

Nicolás Catua and Pedro Omtua

Who: Two young runners from Tesuque Pueblo who carried the knotted cords of the Pueblo Revolt.

When and where: New Mexico, August 8 and 9, 1680.

Their cord had two knots, and the Spanish hanged them for it.

Pedro Omtua and Nicolás Catua set out on the morning of August 8, 1680, with cords for the Tano towns. They came from Tesuque Pueblo, whose Tewa name means "village of the narrow place of the cottonwood trees." The first town they reached was Pecos.

After they left Pecos, Christian Pueblo people told Fernando de Velasco that two Tewa messengers had visited the war chief's house. Velasco was a leader of the Franciscan missionaries, Catholic priests sent to turn the Pueblo people Christian. Two Pueblo leaders from the Galisteo Basin who sided with the Spanish also sent word of a revolt to Governor Antonio de Otermín. Otermín ordered the messengers arrested, and the Spanish caught them on August 9.

Tortured, then hanged. Spanish officials tortured Catua and Omtua to make them explain the knotted cord. Torture means hurting a person's body on purpose to force him to talk. The surviving accounts do not say how the two young men were hurt.

The historian Charles W. Hackett worked from Otermín's own records. He wrote in 1911 that the two told Otermín they had been given a cord with two knots, to carry to the chiefs of the Tano towns, San Marcos and La Cienega. The two knots stood for the two days left before the revolt. Then the Spanish hanged them. The accounts do not name the men who tortured and hanged them.

When Po'pay heard that the runners had been caught, he ordered the revolt to start a day early.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 10 MINUTES

The first colonial newspaper that lasted began in Boston in 1704, and many of the men who printed the colonies' papers also ran the post office. Printers and postmasters started papers in Boston, Philadelphia, New York, Charleston and Williamsburg. Colonial governors and lawmakers still had printers jailed when the printers offended them. The owners made their money from advertisements, and some of those advertisements offered human beings for sale.

The Boston News-Letter, 1704

John Campbell, the postmaster of Boston, published the first issue of the *Boston News-Letter* on April 24, 1704. It was one small sheet printed on both sides, and it came out once a week. A printer named Bartholomew Green printed it for Campbell. The words "Published by Authority," meaning with the approval of the people in power, appeared in its title from 1704 to 1720, and again from 1723 to 1725.

Most of the first issue was copied from London newspapers of mid-December, more than four months old. Local news filled one column. The *News-Letter* came out every week until February 1776, the first newspaper in the colonies to keep going. Boston had no other newspaper until the *Boston Gazette* began on December 21, 1719. The *American Weekly Mercury* started in Philadelphia the next day.

The Courant: a paper the government did not approve, 1721 to 1726

James Franklin started the *New-England Courant* in Boston on August 7, 1721, during an epidemic of smallpox, an outbreak that spread to many people at once. He soon used the paper to take a side in a fight over how to stop the disease.

Inoculation. The minister Cotton Mather and the doctor Zabdiel Boylston urged people to try inoculation. A doctor put a little pus from a sick person into a cut in the skin of a healthy person. The healthy person usually got a mild case of smallpox and soon got well. Mather had learned of the method from Onesimus, an African man he had owned as a slave since 1706, and from other enslaved Africans.

Almost every doctor in Boston except Boylston opposed inoculation. James Franklin printed attacks in the *Courant* on the people who supported it. Someone threw a lit bomb through a window of Mather's house on November 14, 1721. A note with it read: "Cotton Mather, You Dog, Dam You: I'll inoculate you with this, with a Pox to you." The fuse came off, and the bomb did not explode. No record names the person who threw it.

Nearly 6,000 people caught smallpox in the epidemic, and 844 of them died. Boylston inoculated 248 people, and 98 out of every 100 of them lived. Among people who caught smallpox the ordinary way, 85 out of every 100 lived.

A month in jail. Pirates were raiding along the coast of New England in 1722. In June, James Franklin printed a short item in the *Courant* saying that Massachusetts officials were fitting out a ship to chase them. The ship, it said, would sail "some time this Month, if Wind and Weather permit." The item hinted that the officials were in no hurry to go after the pirates.

Massachusetts officials read it as a hidden attack on them. The members of the General Court, the colony's lawmakers, had James Franklin jailed for a month. His younger brother Benjamin, then 16, ran the paper while James was locked up. James was let out on July 2, 1722.

The members of the General Court then ordered censorship, checking and cutting what a printer may print before it comes out. Early in 1723 they forbade James Franklin to print the *Courant* unless officials checked each issue first. James then put the paper in Benjamin's name, and it came out that way until it closed in 1726.

The Weekly Journal and the Zenger trial, 1733 to 1736

For years New York had one newspaper, the *New-York Gazette*. Its printer, William Bradford, printed for the government and supported Governor William Cosby. In 1733 Lewis Morris, the chief judge of New York, wrote a dissent, a judge's written disagreement with the other judges, in a court case of Cosby's called Cosby v. Van Dam. Cosby removed Morris from office.

A second paper. Morris and two lawyers, James Alexander and William Smith, then started the *New-York Weekly Journal* on November 5, 1733. Alexander edited it and used it to accuse Cosby and his officials of tyranny, cruel and unjust rule. John Peter Zenger, a printer born in Germany, printed it. Cosby had copies of the *Journal* burned by the hangman.

Arrested for libel. Officials arrested Zenger on November 17, 1734, for seditious libel. Under the law of that time, seditious libel meant printing blame of any official, of the law, or of anything the law had set up, without a lawful excuse. Whether the words were true did not matter.

The court set Zenger's bail, the money paid to a court so that a prisoner can go free until his trial, at £400. Zenger stayed in jail for more than eight months, until his trial.

Not guilty. At the trial, the judge would not let Zenger's lawyer prove that the printed words were true. The jurors, the judge said, must decide only whether Zenger had printed the papers. Zenger's lawyer told them they had the right to judge the law as well. The jurors went further than the judge allowed. They found Zenger not guilty on August 4, 1735. Chapter 20, Government, Law, and Politics, describes the trial in full.

The verdict changed no law. In New York, a printer could not defend himself by showing that his words were true until 1805, when the state's lawmakers passed a law that allowed it. An account of the trial came out as a pamphlet in 1736, *A Brief Narrative of the Case and Tryal of John Peter Zenger*. Printers reprinted it many times.

Anna Catharina Zenger

Who: The printer's wife who kept the *New-York Weekly Journal* coming out while her husband was in jail, and who ran the print shop after he died.

When and where: New York City, 1734 to 1748.

Instructions came, the story goes, through a hole in the jail door.

Anna Catharina Zenger was born Anna Catharina Maulin, and she married John Peter Zenger on September 11, 1722. When officials jailed him, she took charge of the shop. She and his apprentices kept the *New-York Weekly Journal* coming out while he was held. They missed only one issue. The writer Ann T. Keene reports the story that Zenger gave her his instructions "through the hole of the door of the prison."

After the trial. Zenger became New York's official printer in 1737. He died on July 28, 1746. Anna Zenger then ran the family print shop for more than two years, until their eldest son, John, took it over in December 1748.

Printers who were postmasters, and papers in German

A printer who was also the postmaster got the letters and newspapers from other towns first, and so got the news first. He could also stop the post riders from carrying a rival's newspaper.

Bradford and Franklin. Andrew Bradford printed the *American Weekly Mercury* in Philadelphia and also kept the town's post office. He forbade the post riders to carry Benjamin Franklin's paper. Franklin wrote that he got his papers carried only by bribing the riders to take them in secret.

Alexander Spotswood, a former governor of Virginia, was in charge of the post office for the colonies. He was unhappy with how carelessly Bradford kept the post office's accounts, and in 1737 he took the job away from Bradford and gave it to Franklin, who was 31.

Franklin also set up partners as printers in other towns. He made Lewis Timothy the printer of the *South-Carolina Gazette* in Charleston in November 1733. In Virginia, William Parks printed the first issue of the *Virginia Gazette* in Williamsburg on August 6, 1736. Virginia's lawmakers allowed only one printing office in the colony, and they wanted it to print what the government needed first.

Papers in German. Franklin tried a German-language paper, the *Philadelphische Zeitung*, in May and June 1732, and it failed. Christopher Sauer, a German printer in Germantown, started a German-language paper on August 20, 1739. His family printed it, under changing names, until 1777. Each month sixteen newspapers from Europe reached Sauer, and he took his news of Europe from them.

Elizabeth Timothy

Who: A widow born in Holland who ran the *South-Carolina Gazette*. The *South Carolina Encyclopedia* names her the first woman in the American colonies to own and publish a newspaper.

When and where: Charleston, South Carolina, 1738 to 1746.

A widow with six children, she owned the paper within a year.

Elizabeth Timothy's husband, Lewis Timothy, printed the *South-Carolina Gazette* in Charleston under a six-year partnership with Franklin. He died in December 1738 after what was described at the time as "an unhappy Accident," meaning an unlucky one. He left her with six small children and a seventh about to be born. Franklin wrote that she was "born and bred in Holland."

Their eldest son, Peter, was too young to run the shop, so Elizabeth Timothy ran it herself. She printed the next issue on January 4, 1739, and promised to make the paper "as entertaining and correct as may be reasonably expected." By the end of 1739 she had bought out Franklin's share. Franklin praised how exactly she kept her accounts.

She handed the shop to Peter when he came of age in 1746 and opened a bookstore next to it. She died in 1757. In her will she left her children eight enslaved people, along with her other property.

Advertisements for people as property

Newspaper owners made much of their money from advertisements, and some of those advertisements were for human beings. Franklin printed advertisements in the *Pennsylvania Gazette* that slave owners and slave traders paid for. Some offered enslaved people for sale. Others were notices about enslaved people who had escaped, so that readers would help catch them. According to the International Printing Museum, by the 1750s these made up nearly a quarter of the paper's advertisements.

Franklin himself owned enslaved people. According to the Benjamin Franklin House museum in London, he and his household held enslaved people from about 1735 until 1790 and bought at least seven people. Their names were Joseph, Jemima, Peter, King, Othello, George and Bob. Peter and King went with Franklin to London.

Enslaved people had no say in how owners and traders described them in those advertisements. In South Carolina, lawmakers made it a crime in 1740 even to teach an enslaved person to write.

Benjamin Franklin

Who: A Boston printer's apprentice who became a Philadelphia newspaper owner and the town's postmaster.

When and where: Boston, 1718 to 1723, and Philadelphia, 1723 to 1753.

Movie: *Benjamin Franklin* (2022), a documentary by Ken Burns about his life, shown on PBS.

At 17 he ran away from his brother's print shop.

Benjamin Franklin grew rich as a printer, and much of his money came from the advertisements in his newspaper. In 1718 he became an apprentice, a young worker bound to a master for years to learn a trade, to his older brother James, a printer in Boston. Benjamin carried copies of the *New-England Courant* through the streets to the people who paid for it. In 1722, at 16, he wrote letters to the paper under the made-up name "Silence Dogood." He later wrote that his brother "had often beaten me."

Running away. Benjamin broke his apprenticeship and ran away in 1723, at 17. He landed at the Market Street wharf in Philadelphia on a Sunday morning.

The Gazette. Franklin bought the *Pennsylvania Gazette* from the printer Samuel Keimer on October 2, 1729. Advertising became the paper's main source of money, and Franklin grew the paper from two pages to four, partly to hold more advertisements.

He began *Poor Richard's Almanac*, a book that came out once a year with a calendar and other useful facts, in 1732. He wrote it under the made-up name Richard Saunders. He said that he sold "near ten thousand" copies a year, and that ordinary people "bought scarcely any other books."

The post office. As postmaster of Philadelphia, Franklin wrote that the post office "facilitated the correspondence that improv'd my newspaper." He meant that the job helped him get the letters and news that made his

> paper better, and with them more readers and more advertisements. British officials named him and William Hunter in 1753 to run the royal post office for all the colonies together.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 16 MINUTES

Printers, letter writers and post riders carried the news and the arguments that led to the American Revolution. Supporters of independence also wrecked the press of a New York printer who took Britain's side. Once the war was won, the new country's leaders fought over how free the press should be.

Lawmakers in three-fourths of the states approved the First Amendment to the Constitution in 1791, and it protects freedom of the press. Seven years later the Federalists, President John Adams's party, used their majority in Congress to pass the Sedition Act. Federal judges then jailed newspaper editors who had criticized Adams.

The Stamp Act and the printers, 1765

The members of Parliament in London, Britain's lawmakers, passed the Stamp Act in March 1765. It took effect on November 1, 1765. Under it, colonists had to pay a tax on newspapers, pamphlets, almanacs and legal papers. Printers had to print on stamped paper made in London, which showed that the tax was paid.

The tax. Colonists paid a halfpenny, a small British coin, on each copy of a newspaper printed on half a sheet of paper, and a penny on each copy printed on a whole sheet. They paid two shillings, or 24 pennies, on each advertisement in a newspaper.

Black borders. The Philadelphia printer William Bradford printed his *Pennsylvania Journal* on October 31, 1765, the day before the tax began, with thick black borders, like a tombstone. In the place for the official stamp he printed a skull and crossbones. Across the top of the front page he printed that the paper was "EXPIRING," or dying, "In Hopes of a Resurrection to LIFE again."

This William Bradford was born in 1722 and was a different man from the New York printer of the same name. He never actually stopped printing. He put out the next issue on November 7.

John Hughes had the job of handing out the stamps in Philadelphia. Opponents of the tax threatened him with violence and with destroying his property, and he promised not to enforce the act. The members of Parliament voted in 1766 to repeal, or cancel, the Stamp Act.

Committees of correspondence, 1772 to 1774

Samuel Adams proposed a committee of correspondence for Boston, a small group of men chosen to write letters to other towns and share news. Boston's town leaders voted on November 2, 1772, to set up a Committee of Correspondence of 21 men. They did it in answer to news that the colony's judges would now get their pay from the royal treasury, the king's own money.

The 21 men wrote a set of reports on the colonists' rights and on how Parliament had broken them. Printed as the Boston Pamphlet, the reports went to every town in Massachusetts.

Virginia's committee. Dabney Carr asked the members of Virginia's House of Burgesses, the colony's elected lawmakers, to set up an 11-man committee on March 12, 1773, and they did. Patrick Henry and Thomas Jefferson were two of its members.

The 11 men wrote to the lawmakers of the other colonies. They asked them to share news of laws from London and of what each colony's leaders planned to do about them. Within a year, lawmakers in eleven colonies had set up their own committees. North Carolina and Pennsylvania were the two that did not.

The news of Lexington, April 1775

British soldiers fired on the militia, ordinary men trained to fight when they were called, at Lexington, Massachusetts, on the morning of April 19, 1775. At about 10 o'clock that morning, in Watertown, Joseph Palmer wrote a letter "To all the Friends of American liberty." It said the soldiers had killed six men and wounded four.

Palmer was a member of the Massachusetts Committee of Safety. The colonists' own congress had set up this committee to gather supplies for a fight with the British army in Boston and to spread the alarm if the army marched.

Copy by copy. Palmer gave the letter to a rider, Isaac Bissell, to carry toward Connecticut. At Worcester the town clerk, Nathan Baldwin, copied the letter, wrote that the copy was true and signed it. Someone made another copy at Springfield. Other riders then carried copies on, and the alarm reached Philadelphia five days and seven hours after it left Watertown.

Palmer took care to make his letter believable. Seven months earlier, in September 1774, thousands of militiamen had turned out for nothing after false rumors of a British attack.

Isaac Bissell

Who: A 26-year-old blacksmith from Suffield, Connecticut, who carried a written report of the killings at Lexington from Massachusetts toward Connecticut.

When and where: From Watertown, Massachusetts, to Connecticut, April 19 and 20, 1775.

His name was Isaac, not Israel, and he stopped in Connecticut.

Isaac Bissell came from Suffield, a town on Connecticut's northern border. He was in Watertown, Massachusetts, on April 19, 1775, when Joseph Palmer handed him the letter. The letter said that "the Bearer Mr. Isaac Bissell" was "charged to alarm the country quite to Connecticutt." His job was to warn people all the way to Connecticut. The letter asked people along the way to give him the horses he needed.

Bissell reached Worcester in the early afternoon. On the morning of April 20 the letter reached Connecticut's leaders.

Too fast to believe. In Wethersfield, the home town of Governor Jonathan Trumbull, Silas Deane wrote in his journal that the news "was discredited," not believed, "from the suddeness of its arrival." After men from Massachusetts confirmed the news, Trumbull agreed to call Connecticut's lawmakers together.

The unpaid bill. Bissell then joined the siege of Boston, where colonial soldiers surrounded the British army in the town. He served as a private in Captain Elihu Kent's company from Suffield. In July 1775 the members of the Massachusetts committee of safety approved his bill as a post rider, two pounds and one shilling. The colony's treasurer then would not pay it without a signed approval from the colony's congress.

The story that grew. Many books call the rider "Israel Bissell" and say he rode all the way to Philadelphia. The historian J. L. Bell found that his name was Isaac, that he carried the letter only as far as Connecticut, and

that the long ride to Philadelphia is a story that grew up later. Many riders, most of them unnamed, carried the news the rest of the way.

Common Sense and the Declaration in print, 1776

The printer Robert Bell published *Common Sense* on January 10, 1776. It was a pamphlet by Thomas Paine that argued for independence from Britain. Printers printed it at least twenty-five times, sixteen of them in Philadelphia.

The claims. Paine claimed in April 1776 that 120,000 copies had sold, and later he claimed 150,000. Moncure Conway, who wrote a book about Paine's life, guessed half a million in 1892.

NOT KNOWN: No sales records survive, so nobody knows the real number. The historian Trish Loughran put the highest possible number at 75,000, and she thinks the real number was much lower.

The Declaration. Members of the Continental Congress, the meeting of men sent by each colony to act for all of them, declared independence in Philadelphia on July 4, 1776. Over that night the Philadelphia printer John Dunlap printed about 200 copies of the Declaration of Independence as broadsides.

The members of Congress ordered the copies sent to the new states and to the soldiers, read aloud, and put up in public places. George Washington's soldiers in New York City heard it read aloud on July 9. Twenty-six of Dunlap's copies are known to survive.

Thomas Paine

Who: An English-born writer whose pamphlet *Common Sense* argued that the colonies should declare independence.

When and where: Philadelphia, 1774 to 1776, and with the army, 1776.

He promised his share of the profits to buy mittens for soldiers.

Thomas Paine met Benjamin Franklin in London, and Franklin gave him letters of introduction to people in America. Paine arrived in Philadelphia on November 30, 1774. He helped edit the *Pennsylvania Magazine* and wrote articles under pen names, made-up names that hid who the writer was.

The slavery essay. For a long time Paine was named as the writer of "African Slavery in America," an essay printed in March 1775 under the name "Justice and Humanity." The essay calls slavery unjust. Gary Berton of the Thomas Paine National Historical Association later concluded that a Rhode Island minister, Samuel Hopkins, most likely wrote it, so the accounts differ.

Common Sense. The pamphlet came out on January 10, 1776. Paine agreed to pay for the printing whether it sold or not, and the printer, Robert Bell, was to get half of any profits. Paine promised his own half to buy mittens for the American soldiers outside the city of Quebec, in Canada, that winter. Bell handed over no money.

Then Bell printed a second edition that Paine had told him not to print. Paine took a new, longer edition to the printers of the *Pennsylvania Journal* instead. He never received any money from the sales. He later wrote that he gave the right to print it to every state.

Paine published *The American Crisis* on December 19, 1776. It began, "These are the times that try men's souls." Washington ordered it read to all his troops. Paine died in New York City on June 8, 1809.

A Loyalist printer's press wrecked, 1775

Colonists who stayed loyal to Britain were called Loyalists, and supporters of independence attacked the printers among them. The New York printer James Rivington printed the *New-York Gazetteer*, one of the most widely read newspapers in the colonies, and he used it to back the British government.

The press wrecked. Isaac Sears led a group of Sons of Liberty, colonists who organized against British taxes and rule, from New Haven, Connecticut, to Rivington's shop in New York City in November 1775. The men wrecked Rivington's press and his type, the set of metal letters that a printer puts together by hand to print a page. Type was a printer's most valuable possession. Rivington left for England a few weeks later.

After British soldiers captured New York, Rivington came back with the title of King's Printer, the official printer for the British government there. He printed his paper on the British side until the British left in November 1783.

A postal service for the new country, 1774 to 1792

British officials fired Benjamin Franklin from his job running the royal post office in the colonies in 1774. In the words of the Postal Service's own history, he was "too much of an American."

A rival post. The printer William Goddard set up a rival mail service, which he called the Constitutional Post. He warned that letters could be stopped and opened on the orders of the king's ministers, the men who ran Britain's government. What the letters said, he warned, could be twisted into proof of treason, the crime of betraying one's own government. By 1775 Goddard's service had nearly 50 post offices from Maine to Virginia.

The members of the Continental Congress made Franklin their postmaster general, the head of their post office, on July 26, 1775, at $1,000 a year.

Post roads. The Constitution, approved in 1788, lists among the powers of Congress the power "To establish Post Offices and post Roads." In 1789 the country had 75 post offices and about 2,400 miles of post roads, for almost four million people. The members of Congress passed a new law about the mail

on February 20, 1792. Under it, printers could send newspapers through the mail at very low rates, some for free. The law also forbade postal officials to open people's letters.

Mary Katharine Goddard

Who: A printer and newspaper publisher who ran Baltimore's post office for 14 years and printed the first copies of the Declaration that listed the signers.
When and where: Baltimore, Maryland, 1774 to 1789.

Readers could pay for her newspaper in beeswax or pork.

Mary Katharine Goddard learned printing in her brother William's shop in Providence, Rhode Island, in the 1760s. She moved to Baltimore in 1774. She ran his print shop and his newspaper, the *Maryland Journal*, during his many trips away, and she reprinted *Common Sense* in it.

Postmaster. She became the postmaster of Baltimore in 1775. Postal Service historians call her the first known woman postmaster in the colonies. Postmasters then earned a share of the postage instead of a salary. The members of Congress often failed to pay her, so she paid the post riders and the high rent of the office herself. In 1778 she let readers pay for the newspaper in beeswax, flour, lard, butter, beef or pork.

The Declaration with names. The Continental Congress was meeting in Baltimore in January 1777. Its members ordered new copies of the Declaration of Independence, and Goddard printed them on January 18. Hers were the first printed copies to show the signers' names. At the bottom she printed "Baltimore, in Maryland: Printed by Mary Katharine Goddard." Nine of her copies are known to survive.

Pushed out. Her brother William "apparently forced his sister out" of the *Maryland Journal* in January 1784, Smithsonian Magazine reports. The new postmaster general, Samuel Osgood, replaced her with a man in October 1789. Osgood's assistant, John Burrell, said the job might need "more travelling ... than a woman could undertake."

> More than 200 people in Baltimore signed a letter asking Osgood to give her the job back. She wrote to President George Washington and to the Senate, and neither helped her. She ran a bookshop in Baltimore until about 1810, and she died there on August 12, 1816.

The First Amendment and the party papers, 1789 to 1793

The First Amendment, an addition to the Constitution, took effect on December 15, 1791. It states that "Congress shall make no law ... abridging," or cutting back, "the freedom of speech, or of the press."

Party papers. Newspaper editors took sides in the quarrels inside Washington's government. John Fenno used his *Gazette of the United States* to push the plans of Alexander Hamilton, the head of the Treasury. Secretary of State Thomas Jefferson called Fenno's paper "a paper of pure Toryism," using the old name for colonists who had sided with Britain's king.

Jefferson hired Philip Freneau as a translating clerk at the State Department, paid $250 a year, even though Freneau knew only English and French. Freneau started the *National Gazette* on October 31, 1791. It came out twice a week and had about 1,700 subscribers, people who paid to get each issue. Freneau closed it on October 26, 1793.

Benjamin Franklin's grandson, Benjamin Franklin Bache, printed a paper in Philadelphia called the *Aurora*. In it he attacked Washington and John Adams.

The Sedition Act, 1798 to 1801

American and French warships began fighting each other in the Caribbean Sea in 1798. President John Adams's party, the Federalists, held a majority in Congress. The Federalist members voted through the Sedition Act, named for sedition, the crime of stirring people up against their government. Adams signed it on July 14, 1798.

What it banned. Under the act, it was a crime to write or print "any false, scandalous and malicious writing" against the federal government, Congress or the President. The punishment was a fine of up to $2,000 and up to two years in prison. Unlike the law in the Zenger trial, the act let a person charged try to prove that his words were true, and the jury could decide what the law meant as well as what the facts were.

Who was charged. Federal prosecutors and judges used the act mostly against editors of newspapers that supported Jefferson's party, the Democratic-Republicans. The counts of people found guilty differ. The lowest is 10, the number scholars long used. The highest, from the National Constitution Center, a museum about the Constitution, is more than two dozen. The legal historian Wendell Bird found cases against 16 people that the old count missed.

Some of those charged. They included Congressman Matthew Lyon of Vermont, William Duane of the *Aurora*, Ann Greenleaf of New York's *Argus*, and Anthony Haswell of the *Vermont Gazette*. Luther Baldwin and Brown Clark of Newark, New Jersey, were charged for words they spoke against President Adams in a tavern.

Bache. Federalist supporters physically attacked Benjamin Franklin Bache in Philadelphia. Jonathan Dayton of New Jersey, a Federalist, was Speaker of the House of Representatives, the member chosen to run its meetings. Dayton barred Bache from the floor of the House, the room where its members met, so that he could not report its debates.

A federal judge in Philadelphia, Judge Peters, signed an order for Bache's arrest on June 24, 1798, more than two weeks before the Sedition Act became law. The charge was seditious libel against President Adams, the same crime that officials had charged Zenger with in 1734. Peters let Bache out on bail, and his trial was set for October.

Bache kept printing the *Aurora* through an epidemic of yellow fever, a disease carried from person to person by mosquitoes. He died of the fever on September 10, 1798, at 29, a month before his trial date. His widow kept the paper going, with William Duane as editor. The text of the Sedition Act stated that it would stay in force only until March 3, 1801.

Matthew Lyon

Who: An Irish-born congressman and newspaper owner, the first person tried under the Sedition Act.
When and where: Vermont, 1798 to 1799.

He ran for Congress from a jail cell and won.

Matthew Lyon came to America from Ireland and fought in the Revolutionary War. He went to Congress for Vermont in 1797, and he also owned a newspaper. In 1798 he became the first person tried under the Sedition Act.

His words. In a letter that a newspaper printed, Lyon wrote of seeing the public good "swallowed up in a continual grasp for power, in an unbounded thirst for ridiculous pomp, foolish adulation, or selfish avarice." Adulation is an old word for too much praise, and avarice for greed. At campaign meetings he also read aloud a letter by the poet Joel Barlow, which said Adams should be sent to a "madhouse."

The trial. A federal grand jury in Vermont, a group of citizens who decide whether there is enough evidence to charge someone, charged Lyon with three crimes under the Sedition Act on October 5, 1798. A deputy marshal, an officer who made arrests for the federal courts,

arrested him the next day. At his trial in Rutland on October 9, Lyon defended himself. He pleaded not guilty, and in a second plea he stated that the Sedition Act broke the Constitution.

Justice William Paterson of the Supreme Court told the jury that its job had "nothing whatever to do with the constitutionality or unconstitutionality of the sedition law." He meant that the jurors must not decide whether the law broke the Constitution. The jurors came from towns that supported Adams's party. They found Lyon guilty within an hour. Paterson sentenced him to four months in jail and a $1,000 fine.

Lyon was held in the jail at Vergennes. He ran for Congress again from his cell, and the voters of his district re-elected him. He was let out on February 9, 1799.

BY 1800

If you remember one thing: Printers and riders carried the news of the Revolution, and seven years after the First Amendment took effect, federal judges were jailing editors under the Sedition Act.

- April 19, 1775: Joseph Palmer's letter about Lexington starts a chain of riders that reaches Philadelphia five days and seven hours later.
- December 15, 1791: The First Amendment takes effect.
- October 9, 1798: A jury finds Congressman Matthew Lyon guilty, the first person tried under the Sedition Act.

Next: By 1850 the country had 2,526 newspapers, and Black and Cherokee editors had started papers of their own.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 17 MINUTES

The fight over slavery reached into the print shops and the post office as newspapers spread across the country. The number of American newspapers grew from about 900 in the 1830s to 2,526 in 1850. That year they printed half a billion copies, for a population of about 23 million, or about 22 copies for every person.

A New York printer began selling a daily paper for one cent in 1833, when most daily papers cost six cents. From 1844 news could travel along a telegraph wire, faster than any horse or train.

Free Black New Yorkers started the first Black-owned newspaper in 1827, and Cherokee leaders started the first Native American paper a year later. Men who defended slavery attacked the editors who wrote against it. Men of the Georgia Guard, a band of armed men from the state of Georgia, seized the Cherokee press in 1835. That same year Amos Kendall, the Postmaster General, who ran the post office, let Southern postmasters hold back antislavery papers. In Illinois in 1837, a mob killed an editor who was defending his press.

The last Sedition Act trials, 1800

The Sedition Act was still the law in 1800, and federal judges used it that year against two more writers. Under the act it was a crime to print "false, scandalous and malicious" writing against the government, Congress or the President.

Callender. A grand jury, a group of citizens who decide whether there is enough proof for a trial, charged the writer James Callender in the federal court at Richmond, Virginia, on May 24, 1800. The charge was over his pamphlet *The Prospect Before Us*, in which Callender wrote words that harmed the good name of President John Adams. The trial began on June 3, and the jury found him guilty the same day.

Justice Samuel Chase sentenced Callender to nine months in prison and a fine. The Federal Judicial Center's history of the trials states the fine as $400 in one place and $200 in another.

Cooper. In Philadelphia the same year, Chase sentenced the writer Thomas Cooper to six months in prison. The same history gives Cooper's fine as $400 in one place and $500 plus court costs in another.

The act ended on March 3, 1801. After Thomas Jefferson became president that year, he pardoned, or officially forgave, Callender. Jefferson also paid $50 of his own money toward giving back Callender's fine.

Newspapers by mail, and who could carry it

Newspapers went to readers through the mail. Under the postal law of 1792, readers got newspapers by mail at very low rates, and editors mailed their papers to each other for free. A small-town editor could then reprint news from papers all over the country. Indiana had one newspaper in 1810 and 73 by 1840.

More than Europe. In 1840 the United States had about 17 million people, and Europe had about 230 million. Even so, more copies of American newspapers went out each week than of all the newspapers in Europe.

Most people who worked for the federal government worked for the post office. By 1831, 76 of every 100 federal workers outside the army and navy were postal workers. Postmasters outnumbered soldiers, 8,764 to 6,332.

Letters cost much more to mail than newspapers. From 1799 to 1815, one sheet of paper cost 8 cents to send 40 miles or less, and up to 25 cents to send more than 500 miles. A second sheet doubled the price. In 1845 postal officials began charging by weight instead, and in 1847 they began selling postage stamps.

"Free white persons." Some enslaved men carried the mail in the South until 1802. That March, Postmaster General Gideon Granger warned a senator that enslaved post riders, "hourly mixing with people," would "acquire information." "They will learn that a man's rights do not depend on his color," he wrote. "They will, in time, become teachers to their brethren," meaning their brothers.

Granger began his letter by pointing to "the scenes which St. Domingo has exhibited to the world." On Saint-Domingue, a French island colony in the Caribbean, the enslaved people had risen in a revolution.

Members of Congress then passed a law, and from 1802 to 1865 the postal laws said that mail carriers had to be "free white persons." A mail contractor, a person paid to carry the mail, who broke the rule had to pay a fine. The Postal Service's own history of Black postal workers names no one who was fined. For 63 years, no Black American, free or enslaved, could legally carry the mail.

Freedom's Journal, the first Black-owned newspaper, 1827

A group of free Black New Yorkers met in March 1827 to start a newspaper of their own. It was the first newspaper in the United States owned and run by Black Americans. Samuel Cornish and John Brown Russwurm edited it. Cornish was a Presbyterian minister, a preacher in one of the Protestant churches. Russwurm was one of the first Black Americans to graduate from a college in the United States.

Freedom's Journal came out on March 16, 1827, from 5 Varick Street in Manhattan. In the first issue the editors wrote: "We wish to plead our own cause. Too long have others spoken for us." Editors of other New York papers printed attacks on Black people, and Cornish and Russwurm answered them. They also wrote against slavery.

Readers in 11 states. A year of the paper cost $3. More than 800 copies went out to readers in 11 states and Washington, D.C., and copies also went to Canada, Europe and Haiti. David Walker was one of the agents who sold subscriptions to it.

Russwurm came to support a plan called colonization, which meant sending free Black Americans to live in Africa. Cornish opposed the plan and quit in September 1827. The last issue of *Freedom's Journal* came out on March 28, 1829. Russwurm moved to Liberia, in Africa, and started a newspaper there.

The Cherokee Phoenix, 1828 to 1835

The *Cherokee Phoenix* was the first newspaper printed by a Native American nation. The members of the Cherokee Nation's council set aside $1,500 in 1825 for a printing press and type. Samuel Worcester, a missionary, or Christian preacher sent to win people to his faith, helped the Cherokee set up a print shop at New Echota, their capital. New Echota was in land that the state of Georgia claimed. An iron press came by ship from Boston.

Type for Sequoyah's letters. Workers cast type for the Cherokee syllabary, the writing system that Sequoyah made, in which each of 85 symbols stands for a syllable. The first issue came out on February 21, 1828. Columns in Cherokee ran beside columns in English. The Cherokee leaders who ran the paper opposed every plan to move the Cherokee west, and they used it to argue their side.

Georgia and federal officials made the paper hard to keep going. Colonel Charles Nelson commanded the Georgia Guard, a unit that Georgia officials set up to police the Cherokee land their state claimed. He threatened to shut the paper down and to beat its editor.

The money cut off. President Andrew Jackson ordered the federal government's yearly payment to the Cherokee Nation paid to separate people instead of to the Nation. That cut off the paper's money. Georgia officials ordered the paper's white printer to leave. A local sheriff sued the editor, Elijah Hicks, for libel, printing false words that harm someone. The last issue came out in May 1834.

John Ross, the Principal Chief, the Cherokee Nation's top leader, planned in 1835 to start the paper again. Men of the Georgia Guard went to New Echota, took the press and threw out the type. Two accounts say they also burned the building, and that Stand Watie, a Cherokee who supported moving the Cherokee west, helped them. The records do not name the officer who led them.

A new Cherokee Nation newspaper, the *Cherokee Advocate*, began in Tahlequah in September 1844, with William Potter Ross as its editor.

Elias Boudinot

Who: A Cherokee writer who edited the *Cherokee Phoenix*, the first Native American newspaper, and later, with a small group of Cherokee, signed a treaty that gave up the Cherokee homeland.

When and where: New Echota, Cherokee Nation, in present-day Georgia, 1826 to 1835, and Park Hill, Indian Territory, 1837 to 1839.

He edited the Cherokee paper, then signed away the Cherokee homeland.

Elias Boudinot was born in the Cherokee Nation, in what is now northwest Georgia. His Cherokee name was Gallegina, which means "the Buck."

As a young man he studied at a school run by missionaries in Cornwall, Connecticut, and there he took the name of Elias Boudinot, the president of the American Bible Society. In Cornwall he became engaged to Harriet Gold, a white woman. Opponents of the marriage burned the couple in effigy, setting fire to dummies made to look like them. The two married in 1826.

The press. That year Boudinot went on a speaking tour that included Philadelphia. In a speech called "An Address to the Whites" he asked for money for a Cherokee press, and he collected it. When the *Cherokee Phoenix* began in 1828, he was its editor. The paper printed reports of the Georgia Guard's campaign against the missionaries in the Cherokee Nation, and the Guard's commander, Charles Nelson, threatened to beat Boudinot.

The treaty. Members of Congress passed the Indian Removal Act in 1830. Under it, the president could make treaties, written agreements between nations, with Native nations to move them west. In 1832 Boudinot's cousin John Ridge began to speak openly for moving west, and Boudinot began writing in the paper in favor of it. Principal Chief John Ross opposed moving west on any terms. Ross pressured Boudinot to resign, and he did on August 1, 1832.

In December 1835 Boudinot and a small group of Cherokee signed the Treaty of New Echota. In it they gave all Cherokee land east of the Mississippi River to the United States for five million dollars. They also agreed that the Cherokee would move west to Indian Territory, in what is now Oklahoma.

Killed under Cherokee law. Boudinot moved west to Park Hill, in Indian Territory, in 1837. A group of Cherokee who supported John Ross stabbed him to death there on June 22, 1839. On the same day, other men killed his uncle, Major Ridge, and his cousin John Ridge, who had also signed the treaty. The killers were never identified or tried.

A man named Allen Ross described a secret meeting before the killings. He told of it in 1890. The men at the meeting decided that the three should die under a Cherokee law. That law said anyone who agreed to sell the Nation's land "should forfeit their lives," meaning they should be put to death.

Newspapers against slavery, and the men who attacked them, 1831 to 1835

William Lloyd Garrison, a white abolitionist, someone who worked to end slavery, began *The Liberator* in Boston on January 1, 1831. Garrison demanded an immediate end to slavery, with no payment to the enslavers. About 3,000 people paid for his paper.

The drawing across the top of its front page showed whippings and the sale of children, set in Washington, D.C. Garrison believed that "slavery and freedom of the press cannot exist together." By 1835 members of the American Anti-Slavery Society were printing more than a million papers and pamphlets a year.

Mail burned in Charleston. Members of the society mailed their papers to people in the South in the summer of 1835. A small group of men broke into the post office in Charleston, South Carolina, on the night of July 29. They took the bags of antislavery papers, and a mob burned them. Opening or holding back the mail was against federal law. Even so, Postmaster General Amos Kendall, a close ally of President Andrew Jackson, gave Southern postmasters permission to refuse to deliver antislavery papers.

Garrison dragged. A crowd gathered outside *The Liberator*'s office in Boston on October 21, 1835, where the Boston Female Anti-Slavery Society was meeting. A newspaper of the time put the crowd at 5,000. A member of the society later described the men as "gentlemen of wealth and standing."

The men forced the women out, seized Garrison, tied a rope around his waist and dragged him through the streets. They nearly tarred and feathered him. Tarring and feathering means pouring warm pine tar over a person's body and then covering it with feathers, and the tar often blistered or burned the skin.

The mayor stopped them and had Garrison held in the city jail overnight for his own safety. Garrison later wrote that "every mail" brought letters telling him he had "only so many days to live."

The penny press, 1833

Benjamin Day, a New York printer, started *The Sun* in 1833, partly to bring more work to his print shop. Most daily papers cost six cents. Day sold *The Sun* for one cent a copy, a penny, so people with little money could buy it every day. Boys sold it on the street. Day printed crime stories, and he hired George Wisner, the first police reporter in the United States, to write short reports from the police office.

Life on the Moon. Day printed a made-up report in *The Sun* in 1835 that living creatures had been found on the Moon. Sales rose, and critics attacked Day when readers learned it was false. By 1839 *The Sun* sold 50,000 copies a day. Day paid for the paper mostly by selling advertisements. By 1842 New York City had nine daily papers that cost one or two cents.

Elijah Lovejoy

Who: A white Presbyterian minister and newspaper editor who wrote against slavery and was shot dead by a mob while defending his press.
When and where: St. Louis, Missouri, 1833 to 1836, and Alton, Illinois, 1836 to 1837.

Men who supported slavery broke four of his presses, then shot him.

Elijah Lovejoy wrote against slavery, as Garrison did, but in a state where slavery was legal. He became the editor of the *St. Louis Observer*, a Presbyterian weekly paper in St. Louis, Missouri, in 1833. A group of leading men in St. Louis signed a letter in 1835 asking him to tone down what he wrote. He refused.

Francis McIntosh. A white mob in St. Louis chained Francis McIntosh, a free Black steamboat worker, to a tree and burned him alive on April 28, 1836. Judge Luke Lawless refused to convict anyone and blamed abolitionists. Lovejoy attacked the judge in the *Observer*. In May 1836 men in St. Louis threatened him with mob violence and ran him out of town.

He moved his paper across the Mississippi River to Alton, in the free state of Illinois. Men in Alton who supported slavery destroyed his press three times. They threw one press from a second-floor window. A fourth press arrived by steamboat on November 6, 1837. Lovejoy and his supporters stored it in a stone warehouse owned by Benjamin Godfrey and Winthrop Gilman.

The warehouse. A mob surrounded the warehouse the next night. Its members said they would burn the building and kill every man inside. About twenty men inside had guns, and one of them shot and killed a man in the mob named Bishop. A man from the mob climbed a ladder to set fire to the roof. When Lovejoy stepped outside, men in the mob shot him five times. He was 34. The mob went into the warehouse, broke the press and threw it into the river.

The trials. No one was ever charged with killing Lovejoy. In January 1838 Alton's prosecutors, the lawyers who bring charges for the government, put twelve of the press's defenders on trial for riot. Illinois Attorney General Usher F. Linder, the state's top lawyer, joined the case against them. A jury found Gilman not guilty in ten minutes, and the city attorney dropped the charges against the other eleven.

Prosecutors then tried men from the mob, on January 19, 1838, for breaking into the warehouse and destroying the press. This time Linder was the lawyer for the mob. The jury found the men not guilty.

The men from the mob who were tried: Frederick Drucher, William Carr, James M. Hock, David Butler, Horace Beall, Levi Palmer, and two men named Nutter and Jennings.

The telegraph, 1844, and who owned it

Members of Congress voted Samuel Morse $30,000 in 1843 to build a test line from Washington to Baltimore for his telegraph, which sends messages along a wire as pulses of electricity. Morse sent the first message over the line from the US Capitol on May 24, 1844: "What hath God wrought," old words for "What has God done." Alfred Vail received it in Baltimore and sent it back.

Who owned the wires. Morse and his partners tried to sell the right to use his invention to the federal government and to groups of businessmen. No one bought it. Morse hired Amos Kendall, the former Postmaster General, to run the business. Kendall sold the right to use Morse's patent, the legal right to be the only one to make or use an invention, to separate companies, one region at a time.

Census Bureau officials, who count the people for the government, reported 75 telegraph companies with 21,147 miles of wire in 1851. Private companies owned the lines. From 1844 on, many newspapers printed a section headed "News by Telegraph."

The war between the United States and Mexico began in 1846, and fast news of the war cost much more than news had cost before. Moses Yale Beach, who owned *The Sun*, got the owners of the leading New York papers, six counting his own, to share the cost. That group grew into the New York Associated Press.

Frederick Douglass

Who: A man who escaped slavery in Maryland and started his own newspaper, the *North Star*.

When and where: Rochester, New York, from 1847.

Movie: *Becoming Frederick Douglass* (2022), a PBS documentary about his life, directed by Stanley Nelson.

His paper's motto began: "Right is of no sex."

Frederick Douglass started his own newspaper because he believed that Black Americans had to lead the fight for their own freedom. He was born enslaved in Talbot County, Maryland, in February 1818, and he escaped on September 3, 1838.

Speeches first. Douglass spoke about his life in slavery at a meeting of the Massachusetts Anti-Slavery Society on Nantucket island in 1841. The society's leaders then asked him to travel and give speeches for pay. He published the story of his life in 1845. He then gave speeches in Britain and Ireland, and the money from that tour paid to start his paper.

Douglass broke with Garrison in the late 1840s over whether politics could help end slavery, because Douglass came to believe that political action could. He published the first issue of the *North Star* in Rochester, New York, on December 3, 1847. Its motto was "Right is of no sex, Truth is of no color, God is the Father of us all, and we are brethren."

The *North Star* was four pages long and came out every week. It had more than 4,000 subscribers in the United States, Europe and the West Indies. On the front page Douglass wrote that the paper would "attack SLAVERY in all its forms and aspects." He also wrote that it would "promote the moral and intellectual improvement of the COLORED PEOPLE," using a word Americans of that time used for Black people. Its first printer and publisher was William Cooper Nell, a Black man from Boston.

BY 1850

If you remember one thing: Newspapers got cheaper and faster, and men who defended slavery burned antislavery mail, wrecked presses and killed an editor.

- In 1800: A federal judge sent James Callender to prison for his words about President Adams, and news traveled no faster than a horse or a ship could carry it.
- In 1850: The country had 2,526 newspapers, a daily paper could cost one cent, and news crossed the telegraph wires.

Next: A telegraph wire crossed the continent in 1861, and the Civil War sent reporters to the battlefields.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 19 MINUTES

One company, Western Union, came to carry nearly every telegram in the country, while army officers and white mobs shut down newspapers. A telegraph wire crossed the continent in 1861, and by 1866 Western Union had more than 90 percent of the country's telegraph business. During the Civil War, Northern editors sent dozens of reporters to the battlefields. Generals of the Union, as the Northern side in the war was called, and members of Lincoln's cabinet closed newspapers and had editors arrested without trials.

Boston's postmaster hired the first Black American known to work for the federal government in 1863. In New York, Joseph Pulitzer and William Randolph Hearst competed for readers, and some of the stories they printed were false. Postal workers began carrying mail to farm families at their homes in 1896. White men drove Black editors out of Memphis in 1892 and out of Wilmington, North Carolina, in 1898. In Wilmington a white mob burned a Black-owned newspaper and murdered Black men in the streets.

The Pony Express and the wire across the continent, 1860 to 1861

William H. Russell and his partners, Alexander Majors and William B. Waddell, started the Pony Express on April 3, 1860. Riders carried mail on horseback nearly 2,000 miles, from St. Joseph, Missouri, to Sacramento, California, across land where mostly Native Americans lived. The riders changed horses every 10 to 15 miles and covered 75 to 100 miles a day. The first run took ten days.

Lincoln's speech in under eight days. The riders carried President Abraham Lincoln's inaugural address, the speech a new president gives on taking office, across in 7 days and 17 hours in March 1861. The company charged as much as $5 for half an ounce of mail, when ordinary postage was ten cents or less. Workers finished the first telegraph line across the continent on October 24, 1861. Two days later the Pony Express shut down.

News of the Civil War, 1861 to 1865

The North had far more newspapers than the South when the Civil War began. In 1860 fewer than 10 of every 100 print shops in the country were in the South. The South had 70 of the country's 387 daily papers, and those 70 sold only about 10 of every 100 daily copies.

Soldiers of the Confederacy, the Southern states that had broken away from the United States, fired on Fort Sumter in April 1861. The next day the *New York Herald* printed 135,000 copies, about as many as all the South's daily papers together. Only about 20 Southern daily papers were still printing when the war ended.

Reporters with the armies. The editors of the *New York Herald* alone kept more than 40 reporters with the armies. At Gettysburg the telegraph lines had been cut. A. Homer Byington of the *New York Tribune* repaired the wires near Hanover, and in return he got the first use of them. George W. Smalley of the *Tribune* wrote his story of the Battle of Antietam, in September 1862, on a train to New York. The *Tribune* had thousands of copies on the streets the second morning after the battle.

Southern papers could no longer get the news of the Associated Press, the group of New York papers that shared news. So Southern publishers started their own Press Association in 1862.

Photographs of the time could not show action or reach many readers quickly. The editors of weekly papers such as *Frank Leslie's Illustrated Newspaper* and *Harper's Weekly* sent artists to draw the battles. Engravers carved the drawings into blocks of wood for printing. Readers saw the pictures within about a week.

Editors arrested and papers closed, 1861 to 1864

Union officers and members of Lincoln's cabinet shut down newspapers and arrested editors during the Civil War, most of the time without any court case. The First Amendment states that Congress shall make no law "abridging the freedom ... of the press." From April 1861, Lincoln's officials censored reporters' telegraph messages to and from Washington.

Soldiers arrested editors and closed their presses. Army officers sitting as military courts banished some editors to the Confederacy, forcing them to leave the North and not come back.

Seward and Stanton. William Seward, Lincoln's Secretary of State, the cabinet member in charge of dealings with other countries, ordered the arrest of an editor of the *Freeman's Journal*. Officials held the editor for 11 weeks and then let him go without a trial. Edwin Stanton, the Secretary of War, who ran the army for Lincoln, allowed a military governor, an army officer put in charge of a place, to destroy the office of the *Sunday Chronicle* in Washington.

McGregor. In Canton, Ohio, Archibald McGregor edited the *Stark County Democrat*. He printed words that his opponents called treason, and a mob then destroyed his paper's office. The record does not name the men in the mob. A year later soldiers arrested him without saying what the charge was.

General Ambrose Burnside closed the *Chicago Times*, a paper that backed the Democratic Party, in 1863. Lincoln canceled Burnside's order. He said he was "embarrassed" that his general had failed to weigh the needs of the Union against "the Liberty of the Press."

A forged announcement. Two New York reporters forged an announcement signed with Lincoln's name in May 1864, and the *New York World* printed it. It called for a day of fasting and a much larger draft, the government's order for men to join the army. The two men did it to change the price of gold. One of them, Joseph Howard Jr., had bought gold. A call for more soldiers meant a longer war, and he expected worried investors to buy gold and push its price up.

Lincoln ordered General John A. Dix to arrest the *World*'s editors and take over its offices. He canceled the order once it was clear the two reporters had faked the announcement.

The first Black postal workers, 1863 to 1869

Federal law had barred anyone but "free white persons" from carrying the mail since 1802. The law named the post riders and the drivers of the carriages that carried the mail along the roads. In early 1863, during the Civil War, John Palfrey, the postmaster of Boston, hired William Cooper Nell as a clerk inside the Boston Post Office. Nell was the first Black American known to work for the federal government.

Members of Congress ended the rule on March 3, 1865. Their new law said that "no person, by reason of color, shall be disqualified from employment in carrying the mails." That meant no one could be kept from the job because of the color of his skin.

James Christian began delivering mail in Richmond, Virginia, in June 1869. He was the first Black letter carrier known in the United States. Richmond's postmaster, Elizabeth Van Lew, hired him along with other Black clerks and letter carriers.

William Cooper Nell

Who: A Black writer and printer from Boston who printed Frederick Douglass's first newspaper and became the first Black American known to work for the federal government.

When and where: Boston, and Rochester, New York, 1840s to 1874.

His night shifts at the post office ran from 11 to 5:30.

William Cooper Nell was born in Boston. He went to Rochester, New York, in the 1840s and worked for nearly two years with Frederick Douglass, as the first printer and publisher of the *North Star*.

The schools. The members of the Boston School Committee, who ran the city's public schools, kept Black children apart from white children. Nell and other Black Bostonians sent the committee a petition in 1844, a written request signed by many people, asking it to open the schools to their children.

Eleven years later, in 1855, the governor of Massachusetts signed a law that made it illegal to turn a child away from a public school because of race. The same year, Nell published a 396-page book, *The Colored Patriots of the American Revolution*, about Black Americans who fought in the Revolution.

The post office. Nell wrote in a letter in 1873 that the post office was handling more and more letters, so he had been put on the night mail. His shifts began at 11 at night and usually ended at 5:30 in the morning.

He called himself "the first colored man employed about the United States Mail," using the word of his time for a Black man. He also wrote that he had "never lost a day from sickness or any cause." Nell worked at the post office until he died in 1874.

One company owns the telegraph, 1866 to 1900

Western Union bought its last two big rivals in 1866 and ended up with more than 90 percent of the country's telegraph business. Tomas Nonnenmacher of Allegheny College calls it the country's first nationwide industrial monopoly, a company with no real competition that can set its own prices.

Lobbyists. In almost every session of Congress, members brought bills to control the company or to put the government into the telegraph business itself. Western Union's lobbyists, people paid to persuade lawmakers, blocked nearly all of them.

The number of telegrams the company carried rose from 5.8 million a year in 1867 to 63.2 million in 1900. The average price of a telegram fell from $1.09 to 30 cents. Of every dollar customers paid, about 30 to 40 cents was profit for the company.

The New York Associated Press, run by the owners of a few New York papers, held what the American Antiquarian Society calls a news monopoly by the late 1800s. Chicago newspaper owners formed a rival group, the Western Associated Press, and they broke the New York group's hold. A new, national Associated Press began in 1892.

The telephone, 1876 to 1900

Alexander Graham Bell patented the telephone in 1876. He offered the patent to Western Union for $100,000, and the company's leaders turned it down. In 1900 the United States had about 1.36 million telephones, fewer than 2 for every 100 people. Of every 100 telephone calls, 97 were local calls within one town.

Newspapers in Chinese, 1854 and 1855

Before the Civil War there were already American newspapers in German, French, Spanish, Polish, Swedish, Norwegian, Hawaiian and other languages. Chinese was harder to print because it uses thousands of characters instead of an alphabet. The first Chinese-language paper in the country, *Golden Hill's News*, came out in San Francisco in 1854 and lasted a few months.

The second, *The Oriental*, began there on January 4, 1855. Its editor was William Speer, a Presbyterian minister. Its printers drew the characters on stone with a grease pencil and printed from the stone. The paper closed in 1857. No one tried another Chinese paper until the 1870s.

Nellie Bly

Who: A newspaper reporter who pretended to be mentally ill so that she could report from inside New York City's asylum for women.

When and where: Pittsburgh, 1885 to 1887, and New York City, 1887 to 1895.

Movie: *Escaping the Madhouse: The Nellie Bly Story* (2019), a Lifetime television film that its makers call a fictionalized account.

She pretended to be insane to get locked inside an asylum.

Nellie Bly was the pen name of Elizabeth Cochran, from Cochran's Mills, Pennsylvania. The *Pittsburgh Dispatch* printed an article called "What Girls Are Good For" in 1885. Cochran wrote an angry letter to the paper answering it, and its editor hired her. At the *Dispatch* she wrote about working girls and poor neighborhoods in Pittsburgh.

Ten days inside. Bly went to work for Joseph Pulitzer's *New York World* in 1887. For her first big story she pretended to be insane until she was locked in the city's asylum for women on Blackwell's Island, a hospital where people with mental illness were kept. She stayed ten days.

When she arrived, a nurse, Miss Grupe, took her to a cold, wet bathroom. The nurses pulled off her clothes while a group of patients watched from the door. A patient scrubbed her with soft soap. Then three buckets of ice-cold water came down over her head, and Bly did not say who poured them.

Bly saw 52 women tied together by wide leather belts locked around their waists and fastened to one long rope.

A nurse, Miss Grady, told a patient named Urena Little-Page that "the doctors say that you are thirty-three instead of eighteen," and the other nurses laughed. Then Grady and the other nurses slapped Little-Page, knocked her head and choked her, and dragged her into a closet. The marks of their fingers stayed on her throat all day. A patient told Bly that "the nurse would beat them if they told."

Bly's reports ran in the *World* and then as a book, *Ten Days in a Mad-House*. A grand jury looked into the asylum. Bly wrote that New York City officials had set aside $1,000,000 a year more than ever before for the care of people with mental illness.

Around the world. Bly then asked her editor to let her travel around the world faster than Phileas Fogg, the hero of Jules Verne's novel *Around the World in Eighty Days*. She set out in November 1889. In France she met Verne himself, who asked about her route. The whole trip took 72 days, 6 hours, 11 minutes and 14 seconds. The *World*'s contest to guess her time drew nearly a million entries. She died in New York on January 27, 1922.

Ida B. Wells

Who: A Black newspaper editor in Memphis who counted lynchings, printed what she found and was driven from her city for it.
When and where: Memphis, Tennessee, 1892, and New York City, 1892 to 1895.

She counted 728 lynchings in eight years and printed the count.

Ida B. Wells counted the lynchings in the South, killings by a crowd outside the law with no trial, and she printed what she found. White men in Memphis drove her out of the city for it. She was born into slavery in Holly Springs, Mississippi, on July 16, 1862. By 1892 she was an editor and part owner of the *Free Speech*, a Black newspaper in Memphis, Tennessee.

The People's Grocery. A white mob took three Black men out of their cells in the Memphis jail in the early morning of March 9, 1892, and shot them to death. They were Thomas Moss, Calvin McDowell, and a third man whom the records name as Will Stewart or Henry Steward. Moss was part owner of the People's Grocery, a store run by Black people that was taking business from a white-owned store nearby.

Wells wrote that the white store's owner, a man named Barrett, led twelve officers to the grocery at night. The grocery's defenders fired on them and wounded three. Officers then arrested 31 men, and the mob took the three from among them. Wells wrote that Black people in Memphis asked the authorities to bring the killers to justice, and "No attempt was made to do so."

Wells and the other editors of the *Free Speech* advised Black people to leave Memphis. Wells wrote that Black men "left the city by thousands." Those who stayed stopped riding the streetcars. The streetcar company lost so much money that its managers came to the *Free Speech* and asked the editors to tell people to ride again.

The count. Wells began to study lynchings, using the lists that the *Chicago Tribune* printed each year. She wrote in 1892 that mobs had killed 728 Black people in the past eight years, and that only one-third of the 728 had even been charged with rape. Rape means forcing someone into sex. Her list included "the boy Will Lewis," hanged in Tullahoma, Tennessee, "for being drunk and 'sassy' to white folks." It also included a fifteen-year-old girl hanged in Louisiana.

The editorial. Wells printed an editorial, an article that gives the paper's opinion, in the *Free Speech* on May 21, 1892. It listed eight Black men lynched since the last issue, and it called the claim that Black men raped white women "the old thread-bare lie." Wells was in New York at the time.

White men in Memphis held a meeting at the Cotton Exchange Building on May 24 and sent a group to find the paper's editors. Wells wrote that these men made "open threats of lynching" and did not carry them out only because they could not find the editors.

The business manager and half owner, J. L. Fleming, fled the city. Wells wrote that he was later "ordered not to return," and she did not say who gave the order. Letters and telegrams warned Wells that she would be hurt if she came home.

The office. Wells wrote in 1892 that people the paper owed money to took over the office and sold "the outfit," meaning the printing equipment. She described no fire. Later accounts by the National Park Service and the National Women's History Museum say a mob destroyed or burned the office.

Exiled. Wells did not go back. T. Thomas Fortune's *New York Age*, a Black weekly newspaper, printed most of her account on June 25, 1892, under the name "Exiled." It ran on the front page, and 10,000 copies went out across the country.

Black women in New York and Brooklyn held a meeting at Lyric Hall on October 5, 1892, and raised the money to print her account as a pamphlet. It was called *Southern Horrors: Lynch Law in All Its Phases*. In 1895 she published *A Red Record*, 100 pages of tables of lynchings.

Rural Free Delivery, 1896

People in cities had had their mail brought to their homes for free since 1863, but farm families still had to travel to a post office to get their letters and newspapers. In 1890 about 41 million Americans, 65 of every 100, lived in the country. One farmer asked, "Why should the cities have fancy mail service and the old colonial system still prevail in the country districts?"

Postmaster General John Wanamaker argued that rural people, those who lived in the country, needed the information in newspapers. Congressman Tom Watson of Georgia won $10,000 in 1893 to test home delivery in the country. The next Postmaster General, Wilson S. Bissell, did not use it. Members of Congress added $20,000 in 1895 and $10,000 in 1896.

The first routes. Postal officials began Rural Free Delivery on October 1, 1896, at Charles Town, Halltown and Uvilla, in West Virginia. Within a year 44 routes ran in 29 states. Rural families sent more than 10,000 petitions asking for routes. Rural delivery became permanent on July 1, 1902, with about 8,500 rural carriers.

Yellow journalism and the war with Spain, 1895 to 1898

Joseph Pulitzer owned the *World* in New York, and William Randolph Hearst owned the *Journal*. In 1896 Hearst hired away Pulitzer's cartoonist, Richard F. Outcault, whose comic strip had a character called the Yellow Kid. Pulitzer hired another cartoonist to keep drawing the Kid. People began to call the two men's kind of reporting "yellow journalism."

The State Department's historians define yellow journalism as reporting that put exciting stories ahead of facts. Pulitzer and Hearst printed stories about Cuba's fight for independence from Spain, and some of those stories turned out to be false.

The Maine. The US battleship *Maine* blew up and sank in the harbor of Havana, Cuba, on the night of February 15, 1898. Hearst and Pulitzer printed rumors that someone had planned to sink it, a plot that was never proved. Officials of Spain's government in Cuba wrote an early report that said the explosion started inside the ship.

A court of US Navy officers decided in March that a mine, a bomb placed in the water outside the ship, had set off the explosion. The court found no evidence of who was responsible, and no one has ever found out who placed a mine, or whether there was one. In 1976 a study led by Admiral Hyman Rickover found that a fire in a coal bin most likely set off the explosives stored next to it. People still argue over the cause.

By early May the war between the United States and Spain had begun. The State Department's historians say the two papers helped make Americans ready for a war, but that the papers alone did not cause it.

A Black newspaper burned in Wilmington, 1898

A mob of white men in Wilmington, North Carolina, burned the city's Black newspaper in 1898, murdered Black men in the streets and forced the elected city government out.

Alex Manly edited the paper, the *Daily Record*. In August 1898 he printed an editorial answering a speech by Rebecca Felton, a white woman who had urged the lynching of Black men accused of raping white women. Manly wrote that white newspapers blamed all Black people for the crimes of the few who might be guilty. He also wrote that in many cases called rape, the white woman had chosen to meet the Black man in secret. When people found out, he wrote, a mob lynched the man for rape.

Democratic Party leaders, with Furnifold Simmons at the head of their campaign, used the editorial to stir up white voters before the November election. Democratic newspapers reprinted it under headings such as "An Insult to the White Women of North Carolina."

The demands. The day after the Democrats won, a meeting of white men in Wilmington passed a set of demands. They ordered Manly to close his paper and leave the city, and they demanded that the mayor and the chief of police resign. Alfred Moore Waddell, a former Confederate officer and congressman, led a crowd of white men to the *Daily Record* office on November 10, 1898. About 500 men gathered at the start, and the crowd grew to as many as 2,000. They broke in and burned the building.

The killings. Later that morning, members of the white mob shot and killed Black men in the streets of Wilmington. Every person reported killed was Black. The shooting started where groups of Black and white men were arguing, and each side there said the other fired first. A white militia company, the Wilmington Light Infantry, had a machine gun mounted on a wagon, which white businessmen had bought before the election.

How many. The coroner, the official who looks into deaths, counted 14 men dead. A state commission, a group of people chosen to study the killings, found in 2006 that at least 14 and perhaps as many as 60 men were murdered. North

Carolina's state history office notes unconfirmed reports of many dozens or even hundreds of deaths. The records do not name the men who set the fire or the men who killed.

By late afternoon Waddell and his allies had forced the elected mayor and city council to resign, and the new board of aldermen, the city council, made Waddell mayor. They then banished people from the city. Manly came first, and he escaped. Black leaders, successful Black business owners and white Republicans came next. A federal investigation ended in 1900, and no one was charged.

BY 1900

If you remember one thing: By 1900 one company carried almost all the country's telegrams, and white mobs had driven Black editors out of Memphis and Wilmington.

One number: 728. That is how many Black people Ida B. Wells counted killed by mobs in the eight years before 1892, and only one-third of them had even been charged with rape.

Next: In the new century, magazine reporters dug into big companies and city governments, and radio brought the news into people's homes.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 17 MINUTES

Radio carried the news into American homes as it happened, and in two world wars federal officials worked to control what Americans printed and heard. Magazine reporters investigated companies and city governments from 1902 on and printed long reports about what they found. During World War I, federal officials ran the government's first large propaganda office. They also barred dozens of newspapers from the mail and filed more than 2,000 criminal cases against people for what they said or printed.

The Westinghouse company owned one of the first radio stations, KDKA, from 1920, and then networks paid for by advertisers took over. In World War II, government officials asked newspapers and radio stations to keep military secrets. Japanese Americans forced into camps printed their own newspapers, and camp officials checked what they printed.

The muckrakers, 1902 to 1912

Some reporters in the early 1900s dug into one subject and then wrote long reports about it, and editors at magazines such as *McClure's*, *Cosmopolitan* and *Collier's* printed them. The January 1903 issue of *McClure's* contained three such reports.

Three reports in one issue. One was part of Ida Tarbell's history of the Standard Oil Company. By 1880 that company controlled 90 to 95 percent of the oil refining in the United States, the work of turning crude oil from the ground into products people can use. Another was Lincoln Steffens's report on corruption, officials using their jobs to get money or favors illegally, in the city government of Minneapolis. The third was Ray Stannard Baker's report on coal miners.

The Jungle. Upton Sinclair spent about seven weeks undercover, hiding who he was, in the meatpacking plants of Chicago, the factories where animals were killed and the meat was cut up and packed. His novel *The Jungle* came out as a book in February 1906. He wanted readers to care about the workers, but readers were most upset about what went into their meat. "I aimed at the public's heart, and by accident I hit it in the stomach," Sinclair wrote.

Patent medicines. In a series that ran in *Collier's* in 1905 and 1906, Samuel Hopkins Adams reported on patent medicines, bottled cures sold with false claims. He wrote that Americans would "swallow huge quantities of alcohol, an appalling amount of opiates and narcotics" in them. By opiates he meant drugs made from the opium poppy.

President Theodore Roosevelt signed two new laws on June 30, 1906. Under the Meat Inspection Act, federal inspectors worked in the packing plants. The Pure Food and Drug Act banned food and medicine with false labels or harmful added ingredients from being sold across state lines.

Muckrakers. David Graham Phillips attacked members of the US Senate in a series called "The Treason of the Senate." Roosevelt answered with a speech on April 14, 1906. He compared these writers to the Man with the Muck Rake in

John Bunyan's religious book *The Pilgrim's Progress*, a man raking up muck, mud and filth, "who could look no way but downward."

Roosevelt meant it as an insult. The writers took his word "muckraker" as a name to be proud of. By 1912 this kind of reporting had mostly disappeared from the magazines, in part because large companies stopped buying advertisements in them.

Robert S. Abbott

Who: The son of formerly enslaved parents who founded the *Chicago Defender* and sent it into the South, where it urged Black families to move north.
When and where: Chicago, 1905 to 1940.

He printed "(white)" after white people's names.

Robert S. Abbott started the *Chicago Defender* with 300 copies in 1905, and by 1920 it outsold every other Black newspaper in the country. He was born on St. Simons Island, Georgia, in 1868. His parents, Thomas and Flora Abbott, had been enslaved.

Shut out. Abbott learned printing at Hampton Institute in Virginia. After he graduated in 1896 he moved to Chicago, where he was shut out of the printing business because he was Black. The record does not name the shops that turned him away. He earned a law degree in 1899, but because he was Black he could not get work as a lawyer in Indiana and Kansas.

Abbott printed the first issue of the *Chicago Defender* on May 5, 1905, and sold the 300 copies himself. In his paper's headlines and articles he attacked lynching and white supremacy, the belief that white people should rule over everyone else. One headline read, "When the Mob Comes and You Must Die Take at Least One with You."

White papers such as the *Chicago Tribune* printed "colored" after the names of Black people. Abbott printed "(white)" after the names of white people.

North. At that time 90 of every 100 Black Americans lived in the South, and Abbott sent the paper there. He urged readers to leave the South. In the *Defender* he printed job listings, train schedules, and photos of what he presented as the best schools, parks and housing in Chicago. For four years starting in 1916, more than 10,000 Black Southerners left the South each month. Between 1916 and 1919 about 500,000 left.

Smuggled south. Local police in Southern towns tried to stop the paper. They seized copies, and they arrested people who sold it under vagrancy laws, which made it a crime to have no job. Some police departments banned the sale of Black newspapers altogether. The accounts do not name the towns. Abbott arranged for Pullman porters, the Black workers who served passengers on railroad sleeping cars, to carry bundles of the paper south and sell them in secret.

The *Defender* sold more than 250,000 copies a week by 1929, and Abbott was one of the first Black millionaires. He died in Chicago on February 29, 1940.

World War I: the government's propaganda office, 1917 to 1919

The United States entered World War I on April 6, 1917. That month President Woodrow Wilson set up the Committee on Public Information and put George Creel, a former newspaper reporter, in charge. It was the federal government's first large office for propaganda, information made and spread to push people toward one opinion.

Creel's staff sent articles to newspapers, and Creel later estimated that their material filled 20,000 newspaper columns a week. The committee's staff printed their own paper, the *Official Bulletin*, and about 115,000 copies went out. Its artists made posters, and one showed a German soldier as a gorilla carrying a club.

Staff in one division of the committee watched the hundreds of newspapers printed in other languages in the United States. After the war, many Americans concluded that Creel and his staff had pushed the war too hard, and that they had made it harder for people to speak against it.

World War I: papers banned from the mail and people jailed for words, 1917 to 1921

Members of Congress passed the Espionage Act, named for espionage, or spying, on June 15, 1917. Under it, it was a crime to get in the way of the draft or to stir up disloyalty in the armed forces. Papers that urged treason could not go through the mail.

Banned from the mail. Postmaster General Albert S. Burleson told local postmasters to report anything suspicious. By 1918 his officials had barred 74 newspapers from the mail. The New York City postmaster, Thomas G. Patten, stopped *The Masses* magazine from going through the mail, and its November-December 1917 issue was its last.

Newspapers printed in German and other languages faced one more rule. Under the Trading with the Enemy Act of October 6, 1917, they had to file English translations of their war news with the local postmaster.

The Sedition Act of 1918. Members of Congress added the Sedition Act to the Espionage Act the next year, on May 16, 1918. Under it, it was a crime to speak or write anything "disloyal" about the government, the Constitution, the armed forces or the flag. The punishment was up to 20 years in prison and a $10,000 fine.

Federal prosecutors filed more than 2,000 cases under the two laws, and more than 1,000 ended in convictions. They used the Sedition Act mainly against pacifists, people who oppose all war. They also used it against anarchists, who want to do away with government, and socialists, who want the public rather than private owners to own big businesses.

The Socialist leader Eugene V. Debs gave a speech against the war to about 1,200 people in Canton, Ohio, on June 16, 1918. A judge sentenced him to 10 years in prison, and the justices of the Supreme Court upheld his conviction in 1919. President Warren G. Harding shortened his sentence, and Debs walked out of prison on Christmas Day 1921.

Victor Berger

Who: An immigrant newspaper owner in Milwaukee whose paper was barred from the mail for opposing World War I, and who was sentenced to 20 years in prison.

When and where: Milwaukee, Wisconsin, 1892 to 1929.

Voters kept electing him, and the House kept refusing to seat him.

Victor Berger was born to a Jewish family in Austria-Hungary. He came to the United States in 1878 and taught German in Milwaukee's public schools. He bought a German-language newspaper in 1892, and in 1898 he and Eugene V. Debs founded the Social Democratic Party. Milwaukee voters made him the first Socialist elected to the US House of Representatives in 1910. A year later he started a daily paper in English, the *Milwaukee Leader*.

The permit. Berger opposed the war and said so in his paper. In 1917 an official in Postmaster General Albert S. Burleson's department, the third assistant postmaster general, took away the *Leader*'s "second-class mailing privilege," the permit that let it go by mail as a newspaper.

Federal prosecutors charged Berger under the Espionage Act in 1918. He and four other Socialist leaders were convicted in Chicago, and in early 1919 Judge Kenesaw Mountain Landis sentenced each of them to 20 years in prison.

The empty seat. Milwaukee voters elected Berger to Congress again in 1918, while his case went on. In November 1919 the other members of the House refused to let him take his seat. Voters elected him again in a special election, a vote held to fill the empty seat, with 55 percent of the vote, and the members of the House refused him again.

The justices of the Supreme Court overturned his conviction in 1921. Voters elected him to Congress three more times, in 1922, 1924 and 1926. He died in 1929 after a streetcar accident.

Radio, and who owned it, 1920 to 1934

Radio station KDKA in Pittsburgh broadcast the results of the presidential election between Warren G. Harding and James M. Cox on the evening of November 2, 1920. KDKA belonged to the Westinghouse company. Its studio was a shed on the roof of a building at the Westinghouse works in East Pittsburgh.

Eight stations were on the air by the end of 1921, and by November 1, 1922, federal officials had licensed 564. At first, money for radio came from two places: selling radio sets and selling advertising. The Queensboro Corporation paid station WEAF in New York $50 on August 28, 1922, for about ten minutes of advertising for its apartments. Over the following years, advertising became the main way American radio was paid for.

Networks. The National Broadcasting Company, NBC, bought WEAF in 1926 and set up a permanent network, a group of stations in different cities that carry the same programs. Other networks followed, among them the Columbia Broadcasting System, CBS.

Rules for the air. By the middle of the 1920s, so many stations were on the air that their signals crossed and drowned each other out. Federal judges had ruled that the secretary of commerce, who gave out the licenses, could not stop giving them out even when the dial was full. The broadcasters themselves asked the federal government to restore order.

The biggest makers of radio equipment and the biggest broadcasters had also made business deals with each other. Those deals could have given a few companies a monopoly over radio, with no real competition from anyone else.

Members of Congress passed the Radio Act of 1927. Under it, the members of a federal commission decided which station could use which wavelength, the spot on the radio dial where a station is heard. They gave each of the 732 stations a set place on the dial, and they could turn down a new station when no room was left. In 1934 Congress's members passed the Communications Act and with it set up the Federal Communications Commission, the FCC, to oversee radio and messages sent by wire.

The president on the radio, 1933 to 1944

President Franklin D. Roosevelt gave his first fireside chat, a talk to the country by radio, on Sunday night, March 12, 1933. He had closed every bank in the country on March 6, two days after he took office.

In the talk Roosevelt explained in simple terms how banks worked to some 60 million listeners. He told them it was safer to keep money in a reopened bank than under the mattress. When the banks opened again, people put in more money than they took out. Harry Butcher of CBS gave these talks the name "fireside chats." According to Encyclopaedia Britannica, scholars count between 27 and 31 of them, from 1933 to 1944.

The War of the Worlds broadcast, 1938

The actor Orson Welles and his Mercury Theatre on the Air performed H. G. Wells's novel *The War of the Worlds* on CBS on the evening of October 30, 1938. Welles was 23. The writer Howard Koch, the producer John Houseman and Paul Stewart had rewritten the story as fake news bulletins about Martians landing in New Jersey. The program did not stop to say it was a play until almost 40 minutes in.

Some listeners believed it and called the police, newspapers and radio stations. The next morning, editors across the country printed stories about a nationwide panic.

The count. That night the C. E. Hooper company had asked 5,000 households what they were listening to, and 2 of every 100 named the Welles program. A. Brad Schwartz, who wrote a book about the broadcast, *Broadcast Hysteria*, found that only some listeners were fooled. Their worried phone calls convinced many journalists that the show had caused a panic across the country, and the journalists reported one.

Pictures by wire, 1935

Newspapers mostly got photographs by mail, train or airplane until 1935, and a picture could take up to 85 hours to arrive. The AT&T telephone company had run a service that sent photographs by wire from 1926, but it closed in 1933. Associated Press staff sent their first photograph over wires on January 1, 1935. It was a picture taken from the air of a plane crash near Morehouseville, New York. Forty-seven newspapers in 25 states received it.

Edward R. Murrow

Who: A CBS radio reporter whose eyewitness reports from Europe before and during World War II made him famous across the United States.

When and where: London, 1937 to 1945.

Movie: *Good Night, and Good Luck* (2005), directed by George Clooney, about Murrow's television reports on Senator Joseph McCarthy in 1953 and 1954.

From London he reported the war to Americans by radio.

Edward R. Murrow's radio reports from Europe for CBS, from 1938 to 1940, made him famous across the United States. He also helped bring to the United States German scholars whom the Nazis, Adolf Hitler's party, which ruled Germany, had driven out.

Murrow joined CBS in 1935. CBS executives sent him to London in 1937 to run the network's European office. On the radio he described Germany's moves across Europe as an eyewitness. In 1938 he reported Germany's takeover of Austria and the Munich Conference, a meeting of European leaders. He reported the takeover of Czechoslovakia in 1939, and the Battle of Britain, when German planes attacked Britain, in 1940.

McCarthy. After the war Murrow ran the news department at CBS. In 1954 he made a television program about Senator Joseph McCarthy. McCarthy had charged that Communists, people who wanted one party to run the government and the government to own the farms and factories, were working in the government. Murrow died on April 27, 1965.

World War II: secrets, propaganda and the Black press, 1941 to 1945

Japanese planes attacked the US Navy base at Pearl Harbor, Hawaii, on December 7, 1941. Twelve days later President Roosevelt set up the Office of Censorship. Its director, Byron Price, had been an editor at the Associated Press. The office had about 13,500 workers, and most of them read letters and cables, messages sent by wire under the ocean, going into and out of the country.

The code. Price and his staff gave newspapers and radio stations a code of rules, and editors agreed to follow it of their own free will. The code listed topics to keep out of the news: troop and ship movements, how war factories were doing, the president's travels, and even the weather. Price persuaded the reporters Drew Pearson and William L. Laurence not to write about the building of the atomic bomb.

Roosevelt set up the Office of War Information on June 13, 1942. Its staff ran programs, at home and in other countries, that told people how the government said the war was going and what its war plans were.

Federal prosecutors charged far fewer people for their words than in World War I. Philip A. Dynia, writing in the First Amendment Encyclopedia, counts dozens charged, against thousands in 1917 to 1919. Roosevelt kept pressing his attorney general, Francis Biddle, to "indict the seditionists," meaning to charge with crimes the people he saw as turning others against the government.

Double V. Writers for Black newspapers such as the *Chicago Defender* reported on the armed forces' separate units for Black troops, white officers placed over Black soldiers, blood supplies kept apart by race, and violence against Black servicemen. They ran a "Double V" campaign: victory over the enemy abroad and victory over prejudice at home.

Federal officials threatened to charge Black publishers with sedition. The *Defender*'s publisher, John H. Sengstacke, insisted on meeting Biddle. Biddle agreed to block the charges as long as Black editors did not make their criticism of the war any stronger.

Newspapers behind barbed wire, 1942 to 1945

President Roosevelt signed Executive Order 9066, a written command from the president, on February 19, 1942. Under it, Lieutenant General John L. DeWitt ordered Japanese Americans on the West Coast out of their homes, some with only 48 hours' notice. Soldiers and federal officials forced them into camps because of their Japanese ancestry.

How many. The National Archives counts about 122,000 people, and nearly 70,000 of them were American citizens. Another count gives 110,000 to 120,000. The First Amendment Encyclopedia describes the camps as concentration camps, places where people are held by force without a trial.

Inside the camps, Japanese Americans wrote, printed and handed out their own newspapers. The papers in the first camps, run by the army, were copied on mimeograph machines, which print copies from a cut paper stencil. Army officials required those papers to be written in English only. All ten camps run by the War Relocation Authority had papers in both English and Japanese, among them the *Manzanar Free Press* in California and the *Heart Mountain Sentinel* in Wyoming.

Officials checked what the papers printed. Army officials censored the papers in the first camps. In the later camps, officials of the War Relocation Authority interfered with what the papers printed, and in some cases they censored the papers outright.

Television begins, 1927 to 1941

Philo Farnsworth, who was 21, sent the first picture by all-electronic television, a straight line, in his laboratory in San Francisco on September 7, 1927. Station WNBT in New York showed the first television advertisement allowed by law on July 1, 1941, before a baseball game. It showed a Bulova watch face over a map of the United States. It lasted about ten seconds and cost $9.

BY 1950

If you remember one thing: Radio put the news in people's homes, and during World War I federal prosecutors won more than 1,000 convictions for what people said or printed.

The question this era leaves open: Television was only starting in 1950. Who would decide what its viewers were allowed to see? Era 9 answers it in Jackson, Mississippi.

Next: Television reached most American homes within ten years, and two newspapers printed what a president wanted kept secret.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 18 MINUTES

Television became the way most Americans got the news. About 9 of every 100 American homes had a television set in 1950, and by 1960, 87 of every 100 did. After the DuMont network closed in 1955, three national television networks were left: NBC, CBS and ABC.

Managers of one Mississippi station, WLBT, cut civil rights news off the air. A church leader and two Mississippi leaders fought the station before the government and in court, and its owners lost their license.

Reporters printed a secret history of the Vietnam War in 1971 and tied a burglary to the White House in 1972, and officials in Washington tried to stop them. By 1996 cable channels such as CNN and Fox News showed news all day and night, and the World Wide Web had been open to the public since 1991.

Television and the blacklist, 1950 to 1954

Senator Joseph McCarthy of Wisconsin gave a speech in Wheeling, West Virginia, in February 1950. He said that 205 communists, followers of a system in which one party runs the government and owns the farms and factories, worked in the State Department. When senators asked him, he could not name a single one.

The book. Three former FBI agents who ran a company called American Business Consultants published a book called *Red Channels* in June 1950. The book named 151 people who worked in radio and television and claimed they had ties to communism.

The company's owners then visited networks, advertisers and sponsors. For a fee, they offered to "clear" the people they had named. To be cleared, a person usually had to give the FBI or the House Un-American Activities Committee, a committee of Congress, the names of other people. Network executives and advertisers fired people on the list, which became a blacklist, a list of people whom employers refuse to hire or keep.

On camera. A Senate hearing on McCarthy's charges against Army officers and officials was shown on television across the country in 1954. It lasted 36 days. On camera, Joseph Welch, the Army's lawyer, asked McCarthy, "Have you no sense of decency, sir, at long last?"

Edward R. Murrow showed McCarthy's methods on his weekly CBS program *See It Now* that same year. Members of the Senate voted 67 to 22 on December 2, 1954, to condemn McCarthy.

Radio and television in Spanish, 1946 to 1961

Raoul A. Cortez was born in Xalapa, Mexico, in 1905. He worked as a reporter for *La Prensa*, a Spanish-language newspaper in San Antonio, Texas. In 1946 he opened KCOR in San Antonio, the first all-Spanish radio station owned and run by a Hispanic American.

Federal officials had limited broadcasts in languages other than English during World War II. To get his license, Cortez told officials that part of the station's purpose was to rally Mexican Americans behind the war effort.

Cortez started KCOR-TV in 1955, the first television station aimed only at Hispanic viewers. It broadcast on a kind of channel called UHF, and few television sets could pick it up, so advertisers were hard to find. He sold the station in 1961, and the new owners renamed it KWEX.

The station that cut the news: WLBT, 1955 to 1971

The managers of WLBT, a television station in Jackson, Mississippi, that carried NBC's programs, cut civil rights news off the air, and a group of citizens fought for years to take away the station's license. The Lamar Life Insurance Company started WLBT in 1953.

"Cable Trouble." The lawyer Thurgood Marshall appeared on an NBC program in the fall of 1955 to talk about the Supreme Court's decisions against segregation, keeping Black and white children in separate schools by law. WLBT staff cut him off and showed a sign that read "Sorry, Cable Trouble from New York." The general manager, Fred Beard, said he did it "because the TV networks were overloading the circuits with Negro propaganda," using a word of that time for Black people.

Station staff also cut away from NBC's evening news when it turned to civil rights. WLBT reporters used racial slurs on the air. The White Citizens' Council, a group that fought to keep segregation, ran a bookstore in the station's lobby. About half the people in WLBT's viewing area were Black, and the station's managers refused them time to answer.

Medgar Evers. Medgar Evers was the Mississippi organizer for the NAACP, the National Association for the Advancement of Colored People, a civil rights group. In May 1963 he spoke on WLBT to answer the mayor of Jackson, Allen Thompson. Three weeks later Byron De La Beckwith shot Evers in the back in the driveway of his home and killed him.

That year WLBT staff again ran the "Cable Trouble" sign, this time over NBC's report on white people attacking protesters at a lunch counter in Jackson. WLBT's own crew had filmed the attack.

The complaint. The Reverend Everett Parker of the United Church of Christ joined Aaron Henry, head of the Mississippi NAACP, and A. D. Beittel, the president of Tougaloo College, in 1963. They gathered complaints from viewers, knowing that they could be attacked for it. In 1964 they asked the Federal Communications Commission not to renew WLBT's license, the government permit a station needs to broadcast. The commissioners gave the station a one-year renewal without a hearing.

Judges on a federal appeals court ruled in 1966, in an opinion by Warren Burger, that viewers had the right to take part in these cases. In 1969 the judges ordered the commission to take away the owners' license. The owners appealed and lost in 1971. A board of Black and white citizens then ran the station, and the board hired some of the first Black television managers in the South.

Civil rights news on the page and on the screen, 1955 to 1965

Roy Bryant, his half-brother J. W. Milam and at least one other person took 14-year-old Emmett Till by force from his relatives' home in Mississippi in August 1955. Bryant and Milam later described beating him and shooting him in the head.

Three days later Till's body was found in the Tallahatchie River, weighed down with a 75-pound metal fan from a cotton gin, a machine that cleans cotton. The men had fastened the fan to his neck with barbed wire. An all-white jury found Bryant and Milam not guilty of murder. Afterward, both men told the writer William Bradford Huie, for *Look* magazine, that they had kidnapped and murdered Till.

The photographs. *Jet*, a weekly news magazine for Black readers published in Chicago by John H. Johnson's company, printed photographs of Till's body on September 15, 1955. *Jet* sold about 425,000 copies a week at the time. The Till issue sold out, and its publishers printed more.

The University of Mississippi. A crowd of more than 2,000 white segregationists rioted at the University of Mississippi on the night of September 30, 1962, to stop James Meredith from enrolling as its first Black student. Of the 212 people that marshals and soldiers held afterward, only 24 were students at the university, Justice Department lawyers wrote.

People in the crowd threw a pipe, rocks, bricks and bottles at US marshals. Hundreds of people were hurt, and two men died. One of them was Paul Guihard, a 30-year-old reporter for the French news agency Agence France-Presse, who was covering the story.

Someone shot Guihard in the back at close range, and the bullet hit his heart. No one has ever been charged with killing him. Justice Department lawyers closed the case in 2011 without naming anyone.

Selma. Alabama state troopers and other officers led by Major John Cloud attacked civil rights marchers with clubs and tear gas on the Edmund Pettus Bridge in Selma on March 7, 1965. At least 50 marchers went to the hospital. Television cameras filmed the attack, and the film was flown to New York.

The ABC newscaster Frank Reynolds interrupted the network's showing of *Judgment at Nuremberg*, a film about Nazi war crimes, at about 9:30 that night to show the film of the attack. Nearly 50 million people had tuned in to the film.

Walter Cronkite

Who: The CBS anchor who read the evening news to much of the country for 19 years, and who told viewers in 1968 that the Vietnam War was stuck.

When and where: New York, 1962 to 1981.

Movie: *Walter Cronkite: Witness to History* (2006), a PBS *American Masters* documentary about him.

"If I've lost Cronkite, I've lost Middle America."

Walter Cronkite was the anchor of the *CBS Evening News*, the person who reads the news and introduces the reports. A poll in 1972 named him "the most trusted man in America." He grew up in Houston, Texas, where he wrote for his school newspapers.

War reporter. In World War II Cronkite reported for the United Press news service. He flew on bombing raids over Germany and covered the D-Day landings in 1944. Edward R. Murrow hired him for CBS in 1950.

The anchor desk. Cronkite became the anchor of the *CBS Evening News* in 1962. Soon after, the program grew from 15 minutes to 30 minutes, the first half-hour nightly news program on network television. In 1963 Cronkite told viewers that President John F. Kennedy had been killed. He covered the Moon landing in 1969 and nearly every American spaceflight with a crew from 1961 to 1981.

Vietnam. Cronkite went to Vietnam in 1968, after the Tet Offensive, a large attack by North Vietnamese and Viet Cong forces. On February 27, 1968, he told viewers that the war was "mired in stalemate," stuck in a fight that neither side could win. President Lyndon Johnson told his staff, "If I've lost Cronkite, I've lost Middle America," meaning ordinary

American families. Encyclopaedia Britannica records that some people held this to be the reason Johnson decided not to run for president again that year.

Cronkite ended each program with "And that's the way it is." He left the anchor desk in 1981. He died in New York on July 17, 2009.

Vietnam and the reporters, 1965 to 1971

As late as 1964 fewer than two dozen American reporters were in Indochina, the region that includes Vietnam, Laos and Cambodia. By 1968 about 600 journalists from many countries were in Vietnam. More than 60 journalists were killed during the war, and the record of their deaths does not say who killed them.

US military officers did not censor the reports from Vietnam. The military's daily news briefings in Saigon were nicknamed "the five o'clock follies," after follies, silly shows.

Some Americans later blamed the press for turning people against the war, and Encyclopaedia Britannica records that the argument goes on. Experts who studied the news coverage, Britannica states, found that most of the reporting supported the war until 1968. They found that support at home fell most as more American soldiers were killed.

My Lai. American soldiers of Charlie Company killed unarmed villagers at My Lai in South Vietnam on March 16, 1968. The counts run from at least 175, found by the Army's own inquiry, to 504, the number of names on a memorial in the village. The soldiers also raped women and girls. Rape means forcing someone into sex by violence or threat.

Seymour Hersh, a freelance reporter, one who worked for himself rather than for one newspaper, followed a tip in 1969 and found Lieutenant William Calley. Hersh wrote the first public account of the killings, and he won a Pulitzer Prize, a top award for reporting, in 1970. Calley was found guilty in March 1971 of murdering 22 civilians. He was the only soldier convicted, and no one was convicted of rape.

The Pentagon Papers, 1971

Secretary of Defense Robert McNamara ordered a secret history in 1967 of what American leaders had done in Vietnam since World War II. It filled 47 volumes. Daniel Ellsberg, who had worked on it, gave copies to *The New York Times* without permission. The *Times* began printing stories about it on June 13, 1971.

The papers recorded that President Johnson had planned open war in 1964, a year before the public knew. They also recorded that he ordered the bombing of North Vietnam in 1965, even though intelligence officials had judged that it would not work.

Prior restraint. After three days, Justice Department lawyers got a prior restraint, a court order that stops something from being printed before it comes out, against the *Times*. *The Washington Post* also had the papers. The justices of the Supreme Court voted 6 to 3 on June 30, 1971, that the newspapers could keep printing.

Prosecutors charged Ellsberg under the Espionage Act, and he faced up to 115 years in prison. Men working for President Richard Nixon, led in this case by the former CIA officer E. Howard Hunt, broke into the office of Ellsberg's psychiatrist, a doctor who treats mental illness. They were looking for information to damage Ellsberg. In 1973 the judge dismissed all the charges because of this break-in and other wrongdoing by government officials.

The justices of the Supreme Court ruled in 1972, in a case called *Branzburg v. Hayes*, that the Constitution gives reporters no right to refuse to tell a grand jury who their sources are, the people who give them information. That same year two reporters at *The Washington Post* began getting information from a source whose name stayed hidden until 2005.

Bob Woodward and Carl Bernstein

Who: Two young *Washington Post* reporters who showed that a burglary in 1972 was tied to President Nixon's White House.

When and where: Washington, D.C., 1972 to 1974.

Movie: *All the President's Men* (1976), about their reporting, with Robert Redford as Woodward.

Five men were caught inside the Democrats' office at Watergate.

Bob Woodward and Carl Bernstein, two young reporters at *The Washington Post*, tied a 1972 burglary to President Richard Nixon's White House. Police arrested five men inside the office of the Democratic National Committee, the national leaders of the Democratic Party, in the Watergate building in Washington early on June 17, 1972. One of them, James W. McCord Jr., was the security chief of Nixon's re-election committee.

Woodward had covered minor crimes for the *Post* for nine months. Bernstein covered politics in Virginia. With a third reporter, Alfred E. Lewis, they wrote about the arrests for the next morning's paper.

Deep Throat. Nixon's press secretary, Ron Ziegler, called it a "third-rate burglary attempt." Most early news stories said the White House had nothing to do with it. Woodward and Bernstein kept reporting, and a secret source they called "Deep Throat" gave them information.

They reported on October 10, 1972, that the bugging of the Democrats' office, which means hiding microphones there to listen in, came from "a massive campaign of political spying and sabotage," or secret wrecking, run by White House officials for Nixon's re-election.

CBS cut short. CBS News aired the first part of a two-part report on the story on October 27, 1972. Nixon's aide Charles Colson then threatened William Paley, the head of CBS, and the second part was cut short. The records do not say who at CBS made the cut. That November Nixon

won re-election, carrying every state except Massachusetts. In 1973 the *Post* won the Pulitzer Prize for public service for Woodward and Bernstein's reporting.

Hearings on television. The reporting was one step among several that led to Nixon's resignation. Television stations showed a Senate committee's Watergate hearings live for two weeks in May 1973, and more than 150 public television stations showed them again in the evening. A month after the hearings began, 97 of every 100 Americans had heard of Watergate. A White House aide, Alexander Butterfield, told the committee that Nixon kept a voice-activated tape recorder in rooms of the White House.

The tapes. The justices of the Supreme Court ordered Nixon to hand over the tapes on July 24, 1974. One tape showed that on June 23, 1972, he had ordered the FBI to hold back its investigation. Members of the House Judiciary Committee approved three articles of impeachment, formal charges that could lead to his removal from office. Nixon resigned on August 9, 1974.

W. Mark Felt, who had been an associate director of the FBI, one of its top officials, said in 2005 that he was Deep Throat.

Reporters killed in the United States, 1976 to 1990

A car bomb in Phoenix. Don Bolles, a 47-year-old reporter for the *Arizona Republic*, went to a Phoenix hotel on June 2, 1976, to meet a man who had promised him information. It was to be about land fraud, cheating people in land deals, and organized crime, crime run by gangs. The man never came. When Bolles started his car, a bomb under it exploded.

Doctors had to cut off both his legs and one arm, and he died on June 13. In 1977 John Harvey Adamson pleaded guilty to building and planting the bomb. A jury later convicted Max Dunlap of murder and of conspiracy to murder, which means planning a murder with others. Dunlap died in prison in 2009.

Reporters from many other papers came to Arizona and spent five months finishing Bolles's reporting.

Five journalists for refugee papers. Killers murdered five Vietnamese American journalists between 1981 and 1990. They worked at small papers for refugees from the Vietnam War. Reporters at ProPublica who looked into the killings in 2015 tied them to what the papers printed about Vietnam and its government.

Duong Trong Lam, 27, was shot outside his home in San Francisco in 1981. A gunman chased Nguyen Dam Phong from his house in Houston in 1982 and shot him seven times.

Pham Van Tap was killed by the smoke from a fire that someone set in his office in Garden Grove, California, while he slept. A message sent to the Vietnamese press after his death said he was killed for printing advertisements for companies that did business with Vietnam.

The last two worked for the same magazine in Virginia, *Van Nghe Tien Phong*. A gunman shot and killed Do Trong Nhan, 56, who laid out the magazine's pages, in his car as he got ready to drive to work. Ten months later, on September 22, 1990, killers shot and killed the writer Le Triet and his wife, Dang-Tran Thi Tuyet, in their car in the driveway of their home.

FBI agents suspected a group led by former South Vietnamese military officers, but they never found enough evidence to charge anyone. No one was ever arrested or charged.

Public broadcasting, the fairness rule, cable news and talk radio, 1967 to 1996

Lawmakers, federal officials and owners changed who paid for the news on radio and television, and what it had to include, between 1967 and 1996.

Members of Congress set up the Corporation for Public Broadcasting in the Public Broadcasting Act of 1967, to hand out federal money to public television and radio stations. People at the corporation started PBS in 1969 and NPR, National Public Radio, in 1970.

Ted Turner's company started CNN, the first television channel to show news 24 hours a day, on June 1, 1980. It reached viewers through cable, wires that carried many channels into homes.

The fairness doctrine. The members of the Federal Communications Commission required stations from 1949 on to follow a rule called the fairness doctrine. Station owners had to cover important public questions fairly and air more than one side, and people attacked on the air had to get a chance to answer. The justices of the Supreme Court upheld the rule in 1969.

Members of Congress passed a bill in June 1987 to make the rule a law. President Ronald Reagan vetoed the bill, refusing to sign it. He wrote that the rule "requires Federal officials to supervise the editorial practices of broadcasters." That year the commissioners, led by their chairman, Dennis Patrick, voted 4 to 0 to end the rule.

Talk radio. Rush Limbaugh began a national radio talk show in 1988 on which he gave his conservative political opinions, views that favor keeping old ways and limiting government. Within five years an estimated 20 million people listened each week. His show began the year after the fairness doctrine ended. Whether the end of the rule helped talk shows like his grow is argued and not settled.

Rupert Murdoch's company started the Fox News Channel on October 7, 1996. Roger Ailes, a television producer and former Republican political adviser, ran it.

The internet, 1969 to 1996

Researchers at the University of California, Los Angeles, sent the first message over ARPANET, a computer network paid for by the Defense Department, to the Stanford Research Institute in late 1969.

Tim Berners-Lee, a British scientist working in Switzerland, opened the World Wide Web, the system of linked pages that people open over the internet, to the public in 1991. A team at the University of Illinois released Mosaic in 1993, the first widely used program for viewing web pages with pictures.

President Bill Clinton signed the Telecommunications Act in February 1996. Under it, one company could own more television stations, and many media companies merged after it passed. Under one part of it, sending "indecent" material to children online was a crime. The justices of the Supreme Court struck down that part in 1997. They ruled that the internet has the same protection for free speech as printed words.

BY 2000

If you remember one thing: As television brought the news into nearly every home, judges settled fights over keeping news from the public.

- 1969: Federal judges order the FCC to take WLBT's license from the owners who cut civil rights news off the air.
- June 30, 1971: The justices of the Supreme Court vote 6 to 3 that newspapers may keep printing the Pentagon Papers.
- July 24, 1974: The justices order President Nixon to hand over his tapes.

Next: After 2000 the news moved to phones and feeds, and thousands of newspapers closed.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 14 MINUTES

Since 2000 the news has moved from paper to phones and feeds, and the men who own the biggest sites have changed what those feeds show. In a 2025 survey by the Pew Research Center, 86 of every 100 American adults said they got news at least sometimes from a phone, computer or tablet, and 64 of every 100 from television. Newspapers lost most of their advertising money. Researchers at Northwestern University counted close to 3,500 newspapers that closed between 2005 and 2025.

People angry at what reporters wrote killed journalists in their newsrooms and outside their homes. Police and federal agents arrested and held reporters at protests. In 2025 members of Congress took back the federal money for public radio and television.

The news on phones and feeds, 2004 to 2025

Mark Zuckerberg and three other Harvard students started Facebook in February 2004. Three former workers at the PayPal company started YouTube in 2005, and Google bought it in November 2006 for $1.65 billion. Twitter began in 2006.

The feed. Zuckerberg announced changes to Facebook's feed, the list of posts the site shows each user, in January 2018. Users would see fewer posts from news outlets and businesses and more posts from their friends and family.

Section 230. Under a law of 1996, known as Section 230, a website cannot be treated as the publisher of what its users post. That means the company that runs the site is not legally responsible, as a newspaper publisher would be, for what users write there.

Smartphones spread quickly. In 2011, according to the Pew Research Center, 35 of every 100 American adults owned one, and by 2025, 91 of every 100 did.

In a Pew survey in August 2025, about half of American adults said they got news at least sometimes from social media, most often on Facebook and YouTube. Only 7 of every 100 said they often read news in a printed newspaper

or magazine.

False news, measured, 2018

Three researchers at the Massachusetts Institute of Technology, Soroush Vosoughi, Deb Roy and Sinan Aral, published a study of news on Twitter in 2018. They followed about 126,000 chains of retweets, posts shared again on Twitter, from 2006 to 2017. Each chain began with one news story that people passed along. About 3 million people shared the stories more than 4.5 million times.

What they found. Six fact-checking groups had judged which stories were true and which were false. The researchers found that false stories were 70 percent more likely to be shared again than true ones. A true story took about six times as long as a false one to reach 1,500 people. False stories about politics spread fastest.

Some accounts on Twitter were run by computer programs, called bots. When the researchers left out the bots, the result stayed the same. So people, the researchers concluded, spread the false stories.

Who owns the feed, 2022 to 2026

Elon Musk bought Twitter for $44 billion in October 2022. He laid off about half its workers and cut back content moderation, the work of checking posts and removing those that break a site's rules. He began selling blue check marks for $8 a month.

Musk renamed the site X in 2023. In March 2025 he sold X to his artificial intelligence company, xAI, in a deal that valued X at $33 billion. In 2026 his rocket company, SpaceX, bought xAI.

On Facebook, Mark Zuckerberg made his own change. He announced in January 2025 that the company would end the fact-checking programs it had used for about ten years.

TikTok. TikTok belonged to ByteDance, a company in China. President Joe Biden signed a law in April 2024 that required ByteDance to sell TikTok within a year or see the app banned. The justices of the Supreme Court upheld the law in January 2025, and President Donald Trump then delayed the ban several times.

A new company took over TikTok in the United States in January 2026. The software company Oracle, the investment firm Silver Lake and a fund owned by the government of the United Arab Emirates each own 15 percent of it, and ByteDance kept 19.9 percent.

CBS and CNN. David Ellison bought Paramount, the company that owns CBS, in 2025, and he hired Bari Weiss to run CBS News. A *60 Minutes* report about a prison in El Salvador was pulled from the air in December 2025, three hours before it was to run. The correspondent, Sharyn Alfonsi, wrote that Weiss "spiked our story," which means stopped it, after CBS lawyers had cleared it.

Ellison's company also agreed to buy Warner Bros. Discovery, which owns CNN, for $111 billion. According to NPR, both deals depend on money from his father, Larry Ellison, a founder of Oracle. The top lawyers of 12 states, all of them Democrats, sued over the deal.

Paramount's owners settled the lawsuit in September 2026 by agreeing to set up a board meant to keep the owners out of news decisions at CBS and CNN. The purchase was not yet complete at the end of September 2026.

Newspapers close: the news deserts, 2005 to 2025

American newspapers took in less than a fifth as much money from advertising in 2022 as in 2005. Researchers at the Pew Research Center put the figures at about $49.4 billion in 2005 and an estimated $9.8 billion in 2022.

Where the money went. Advertisers spent more and more online, and most of that money went to big technology companies that do not report the news, such as Google and Facebook. Pew researchers wrote in 2014 that these companies could reach far more people than any news outlet, and aim their ads better than any one newspaper's website could. In 2014 five companies, including Google and Facebook, took in 61 of every 100 dollars spent on online ads in the United States.

Researchers at the Medill school of journalism at Northwestern University count newspapers every year. In their 2025 report they found that almost 2 of every 5 local newspapers in the country had closed since 2005, close to 3,500 papers in all. Papers were still closing in 2025, at more than two a week. Since 2005 the newspaper business had lost more than three of every four of its jobs.

News deserts. The Medill researchers call a county with no local newspaper, news website or station a news desert. The number of news deserts grew from just over 150 counties in 2005 to 212 in 2025, and most of them were in the countryside. Another 1,525 counties had only one local source left. In all, about 50 million people lived in a county with one local source or none.

Fewer owners. The number of companies and people who owned American newspapers fell by more than half, from 3,995 in 2005 to just under 1,900 in 2025.

The *Chicago Defender*, the paper that urged Black Southerners to move north in the 1910s, ended its print edition in 2019. Its owners now publish it only online.

Jeff German

Who: A Las Vegas newspaper reporter who was stabbed to death by an elected official he had written about.

When and where: Las Vegas, Nevada, 1980s to 2022.

The official he wrote about stabbed him outside his home.

Robert Telles, an elected official in Las Vegas, stabbed the reporter Jeff German to death in 2022 after German reported on Telles's office. German had reported in Las Vegas for four decades, and at the time of his death he worked for the *Las Vegas Review-Journal*. He wrote about organized crime and dishonest officials, and he hosted a *Review-Journal* podcast about the mob called *Mobbed Up*.

The stories. That year German wrote about the office of Robert Telles, who had been elected Clark County Public Administrator. When a person in Clark County dies and no family member can step in at once, workers in that office guard the dead person's property and money until they can hand it to the people who should get it.

German's stories described bullying in the office and the punishing of workers who complained. They also described an "inappropriate relationship" between Telles and a staff member. Telles denied it. In June 2022 he lost his election.

The evidence. Telles stabbed German to death outside German's home on September 2, 2022. Police found Telles's DNA, the chemical code inside every person's cells that can show who was at a place, on German's hands and fingernails. In Telles's home, police found a straw hat and sneakers, cut into pieces, like the ones the killer wore on a security camera video.

A jury found Telles guilty of murder on August 28, 2024. In October 2024 Judge Michelle Leavitt added more time because German was over 60 and Telles had used a deadly weapon. Telles was sentenced to 28 years to life in prison.

A newsroom attacked: Annapolis, 2018

Jarrod Ramos walked into the newsroom of the *Capital Gazette* in Annapolis, Maryland, on June 28, 2018, with a shotgun, smoke grenades and extra ammunition. He killed five people who worked there: Gerald Fischman, Rob Hiaasen, John McNamara, Rebecca Smith and Wendi Winters.

Ramos held a grudge because in 2011 the paper's reporters had written that he was convicted of harassing a woman he had gone to high school with. In 2021 a jury found that he was responsible for his crimes, and a judge sentenced him to five life terms in prison with no chance of release.

Darnella Frazier

Who: A 17-year-old who recorded a Minneapolis police officer killing George Floyd, and whose video became evidence at his trial.
When and where: Minneapolis, Minnesota, 2020 to 2021.

She was 17 and out walking with her nine-year-old cousin.

Darnella Frazier's phone video of a police officer killing George Floyd reached people around the world. She was walking with her cousin in Minneapolis on May 25, 2020, when she saw the police officer Derek Chauvin kneeling on the neck of George Floyd, a Black man, and she recorded it. Her video showed Chauvin kneeling on Floyd's neck for nine minutes and 29 seconds, and it recorded Floyd's murder.

The trial. According to NPR, the video played a major part in starting protests against police violence around the world. At Chauvin's trial in 2021, prosecutors played it again and again, and Frazier testified.

The jury found Chauvin guilty of three different legal grades of killing a person: second-degree murder, third-degree murder and second-degree manslaughter, which means killing a person without meaning to kill. The journalist Ann Marie Lipinski said, "There is no case without her."

The members of the Pulitzer Prize Board gave Frazier a special citation, an honor outside their usual prizes, on June 11, 2021. The citation identifies "the crucial role of citizens in journalists' quests for truth

> and justice." Frazier called recording the video a "traumatic life-changing experience."

A small-town paper raided: Marion, Kansas, 2023

Police Chief Gideon Cody of Marion, Kansas, led officers in a raid on the weekly *Marion County Record* and on the home of its publisher, Eric Meyer, on August 11, 2023. The officers took computers and reporters' phones. Cody claimed that Meyer and the reporter Phyllis Zorn had committed identity theft, pretending to be someone else by using that person's private information, or computer crimes. He said they had done it by checking a local business owner's driving record.

Joan Meyer. Meyer's mother, Joan Meyer, was 98 and owned part of the paper. A police camera recorded her telling officers, "Get out of my house!" She died of a heart attack the next afternoon.

Special prosecutors, lawyers brought in from outside to handle the case, later found that no one at the paper had committed a crime. They said Cody had reached a wrong conclusion through "a poor investigation." They said they could not charge anyone over Joan Meyer's death. Cody was charged in August 2024 with felony obstruction of justice, a serious crime of getting in the way of an investigation, for asking the business owner to delete text messages.

Reporters arrested, hit and deported, 2017 to 2026

Staff of the US Press Freedom Tracker, a project of the Freedom of the Press Foundation, have counted attacks on journalists in the United States since 2017. More than half of all the assaults they counted came in two years, 2020 and 2021: nearly 800 of the 1,487 they had counted by September 2026. They also counted 445 arrests or criminal charges.

Protests against deportation. The tracker counted at least 32 journalists arrested or held in 2025 and at least 170 assaulted. Most were covering protests against deportation, the sending of immigrants out of the country. Police in Los Angeles surrounded and held at least 10 journalists at one protest on June 9, 2025.

Minneapolis. In January 2026 the tracker counted at least nine assaults on journalists in the Minneapolis area. Most of those journalists were hit by pepper balls, small balls fired from a gun that burst into a stinging powder, or by pieces of stun grenades, both of them crowd-control weapons. The tracker's January report does not say who fired each one. Federal agents held the photographer John Abernathy on the ground on January 15, 2026.

Mario Guevara. Mario Guevara, a Spanish-language reporter who covered immigration near Atlanta, was arrested on June 14, 2025, while he livestreamed a protest, showing it live on the internet. The Committee to Protect Journalists' account of the case does not name the police who arrested him.

Federal officials held Guevara and argued that his filming of police was a danger to public safety. They deported him on October 3, 2025, sending him out of the country to El Salvador. The Committee to Protect Journalists said it was the first time it had recorded this kind of punishment for reporting.

WikiLeaks. Julian Assange published secret documents about the US wars in Afghanistan and Iraq on his WikiLeaks website starting in 2010. Federal prosecutors charged him in 2019 under the Espionage Act of 1917, the law once used against the editor Victor Berger and against Daniel Ellsberg. In June 2024 Assange pleaded guilty under that law.

The press pool. White House press secretary Karoline Leavitt told the Associated Press, the AP, on February 11, 2025, that its reporters could no longer come into the Oval Office with the press pool, the small group of reporters that covers the president up close. The ban was to last until the AP agreed to call the Gulf of Mexico the Gulf of America.

A federal judge, Trevor McFadden, ordered the AP's access restored in April. In October 2025 officials at the Pentagon made reporters agree to have their material checked in order to keep their passes.

Public broadcasting loses its federal money, 2025 to 2026

Republican majorities in both houses of Congress passed the Rescissions Act in July 2025, and President Trump signed it. With the act, members of Congress took back about $1.07 billion already promised to the Corporation for Public Broadcasting for 2026 and 2027, according to the research group USAFacts. That money had gone to NPR, PBS and local public radio and television stations.

Trump had signed an order in May 2025 calling for an end to government money for news outlets that did not meet standards of "fairness, accuracy, and nonpartisanship," which means not taking the side of any political party.

The members of the corporation's board voted in January 2026 to close it after 58 years. Public radio and television stations cut about 550 jobs between July 2025 and May 2026, according to a count reported by Nieman Lab.

Rural stations and stations run by Native nations had gotten a large share of their money from the federal government, and they were hit hardest. By mid-2026 at least one public television station had shut down, and more had announced plans to close. No full count had been published. Stations of every kind saw the number of people giving them money rise between 2024 and 2025.

Pressure on commercial stations. Officials also pressed commercial broadcasters, the stations paid for by advertising. The members of the Federal Communications Commission give out the licenses that those stations need to broadcast.

The talk-show host Jimmy Kimmel spoke on his show in 2025 about which political side the man accused of killing the activist Charlie Kirk was on. Brendan Carr, the chair of the FCC, then pressed ABC to take *Jimmy Kimmel Live!* off the air. In 2026 Carr opened an investigation of the talk show *The View* under the rule that stations must give political candidates equal time.

THE THREE QUESTIONS, ANSWERED

1. **Did the First Amendment stop the government from punishing people for what they printed?** No. Seven years after it took effect, federal judges jailed editors under the Sedition Act, and during World War I prosecutors won more than 1,000 convictions for words.
2. **Who was shut out of carrying and printing the news?** From 1802 to 1865 federal law let only free white persons carry the mail, and white mobs drove Black editors out of Memphis and Wilmington. Black and Cherokee Americans started papers of their own.
3. **Why have so many local newspapers closed since 2005?** Advertisers moved their money online, where most of it went to technology companies such as Google and Facebook, so newspapers' advertising money fell by more than four-fifths between 2005 and 2022. Readers moved to phones and feeds too, and by 2025, 212 counties had no local news source.

What changed: In 1673 a post rider took about two weeks to carry the mail from New York to Boston. By 1920 radio listeners heard election results on election night, and by 2025 most American adults got at least some news on a phone, computer or tablet.

FIVE DATES TO KEEP

September 25, 1690: *Publick Occurrences* appears in Boston and is stopped four days later.

December 15, 1791: The First Amendment takes effect.

March 3, 1865: Congress ends the whites-only rule for mail carriers.

November 2, 1920: KDKA broadcasts the election results.

June 30, 1971: The Supreme Court lets the Pentagon Papers be printed.

NOT KNOWN: No record survives of what news Native traders passed along with the copper and shells they carried before 1500.

Where to go: Part of the Boston Post Road, the first post rider's trail in 1673, is now US Route 1, and you can drive it.

Next: Chapter 32, Art. It asks who decided what counted as art, and who got to see it.

PART 9

Culture and Play

Chapter 32: Art

CHAPTER 32 OF 37 · ART · 10 ERAS · ABOUT 155 MINUTES

Who was allowed to make art in America, who got paid for it, and who ended up owning it has always depended on who held power.

An enslaved potter in South Carolina named Dave cut two lines into a big clay jar in 1857. They use lucre, an old word for money: "I made this Jar = for cash / Though its called Lucre trash." Dave was not paid for that jar. It was sold for the profit of the man who held him, Lewis J. Miles. On October 29, 2025, the Museum of Fine Arts in Boston gave Dave's descendants ownership of it and of a second jar he made that year.

This chapter follows the pictures, carvings, pots, photographs and books made in this land, from Ancestral Pueblo bowls to pictures made by computer programs. Keep an eye on the names. The carvers of the Ohio pipes left none, but the men who dug up, bought and sold such work often did. Then watch the money. Enslaved painters and potters earned it for other men, the mother in the 1936 photograph *Migrant Mother* never got a penny, and artists today are suing over computer programs built from their pictures. From the 1800s on, the fights are also about who gets into art schools, museums and shows.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. How did enslaved artists make art, and who got paid for it?
2. Who decided what counted as art, and who got to see it?
3. Why are museums giving back things they once took?

Five minutes? Read "Photographs of hunger, and photographs of the camps" in 1900 to 1950, and the Lange box after it.

Can skip: "Portrait painters in the colonies", "Writers", "Painters of the 1930s and 1940s", "A camera in every pocket". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 9 MINUTES

Every pot, carving and copper plate made in this land before 1500 was made by Native people, and no surviving record names the people who made them. Potters in the Southwest painted bowls and jars. Carvers in the Ohio valley shaped stone pipes into birds and animals. In the towns of the Mississippi valley and the Southeast, metalworkers hammered copper into sheets and pressed pictures into it, and on the Northwest Coast people carved bone, horn and stone.

Many of the objects that survive were buried with the dead in graves and mounds. In the 1800s and 1900s, diggers took them out of the ground, and many of those diggers sold what they found.

How did Ancestral Pueblo potters paint a pot?

Ancestral Pueblo potters painted black designs over the white of the clay, and the pottery is now called black-on-white. The Ancestral Pueblo people were the ancestors of today's Pueblo nations. A potter rolled clay into a long snake and coiled it around in a spiral to build up the pot. Then the potter scraped the coils together until the sides were smooth.

The black paint came from boiled plants, such as beeweed or tansy mustard, or from crushed rock with iron in it, such as hematite. Potters made their brushes from the fibers of the yucca plant. At Mesa Verde, people made this pottery from about the year 600 to about 1300.

Bowls with a hole. In the Mimbres valley of southwestern New Mexico, potters painted bowls from about 1000 to 1130 or 1150. Most of these bowls have been found in graves. Archaeologists, the scientists who dig up and study the things people left behind, think people set a bowl over the dead person's face or head. Before they did, someone punched a hole through the bottom of the bowl on purpose. Archaeologists call it a kill hole.

Pictures on the rock

Native artists cut or pecked some pictures into rock, called petroglyphs, and painted others, called pictographs. On the volcanic cliffs west of Albuquerque, New Mexico, there are about 24,000 to 25,000 petroglyphs. They show animals, people, crosses, the brand marks that ranchers burn into cattle, and other images.

Ancestral Pueblo people chipped most of them into the rock with chisels and other stones between 1300 and the 1680s. The oldest are much older and date from about 2000 BC. For some Native nations the petroglyphs still have religious meaning today, and a place in their ceremonies.

Pipes, copper and stone in the Ohio and Mississippi valleys

Carvers of the Hopewell culture made smoking pipes of stone in the shapes of animals. The Hopewell people lived in the Ohio valley from about 100 BC to about AD 400 or 500. Their pipes show birds of prey, the birds that hunt, and ducks and other water birds. They also show songbirds, frogs, toads, meat-eating animals and river otters.

Stone from far away. One Ohio mound, Tremper Mound in Scioto County, held a store of more than 500 objects, among them 136 pipes. Archaeologists thought most of the pipes were carved from Ohio pipestone. When scientists tested some of them, 16 out of every 100 turned out to be catlinite. That stone came from quarries, pits where people dug stone, in southwestern Minnesota.

Copper plates. Metalworkers at Etowah, near Cartersville, Georgia, hammered copper into thin sheets between about 1250 and 1325. They pushed the design up from the back of the sheet so it stood out on the front. The best-known plates show a dancing figure that archaeologists call the Birdman, or the falcon dancer.

The Birger figurine. Near Cahokia, in what is now Illinois, a carver made a figure of flint clay, a stone from near St. Louis, Missouri, between 1050 and 1200. It shows a kneeling woman with a pack on her back. She is using a hoe on the back of a snake that has the head of a cat. It was dug up in 1979.

At Spiro, in eastern Oklahoma, people built twelve mounds between 850 and 1450, along with grounds for ceremonies and a town. One of the mounds, Craig Mound, held objects of stone, copper, shell, basketry and cloth.

Carving on the Northwest Coast

On the Northwest Coast, people carved bone, stone and horn at least 5,000 years ago. The oldest Coast Salish basketry comes from an old fishing camp on the Hoko River, on the Olympic Peninsula. It is about 2,500 years old.

Most carving on the coast was done in cedar wood. Wood rots, so very little of it survives from before 1500. One piece that may be that old is a hat woven from twisted strands of cedar bark, found at the mouth of Wapato Creek. It dates from between 1450 and 1620. Carvers on the coast still work in this tradition today.

Who dug the objects up, and where did they go?

Two men named Ephraim Squier and Edwin Davis dug into the Mound City mounds, near Chillicothe, Ohio, in 1846 and took more than 200 stone pipes. Long before they came, the pipes had been broken and laid together under the floor of a building used for ceremonies.

Mound City to London. Davis sold his collection in 1864 for $10,000 to William Blackmore, who ran a museum in Salisbury, England. The collection was sold again in 1931, to the British Museum in London. Fewer than two dozen of the carved animal pipes have been on public display there.

Etowah. John Rogan dug at Etowah for the Smithsonian, the national museum in Washington, in 1885. He took the two best-known Birdman plates from a grave lined with stone. The Smithsonian's National Museum of Natural History still holds them.

Spiro. Craig Mound at Spiro was a burial mound. In 1933 six men who called themselves the Pocola Mining Company paid $50 each, $300 in all, to George Evans for the right to dig into it for two years. Evans was the grandfather of the children who owned the land. He needed the money to pay off a loan on the land and to treat his grandson's tuberculosis, a disease of the lungs.

The Pocola Mining Company hired coal miners, who dug tunnels into the mound. A business that sells copies of Spiro objects shows photographs of the dig from 1935 on its website, with notes drawn from a 1952 report on the mound. The notes name two of the diggers, John Hobbs and K. A. McKenzie, who pried up thirty copper axes and carried them out of one of the tunnels. Captions on the photographs name three more: the brothers Bill and Hayden Vandagriff, and W. Guinn Cooper.

What the diggers did. From 1933 to 1935 the diggers took things out of the graves to sell, and they destroyed about a third of the mound. They sold thousands of objects of stone, copper, shell, basketry and cloth to collectors around the world. One pile of objects, found in April 1935, went to a secondhand furniture dealer from Indianapolis, Indiana, for $100.

People who saw the dig described it. Beads, pearls and arrowheads lay spilled across the ground. The diggers trampled feather capes and woven cloth. They hauled out decorated shells by the wheelbarrow and dumped them near the entrance, where the shells were crushed under the diggers' feet. They burned ancient cedar poles as firewood. They piled human bones at the edge of their camp, where the bones crumbled to dust.

The blast. Forrest Clements, an archaeologist at the University of Oklahoma, tried to stop the dig. Oklahoma lawmakers passed a law in 1935 that required a license to dig at such sites, and Clements filed a complaint with the sheriff of LeFlore County. When he left for California, the diggers came back.

The historian David La Vere calls Craig Mound by its other name, the Great Temple Mound. In his words, "In a fit of spite, just to jab their finger in Clements' eye," the diggers "packed the central chamber of the Great Temple Mound with kegs of black powder and touched off a mighty explosion." The blast caved in part of the mound and left a large crack in it.

The Encyclopedia of Oklahoma History says the Pocola Mining Company was shut down for good in November 1935. It does not say who shut it down.

Then University of Oklahoma archaeologists led workers paid by a government jobs program, the Works Progress Administration, from 1936 to 1941. The workers took the remains of more than 600 people out of Craig Mound, some

whole skeletons and some only parts.

Mimbres. In the Mimbres valley, looters dug up graves to reach the painted bowls. In the 1960s they began using bulldozers and earth movers to get to the bowls faster, and they wiped out many village sites completely. Every Mimbres site has been looted. The records do not name the people who ran the bulldozers.

Nathan Jackson

Who: A Tlingit carver of totem poles and masks, still carving in the Northwest Coast tradition in his eighties.

When and where: Born August 29, 1938, in southeastern Alaska. He lives in Ketchikan, Alaska.

At 86, he carved an eight-foot pole about Raven and Fog Woman.

Carving on the Northwest Coast did not stop in 1500, and Nathan Jackson carves in that tradition today. He is Chilkoot Tlingit. Every Tlingit person belongs to one of two halves, Raven or Eagle, and each half is made up of clans, large groups of related families. Jackson's clan, the Sockeye Clan, is on the Raven side.

He carves totem poles, masks, canoes, carved doors and panels that show clan crests, the animal symbols that belong to a clan. He also works metal and dances. He learned his people's traditions from Jack David, his clan uncle and grandfather.

Totem poles in a hospital. Jackson served in the Army in Germany until 1959. Later he spent 54 days in a hospital with pneumonia, a serious sickness of the lungs, and while he was there he whittled small totem poles. "I told the nurses, 'Those totem poles there, they have a price on them,'" he said later.

NOT KNOWN: whether that hospital stay came soon after his Army service or in his mid-30s, because published accounts of his life disagree.

Learning the adze. He joined the Chilkat Dancers of Haines, Alaska, in the early 1960s. Then he studied for about three years at the Institute of American Indian Arts in Santa Fe, New Mexico. After that the carver Duane Pasco taught him to work with an adze, a carving tool with a curved blade set across the end of its handle. Through a program of the Alaska State Council on the Arts, he taught apprentices, younger carvers who learn by working beside a master.

Officials of the National Endowment for the Arts, a US government agency, gave him an honor called a National Heritage Fellowship in 1995. He has said that "the traditional way of life is something I identify with."

He began the Raven and Fog Woman pole in 2024 at the Edwin DeWill Carving Center in Saxman, Alaska. He finished it that autumn at the Arts Council of Princeton, in New Jersey, where it stands in the lobby. In the Tlingit story the pole shows, Raven marries Fog Woman, a woman who came out of the fog, for the salmon in the basket she weaves. When he mistreats her, she leaves him, and all the salmon follow her.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 4 MINUTES

The oldest European pictures of this land and its people were made by two artists who came with colonies that did not last. Jacques Le Moyne drew the French colony in Florida in 1564. John White painted the coast of what is now North Carolina in 1585. In Europe, Theodor de Bry cut copies of both men's pictures into metal plates so that he could print them in books, and he changed them.

How Le Moyne lost his Florida drawings

Jacques Le Moyne lost every drawing he made in Florida when Spanish soldiers took the French fort there in 1565, so the pictures that survive are ones he drew again from memory. French colonists had set up the colony, called Fort Caroline, in 1564, in a part of Florida that Spanish leaders claimed. They brought Le Moyne along as their official artist, to record it. He drew the fort, the settlers and the land, and the people who already lived there, the Timucua.

The attack. Pedro Menéndez de Avilés and 500 Spanish soldiers took the fort in an attack at dawn on September 20, 1565. They killed most of the French settlers they found. Menéndez spared about 50 women and children and shipped them to Havana. Le Moyne escaped.

Sold, and changed. Le Moyne died in France in 1588, and his widow sold his new drawings to de Bry, who printed them in 1591. De Bry changed the people and the landscapes to make his books sell better. He also made different versions of the pictures for different buyers.

One painting by Le Moyne, *Laudonnière and Athore, 1564*, shows the French commander René de Laudonnière with Athore, a Timucua leader. The year in the title is the year of the meeting the picture shows. Le Moyne made it after he got back to Europe. The New York Public Library holds it.

John White

Who: The English artist whose Roanoke watercolors are the oldest surviving pictures Europeans made on the spot in this land. Later he was governor of the 1587 colony there.

When and where: Roanoke Island and the coast of what is now North Carolina, 1585 and 1586, and again in 1587. Probably born in Cornwall, England. His years of birth and death are not known. He was working from 1577 to 1593.

More than seventy watercolors survive from his thirteen months at Roanoke.

John White made the first pictures of this land by an English artist.

The voyage. White sailed as the artist on Sir Richard Grenville's voyage to Roanoke Island in 1585. Walter Raleigh and other men who put money into the voyage paid for it. White worked beside the mathematician Thomas Harriot. The coast they recorded was the land of nations that spoke Algonquian languages, a family of related languages. Among them were the Roanoke, the Secotan and the Croatoan. In July 1585 White visited the town of Secotan and painted it.

What he painted. In about thirteen months he painted Algonquian towns, people, dances, clothing and fishing, and plants, birds and fish. He drew each outline in black lead, a kind of pencil. Then he filled it in with watercolor and added touches of gold and silver paint.

De Bry printed engravings, pictures cut into metal plates so that many copies could be printed, of White's pictures of people in 1590, in a book with Harriot's report on the colony. He changed some of them. In one of White's watercolors, a Secotan girl holds a small doll dressed in English clothes. De Bry's copy also puts a model of the globe and the sky in her hands.

The British Museum in London owns White's original watercolors, and its staff keep them stored away from light. In the middle of the 1800s, water badly damaged them during a fire at the Sotheby's auction house. Over

time, chemical changes have turned the silver paint black.

The governor. White returned to Roanoke in 1587 as the governor of a new colony. After the colonists landed, one of them, George Howe, was found dead. He had been shot with sixteen arrows and beaten. The Encyclopedia Virginia account of the colony does not name the men who killed him.

In August 1587 White led an attack on the town of Dasamonquepeuc to pay back Howe's killing. He believed its people were Roanoke, enemies of the English. They turned out to be Croatoan, who were friends of the English, and White's men killed a number of them. One account says the dead included a leader named Menatonon, and other accounts name the leader differently.

That same year the colonists talked White into sailing to England for more supplies. He could not return for three years. In 1588 Queen Elizabeth I took every English ship for her navy, to fight the Spanish Armada, a fleet of warships sent from Spain.

When White reached Roanoke again on August 18, 1590, the colonists were gone. The word "CROATOAN" was carved on a post. Chapter 31 tells what that word meant and how White tried to find the colonists.

NOT KNOWN: what became of the colonists.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 7 MINUTES

Art in the English colonies of the 1600s was made for families with money, for the graves of the dead and for the church. Painters made portraits for rich Boston families, carvers cut pictures into gravestones, and girls stitched needlework. A printer in Massachusetts produced the first full book printed in the English colonies in 1640, and a book of poems by a woman living in Massachusetts came out in London ten years later.

In New Mexico, a Spanish friar, a member of a Catholic religious order, had Acoma people build a church on top of the steep hill where their town stands, and they had to carry every load up to the top. Other friars, and Spanish soldiers, burned the masks that Pueblo people used in their ceremonies.

Portraits, gravestones and needlework in New England

English colonists built Boston on land of the Massachusett nation, on a peninsula the Massachusett called Mushauwomuk. Experts credit about ten portraits of people in Boston, all painted from 1670 to 1674, to one painter. No record gives the painter's name, so today the painter is called the Freake Painter, after the best-known portrait. An article in *The Magazine Antiques* calls the painter "probably Samuel Clement," but nobody has proved it.

A baby painted in later. That portrait shows Elizabeth Freake holding her baby daughter, Mary. The Freakes were one of the richest families in Boston. The painter first painted Elizabeth alone, in about 1671. Mary was born on May 6, 1674, and X-rays of the painting show that the baby was painted in afterward. The Worcester Art Museum, in Massachusetts, owns the painting.

Skulls with wings. Many settlers of New England were Puritans, English Protestants, Christians outside the Catholic Church, who wanted a plainer and stricter church. Puritans did not want religious symbols such as crosses and cherubs, carvings of baby angels, on their graves. Carvers cut other pictures

into Puritan gravestones: skulls with wings, crossed bones and hourglasses. Many stones carry the Latin words "Memento Mori," which mean "remember you will die."

Joseph Lamson of Charlestown, Massachusetts, who lived from 1658 to 1722, is one carver whose name is known. He carved winged skulls with eyebrows that hook at the ends, inside borders of fruit, vines and flowers. His sons Nathaniel and Caleb and his grandson Joseph carried on the work.

Girls learned needlework from their mothers. Many stitched samplers, strips of cloth that kept a record of stitches and patterns to copy later.

Loara Standish

Who: A daughter of Myles and Barbara Standish of Plymouth Colony, thought to be the maker of the oldest known sampler made in America.
When and where: Duxbury, in Plymouth Colony, in the 1640s or about 1653. She was born after 1627 and died before 1655.

"Loara Standish is my name," she stitched in silk on linen.

Loara Standish is thought to have stitched the oldest known sampler made in America, and the oldest known sampler with a verse. She made it in Duxbury, in Plymouth Colony. English settlers built Plymouth on the site of Patuxet, a Wampanoag town.

Loara was one of the seven children of Myles and Barbara Standish. According to the Pilgrim Hall Museum, she probably made the sampler in her teens. She stitched it in silk thread on linen cloth, with roses, carnations and oak leaves, and a letter S twisted around itself.

The verse. She stitched this into it: "Loara Standish is my name Lorde guide my hart that I may doe thy will also My hands with such Convenient skill as may Conduce to virtue void of Shame and I will give The glory to thy name." The verse asks God to guide her heart and to give her hands enough skill to do good. She promises to give God the glory.

> Lucius Alden gave the sampler to the Pilgrim Hall Museum in Plymouth in 1844. It has faded from being hung up for so many years. Experts at the museum date it to about 1653. Experts at the Textile Research Centre in Leiden, in the Netherlands, date it to the 1640s.

The first books printed and written here

The Reverend Jose Glover sailed for Massachusetts with a printing press in 1638 and died on the ship. His widow, Elizabeth Glover, set up the press in Cambridge, Massachusetts. She put it in the charge of Stephen Daye, a locksmith.

The Bay Psalm Book. Daye printed *The Whole Booke of Psalmes*, now called the *Bay Psalm Book*, in 1640. A group of thirty elders, men respected in the colony for their learning, had put the psalms, 150 poems in the Hebrew Bible, into English verse that could be sung. Among them were John Cotton, Richard Mather and John Eliot. Daye is thought to have printed about 1,700 copies, which sold for twenty pence, or pennies, each. Only eleven copies survive today.

Anne Bradstreet

Who: A poet in the Massachusetts Bay colony, whose book was the first book of poems by someone living in the English colonies.

When and where: Born in England in 1612. Came to Massachusetts in 1630. Died in 1672.

The title page called her only "a Gentlewoman of those parts."

Anne Bradstreet wrote the first book of poems by someone living in the English colonies. It was printed in London in 1650 as *The Tenth Muse Lately Sprung Up in America*. In old Greek stories, nine goddesses called the Muses watched over poetry and the other arts, so the title describes her as a tenth one. Her full name appears inside the book.

She was the daughter of Thomas and Dorothy Dudley. She married Simon Bradstreet in about 1628, sailed to Massachusetts with him and her parents in 1630, and had eight children.

How the poems got to London. Her brother-in-law, the Reverend John Woodbridge, took her poems to London. In the book's opening pages, Woodbridge wrote that she had not known he was doing it. Later, in a poem called "The Author to Her Book," Bradstreet called him a "friend more loving than true" for taking them.

What she knew. The biographer Charlotte Gordon studied the poems and the letters between Bradstreet and Woodbridge. She found that Bradstreet knew about the plan and helped with it from the start. One poem in the book is about events of 1649. Woodbridge had sailed in 1648, so someone had to send that poem after him.

Mission churches and burned masks in New Mexico

Acoma Pueblo is a town built on top of a mesa, a hill with steep sides and a flat top. Chapter 2 tells in full what happened there in 1598 and 1599. In the Acoma people's own account, the soldiers of the Spanish captain Juan de Zaldívar raped an Acoma woman, which means they forced her into sex. In December 1598 Acoma people killed Zaldívar and eleven to fourteen of his men.

The attack on Acoma. In January 1599 Spanish soldiers sent by Juan de Oñate, the leader of the Spanish colony in New Mexico, took the town and burned much of it. They killed hundreds of Acoma men, women and children, between about 300 and about 1,500 by the estimates.

Oñate sentenced the Acoma men older than twenty-five to have one foot cut off. He also sentenced them to twenty years of forced labor, work for others without pay and without the right to leave. Whether the feet were really cut off is disputed.

The church on the mesa. A friar named Juan Ramírez arrived at Acoma in 1629. He probably began soon after to have Acoma people build a church on the mesa, called San Esteban del Rey. The Acoma workers had to carry every load up the mesa. The loads included roof beams 40 feet long, cut in mountains 30 to 40 miles away. One account says the builders were enslaved. Another says only that they had to do the work.

NOT KNOWN: the exact years of the building, or whether the workers were paid, which the surviving records do not say.

San Esteban del Rey is the oldest European church in New Mexico that still stands.

Burned masks. Pueblo people made masks for their ceremonies. Katsina masks show spirit beings, and they were kept in kivas, rooms used for religious ceremonies. Alonso de Posada, the head of the Franciscan friars in New Mexico, banned Pueblo ceremonies from 1656 to 1665. He ordered friars to go into the kivas and burn the masks. They also burned prayer sticks and

carved figures, or took them away. In 1661 Spanish soldiers raided kivas and burned masks as well. No surviving record counts the masks that friars and soldiers burned.

Governor Juan Francisco Treviño had 47 Pueblo religious leaders arrested in 1675. Three of them were hanged, and one killed himself. The rest were whipped in public and jailed, until Pueblo men came to Santa Fe and forced their release. Treviño ordered the arrests. Dennis Zotigh's account of these events for the Smithsonian does not name the men who hanged and whipped the prisoners.

One of the freed men was Po'pay, of Ohkay Owingeh. He led the Pueblo Revolt on August 10, 1680, in which Pueblo people killed 21 friars and burned many of the mission churches across the province.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 7 MINUTES

The first trained painters in the colonies earned their living from families with money, and some of that money came from slavery and from Native land. A few painters trained in Europe settled here between 1700 and 1750. They painted merchants, planters and officials, because only families with money could pay for a portrait.

Two portraits from these years show slavery. One shows an enslaved boy in a metal collar beside the son of a rich Maryland family. The other shows the Royall family, whose money came from trading in sugar, rum and people. One painter made portraits of two Lenape leaders two years before William Penn's sons took a large part of Lenape land. A colonial governor took Cherokee baskets to London in 1725, and they are still kept there.

Portrait painters in the colonies

Henrietta Johnston drew portraits in Charleston, South Carolina, from 1708. John Smibert came from Scotland and painted in Boston from 1729 or 1730.

Justus Engelhardt Kühn came from Germany. He applied at Annapolis, Maryland, in 1708 to become an English subject, with the rights of a person born English. He painted the children of rich Maryland families until he died in 1717. He was the earliest artist known to work for pay in the Middle Atlantic colonies, the group of colonies that included Maryland.

Gustavus Hesselius was born in Sweden in about 1682 and studied art there. He painted portraits in Philadelphia. He also built church organs, among them one for the church of the Moravians, a Protestant group, in Bethlehem, Pennsylvania, in 1746. He died in Philadelphia on May 23, 1755. Robert Feke painted portraits in Newport, Rhode Island.

Henrietta Johnston

Who: A portrait artist who worked in pastels. She was the first woman recorded as working for pay as an artist in the English colonies.

When and where: Born in northern France in about 1674. Worked in Charleston, South Carolina, from 1708 until she died there on March 9, 1729.

Pastels came only from England, and pirates attacked her voyage home.

Henrietta Johnston was the first woman recorded as working for pay as an artist in the English colonies. She was also the first artist in the colonies to use pastels, crayons made from a paste of colored powder and resin, a sticky stuff that comes from trees.

Driven out of France. Her family were French Protestants. Two years before they fled to London in 1687, King Louis XIV of France had taken away Protestants' right to practice their religion. He sent soldiers to live in Protestant homes, and the king's officers let the soldiers loot the homes and ruin the families.

The soldiers tortured some people who would not become Catholic, which means they hurt them on purpose to make them give in. They stayed until the families became Catholic or left France.

Henrietta married in 1694 and moved to Ireland, where she learned to draw portraits in pastel. Her first husband died in 1704 and left her with two small children.

Charleston. Her second husband, Gideon Johnston, was a minister of the Church of England. In 1708 he moved the family to Charleston, where he served as the representative of the bishop of London. The Stono, Kiawah and Etiwan peoples had lived along the rivers at Charleston when English colonists settled there in 1670. The Johnstons were short of money, so Henrietta drew portraits of the town's richest families for pay.

Pastels could be bought only in England. She sailed to London for supplies in 1711, and on the voyage home pirates attacked her ship. She survived. After Gideon died in 1716, she earned the family's living alone. About three dozen of her portraits survive.

John Smibert

Who: A Scottish portrait painter in Boston, whose shop and studio showed younger painters copies of European art. He also drew the plans for Faneuil Hall.

When and where: Born in Edinburgh, Scotland, in 1688. Newport, Rhode Island, in 1729, then Boston until he died there in 1751.

Upstairs over his paint shop hung copies of Europe's famous paintings.

John Smibert was one of the first painters with formal art training to work in the thirteen colonies. In 1728 a church leader named George Berkeley asked him to come to America. Berkeley planned to start a college in Bermuda, where Smibert would teach art. The college was never started.

Smibert reached Newport, Rhode Island, with Berkeley's group in 1729 and painted Berkeley and his party in a picture now at Yale University. By 1729 or 1730 he had moved to Boston. There he painted merchants, such as Peter Faneuil, and Judge Samuel Sewall. He drew the plans for Faneuil Hall in Boston in 1742.

The shop and the studio. Portraits alone did not earn Smibert enough, so he kept a shop. In 1734 he began selling paint, other art supplies and prints. Upstairs, in his studio, he hung copies of famous European paintings that he had made in Europe. He also showed casts there, copies made by pouring material into molds.

The historian Richard Saunders calls it "America's first art gallery." Saunders writes that the collection gave Charles Willson Peale, Gilbert Stuart and John Trumbull much of their early training. A biography of Smibert on Encyclopedia.com names John Singleton Copley and Washington Allston as painters who learned from it. Stuart was born in 1755, four years after Smibert died, so he studied the copies after Smibert's death.

Two portraits that show slavery

The boy in the collar. Justus Engelhardt Kühn painted Henry Darnall III, the son of a rich Maryland family, in about 1710, when the boy was about eight. Henry wears fine clothes and holds a bow. Beside him stands a Black boy with a metal collar around his neck. The Black boy was enslaved.

His name was not recorded, and neither was the name of whoever put the collar on him. The Maryland Center for History and Culture owns the painting and calls him "Unnamed attendant." One art history website calls the picture the earliest known formal painting of an enslaved African in America.

The Royall family. Robert Feke painted Isaac Royall Jr. in 1741, when he was 22, with his wife Elizabeth, their baby daughter Elizabeth, his sister Penelope and his wife's sister-in-law Mary Palmer. Harvard Law School owns the painting.

Isaac's father, Isaac Royall Sr., had set up a sugar plantation on the island of Antigua. The father got rich by trading in sugar, in rum and in enslaved people. In 1737 the family moved to Medford, Massachusetts, and brought at least 27 enslaved Africans with them. When the father died in 1739, the son got his very large fortune, at the age of 20.

Two Lenape leaders painted, 1735

Gustavus Hesselius painted two Lenape leaders, Lapowinsa and Tishcohan, in 1735, for John Penn, a son of William Penn. English colonists led by William Penn had built Philadelphia on Lenape land. Lapowinsa is shown as a strong man of about 40. They are the only two Lenape chiefs whose portraits have survived. The Historical Society of Pennsylvania owns them.

The Walking Purchase. Two years later Lapowinsa and Tishcohan signed a land deal called the Walking Purchase with John Penn and his brother Thomas Penn. The Lenape leaders Nutimus and Menakihikon also signed it. James Logan, who worked for the Penns, showed the Lenape an unsigned copy of a deed from 1686, a paper selling land. He claimed it gave the Penns as much land as a man could walk in a day and a half.

The walk. The Penns' men cleared a path ahead of time. On September 19, 1737, three walkers set off at a fast pace, and in a day and a half one of them covered more than 60 miles. The Penns' surveyors, the men who measured and marked out the land, then bent the boundary line to take in even more. In all, the Penns took more than a thousand square miles of Lenape land, and they forced Nutimus and his people to leave their homes.

Cherokee baskets taken to London, 1725

Cherokee weavers made baskets from river cane, a tall plant with hollow stems that grows along rivers. They split the cane into thin strips and dyed some of the strips with walnut and pokeberry. Some baskets were double woven, two baskets woven one inside the other from the same strips, so both the inside and the outside show a finished pattern.

Francis Nicholson, the first governor of South Carolina chosen by the British king, left Charleston for London in 1725. He took a set of Cherokee double-woven baskets with him and passed them to Sir Hans Sloane, a collector in London. A note tied to them says, "They will keep anything in them from being wetted by rain." The British Museum in London holds them today.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 10 MINUTES

The men who led the Revolution had their portraits painted by Americans, several of them trained in London, and in the same cities enslaved Black artists painted and wrote poems, though only a few records name them. In Boston, Prince Demah painted portraits while he was enslaved, and later he served during the Revolution in the Massachusetts militia, a part-time army of local men.

Phillis Wheatley's *Poems*, the first book of poems by an African American, came out in London in 1773 while she was still enslaved in Boston. The painter Charles Willson Peale was paid for portraits with two enslaved people.

Painters who went to London

John Singleton Copley, a Boston painter born on July 3, 1738, sent a painting called *A Boy with a Flying Squirrel* to be shown in London in 1766. The London painters Joshua Reynolds and Benjamin West praised it. In 1769 Copley painted Isaac Royall Jr., the rich man from Medford, and his wife. Copley left America for England in 1774. He painted *Watson and the Shark* there in 1778, and he died in London on September 9, 1815.

The Pennsylvania painter Benjamin West settled in England in 1763 and became the king's official painter of history scenes. West was known for helping young American painters who came to London to learn.

Faces in wax. Patience Wright, born Patience Lovell in 1725, made portraits by shaping wax. Britannica gives her birthplace as Bordentown, New Jersey. The American Battlefield Trust says she was born at Oyster Bay, on Long Island in New York, and that her family moved to Bordentown when she was four. She took her wax figures around on tour to show them. She sailed to England in February 1772, and in London she showed wax figures of actors, politicians and nobles. She died in London on March 23, 1786.

Charles Willson Peale

Who: A painter of the leaders of the Revolution, who opened a museum in Philadelphia and held a young man in slavery to work in it.

When and where: Born in Chester, Maryland, in April 1741. Worked in Annapolis, then Philadelphia. Died in 1827.

A planter paid him for portraits with two enslaved people.

Charles Willson Peale painted the leaders of the Revolution, and George Washington sat for him seven times. Peale first trained to make saddles. Then he studied painting in England for three years. Back in Annapolis, Maryland, he joined the Sons of Liberty, groups of colonists who formed in 1765 to resist a British tax on printed paper, called the Stamp Act.

Mount Vernon. Peale came to Washington's home at Mount Vernon on May 18, 1772, and stayed two weeks. He painted small portraits of Martha Washington and her children. He also painted George Washington in oil, in the uniform of the Virginia militia.

The museum. Peale announced a show of 44 portraits of leaders of the Revolution in his home in Philadelphia in 1784. Visitors paid to get in, and Peale called it the Philadelphia Museum. One account dates the opening of his museum to 1786 instead.

Washington paid a yearly fee to support it and gave it two golden pheasants from China. In 1795 the museum was the site of the Columbianum, the first show in America put on by a society of artists. After Peale died, his family sold the museum's collection of things from nature in 1849 and its portraits at auction in 1854.

Paid in people. By 1776 a Maryland plantation owner had given Peale two enslaved people, Scarborough and Lucy, as payment for portraits. The account of this payment does not give the planter's name. Peale freed Scarborough and Lucy in 1786.

Their son, Moses Williams, was born in about 1777. Pennsylvania lawmakers passed a law in 1780 to end slavery slowly, over many years. Under that law, only children born after it was passed were to go free, and only when they turned 28. Moses had been born about three years before, so he was not one of them.

Peale kept him enslaved in his household until about 1802, when Moses was about 25 or 27. Peale trained him for work in the museum: cutting silhouettes, which are outline portraits cut from paper, preserving dead animals for display and building exhibits.

Prince Demah

Who: An enslaved portrait painter in Boston, who later lived free and served as a soldier in the Massachusetts militia.

When and where: Baptized in Boston in May 1745. Worked in Boston and London from 1769 to 1778. Died in Boston in March 1778.

He signed his portrait of a Boston merchant "Prince Demah Barnes."

Prince Demah painted portraits in Boston while he was enslaved. One of his signed paintings belongs today to the Metropolitan Museum of Art in New York. He and his mother, Daphney, were baptized at Trinity Church in Boston in May 1745, when Prince was a small child.

Bought for his talent. Henry Barnes was a merchant in Marlborough, Massachusetts, whose family already held Daphney in slavery. In 1769 Barnes bought her son, Prince, who was then in his late twenties. Barnes's wife, Christian, wrote to a friend that they planned on "improving his genius in painting," genius meaning talent. She also wrote that the Boston painter John Singleton Copley would not be willing to teach him.

London. Barnes took Prince to London in October 1770, and a painter named Pine gave him lessons there. He was probably Robert Edge Pine. Barnes was afraid that Prince would "attempt his freedom," which meant

try to escape. He wrote, "I do not let [Prince] converse with any of his own colour here." He meant that he kept Prince from talking with other Black people in London.

The advertisement. Back in Boston, an advertisement ran at least nine times in the *Boston News-Letter* in 1773. It offered the work of a "Negro Artist," using the word of that time for a Black person, who "takes Faces at the lowest Rates," which meant painted portraits cheaply. That February, Prince painted William Duguid, a Scottish cloth merchant living in Boston, and signed it "Prince Demah Barnes." He also painted, or copied from Copley, portraits of Henry and Christian Barnes.

Free. The Barnes family sided with the king. In late 1775 they left for England, and they left Daphney behind at their Marlborough home. The records do not say where Prince was when they sailed, or how he became free.

Prince joined a unit of cannon soldiers in the Massachusetts militia in April 1777. He signed up as Prince Demah, without the Barnes name. On March 11, 1778, he wrote his will as "Prince Demah, limner," a painter of portraits, and as a "free Negro." He left everything he had to his mother. He died one week later. The record does not give the cause.

Phillis Wheatley

Who: A poet, the first African American to publish a book of poems. She was enslaved in Boston when the book was printed.

When and where: Kidnapped in West Africa as a child and landed in Boston in 1761, at seven or eight years old. Her book was printed in London in 1773. She died in Boston in 1784, at about 31.

Eighteen men signed a statement at the front that she wrote it.

Phillis Wheatley wrote the first book of poems by an African American. It came out in London in September 1773, while she was enslaved in Boston. The title page describes her as "Negro Servant to Mr. John Wheatley, of Boston." Servant there stood for enslaved.

Named for a ship. She was kidnapped in West Africa as a child. In 1761, when she was seven or eight, she landed in Boston on a slave ship named the *Phillis*, and her first name came from the ship. John Wheatley's letter in her book says only that she "was brought from Africa to America," and it does not name the men who kidnapped her. In Boston, John Wheatley bought her. He wrote that she learned English in sixteen months, taught at home and not in any school.

When she was about seventeen, in 1770, a Boston printer named Ezekiel Russell printed her poem on the death of George Whitefield, a preacher who had toured the colonies.

The statement. The publisher of her book expected readers to doubt that an enslaved African girl could write poems. So he printed a statement at the front of the book, signed by 18 men of Boston. Among them were Governor Thomas Hutchinson, John Hancock, the Reverend John Moorhead and John Wheatley, listed as "her Master."

The men wrote that the poems were "written by PHILLIS, a young Negro Girl, who was but a few Years since, brought an uncultivated Barbarian from Africa, and has ever since been, and now is, under the Disadvantage of serving as a Slave" (uncultivated meant untaught, and barbarian was

> an insult for a person thought to be wild and without learning). They wrote that she "has been examined by some of the best Judges, and is thought qualified to write them."
>
> One poem in the book is called "To S. M. a young African Painter, on seeing his Works." The Wheatleys freed her by November 1773, soon after the book appeared. She married John Peters in 1778. She died poor in 1784, at about 31.

Two more Black painters, Scipio Moorhead and Joshua Johnson

Scipio Moorhead was an enslaved Black painter in Boston. The scholars Kwame Anthony Appiah and Henry Louis Gates Jr. write that Wheatley's poem to "S. M." may describe two of his paintings. He was held in slavery by the Reverend John Moorhead of Boston, one of the 18 men who signed the statement in Wheatley's book. Sarah Moorhead probably gave Scipio lessons.

Appiah and Gates also write that the engraved portrait of Wheatley at the front of her book was based on his painting of her. No signed painting by Scipio Moorhead survives.

Joshua Johnson. Joshua Johnson was born enslaved in Maryland in 1763. His father was a white man named George Johnson. His mother was a woman held in slavery by William Wheeler Sr., and her name was not written down. George Johnson bought his 19-year-old son for £25 in 1782. He sent him to learn the trade of a blacksmith and signed a manumission, a legal paper that freed him.

Joshua Johnson was listed in Baltimore as a portrait painter by 1796. In a 1798 newspaper advertisement he called himself a "self-taught genius." He wrote that he had faced "many insuperable obstacles," which means problems he could not get past. Amelia Peck of the Metropolitan Museum of Art and Paula M. Bagger write that before Prince Demah's work was found, Johnson was thought to be the earliest African American painter of portraits in oil paint.

Mercy Otis Warren's plays

Mercy Otis Warren wrote plays that made fun of the British governor of Massachusetts and attacked his policies. She was born in Barnstable, Massachusetts, on September 14, 1728. Her first play, *The Adulateur*, came out in a newspaper, the *Massachusetts Spy*, in 1772. At least four more of her plays followed by 1779.

All of them came out without her name. The National Women's History Museum says she likely did this to avoid punishment, and so that readers would take the work of a woman seriously. She died in 1814.

Gilbert Stuart

Who: A portrait painter whose unfinished picture of George Washington is the model for the face on the one-dollar bill.

When and where: Born in Kingstown, Rhode Island, on December 3, 1755. Worked in London and Dublin, then in the United States from 1793. Died in 1828.

He never delivered Washington's portrait, and he sold copies for $100.

Gilbert Stuart sailed to London in 1775. There Benjamin West hired him and gave him a studio and a place to live. In 1787 Stuart left London for Dublin to get away from the people he owed money. He arrived in New York in May 1793.

The unfinished head. Martha Washington ordered portraits of her husband and herself from Stuart in 1796. He painted only Washington's head and neck on a brown background, left the rest of the canvas unfinished and kept it. He never gave it to her, although she asked for it again and again after her husband died in 1799.

Stuart used the unfinished head as a model and painted more than a hundred copies of it, 130 by one count. He sold them for $100 each. An engraving of the head, flipped left to right, is on the one-dollar bill.

> The people in charge of the Boston Athenaeum, a library in Boston, bought the original for $1,500 in 1831, and the painting has been called the Athenaeum portrait ever since. Since 1980 the Museum of Fine Arts in Boston and the National Portrait Gallery in Washington have owned it together.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 22 MINUTES

City buyers paid for paintings of the Hudson valley and the Catskills in the same years that federal officials, the officials of the national government, forced Native nations off their land. From about 1825 a group of painters known as the Hudson River School made landscapes, pictures of the land and sky, of the Hudson River valley and the Catskill Mountains. The painter George Catlin travelled west and painted the people of about fifty nations.

Enslaved artists worked too. In South Carolina an enslaved potter named Dave began cutting his own verses into his jars in 1834, the year the state's lawmakers made it a crime for enslaved people to learn to read and write, and later he signed them "Dave." News of photography reached the United States in 1839. By the early 1850s, a small photograph in New York cost as little as 25 cents.

Black artists in Philadelphia and Baltimore

Moses Williams, the son of the two people a planter gave Charles Willson Peale as payment for portraits, was held by Peale until about 1802. Then he cut silhouettes at Peale's museum in Philadelphia, portraits that show only the outline of a face from the side. Williams used a machine called a physiognotrace, which traced the outline of a sitter's face onto paper through a set of connected rods.

Peale's own children learned painting from their father. Karl Cole's account of Williams's life for Davis Art says Williams was not given the chance to paint. The Philadelphia Museum of Art holds silhouettes he cut of the Peale family between 1803 and 1805.

Joshua Johnson, the Maryland painter whose white father bought him and freed him in 1782, was listed as a portrait painter in the Baltimore city directories, books that listed the town's people and their trades, from 1796 to 1824.

The Academy. Peale, the sculptor William Rush and other artists and business leaders founded the Pennsylvania Academy of the Fine Arts in Philadelphia in 1805. The academy's leaders very seldom let Black students in.

Robert Douglass Jr., a Black painter of Philadelphia who lived from 1809 to 1887, was one of the few. He trained at the academy and studied under the painter Thomas Sully. In 1834 he painted the portraits of William Lloyd Garrison and James Forten, two men who worked to end slavery. An article by the Library Company of Philadelphia describes him as Philadelphia's first African American photographer.

Women at the Academy. The academy's leaders let women in one step at a time. In 1844 they gave women artists the room of statues to draw in, on three mornings a week. In 1860 they let women take classes on the body's bones and muscles and draw from copies of ancient statues. They opened life classes, where students draw from a model without clothes, to women in 1868, with women as the models. Men became the models for these classes in 1874.

Painters on the road

Many portrait painters of these years had taught themselves. They travelled from town to town and charged somewhat less than painters with training. A story told later says these painters painted bodies ahead of time and added the customer's face when they arrived. The unfinished portraits that survive show the opposite. They have the face done and the body not yet painted, so the painters began with the head.

The "Border Limner." Ammi Phillips travelled and painted portraits in Connecticut, Massachusetts and New York from the middle of the 1810s until the early 1860s. He was born in Colebrook, Connecticut, on April 24, 1788. For years nobody knew who had painted many of his pictures, and collectors called the unknown painter the "Border Limner," limner being an old word for a painter of portraits. The collectors Barbara and Larry Holdridge matched those paintings to Phillips.

In the mid-1830s, in Dutchess County, New York, Phillips painted *Girl in Red Dress with Cat and Dog*. It was bought for the American Folk Art Museum in 1985 for one million dollars. Phillips died on July 11, 1865.

The Peaceable Kingdom. Edward Hicks, born in Pennsylvania on April 4, 1780, became an apprentice, a young worker learning a trade by working for its masters, to coach makers at 13. From 1812 he was a minister of the Quakers, a Christian group.

He painted 62 versions of *The Peaceable Kingdom*, based on a passage in the book of Isaiah in the Bible. Many versions show William Penn meeting Native people, who stand for the Lenape, on whose land Penn founded his colony. In his own lifetime, Hicks was better known as a minister than as a painter. He died on August 23, 1849.

Joseph Whiting Stock

Who: A travelling portrait painter who could not walk. He kept a journal of the paintings he made and what he was paid for them.

When and where: Born in Springfield, Massachusetts, on January 30, 1815. Painted in Massachusetts, Rhode Island and New York from 1832. Died in 1855, at the age of forty.

An oxcart fell on him at eleven, and he painted 900 pictures.

Joseph Whiting Stock painted more than 900 pictures, although he could not walk. When he was eleven, an oxcart turned over and fell on him. He was paralyzed from the waist down, which means he could not move or feel his legs. He could not leave his bed until he was nineteen.

A doctor's idea. A doctor suggested that he take up art. He began lessons at seventeen, with a painter named Franklin White, and tried a portrait of his sister Eliza. "I attempted my sister Eliza's portrait and made so good a likeness as to induce my friends to encourage me by their patronage," he wrote in his journal (patronage meant paying him for pictures).

A wheelchair. In 1834 a doctor named James Swan hired Stock to make drawings of the human body. Swan also built him a wheelchair. With it, Stock could paint large pictures and be lifted onto trains to travel for work.

His first painting trip was a month in Wilbraham, Massachusetts, in 1836. He later spent two years in Warren, Rhode Island, and New Bedford, Massachusetts, and several years in Orange County, New York. He lived with local families while he worked, and sometimes he paid for his room and meals with paintings.

His journal lists more than 900 paintings and what he was paid for them. About a hundred of those paintings are known today. He died of tuberculosis, a disease of the lungs, in 1855, at forty. The Springfield Museums hold his journal.

Writers

Some writers of these years turned to the American land and to nature, as the painters did. Washington Irving set his 1819 story "Rip Van Winkle" in the Catskill Mountains of New York, the same mountains the Hudson River School painted a few years later. Ralph Waldo Emerson's long essay *Nature* appeared in 1836.

James Fenimore Cooper's novel *The Last of the Mohicans* came out in Philadelphia on February 4, 1826. The Mohican people named in its title were living in New York and Wisconsin that year.

The Hudson River School, and whose land it painted

The Hudson River School was a group of American landscape painters who worked from about 1825 to 1870. They painted American land in careful, true-to-life detail, often with quiet farms next to the last of the wild forest. Many of them believed that God could be seen in the American landscape. Thomas Cole, Thomas Doughty and Asher B. Durand were the first leaders, and many of the group painted the Catskill Mountains, west of the Hudson River.

The Hudson valley was the homeland of the Mohican people. Cole made his home in the village of Catskill, New York, in 1826. That land is the homeland of the Muh-he-conneok, the People of the Waters That Are Never Still, who today are called the Stockbridge-Munsee Band of Mohican Indians. A marker at Cole's house states that they were forced from there.

Stockbridge. Through the 1600s and 1700s, before Cole was born, settlers pushed the Mohican out of the Hudson valley. Most moved to Stockbridge, Massachusetts, a mission town, which means a town built around a church where ministers taught Christianity. From 1764 white settlers poured into Stockbridge and took thousands of acres of Mohican land. They squatted on it, which means they settled on it without any right, and they bought it in ways the law did not allow. They also took land to pay off Mohican debts.

The Mohican had lost all their land in the town by 1783. In 1785 a group of them founded New Stockbridge in upstate New York, on land of the Oneida nation.

To Wisconsin. The Mohican were made to move again in the same years Cole began to paint the Catskills. Agents from New York and commissioners from the War Department arranged treaties, written agreements between governments. Under them, the Stockbridge, as the Mohican were by then called, and the Munsee had to leave New York for Wisconsin.

The moves began after an 1822 treaty, three years before Cole put his landscapes in a New York shop window. By 1831, five years after Cole settled in Catskill, 225 Stockbridge people and 100 Munsee people had gone. From 1832 to 1834, federal officials made them move once more, to the east shore of Lake Winnebago. Their reservation, land set aside for them by treaty, is in northeastern Wisconsin today.

Removal. While Cole was selling paintings of the Catskills, federal officials were moving Native nations west. President Andrew Jackson signed the Indian Removal Act on May 28, 1830. Under it, the president could make treaties in which Native nations gave up their lands east of the Mississippi River for lands in the west.

Federal officials and soldiers forced more than 16,000 Cherokee people from their homeland to Indian Territory, in what is now Oklahoma, in 1838 and 1839. At least 4,000 of them died of cold, hunger and disease along the way, by the usual count, and other counts are higher.

Thomas Cole

Who: A painter of landscapes and one of the first leaders of the Hudson River School.

When and where: Born February 1, 1801, in Bolton-le-Moors, Lancashire, England. Came to America in 1818. Lived in Catskill, New York, from 1826. Died there on February 11, 1848.

The cleared strips on the far hill seem to spell "Noah" in Hebrew.

Thomas Cole was one of the first leaders of the Hudson River School. He came to America from England with his family in 1818, and they lived first in Philadelphia and then in Steubenville, Ohio. A travelling portrait painter named Stein gave him lessons. Then he studied for two years at the Pennsylvania Academy of the Fine Arts.

A shop window. Cole put some landscapes in the window of a shop in New York City in 1825. The painters John Trumbull and Asher B. Durand saw them and bought them. The next year Cole moved to Catskill. He made pencil sketches outdoors, and in winter he painted in his studio. He also spent years painting in Europe, mostly in Italy, from 1829 to 1832 and again from 1841 to 1842.

The Oxbow. In 1836 he painted *The Oxbow*, a view from Mount Holyoke, near Northampton, Massachusetts. It shows the valley of the Connecticut River, not the Hudson, and Cole joined two views from the mountain into one picture. On the far hill, the bare strips where trees were cut seem to spell the Hebrew letters for "Noah." The art historian Matthew Baigell was the first to notice them.

Cole made the painting for a show in New York in April 1836. His patron, a person who pays an artist to make work, was Luman Reed, and Reed had suggested it. In March 1836 Cole wrote to Reed, "Fancy pictures seldom sell & they generally take more time than views so I have determined to paint one of the latter." By "fancy pictures" he meant pictures from his imagination, and by "views" he meant real places.

That same year he finished *The Course of Empire*, a set of five paintings. The Metropolitan Museum of Art in New York has owned *The Oxbow* since 1908.

Cole died in Catskill on February 11, 1848. Durand painted a picture called *Kindred Spirits* in his memory. Cole's house and studio in Catskill are now the Thomas Cole National Historic Site.

BY 1840: Painters were selling views of the Catskills in New York City, and federal officials and soldiers had forced the Mohican, the Munsee and the Cherokee out of their homelands.

George Catlin and the people he painted

George Catlin was a lawyer who became a painter. He lived from 1796 to 1872. In 1830 he went to St. Louis to meet William Clark, the federal official in charge of Indian affairs there. From St. Louis, Catlin made five trips west between 1830 and 1836, and in 1832 he travelled more than 2,000 miles up the Missouri River.

He wrote, "If my life be spared, nothing shall stop me from visiting every nation of Indians on the Continent of North America." By one count he visited 48 nations, and by another, fifty.

Four Bears. At a Mandan village in what is now North Dakota, Catlin painted Four Bears, a Mandan leader, in 1832. His Mandan name was Máh-to-tóh-pa. Catlin called him "the first and most popular man in the nation." Four Bears was a painter too, and he painted his own battles on buffalo robes. Catlin got one of those robes in 1832, and it is now at the Smithsonian.

A German prince, Maximilian of Wied, travelled up the Missouri with the painter Karl Bodmer in 1833 and 1834. He took another Four Bears robe to Germany, where it is in the Linden Museum in Stuttgart.

Catlin sometimes got objects from the people he painted, as proof that his pictures were accurate. One was a Sioux cradle. In 1836 he went to the place in southwestern Minnesota where people dug red stone for pipes. Sioux elders

protested strongly, and he went anyway.

Smallpox. Five years after Catlin painted the Mandan, smallpox killed almost all of them, Four Bears among them. Smallpox was a disease caused by a virus. It spread when people were close together, face to face. It caused a fever and a rash that turned into scabs, and about 3 of every 10 people who caught it died.

President Jackson signed the Indian Vaccination Act on May 5, 1832, a law to give Native people vaccinations, shots that protect a person from smallpox. Secretary of War Lewis Cass ran the program through federal Indian agents. The Mandan, the Hidatsa and the Arikara of the upper Missouri were kept out of it. The records do not name the officials who left them out.

The American Fur Company's steamboat *St. Peters* reached Fort Clark, next to the Mandan villages, on June 18, 1837. The fort's trader, Francis Chardon, learned from the captain, Bernard Pratte Jr., that people on board had smallpox. The crew unloaded goods and loaded furs in less than a day, and the boat went on up the river. It had brought smallpox to the Mandan villages. About 2,000 Mandan lived there that spring. By October, 138 were alive.

Four Bears caught smallpox and died on July 30, 1837. Chardon wrote down his last speech: "I have loved the Whites ... and how have they repaid it! With ingratitude!" (ingratitude means not being thankful).

Osceola. The Seminole leader Osceola sat for Catlin in January 1838 as a dying prisoner. General Thomas Jesup had ordered soldiers to seize Osceola near St. Augustine, Florida, on October 21, 1837, while he was under a white flag of truce, a sign that the two sides have stopped fighting to talk. Osceola was held at Fort Marion in St. Augustine and then at Fort Moultrie in South Carolina.

There he was very sick with malaria, a disease spread by mosquitoes that brings fever and chills, and with other illnesses. Three painters, Catlin, W. M. Laning and Robert John Curtis, talked him into letting them paint him anyway. Osceola died a prisoner on January 30, 1838. The army doctor, Frederick Weedon, cut off his head and then buried the body. Weedon kept the head and showed it in his drugstore.

The Indian Gallery. Catlin opened his paintings to the public at Clinton Hall in New York on September 23, 1837, at 50 cents a visit. He called the show his Indian Gallery. He tried to sell it to the United States government, and members of Congress did not buy it. In November 1839 he sailed for England with the gallery, a tepee of buffalo hide and two live bears. He showed the gallery in London, Brussels and Paris.

Groups of Native people who were touring Europe with promoters joined him there, 21 Ojibwe and 14 Iowa. Catlin talked them into acting out hunts, dances and even scalpings for the crowds. Scalping means cutting the skin and hair from the top of an enemy's head. In Paris in 1845, the Ojibwe group caught smallpox, and two of them died. The account that records their deaths does not name them.

In debt. Catlin ran out of money in 1852 and was put in a London prison for debt. Members of Congress still would not buy the gallery, even after he lowered his price from $65,000 to $25,000. Joseph Harrison, a Pennsylvania railroad owner, paid Catlin's debts and got the gallery for $20,000. He stored it in his boiler factory in Philadelphia. In 1879 Harrison's widow gave the paintings to the Smithsonian.

Audubon's birds, and the people he sold

John James Audubon's *The Birds of America* was printed in England from 1827 to 1838. It has 435 pictures of birds, each bird shown at its real size.

The people the Audubons sold. The historian Gregory Nobles records that the Audubons held nine enslaved people in their household in Henderson, Kentucky, in the 1810s. By the end of that decade, short of money, they sold them. In early 1819 Audubon took two enslaved men down the Mississippi River to New Orleans on a small boat, and there he offered the boat and the two men for sale.

The family bought more enslaved people in the 1820s and sold them in 1830, when Audubon moved to England to oversee the printing of the birds.

Audubon wrote to his wife in 1834 about the freeing of the enslaved people in Britain's colonies in the West Indies, the islands of the Caribbean. He wrote that the British government had "acted imprudently and too precipitously," which means without enough care and too fast. The surviving record counts the people Audubon held and sold. It does not give their names.

Dave (David Drake)

Who: An enslaved potter and poet who cut his name and his own verses into large jars of hard-fired clay.

When and where: Born about 1800 in South Carolina. Worked in the potteries of the Edgefield District from about 1818 to 1864. Listed in the 1870 census as "David Drake, Turner." Believed to have died in the 1870s.

He cut verses into clay when learning to read was a crime.

Dave was an enslaved potter who wrote his own verses on the jars he made. He is the only Black potter in Edgefield before the Civil War known to have signed his own work. He was born into slavery around 1800. In the Edgefield District of South Carolina, white factory owners made their potteries grow by using the unpaid work of enslaved men, women and children. At least 76 enslaved people worked at the district's 12 potteries.

Mortgaged. The first record of Dave is dated June 13, 1818. It describes "a boy about 17 years old country born," which meant born in America and not brought from Africa. His enslaver, Harvey Drake, mortgaged him to a man named Eldrid Simkins. That meant Drake used Dave to guarantee a loan: if Drake did not pay the money back, Simkins could take Dave.

Passed from man to man. At least five men held Dave in slavery during his life. Harvey Drake was the first, until he died in 1832. His brother Reuben Drake held Dave next, until 1835, and then the Reverend John Landrum. When Landrum died in 1846, all 18 of the people he enslaved were put up for sale. The records do not name who sold them. Franklin Landrum held Dave for a time. In 1849 Lewis Miles, who owned the Stony Bluff pottery, bought him.

Words on a jar. South Carolina's lawmakers made it a crime for enslaved people to learn to read and write in 1834. That same year, Dave cut words into a jar: "put every bit all between / surely this jar will hold

14." On the jar's other side he pressed fourteen dots. Arthur F. Goldberg and James Witkowski, two scholars who studied his pots, think such dots showed how many gallons a jar held, so the 14 means 14 gallons.

He wrote on another jar on July 31, 1840: "Dave belongs to Mr. Miles / wher the oven bakes and the pot biles." So by his own words, Lewis Miles held him in 1840, nine years before the 1849 sale. Accounts of his life do not agree on when Miles first held him or how.

NOT KNOWN: how he learned to read, though he may have learned while he worked at a newspaper, the *Edgefield Hive*, printed by Harvey Drake's business partner Abner Landrum.

Dave shaped the bottom of each jar on a potter's wheel. Then he built up the top by hand with thick coils of clay. Two of his jars at the Charleston Museum each hold more than 40 gallons.

What was taken from him. His family was sold away from him. The records do not say who sold them or where they were taken. One of his legs was amputated, which means it was cut off.

NOT KNOWN: how he lost the leg. One account says an enslaver beat him for writing, and another says he was hurt in a train accident. Neither has been proved.

He wrote three verses on his pots in 1857, eight in 1858 and seven in 1859. On August 16, 1857, he wrote: "I wonder where is all my relation / Friendship to all, and every nation."

His last known poem, from 1862, during the Civil War, reads: "I made this Jar all of cross, If you dont repent, you will be, lost." To repent means to be sorry for doing wrong and to change. Goldberg and Witkowski write that the poem carries political and religious meaning, because he wrote it in a time of slavery and civil war.

Free, and counted. In a survey of 2006, Goldberg and Witkowski counted 169 pots made by Dave or credited to him. More than a hundred, dated from 1849 to 1864, are signed "Dave." His verses and marks appear on 50 of them. Sometimes he added the names of other enslaved potters beside his own: Mark, Abram and Baddler. His last dated pot is from 1864.

Dave was free by the end of the Civil War in 1865. The Smithsonian American Art Museum credits his freedom to the Emancipation Proclamation, President Abraham Lincoln's order freeing enslaved people in the states at war with the United States. He took the last name Drake, probably from Harvey Drake, the first man who had held him.

The census of 1870, the government's count of everyone in the country, lists him as "David Drake," and his work as "turner," a person who shapes pots on a wheel. His name is not in the census of 1880. He is believed to have died in the 1870s.

Photography arrives, 1839

The French artist Louis Daguerre worked out a way of making pictures with light, and news of his process reached the United States in late August and September 1839. In October or November 1839, Robert Cornelius of Philadelphia took a picture of himself. It is the oldest American portrait photograph that survives.

These first photographs, called daguerreotypes, were each made directly on a copper plate coated with silver. Each was a single picture, and it could not be copied.

Studios on Broadway. A history of New York's photographers, published by the Bard Graduate Center, says the first American studio that sold portrait photographs opened in New York in 1840. By 1850 New York had 71 daguerreotype studios, and by 1853 it had more of them than all of England. Mathew Brady opened his first studio at 205 Broadway in 1844.

Cheaper studios on Broadway and on the Bowery made portraits for working people. In the early 1850s, a very small daguerreotype, about 1 5/8 inches by 1 3/8 inches, cost 25 cents. A cheap portrait from a "picture factory," a shop that turned out many portraits fast, cost 50 cents. A medium-sized portrait at Brady's studio cost $2.

Frederick Douglass

Who: A writer and speaker who escaped slavery. He wrote the story of his own life and sat for 160 known photographs.

When and where: Born in Talbot County, Maryland, in February 1818. Escaped slavery on September 3, 1838. Lived in Massachusetts, then Rochester, New York, then Washington. Died in 1895.

Movie: *Becoming Frederick Douglass* (2022), a documentary by Stanley Nelson, shown on PBS. It is about his life.

He sat for 160 photographs, more than Lincoln's 126.

By the count of the historians John Stauffer, Zoe Trodd and Celeste-Marie Bernier, Frederick Douglass sat for more photographs than any other American of the 1800s: 160 of them, against 126 of Abraham Lincoln. He was born into slavery in Maryland. He escaped on September 3, 1838, by train through Baltimore, dressed in a sailor's clothes. Anna Murray, a free Black woman, helped him, and he married her.

The book. His book came out from the Anti-Slavery Office in Boston on May 1, 1845. It was called *Narrative of the Life of Frederick Douglass, an American Slave. Written by Himself*. By one count it sold 4,500 copies in four months, and by another 5,000. By 1860 almost 30,000 copies had sold.

Pictures by white artists. In 1849 Douglass wrote about pictures of Black people drawn by white artists. He wrote that "negroes can never have impartial portraits at the hands of white artists" (negroes was a word of that time for Black people, and impartial means fair). "It seems to us next to impossible for white men to take likenesses of black men, without most grossly exaggerating their distinctive features," he wrote.

Douglass sat for photographs again and again. He said that "the great cheapness and universality of pictures must exert a powerful, though silent, influence upon the ideas and sentiment of present and future generations." By universality he meant that pictures were everywhere.

BY 1850

If you remember one thing: Painters in these years sold city buyers pictures of the Hudson valley and of Native leaders, while federal officials forced Native nations off their land.

- May 28, 1830: President Andrew Jackson signs the Indian Removal Act.
- 1834: Dave cuts words into a jar, the year South Carolina makes it a crime for enslaved people to learn to read and write.
- October or November 1839: Robert Cornelius of Philadelphia takes the oldest surviving American portrait photograph.

Next: In the next fifty years, photographers carry their cameras onto Civil War battlefields and into the valleys of the far West.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 23 MINUTES

Cameras and cheap printing put pictures and books in front of millions of Americans after 1850. Many Black and Native artists of the same years did their work far from home or as prisoners. Photographers showed Americans the bodies of soldiers killed in the Civil War, and the valleys and mountains of the far West. The first ten-cent novel, in 1860, sold more than 65,000 copies in a few months, and *Uncle Tom's Cabin* sold 300,000 in the United States in its first year.

The sculptor Edmonia Lewis said she was "practically driven to Rome" by prejudice against her color, and the painter Henry Ossawa Tanner made his career in Paris. At an army fort in Florida, Plains men held as prisoners without trial drew their lives in account books. In New York, the Metropolitan Museum of Art opened in 1872.

Writers and cheap books

Harriet Beecher Stowe's *Uncle Tom's Cabin*, a novel against slavery, sold more copies than any other book of the 1800s except the Bible. It first ran in parts in a newspaper, *The National Era*, from 1851, and came out as a book in 1852. In the United States it sold 10,000 copies in its first week and 300,000 in its first year.

Herman Melville's *Moby-Dick* sold far fewer. The novel, about a whaling captain who hunts the giant white whale that bit off his leg, came out in 1851, and its first printing in New York was 2,915 copies. It was out of print when Melville died in 1891. Readers began to call it a great American novel in the 1900s.

Walt Whitman paid to print his own book of poems, *Leaves of Grass*, on July 4, 1855. The first edition held twelve poems. Whitman kept adding to it and changing it until he died in 1892.

Dime novels. The brothers Erastus and Irwin Beadle began selling novels of about 100 pages for ten cents each in 1860. People called them dime novels, because a dime is ten cents. The first, Ann S. Stephens's *Malaeska, the Indian Wife of the White Hunter*, sold more than 65,000 copies in its first few months. The Beadles printed 321 of these books in the series.

Robert S. Duncanson in Cincinnati

Robert S. Duncanson was a free Black painter who had taught himself to paint. He was born in about 1821 in Fayette, New York, the son of a free Black tradesman. In 1840 he moved to Cincinnati, Ohio, where about 3,000 Black people lived.

Belmont. Nicholas Longworth hired Duncanson in about 1850 or 1851 to paint eight landscapes on the walls of the entrance hall of his house, Belmont. Each is about nine feet high. The house is now the Taft Museum of Art. In 1853 Duncanson painted *Uncle Tom and Little Eva*, from Stowe's novel, which is at the Detroit Institute of Arts.

During the Civil War he left the United States. He showed his work in Montreal, Canada, in 1864 and in Dublin, Ireland, in 1865. He died in Detroit on December 21, 1872.

Photographs of the Civil War dead

Alexander Gardner, born in Paisley, Scotland, in 1821, worked for the New York photographer Mathew Brady from 1856, and in 1858 Brady put him in charge of his studio in Washington. In September 1862 Gardner and his team photographed the dead soldiers on the battlefield at Antietam, in Maryland. The American Battlefield Trust estimates that 22,717 soldiers were killed, wounded or missing in that battle.

"The Dead of Antietam." Brady showed the photographs at his gallery in New York in October 1862, under a sign that read "The Dead of Antietam." A writer for *The New York Times* reported on October 20 that crowds kept climbing the stairs to see them. "If he has not brought bodies and laid them in our door-yards and along the streets, he has done something very like it," the writer said (door-yards are the yards in front of houses). The article gave Brady the credit.

Whose name went on the picture. Brady put the words "Photographed by Brady" on pictures his employees took. In about November 1862 Gardner stopped working for Brady, probably in part because of this. In May 1863

Gardner and his brother James opened their own studio in Washington and hired many of Brady's former workers.

Gardner published a book of 100 of the war's photographs in two volumes in 1866. Under each picture he printed the name of the man who took it, among them Timothy H. O'Sullivan and James F. Gibson. The book did not sell well.

A body moved for the camera. After the Battle of Gettysburg, on July 6, 1863, Gardner's team photographed a dead soldier among the rocks at a place called Devil's Den. Gardner later called him a Confederate, a soldier of the Southern states that fought the United States to keep slavery. He titled the picture *Home of a Rebel Sharpshooter*, a sharpshooter being a soldier who shoots at a distance with a rifle.

The historian William A. Frassanito showed in 1975 that the same body appears in six photographs. The photographers had carried the body from the south edge of Devil's Den to a stone wall, and the rifle beside it was probably put there for the picture. In 1998 the artist James Groves argued that the body was carried the other way, out of the wall and to the first spot.

KNOWN:	the photographers moved the body, which both men agree on.
NOT KNOWN:	the soldier's name.

Winslow Homer

Who: A painter who drew the Civil War for a magazine and later painted the sea.

When and where: Born in Boston on February 24, 1836. Drew the Civil War for *Harper's Weekly*. Lived in England from 1881 and in Prouts Neck, Maine, from 1883. Died there on September 29, 1910.

He sketched the Civil War at the front for *Harper's Weekly*.

Winslow Homer drew the Civil War at the front for *Harper's Weekly*, a magazine, and he drew everyday life in the soldiers' camps. He began as an apprentice at a lithography company, which printed pictures from drawings made on stone. Then he drew pictures for magazines, among them *Ballou's Pictorial* and *Harper's Weekly*.

The sea. He began painting in watercolor in 1873. In 1881 he went to live in Cullercoats, a town in England. In 1883 he moved to Prouts Neck, on the coast of Maine, and the sea became his main subject. He painted people at sea, in pictures such as *The Life Line* and *Fog Warning*. He died at Prouts Neck on September 29, 1910.

Edmonia Lewis

Who: A sculptor of Mississauga Ojibwe and African American descent, who carved in marble in Rome after she was beaten and falsely charged at college in Ohio.

When and where: Born about July 4, 1844, in Greenbush, New York. Oberlin, Ohio, from 1859. Boston. Rome from 1865 or 1866. Died in London on September 17, 1907.

She sold 100 plaster copies of a bust to pay her way to Rome.

Edmonia Lewis carved statues in marble in Rome. Before that, at college in Ohio, a group of white men beat her, officials charged her with poisoning two classmates, and college officials kept her from graduating.

She was born in Greenbush, New York, in about 1844. On official papers she gave her birth year as 1842, 1844 and 1854 at different times. Her mother, Catherine Mike Lewis, was of Mississauga Ojibwe and African American descent. Edmonia's name at birth was Wildfire. By the age of nine she had lost both parents. As a girl she and her aunts sold Ojibwe baskets, moccasins and embroidered blouses to tourists at Niagara Falls. Her brother Samuel paid for her schooling with money he made in the gold rush.

Oberlin. From 1859 she studied at Oberlin, in Ohio. In the winter of 1862, she gave spiced wine to two white students she lived with, Maria Miles and Christina Ennes, before a sleigh ride. They fell sick. Doctors said they had been poisoned with cantharides, a poison made from blister beetles. Both young women got well.

Beaten. One night soon after, Lewis was walking home alone. A group of white men dragged her into an open field, beat her badly and left her for dead. No one ever identified the men who did it. A few days later, officials arrested her for poisoning the two students. She was hurt so badly she could not walk, so her trial was put off.

John Mercer Langston, the first Black lawyer in Ohio, defended her. The court dropped the charges, because no one had tested what was in the young women's stomachs, so there was no proof of poison.

About a year later she was accused of stealing art supplies. The record does not name who accused her. That case was dropped too. But Oberlin officials did not let her sign up for her last term, so she could not graduate. In 2022, more than a hundred years after her death, the leaders of Oberlin College gave her a degree.

The bust. She went to Boston and made a bust, a sculpture of a person's head and shoulders, of Colonel Robert Gould Shaw. Shaw had led the 54th Massachusetts, a regiment of Black soldiers, in the Civil War. Lewis sold 100 plaster copies of the bust for $15 each, and the money paid her way to Rome.

Her passport of 1865 says she was "sent by subscription to Italy having displayed great talents as a sculptor" (sent by subscription means that a group of people paid for the trip). In Rome she carved her work in marble.

She told *The New York Times* in 1878: "I was practically driven to Rome in order to obtain the opportunities for art culture, and to find a social atmosphere where I was not constantly reminded of my color. The land of liberty had no room for a colored sculptor." (Colored was a word of that time for Black people.)

Cleopatra. Her marble statue *The Death of Cleopatra* was shown at the Centennial Exhibition in Philadelphia in 1876. In 1878 the critic William J. Clark called the way it showed death "ghastly" and "absolutely repellant," which means disgusting. Later a gambler named "Blind John" Condon bought it from a saloon in Chicago. He used it to mark the grave of a racehorse named Cleopatra.

The Smithsonian American Art Museum's record of the statue states that it was thought lost for almost a century. It was later moved to a construction yard in Cicero, Illinois. The scholars Marilyn Richardson

and Dorothy Porter Wesley told George Gurney, a curator at the Smithsonian, one of the museum workers who choose and care for its art, about it. In 1994 the Historical Society of Forest Park, Illinois, gave it to the Smithsonian American Art Museum.

BY 1866: Americans had seen photographs of the dead at Antietam and Gettysburg, and Gardner had printed the name of each man who took them under the war's photographs.

Pictures of the West, and whose land they showed

Carleton Watkins carried a very large camera into Yosemite Valley, in California, in July 1861. It took pictures on glass plates 18 inches by 22 inches. He came back with 30 of these large plates and 100 smaller negatives. His photographs were shown at a gallery in New York in 1862, and they helped persuade members of Congress to protect the valley. President Abraham Lincoln signed the Yosemite Grant on June 30, 1864.

The Ahwahneechee. Yosemite Valley was the home of the Ahwahneechee people. California's governor, John McDougal, raised a force of about 200 armed volunteers on horseback in 1851, called the Mariposa Battalion. Under Major James D. Savage, they invaded the valley in March 1851. According to the National Park Service, the battalion's men burned villages and food supplies, one after another, and forced men, women and children away from their homes.

They marched Tenaya, the leader of the Ahwahneechee, and his people to a reservation on the Fresno River. The National Park Service counts that by 1910, more than 90 out of every 100 of the Ahwahneechee who first lived there were dead or missing.

Yellowstone. The photographer William Henry Jackson and the painter Thomas Moran went to Yellowstone with the Hayden survey, a government expedition, in 1871. Jackson took the first known photographs of the Yellowstone falls. When President Ulysses S. Grant signed a law on March 1, 1872, Yellowstone became a national park. That year members of Congress

paid Moran $10,000 for his painting *The Grand Canyon of the Yellowstone* and hung it in the Capitol. It shows four small figures in front, and one of them is a Native man.

The Tukudika, a band of Mountain Shoshone, had lived in the Yellowstone area for thousands of years. According to the National Park Service, they were forced onto reservations. The Park Service account does not say who first forced them. In the fall of 1879, the park's superintendent, Philetus W. Norris, found one of their camps. He asked the government agent at Fort Washakie for help. The agent sent a party of Shoshone men to take the Tukudika to the Wind River Reservation.

Timothy O'Sullivan, who had photographed the war, later photographed for the Wheeler survey, an army survey of the West, from 1872 to 1879. The army's orders for that survey included a duty to "discover the numbers, habits, and disposition of Indians." Disposition here meant whether they were likely to be friendly or to fight.

Why was the Met closed on Sundays?

Many of the founders of the Metropolitan Museum of Art were Protestants, Christians outside the Catholic Church, who refused to open the museum on Sundays. Sunday was the one day off that most working New Yorkers had.

New York's lawmakers approved the founding of the museum on April 13, 1870. It opened on February 20, 1872, on Fifth Avenue, and moved to Central Park in 1880. City officials demanded Sunday opening. In 1885 officials of the city's parks department threatened to cut the museum's money if it stayed closed on Sundays. The trustees, the people in charge of the museum, agreed in the end, although they did not want to. The museum first opened on a Sunday on May 31, 1891, after nearly twenty years of argument.

Fort Marion: drawings by Plains prisoners

Plains artists had long painted their deeds on buffalo hides. About 30 million buffalo lived on the Plains in the early 1800s, and fewer than 1,000 were left by 1900. Hunters killed them for their hides, and army officers encouraged the killing, because the herds fed the Plains nations. Disease and dry years also cut the herds, and so did the railroads built across the Plains.

With the buffalo gone, Plains artists drew on paper instead, often in ledgers, lined account books meant for keeping records of money. This is now called ledger art. Prisoners held at an army fort in Florida made many ledger drawings.

Held without trial. US Army soldiers fought Comanche, Kiowa, Cheyenne and other Plains people on the southern Plains in 1874 and 1875, in what is called the Red River War. After it, army officers charged 72 Cheyenne, Arapaho, Kiowa, Comanche and Caddo people with war crimes, acts in war that break the rules of war, or with being "ringleaders," the leaders of the fighting. General Philip Sheridan ordered them sent "to an eastern fort to be held without trial for an undefined time."

They were 71 men and one woman, named Mochi. A girl of about nine, Black Horse's daughter, went with them. The trip from Fort Sill, in Indian Territory, took 26 days by wagon, train, steamship and oxcart. The poet Sidney Lanier saw them arrive "in leg-irons," chains locked around their ankles.

Fort Marion. They were held at Fort Marion, in St. Augustine, Florida, from 1875 to April 1878. Spanish builders had begun the fort in 1672 as the Castillo de San Marcos. Lieutenant Richard Henry Pratt, who was in charge of them, took off their chains. Then he cut the prisoners' hair, put them in army uniforms, made them march in drills, taught them English and sent them out to work for others as laborers.

Army officers kept them in an old fort without proper living quarters. In the Florida summer heat, many prisoners fell sick, and many were deeply sad and homesick. The writer Judith Lee Wilmot says the sickness, the sadness, the heat and the poor quarters together raised the number of prisoners who died.

"Only give us our women and children." Mah-mante, a Kiowa leader, asked for that in June 1875. President Grant agreed, and then changed his mind. In 1877 Making Medicine, a Cheyenne man, wrote for the young prisoners: "We have lived in this old place two years. It is old and we are young." He went on: "We want Washington to give us our wives and children, our fathers and mothers. We are willing to learn and want to work."

The drawings. Pratt gave the prisoners pencils, ink, crayons, watercolor paint and paper. Twenty-six of them made drawings, all younger Cheyenne, Arapaho and Kiowa men, and Pratt sold their drawings and crafts. The artists included Making Medicine, Howling Wolf, Bear's Heart and Tichkematse, who were Cheyenne, and Zotom, Wohaw, Etahdleuh Doanmoe and Koba, who were Kiowa. White Bear was Arapaho. More than a thousand of their drawings survive in collections around the world.

The dead. Ten of the prisoners died in Florida. Amy Larner Giroux, of the University of Central Florida's Center for Humanities and Digital Research, spent five years searching army records for their names. A January 2023 article in UCF News states that she found all ten.

Six of the dead were Cheyenne: Grey Beard, Lean Bear, Big Moccasin, Starving Wolf, Spotted Elk and Heap of Birds. Three were Kiowa: Sun, Mah-mante and Ih-pa-yah. The tenth, Nad-a-with-t, was Comanche.

Grey Beard died on the way to the fort. He jumped out of a window of the train that was taking the prisoners to St. Augustine. The guards had orders to catch him again, but he was shot instead, and the UCF article does not say who fired. He is buried in Piney Grove Cemetery in Baldwin, Florida.

For many years two graves in the St. Augustine National Cemetery, each holding six men, had stones that read only "Six Unknown Indians." That makes twelve men, three more than the nine prisoners who died at the fort. The UCF article does not say who the twelve men are.

Officials of the National Cemetery Administration, the federal office that runs national cemeteries, said in 2023 that they would replace the two markers with headstones that give the prisoners' names.

After their release, Bear's Heart, Koba and Buffalo Meat died of tuberculosis. Making Medicine became a deacon, a church minister, in the Episcopal Church in 1881. Pratt founded the Carlisle Indian School in Pennsylvania, a boarding school for Native children, in 1879. Staff there cut the children's hair, took away their clothes, gave them English names and forbade them to speak their own languages.

Howling Wolf

Who: A Southern Cheyenne man who lived through the Sand Creek Massacre at 15 and became a ledger artist while a prisoner at Fort Marion.

When and where: Born about 1849. The southern Plains, and St. Augustine, Florida, from 1875 to 1878. Died in 1927.

He drew the massacre at Sand Creek, which he lived through at 15.

Howling Wolf drew the attack he had lived through as a boy. His Cheyenne name was Ho-na-nist-to. He belonged to the band of the Cheyenne leader Black Kettle.

Sand Creek. Colonel John Chivington and the First Regiment of Colorado Volunteers attacked Black Kettle's camp at Sand Creek, in Colorado, on November 29, 1864. Howling Wolf was 15. He and his father, Eagle Head, were in the camp. The counts of Cheyenne and Arapaho people killed there run from about 70 to about 230. Most of the dead were women, children and old people. Among Howling Wolf's drawings is a picture of the massacre.

Army officers sent Howling Wolf to Fort Marion with the other prisoners in 1875. There he served as a sergeant in charge of a guard company made up of prisoners. He drew his people's lives and wars.

Home. He was released in 1878 and went home to the Cheyenne reservation in Indian Territory, now Oklahoma. His eyesight began to fail, and he sailed to Boston for an operation on his eyes.

> He spoke out against the Dawes Act of 1887. Under that law, federal officials broke up land that each nation held together into small plots for single owners and sold what they called the "surplus." Native nations held about 138 million acres in 1887 and about 48 million acres by 1934, a loss of about 90 million acres.
>
> Howling Wolf died in a car accident in 1927. He was on his way home to Oklahoma after performing in Houston, Texas, in a Wild West show, a traveling show of riding, shooting and scenes of frontier life.

Painters after the war

Mary Cassatt showed her paintings in Paris with the Impressionists, a group of painters in France. She was born in Allegheny City, now part of Pittsburgh, Pennsylvania, on May 22, 1844. She studied at the Pennsylvania Academy of the Fine Arts from 1861 to 1865, went to Europe in 1866 and settled in Paris in 1874.

The French painter Edgar Degas admired her drawing. At his request she showed her work with the Impressionists in 1879, and again in 1880, 1881 and 1886. Britannica's writers count her as the only American who showed with them in those years. She died near Paris on June 14, 1926.

Forced out. Thomas Eakins, born in Philadelphia on July 25, 1844, painted *The Gross Clinic* in 1875. He taught at the Pennsylvania Academy from 1876 and became head of its school in 1882.

During a class that women students attended, he removed the cloth that covered a male model's private parts. In 1886 he had to resign, and the record does not name the people who forced him out. Some of his students then formed their own school, the Art Students' League of Philadelphia, and he taught there. One of his students at the academy was Henry Ossawa Tanner. Eakins died on June 25, 1916.

Mark Twain

Who: A writer, born Samuel Langhorne Clemens, whose books were sold door to door.

When and where: Born November 30, 1835, in Florida, Missouri. Died in Redding, Connecticut, on April 21, 1910.

Movie: *Mark Twain* (2001), a documentary by Ken Burns, shown on PBS. It is about his whole life.

Salesmen going door to door sold 70,000 copies in one year.

Mark Twain sold his books through salesmen who went from door to door. His real name was Samuel Langhorne Clemens.

A subscription book. His book *The Innocents Abroad* came out on July 20, 1869. Elisha Bliss's American Publishing Company sold it as a subscription book. A salesman came to people's homes and showed them the book. They ordered a copy, and it was delivered later. *The Innocents Abroad* sold more than 70,000 copies in its first year. While Twain lived, it sold better than any of his other books.

The Adventures of Tom Sawyer came out in 1876. *Adventures of Huckleberry Finn* came out in Britain and Canada on December 10, 1884, and in the United States on February 18, 1885.

Kept off the shelf. In 1885 the members of the library committee in Concord, Massachusetts, decided to keep *Huckleberry Finn* out of the town's public library. According to the *Boston Transcript*, one member of the committee called it "the veriest trash," which meant the worst kind of trash.

Henry Ossawa Tanner

Who: A Black painter who studied under Thomas Eakins and made his career in France.

When and where: Born in Pittsburgh on June 21, 1859. Philadelphia. Paris from 1891. Died in Paris on May 25, 1937.

Students tied him to his easel in the middle of Broad Street.

Henry Ossawa Tanner was a Black painter who left the United States to work in France. His father, Benjamin Tucker Tanner, was a bishop, a high leader, of the African Methodist Episcopal Church.

Tanner wrote in 1909 about looking for a painting teacher when he was a boy. "The question was not, would the desired teacher have a boy who knew nothing and had little money, but would he have me, or would he keep me after he found out who I was," he wrote. He meant that a teacher might turn him away, or send him away later, because he was Black.

The academy. From 1879 to 1885 he studied at the Pennsylvania Academy of the Fine Arts, on and off, under Thomas Eakins. Joseph Pennell, a fellow student, later wrote about a night when other students attacked Tanner. "One night his easel was carried out into the middle of Broad Street and, though not painfully crucified, he was firmly tied to it and left there," Pennell wrote (crucified means fastened to a cross). Pennell did not name the students who did it.

Paris. Tanner went to Paris in 1891 to study at a school called the Académie Julian. A bishop from Atlanta, Joseph Crane Hartzell, and his wife paid for the trip by buying every painting in a show of Tanner's work. In Paris other American students mocked him. In 1893 he came home sick with typhoid fever, a disease spread by dirty water and food. In Philadelphia he painted *The Banjo Lesson*. Then he went back to Paris. Apart from short visits home, he lived there for the rest of his life.

> His painting *The Resurrection of Lazarus* won a third-place medal at the Paris Salon, a large yearly art show, in 1897, and French government officials then bought it. In 1923 he was made a member of the Legion of Honor, an order of people honored by France for their work.

The Shaw Memorial

A committee of 21 people in Boston hired the sculptor Augustus Saint-Gaudens in August 1882 to make a memorial to Colonel Robert Gould Shaw and the men of the 54th Massachusetts. The regiment had attacked Fort Wagner, in South Carolina, in July 1863. Joshua Bowen Smith, a Black man in Boston who had worked for the Shaw family, is credited with first proposing it. The writer Lydia Maria Child wrote that "the colored soldiers who fell ought to have a monument also."

Fourteen years. Saint-Gaudens worked on it for 14 years, longer than on anything else he made. He did not use photographs of the real soldiers or meet them. Instead he hired Black men he met on the street near his studio and made about 40 studies of their heads.

Whose names. Shaw's sister, Josephine Lowell, asked for the names of all the men of the 54th killed at Fort Wagner and afterward to be carved on the base. Her request failed, and the records do not say who turned it down. When the memorial went up, its base carried only the names of the white officers. The names of the Black soldiers were added in the early 1980s. The National Park Service account of the memorial does not say who added them.

The memorial was unveiled on Boston Common on May 31, 1897. Sixty-five veterans of the 54th led the parade, and Sergeant William Carney carried the flag.

Dickinson's poems, and Riis's flash photographs

Emily Dickinson of Amherst, Massachusetts, wrote nearly 1,800 poems. Only 10 were published while she was alive. She died on May 15, 1886, and her sister Lavinia found the poems after her death. Thomas Wentworth Higginson and Mabel Loomis Todd chose and prepared the poems for the first book of them, which came out in 1890.

That same year Jacob Riis published *How the Other Half Lives*, about the tenements of New York, the crowded buildings where poor families rented rooms. To photograph the inside of the dark tenements, he used magnesium flash powder, which burns with a sudden bright light.

BY 1900

If you remember one thing: By 1900 photographs and cheap books reached millions of Americans, and the Black and Native artists of the time had worked in Rome and Paris or drawn as prisoners in Florida.

In 1850: a photograph was a single picture on a silvered copper plate that could not be copied, and the Metropolitan Museum of Art did not yet exist.

In 1900: the Met had been open on Sundays since 1891, Gardner's war photographs were in print with each photographer's name, and Jacob Riis had photographed the inside of New York's tenements by flash.

Next: In the next fifty years, a show of modern European paintings draws jokes in New York, and federal officials begin paying artists a weekly wage.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 25 MINUTES

Americans argued over what counted as art from the first big show of modern paintings in 1913 on, and in the 1930s federal officials paid artists for the first time, though Black artists had to organize before they were given that work. About 75,000 people came to see modern European paintings at the Armory Show in New York in 1913, and its paintings drew jokes. In Harlem in the 1920s and 1930s, Black painters, sculptors, photographers and writers worked side by side.

Federal officials paid thousands of artists a weekly wage from 1935 to 1943. Government photographers recorded hungry farm families in the 1930s. In 1942 one of them photographed Japanese American families as soldiers and officials forced them into camps, and officials kept most of those pictures out of public view.

The Armory Show, 1913, and photographs as art

The International Exhibition of Modern Art, which people call the Armory Show, ran from February 17 to March 15, 1913, in the 69th Regiment's armory on Lexington Avenue in New York, a large building where the unit's soldiers trained and kept their weapons.

A group of American painters and sculptors organized it. Its catalog listed 1,090 works by 306 artists, and several hundred more were added during the show. About 75,000 people came to see it in New York. By the end of its tour to Chicago and Boston, nearly 300,000 people had seen it.

The jokes. Marcel Duchamp's painting *Nude Descending a Staircase* drew jokes. The critic Julian Street called it "an explosion in a shingle factory." Theodore Roosevelt said it looked like the Navajo rug in his bathroom. The sculptor Gutzon Borglum, one of the show's early organizers, called it "a staircase descending a nude."

A pretend trial. In Chicago, on April 16, 1913, students of the School of the Art Institute held a pretend trial of the painter Henri Matisse. They charged him with "pictorial arson," arson being the crime of setting fire to something on purpose, and "criminal misuse of line." Then they burned copies they had painted of three of his pictures, among them *Blue Nude*. School officials had told them not to. A reporter for the *Chicago Evening Post* counted two hundred students and more than a thousand people watching.

The photographer Alfred Stieglitz argued that a photograph could be fine art, as a painting was. He published *Camera Work*, a magazine of photographs, from 1903 to 1917. He also ran a gallery at 291 Fifth Avenue in New York from 1905 to 1917, and people called the gallery 291.

Georgia O'Keeffe

Who: A painter whose drawings Alfred Stieglitz showed in New York in 1916, and who later lived and painted in New Mexico.

When and where: Born November 15, 1887, on a dairy farm at Sun Prairie, Wisconsin. Texas, New York, and New Mexico from 1929. Died in Santa Fe on March 6, 1986.

Movie: *Georgia O'Keeffe* (about 1977), a documentary by Perry Miller Adato, made with the New York public television station WNET. It is about her life and work.

Stieglitz hung ten of her drawings at 291 in April 1916.

Georgia O'Keeffe first showed her work in Alfred Stieglitz's gallery, 291, in April 1916. That fall she became head of the art department at West Texas State Normal College, in Canyon, Texas, a college that trained teachers. She married Stieglitz in 1924.

New Mexico. From 1929 she spent her summers painting in New Mexico. In late 1945 she bought a house at Abiquiu, New Mexico, from the Catholic Church in Santa Fe. Stieglitz died in 1946, and in 1949 she moved to New Mexico for good.

An eye disease called macular degeneration had destroyed the center of her sight by 1972, and she could see only at the sides. She had stopped painting in oils without help. She died in Santa Fe on March 6, 1986, at the age of 98.

Native artists, the boarding schools, and the Studio

Angel De Cora was a Ho-Chunk painter from the Winnebago Agency in Nebraska, born on May 3, 1871. In her own account, a strange white man came to the reservation when she was a child and asked her, through an interpreter, if she would like to ride on a steam train. When the ride ended she was at the boarding school at Hampton, Virginia, a school where children live as well as study. "[It was] three years later when I returned to my mother," she said.

As an adult De Cora taught art at the Carlisle Indian School in Pennsylvania, the school Richard Henry Pratt had founded. She died on February 6, 1919.

Zitkala-Ša was a Yankton Dakota writer who lived from 1876 to 1938. In 1900 three of her essays ran in the *Atlantic Monthly* magazine. Two were about her childhood and her boarding school, and the third was about her work as a teacher. Her book *American Indian Stories* came out in 1921.

The Studio. A white teacher named Dorothy Dunn asked Chester Faris, the head of the Santa Fe Indian School, a federal boarding school in New Mexico, to let her open a painting studio there in 1932. The Studio opened on September 9, 1932, and by 1937 it had 170 students.

Dunn chose not to teach the students to draw real people and things as the eye sees them. She did not teach them to make objects look near or far, or to mix colors by rule. She taught one style: flat areas of color with heavy outlines, showing ceremonies, dances and old stories. She believed it "was the only authentic painting style for Native American artists to follow" (authentic means real and true to its roots).

What her students said. Her students disagreed about her. The Chiricahua Apache artist Allan Houser said, "she trained us all the same way... Her style lacked originality and creativity." Geronima Cruz Montoya, of Ohkay Owingeh Pueblo in New Mexico, said Dunn "made us realize how important our own Indian ways were, because we had been made to feel ashamed of them." She added, "She gave us something we could be proud of."

Dunn left in 1937. Montoya then ran the Studio until it closed in 1962. Other students included Pablita Velarde, the first girl in the art classes, and Harrison Begay, Quincy Tahoma, Oscar Howe, Pop Chalee and Andrew Tsinajinnie. Members of Congress created the Indian Arts and Crafts Board inside the Interior Department in 1935, while the Studio was running. They meant the board to widen the market for Native arts and crafts.

A basket worked out from a photograph. Lottie Queen Stamper, of the Eastern Band of Cherokee Indians in North Carolina, taught basket weaving for more than 30 years. In 1940 she found a photograph of the Cherokee double-woven baskets taken to London in 1725, two baskets woven one inside the other from the same strips.

She spent two and a half days working out the pattern from the photograph. Then she wove a copy from 500 splints, thin strips cut for weaving. "This, indeed, was the happiest day of my life," she wrote. "Now it was my duty to teach it to my brightest students."

People building along the rivers had destroyed many patches of cane by the middle of the 1900s. The weaver Eva Wolfe drove 80 miles to Hayesville, North Carolina, to gather river cane.

Maria Martinez

Who: A potter at San Ildefonso Pueblo, a Tewa town in New Mexico, known for black-on-black pottery.

When and where: Born Maria Poveka Montoya at San Ildefonso, probably in 1887. Died there on July 20, 1980.

Movie: *Maria Martinez: Indian Pottery of San Ildefonso* (1972), a documentary that shows her and her son Popovi Da making pottery at the pueblo.

The black on her pots comes from smoke and dried manure.

Maria Martinez and her husband, Julian Martinez, made black-on-black pottery at San Ildefonso Pueblo, a Tewa pueblo about 20 miles northwest of Santa Fe. Maria was born there, probably in 1887. Her aunt Nicolasa taught her to work clay.

Fairs and copies. In 1904 the couple showed how they made pottery at the World's Fair in St. Louis. Between 1907 and 1909, the archaeologist Edgar Lee Hewett asked Maria to make copies of ancient pots dug up at a site where he worked. Maria shaped the pots and Julian painted them. They showed their work again at fairs in San Diego in 1914 and Chicago in 1934.

The black. While the pots are fired, the potters smother them with dried manure, and the smoke turns the clay black. Potters at Santa Clara Pueblo had made polished black pots since the 1600s, and Maria learned the method from the Tafoya family there. In 1918 Julian finished the first pot with a dull black design on a shining black surface.

Maria signed the pots "Marie" from 1923 to 1925. From 1925 until Julian died in 1943, she signed them "Marie + Julian." Later she signed with her daughter-in-law, Santana, and then with her son, Popovi Da. Popovi Da built a shop at the pueblo and sold the family's work.

> Officials of the Santa Fe Indian School asked Maria to teach there in 1932. She said no. "I come and I work and they can watch ... nobody teaches," she said. She died at San Ildefonso on July 20, 1980.

BY 1932: Stieglitz had shown that a photograph could hang in a gallery, Maria and Julian Martinez had been making black-on-black pots since 1918, and the Studio in Santa Fe was teaching Native students a single style.

The Harlem Renaissance

Black painters, photographers and writers worked side by side in Harlem, in New York City, in the 1920s and 1930s. This time is called the Harlem Renaissance, renaissance being a French word that means rebirth.

Van Der Zee. James Van Der Zee was born in Lenox, Massachusetts, in 1886. He and Gaynella Greenlee opened the Guarantee Photo Studio on West 125th Street in Harlem in 1916, where he made portraits of his customers. In 1919 he photographed the victory parade of the 369th Infantry Regiment, an army unit. He also photographed the leader Marcus Garvey. His work became widely known in 1969, when it hung in a show called *Harlem on My Mind* at the Metropolitan Museum of Art.

Hughes. Langston Hughes was born in Joplin, Missouri, in 1901. His poem "The Negro Speaks of Rivers" came out in 1920 (Negro was a word people then used for Black people). Readers first noticed him through *The Crisis*, a magazine. His first book of poems, *The Weary Blues*, came out in 1926.

Douglas. Aaron Douglas was a painter from Topeka, Kansas. He meant to stop in Harlem in 1925 on his way to Paris, and he stayed. He designed the cover of the magazine *Fire!!* in 1926 and drew pictures for Alain Locke's book *The New Negro*.

Douglas painted a set of four murals, paintings made on a wall or for a wall, for the 135th Street branch of the New York Public Library in 1934, paid through a federal program. The murals are called *Aspects of Negro Life*. They show

Africa, slavery and the years after the Civil War, then lynching, the killing of a person by a mob without any trial, and segregation, keeping people apart by race, and then the move north.

Douglas started the art department at Fisk University, in Nashville, in 1944, and he taught there until 1966.

Augusta Savage

Who: A sculptor and art teacher in Harlem, who taught Jacob Lawrence and lost her largest sculpture for lack of money.

When and where: Born Augusta Christine Fells on February 29, 1892, in Green Cove Springs, Florida. Harlem from the 1920s. A farm at Saugerties, New York, from about 1940. Died in New York City on March 27, 1962.

Movie: *Searching for Augusta Savage* (2024), a short documentary by Charlotte Mangin and Sandy Rattley for the PBS series *American Masters*. It is about her life and her lost work.

Her 16-foot harp was bulldozed when the World's Fair closed.

Augusta Savage taught young artists in Harlem, among them Jacob Lawrence, and she lost her largest sculpture because she had no money to save it. Her father, Edward Fells, was a Methodist minister in Florida who said her clay figures were sinful. Her own words about him are printed by the public television station WMHT: "My father licked me four or five times a week," and he "almost whipped all the art out of me." (Licked here meant beat. Some other printings of her words say "kicked" instead.)

Turned away. In 1923 she was chosen for a summer art school at Fontainebleau, in France. French officials offered the school to 100 American women, and her place came with a $500 scholarship. When the American committee that chose the students learned that she was Black, its members took her place away.

Savage told the *New York World*: "My brother was good enough to be ... [in a] regiment that saw service in France during the war, but it seems his sister is not good enough to be a guest of the country for which he

fought." One committee member, the sculptor Hermon MacNeil, had supported her, and he invited her to study with him.

A teacher in Harlem. She opened the Savage Studio of Arts and Crafts in a basement on West 143rd Street in 1934. Jacob Lawrence, Norman Lewis and Gwendolyn Knight studied with her. In 1935 she helped start the Harlem Artists Guild. In 1937 she became the first director of the Harlem Community Art Center, which opened on December 27, 1937. By one count, 70,592 children and adults took part in its first sixteen months. Another count gives 1,500 people.

The Harp. The organizers of the 1939 New York World's Fair hired her to make a sculpture. She was the only African American woman given such a job. She made *Lift Every Voice and Sing*, named after a song by James Weldon Johnson. It was a harp 16 feet tall. Its strings were twelve Black singers, and the arm and hand of God formed its sounding board. The fair's organizers renamed it *The Harp*.

She made it of plaster painted to look like black stone. She needed money to cast it in bronze, which means pouring melted metal into a mold of the sculpture. She sold small metal copies as souvenirs, but she never raised enough. When the fair closed in 1940, its temporary buildings and plaster art were bulldozed, and *The Harp* with them. No record names who gave the order. Some of the small copies survive.

In about 1940 she moved to a farm at Saugerties, New York, and mostly left the art world.

Zora Neale Hurston

Who: A novelist and folklorist, someone who collects the stories, songs and sayings that people pass along by word of mouth.

When and where: Born January 7, 1891, in Notasulga, Alabama. Grew up in Eatonville, Florida. Harlem, Haiti and Jamaica. Died in Fort Pierce, Florida, on January 28, 1960.

Movie: *Zora Neale Hurston: Jump at the Sun* (2008), a documentary by Sam Pollard for the PBS series *American Masters*. It is about her life and writing.

She never earned more than $943.75 from any one of her books.

Zora Neale Hurston wrote novels and collected the stories of Black Southerners, and she died poor. She grew up in Eatonville, Florida. According to the official Hurston website, Eatonville was the nation's first incorporated Black township, which means the state recognized it as a town by law, with its own government.

Kossola. In 1927 she interviewed Kossola, also called Cudjo Lewis. He was one of the last survivors of the *Clotilda*, the last known ship to bring captives from Africa to the United States.

Soldiers of Ghezo, the king of Dahomey in West Africa, attacked Kossola's town in April 1860 and took him captive. Captain William Foster bought him and other captives there for Timothy Meaher, a businessman in Mobile, Alabama. In July 1860 Foster smuggled about 110 Africans into Mobile on the *Clotilda*, to be enslaved. Bringing enslaved people into the country had been against federal law for 52 years. In Mobile, Meaher's brother James enslaved Kossola.

The books. Hurston wrote a book from what Kossola told her and called it *Barracoon*, the word for a pen where captives were held until a ship took them. It was not published until 2018, 58 years after she died. She gathered Black folktales in Florida for her book *Mules and Men* (1935),

and stories in Haiti and Jamaica for *Tell My Horse* (1938). Her novel *Their Eyes Were Watching God* came out in 1937. In 1938 and 1939 she worked in Florida for the Federal Writers' Project.

Her royalties, the share of each book's price that goes to the writer, never came to more than $943.75 for any of her books. She had a stroke in early 1959. In October 1959 she had to enter the St. Lucie County Welfare Home, a home the county ran for people with no money, and she died there on January 28, 1960. Her neighbors in Fort Pierce collected money for her funeral, but not enough for a headstone.

Saved from the fire. After she died, a yardman cleaning out her house began burning her papers. Patrick DuVal, a law officer and her friend, put out the fire, and the papers went to the University of Florida. She lay in an unmarked grave in the Garden of Heavenly Rest, a cemetery for Black people only, until August 1973. That month the novelist Alice Walker found the spot and placed a marker there.

Painters of the 1930s and 1940s

Grant Wood painted *American Gothic* in 1930. His models were his sister, Nan Wood Graham, and the family dentist, Byron McKeeby. They stand in front of a house in Eldon, Iowa. The painting won a bronze medal and $300 at the Art Institute of Chicago. One judge called it a "comic valentine." Some Iowans who read about it in the *Cedar Rapids Gazette* were angry. They felt it showed them as "pinched, grim-faced, puritanical Bible-thumpers."

Edward Hopper painted *Nighthawks* in 1942, and on May 13 of that year the Art Institute of Chicago bought it for $3,000.

Norman Rockwell's four paintings called the *Four Freedoms* ran in the *Saturday Evening Post* in February and March 1943, one each week. The paintings then went on a tour of 16 cities, where people bought war bonds, loans to the government to pay for World War II. About 1.2 million people saw the paintings, and the tour raised about $132 million.

Who did the government pay to make art?

Federal officials paid thousands of artists a weekly wage through the Federal Art Project, but Black artists had to organize to be hired. The project ran from August 29, 1935, to June 30, 1943, as part of the Works Progress Administration, the federal jobs program of the Great Depression, the hard years of the 1930s when many people had no work. Holger Cahill directed it.

The pay. Most of its artists had to show they were poor enough to get government aid. They earned about $23.50 a week, and each had to turn in a finished work within a set number of weeks. According to Britannica, project officials employed more than 5,000 artists at its peak in 1936. Another count puts the total at about 10,000 artists and craft workers.

They made about 400,000 paintings, murals, prints and posters, and they opened more than 100 community art centers. When officials cut the budget and sent out notices that ended people's jobs, artists held sit-down strikes, refusing to leave their workplaces.

The Harlem Artists Guild. The project's rules said workers must be hired fairly, whatever their race, but Black artists were routinely refused work. The records do not name the people who turned them away. Augusta Savage, Charles Alston, Elba Lightfoot, Louise E. Jefferson, Arthur Schomburg and others started the Harlem Artists Guild in 1935, with Aaron Douglas as its president. Alston called it "a pressure group to get more black artists on the federal projects." According to *Black Art in America*, Alston became the first Black supervisor on the project.

Harlem Hospital. Alston, Vertis Hayes and Georgette Seabrooke designed murals for Harlem Hospital in 1936. According to the Harlem history project Harlem-is, it was the first mural job the WPA gave to African American artists anywhere in the country. The head of the hospital rejected the sketches because of their "Negro subject matter." Members of the Guild and the Artists Union wrote to Mayor Fiorello La Guardia and President Franklin Roosevelt, and the murals were then painted as the artists had planned.

Post office murals. Edward Bruce ran a second program, in the Treasury Department, from 1934 to 1943. Its artists painted about 1,400 murals for post offices in more than 1,300 towns and cities. For each new post office, about 1 percent of the building money was set aside to pay for art.

Bruce's officials pushed the artists toward American scenes and away from subjects that might start public quarrels. They also kept them away from abstract art, which shows shapes and colors instead of things. In Safford, Arizona, local people who were "still resentful about Apache raids" demanded a different subject for a mural, and the subject was changed. The account of the Safford mural does not say who changed it.

Federal officials also hired writers, for the Federal Writers' Project. From 1936 to 1938 its interviewers in 17 states recorded more than 2,300 first-person accounts by people who had been enslaved. The Library of Congress holds the accounts.

Jacob Lawrence

Who: The painter of the *Migration Series*, sixty panels about Black families moving north.

When and where: Born September 7, 1917, in Atlantic City, New Jersey. Philadelphia, Harlem from the age of 13, and Seattle. Died in Seattle on June 9, 2000.

He painted all 60 panels at once, one color at a time.

Jacob Lawrence painted all 60 panels of *The Migration Series* in 1940 and 1941, when he was 22 and 23. His parents split up in 1924. From 1927 to 1930 he and his younger brother and sister lived in foster care in Philadelphia, with families paid to raise children not their own, while their mother worked in New York City.

Harlem teachers. At 13 he moved with his mother to Harlem. He took art classes with Charles Alston at the Harlem Art Workshop. Augusta Savage got him a scholarship to the American Artists School and a paid place on the federal art project.

The series. Before *The Migration Series* he painted series of pictures about the lives of Toussaint L'Ouverture in 1938, Frederick Douglass in 1939 and Harriet Tubman in 1940. Toussaint L'Ouverture was born enslaved in the French colony that is now Haiti, and he became a leader of the revolution that ended slavery there. A grant, a gift of money, from the Julius Rosenwald Fund paid for *The Migration Series*. The panels show the Great Migration, when Black families moved from the South to cities in the North.

He wrote a caption for each panel first. Then he painted all 60 at the same time, one color at a time. Each panel is 12 inches by 18 inches. In November 1941 the editors of *Fortune* magazine printed panels from the series with an essay by Alain Locke. Today the Phillips Collection in Washington holds the odd-numbered panels, and the Museum of Modern Art in New York holds the even-numbered ones.

BY 1941: Federal officials had paid thousands of artists a wage, Black artists in Harlem had organized to get some of that work, and Jacob Lawrence had painted the Great Migration in 60 panels.

Photographs of hunger, and photographs of the camps

Officials of the federal Resettlement Administration, later called the Farm Security Administration, paid photographers in the 1930s to record poor farm families. In March 1936 Dorothea Lange stopped at a camp of pea pickers at Nipomo, California. Freezing rain had destroyed the crop, and as many as 2,500 to 3,500 people were camped there.

Migrant Mother. Lange made seven pictures of a mother and her children. One of them became known as *Migrant Mother*, and it is one of the most reprinted pictures of the Great Depression. The government caption reads: "Destitute pea pickers in California. Mother of seven children. Age thirty-two" (destitute means so poor that a person has nothing to live on).

Two accounts. Lange later wrote, "I did not ask her name or her history." She wrote that the mother said the family had been living on frozen vegetables from the fields and on birds the children killed. The mother had just sold the tires from her car to buy food, Lange wrote. The mother's son, Troy Owens, said later, "There's no way we sold our tires, because we didn't have any to sell." He thought Lange had mixed up two stories. The two accounts do not agree.

Florence Owens Thompson. The mother was Florence Owens Thompson, born on September 1, 1903, in Indian Territory, now Oklahoma. The records of her family's Cherokee ancestry disagree. Cherokee Nation records list her father as Cherokee, while her mother said she had Cherokee ancestors but told a federal commission that her own parents were both white. The government had paid for the photograph, so anyone could print it for free, and neither Lange nor Thompson earned money from it.

A reporter for the *Modesto Bee*, Emmett Corrigan, found her in 1978, about 42 years after the picture was taken. She was living in a mobile home park in Modesto, California, and he printed her name. "I wish she hadn't taken my

picture. I can't get a penny out of it. She didn't ask my name," she told him. "She said she wouldn't sell the pictures. She said she'd send me a copy. She never did."

Her children asked for help with her medical bills in 1983, when she was sick. More than 2,000 letters came with money. "For Mama and us, the photo had always been a bit of [a] curse," Troy Owens said. "After all those letters came in, I think it gave us a sense of pride." She died on September 16, 1983.

The camps. President Franklin Roosevelt signed Executive Order 9066, an order from the president that has the force of law, on February 19, 1942. Under it, Lieutenant General John L. DeWitt, who commanded the Army on the West Coast, ordered Japanese Americans out of their homes, some with only 48 hours' notice.

Soldiers and federal officials sent about 122,000 men, women and children to ten camps. They held them there behind wire fences watched by armed guards in towers. Nearly 70,000 of them were American citizens. That year officials of the War Relocation Authority, the agency that ran the camps, hired Lange to photograph the forced removal.

Dorothea Lange

Who: A photographer paid by the federal government to record poor families in the 1930s and the forced removal of Japanese Americans in 1942.

When and where: Born Dorothea Nutzhorn on May 26, 1895, in Hoboken, New Jersey. California and the West. Died October 11, 1965.

Movie: *Dorothea Lange: Grab a Hunk of Lightning* (2014), a documentary for the PBS series *American Masters*, directed by her granddaughter Dyanna Taylor. It is about her life and work.

At Manzanar, officials would not let her photograph the guard towers.

Dorothea Lange photographed Japanese American families as soldiers and officials forced them from their homes in 1942, and officials kept most of those photographs from the public. As a child she had polio, a disease that attacks the nerves, and it left her with a limp.

What she photographed. In 1942 she photographed families getting ready to leave their homes between Fresno and Sacramento. She photographed the Tanforan assembly center at San Bruno, a holding camp at a racetrack, where horse stalls had been turned into rooms for families. She also photographed the Manzanar camp. She made more than 800 photographs.

Officials discouraged her from talking with the prisoners. At Manzanar they did not allow her to photograph the wire fences, the watch towers, the armed guards or any sign that people were resisting. On July 30, 1942, officials of the War Relocation Authority let her go, with the note "completion of work."

Held back. Army officers judged her pictures critical of the camps and held them until the war ended, according to the National Coalition Against Censorship. The Densho Encyclopedia says officials of the War Relocation Authority kept most of them from public view. Neither account names the officers who gave the order.

> After the war, the coalition says, the photographs were "quietly placed" in the National Archives. It does not say who placed them there. In 2006 the historians Linda Gordon and Gary Y. Okihiro published a selection of them in a book called *Impounded*.
>
> Lange wrote to the photographer Ansel Adams on November 12, 1943: "I fear the intolerance and prejudice is constantly growing." She died on October 11, 1965.

A book banned and burned, 1939

John Steinbeck's novel *The Grapes of Wrath* came out on April 14, 1939. It was the best-selling book of 1939, and by February 1940 publishers had printed 430,000 copies. It won the National Book Award and the Pulitzer Prize.

The ban. The members of the Kern County Board of Supervisors in California voted 4 to 1 in August 1939 to take the book out of the county's libraries and schools. One supervisor called it a "libel and lie," a libel being a printed lie that harms someone's good name. Bill Camp, who led the Associated Farmers, a group of large landowners, pushed for the ban. He had one of his workers, Clell Pruett, burn a copy in a trash can for a newspaper photographer. Pruett had not read the book.

The librarian. The county librarian, Gretchen Knief, wrote to the supervisors: "Ideas don't die because a book is forbidden reading. If Steinbeck has written the truth, that truth will survive." She did not throw the books away. She offered them to other county libraries. The book went back on the shelves in January 1941.

Paintings sent abroad, and called back, 1946 and 1947

J. LeRoy Davidson, an art historian at the State Department, spent just under $50,000 in 1946 on 79 modern American paintings by 47 artists, among them Georgia O'Keeffe. He sent them to tour other countries in a show called *Advancing American Art*.

One congressman said, "I am just a dumb American who pays taxes for this kind of trash." President Harry Truman also mocked the paintings. He said that if that was art, then he was a member of an African people. The word he used for them was an insult that Europeans used for the Khoekhoe people of southern Africa.

Called back. Accounts differ on who stopped the tour, and when. The art historian Jennifer McComas writes that the tour was stopped in early April 1947. By her account, members of Congress had cancelled it by the end of that month, cut off the State Department's art program and done away with Davidson's job. The writer Matthew Algeo says instead that Secretary of State George Marshall ended the show in early May, and told a House committee that the paintings would be brought home and sold.

Officials sold the paintings, along with 38 watercolors, in June 1948 by sealed bid, in which buyers send in secret offers and the highest offer wins. Three universities in Alabama, Oklahoma and Georgia bought 81 of the 117 works.

BY 1950

If you remember one thing: For the first time, federal officials paid thousands of American artists to work, and other officials decided which pictures and books the public could see.

One number: About $23.50 a week was the pay of a Federal Art Project artist. In 1942 the Art Institute of Chicago paid $3,000 for one painting, Hopper's *Nighthawks*, more than two years of that wage.

Next: After 1950, painters in New York make pictures with no objects in them at all, and officers of the CIA secretly pay to send some of them abroad.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 21 MINUTES

After 1950 the fights over who made American art, who profited from it and who paid for it came into the open. Painters in New York after 1950 made pictures that showed no objects at all, and officers of the CIA secretly paid for shows that sent some of that painting to Europe. In the 1960s other artists painted soup cans and comic strips, and the prices of paintings climbed. A painting that Robert Rauschenberg sold for $900 went for $85,000 at an auction in 1973.

Black and Chicano artists painted murals on neighborhood walls and bridge pillars, and women and Black artists protested at museums that left them out. In 1987 volunteers laid 1,920 quilt panels on the National Mall for people who had died of AIDS, a disease that destroys the body's defenses against other illnesses.

Members of Congress fought in 1989 and 1990 over whether public money should pay for art that some of them called offensive. In 1990 they also passed laws to protect Native artists' work and to return Native remains and sacred objects to the nations.

Painting with no objects in it

Jackson Pollock laid his canvas on the floor from 1947 to 1950 and dripped and poured paint onto it. Other people called his way of working drip painting or action painting. His pictures showed no things that a viewer could name. This kind of painting, abstract because it shows no real objects, is called Abstract Expressionism. The historian Frances Stonor Saunders writes that the center of the art world had been moving from Paris to New York since the 1930s.

Jackson Pollock

Who: A painter who dripped and poured paint onto canvas laid on the floor.

When and where: Born January 28, 1912, in Cody, Wyoming. New York City, then Springs, on Long Island, New York. Died there on August 11, 1956.

Movie: *Pollock* (2000), a feature film directed by Ed Harris, who also plays Pollock. It is about his life.

"On the floor I am more at ease," he wrote in 1947.

Jackson Pollock explained his method in 1947, in a magazine called *Possibilities*: "I prefer to tack the unstretched canvas to the hard wall or the floor. I need the resistance of a hard surface. On the floor I am more at ease. I feel nearer, more a part of the painting, since this way I can walk around it, work from the four sides and literally be in the painting." He wrote that this was like the method of the Native sand painters of the West.

Pollock had married the painter Lee Krasner in 1945. On August 8, 1949, the editors of *Life* magazine put this question in a headline over a story about him: "Jackson Pollock: Is he the greatest living painter in the United States?"

The crash. On the night of August 11, 1956, in Springs, New York, Pollock drove his car while drunk. He crashed less than a mile from his home and was killed, and so was his passenger Edith Metzger. A second passenger, Ruth Kligman, survived.

The CIA and the painters

The historian Frances Stonor Saunders reported in *The Independent*, a British newspaper, in 1995 that officers of the CIA had helped promote Abstract Expressionism in other countries. The CIA, the Central Intelligence Agency, is the government's spy agency.

In those years the United States and the Soviet Union were rivals in the Cold War, a long contest for power and friends around the world that never became open war between the two. The Soviet government's official style of art was called Socialist Realism. Its paintings looked like real life, only better, and they showed simple stories in support of the government's ideas, such as workers winning their freedom.

What a CIA man said. Donald Jameson, a former CIA officer, told Saunders that CIA officers saw a chance in this new painting. He said "Abstract Expressionism was the kind of art that made Socialist Realism look even more stylised and more rigid." The support came "at two or three removes," he said, which means through other groups. The painters did not know.

Tom Braden, who led a CIA division from 1950, had worked at the Museum of Modern Art in New York in 1949. "We wanted to unite all the people who were writers, who were musicians, who were artists," Braden said, "to demonstrate that the West and the United States was devoted to freedom of expression."

The money's route. The money went through the Congress for Cultural Freedom, a group set up with CIA money in 1950 and run by a CIA agent. It had offices in 35 countries and paid for touring shows of American art. One, "The New American Painting," visited every large city in Europe in 1958 and 1959. Staff of the Museum of Modern Art organized most of these shows.

Accounts differ about how much this mattered to the painters or to their fame. The art historian Jennifer McComas writes that the claims hold "some truth." She also writes that some of the writers who made them got facts wrong and chose only the shows that fit their argument.

NOT KNOWN: the amount of money spent on the painting shows.

Photographs and books

The photographer Robert Frank won a Guggenheim Fellowship, a grant of money for artists and writers, in 1955. He used it to pay for trips across the United States. In the South, a sheriff told him he had "an hour to leave town." His book of photographs, *The Americans*, came out in Paris in 1958 and in New York in 1959. A writer in *Popular Photography* called the pictures "meaningless blur, grain, muddy exposures, drunken horizons and general sloppiness."

Black writers won national prizes and reached Broadway in the 1950s. Ralph Ellison's novel *Invisible Man*, about the problems Black Americans faced in the early 1900s, came out in 1952. It won the National Book Award in 1953, and Ellison was the first African American writer to win it.

Lorraine Hansberry's play *A Raisin in the Sun* opened on Broadway on March 11, 1959. It follows a Black family in Chicago that buys a house in a white neighborhood, where a man from the neighborhood offers to buy them out. Its director, Lloyd Richards, was the first Black director of a Broadway play, and the New York Drama Critics' Circle named it the best play of the year.

Gordon Parks

Who: A photographer, the first African American staff photographer at *Life* magazine.

When and where: Born November 30, 1912, in Fort Scott, Kansas. Washington, D.C., from 1942. New York. Died in New York on March 7, 2006.

Movie: *Half Past Autumn: The Life and Works of Gordon Parks* (2000), a documentary about his life.

He photographed a cleaning woman with her mop before the flag.

Gordon Parks was the first African American photographer on the staff of *Life* magazine. He grew up in Fort Scott, Kansas, the youngest of 15 children, and went to a segregated elementary school, a school for Black children only. He bought his first camera at a pawnshop, a store that lends money and sells things people leave there and do not come back for.

Washington, 1942. Parks won a Julius Rosenwald Fellowship in 1942 and went to Washington, D.C., to work for the Farm Security Administration. Workers in restaurants and shops in the segregated capital refused to serve him.

After that he photographed Ella Watson, a Black woman on the cleaning crew of the agency's building. She stands with a broom and a mop in front of an American flag. He titled the picture *American Gothic, Washington, D.C.*, after Grant Wood's 1930 painting *American Gothic*, which shows a farmer holding a pitchfork beside a woman in front of their house. His boss, Roy Stryker, said the picture was an attack on America and could get all his photographers fired.

Parks published a photo essay, a set of photographs that tell a story, about a young gang leader in Harlem in 1948. It won him a staff job at *Life*, and he stayed at the magazine until 1972.

Pop Art, and the price of a painting

Pop Art painters of the early 1960s made pictures of comic strips, soup cans and famous faces. Roy Lichtenstein painted scenes from comic strips in oil paint. His 1961 painting *Look Mickey* is now in the National Gallery of Art in Washington.

Thirty-two soup cans. Andy Warhol showed 32 paintings of Campbell's soup cans at the Ferus Gallery in Los Angeles in July 1962. Each canvas is 20 inches by 16 inches. The art dealer Irving Blum, who bought and sold art for a living, bought all 32 for $1,000, paid in ten monthly payments of $100.

The Museum of Modern Art got them from Blum in 1996. In 1970 one of Warhol's soup-can paintings sold at auction for $60,000. At that time it was the highest auction price for a living American artist.

$900, then $85,000. Robert Scull, who owned a fleet of taxis, sold 50 works from his art collection at an auction in New York on October 18, 1973, for about $2.2 million. Years earlier, Robert Rauschenberg had sold Scull his painting *Thaw* for $900. That night it sold for $85,000. Artists received nothing when their work was sold again. Rauschenberg shoved Scull and told him he had been working hard for Scull to make that profit.

Andy Warhol

Who: A painter who made pictures of soup cans, dollar bills and famous faces. His studio was called the Factory.

When and where: Born Andrew Warhola Jr. on August 6, 1928, in Pittsburgh. New York. Died in New York on February 22, 1987.

Movie: *Andy Warhol: A Documentary Film* (2006), a four-hour documentary by Ric Burns, shown on PBS. It is about his life.

Told to paint what he liked most, he answered, "money."

Andy Warhol started out drawing pictures for magazines before he made his paintings of soup cans. His parents were working-class immigrants, Rusyns from the village of Miková, in what is now northeastern Slovakia. His father worked in a coal mine.

Drawings for magazines. Warhol moved to New York in 1949. There Tina Fredericks, an editor at *Glamour* magazine, bought a drawing of an orchestra from him for $10. Through the early 1950s his drawings appeared regularly in fashion magazines and in *The New York Times*.

Silkscreens. In 1961 a printer, Floriano Vecchi, taught him silkscreen printing, in which the artist puts a design on a fine screen and pushes ink through it with a rubber blade, so the same picture can be printed again and again. His first silkscreens, made in early 1962, showed one-dollar and two-dollar bills.

Muriel Latow, who knew him from the art world, had told him to paint what he liked most, and he answered, "money." One of his best-known early silkscreen paintings is *Marilyn Diptych*, from 1962, a picture in two parts of the actress Marilyn Monroe.

His studio was called the Factory. On June 3, 1968, the writer Valerie Solanas shot Warhol and the critic Mario Amaya at the Factory. Warhol was in the hospital for nearly two months. He died in New York on February 22, 1987, after an operation on his gallbladder.

BY 1973: Paintings by New York artists had toured Europe in shows paid for in secret with CIA money, and a Rauschenberg painting bought for $900 had resold for $85,000.

Walls, bridges and museums: art made as protest

A walk to school. Ruby Bridges, who was six, walked into William Frantz Elementary School in New Orleans on November 14, 1960, between four federal officers called deputy US marshals. She and three other six-year-old girls at another school that day were the first Black children in white public schools in Louisiana. A crowd outside screamed at her.

Norman Rockwell painted her walk in 1963, the year he left the *Saturday Evening Post*, whose editors limited what political subjects he could paint. On the wall behind her he painted a racial slur, the letters "KKK" and a smashed tomato. KKK stands for the Ku Klux Klan, a white group that has threatened, beaten and killed Black people. The editors of *Look* magazine printed the painting, *The Problem We All Live With*, on January 14, 1964.

The Wall of Respect. Fourteen artists of the Organization of Black American Culture, among them William Walker, painted the *Wall of Respect* in 1967 on the side of a closed bar at 43rd Street and Langley Avenue in Chicago. It showed Nat Turner, Harriet Tubman, W. E. B. Du Bois, Marcus Garvey, Malcolm X, Gwendolyn Brooks, Muhammad Ali, Aretha Franklin and others. In the eight years after it, artists painted more than 1,500 murals across the country.

A fire damaged the building in 1971. The building was then torn down, and the mural with it. The records do not say who ordered the building torn down.

Chicano Park. Barrio Logan is a Mexican American neighborhood of San Diego, and many Mexican Americans call themselves Chicano. Highway builders cut the neighborhood in two with Interstate 5 in 1963, and in 1969 they cut it again with the ramps of the bridge to Coronado. City officials approved a park under the bridge that June and then did nothing.

A student named Mario Solis saw bulldozers there on April 22, 1970, getting the land ready for a parking lot for a California Highway Patrol station. Residents took over the land.

City officials set aside $21,814.96 for a park of 1.8 acres, called Chicano Park, on July 1, 1970. The artist Salvador Torres had proposed painting the bridge pillars. The artist Victor Ochoa brought 300 brushes on March 23, 1973, and nearly 300 people painted all weekend. The artists raised the money for the paint themselves.

At the museums. Faith Ringgold and other artists protested at the Whitney Museum of American Art in New York in 1970, because its show of American art had no Black artists in it. They also demanded that half the artists it showed be women.

Judy Chicago finished *The Dinner Party* in 1979. It is a table with three sides, set with 39 places for 39 women from history and legend, among them Sacajawea, Sojourner Truth, Susan B. Anthony, Virginia Woolf and Georgia O'Keeffe. Each place has a hand-painted plate. Most of the plates show a butterfly or flower shape that stands for a vulva, the outer part of a woman's sex organs.

The critic Hilton Kramer called it "very bad art ... failed art." Representative Robert K. Dornan called it "ceramic 3-D pornography" (pornography means pictures or objects made to show sex). The writer Alice Walker objected that Sojourner Truth, the one Black woman at the table, was shown in a different way from the white women. Truth's plate shows three faces instead.

The board of the University of the District of Columbia voted in 1990 to accept it as a gift. After the *Washington Times* printed stories against it, the plan was dropped. The records do not say who dropped it. *The Dinner Party* is now at the Brooklyn Museum.

Mining the Museum. The artist Fred Wilson rearranged the collection of the Maryland Historical Society in Baltimore in 1992 for a show called *Mining the Museum*. In a case of fine silver, he placed shackles that had been used to chain enslaved people. He also hung Justus Engelhardt Kühn's portrait of

Henry Darnall III, the Maryland boy painted in about 1710 with an enslaved Black boy beside him. Wilson lit the face of the enslaved boy and played a recorded voice asking, "Am I your brother?"

In another room he set old chairs facing a whipping post. Several writers said that the post had been used on enslaved people, but it came from the Baltimore City jail, where officials had used it to whip men convicted of beating their wives.

On the subway walls. Jean-Michel Basquiat and Al Diaz wrote graffiti, writing or drawing on walls without permission, signed "SAMO" on walls in Manhattan in the late 1970s. Basquiat later became a painter. He died of a heroin overdose on August 12, 1988, at 27.

Michael Stewart. New York City Transit Police officers arrested Michael Stewart, a 25-year-old Black artist, at the First Avenue subway station on September 15, 1983, for writing graffiti. While the officers held him, he went into a coma, a state like deep sleep that a person cannot wake from. He died on September 28. The city's medical examiner, the doctor who studies a body to find the cause of death, said his heart had stopped. Others disputed that finding.

Six officers were tried for causing his death by carelessness, for assault and for lying under oath. On November 24, 1985, an all-white jury found them not guilty. A lawsuit over his death was later settled for $1.7 million. Basquiat painted *Defacement (The Death of Michael Stewart)* about him.

Keith Haring drew in the early 1980s in white chalk on the black paper that covered empty advertising frames in New York subway stations. He learned he had AIDS in 1988, and in 1989 he started the Keith Haring Foundation. He died on February 16, 1990.

Faith Ringgold

Who: A painter and quilt maker who also wrote and illustrated children's books.

When and where: Born Faith Willi Jones on October 8, 1930, in Harlem. New York City. Died in Englewood, New Jersey, on April 13, 2024.

Her quilt *Tar Beach 2* shows a girl flying over Harlem.

Faith Ringgold painted stories on quilts, and police arrested her during the protest at the Whitney. For years she taught art in New York City public schools. In 1967 she painted *The Flag Is Bleeding* and *Die* for a series called *The American People*.

Arrested. With the critic Lucy Lippard and the artist Poppy Johnson, she started the Ad Hoc Women's Art Committee, which joined the protest at the Whitney. The museum owned work by Jacob Lawrence but left him out of its show. Police arrested Ringgold on November 13, 1970. That year she and her daughter, Michele Wallace, also started a group called Women Students and Artists for Black Art Liberation.

Quilts. From the 1980s she painted stories on quilts. *Tar Beach 2* (1990) shows Cassie Louise Lightfoot, an eight-year-old girl who dreams of flying over Harlem. She wrote and illustrated more than a dozen children's books.

Native artists and Native objects

Oscar Howe was a Yanktonai Dakota painter, born on the Crow Creek Sioux Reservation in South Dakota in 1915, who had studied at Dorothy Dunn's Studio in Santa Fe. In 1958 the judges of the Indian art show at the Philbrook Museum in Tulsa, Oklahoma, turned down his painting as "a fine painting, but not Indian."

Howe's answer. "Who ever said, that my paintings are not in the traditional Indian style, has poor knowledge of Indian art indeed," Howe wrote back. "There is much more to Indian Art, than pretty, stylized pictures." He added: "Are we to be herded like a bunch of sheep, with no right for individualism, dictated as the Indian has always been."

Scholder and Cannon. When the Studio closed in 1962, the Institute of American Indian Arts opened in Santa Fe. Fritz Scholder, a registered member of the La Jolla Band of Luiseño Indians, taught there from 1964. From 1967 he painted Native people with American flags, beer cans and cats. The paintings started an argument, among Native artists too, that still goes on.

The Cherokee painter Roy Boney Jr. said of *Indian with Beer Can* (1969): "While some might find the image offensive or even ugly," it "definitely was not a maiden on the river or a warrior on horseback, and I liked that."

T. C. Cannon, a Kiowa and Caddo painter, studied at the Institute. He served in Vietnam in 1967 and 1968 as a paratrooper, a soldier who jumps from planes, and he won two Bronze Stars, medals for brave or useful service in war. He died in 1978 at the age of 31.

Cannon was one of the Americans who served in that war. In 1981 a student, Maya Lin, 21, won the contest to design the memorial to them in Washington, the Vietnam Veterans Memorial. The judges knew the 1,421 entries only by number, not by name. Chapter 12 tells her story in full.

Two laws of 1990. Members of Congress passed the Indian Arts and Crafts Act in 1990. Under it, selling work as made by a Native artist when it was not is a crime. A person who does it for the first time can be fined up to $250,000 or sent to prison for five years, or both. A business can be fined up to $1,000,000.

President George H. W. Bush signed the Native American Graves Protection and Repatriation Act, called NAGPRA, on November 16, 1990. Representative Mo Udall had introduced it. Repatriation means sending something back home. Under the law, museums and agencies that take federal money must return Native human remains, objects buried with the dead, sacred objects and objects that belong to a whole nation, to descendants and to the Native nations.

Some of those remains and objects had been dug out of graves and mounds, among them the remains of more than 600 people that workers took out of Craig Mound at Spiro after the Pocola Mining Company's dig, which the first era of this chapter tells.

The AIDS Memorial Quilt, 1987

Cleve Jones, an activist in San Francisco, learned in November 1985 that more than 1,000 people in his city had died of AIDS. He made the first quilt panel, for his friend Marvin Feldman. In June 1987 he, Mike Smith, Gert McMullin and others started the NAMES Project Foundation.

Each panel is three feet by six feet, about the size of a grave, and each one is made in memory of people who died of AIDS. Many people who died of AIDS had no funeral. Some of their families were ashamed, and workers at many funeral homes and cemeteries refused to handle their bodies.

On the Mall. Volunteers laid 1,920 panels on the National Mall in Washington on October 11, 1987, over an area larger than a football field. They read all 1,920 names aloud. About half a million people came that weekend. By October 1989 the quilt had more than 12,000 panels. In October 1996 the whole quilt covered the Mall for the last time, and about 1.2 million people came to see it.

Fights over public money for art, 1989 and 1990

The National Endowment for the Arts, or NEA, is a federal agency that gives money to artists and museums. In 1987 the photographer Andres Serrano made a picture of a small plastic crucifix, a model of Jesus on the cross, in a glass of his own urine. It won an award of $15,000, paid for in part with NEA money.

Senators Al D'Amato and Jesse Helms attacked the award in 1989. Some members of Congress called art like this obscene, so shocking or indecent that some people want it banned, or blasphemous, insulting to God or religion. Serrano received death threats and hate mail, and he lost grants.

Mapplethorpe. Robert Mapplethorpe was a photographer who died of AIDS on March 9, 1989. A show of more than 150 of his photographs was then touring the country. It held portraits, nudes and pictures of flowers. It also held photographs that showed sex between men openly, some of it sex that involves pain, and two photographs of young children without clothes. At each museum, staff hung the sex pictures in a separate area that children could not enter.

Christina Orr-Cahall, director of the Corcoran Gallery of Art in Washington, cancelled the show in June 1989, because she feared for the NEA's money. Senator Helms then proposed that no NEA money could pay for "obscene" art. For a time, artists who took NEA grants had to sign a promise not to promote obscenity.

A museum on trial. The Mapplethorpe show opened at the Contemporary Arts Center in Cincinnati in 1990. After a campaign by a group called Citizens for Community Values, law officers ordered 400 visitors out of the museum and videotaped the photographs. Government lawyers charged the museum and its director, Dennis Barrie, with obscenity. It was the first time a museum in the United States was put on trial for art it showed. On October 5, 1990, a jury found them not guilty. More than 80,000 people saw the show in Cincinnati.

The NEA chairman, John Frohnmayer, turned down grants to four performance artists, who put on live shows, in June 1990 because of what their work was about. They were Karen Finley, Tim Miller, John Fleck and Holly Hughes. Panels of experts had already approved the grants. The four artists won in court in 1993. In 1998 the justices of the Supreme Court ruled in favor of the way the NEA chose its grants. After that, NEA officials stopped giving most grants to single artists.

Toni Morrison

Who: A novelist and book editor who won the Nobel Prize in Literature.

When and where: Born Chloe Ardelia Wofford on February 18, 1931, in Lorain, Ohio. Syracuse, then New York City. Died in the Bronx on August 5, 2019.

Movie: *Toni Morrison: The Pieces I Am* (2019), a documentary by Timothy Greenfield-Sanders about her life and work.

She found Margaret Garner's story while making *The Black Book*.

Toni Morrison published other Black writers as an editor before she became a famous novelist herself. In about 1965 she began work as an editor for a textbook company owned by Random House, in Syracuse, New York. About two years later she moved to Random House in New York City. There she was the first Black woman senior editor in the fiction department.

The editor. As an editor she published the novelist Gayl Jones, whose writing she had discovered, and the writer Toni Cade Bambara. She also published books by the activist Angela Davis and the boxer Muhammad Ali. She published the poet Henry Dumas, whom a transit officer had shot dead in a New York subway station in 1968. The records do not name the officer.

She and the collector Middleton A. Harris put together *The Black Book*, a collection of old papers, photographs, advertisements and pictures about Black life in America, in 1974.

Beloved. Her first novel, *The Bluest Eye*, came out in 1970. While working on *The Black Book*, she found the story of Margaret Garner. On January 28, 1856, Garner and her family escaped from slavery to a place near Cincinnati, Ohio. When slave catchers came for them, Garner killed her two-year-old daughter, Mary, with a knife rather than see the child returned to slavery. That story became the base for Morrison's novel *Beloved* (1987), which won the Pulitzer Prize in 1988. In 1993 she won the Nobel Prize in Literature.

BY 2000

If you remember one thing: Between 1950 and 2000 the fights over art moved into the open, in museums, in courts and in Congress, and in 1990 members of Congress ordered museums that take federal money to return Native remains and sacred objects.

Left open: how much the museums would really give back under the 1990 law, and how fast.

Next: After 2000 a new federal rule makes museums cover or close their Native displays, and computer programs begin making pictures in the style of living artists.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 24 MINUTES

Almost every adult now carries a camera in a phone, and the old arguments about art have come back over new things: computer programs that copy artists' styles, Native remains in museums, and what national museums may show. After 2022, computer programs could make pictures in the style of living artists, and some of those artists sued the companies that made the programs.

Under a rule that took effect in January 2024, museums must get a Native nation's consent before they show its ancestors' remains or sacred objects.

Two Black artists painted the official portraits of a president and a first lady in 2018. In 2025 one of them cancelled her show at a national museum after officials there questioned one of her paintings. That year officials of President Donald Trump's administration ended many federal arts grants and asked for a review of eight Smithsonian museums.

A camera in every pocket

A smartphone has a camera built in, so anyone who owns one can take a picture at any moment. In a survey taken from February to June 2025, researchers at the Pew Research Center found that 91 out of every 100 adults in the United States owned a smartphone. In Pew's first survey about smartphones, in 2011, only 35 out of every 100 did.

Who is in the picture

Officials of the National Portrait Gallery in Washington unveiled the official portraits of former President Barack Obama and former First Lady Michelle Obama on February 12, 2018. Kehinde Wiley painted the former president, and Amy Sherald painted the former first lady. According to the gallery's staff, Wiley and Sherald were the first African American artists chosen to paint the gallery's official portraits of a president or a first lady.

Wiley painted Obama sitting in front of a wall of leaves and flowers. The chrysanthemums stand for Chicago, the jasmine for Hawaii and the African blue lilies for Kenya, his father's country. Sherald titled her painting *Michelle LaVaughn Robinson Obama*.

The two portraits then toured museums, first the Art Institute of Chicago, and in 2022 Atlanta, Houston, San Francisco and Boston. The Los Angeles County Museum of Art was another stop. At the Art Institute of Chicago, the crowds broke the museum's records for daily attendance again and again, according to the Portrait Gallery.

Kara Walker. Kara Walker was born in Stockton, California, on November 26, 1969. She cuts figures out of black paper and sets them up in scenes, as big as a room, about slavery in the South. In 1997, when she was 28, she won a MacArthur Fellowship, a large prize of money given to people for creative work. That same year the artist Betye Saar sent letters to about 200 artists and politicians. Saar objected that Walker's work used racist pictures of Black people.

In a 1999 PBS documentary, Saar called the work "revolting and negative" and said it pandered to "the white art establishment," which means it gave those people what they wanted, to win their favor. Other writers call Walker one of the most prominent and praised Black American artists working today.

A sugar sphinx. Inside the old Domino Sugar Refinery in Brooklyn, from May to July 2014, before the building was torn down, Walker showed a huge white figure coated in sugar. It was a sphinx, a creature with a lion's body and a human head, and its face had the features of a Black woman. Fifteen smaller figures stood around it.

She called it *A Subtlety, or the Marvelous Sugar Baby*. Its full title calls it a tribute to "the unpaid and overworked Artisans who have refined our Sweet tastes from the cane fields to the Kitchens of the New World." The unpaid workers in the cane fields were enslaved people.

Amy Sherald

Who: The painter of Michelle Obama's official portrait and of Breonna Taylor, who cancelled her own show at the National Portrait Gallery in 2025.

When and where: Born August 30, 1973, in Columbus, Georgia. Baltimore, then New Jersey from 2018.

She cancelled her own show at the National Portrait Gallery.

Amy Sherald waited tables until she was 38 while she kept painting, and then she painted Michelle Obama's official portrait. She studied painting at Clark Atlanta University, where she finished in 1997, and at the Maryland Institute College of Art in Baltimore, where she finished in 2004. She taught art at the Baltimore City Detention Center.

A new heart. When she was 30, doctors found that she had congestive heart failure, which means her heart could not pump blood well enough. On December 18, 2012, when she was 39, she had a heart transplant, an operation that gave her the heart of a person who had died.

The portrait contest. In 2016 she won the National Portrait Gallery's portrait contest with a painting called *Miss Everything (Unsuppressed Deliverance)*. She was the first woman and the first African American to win it. Two years later, gallery officials unveiled her portrait of Michelle Obama. In 2018 she moved from Baltimore to New Jersey.

Breonna Taylor. Police officers in Louisville, Kentucky, forced their way into Breonna Taylor's apartment on March 13, 2020, with a warrant to search for drugs. Taylor was a Black woman. Her boyfriend fired one shot, the officers fired 32, and a shot by officer Myles Cosgrove killed her. No officer was charged with killing her. One officer, Brett Hankison, whose shots hit no one, was later convicted in federal court of using too much force.

For the September 2020 cover of *Vanity Fair*, Sherald painted Taylor's portrait. The Smithsonian's National Museum of African American History and Culture and the Speed Art Museum in Louisville bought the painting together.

The cancelled show. A large show of Sherald's work, *American Sublime*, hung at the San Francisco Museum of Modern Art and at the Whitney Museum of American Art in New York in 2024 and 2025. It was due at the National Portrait Gallery in September 2025.

Officials at the gallery, whom the reports do not name, raised "concerns" about one painting, *Trans Forming Liberty*. It shows a transgender woman, someone whose sense of being a woman is different from the sex written down at birth, in the pose of the Statue of Liberty. The officials talked about taking the painting out of the show.

Sherald cancelled the show on July 24, 2025. "I cannot in good conscience comply with a culture of censorship, especially when it targets vulnerable communities," she said. In a statement, Smithsonian officials said they had proposed adding a video to explain the painting. The Baltimore Museum of Art showed *American Sublime* instead, from November 2, 2025, to April 5, 2026.

Answering the Confederate statues

Delegates from seven Southern states that had left the United States met in Montgomery, Alabama, in February 1861 and set up the Confederate States of America, called the Confederacy. Its leaders then fought the United States in the Civil War to keep slavery.

Rumors of War. A show of the painter Kehinde Wiley's work opened at the Virginia Museum of Fine Arts in 2016. While he was there, he saw the Confederate statues on Monument Avenue in Richmond, Virginia. He then made *Rumors of War*, a bronze statue of a young Black man in jeans and sneakers riding a horse. The pose copies the statue of the Confederate general J. E. B. Stuart on Monument Avenue. It stands more than 27 feet tall.

It was first shown in Times Square in New York in September 2019. On December 10, 2019, it was unveiled outside the Virginia Museum of Fine Arts in Richmond, where it stays. Museum staff estimated the crowd at more than 5,000 people. Work by Wiley is also in the Freedom Monument Sculpture Park in Montgomery, Alabama, which opened on March 27, 2024.

Charlottesville. A bronze statue of the Confederate general Stonewall Jackson, made by Charles Keck in 1921, stood in Charlottesville, Virginia, for 100 years. At a rally in Charlottesville called Unite the Right, on August 12, 2017, James Alex Fields Jr. drove his car into people protesting against the rally. He killed Heather Heyer, who was 32. City workers took the Jackson statue down on July 10, 2021, along with a statue of Robert E. Lee.

The members of the City Council voted, all in favor, to give the Jackson statue to The Brick, an art gallery in Los Angeles. Kara Walker cut the bronze apart and joined the pieces into a new shape, which she finished in 2023. She called it *Unmanned Drone*. The Museum of Contemporary Art in Los Angeles bought it in February 2026. In October 2023 members of the Jefferson School African American Heritage Center melted down the Lee statue, in a project called Swords into Plowshares.

MONUMENTS. The Museum of Contemporary Art and The Brick showed ten statues that had been taken down from public places, most of them Confederate, in a show called *MONUMENTS*, from October 23, 2025, to May

3, 2026. New works by living artists stood beside them, and Kara Walker helped choose the works.

The oldest statue in the show was an 1887 figure of Roger B. Taney. As chief justice, the head judge of the Supreme Court, he wrote the Dred Scott decision of 1857, which held that Black Americans were not and could never be citizens. Hamza Walker, the director of The Brick, said the works "address the questions of who we want to be as a nation, and who and what is worth remembering, let alone celebrating."

Street murals after 2020

A Minneapolis police officer, Derek Chauvin, murdered George Floyd on May 25, 2020, by kneeling on his neck for more than nine minutes. In the weeks after the murder, people painted words and portraits on walls, on streets and on the plywood boards nailed over shop windows. In 2021 a jury convicted Chauvin of murder.

A team at the University of St. Thomas in St. Paul, Minnesota, led by the professors Heather Shirey, Todd Lawrence and Paul Lorah, began recording this art in early June 2020, from small stickers to large murals. Some of the painted boards were taken down, stored and later shown in exhibits.

Black Lives Matter Plaza. Washington's mayor, Muriel Bowser, had the words "Black Lives Matter" painted across two blocks of 16th Street in early June 2020, days after federal officers used tear gas on protesters in Lafayette Square near the White House. The yellow letters were 48 feet wide. She renamed the spot Black Lives Matter Plaza. Keyonna Jones, one of the artists who painted it, said, "We are saying it loud. We are here." According to NPR, the whole project cost more than $4 million.

Representative Andrew Clyde of Georgia introduced a bill in early March 2025 to cut federal money to the city unless it removed the words and renamed the spot Liberty Plaza. Bowser had earlier called the mural permanent. Now she announced it would go: "now we can't afford to be distracted by meaningless congressional interference." Workers of the District Department of Transportation began tearing it out on March 10, 2025.

BY 2025: Kehinde Wiley's *Rumors of War* stood in Richmond, Kara Walker had cut a Confederate general's statue apart, and workers were tearing out the painted words on 16th Street in Washington.

What museums hold, and what goes back

Officials of the Interior Department announced new rules for NAGPRA, the 1990 law on returning Native remains and sacred objects, on December 6, 2023. The rules took effect on January 12, 2024. A museum must now get the consent of the Native nation, or of the dead person's descendants, before it shows Native human remains or sacred objects. The same consent is needed before staff study them or let others get at them.

These remains and objects had been taken from Native graves and lands in earlier years, by men such as the diggers at Mound City in 1846 and at Spiro in the 1930s.

Halls closed. Museum leaders closed or covered Native displays in January 2024. Sean Decatur, president of the American Museum of Natural History in New York, closed its Eastern Woodlands and Great Plains halls on January 27, 2024, and covered seven more cases. He wrote to his staff that the halls came from "an era when museums such as ours did not respect the values, perspectives, and indeed shared humanity of Indigenous peoples."

About 500,000 children visit that museum each year on school or camp trips. In October 2023 museum officials had said that about 26 out of every 100 of the 12,000 human remains the museum held were Native American.

Staff at the Field Museum in Chicago, the Cleveland Museum of Art and the Metropolitan Museum of Art covered cases or took objects down. Harvard's Peabody Museum closed most of its floors on January 16, 2024, while its staff asked Native leaders which objects to remove, and they took down nearly 40. No one has published a count of every museum that did the same.

Fines. According to *The Art Newspaper*, from 1990 to early 2024 museums paid less than $60,000 in all in fines for breaking NAGPRA, and those fines came from 20 museums. Kelly Applegate, of the Mille Lacs Band of Ojibwe,

wrote to the Interior Department that museums had used the law's wording "to not give complete information about the entirety of their collections."

The count. The latest federal count comes from the National Park Service, in a report published on May 29, 2026. Since 1990, museums and federal agencies have reported holding the remains of 222,824 Native people. For 142,389 of them, officials have published a notice naming the nation or the family with the right to them. That notice is a legal step, and it does not mean the person's body has gone home.

As of September 30, 2025, the remains of 80,435 people had not yet gone through those legal steps. They were held by 381 museums and 104 federal offices. The report states that each year museums find and report remains they had never listed before. As of September 2026, the 2024 rule was still in force.

Dave's jars. Some returns fall outside NAGPRA. The Museum of Fine Arts in Boston gave the descendants of David Drake, the enslaved potter and poet, ownership of two jars he made in 1857, on October 29, 2025. The museum's officials said Drake "was not permitted to possess the jars and did not receive remuneration for them," which means he was not paid. The jars had been sold for the profit of his enslaver, Lewis J. Miles.

The family kept one jar and lent it back to the museum, and museum officials bought the other one from them. On that second jar, called the Poem Jar, Drake wrote: "I made this Jar = for cash / Though its called Lucre trash" (lucre is an old word for money).

Jeffrey Gibson

Who: A painter and sculptor, a member of the Mississippi Band of Choctaw Indians and of Cherokee descent, the first Native artist to represent the United States alone at the Venice Biennale.

When and where: Born March 31, 1972, in Colorado Springs, Colorado. Grew up in North Carolina, New Jersey, West Germany and South Korea. Lives near Hudson, New York.

In 2024 his work alone filled the United States pavilion in Venice.

Jeffrey Gibson was the only artist shown in the United States Pavilion at the Venice Biennale in 2024. The Biennale is an international art show held in Venice, Italy, where each country shows its artists in its own building, called a pavilion. According to SITE Santa Fe, one of the show's sponsors, he was the first Native artist to represent the United States there alone.

His parents' schools. Both of Gibson's parents had attended boarding schools as children. At the federal boarding schools for Native children, staff had for many years cut the children's hair, taken away their clothes and forbidden them to speak their own languages.

London. He studied painting at the School of the Art Institute of Chicago and at the Royal College of Art in London. The Mississippi Band of Choctaw Indians paid for his study in London. "My chief felt that me going there, being a strong artist, made him stronger," he said.

His paintings and sculptures use bright color, detailed patterns and written words. According to the Portland Art Museum, he mixes American, Native and queer history with music and popular culture, queer being a word many gay and lesbian people use for themselves. He won a MacArthur Fellowship in 2019.

> **Venice and after.** His Venice show ran from April 20 to November 24, 2024. He named it *the space in which to place me*, after a poem by the Oglala Lakota poet Layli Long Soldier. The same sponsor says it was also the first United States pavilion organized by a Native curator, a museum worker who chooses the art for a show and plans it. She was Kathleen Ash-Milby of the Portland Art Museum.
>
> Four large sculptures by Gibson, of a deer, a coyote, a squirrel and a hawk, stood on the front of the Metropolitan Museum of Art in New York from September 12, 2025, to June 9, 2026. On April 9, 2026, the Obama Foundation said it had asked him to make a wall of 17 round prints for the Obama Presidential Center.

Prices, and a picture that is only a file

The highest prices paid for paintings by American artists have reached hundreds of millions of dollars. A buyer paid $195 million at Christie's auction house in New York on May 9, 2022, for Andy Warhol's 1964 portrait of Marilyn Monroe, *Shot Sage Blue Marilyn*. The money went to a charity for children in Zurich, Switzerland.

The Associated Press reported that no work by an American artist had ever sold for more at auction, and as of September 2026 none had. Sixty years before that sale, an art dealer had bought all 32 of Warhol's soup-can paintings for $1,000.

Paintings by Basquiat and Pollock have also sold for more than $100 million. The Warhol beat the $110.5 million paid in 2017 for a 1982 painting of a skull by Jean-Michel Basquiat, the painter who had once written graffiti on Manhattan walls. In May 2026 a painting by Jackson Pollock, *Number 7A, 1948*, sold for $181.2 million, according to the *Robb Report*.

Paintings by women have sold for much less. Georgia O'Keeffe's *Jimson Weed/White Flower No. 1* sold for $44.4 million in 2014. According to the Associated Press, that was the most ever paid at auction for a work by a woman until November 20, 2025, when a painting by the Mexican painter Frida Kahlo sold for $54.7 million.

A picture that is only a file. A digital picture by Mike Winkelmann, who calls himself Beeple, sold at Christie's on March 11, 2021, for more than $69.3 million, according to Al Jazeera. It is a collage of 5,000 pictures he made, one each day, starting on May 1, 2007. The buyer, Vignesh Sundaresan, a programmer based in Singapore, paid in Ether, a kind of digital money.

What Sundaresan bought was a digital token, a record kept on a network of computers that names one person as the owner of a file. With it he got the right to show the picture. He did not get the copyright, the legal right to copy the work and sell copies.

Sundaresan and Beeple also both owned part of a different set of tokens, tied to other Beeple works. The price of those tokens rose to its highest during the sale and then fell sharply, and some people called the sale a publicity stunt.

Pictures made by computer programs

Anyone could type a few words into a website and get a picture back by the summer of 2022, as NPR reported.

The lawsuit. Kelly McKernan, Sarah Andersen, Karla Ortiz and other artists sued Stability AI, the company behind the program Stable Diffusion, along with Midjourney and the art website DeviantArt, in January 2023. Accounts give the date as January 12 or January 13.

In their lawsuit, the artists say the companies built these programs by feeding them huge collections of pictures gathered from the internet. They say the collection behind Stable Diffusion held more than five billion pictures, copied without asking the people who made them. These are the artists' claims, and no court has yet ruled on whether they are true.

Judge William Orrick in San Francisco let the artists' copyright claims go forward on August 12, 2024. As of September 2026, the case was still before him, and no trial had been held, according to the court's record of the case.

No human author. The computer scientist Stephen Thaler asked the US Copyright Office on November 3, 2018, to register a picture made by his computer program, with the program named as the only author. On August 12, 2019, officials refused, because the picture had no human author.

The officials relied in part on an 1884 Supreme Court case. In it the justices decided that a photograph of the writer Oscar Wilde counted as a work of art, because it came from the photographer's own ideas, his "intellectual invention." A picture with no person's ideas behind it, the officials reasoned, had no author who could own it.

Judges on a federal appeals court agreed with the refusal in 2025. On March 2, 2026, the justices of the Supreme Court declined to hear Thaler's appeal. As the law stood in 2026, according to the National Constitution Center, no one could hold the copyright to a picture made by a program with no human author.

Kelly McKernan

Who: An illustrator and painter, one of three artists who sued the makers of picture-making programs in January 2023.
When and where: Born 1986. Nashville, Tennessee.

People typed "in the style of Kelly McKernan" more than 12,000 times.

Kelly McKernan was one of three artists who sued the companies behind picture-making programs in January 2023. McKernan uses the words they and them. They live in Nashville, Tennessee, where they teach at the Nossi College of Art and Design. McKernan is a single parent.

Twenty years online. McKernan joined DeviantArt, a website where artists share their work, as a high school student in 2002. For about 20 years they posted paintings there, "not for money," and built a following. In January 2023 McKernan told NPR: "I almost barely make rent most months. I will spend, you know, 30 hours on a painting, and I won't see any money from that until it sells."

Their name on someone else's picture. People using picture programs had typed the words "in the style of Kelly McKernan" more than 12,000 times. Some people sold the results on websites such as

> Redbubble, with McKernan's name attached. "There's more and more images with my name attached to it that I can see my hand in, but it's not my work," McKernan said.
>
> **In court.** Judge William Orrick dismissed most of the claims in the artists' case on October 30, 2023, and allowed them to rewrite them. Cleary Gottlieb, a law firm that represents Midjourney, wrote a report on the ruling. According to that report, he dismissed McKernan's copyright claims because McKernan had not registered those paintings with the Copyright Office. In 2023 *Time* magazine named McKernan to its list of the 100 most influential people in artificial intelligence. By September 2026 McKernan's name was no longer on the list of artists suing.

Books

More writers now publish their own books, without a publishing company. Every book for sale carries an identifying number called an ISBN, and in the United States a company called Bowker hands these numbers out. By Bowker's count, reported by the publishing writer Jane Friedman, writers who published their own books took out numbers for about one and a half times as many new books in 2021 as in 2018.

Spending on audiobooks grew too. Americans spent $2.43 billion on them in 2025, 9 percent more than in 2024, according to a survey for the Audio Publishers Association.

Books taken off the shelves. School and library officials removed or restricted thousands of books in the mid-2020s. Two groups count this, and their numbers differ because they count different things. PEN America, a group of writers that defends free expression, counts each time school officials remove or restrict a book. It counted 10,046 in the 2023-24 school year and 6,870 in 2024-25.

The American Library Association counts attempts it hears about to remove books from school, public and college libraries, listed by title. It counted 4,235 different titles in 2025, and it found that 92 out of every 100 of those attempts were started by "pressure groups, government officials and decision makers."

Which books, and why. The books PEN America found removed most often included *A Clockwork Orange*, a 1962 novel by Anthony Burgess, and *Sold*, a 2006 novel by Patricia McCormick about a girl sold into sexual slavery in India. PEN America says that books showing gay, lesbian or transgender people were often called "sexually explicit," among them *And Tango Makes Three*, a picture book about two male penguins at New York's Central Park Zoo who raise a chick together.

In July 2025 federal officials removed nearly 600 titles from the schools the Defense Department runs on military bases. According to PEN America, those books did not fit President Trump's orders on diversity, race and "gender ideology extremism."

Wilder's name. Laura Ingalls Wilder's Little House books, about her family's life as settlers on the frontier, came out from 1932 to 1943. The board of the Association for Library Service to Children took her name off its award for children's books on June 23, 2018. The award had carried her name since 1954.

The board members wrote that her books include "expressions of stereotypical attitudes inconsistent with ALSC's core values," a stereotype being an unfair, fixed idea about a whole group of people. They acted after critics pointed to how her books show Native and Black people, and after a group that included the American Indian Library Association reviewed the award.

Wilder described one place in her 1935 book *Little House on the Prairie* as somewhere "there were no people. Only Indians lived there." In that line, the Native people who lived there do not count as people. Later printings changed the line. Several characters in the Little House books say that "the only good Indian is a dead Indian." The prize is now called the Children's Literature Legacy Award.

Audubon's name. The members of the board of the National Audubon Society voted in March 2023 to keep the name of John James Audubon, who painted *The Birds of America* and who had enslaved people. "The name has come to represent not one person, but a broader love of birds and nature," said

the board chair, Susan Bell. Three board members resigned. The leaders of the local Audubon groups in Chicago, Seattle, Portland and Washington, D.C., had already decided to drop the name.

Public money and national museums, 2025 and 2026

White House officials sent Congress a budget for 2026 on May 2, 2025, that would have shut down the National Endowment for the Arts. The same day, NEA staff emailed arts groups across the country that their grants were withdrawn or ended because the projects fell outside the President's priorities. On May 5 about a dozen senior NEA staff members resigned.

Members of Congress did not close the agency. They gave it $207 million for 2026, the same amount as in 2024 and 2025, according to the Congressional Research Service. On April 3, 2026, White House officials proposed shutting the NEA down again, for 2027. As of September 2026, members of Congress had not decided.

The Smithsonian. President Donald Trump signed an order titled "Restoring Truth and Sanity to American History" on March 27, 2025. It stated that the Smithsonian Institution had "come under the influence of a divisive, race-centered ideology."

Trump announced on May 30 that he had fired Kim Sajet, who had directed the National Portrait Gallery for 12 years. He called her a "highly partisan person." He named no law under which he could fire her, and she kept coming to work. The members of the Smithsonian's Board of Regents, the group that governs it, then said that all decisions about staff belonged to the Smithsonian's head, Lonnie Bunch. Sajet resigned on June 13, 2025. She told her staff that her presence had become a distraction from the Smithsonian's mission.

Three White House officials, Lindsey Halligan, Vince Haley and Russell Vought, wrote to Bunch on August 12, 2025. They asked for a review of eight Smithsonian museums, among them the American Art Museum and the Portrait Gallery. They told the museums' leaders to begin changing their exhibits within 120 days. On July 24, 2026, Trump signed another order about the Smithsonian, aimed at the National Museum of American History.

BY TODAY

If you remember one thing: Since 2000 artists have sued over programs built from their pictures, museums have needed Native consent to show remains, and officials have pushed national museums to change what they show.

- January 12, 2024: a federal rule takes effect that requires a Native nation's consent before museums show its ancestors' remains or sacred objects.
- July 24, 2025: Amy Sherald cancels her show at the National Portrait Gallery.
- October 29, 2025: the Museum of Fine Arts in Boston gives Dave's descendants ownership of two of his jars.

THE THREE QUESTIONS, ANSWERED

1. **How did enslaved artists make art, and who got paid for it?** They painted, cut silhouettes, turned pots and wrote poems while other people held them as property, and the people who held them got the money. Dave's jars were sold for the profit of Lewis J. Miles, and Moses Williams learned to cut silhouettes and build exhibits in Peale's museum while Peale held him enslaved. Henry Barnes took Prince Demah to London for painting lessons, and Dave cut verses into his jars in years when it was a crime for him to learn to read.
2. **Who decided what counted as art, and who got to see it?** Mostly people with money or power: the Met's trustees, who kept it shut on Sundays until 1891, a teacher in Santa Fe who taught one "authentic" Native style, and a congressman who called a touring show of modern paintings trash. Artists pushed back, from Oscar Howe's letter in 1958 to Amy Sherald cancelling her show in 2025.
3. **Why are museums giving back things they once took?** Diggers took objects and human remains out of Native graves, at

Mound City in 1846 and at Spiro in the 1930s, and sold many of the objects. Under a 1990 law, NAGPRA, museums that take federal money must return Native remains and sacred objects, and since 2024 they need a nation's consent even to show them.

What changed: The chapter begins with potters and carvers whose names no record keeps and ends with artists suing over computer programs that copy their styles and attach their names.

FIVE DATES TO KEEP

1585: John White paints the town of Secotan, on the coast of what is now North Carolina.

1773: Phillis Wheatley's *Poems* comes out in London while she is enslaved in Boston.

1857: Dave cuts "I made this Jar = for cash" into the jar now called the Poem Jar.

1936: Dorothea Lange photographs Florence Owens Thompson at a pea pickers' camp in Nipomo, California.

November 16, 1990: President George H. W. Bush signs NAGPRA.

NOT KNOWN: No surviving record names the people who made the painted bowls, stone pipes and copper plates of this land before 1500.

Where to go: The Museum of Fine Arts in Boston holds the two jars Dave made in 1857, one bought from his descendants and one lent by them.

Next: Chapter 33, Music. It asks the same questions about songs: who made them, where they came from, and who got paid.

Chapter 33: Music

CHAPTER 33 OF 37 · MUSIC · 10 ERAS · ABOUT 135 MINUTES

For most of American history, the people who made the music were often not the people who got paid for it.

Willie Mae "Big Mama" Thornton, a blues singer from Alabama, recorded "Hound Dog" on August 13, 1952, and her record went to No. 1 on the rhythm and blues chart. Don Robey, who owned her record company, put his own name on the copyright form as one of the song's writers. Each writer named on that form has a right to part of the money the song earns.

Four years later Elvis Presley recorded the same song and sold about 10 million copies. "I got one check for $500 and never saw another," Thornton said. She died poor in a Los Angeles boarding house in 1984.

This chapter follows American music from wooden flutes made in the 600s to songs streamed over the internet. In every era, look first at who made the music: Native singers, enslaved fiddlers, New England singing teachers, blues singers in Mississippi, a teenage DJ in the Bronx. From the 1770s on, the records show who was paid, so look at that too.

Again and again the money and the credit went to someone else: a white stage performer who copied a Black man's song, a publisher who put his own name on a song, a company that paid a set fee and kept the rest. Watch, too, for the people who tried to stop music, from lawmakers who banned drums to officials who banned Native dances.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. Where did the banjo and the blues come from?

2. Why did so many musicians make hit songs and still die poor?
3. Who tried to stop people from playing their own music, and why?

Five minutes? Read "Drums at Stono, and the 1740 law against drums and horns" in 1700 to 1750, then "Records for Black buyers, and who was paid, 1920 to 1938" in 1900 to 1950.

Can skip: "Jenny Lind's tour, 1850 to 1852", "Concerts for a ticket, and a fiddle for a prize", "The Kennedy Center, 2025 and 2026". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 6 MINUTES

Native nations in this land made music for nearly every part of life, and they passed their songs on by teaching them. Their songs were for ceremonies, healing, work, games, courting a sweetheart, storytelling, hunting, farming, war and social dances. None of the nations north of Mexico had a way of writing tunes down, so no singer's name and no song's name from these centuries survives in writing.

Some of the instruments survive. Archaeologists, scientists who dig up and study what people left behind, have found wooden flutes and metal-covered panpipes more than a thousand years old. Onondaga and Tlingit singers today still follow rules about where a song may be sung and who owns it.

How old are the oldest flutes?

The oldest known wooden flutes in North America were made between the years 620 and 670. Ancestral Pueblo people, the ancestors of today's Pueblo peoples, made them. The archaeologist Earl H. Morris found them in 1931, when he explored 15 caves in the Prayer Rock district of northeastern Arizona, in what is now the Navajo Nation. In the largest cave he found four wooden flutes. That cave is now called Broken Flute Cave.

The flutes. Each one is a tube of box elder wood between about 68 and 74 centimeters long, a little over two feet. The finger holes are almost the same on each flute, so the maker planned which notes the flute would play. Red, blue and black feathers were tied to one end. Two of the flutes lay broken in trash above a grave. The other two lay whole under a dirt floor, tied together. The Arizona State Museum in Tucson holds them today.

The panpipes. Farther east, people of the Hopewell culture lived in the woodlands of eastern North America between the years 1 and 400. "Hopewell" is a name archaeologists gave them, not the name of a nation. In southern Ohio they built earthworks, mounds and long banks of piled earth. A Hopewell panpipe is a row of three or four tubes of cane, reed or bone, held together by a metal jacket. A player blows across the tubes, and each tube makes a different note.

Almost every Hopewell panpipe that archaeologists have found was buried with the dead. They have found 105, from Wisconsin and Ontario down to the Gulf Coast, and very few came from places where people lived. Most of the metal jackets are copper. The rest are silver, copper covered with silver, or iron.

NOT KNOWN: Nobody knows what tunes anyone played on these flutes and panpipes.

Drums, rattles, and songs that belong to someone

Onondaga singers today play a water drum and a horn rattle. The Onondaga Nation, in what is now central New York, is one of the Haudenosaunee nations. The water drum is usually made of cedar, with deer hide stretched over the top. The horn rattle is a dried, hollowed animal horn with seeds inside. A rattle made of turtle shell is used only in a few ceremonies.

The Onondaga keep two kinds of songs. Social songs can be sung anywhere. Songs for ceremonies are sung only in the longhouse, the building where ceremonies are held, and the public may not watch them.

Songs a clan owns. Among the Tlingit of what is now southeast Alaska, a song can belong to a clan, a large family group that traces itself back to shared ancestors. A clan owns its songs, its stories, its crests and the clothing its members wear in ceremonies. The Tlingit word for these owned things is *at.óow*, "something owned or purchased."

Some songs and stories tell of a clan's losses in a certain place. In the Tlingit view, those songs are the clan's deed to that place, the proof that the place is theirs.

KNOWN:	These rules come from the nations' own accounts today.
NOT KNOWN:	No written record from before 1500 describes them.

R. Carlos Nakai

Who: A flute player from a Navajo (Diné) and Ute family, whose records were the first of the traditional Native flute to sell 500,000 copies.

When and where: Born April 16, 1946, in Flagstaff, Arizona. Still performing in 2026.

A car crash ruined his trumpet playing, and someone gave him a flute.

R. Carlos Nakai first studied the trumpet. A car accident ruined the way he shaped his lips against the trumpet's mouthpiece. Someone gave him a cedar flute as a gift and challenged him to master it. His family is Navajo and Ute, and his father, Raymond Nakai, was chairman of the Navajo Nation from 1963 to 1970.

The records. Nakai has recorded more than forty albums with Canyon Records in Phoenix, Arizona, starting with *Changes* in 1983. His albums *Canyon Trilogy* and *Earth Spirit* each sold 500,000 copies, and each earned a gold album award from the RIAA, the music business group that gives sales awards. They were the first recordings of the traditional Native flute to sell that many. *Canyon Trilogy* kept selling. In 2014 the RIAA named it a platinum album, its award for one million copies.

He was nominated for ten Grammy awards between 1994 and 2013. Nakai calls himself "an iconoclastic traditionalist," someone who breaks with old ways and keeps them at the same time. His concert calendar for 2026 lists shows in Utah and Colorado in September and more in October and November.

Why this story is here: Flutes survive from before 1500, but no flute player's name does, so this era's story belongs to a living player of the traditional cedar flute.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 4 MINUTES

The first European music on record in what is now the United States is church singing and soldiers' trumpets, and Native people watched and listened. It comes from three places: the coast of Florida, the coast of California, and New Mexico from 1598. Spanish priests sang Latin hymns, songs that praise God, when they came ashore and when they held services. French and English Protestants, Christians who had broken away from the Catholic Church, sang psalms, songs from the Bible.

Europeans wrote down a few of the Native listeners' reactions. No record from the 1500s names a mission choir or a Native singer trained in church music. The first ones on record come after 1598.

Hymns sung at the landings, Florida, 1564 and 1565

French Protestants called Huguenots built Fort Caroline in 1564, near the mouth of the St. Johns River and today's Jacksonville, Florida. They built it on the land of the Timucua people. Their leader, René de Laudonnière, wrote that on June 30 he ordered his men to sing aloud on the beach to thank God for their safe arrival. The historian Francis Parkman wrote in 1865 that on the morning they began the fort, the men sang a psalm before they started work.

St. Augustine. The Spanish commander Pedro Menéndez de Avilés landed at Seloy, a Timucua town, on September 8, 1565, and founded St. Augustine. His chaplain, the priest who served his soldiers, was Francisco López de Mendoza Grajales, and the chaplain wrote an account of that day. He wrote that Menéndez came ashore "to the sound of trumpets and salutes of artillery," meaning cannons fired as a greeting.

The chaplain walked to meet Menéndez carrying a cross and singing the *Te Deum*, a Latin hymn of praise to God. "A large number of Indians watched these proceedings and imitated all they saw done," the chaplain wrote.

The killings. Menéndez's soldiers captured Fort Caroline on September 20, 1565, and killed most of the Frenchmen there. In a letter of October 15, Menéndez wrote that 132 of them had "their throats cut." He gave his reason in

the same letter: "they spread the Lutheran sect," meaning the Protestant faith. When Menéndez came back to St. Augustine, the chaplain and his companions walked ahead of him in a line, "singing the Te Deum laudamus."

In the weeks after, shipwrecked Frenchmen surrendered to Menéndez at a place called Matanzas. His soldiers killed 111 of them. On October 12 they killed 134 more who had surrendered with their leader, Jean Ribault.

Psalms at Drake's landing, California, 1579

The English captain Francis Drake stopped on the California coast in June 1579 to repair his ship, probably at the place now called Drake's Bay. Coast Miwok people lived along that shore. Drake's men stayed for about five weeks. They held prayers, sang psalms and read from the Bible, and Miwok people came to watch.

"Gnaah." A book about the voyage, *The World Encompassed by Sir Francis Drake*, states that the Miwok "tooke such pleasure in our singing of Psalmes" that each time they came, "their first request was Gnaah." That word meant they wanted the Englishmen to sing. The anthropologist Robert Heizer, a scientist who studied people and the ways they live, wrote in 1947 that *gnaah* seems to be a Coast Miwok word.

Who wrote the book. It came out in London in 1628. Drake's nephew, also named Francis Drake, put it together. Its title page states that it was collected "out of the Notes of Master Francis Fletcher," the preacher on the voyage, and checked against other notes made on the same voyage. Heizer wrote that who wrote it is uncertain.

New Mexico, 1598

Juan de Oñate led Spanish colonists north into New Mexico in 1598 to start a colony on the lands of the Pueblo peoples. Pueblo people then began to hear Spanish military music and to sing Catholic church songs, some of them in parts, with different voices singing different notes at the same time. The music historian John Koegel dates this to "the Oñate expedition and its aftermath," meaning the journey and the years after it.

The earliest music teachers there that Koegel names are two friars, Catholic men who lived by the rules of a religious order and put the title Fray in front of their names. Fray Bernardo de Marta came in about 1605. Fray Cristóbal de Quiñones died in 1609.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 5 MINUTES

Colonists in the 1600s brought their church singing with them, and in New Mexico Spanish friars and officials punished Pueblo people for keeping their own ceremonies. In New England, congregations, the people who worship together at a church, sang psalms from a book printed in Massachusetts in 1640. For most of the century each printing of that book held only the words, with no musical notes.

In New Mexico, the friar Cristóbal de Quiñones put an organ in the church at San Felipe Pueblo and trained Pueblo singers. Later friars banned Pueblo religious ceremonies, and a Spanish governor had 47 Pueblo religious leaders arrested in 1675. Three were hanged. In Virginia, the crew of an English ship landed about twenty captured Africans in 1619. Enslaved Africans made music there through the century, but nobody who wrote in those years left a description of it that survives.

Singing without notes: the Bay Psalm Book and lining out

Stephen Daye printed *The Whole Booke of Psalmes Faithfully Translated into English Metre* at Cambridge, Massachusetts, in 1640. People today call it the *Bay Psalm Book*, and it was the first book printed in British North America. Richard Mather and other New England ministers turned the Psalms of the Bible into English verse with a steady beat, so that a congregation could sing them. Eleven copies of that first printing survive.

No notes. The 1640 book had no printed music. It lists tunes by name, tunes already printed in English psalm books. The ninth edition, printed in 1698, was the first to include music: 13 tunes taken from a music book by an Englishman, John Playford.

Lining out. A gathering of ministers at Westminster, in London, wrote a guide for church services in 1644. Where many people in a congregation could not read, the guide says, the minister or a person he chose should "read the psalm, line by line, before the singing thereof."

This way of singing is called lining out. A leader read or sang one line, and the congregation sang it back. Colonists from England and Scotland brought lining out to America, and members of Old Regular Baptist churches in the United States still sing this way today.

Fray Cristóbal de Quiñones

Who: A Franciscan friar who built the church at San Felipe Pueblo, put an organ in it, and trained Pueblo singers.

When and where: San Felipe Pueblo, a Keres-speaking town in New Mexico. Died in 1609.

He put an organ in a Pueblo church and trained its singers.

Fray Cristóbal de Quiñones belonged to the Franciscans, a Catholic religious order. He was the leader of the Franciscan friars in New Mexico. San Felipe is a Pueblo town whose people speak the Keres language. Quiñones learned Keres and baptized many Native people in the New Mexico missions, making them members of the Christian church in a ceremony with water. At San Felipe he built the church, a house for the friars, a pharmacy and a place to care for the sick.

What one writer recorded. Agustín de Vetancurt, a Franciscan writer in Mexico, described his work in a book of the lives of Franciscan friars, printed in the 1690s. Vetancurt wrote that Quiñones "installed an organ to enrich the Divine Service," meaning the church service, "and encouraged music-making by the skilled singers" he had trained.

Quiñones died in 1609. The music historian John Koegel calls him "perhaps the first trained teacher of European music" to live in what is now the US Southwest. Koegel gives neither his birthplace nor the year he came to New Mexico.

NOT KNOWN: Vetancurt tells only the friar's side, and his account does not record what the singers of San Felipe thought of the music they were taught.

Church music and banned ceremonies in New Mexico

Other friars taught music in more Pueblo towns. Fray Bernardo de Marta came to New Mexico in about 1605, taught Pueblo people in many towns to sing and to play European instruments, and died in 1635. By 1634 Fray Roque de Figueredo was teaching Zuni boys to sing in parts.

The ban. A Spanish church leader and a Spanish governor punished Pueblo people for keeping their own religion. The Franciscan leader Alonso de Posada forbade Pueblo ceremonies from 1656 to 1665. He ordered friars to invade the sacred kivas, the rooms where Pueblo people held their ceremonies. There the friars burned the masks and took or destroyed sacred objects.

The arrests. The governor, Juan Francisco Treviño, had 47 Pueblo religious leaders arrested in 1675 and charged with sorcery, using magic to do harm. Four were sentenced to be hanged. Three were hanged, and one killed himself. The rest were shamed and whipped in public, then put in prison. The records do not name the men who passed the sentences or carried out the hangings and the whippings. Pueblo people went to Santa Fe and demanded that the prisoners be freed, and Spanish officials let them go.

Po'pay. One of the whipped men was Po'pay, a leader from Ohkay Owingeh. On August 10, 1680, Po'pay led the Pueblo nations as they rose up together against the Spanish. The Pueblo fighters killed about 400 Spanish settlers, 21 of them Franciscan friars, and drove the Spanish out of New Mexico for 12 years.

What arrived with enslaved Africans

The crew of an English ship called the *White Lion* landed "20. and odd Negroes" at Point Comfort, Virginia, in late August 1619. Those are the words of the colonist John Rolfe, and "Negroes" was a word of that time for Black people. The crew had taken these Africans from a Portuguese slave ship. They came from the Ndongo and Kongo region of West Central Africa.

Enslaved Africans made music in the English colonies through the 1600s, but no one who wrote in those years left a description of it that survives. The first clear description of an early banjo comes from the island of Jamaica. An English doctor there, Hans Sloane, wrote in 1687 about an instrument he called a "strum strump."

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 9 MINUTES

Two fights over music ran through these fifty years. In New England, church members argued about singing from written notes, and in South Carolina, lawmakers took drums away from enslaved people. New England ministers began teaching their congregations to read notes around 1720. They started singing schools and printed the first books of music lessons in the colonies.

Boston had a concert for a paying audience by 1731, and a ticket cost five shillings. In Virginia, enslaved Black musicians played the fiddle. Three of them appear in notices their enslavers printed when the men ran away in 1745 and 1746. Enslaved men rose up near the Stono River in South Carolina in 1739, with drums beating. The next year South Carolina's lawmakers banned enslaved people from using drums and horns, and fined any master who let them.

Singing by note and the first singing schools

New England churches still sang by lining out at the start of the 1700s. "By the end of the seventeenth century singing had sunk to a low level in all the colonies," the historian Henry Wilder Foote wrote. In the first 25 years of the 1700s, ministers in New England turned against lining out. They called for "regular singing" instead, which meant singing from written notes.

The Reverend Thomas Symmes of Bradford, Massachusetts, made the case in a booklet of 1720, *The Reasonableness of Regular Singing, or Singing by Note*. He wrote that church singing had got worse because "Singing schools and singing books being laid aside, there was no way to learn." New England had had singing schools in its early days, Symmes wrote, but people had stopped holding them.

The first music books. The Reverend John Tufts of Newbury, Massachusetts, published *An Introduction to the Singing of Psalm Tunes*, the first book of music lessons printed in the English colonies.

No copy of the first printing is known, so its exact title and year are uncertain. The dates given for it run from about 1712 to 1721. Tufts traveled to give talks about singing and to set up singing schools, where a teacher taught a class to read and sing music.

Thomas Walter, a 25-year-old nephew of the Boston minister Cotton Mather, published *The Grounds and Rules of Musick Explained* in 1721, with 24 psalm tunes. James Franklin printed it in Boston. It was the first music in the colonies printed with bar lines, the lines that divide music into equal parts of time. It stayed a favorite for more than forty years and went through six editions.

New singing schools spread in the 1720s. The records that survive do not say where the first one met or what a pupil paid.

The young singers. Young people took up the new singing first. The Boston judge Samuel Sewall wrote in his diary on March 20, 1721, that "Dr. Mather" had preached that night "in the school house to the young musicians." The house was full, Sewall wrote, "and the singing extraordinarily excellent, such as hardly been heard before in Boston."

The fight. Other church members fought the change. In Symmes's town, he reported, "a great part of the town has for near half a year, been in a mere flame about it." He meant that people had been angry and arguing about it for almost six months.

The Reverend Nathaniel Chauncey of Connecticut wrote answers in 1728 to the objections people raised. One objection was that singing by note "leads to the Church of England and will bring in organs quickly." The Church of England was the official church back in England.

The churches in this fight had been started by Puritans, English Protestants who wanted to clear the Church of England of what they saw as leftovers of the Catholic Church. Puritan congregations sang with no instruments at all, because instruments looked to them like Catholic worship. Another objection was only about who liked the change: the new way must be wrong "because the young people fall in with it."

Concerts for a ticket, and a fiddle for a prize

A "Concert of Music" on several instruments was held in Mr. Pelham's great room in Boston on December 30, 1731. An advertisement in the *Boston News-Letter* that month listed it, and a ticket cost five shillings, a quarter of a British pound. It is the earliest advertised concert in Boston that the music historian Oscar Sonneck found. After a concert at Faneuil Hall in 1744, the town's selectmen, the men elected to run the town, received 205 pounds for the poor of Boston.

A fiddle for a prize. A notice in the *Virginia Gazette* of November 26, 1736, listed prizes for a holiday gathering at Page's Warehouse in Hanover County, Virginia, on November 30. One prize was "A fine Cremona Fiddle to be plaid for, by any number of Country Fiddlers." A Cremona fiddle was a violin made in the town of Cremona, in Italy. The races at John Pinkerton's Old Field in Virginia in November 1737 included a fiddling contest.

Fiddles, banjos, and the enslaved musicians who played them

The banjo has West African roots. A 2014 article on the Oxford University Press blog counts more than 60 plucked instruments in West Africa that are likely forerunners of it. The first known mention of a banjo in the mainland colonies is in John Peter Zenger's newspaper, the *New-York Weekly Journal*, in 1736.

Runaway notices. Virginia enslavers put notices in the *Virginia Gazette* when an enslaved person ran away. Each notice described the person's body, clothes and skills, so that strangers could recognize and catch the person. Playing the fiddle was one of the skills these notices listed. The University of Virginia's collection of Virginia runaway notices holds three from before 1751 that name a musician: two men named Tom, and a fiddler named Harry.

Robert Whitfield of Isle of Wight County offered four pistoles, Spanish gold coins used in the colonies, for a young man named Tom, who "plays very well on the Violin." His notice ran in the issue of November 28 to December 5, 1745. In April 1746 John Thornton of Fredericksburg advertised for another man named Tom, about 46 years old, who "plays on the Violin, and is a Sawyer," a man who saws logs into boards.

Harry, a fiddler who ran away, perhaps to his wife, 1746

Who: An enslaved man who played the fiddle. The man who held him put a notice in the newspaper for his capture.

When and where: Near Jamestown, Virginia, March 1746.

He wore a blue greatcoat. His enslaver wanted him whipped.

Harry was an enslaved fiddler who ran away in early March 1746 from the man who held him, near Jamestown, Virginia. Everything known about him comes from one notice in the *Virginia Gazette*, printed between March 20 and 27, 1746. The notice gives him no last name.

Harry was about 35 years old and about 5 feet 7 inches tall, with small eyes and "a very large Beard," and he "plays upon the Fiddle." He left wearing a double-breasted dark cloth coat, two dark cotton jackets, a blue greatcoat and buckskin breeches, which are pants that end at the knee. He had once belonged to Colonel Grymes of Richmond County, Virginia.

The notice. William Newgent signed it, though a later reprint spells his first name James. Newgent guessed that Harry had gone to Richmond County, "where he has a Wife." He offered one pistole for Harry's return. At the end he added: "As he ran away without any Cause, I desire he may be punish'd by Whipping, as the Law directs." Newgent was asking whoever caught Harry to have him beaten with a whip.

NOT KNOWN: The record does not say whether Harry was caught.

Drums at Stono, and the 1740 law against drums and horns

About 20 enslaved men seized weapons near the Stono River, south of Charleston, South Carolina, on September 9, 1739. A report written that year called them "Angola Negroes" and named their leader as a man called Jemmy. They marched south toward Spanish Florida.

More men joined them, "calling out Liberty," the report says, and they "marched on with Colours displayed," meaning flags, "and two Drums beating." When there were sixty to a hundred of them, they stopped in a field and "set to dancing, Singing and beating Drums, to draw more Negroes to them."

The killings. The same report says the rebels killed white men, women and children as they marched. Lieutenant Governor William Bull raised the militia, a force of armed planters, and the militiamen attacked the rebels in the field the same day. The report says the men captured in the field were questioned and then "shot on the Spot," and men who had run back to their plantations were caught there and shot. It does not name who fired.

The report counts about 40 Black people and 20 white people killed. Later counts give about 25 white colonists and 35 to 50 rebels killed. Colonists cut off the heads of rebels and set them on stakes along the main roads as a warning. They put most of the captured rebels to death and sold the survivors to the West Indies.

The law. The men of the South Carolina assembly passed the Negro Act on May 10, 1740. In section 36 they wrote that it was "absolutely necessary to the safety of this Province," meaning the colony, to stop enslaved people from "using or keeping of drums, horns, or other loud instruments."

They gave the reason in the same sentence: such instruments "may call together or give sign or notice to one another of their wicked designs and purposes." They meant that drums and horns could be used to call enslaved people together to rise up.

What the law allowed. A master or an overseer, the man who ran the work on a plantation, paid a fine of ten pounds each time he let enslaved people beat drums, blow horns or gather in public. The lawmakers wrote that enslaved people had to be kept from wandering and meeting at all times, and most of all on Saturday nights, Sundays and holidays. Any master, overseer or other person could seize an enslaved person found off the plantation without a written pass and with no white person along.

If an enslaved man found off the plantation carried a weapon, any master, overseer or other person could take the weapon away, seize him and whip him, even if he carried a pass.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 10 MINUTES

Americans began writing and printing their own music in these years. The names of the Black musicians who played beside them survive mainly in the notices enslavers printed when those musicians ran away. A Boston tanner named William Billings published a book of church songs he had written himself in 1770. By 1800 Americans had published about forty books of church music. During the Revolution, officers used drum beats to tell soldiers when to wake, march and fight, and American writers put new words to old tunes.

Black musicians played fiddles, horns, drums and banjos in Virginia, in Charleston and in New England. Slave traders took one of them, Newport Gardner, from Africa as a boy. He became a music teacher in Newport, Rhode Island, and bought his freedom in 1791. That same year, on the Pacific coast, a man sailing with a Spanish expedition wrote down Tlingit songs in musical notes.

William Billings and the New England singing masters

William Billings, a Boston tanner who turned animal skins into leather for a living, published *The New-England Psalm-Singer* in 1770. A Library of Congress research guide calls it "the first publication consisting of sacred music," meaning music for worship, "composed entirely by a native-born American." Paul Revere is credited with engraving the picture at the front of the book, cutting it into a metal plate so it could be printed.

Billings also taught singing schools. He opened one in Boston with John Barry in 1769, and he taught another in Stoughton, Massachusetts, in 1774. The historian Henry Wilder Foote counted about forty American books of church music published before 1800, most of them printed in Boston.

William Billings

Who: A tanner and singing teacher who wrote about 340 songs for choirs.

When and where: Boston. Born October 7, 1746. Died September 26, 1800.

A tanner with one blind eye wrote 340 songs and died poor.

William Billings wrote about 340 songs for choirs and published them in six books. He did it while working as a tanner and a singing teacher. His father died when Billings was 14, and he went to work learning to tan leather. He was mostly self-taught in music, though he may have had some lessons from John Barry of Boston's New South Church. A writer named Nathaniel Gould described him in 1853 as having "one eye blind, one leg shorter than the other, one arm somewhat withered."

"Chester." His 1770 book included his song "Chester." It opens with the words "Let tyrants shake their iron rod." The singers say that they do not fear tyrants or the chains of slavery, because they trust in God. Billings printed a new version with five verses in *The Singing Master's Assistant* in 1778. Soldiers "learned the words by heart," according to the writer David Stowe, and carried Billings's songs wherever the army sent them.

No copyright. Other printers copied Billings's tunes without paying him. Before the Revolution, the men who made Massachusetts's laws voted for a bill, a proposed law, to give Billings copyright over his first book: the legal right to decide who may copy and sell it. The governor, a Tory loyal to the British king, refused to sign it. Stowe writes that the governor may have refused because Billings had ties to patriots such as Samuel Adams.

Poor at the end. His friends paid to print his book *The Continental Harmony* in 1794. His wife, Lucy, died on March 26, 1795, and left him with six children under 18. In the 1790s he worked as a street cleaner. Billings died poor in Boston on September 26, 1800, and was buried in an unmarked grave on Boston Common.

Songs and signals of the Revolution

British officers first sang "Yankee Doodle" to make fun of the colonists. The man most often named as the writer of the words is Richard Shuckburgh, a British army surgeon, in about 1755 or 1758, during the French and Indian War. The date is disputed.

British soldiers arrived to occupy Boston in 1768, and their musicians played the song in the streets to mock the colonists. Early in the war, British troops and Loyalists, colonists who stayed on the British side, played it to make fun of the Continental soldiers. The Americans then made up their own verses, and by 1781 "Yankee Doodle" was a favorite American song.

"The Liberty Song." John Dickinson of Pennsylvania wrote its words to the tune of "Heart of Oak," the anthem, or official song, of the British Royal Navy. The *Boston Gazette* printed it in July 1768. Dickinson sent it to his Massachusetts friend James Otis with a note that "indifferent songs are very powerful on certain occasions." By indifferent he meant songs that were not very good.

Orders by drum. In the Continental Army, officers gave orders by drum beat. Under the army rules of Baron von Steuben, each beat had its own name and meaning. "The Reveille" woke the soldiers in the morning. "The General"

meant take down the tents and get ready to march, "The Assembly" meant line up at the flags, and "To Arms" meant pick up weapons and get ready to fight.

Drummers beat "The Tattoo" at 9 or 10 at night, and at that signal tavern keepers stopped serving the soldiers drinks. Boys under 14 were recommended as drummers, according to the American Battlefield Trust, and some boys who played the fife, a small, high-pitched flute, were 9 or 10 years old.

Black musicians, enslaved and free

Virginia enslavers kept naming enslaved musicians in their runaway notices. William Gregory advertised on May 4, 1769, for Peter, about 44, who had taken with him "a fiddle, which he is much delighted in when he gets any strong drink." David Walker of Dinwiddie County advertised on September 8, 1775, for Jemmy. He wrote that Jemmy "is very fond of singing hymns and preaching," and that he was living near Williamsburg under the name James Williams.

Mark. William Allason offered forty pounds in August 1780 for four men who had run away together from near Fauquier Court House, Virginia. One of them was Mark, about 25, born on the island of St. Jago, in the Cape Verde Islands off West Africa. He spoke Portuguese. The notice says Mark "blows the French horn, can play on the fiddle, whistles many tunes well," and that he loved marches and Catholic church music. Allason guessed that the four men planned to get aboard a ship.

At Nomini Hall. Philip Vickers Fithian was a tutor, a live-in teacher, to the children of Robert Carter III at Nomini Hall, a Virginia plantation, in 1774. His journal records that on a January evening, enslaved people gathered in the schoolroom "& began to play the Fiddle, & dance." Two of Carter's sons, Ben and Harry, joined them, and Fithian sent everyone away. A few days later, he wrote, "several Negroes & Ben, & Harry are playing on a Banjo & dancing."

In Charleston. A gentleman lost his pocketbook on the evening of December 2, 1766, as he passed "a croud of negroes assembled at the lower end of Elliott-street, with a banjer playing." A notice in the *South Carolina Gazette and General Advertiser* of December 12 reported the loss. A Charleston town rule of 1750 banned beating drums in town without an officer's permission.

The earliest banjo painting. A painting on paper called *The Old Plantation*, made between about 1785 and 1795, shows enslaved Black men and women dancing. One man plays an early banjo made from a gourd, a large fruit with a hard shell that can be dried and hollowed out. Another man plays a drum, and two women hold rattles. It is the earliest known painting of a banjo.

The librarian Susan Shames identified the painter in 2010 as John Rose, a South Carolina planter who held people in slavery. The Abby Aldrich Rockefeller Folk Art Museum in Williamsburg, Virginia, owns it.

Jefferson. Thomas Jefferson held people in slavery at Monticello, his plantation in Virginia. In the 1787 edition of his book *Notes on the State of Virginia*, he wrote about Black musicians: "In music they are more generally gifted than the whites." Then he doubted that they could write longer, more complicated music: that, he wrote, "is yet to be proved."

In a note he called the "Banjar" the instrument "which they brought hither," meaning here, "from Africa." In the same passage he wrote that Black people had "no poetry," and he dismissed the published poems of Phillis Wheatley, a Black woman.

Election days. Black communities in New England held their own election days from about 1750. In New Hampshire and Massachusetts they elected a "king," and in Rhode Island and Connecticut a "governor." The enslavers granted the day off and paid for the feast. The parades had "tambourines, banjos, fiddles and drums," and the feast had rum, gingerbread and "thick, fruit-studded election cakes."

Newport Gardner

Who: Born Occramer Marycoo in West Africa, enslaved in Newport, Rhode Island, where he became a music teacher and composer.

When and where: Born about 1746. Newport, from about 1760. Died in Liberia in 1826.

He won a lottery in 1791 and bought his family's freedom.

Newport Gardner was about 14 when slave traders took him from West Africa to Newport, Rhode Island. His name at birth was Occramer Marycoo. Caleb Gardner, a merchant and ship captain, bought him and renamed him Newport Gardner. The music writer Sophie Lowe writes that Caleb Gardner "helped enslave some 3,912 human beings" through the slave trade.

His teachers. The enslaved boy learned English and music in Newport. The best-known account names Andrew Law as his teacher, Lowe writes. But Law is first known to have been in Rhode Island in 1783, when Gardner was already in his late thirties. Lowe concludes that he "probably had a variety of musical teachers."

Freedom. Gardner and some friends won a lottery in late December 1791. With his share he bought freedom for himself and his family, then opened a school in Newport where he taught music. At Newport's First Congregational Church he was a deacon, a church member who helps lead it. In the 1820s he helped found a Black church, according to the historian Edward Andrews, and the historian John Millar writes that Gardner joined the new Colored Union Church in 1824.

His music. The writer Eileen Southern credited to him a tune called "Crooked Shanks," printed in 1803. Lowe reports newer research that found the same tune in print in London in 1768, so the credit is uncertain. The words of his anthem, a church song, survive. They begin "Hear the words of the LORD, O ye African race."

> **Liberia.** He led a group of Black New Englanders to Liberia, in West Africa. Millar counts about 30 of them, and Andrews counts about three dozen. Accounts also differ on when they sailed: late December 1825, or January 4, 1826. Gardner died of disease in Liberia within months, in 1826.

Tlingit songs written down, 1791

Two Spanish ships led by Malaspina and Bustamante anchored in Yakutat Bay, in what is now Alaska, in 1791. The bay was Tlingit land. Several times, Tlingit people sang "to and with" the Spanish sailors.

Tadeo Haenke was a botanist on the ships, a scientist who studies plants, and he had trained in music. He wrote the songs down in musical notes on four sheets of paper. The sheets stayed in the Museo de América, a museum in Madrid, Spain, for more than 200 years.

Hearing them again. The scholar Steve Langdon got pictures of the sheets and sent them to Maria Shaa Tláa Williams, a Tlingit ethnomusicologist, a scholar who studies the music of a people and its place in their lives. Williams found that the singers used harmony, two or more notes sung together, in part of their singing. She found one song, "Canta de la Paz," that was used to settle a quarrel over a stolen piece of clothing.

She then programmed a synthesizer, a machine that makes musical sounds electronically, to play the notes, so people could hear how the songs sounded. Judy Daxootsu Ramos, a Tlingit from Yakutat, said of the old songs, "we're still practicing that today."

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 15 MINUTES

Enslaved Black people in the South made songs that carried their own meanings, while white men in blackface copied Black music on stage and kept the money. The enslaved made their songs at work, at worship and on the days off their enslavers allowed, such as Christmas. Frederick Douglass later wrote down what the songs meant, and Harriet Tubman told a writer, Sarah Bradford, how she used hers.

The minstrel show. White performers darkened their faces with burnt cork and sang and danced as Black characters who were lazy, stupid, grinning fools. This blackface minstrel show became one of the most popular kinds of entertainment in the country. The money went to white performers and publishers. Stephen Foster, a white songwriter from Pittsburgh, wrote many of its best-known songs.

In Philadelphia a free Black bandleader, Francis Johnson, published more than 200 pieces of music. In the South, singers learned church music from books printed in shape notes, where the shape of each note shows the singer which sound to sing.

What the singers said the songs meant

Frederick Douglass was enslaved in Maryland, on Colonel Edward Lloyd's plantation in Talbot County and later on William Freeland's farm. He escaped in 1838 and published the story of his life in 1845. In it he wrote that enslaved people sang as they walked to the main farm to collect their monthly food, making up the words as they went.

Some people in the North took such singing as a sign that enslaved people were happy. Douglass wrote that this was a mistake: "Slaves sing most when they are most unhappy." He added, "I have often sung to drown my sorrow, but seldom to express my happiness."

"Make a noise." Enslavers wanted to hear singing, Douglass wrote in a second book, in 1855. "A silent slave is not liked by masters or overseers," he wrote. When the workers went quiet, the words they heard were "Make a noise." Teamsters, the men who drove the wagons, sang so that the overseer, the man who drove enslaved people at their work, would know where they were and that the work was going on.

A second meaning. Douglass and five other enslaved men planned to escape together in 1836. As they planned, they kept singing a hymn about being "bound for the land of Canaan." In the Bible, Canaan is the land God promised to the people of Israel after they escaped from slavery in Egypt.

Douglass wrote, "the north was our Canaan." Someone betrayed the plan, and it failed. Douglass never found out who. In his book he named the five men: Henry Harris, John Harris, Sandy Jenkins, Charles Roberts and Henry Bailey.

Juba. At Christmas, enslaved people on the Maryland farms played fiddles and beat out rhythms on their own bodies with their hands, which was called "juba" beating. The singers made up the words of the juba songs as they went. Douglass wrote down one verse that begins "We raise de wheat, Dey gib us de corn." It goes on to list the work the enslaved people did and the scraps they were given for it.

Tubman's signals. Harriet Tubman escaped from slavery in Maryland in September 1849 and later went back to lead others north. She told the writer Sarah Bradford how she used hymns as signals. People hiding in the woods came out only after she walked past singing a certain hymn twice. If she sang "Moses go down in Egypt" instead, they stayed hidden, "for dere's danger in de way." Bradford printed Tubman's account in 1869.

The "Drinking Gourd." Douglass and Tubman describe songs with hidden meanings and songs used as signals. A different claim is that the song "Follow the Drinking Gourd" was a map that led people from Alabama north to the Ohio River. That claim comes from a single article printed in 1928 by H. B. Parks, a Texas scientist who studied insects and collected songs.

A folk singer, Lee Hays, wrote the best-known words of the song in 1947. The researcher Joel Bresler found that no one ever collected the song in Alabama. He also found no older use of "drinking gourd" to mean the Big Dipper, the group of stars that points to the North Star. Bresler and the scholar James Kelley doubt that the song was ever a map.

Congo Square, New Orleans

Under a city law the mayor of New Orleans issued in 1817, enslaved people could gather in only one place: across Rampart Street at the back of town, on Sunday afternoons. The space was later called Congo Square. There enslaved people sold goods, sang, danced and played music. The architect Benjamin Latrobe wrote in his journal in 1819 of 500 to 600 enslaved people gathered there for dancing. He called the dancing "savage."

City officials stopped the Sunday music and dancing in 1835. It started again, and officials stopped it again in 1851. The records that survive do not give the names of the mayor who limited the gatherings or of the officials who stopped them.

What was blackface minstrelsy?

Blackface minstrelsy was a stage show in which white men darkened their faces with burnt cork and acted as Black people. White audiences liked seeing Black people shown as "singing, dancing, grinning fools," David Pilgrim of the Jim Crow Museum at Ferris State University writes. He writes that these shows helped spread the belief that Black people were lazy, stupid and "inherently less human," meaning less human by birth.

Jim Crow. Thomas Dartmouth Rice was a white actor, born in New York in 1808. He sang and danced a song called "Jump Jim Crow" in blackface. Pilgrim dates his first performance as Jim Crow to 1828. Other accounts say only that it had become his main act by 1832, when a Philadelphia newspaper notice announced that "Mr. Rice will appear and sing Jim Crow."

The man he copied. Rice said he copied a disabled Black man who cared for horses and sang as he worked, and that he bought the man's clothes to wear on stage. People still argue about when and where this happened, and whether it happened at all. No record names that man. No record shows that he or any other Black musician was paid for what the minstrels copied.

Rice played to sold-out theaters from about 1832 to 1844, and he took the act to London in 1836. By 1838 people were using "Jim Crow" as an insult for Black people. By the end of the 1800s, "Jim Crow" was the name for the

laws and customs that officials and lawmakers used against Black people. Under them, Black people were kept out of white schools, railroad cars and waiting rooms.

The Virginia Minstrels. Four white men performed in New York for a paying audience as the Virginia Minstrels on what was probably January 31, 1843. They were Dan Emmett, Billy Whitlock, Dick Pelham and Frank Brower. Earlier blackface acts had one singer or dancer. The Virginia Minstrels performed as a group, with fiddles, banjos, tambourines and the bones, a rhythm instrument.

A group led by Edwin P. Christy, the Christy Minstrels, started many of the features of the minstrel show from 1845. The players sat in a half circle. Two comic players called Mr. Tambo and Mr. Bones sat at the ends, and a leader called Mr. Interlocutor sat in the middle. The money went to the white performers and to the music publishers who printed their songs. Rice became rich, and he died poor in 1860.

The banjo goes on stage

Enslaved Black people played the banjo, which came from West African instruments, in America from at least 1736. That was about a hundred years before any white man played it on a stage.

Joel Walker Sweeney, a white man born in 1810 in Appomattox County, Virginia, learned to play it from enslaved people there. He played the banjo on a stage in New York in April 1839, and he is the earliest known person to have done so. Four years later, two of the Virginia Minstrels played banjos in their show.

One story says that Sweeney added the banjo's short fifth string. No proof of that exists. Older banjos, and pictures made before his time, already show the short fifth string.

Stephen Foster

Who: A white songwriter who wrote songs for blackface minstrel shows and for singing at home, and one of the first Americans to earn a living only by writing songs.

When and where: Born July 4, 1826, in Lawrenceville, Pennsylvania, now part of Pittsburgh. Worked in Pittsburgh, Cincinnati and New York. Died January 13, 1864, in New York.

When he died, his wallet held 37 cents and three pennies.

Stephen Foster wrote many of the best-known songs of the minstrel shows.

Kitty. Foster's family held a Black girl named Kitty as a bound servant, someone who had to work for a family without pay until a set number of years ran out. The writers of the University of Pittsburgh library's biography of Foster call this arrangement "enslavement in all but name."

Foster's father wrote in 1834 that a woman named Mrs. Collins had given the family the girl as "a present." The girl had more than three years left to serve. He wrote that it saved them the cost of hiring a girl.

Learning the style. At nine, Foster sang blackface songs such as "Jim Crow" in a boys' theater set up in a carriage house, and he was paid a small sum each week. He learned the style mostly from songs that white performers wrote to mock Black people. In 1846 and 1847 he kept the money records for his brother's shipping company in Cincinnati. The company made money from cotton picked by enslaved people in the South.

"Oh! Susanna." The song was first advertised in Pittsburgh in September 1847. Within a year the publisher William C. Peters printed it as one of the songs of the Sable Harmonists, a blackface group. At the time, no American song had sold more than 5,000 copies of its sheet music, the printed music people bought to play at home. "Oh! Susanna" sold more than 100,000. Its original second verse used a racist word for Black people and told, as comedy, of an explosion that killed 500 of them.

Christy's name on the song. The minstrel leader Edwin P. Christy paid Foster $10 a song from 1850 for the right to sing each new song first. For "Old Folks at Home" in 1851, Christy paid $15, and the sheet music named Christy as the writer. Foster asked in 1852 to have his own name put back. Christy refused.

That year Foster wrote to Christy about the words of his songs. He said he had made them suitable for "refined people," instead of the "trashy and really offensive words" of other minstrel songs. The University of Pittsburgh writers say he most likely did this to sell more sheet music.

Politics. His only openly political songs before the Civil War supported the Democrats who opposed ending slavery. One of them, "The Abolition Show" of 1856, attacked the people working to end slavery. Frederick Douglass, however, said in 1855 that songs such as "Old Kentucky Home" and "Uncle Ned" could make listeners feel for enslaved people.

Selling the future. In about 1857 Foster sold his rights to future payments on his songs, in return for money right away. He moved to New York in 1860 and kept writing, including more minstrel songs.

His death. In January 1864, while he was ill, Foster was badly cut on his neck and face in his hotel room. His writing partner, George Cooper, found him lying in a pool of blood, with what Cooper called "a cut in his throat." Foster died at Bellevue Hospital three days later, at 37. His wallet held 37 cents in paper money and three pennies.

DISPUTED: Biographers disagree about how he was cut. His brother Morrison wrote in 1896 that Stephen fainted and fell across the wash basin, which broke and cut him. Ken Emerson, writing in 1997, tells it as a fall onto a wash basin or a chamber pot, a bowl kept in the room for use as a toilet. JoAnne O'Connell argued in 2016, from Cooper's description of the wound, that Foster cut his own throat on purpose.

> **The words today.** Other people later changed the words that are sung today. Two Kentucky lawmakers, Representative Carl Hines and Senator Georgia Davis Powers, won votes in 1986 to sing "people" in place of a racist word in "My Old Kentucky Home," the state song since 1928.

Church songs: Richard Allen's hymn book and shape notes

Richard Allen, a Philadelphia minister who had been born enslaved, put together two hymn books in 1801, one of 54 hymns and one of 64. The books contain the words and no music. Allen formally organized the African Methodist Episcopal Church, a church run by Black Methodists, in 1816.

Shape notes. William Little and William Smith printed a music book called *The Easy Instructor* in Philadelphia in 1801, the same year as Allen's hymn books. Its music is written in shape notes: each note has one of four shapes, and each shape stands for one sound to sing. The book was made for singing schools.

The Sacred Harp. Two Georgia men, Benjamin Franklin White and Elisha J. King, published *The Sacred Harp* in 1844, a shape-note book of more than 250 songs. Some of its oldest songs are by William Billings, the Boston singing teacher of the late 1700s. By 1800 his tunes had mostly dropped out of use in Boston, but singers in the rural South kept them.

Sacred Harp singers sit in a square, facing inward, with an empty space in the middle, and they sing in four parts with no instruments. People still sing from the book, and a new edition was printed in 2025.

Francis Johnson

Who: A free Black bandleader, bugle player and composer in Philadelphia who published more than 200 pieces of music.

When and where: Born June 16, 1792, in Philadelphia. Died there April 6, 1844.

A congressman called him the "leader of the band at all balls."

Francis Johnson led the band at Philadelphia's dances and balls, and he published more than 200 pieces of music. He was a free Black man. A church record in Philadelphia gives his birth date as June 16, 1792. Some books say he was born on the island of Martinique, but they give no evidence.

He grew up in a free Black neighborhood of Philadelphia. By 15 he could play the flute, the violin, the bugle and the piano. He played in taverns, then as the fiddler at the Exchange Coffee House.

First in print. A Philadelphia publisher, George Willig, printed his dance music. The writer Richard Grant, in *Smithsonian* magazine, dates the first piece to 1810 and calls it the first music published by a Black American. Other accounts date his first wide notice to a collection Willig printed in 1818. That year Robert Waln, a former congressman, wrote a book about Philadelphia that called Johnson the "leader of the band at all balls." Johnson played the keyed bugle, a brass horn with keys, and wrote dances, marches and songs.

To England. Johnson took his four-man band to England in November 1837. No Black American musician had taken a band to Europe before, Grant writes. Some accounts say Johnson played for Queen Victoria, and others say that has not been proven.

Arrested in St. Louis. Johnson and nine Black musicians toured eight states in 1842 and 1843. In St. Louis in December 1842, the band members were served with warrants, papers from a court that order an

arrest. The charge was being "Free Negros within the State of Missouri without a license." Missouri law required free Black people to hold a license to be in the state.

The records do not name the officials who served the warrants. A firemen's club that had hired the band paid a lawyer. The judge closed the case without a ruling, and the band left.

The mob. In Allegheny City, Pennsylvania, a mob gathered outside the hall where the band played. The mob attacked the musicians in the street, threw stones, bricks and rotten eggs, and shouted racist insults. Several musicians were badly hurt. The band played the next night anyway. No record names anyone in the mob.

Johnson died on April 6, 1844, when a blood vessel near his heart burst. At his funeral his band played a funeral march he had written. One of the largest funeral crowds in Philadelphia's history came to it.

The Hutchinson Family sing against slavery

The Hutchinson Family Singers were brothers from Milford, New Hampshire: John, Asa, Jesse and Judson Hutchinson. They gave their first concert in Milford on November 6, 1840. Their sister Abby joined them when she was about 12. In 1842 they earned up to $130 a concert.

Songs against slavery. From 1843 the Hutchinsons sang against slavery. In 1844 they set "Get Off the Track!" to the tune of a minstrel song, "Old Dan Tucker." A year later they toured Britain with Frederick Douglass.

Philadelphia, 1847. The Hutchinsons sang in Philadelphia in the spring of 1847 to audiences of Black and white people together. The city's mayor, John Swift, said more concerts would cause a riot. He ruled that no antislavery speech could be given at the hall and that no Black person could sit in the audience. The Hutchinsons refused to sing for a white audience only.

BY 1850

If you remember one thing: In these fifty years enslaved people's songs held meanings of their own, and the white men who copied Black music on the minstrel stage kept the money.

- 1817: The mayor of New Orleans limits enslaved people's Sunday gatherings to the place later called Congo Square.
- 1843: Four white men perform in New York as the Virginia Minstrels, the first blackface act built as a group.
- 1845: Frederick Douglass writes, "Slaves sing most when they are most unhappy."

Next: After 1850 the songs of slavery were printed for the first time, and freed Black students sang them for a president and a queen.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 19 MINUTES

The songs of slavery reached print and the concert stage after the Civil War. Black singers carried them to audiences in America and Europe, while the officer who ran a boarding school for Native children set out to silence the children's drums. Three white Northerners printed the first book of spirituals, the religious songs that enslaved Black people had made, in 1867. Students at Fisk University, a school for freed Black people, sang those songs on tour to keep their school open.

That officer, at the Carlisle Indian School in Pennsylvania, gave the boys brass instruments to stop their drumming. The school's own paper said that as the band grew, the boys stopped singing their own songs. In the war itself, army bands played for soldiers on both sides, and bandsmen carried the wounded.

Singers recorded songs on wax cylinders from 1890. A wax cylinder was a tube of wax that held two or three minutes of sound, and a machine could play it back. Scott Joplin, a Black pianist in Missouri, published the "Maple Leaf Rag"

in 1899, a piece of ragtime, piano music with a bouncing rhythm. In the South, Black farm workers were making the music later called the blues.

Jenny Lind's tour, 1850 to 1852

The showman P. T. Barnum agreed in January 1850 to pay the Swedish singer Jenny Lind $1,000 a concert to tour the United States. She arrived in New York in September 1850, and Barnum sold tickets by auction. She sang 93 concerts for Barnum and earned about $350,000, while Barnum made at least $500,000. Lind gave her share to charities, most of it to free schools in Sweden.

War songs and army bands, 1859 to 1865

Bryant's Minstrels, a white blackface group, first sang "Dixie" in New York on April 4, 1859. The song is credited to Dan Emmett, one of the Virginia Minstrels.

Who wrote "Dixie"? The accounts differ. Since the 1910s or 1920s, people in Mount Vernon, Ohio, have said that Emmett took the song from the Snowdens, a Black family of musicians in Knox County, Ohio. The writers Howard and Judith Sacks suggest it came from the parents of the family, Thomas and Ellen Snowden. Other scholars, such as E. Lawrence Abel, reject the Snowden story outright.

A Confederate song. In Charleston, South Carolina, in December 1860, a band played "Dixie" after each vote to leave the Union, as people then called the United States. A band played it in February 1861 when Jefferson Davis became president of the Confederacy, the group of Southern states that broke away from the United States.

"Battle Hymn." Union soldiers from Massachusetts made up the song "John Brown's Body" in 1861, about John Brown, who led an 1859 raid on Harpers Ferry, Virginia. They sang it to the tune of a hymn from camp meetings, big outdoor church gatherings.

Julia Ward Howe heard soldiers singing it near Washington, D.C., and in November 1861 she wrote new words to the same tune. She sold them for $4 to *The Atlantic Monthly*, a magazine. Its editors printed her "Battle Hymn of the

Republic" on the front page in February 1862.

Banned from the camps. The Hutchinson Family sang a song against slavery to Union soldiers in Virginia in January 1862. Its words included "Let Slavery die!" Some of the soldiers booed. General George McClellan, who opposed using the war to end slavery, then banned the Hutchinsons from singing in the army camps.

Bandsmen. Under an army order of August 3, 1861, each Union regiment, one unit of soldiers, could have a band of 24 musicians. Members of Congress voted in July 1862 to send the regimental bands home. They kept one band for each brigade, a larger group of soldiers made up of several regiments.

Bandsmen also carried the wounded. Albert Mann, a bandsman from Massachusetts, wrote that the army surgeon taught the band to use "stretchers, bandages and tourniquets," bands tied tight around an arm or leg to stop heavy bleeding. The bandsmen were to go into battle with the regiment, "rescue the wounded, if possible, and carry them to the field hospital."

At the Battle of Gettysburg, fought from July 1 to 3, 1863, the bands of the 26th and 11th North Carolina regiments played while "heavy firing" went on, the 26th's band leader recalled. A British visitor heard a Confederate band play polkas and waltzes while cannon fired.

Spirituals written down

Thomas Wentworth Higginson, a white abolitionist who worked to end slavery, commanded the 1st South Carolina Volunteers in 1862. The regiment was a Union unit of men who had been enslaved. A drummer boy in the regiment told Higginson about a hymn with the words "We'll soon be free." He said that enslaved people in Georgetown, South Carolina, had been whipped for singing it when Abraham Lincoln was elected in 1860.

"De Lord." The enslavers thought "de Lord" in the song meant the Yankees, the Northern soldiers, the boy said. In a later version of the story, Higginson wrote that the singers had been put in jail. Neither account names the drummer boy, the singers, or the people who punished them.

The first book. William Francis Allen, Lucy McKim Garrison and Charles Pickard Ware, three white Northerners, published *Slave Songs of the United States* in 1867. It contains 136 songs and was the first book of spirituals ever printed. Most of its songs came from Gullah Geechee people, Black people of the South Carolina islands, who lived on St. Helena Island and had been freed during the war.

The Fisk Jubilee Singers, from 1871

Fisk University opened in Nashville, Tennessee, after the Civil War to teach freed Black people. By 1871 it was running out of money, and its classes met in old buildings of a Union army hospital. George White, a white church worker from the North, kept the school's money and led its music. He set out with nine students on a singing tour to raise money on October 6, 1871. Among them were Maggie Porter and Ella Sheppard.

At first they sang spirituals only as extra songs at the end of a concert. Audiences asked for more. George White named the group the Jubilee Singers, after the "year of jubilee" in the Bible, when slaves were set free.

Hard roads. After one early concert in Ohio, the singers gave their profit to the victims of the Chicago fire of October 1871. "We had thirty dollars and sent every penny to Chicago and didn't have anything for ourselves," Maggie Porter said. She also said, "There were many times, when we didn't have place to sleep or anything to eat."

Ella Sheppard wrote of "the ill treatment at hotels, on railroads, poorly attended concerts, and ridicule." George White and another man walked through sleet, snow and rain from hotel to hotel, looking for one that would take the singers in. The records do not name the hotels that turned them away.

What they raised. They sang for President Ulysses S. Grant at the White House in March 1872. By that spring they had raised the $20,000 that George White had promised. They sang for Queen Victoria in England in April 1873, and by May 1874 their total had reached nearly $50,000.

That money paid for Jubilee Hall, Fisk's first permanent building, which opened on January 1, 1876. It became a National Historic Landmark in 1975. Over seven years of touring, the singers raised about $150,000 in all.

Ella Sheppard

Who: Born into slavery, she became the pianist, arranger and assistant director of the Fisk Jubilee Singers.

When and where: Born February 4, 1851, at the Hermitage, Andrew Jackson's plantation near Nashville, Tennessee. Toured the United States and Europe. Died in Nashville in 1914 or 1915 (the records differ).

Movie: *Jubilee Singers: Sacrifice and Glory* (2000), a documentary about the group in the PBS series *American Experience*.

"She is mine and she shall die mine," said her mother's enslaver.

Ella Sheppard arranged most of the spirituals that the Fisk Jubilee Singers sang, writing out the parts for each voice. She was born into slavery at the Hermitage, Andrew Jackson's plantation near Nashville.

Her mother. Her father, Simon Sheppard, paid $1,800 to buy his own freedom, and then he bought Ella's. The woman who held Ella's mother, Sarah, refused to sell her. She said, "She is mine and she shall die mine. Let Simon get another wife." When Ella was three, her mother was sold to a plantation in Mississippi. Ella did not see her again until she was 15.

The records do not name the woman who held Sarah or the person who bought her. Her mother said, "My back was never struck, but my heart is like a checkerboard with its stripes of sorrow."

Lessons through the back door. After a riot in Nashville in 1856, white officials there made stricter rules for free Black people. Simon fell into debt and was afraid that his family would be seized and sold, so he took Ella to Cincinnati, Ohio. There a German woman taught her piano. A white teacher taught her in secret, at night, letting her in through the back door.

To Fisk. Her father died in 1866 of cholera, a gut infection that people catch from dirty food or water. It drains so much water from the body that a person can die. Ella taught music in Gallatin, Tennessee, and saved

about $6 in five months. She entered Fisk in 1868. The money lasted three weeks, and she stayed by giving music lessons and washing dishes.

With the singers. On the first tour, in 1871, she sang with eight other students: Isaac Dickerson, Maggie Porter, Minnie Tate, Jennie Jackson, Benjamin Holmes, Thomas Rutling, Eliza Walker and Green Evans. She played piano, organ and guitar, arranged the spirituals for the group to sing in four parts, and collected more than a hundred songs.

On stage she led the singers from her place among them. In the summer of 1875 she wrote down the music of eight spirituals for a printed book of the group's songs, and the book did not name her.

She later wrote that the old songs "were sacred to our parents, who used them in their religious worship," and that at first the students did not want to sing them for strangers. In 1890 she trained a new group of Jubilee Singers at Fisk.

Native songs, drums and the first recordings

The army officer Richard Henry Pratt opened the Carlisle Indian School in Pennsylvania, a boarding school for Native children, in 1879. Students came from 54 or more nations. Early in the school's history, a rule was made that students could not speak their own languages or practice "Indian customs." The school's paper does not say who made the rule.

"Even in song." An article in that paper, *The Red Man*, stated in 1896 that the school's aim was "the complete transformation of the Indians." It called any "display of savagery and barbarism, even in song and language," out of place in the school. Those were the paper's words for the students' own songs and languages. The article states that in the first year, the only music heard from the boys' rooms was the drum.

Brass for drums. Pratt told a Boston donor, Mrs. Walter Baker, that he wanted to stop the drumming. "If you will give me a set of brass band instruments I will give them to the 'tom tom' boys," he said, as the paper quotes him, and "this will stop the 'tom tom.'" The school band began in 1881.

The rule named languages and "Indian customs," but the same article states that "Indian singing was never prohibited" and that no order to stop the songs was ever given. As the band grew, the article says, the singers of those songs fell silent. Dennison Wheelock, an Oneida student who entered Carlisle in 1885, later led the school band.

Dances made offenses. Hiram Price, the federal Commissioner of Indian Affairs, issued rules on March 30, 1883, that made the Sun Dance and other religious dances "Indian offenses." His boss, Secretary of the Interior Henry Teller, had called Native dances "heathenish," an insulting word for not Christian. The rules named dances and feasts. They did not name songs. The punishment was the loss of rations, the food that federal officials handed out to Native people on reservations.

For a first offense, officials could hold back a person's rations for up to ten days, and for a later offense, 15 to 30 days. They could instead put the person in the agency prison, the jail at the government office on the reservation, for up to 30 days. Officials could enforce these rules until 1978.

The first recordings. The scientist Jesse Walter Fewkes recorded Passamaquoddy songs and stories on 36 wax cylinders in Calais, Maine, from March 15 to 18, 1890. The Passamaquoddy are a Native nation whose homeland is along the border between Maine and New Brunswick, in Canada. The singers were Peter Selmore, Newell Josephs and Peter Lacoute.

In a Library of Congress essay, Kelly Revak writes that these are "largely credited" as the first recordings of Native American music. Passamaquoddy speakers have used the recordings since the 1980s to bring old songs back. Wayne Newell said in 2009 that people were working on them at home "so we can sort of resurrect older songs."

Wounded Knee. Soldiers of the 7th Cavalry, an army unit on horseback, killed between 250 and 300 Lakota people at Wounded Knee on December 29, 1890, most of them women and children. The soldiers had been taking the guns of a Lakota band led by Spotted Elk. His people had taken up a religious movement called the Ghost Dance, whose followers danced in a circle, and the Ghost Dance had its own songs.

James Mooney, a scientist who studied Native peoples, recorded Ghost Dance songs in 1894. Library of Congress notes say the singer on those recordings is probably Mooney himself, not a Native singer.

John Philip Sousa

Who: Leader of the United States Marine Band and writer of more than 100 marches.

When and where: Born November 6, 1854, in Washington, D.C. Led the Marine Band from 1880 to 1892, then his own band. Died March 6, 1932, in Reading, Pennsylvania.

Movie: *Stars and Stripes Forever* (1952), a Hollywood film loosely based on his memoir.

His father signed him into the Marines at 13.

John Philip Sousa wrote more than 100 marches, including "The Stars and Stripes Forever," the national march of the United States. His father played in the Marine Band. When Sousa was 13, his father signed him into the Marine Corps as an apprentice musician, a boy learning the work. He did it to keep his son from joining a circus band. Sousa served seven years.

The Marine Band. Sousa became the 17th leader of the Marine Band on October 1, 1880. He led it for 12 years under five presidents, from Rutherford B. Hayes to Benjamin Harrison. In 1892 he formed a band of his own.

The march. Sousa was on a ship crossing the Atlantic on Christmas Day 1896. He had just learned that his band's manager, David Blakely, had died. On that voyage he began "The Stars and Stripes Forever," and he finished it in April 1897. Members of Congress voted in 1987 to make it the national march. Sousa also wrote 15 operettas, short comic operas, and he helped develop the sousaphone, a large brass horn made for marching bands.

Recording begins

Thomas Edison's workers built his first phonograph, a machine that recorded sound and played it back, in December 1877. Machines good enough to sell came on the market in 1888.

George W. Johnson. In 1890 two phonograph companies paid George W. Johnson 20 cents for each two-minute song he recorded on a wax cylinder. Johnson was a Black street whistler, born in Virginia in 1846. The cylinders played in coin-operated machines. No way yet existed to copy a cylinder in large numbers, so Johnson sang the same songs over and over, one cylinder at a time. Between 1890 and 1895 he made an estimated 25,000 to 50,000 cylinders.

His two best sellers were "The Laughing Song," which he wrote, and a whistling song by a white writer that mocked Black people. The title of that song used a racist insult for a Black person. "The Laughing Song" was the best-selling record in the country for ten weeks in 1891, and Johnson is counted as the first Black recording star.

What became of him. Johnson was put on trial in 1899 for the murder of Roskin Stuart, the woman he lived with as his wife, who had been found beaten in their apartment. He was found not guilty. By 1905 record makers could press many copies from one recording, so they no longer needed him to sing each copy. His friend Len Spencer hired him as a doorman for his office. Johnson died in 1914 and was buried in a grave without a marker.

Ragtime, and songs that mocked Black people

Ragtime is music with a "ragged" rhythm: the tune lands between the beats while a steady beat keeps time underneath. On the piano, the left hand keeps the steady beat and the right hand plays the tune. Ragtime began among African Americans in the late 1800s. Accounts differ about the first printed ragtime piece, and they date it to 1895 or 1897.

Ernest Hogan, a Black performer from Bowling Green, Kentucky, who had started out in minstrel shows, wrote a hit song in 1895 and 1896 whose title used a racist insult for Black people. The title said that all Black people look alike. Many other writers copied it. People at the time named these copies after the insult. They were songs that used racist words and pictures to mock Black people.

Scott Joplin

Who: A Black composer and pianist who wrote the "Maple Leaf Rag" and an opera, *Treemonisha*.

When and where: Born in northeastern Texas between mid-1867 and early 1868 (the date is not known for certain). Lived in Texarkana, Sedalia and St. Louis, Missouri, and New York. Died April 1, 1917, in New York.

His most famous rag earned him about $4 in its first year.

Scott Joplin wrote the "Maple Leaf Rag," and in his last years he paid to print his own opera. He was born in northeastern Texas, and the exact date is not known. The historian Edward A. Berlin places it between June 1867 and the middle of January 1868.

His father, Giles, had been enslaved in North Carolina. His mother, Florence, was born free in Kentucky. She cleaned houses, and Scott learned to play on her employer's piano. A teacher, Julius Weiss, gave him lessons.

Finding work. Churches and brothels, houses where men paid women for sex, were among the few places where a Black pianist could find steady work. In 1891 he was a member of the Texarkana Minstrels, a group raising money for a monument to Jefferson Davis, the former president of the Confederacy. He moved to Sedalia, Missouri, in 1894. There he played the cornet, a brass horn like a small trumpet, in a town band and studied music at George R. Smith College.

One cent a copy. Joplin signed a contract on August 10, 1899, with John Stark, a Sedalia music store owner and publisher, to publish the "Maple Leaf Rag." Joplin was to get one cent for each copy sold. His first biographer said it sold 75,000 copies in six months. Berlin later found that the first 400 copies took a year to sell, which paid Joplin about $4. Later sales gave him a small, steady income. Berlin found that by 1909 they would have paid him about $600 a year.

Treemonisha. He moved to St. Louis in 1901 and to New York in 1907. He wrote an opera, *Treemonisha*, set on a Texas plantation after the Civil War. It tells of a young, educated Black woman who helps free her people from ignorance and superstition. No one would pay to stage it. In 1911 he printed it with his own money. In 1915 he played it in a hall in Harlem, with only a piano.

His death. By 1916 Joplin had syphilis in its late stage. Syphilis is a disease passed from person to person during sex. Without treatment it can spread to the brain, where it causes confusion, changes in personality and dementia, the loss of memory and of the ability to think.

He was admitted on February 2, 1917, to Manhattan State Hospital, a hospital for mental illness. He died there of the disease on April 1, 1917. No record describes how he was treated there. He was buried in a grave with no marker.

Treemonisha was first fully staged in January 1972, in Atlanta. His grave was given a marker in 1974, 57 years after his burial. In 1976, 59 years after he died, Joplin won a Pulitzer Prize, a top American award.

The blues begins, and nobody wrote it down

The blues is a kind of Black music from the South. It grew out of the songs and calls that enslaved people sang as they worked in the fields, and out of the songs of Black workers on farms, docks and river boats after slavery ended. Writers on the blues place its beginning between 1870 and 1900.

Sharecropping. In those years, freed Black families in the South who had no land of their own farmed a landowner's fields in return for a share of the crop. This was called sharecropping. The families bought tools, seed and food on credit at the landowner's store prices. The debt rolled over from year to year, and families who owed it could not leave the land.

No written description of the blues from before 1900 is known. The first written accounts come from just after 1900.

NOT KNOWN: No one knows who first played the blues, or when.

BY 1900

If you remember one thing: The songs of slavery were written down and sung across America and Europe in these fifty years, and music could now be recorded and sold.

In 1850: No book of spirituals had ever been printed, and the people who made them were still enslaved.

In 1900: *Slave Songs of the United States* was in print, the Fisk Jubilee Singers had sung for a president and a queen, and a Black whistler, George W. Johnson, had made the best-selling record in the country.

Next: After 1900 record companies began to record the blues and jazz, and the fight over who was paid moved into the recording studio.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 29 MINUTES

Record companies began to record and sell the blues, jazz and country music in these years, and the companies and the men who held the copyrights kept much of the money. Black musicians in the South made the blues and jazz. Country music came from Southern singers and players, white ones like the Carter Family and Black ones like DeFord Bailey and Lesley Riddle. Bessie Smith's first record sold 780,000 copies, and Columbia paid her a set fee and no share of the sales.

Americans spent $106 million on records in 1921. From the 1920s, anyone with a radio could hear music at home for free. Owners and managers of clubs, hotels and concert halls kept Black people out, even Black stars. Billie Holiday recorded "Strange Fruit" in 1939, a song about Black people murdered by white mobs. That same year Marian Anderson sang outdoors in Washington to more than 75,000 people, after the leaders of two indoor halls in the city refused her.

The first written accounts of the blues, 1901 to 1903

The first written account of the kind of songs later called the blues comes from Mississippi in 1901 and 1902. Charles Peabody, an archaeologist, dug into a Native mound in Coahoma County in May and June of both years for Harvard University's Peabody Museum. He hired nine to fifteen Black men from the town of Clarksdale to do the digging, and the men sang while they dug. Peabody wrote in 1903 that bosses sometimes hired a strong singer just to keep workers going.

The men's songs were about hard luck, love and pay day. In one line the singer said he had been arrested for murder though he had never harmed anyone. Peabody did not use the word blues.

Tutwiler. The bandleader W. C. Handy was waiting for a train at Tutwiler, Mississippi, in about 1903. A man beside him played a guitar by sliding a knife along the strings, and sang. No record names the man. Handy later published the song as "Yellow Dog Blues."

"Father of the Blues." Handy sold "The Memphis Blues" for $100 in 1912, and in 1914 he published "Saint Louis Blues." With Harry Pace, a Black banker, he ran a company called Pace and Handy that published music. Handy called himself the "Father of the Blues." Jelly Roll Morton disagreed. In a letter to the magazine *Down Beat*, he wrote that Handy had not started the music.

"Mother of the Blues." The singer Gertrude "Ma" Rainey said that in 1902 a girl in Missouri sang her a song about a man who had left a woman. Rainey began singing it in her shows. Paramount Records later advertised her as the "Mother of the Blues." Between 1923 and 1928 she made more than 100 records.

Records for Black buyers, and who was paid, 1920 to 1938

Mamie Smith, a Black singer, recorded "Crazy Blues" for the Okeh record company on August 10, 1920. The songwriter Perry Bradford wrote it. Managers at Victor had turned Smith down after a try-out, so Bradford went to Fred Hager, who ran recording at Okeh. He told Hager that Smith could "do more with those songs than a monkey can do with a peanut."

Some white people had already warned Hager not to record Black musicians, and he recorded her anyway. Within two months, buyers had paid a dollar each for 75,000 copies. It was the first blues record to become a big hit.

"Race records." Record company managers then went looking for Black singers to sell records to Black buyers. By 1922 managers at Okeh were calling these records "race records." The Black businessman Harry Pace started Black Swan Records in 1921. Black Swan paid its singers fair wages and let them record under their own names. Paramount took over Black Swan in 1924.

A set fee. Columbia paid Bessie Smith a set fee for each side she recorded. A side was one song on one face of a record. She got no royalty, the small payment for every copy sold that lasts as long as the record sells. Columbia paid white singers more, and it paid them royalties. With a set fee, a singer earned the same whether the record sold a hundred copies or a million.

Twenty-nine songs. Robert Johnson, a Black guitarist from Mississippi, recorded 29 songs in 1936 and 1937, in a hotel room in San Antonio and in Dallas, both in Texas. His best seller, "Terraplane Blues," sold about 10,000 copies. His pay for the sessions is not on record. He died near Greenwood, Mississippi, on August 16, 1938, at 27. The cause of his death is not known. One story says he was poisoned, but no one has proved it.

Mississippi judges ruled in 1998 that his son, Claud Johnson, was his only heir, the one person with the right to what Johnson left. That right was worth more than $1 million in royalties.

The editors of *Billboard*, a music magazine, renamed its "race records" sales chart "rhythm and blues" in June 1949. A writer named Jerry Wexler suggested the new name.

Bessie Smith

Who: A Black blues singer whose first record sold 780,000 copies in six months.

When and where: Born in Chattanooga, Tennessee, on April 15, 1894 (the 1900 government count of the people gives July 1892). Recorded for Columbia Records from 1923. Died near Clarksdale, Mississippi, on September 26, 1937.

Movie: *Bessie* (2015), an HBO drama film, with Queen Latifah as Smith.

Her first record sold 780,000 copies. She got $125 a side.

Bessie Smith was born in Chattanooga, Tennessee. Her family kept April 15, 1894, as her birthday, but the 1900 census, the government's count of everyone in the country, gives July 1892. Both her parents died when she was a child. She and her brother Andrew sang and danced for coins on the streets of Chattanooga. In 1912 she joined a traveling show as a dancer, and Ma Rainey sang in the same show.

The pay. Frank Walker of Columbia Records signed her in 1923. Her first record, "Down Hearted Blues," sold 780,000 copies in six months. Her contract paid her $125 for each side that could be used. Later contracts paid $150 and then $200 a side, and none of them paid a royalty.

She recorded between 150 and 200 songs. Cary O'Dell's essay for the Library of Congress states 150 in one place and close to 200 in another. On tour she earned up to $2,000 a week, and she traveled in her own railroad car.

The crash. The car she rode in hit the back of a slow truck on Route 61 near Clarksdale, Mississippi, on September 26, 1937. Her partner, Richard Morgan, was driving. Her right arm was almost torn off at the elbow. A white doctor from Memphis, Hugh Smith, stopped to help. An ambulance took her to the G. T. Thomas Afro-American Hospital in Clarksdale. Doctors there amputated her arm, which means they cut it off, and she died that morning.

A story that was not true. The record producer John Hammond wrote in 1937 that she died because a white hospital refused to treat her. Dr. Smith said the ambulance would never have taken her to a white hospital. Her biographer, Chris Albertson, showed that Hammond's story was a myth.

More than 10,000 people came to her funeral in Philadelphia. Her grave had no stone for more than 30 years, until the singer Janis Joplin helped pay for one. Later Jack Gee Jr., the son of her husband, sued Columbia. The judges ruled against him because he had waited too long to sue. They did not decide whether she had been cheated.

Jazz on record, 1917 to 1931

Jazz began in the Black communities of New Orleans in the late 1800s and early 1900s, but white musicians made the first jazz record. Five white musicians from New Orleans recorded two songs in New York for the Victor company on February 26, 1917. They called themselves the Original Dixieland Jass Band. Victor's managers put the record on sale in May 1917, and by some counts it sold more than a million copies. The band's leader, Nick LaRocca, later claimed that he had invented jazz.

A legend. One story says that in 1915 Victor had asked a Black New Orleans player of the cornet, a brass horn like a small trumpet, to record first. The player was Freddie Keppard, and the story says he said no. The historian John Edward Hasse calls that story a legend.

The Cotton Club. Owney Madden, a gangster who sold illegal liquor, ran the Cotton Club in Harlem, New York. Madden's managers hired Black musicians and dancers, and they let in only white customers, apart from a few Black stars. The club's dancers had to be light-skinned, at least 5 feet 6 inches tall and under 21. Duke Ellington's band played there from December 4, 1927, to June 30, 1931. When Ellington asked, the people running the club let in a few more Black customers.

BY 1927: Blues records by Black singers sold in the hundreds of thousands, and the first jazz record, made by white musicians, had sold a million copies by some counts.

Louis Armstrong

Who: A Black trumpet player and singer from New Orleans who made jazz records with his Hot Five and Hot Seven.

When and where: Born in New Orleans. Most sources give August 4, 1901. He often said July 4, 1900. Lived in Chicago and New York. Died in New York on July 6, 1971.

Movie: *Louis Armstrong's Black & Blues* (2022), a documentary about him.

"The government can go to hell," he told a reporter in 1957.

Louis Armstrong learned to play the cornet in a home for Black boys in New Orleans, where a judge sent him after an arrest. On New Year's Eve 1912 he fired his stepfather's gun into the air. It was loaded with a blank, a shell with gunpowder but no bullet. Police arrested him, and the next day a judge sent him to the Colored Waif's Home, a reform home for Black boys. There a teacher, Peter Davis, taught him the cornet in the home's band.

Hot Five, Hot Seven. The bandleader King Oliver invited him to Chicago in 1922 to play second cornet in his band. From November 1925 Armstrong made records for Okeh with his own groups, the Hot Five and the Hot Seven.

Little Rock. A reporter in Grand Forks, North Dakota, asked Armstrong on September 17, 1957, about the fight over nine Black students entering Central High School in Little Rock, Arkansas. Armstrong said: "The way they are treating my people in the South, the government can go to hell." He called President Dwight Eisenhower "two faced" and said he had "no guts."

> Staff at WBKJ, a radio station in Hattiesburg, Mississippi, threw out his records. Officials at the University of Arkansas cancelled his invitation to play a dance. The congressman Adam Clayton Powell said Armstrong "didn't know what he was talking about." On September 24 Eisenhower sent soldiers to protect the students. Armstrong then sent him a telegram: "If you decide to walk into the schools with the little colored kids, take me along Daddy. God bless you."

Country music on record: Bristol, 1927

Ralph Peer of the Victor record company recorded 76 songs by 19 singers and groups in Bristol, Tennessee, from July 25 to August 5, 1927. He set up on the third floor of a hat and glove company's building. Each performer got $50 in cash for each side, plus 2½ cents for each record sold. The Carter Family recorded on August 1 and 2, and a singer named Jimmie Rodgers on August 4.

What Peer kept. Peer took no salary from Victor. Instead he took a royalty of one cent on each record side, which he split with the singer. He also kept the copyright of the songs he recorded, including old songs passed down from singer to singer, and with it the right to be paid whenever those songs were printed, recorded or played.

Peer started a company in 1928, Southern Music Publishing, to collect that money. He offered to publish the songs that A. P. Carter of the Carter Family had gathered, if Carter would claim that he wrote them.

Maybelle Carter

Who: Guitarist and singer in the Carter Family, who changed how the guitar is played in country music.

When and where: Born May 10, 1909, in Nickelsville, Virginia. Recorded at Bristol, Tennessee, in 1927, at 18. Died October 23, 1978, in Hendersonville, Tennessee.

Movie: *The Carter Family: Will the Circle Be Unbroken* (2005), a PBS *American Experience* documentary about the family.

Her thumb played the tune, and one finger kept the rhythm.

Maybelle Carter found a way to play the guitar that made it a lead instrument in country music. She picked out the tune with her thumb on the three low strings and strummed the three high strings with her index finger to keep the rhythm. It is called the thumb-lead style. She first recorded "Wildwood Flower," played this way, in 1928.

She sang and played with Sara Carter and A. P. Carter as the Carter Family. At Bristol in August 1927 she was 18. The Carter Family was paid Victor's rate of $50 a side and 2½ cents for each record sold.

Lesley Riddle. A. P. Carter went looking for old songs from December 1928 with Lesley Riddle, a Black guitarist from Burnsville, North Carolina. Riddle had lost his right leg at the knee in 1927 after an accident at a cement plant. On their trips, Carter wrote down the words while Riddle memorized the tunes. Riddle lived with the Carters for a time and taught Maybelle his finger-picking blues guitar style. Maybelle said she learned guitar runs from him, including the ones she played in "Cannonball Blues."

No record shows that Riddle was paid, or named as a writer, for any of the songs he helped gather.

Later Maybelle led a group with her daughters, called Mother Maybelle and the Carter Sisters. From 1968 she toured with her son-in-law, the singer Johnny Cash.

How did the Grand Ole Opry get its name?

George D. Hay named the Grand Ole Opry on the air on December 10, 1927, right after a Black harmonica player, DeFord Bailey, played his "Pan American Blues." Hay had started the show on November 28, 1925, on WSM, a Nashville radio station owned by the National Life and Accident Insurance Company. He first called it the *WSM Barn Dance*. The first player was a 77-year-old fiddler, Uncle Jimmy Thompson.

That December night the *Barn Dance* came on the air after a program of opera music. After Bailey played, Hay told listeners, "from now on, we will present 'The Grand Ole Opry.'" One hour of the show went out across the country on the NBC radio network from 1939 to 1956.

DeFord Bailey

Who: A Black harmonica player, for fifteen years one of the best-loved stars of the Grand Ole Opry.

When and where: Born December 14, 1899, in Smith County, Tennessee. Played on Nashville radio from 1926 to 1941. Died July 2, 1982.

Movie: *DeFord Bailey: A Legend Lost* (2002), a Nashville Public Television documentary about him.

White stars got him into hotels by the fire escape.

DeFord Bailey's family in Smith County, Tennessee, played what he called "Black hillbilly music." He caught polio at three. The virus that causes polio can damage the nerves that move the muscles, and it stunted Bailey's growth and left his back bent.

The pay. He played on the *WSM Barn Dance* from June 1926. Accounts of his pay differ. One says he got a fixed $5 at first, less than the white players he toured with. The Country Music Hall of Fame says he was one of the best-paid stars on the show.

On tour. He toured the South with white stars such as Roy Acuff, Bill Monroe and Uncle Dave Macon. Hotel and restaurant owners would not serve him because he was Black. The other players brought him food, or

got him into hotels by the fire escape.

Fired. The managers of most radio stations stopped playing songs licensed by ASCAP, a group that collected money for songwriters, during a fight over fees in 1941. Managers at WSM told Bailey not to play his ASCAP songs, which were some of his most popular ones. They fired him at the end of 1941.

"Lazy." Hay wrote a book about the show in 1945. In it he wrote, "Like some members of his race and other races, DeFord was lazy." Hay added that Bailey knew about a dozen tunes and "refused to learn more."

The historian Charles Wolfe reported in 1999 that Bailey remembered it the other way around. Bailey said he wanted to play new tunes, but Hay and the listeners kept asking for the same ones. Bailey also said that Hay had treated him kindly and had written those words to please his bosses.

Bailey ran a shoeshine stand and rented out rooms after 1941. He almost never played in public again until 1974. In 2005 he was named to the Country Music Hall of Fame.

Radio, the Depression and two fights over pay, 1906 to 1944

John Philip Sousa wrote in 1906 that records and player pianos were becoming a "substitute for human skill, intelligence and soul." He called records "canned music." Members of Congress passed a copyright law in 1909 that let anyone record a song without asking, as long as they paid the song's owner a set fee.

Sales up and down. Americans spent $106 million on records in 1921. A history of records from the University of Michigan Press says they did not spend that much again until 1945. IASA, a group of sound archivists, says sales did not reach their old peak until the 1950s. During the Great Depression, in the early 1930s, record sales fell to about one tenth of what they had been in the 1920s.

ASCAP and BMI. Radio station owners paid ASCAP a fee for the right to play songs by its songwriters, and ASCAP passed the money on to the writers. When ASCAP's leaders announced a big rise in fees in 1939, radio station owners started a group of their own, BMI, so they would have songs to play without paying ASCAP.

Managers at almost every station, and at all three national networks, stopped playing ASCAP songs in 1941. ASCAP's leaders had not wanted writers of blues, gospel, country, folk and Latin music, and BMI became the first such group to sign them.

The record ban. James Petrillo, the head of the musicians' union, told its members to stop making records on August 1, 1942. He wanted musicians to be paid when radio stations and jukeboxes played records instead of hiring live bands. Decca's managers signed an agreement in September 1943 to pay a fee on every record into a union fund. Victor and Columbia signed on November 11, 1944. Union rules still let singers record with voices alone, so for two years singers made records without bands.

Gospel, shape notes and prison recordings

Gospel is a kind of Black church music. Thomas A. Dorsey had played piano for Ma Rainey under the name "Georgia Tom." His wife, Nettie, and their newborn son died in August 1932, and he wrote "Take My Hand, Precious Lord." That year he started the first Black-owned company to publish gospel music, and in 1933 a national convention of gospel choirs. He led the music at Pilgrim Baptist Church in Chicago for fifty years. "I'm not ashamed of my blues," he said. "It's all the same talent."

Mahalia Jackson. She came to Chicago from New Orleans in 1927, and Dorsey trained her. She refused to sing the blues. Managers at Decca offered to keep recording her if she sang blues, and she refused. Her "Move On Up a Little Higher" of 1947 sold about two million copies.

The Colored Sacred Harp. Judge Jackson, a shape-note singer from Alabama, printed *The Colored Sacred Harp* in 1934. Judge was his first name, and "Colored" in the title was a word of that time for Black people. It was a book of 77 church songs printed in shape notes, notes whose shapes tell the singer which sound to sing. Eighteen of the songs were his own. He and Bishop J. D. Walker paid to print 1,000 copies, and Jackson sold them door to door.

Lead Belly. John Lomax and his son Alan recorded singers in Southern prisons from June 1933. John Lomax said he wanted music "not yet influenced by jazz and the radio." From 1934 he ran the Library of Congress's folk song collection, for a salary of one dollar. At Angola, the Louisiana state prison, they recorded Huddie Ledbetter, called Lead Belly. He was serving time for stabbing a man in a fight.

Years before, Lead Belly had been convicted in Texas of killing a relative, Will Stafford. He was in prison there from 1918 until the governor of Texas, Pat Neff, pardoned him in 1925, after Lead Belly sang him a song asking to be freed. He left Angola on August 1, 1934. A prison official later wrote that his singing had nothing to do with that release.

"Goodnight, Irene." John Lomax then managed Lead Belly and took a share of his pay. The two men split over money in 1935. Lomax published a book in 1936 that printed Lead Belly's song "Goodnight, Irene" with both men named as its writers. Lomax had recorded the song. He had not written it. A group called the Weavers sold 2 million copies of "Goodnight, Irene" in 1950, the year after Lead Belly died.

Native songs, Hawaiian guitar and a new songwriter

The band of the Carlisle Indian School, a boarding school for Native children in Pennsylvania, played the "Aboriginal Suite" at Carnegie Hall in New York on March 28, 1900. Its composer and conductor was Dennison Wheelock, an Oneida graduate of the school. Richard Henry Pratt had made him the Carlisle bandmaster in 1892, the first Native bandmaster there. Wheelock later became a lawyer and argued cases for Native nations before the Supreme Court.

Songs on wax. Scientists recorded thousands of Native songs in these years on wax cylinders, tubes of wax that each held two or three minutes of sound. The Library of Congress holds about 10,000 cylinders, and nearly 8,000 of them hold Native songs and speech. Many held sacred songs meant only for ceremonies.

One collector, Francis La Flesche, took singers from Oklahoma to Washington, D.C., so that neighbors who objected could not stop him from recording ceremonial songs. No record shows that the singers were paid. Frances Densmore recorded the songs of the Ojibwe, Sioux, Mandan, Hidatsa, Tohono O'odham, Seminole and other nations for the Smithsonian Institution from 1907.

The steel guitar. Joseph Kekuku, a Hawaiian student at the Kamehameha School for Boys, found in 1889 that he could change a guitar's pitch by sliding a steel bar along the strings. From 1904 he played his steel guitar in theaters across the mainland United States.

By then Hawaii belonged to the United States. A group of mostly American businessmen had overthrown Hawaii's queen, Lili‘uokalani, in 1893. Before they moved, John L. Stevens, the top US official in Hawaii, had 162 American sailors and Marines brought ashore. Native Hawaiians put 21,269 signatures

on petitions, written requests to the government, against joining the United States in 1897. Members of Congress voted to annex Hawaii anyway in 1898, making it part of the United States.

A new songwriter. Irving Berlin, born Israel Beilin, came to New York from the Russian Empire in 1893, at age five. He could not read music and could play the piano in only one key, and he wrote "Alexander's Ragtime Band" in 1911. Through his own publishing company he owned his own songs. He gave all the money from "God Bless America," which Kate Smith first sang in 1938, to the Boy Scouts and Girl Scouts.

BY 1939: Anyone with a radio could hear music at home for free, and record sales were still below their 1921 peak. That year one hour of the Grand Ole Opry began going out across the country on NBC.

Woody Guthrie

Who: A folk singer and songwriter who wrote about poor farm families, workers and migrants in the 1930s and 1940s.

When and where: Born July 14, 1912, in Okemah, Oklahoma. Lived in Oklahoma, California and New York. Died October 3, 1967, in New York.

Movie: *Bound for Glory* (1976), a Hollywood film based loosely on his own book about his life.

On his guitar he wrote "This machine kills fascists."

Woody Guthrie wrote "This Land Is Your Land" and many other songs about poor farm families and workers. His mother, Nora, had Huntington's disease and was put in a hospital. No account names who sent her there. Huntington's is a disease passed down in families that destroys parts of the brain. A person with it makes movements they cannot control, has changes in mood, and loses the ability to think.

The Dust Bowl. In the 1930s Guthrie joined the farm families who left the Great Plains for California after years of drought, the time called the Dust Bowl. He sang on a Los Angeles radio station, KFVD. In 1940 he made an album called *Dust Bowl Ballads* for Victor.

An answer to Berlin. He wrote "This Land Is Your Land" in a New York hotel on February 23, 1940, as an answer to Irving Berlin's "God Bless America," which Kate Smith sang on the radio. His first title was "God Blessed America for Me." His handwritten copy had two verses that were often left out later. One is about a sign that says "No Trespassing." The other is about hungry people at a relief office, a place that gave out food or money to the poor.

Twenty-six songs in a month. Paul Raver, the head of a federal agency called the Bonneville Power Administration, hired him for one month in May 1941 for $266. Guthrie's boss there, Stephen Kahn, wanted three pages of songs a day for a film about the agency's dams on the Columbia River. Guthrie wrote 26 songs in that month. One of them was "Roll On, Columbia." Kahn later said the government had never gotten "a better investment on its money."

His last years. The fascists of his guitar's slogan were the followers of the dictators who ruled Italy and Germany. In the Second World War he served in the Merchant Marine, the ships that carried supplies. Doctors found in 1952 that he had Huntington's disease. He spent his last years in hospitals in New Jersey and New York, and he died at Creedmoor hospital in New York in 1967, at 55.

Strange Fruit, 1939

"Strange Fruit" is a song about the lynching of Black Americans. Lynching means a mob killing a person without a trial, often by hanging. The song describes the bodies of Black people hanging from trees in the South: their bulging eyes and twisted mouths, and the smell of burning flesh.

Abel Meeropol, an English teacher in the Bronx, New York, wrote the song under the name Lewis Allan. He wrote it after he saw a photograph of the lynching of Thomas Shipp and Abram Smith in Marion, Indiana.

Marion, Indiana. A white mob of between 5,000 and 10,000 people broke into the jail in Marion on August 7, 1930. The mob wanted three young Black men held there for the murder of a white man, Claude Deeter, and the rape of a woman, Mary Ball. Rape means forcing a person to have sex. Men in the mob beat Shipp and Smith, who were both 19, and hanged them. People in the crowd took parts of their bodies as souvenirs.

James Cameron. The third prisoner, James Cameron, who was 16, was beaten but lived, after someone in the crowd said he was innocent. Cameron waited about a year in jail for his trial, and accounts of what Mary Ball said there differ. The historian James H. Madison writes that she said she had been raped but that the night was too dark to tell whether Cameron was one of the men. Fran Kaplan of America's Black Holocaust Museum writes that Ball testified she had not been raped at all.

Cameron was convicted on a lesser charge, of helping before the crime, and a judge sentenced him to 2 to 21 years. He served four years in prison. The governor of Indiana pardoned him in 1993.

The trials. Leaders of the NAACP, a group that fights for the rights of Black Americans, named 27 people they suspected of the lynching. All-white juries found the mob's leaders not guilty.

Café Society. Billie Holiday first sang "Strange Fruit" at Café Society, a club in New York, in 1939, and she closed her show with it. The waiters stopped serving, the room went dark except for a light on her face, and she sang no more songs after it. Managers at Columbia would not record it. John

Hammond of Columbia said record stores and radio stations in the South would object. Milt Gabler of Commodore Records recorded it on April 20, 1939. It became her best-selling record.

Billie Holiday

Who: A Black jazz singer who recorded "Strange Fruit," a song about lynching, in 1939.

When and where: Born Eleanora Fagan on April 7, 1915, in Philadelphia. Grew up in Baltimore. Sang in New York. Died July 17, 1959, in New York.

Movie: *Billie* (2019), a documentary about her.

Federal agents handcuffed her to her hospital bed as she was dying.

Billie Holiday was a Black jazz singer whom federal drug agents arrested three times, the last time in her hospital bed. She was born Eleanora Fagan in Philadelphia and grew up in Baltimore.

At nine she was brought before a juvenile court, a court for children, for missing school. The judge sent her to the House of the Good Shepherd, a Catholic reform school for girls, where courts sent children who were in trouble. As a young girl she ran errands in a brothel, a house where men paid women for sex, and she scrubbed steps and floors in the homes of her neighborhood.

The service elevator. She sang with Artie Shaw's band in 1938, and its other members were white. At the Lincoln Hotel in New York, the managers made her use the service elevator because white guests complained. She left the band soon after.

Anslinger's agents. Harry Anslinger ran the Federal Bureau of Narcotics, the government's drug police, from 1930 to 1962. Federal agents arrested Holiday on May 16, 1947, for having narcotics, illegal drugs, in her New York apartment. She pleaded guilty, and a judge sent

her to the Alderson Federal Prison Camp in West Virginia for a year. She said later: "It was called 'The United States of America versus Billie Holiday'. And that's just the way it felt."

Because of the conviction, she lost her New York City cabaret card, the police license a performer needed to work in any club that sold alcohol. After that she sang in concert halls and theaters. A federal agent named George White, a different man from the Fisk Jubilee Singers' leader, arrested her again in a San Francisco hotel in January 1949.

DISPUTED: No source before 2015 says that Anslinger's agents went after her because she sang "Strange Fruit," the jazz writer Lewis Porter points out. The writer Johann Hari wrote in 2015 that they did, from 1939.

Her last arrest. She was in Metropolitan Hospital in New York with liver and heart disease in 1959. Federal narcotics agents arrested her in her hospital bed on May 31 and handcuffed her to it. Writing in *TIME* in 2019, John Halpern and David Blistein said that Anslinger ordered the arrest. Police guarded her room until a judge ordered the handcuffs taken off. She died there on July 17, 1959, at 44, with 70 cents in the bank. Her liver was scarred, a disease called cirrhosis, and her heart failed.

Marian Anderson at the Lincoln Memorial, 1939

Officials of Howard University in Washington, D.C., asked in January 1939 to rent Constitution Hall for an Easter concert by the Black singer Marian Anderson. The hall belonged to the Daughters of the American Revolution, or DAR, a women's group. Its leaders refused. DAR leaders had let only white performers use the hall since 1932. Frank Ballou, the head of Washington's public schools, also refused to let her use the hall of Central High School, a white school, and the members of the school board backed him.

The Lincoln Memorial. First Lady Eleanor Roosevelt quit the DAR on February 26, 1939. She wrote that its leaders had "an opportunity to lead in an enlightened way" and had "failed." Harold Ickes, the Secretary of the Interior, then set up a concert on the steps of the Lincoln Memorial. Anderson sang there on Easter Sunday, April 9, 1939, to more than 75,000 people, and millions more heard her on the radio. She began with "My Country, 'Tis of Thee."

Marian Anderson

Who: A Black contralto, a singer with a low woman's voice, who sang at the Lincoln Memorial in 1939 and was the first Black American singer at the Metropolitan Opera.

When and where: Born February 27, 1897, in Philadelphia. Died April 8, 1993, in Portland, Oregon.

Movie: *Marian Anderson: The Lincoln Memorial Concert* (1939), a short film of the concert.

Toscanini told her she had "a voice heard once in a hundred years."

As a young woman, Marian Anderson applied to a music school in Philadelphia. The school's officials turned her away because they took only white students. In Salzburg, Austria, in 1935, the conductor Arturo Toscanini told her she had "a voice heard once in a hundred years."

Constitution Hall. The DAR's president in 1939, when its leaders kept Anderson out of the hall, was Sarah Corbin Robert.

The Met. She sang at the Metropolitan Opera on January 7, 1955, at 57, in the part of Ulrica, a fortune teller, in Verdi's opera *Un ballo in maschera*. She sang at the March on Washington in August 1963. That year she was given the Presidential Medal of Freedom, an award given by the president.

BY 1950

If you remember one thing: In these fifty years record companies and radio stations brought the blues, jazz, gospel and country music to listeners across the country, and the companies and copyright holders kept much of the money.

One number: $125. Columbia paid Bessie Smith that much for each side of "Down Hearted Blues," a record that sold 780,000 copies in six months, and it paid her no royalty on any of them.

Next: After 1950 Black musicians made rock and roll out of rhythm and blues and gospel, and white singers sold more copies of some of their songs than they did.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 22 MINUTES

Black musicians made rock and roll, soul and hip-hop. White singers then sold more copies of some of those songs than the Black singers who recorded them first. Record company owners, managers and publishers kept much of the money from songs such as "Hound Dog" and "That's All Right."

In Detroit, Berry Gordy built Motown, which became the largest Black-owned business on one magazine's list. Civil rights marchers sang old church songs with new words at their mass meetings.

A teenage DJ and his sister held a party in the Bronx, in New York City, in 1973 that people now name as the start of hip-hop. Senators held a hearing on the words of songs in 1985, and leaders of the RIAA, the record companies' own group, agreed to put warning labels on some albums.

Rock and roll, and who got paid for it

Sister Rosetta Tharpe, a Black gospel singer from Arkansas, played electric guitar in church music from the late 1930s. Her "Strange Things Happening Every Day," from 1944, was the first gospel record to reach the rhythm and blues sales chart. Some scholars call it the first rock and roll record. She was an influence on Elvis Presley, Little Richard, Chuck Berry and Johnny Cash.

Credit taken. Fats Domino's "The Fat Man," from 1949, had sold a million copies by 1951. Chuck Berry's "Maybellene," from 1955, sold more than a million. When Berry first saw his record, it listed Alan Freed, a disc jockey who played records on the radio, and another man as its co-writers. That gave them a right to part of the money the song earned its writers. Berry later won back full credit.

Cover versions. White singers made cover versions of songs by Black singers, new recordings of songs that someone else had already recorded. Georgia Gibbs, a white singer, copied LaVern Baker's "Tweedle Dee" note for note in 1955. Baker's record reached No. 14 on the national pop chart, and Gibbs's copy reached No. 1.

Baker tried to sue Gibbs for $250,000. She asked Congress to treat such copies as a breach of copyright. Representative Charles Diggs led an investigation by Congress into what he called "song theft." No law came of it.

Pat Boone, a white singer, covered Fats Domino's "Ain't That a Shame" in 1955. It was Boone's first No. 1 record. Domino and his co-writer, Dave Bartholomew, still earned writers' royalties from it. Boone also covered Little Richard's "Tutti Frutti," and Boone's record ranked higher on the national pop chart than Little Richard's own.

Little Richard's lawsuit. Little Richard later said that the people running his record company, Specialty Records, had cut his royalty rate without telling him. He sued the company and its owner, Art Rupe, in 1984 for $112 million in royalties he said he was owed. They settled out of court in 1986, which means they reached an agreement and the case never went to trial.

Payola. Members of a House committee, led by Representative Oren Harris, held hearings in 1959 and 1960 on payola, secret payments to a disc jockey or a radio station to play a record. Alan Freed refused to sign a statement that he had taken no bribes, and the managers of the radio station WABC fired him in November 1959.

Members of Congress made payola a crime in 1960, punished by up to a year in jail. Freed told a court in 1962 that he was guilty of taking bribes and paid a $300 fine. The older song publishers in ASCAP pushed for the hearings, partly because they opposed rock and roll.

Hound Dog: Big Mama Thornton and Elvis Presley

The songwriters Jerry Leiber and Mike Stoller wrote "Hound Dog." The chapter opening tells the start of this story: Big Mama Thornton's 1952 record, Don Robey's name on the copyright form, and her one check for $500. Robey's Peacock Records put her record out in 1953, and it stayed at No. 1 on the rhythm and blues chart for seven weeks. Robey guessed that it sold 500,000 to 750,000 copies. Thornton said, "That song sold over two million records."

Presley's record. Elvis Presley recorded "Hound Dog" for RCA on July 2, 1956. His record was No. 1 on the pop chart for 11 weeks. He followed a reworked version by Freddie Bell and the Bellboys, a band he had heard in Las Vegas that year. Leiber and Stoller earned large royalties only after Presley's record. Thornton died of heart and liver disease in 1984. She was buried in a grave shared with two other people.

Elvis Presley

Who: A white rock and roll singer from Mississippi and Tennessee whose records sold an estimated 500 million copies.

When and where: Born January 8, 1935, in Tupelo, Mississippi. Moved to Memphis, Tennessee, in 1948. Died August 16, 1977, at his Memphis home, Graceland, at 42.

Movie: *Elvis* (2022), a Hollywood drama film about him and his manager.

His manager took 25 percent of his pay, and later 50.

Elvis Presley recorded a Black singer's blues song at Sun Records in 1954, and his "Hound Dog" followed a song that had been a hit for a Black singer first. He first heard music at his family's church, an Assembly of God church. In Memphis he listened to Black blues and rhythm and blues singers on the radio.

Sun Records. Sam Phillips owned Sun Records in Memphis and recorded Black blues musicians such as Howlin' Wolf and B. B. King. His office manager, Marion Keisker, said he often told her: "If I could find a white man who had the Negro sound and the Negro feel, I could make a billion dollars." "Negro" was a word of that time for Black people. Presley sang "That's All Right," a blues song by the Black singer Arthur Crudup, at Sun on the night of July 5, 1954, and Phillips recorded it.

Arthur Crudup. Crudup had recorded the song for RCA in 1946. He said later: "I realised I was making everybody rich, and here I was poor." In 1968 a publisher backed out of a $60,000 settlement with him at the last moment. In 1971 a songwriters' group got him more than $10,000 in royalties he had not been paid. He died in 1974.

Colonel Parker's share. Phillips and Presley's manager, Colonel Tom Parker, sold Presley's contract to RCA for $40,000 in November 1955. Parker took 25 percent of Presley's pay. Presley agreed in 1967 to raise Parker's share to 50 percent of some of his income. Parker sold RCA the rights to all of Presley's old records in 1973 for $5.4 million. Because of that sale, Presley's family got no royalties on those records after he died.

> Blanchard Tual, a lawyer whom a judge had appointed, called the 50 percent share "extortionate" in 1981, meaning unfairly high. He called the 1973 sale "unethical and poorly handled." Presley served in the Army from 1958 to 1960. His record sales are estimated at about 500 million copies around the world. He died at Graceland on August 16, 1977, at 42.

Motown, soul and gospel

Berry Gordy Jr. of Detroit started a record company on January 12, 1959, with an $800 loan from his family's savings fund. It was later called Motown. From 1960 to 1969, 79 Motown songs reached the top ten of the national pop chart. The editors of *Black Enterprise* magazine began ranking the largest Black-owned businesses in 1973. Motown was first on that list, with $40 million in sales, and it stayed first until 1983. Gordy sold Motown in 1988 for $61 million.

The Funk Brothers. A group of Detroit studio musicians, later called the Funk Brothers, played on most Motown hits from 1959 to 1972. No Motown record listed their names until Marvin Gaye's album *What's Going On* in 1971. Gordy fined any of them he caught recording for other companies.

Ray Charles. He had been blind since he was about seven. In "I Got a Woman," from 1954, he mixed gospel with the blues, and some church people objected. He refused to play a dance in Augusta, Georgia, in 1961 when he learned that the audience would be split by race. The promoter sued him, and in 1962 a judge fined him $757. His 1959 contract with ABC-Paramount promised that he would own his master recordings, the original tapes that every copy is made from, in time.

Sam Cooke. A singer from Mississippi who had led the gospel group the Soul Stirrers, Cooke started his own record company and his own company to publish his songs. From 1963 his own company owned his master recordings, and he was among the first Black artists to control his own business.

A Los Angeles motel manager, Bertha Franklin, shot and killed him on December 11, 1964. A coroner's jury, a panel that decides how a person died, called it justifiable homicide, a killing the law excuses. His family has disputed

that account.

James Brown. Brown paid for the recording of his 1963 album *Live at the Apollo* himself. Martin Luther King Jr. was shot and killed on April 4, 1968, and James Earl Ray later pleaded guilty to his murder. The next day, Brown gave a free concert in Boston that was shown on television. His song "Say It Loud, I'm Black and I'm Proud" came out that August.

BY 1970: Motown had put 79 songs in the pop top ten, Sam Cooke's own company owned his master recordings, and Ray Charles had a contract that promised him his.

Aretha Franklin

Who: A Black singer who recorded "Respect" in 1967.

When and where: Born March 25, 1942, in Memphis, Tennessee. Grew up in Detroit, Michigan. Died there August 16, 2018.

Movie: *Amazing Grace* (2018), a documentary film of her 1972 gospel concert in a Los Angeles church.

She spelled it out: R-E-S-P-E-C-T.

Aretha Franklin took Otis Redding's song "Respect" and turned it into a woman's demand, and it went to No. 1 on the pop chart in 1967. Her father, the Reverend C. L. Franklin, led New Bethel Baptist Church in Detroit, and she sang there as a child. At 14 she recorded a gospel album, *Songs of Faith*. She had her first child at 12 and her second at 15.

She recorded for Columbia from 1960 to 1966 and had few hits. Jerry Wexler then brought her to Atlantic Records. In January 1967 she recorded for one day at FAME Studios in Muscle Shoals, Alabama, before a fight broke out in the studio.

"Respect." Redding had written and recorded "Respect" in 1965. In his song a man asks for respect when he comes home. Franklin recorded it in New York on February 14, 1967. She and her sister Carolyn made it a

woman's demand. They spelled out the word "R-E-S-P-E-C-T" and added new lines.

It was No. 1 on the pop chart for two weeks and on the rhythm and blues chart for eight. It became a song of the women's movement and of the civil rights movement. Redding called it the song "that a girl took away from me."

Angela Davis. Franklin spoke up in 1970 for Angela Davis, a Black activist whom FBI agents had arrested that October. Davis was charged with kidnapping and with the murder of Judge Harold Haley, who was killed in an attack on a California courthouse. Franklin said, "Angela Davis must go free." An all-white jury found Davis not guilty in June 1972.

Amazing Grace. Franklin recorded the gospel album *Amazing Grace* at New Temple Missionary Baptist Church in Los Angeles in January 1972. It sold more than two million copies. The film made at the same time was not shown until 2018, because the sound and the pictures could not be matched. In 1987 she became the first woman named to the Rock and Roll Hall of Fame. She died in Detroit on August 16, 2018.

Where did 'We Shall Overcome' come from?

"We Shall Overcome" started as a church hymn, "I'll Overcome Some Day," that Charles Albert Tindley wrote in 1901. Tobacco workers went on strike at a cigar factory in Charleston, South Carolina, in 1945 and 1946. One of them, Lucille Simmons, led the strikers in singing "We Will Overcome." Zilphia Horton of the Highlander Folk School learned it from her and printed it in 1947.

The folk singer Pete Seeger changed "will" to "shall," because, he said, "'We shall' opens the mouth wider." From 1959 Guy Carawan taught the song to young civil rights workers.

The March on Washington. Joan Baez led "We Shall Overcome" at the March on Washington on August 28, 1963. Mahalia Jackson, Marian Anderson, Odetta, Bob Dylan, and Peter, Paul and Mary sang there too. During Martin Luther King Jr.'s speech, Jackson called out to him, "Tell them about the dream, Martin!"

Selma. About 600 marchers set out from Selma, Alabama, on March 7, 1965. At the Edmund Pettus Bridge, Alabama state troopers and other officers, led by Major John Cloud, attacked them with nightsticks and tear gas. At least 50 marchers went to the hospital. President Lyndon Johnson spoke to Congress on March 15 and used the song's words: "And we shall overcome." In January 2018, after a court case, the owners of the song's copyright gave it up. Since then anyone may use it freely.

Bernice Johnson Reagon

Who: A Black student in Albany, Georgia, who led singing at civil rights meetings and sang with the SNCC Freedom Singers.

When and where: Born October 4, 1942, in Albany, Georgia. Died July 16, 2024.

"So instead I put in freedom," she said of an old song.

Bernice Johnson Reagon led the singing at civil rights meetings in Albany, Georgia, and changed the words of old spirituals to fit the protests. She joined the NAACP Youth Council in Albany. Officials at Albany State College suspended her for her part in the protests.

At mass meetings she took old spirituals and put new words in them. Of one song she said: "So instead I put in freedom and by the second line everyone was singing."

The Freedom Singers. She joined the Freedom Singers of SNCC, the Student Nonviolent Coordinating Committee, with Cordell Reagon, Rutha Mae Harris and Chuck Neblett. She married Cordell Reagon, who had started the group. The group traveled 50,000 miles in nine months to sing about the movement, without taking a single flight, and its first tour raised nearly $50,000 for SNCC. "There weren't soloists, there were song leaders," she said. She called the group "a singing newspaper."

Sweet Honey in the Rock. She started Sweet Honey in the Rock in 1973, a group of African American women who sing without instruments. She later worked for the Smithsonian Institution as a curator, a person in charge of a museum's collections. Through radio, film and concerts, she helped people study the songs and stories that Black Americans passed down by word of mouth. She died on July 16, 2024.

Bob Dylan

Who: A songwriter of the folk music revival of the early 1960s and after, and winner of the Nobel Prize in Literature.

When and where: Born Robert Allen Zimmerman on May 24, 1941, in Duluth, Minnesota. Grew up in Hibbing, Minnesota. Moved to New York in 1961.

Movie: *No Direction Home: Bob Dylan* (2005), a documentary by Martin Scorsese.

At the 1965 Newport Folk Festival he played an electric guitar.

Bob Dylan won the Nobel Prize in Literature, a world prize for writers, in 2016 for his songs. The prize was "for having created new poetic expressions within the great American song tradition."

He moved to New York in January 1961 and visited Woody Guthrie, who was then in a mental hospital in New Jersey with Huntington's disease. He released the album *The Freewheelin' Bob Dylan* in 1963. At the March on Washington that August he sang "Only a Pawn in Their Game."

Newport. He played an electric guitar at the Newport Folk Festival in 1965. The leaders of the folk music world met him with hostility.

Country music from Nashville and Bakersfield

Hank Williams learned guitar as a boy in Alabama from a Black street musician, Rufus "Tee-Tot" Payne, who taught him in return for money or meals. Williams had 12 No. 1 country records. He was born with a defect of the spine that caused him pain all his life, and he drank and took painkillers. Grand Ole Opry managers dropped him in August 1952 for drunkenness and missed shows. He died in the back seat of a car near Oak Hill, West Virginia, on January 1, 1953, at 29.

Patsy Cline recorded "Crazy," a song by Willie Nelson, in 1961. She died in a plane crash near Camden, Tennessee, on March 5, 1963, at 30. She became the first woman in the Country Music Hall of Fame in 1973.

Bakersfield. Buck Owens, Merle Haggard and other musicians in Bakersfield, California, played country music on electric guitars in the late 1950s, often two Fender Telecasters. Nashville records of those years added orchestras and a polished sound, and the Bakersfield musicians broke from it. Many of their listeners were the families of people who had come to California in the Dust Bowl years.

Johnny Cash recorded two concerts for prisoners at Folsom State Prison in California on January 13, 1968. The album ends with "Greystone Chapel," a song by a prisoner, Glen Sherley. It sold 500,000 copies by October 1968. Cash himself never served a prison sentence.

"The Pill." Loretta Lynn's song of 1975 is about a wife who is tired of being pregnant and starts taking birth-control pills. The people running a number of country radio stations refused to play it. It still reached No. 5 on the country chart.

Charley Pride. He became the first Black performer on the Grand Ole Opry in 1967 since DeFord Bailey last played there in 1941. Pride was one of eleven children of sharecroppers from Sledge, Mississippi, families who farmed another man's land for a share of the crop. His first records went to radio stations without his photograph. He had 30 No. 1 country records, and in 1971 he won the Country Music Association's award for Entertainer of the Year.

Hip-hop from the Bronx, 1973 onward

Clive Campbell, a teenage DJ called Kool Herc, played records for dancers at a party at 1520 Sedgwick Avenue in the Bronx, New York, on August 11, 1973. His sister Cindy Campbell planned the party to earn money for back-to-school clothes. City officials named the building the birthplace of hip-hop in 2007.

The fires. The first hip-hop DJs played in the Bronx in the same years that fires burned much of the South Bronx. Most of the fires were arson, fires set on purpose. Landlords paid people who lived nearby to set fires in the landlords' own buildings, so the landlords could collect insurance money. One landlord collected $125,000 from 21 fires.

After a study of the fire service by the RAND Corporation, a research company, city officials closed 12 fire companies in the South Bronx between 1974 and 1976, when the city was nearly out of money. Seven census tracts, small areas the census counts separately, lost more than 97 percent of their buildings to fire and abandonment. About 250,000 people lost their homes.

"Rapper's Delight." The Sugarhill Gang's "Rapper's Delight" came out on Sugar Hill Records on September 16, 1979. Sylvia Robinson produced it and ran the company's work. It reached No. 36 on the national pop chart, and many writers call it the first rap record that sold widely. It used the music of Chic's song "Good Times." Chic's writers, Nile Rodgers and Bernard Edwards, got credit only after they threatened to sue. One of its rappers, Big Bank Hank, used rhymes written by Grandmaster Caz and did not credit him.

"The Message." The 1982 song by Grandmaster Flash and the Furious Five described poverty in the inner city. Ed "Duke Bootee" Fletcher, Melle Mel, Clifton "Jiggs" Chase and Sylvia Robinson wrote it. In 2002 it became the first hip-hop record added to the National Recording Registry, the Library of Congress's list of recordings chosen to be kept for the future.

DJ Kool Herc

Who: Born Clive Campbell in Jamaica, the DJ at the 1973 Bronx party that people name as the start of hip-hop.

When and where: Born April 16, 1955, in Kingston, Jamaica. Moved to the Bronx, New York, in November 1967, at 13.

He played two copies of one record to stretch the drums.

The Merry-Go-Round. At parties he played funk records. The "break" of a funk record is its drum part. Herc used two copies of the same record. When the break ended on one, he started it again on the other, so the drum part lasted longer. He called this the "Merry-Go-Round." He called the dancers who danced to the breaks "b-boys" and "b-girls."

Later someone stabbed Herc at a club called the Executive Playhouse while he was trying to stop a fight. No record names who stabbed him. After that he pulled back from playing, and by 1980 he had stopped working as a DJ. No surviving document shows what he earned from hip-hop.

Woodstock, music television, compact discs and the lyrics hearing

Thirty-two acts played at the Woodstock music festival, on Max Yasgur's dairy farm in Bethel, New York, from August 15 to 18, 1969. The organizers expected about 50,000 people. Estimates of the crowd run from 400,000 to more than 460,000, and no record names who counted. The fences were not finished, so the festival became free. Three people died. Two died from taking too much of a drug, and a tractor ran over a 17-year-old as he slept. No record names the driver.

MTV. The MTV television channel began playing music videos on August 1, 1981. Its managers said they kept to a "rock format," and they played few Black artists. Walter Yetnikoff, president of CBS Records, threatened to pull CBS's videos unless MTV's managers played Black artists. They then put Michael Jackson's "Billie Jean" into heavy rotation from March 1983, which means they played it often. Compact disc players went on sale in Japan on October 1, 1982, and in the United States in March 1983.

The lyrics hearing. Tipper Gore, Susan Baker and two other women in Washington started a group called the Parents Music Resource Center in 1985. They made a list of 15 songs they objected to and called it the "Filthy Fifteen." It included Prince's "Darling Nikki." Members of the Senate Commerce Committee held a hearing on September 19, 1985. The musicians Frank Zappa, Dee Snider and John Denver spoke against labels. Zappa called the plan "an ill-conceived piece of nonsense," a badly thought-out idea.

Leaders of the RIAA, the record companies' own group, agreed on November 1, 1985, to put warning labels on some albums. Record companies began putting a standard "Parental Advisory" sticker on albums in 1990. Managers at Walmart and some other stores would not sell albums with the sticker.

The 1978 act. Many Native songs belong to religious ceremonies. Until 1978, federal officials could still enforce the rules against Native religious dances that Hiram Price, the head of the government's Indian office, had issued in 1883. That year members of Congress passed the American Indian Religious

Freedom Act. In it they wrote that Native "ceremonies have been intruded upon, interfered with, and in a few instances banned." The act does not name the people who did these things.

Selena Quintanilla

Who: A Mexican American singer of Tejano music, the Spanish-language music of Texas.

When and where: Born April 16, 1971, in Lake Jackson, Texas. Killed March 31, 1995, in Corpus Christi, Texas, at 23.

Movie: *Selena* (1997), a Hollywood drama film about her, with Jennifer Lopez.

The woman who ran her fan club shot her at 23.

Selena Quintanilla sang with her brother and sister in their father Abraham Quintanilla Jr.'s band, Selena y Los Dinos, and learned the Spanish words of her songs by their sound, with her father's help. She won the Tejano Music Award for Female Vocalist of the Year in 1987 and in each of the next nine years. In 1994 she won a Grammy Award for her album *Live!*

Yolanda Saldívar. Saldívar ran Selena's fan club and managed her clothing stores. She had secretly taken money from the business, more than $30,000 or more than $60,000 by different counts. Selena meant to fire her.

The shooting. Saldívar shot Selena with a gun at a Days Inn motel in Corpus Christi, Texas, on March 31, 1995, as Selena tried to leave the room. The bullet hit her lower right shoulder. Selena reached the lobby and named Saldívar. She died at the hospital that afternoon from loss of blood. Saldívar gave herself up to the police more than nine hours later.

The trial. A jury in Houston found Saldívar guilty of murder with a deadly weapon on October 23, 1995, and Judge Mike Westergren sentenced her to life in prison. Members of the Texas parole board, who decide whether a prisoner may leave prison early, refused to let her out on March 27, 2025. They set her next review for March 2030.

> Between 30,000 and 40,000 people came to see Selena's coffin. Her album *Dreaming of You* came out after her death. It made her the first Latin artist whose album entered the national album chart at No. 1.

BY 2000

If you remember one thing: Black musicians made rock and roll, soul and hip-hop in these fifty years, and the owners of the copyrights and the master recordings kept much of the money.

Left open: Who would own the recordings, the companies or the singers who made them? Sam Cooke's company owned his masters from 1963, and Ray Charles had a contract that promised him his. After 2000 one singer lost hers to a buyer and recorded four albums again.

Next: After 2000 Americans moved from buying records to streaming them, and a stream paid the owner of the recording a fraction of a cent.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 25 MINUTES

Most Americans now stream their music, playing songs over the internet without buying copies, and a streaming service pays the owner of each recording a fraction of a cent a play. By 2025, 82 cents of every dollar that American record companies took in came from streaming.

Sales of recorded music in the United States had peaked in 1999, when most people bought CDs. Then a free program called Napster let people copy songs from each other's computers, and by the record companies' own count, sales fell in 15 of the 16 years from 2000 to 2015.

A streaming service pays the owner of the recording, usually a record company, and not the singer. In a 2018 survey, most working musicians said they earned money from playing live. Dolly Parton, a songwriter from the mountains of Tennessee, died on August 25, 2026, at 80. In September 2026 record companies and musicians were in court against companies whose computer programs make songs.

Napster, the iPod and streaming, 1999 to 2025

Shawn Fanning and Sean Parker started Napster in June 1999. It let people copy music files from each other's computers for free. Record companies sued in December 1999, and a federal judge ordered Napster to block copyrighted songs. Napster's owners could not do it, so they shut the service down in July 2001. At its peak, in February 2001, it had 26.4 million users by a checked count, though some estimates say 80 million.

The iPod. Apple's boss, Steve Jobs, showed the iPod, a pocket music player, on October 23, 2001. He said it held "1,000 songs in your pocket." Apple's iTunes Store opened on April 28, 2003, and sold most songs for 99 cents each. By 2014 it had sold 35 billion songs.

Streaming. Spotify, a company from Sweden, began streaming music in the United States in July 2011. By March 2026, the company said, Spotify had 300 million paying subscribers around the world.

The numbers. The Recording Industry Association of America, or RIAA, is the record companies' own group, and its staff count what the companies take in. Mark J. Perry of the American Enterprise Institute, a research group, used those figures in 2017. He found that sales peaked in 1999 at $20.9 billion, counted in 2016 dollars so that the rise in prices is taken out.

Sales then fell in 15 of the 16 years from 2000 to 2015. In 2016 they were $7.57 billion, a little more than a third of the 1999 figure. That year, for the first time, Americans paid more for streaming than for CDs, downloads and ringtones.

The RIAA reported in March 2026 that in 2025 the companies took in $11.5 billion at wholesale, the price the companies themselves are paid, which is lower than the price in stores. Counted that way, without taking out the rise in prices, the RIAA called 2025 the companies' best year. With the rise in prices taken out, the 1999 peak was still higher. Of the 2025 money, $9.5 billion came from streaming, and $1.04 billion came from vinyl records.

What does a stream pay?

Spotify pays the owners of the music less than half a cent for each play, by one company's estimate. It pays about 70 percent of the money it takes in to the owners of the music, by its own account.

About 58.5 percent goes to whoever owns the recording, which is usually a record company. About 12 percent goes to whoever owns the song itself: the songwriter and the publisher, a company that manages the rights to the song. A singer who does not own the recording gets a share from the record company, under the singer's contract.

The estimate. Spotify does not pay a set price for each play. It pays each owner by that owner's share of all the plays. iMusician, a company that sends music to streaming services, put the average in February 2025 at $0.003 to $0.005 a play, and about $0.004 for a listener in the United States.

The 1,000-play line. From April 1, 2024, Spotify stopped paying anything for a recording played fewer than 1,000 times in a year. In a November 2023 statement, Spotify's managers wrote that recordings under that line had earned an average of about 3 cents a month, and that 99.5 percent of all plays were of recordings above the line.

Spotify's March 2026 report states that it paid the music business more than $11 billion in 2025. By its count, more than 1,500 artists earned over $1 million from it that year. The artist ranked 100,000th earned about $7,300.

What musicians say. A musicians' group, the United Musicians and Allied Workers, held protests in 31 cities in March 2021 and asked Spotify to pay one cent a play. A group called the Music Industry Research Association asked 1,227 American musicians about their work in 2018. Most earned money from playing live, and most could not live on music alone.

Of the women who answered, 72 percent said they had been treated unfairly because they were women, and 67 percent said they had been sexually harassed, which means they faced unwanted sexual remarks or touching. Of the musicians who were not white, 63 percent said they had been treated unfairly because of their race. The musicians who answered did not name the people who did it.

Zoë Keating

Who: A cellist and composer who sells her own recordings and publishes what streaming pays her.

When and where: Born February 2, 1972, in Guelph, Ontario, Canada, to an English mother and an American father. Worked in San Francisco, California, and later Vermont.

"206,011 Spotify streams. $753."

Zoë Keating is a cellist who has published what streaming services paid her, so that other musicians could see real numbers. She posted those Spotify figures in September 2019. They came to a little more than a third of a cent for each play, and the company that sent her music to Spotify took no cut.

She played cello in the band Rasputina from 2002 to 2006. Alone, she uses a computer to record and repeat her own cello parts as she plays, so that one player sounds like many.

On her own. She released her album *One Cello x 16: Natoma* herself, without a record company. It reached No. 1 on the iTunes classical chart four times. She began publishing her income from sales and streaming in August 2012.

Her husband. Doctors found in May 2014 that her husband, Jeff Rusch, had stage 4 cancer, cancer that has spread through the body. Staff at their insurance company, Anthem, first refused to pay for his hospital stay. The records do not name them. Keating wrote about the refusal on her blog, as she publishes her pay. Anthem's staff reversed the refusal after local news stories about it. He died on February 19, 2015.

Who owns a recording: masters and songs

Every recorded song has two copyrights. One covers the song itself, its words and tune. The other covers the master, the first recording, which every copy is made from. Whoever owns the master is paid for every copy and every stream of that recording. Sam Cooke's own company owned his master recordings from 1963. Ray Charles's 1959 contract promised that he would own his in time.

The Universal fire. Jody Rosen, a writer for the New York Times Magazine, reported in 2019 that a fire in 2008 had destroyed 118,000 to 175,000 of Universal Music Group's master tapes. He wrote that they might include records by Chuck Berry, Muddy Waters and John Coltrane. A statement from Universal Music Group said the report held "numerous inaccuracies," meaning many mistakes. The company's leaders confirmed that the masters of one Soundgarden album had burned.

The fire began at Universal Studios Hollywood on June 1, 2008, when a worker used a blowtorch to heat roof shingles and left before they cooled. It spread across the studio's backlot, the outdoor area of sets and storage buildings.

Bob Dylan sold the rights to all of his songs to Universal Music Publishing Group in December 2020. Reporters at *The New York Times* estimated the price at more than $300 million, and other reports said about $400 million.

Taylor Swift

Who: A songwriter and singer who recorded four of her first six albums again after a music manager bought the master recordings.

When and where: Born December 13, 1989, in West Reading, Pennsylvania. Moved to Hendersonville, Tennessee, at 14.

Movie: *Miss Americana* (2020), a documentary about her.

She recorded four of her albums again, so she would own them.

Taylor Swift made new versions of four albums after a music manager bought the masters of her first six. Under her 2018 contract with Universal, she owns the masters of her new recordings.

At 14 her family moved to Hendersonville, Tennessee. That year a Nashville music publisher signed her as a songwriter, the youngest it had ever signed. After a show at Nashville's Bluebird Cafe on November 3, 2004, she signed with Scott Borchetta's new company, Big Machine Records. Big Machine owned the masters of her first six albums.

The sale. The music manager Scooter Braun bought Big Machine on June 30, 2019, for about $330 million, and with it her masters. Swift said she had tried for years to buy them. She said she was offered them only if she signed up to make six more albums for the company. Braun sold the masters to Shamrock Holdings in October 2020 for a reported $405 million. Shamrock is owned by the family of Roy E. Disney.

Taylor's Version. Swift recorded four of the albums again, and each came out as "Taylor's Version." *Fearless* came out on April 9, 2021, and *Red* on November 12, 2021. *Speak Now* followed on July 7, 2023, and *1989* on October 27, 2023.

Buying them back. Her Eras Tour ran from March 17, 2023, to December 8, 2024, with 149 shows. It took in $2.07 billion, more than any concert tour before it. On May 30, 2025, she said she had

> bought all six of the original masters from Shamrock. The price was not made public.

The Music Modernization Act, 2018

Members of Congress passed the Music Modernization Act in 2018. House members voted for it on April 25, and senators passed it on September 19 with no votes against. President Donald Trump signed it on October 11. Under the law, a nonprofit group, the Mechanical Licensing Collective, keeps a list of who owns each song and pays songwriters for streams. The group began paying out money in 2021 for songs whose owners nobody had identified.

Older records. Recordings made before February 15, 1972, had no federal copyright, so internet radio services did not have to pay for playing them. Many rhythm and blues records of the 1950s and 1960s were made before that date. Under the 2018 law, the singers and musicians on those older records are paid when digital radio plays them.

Hip-hop, Latin music and country radio

Hip-hop and R&B made up 24.5 percent of all the music Americans bought or streamed in 2017, more than any other kind. Rock came second, with just under 21 percent. Analysts at Nielsen Music, a company that tracks sales and streams, made the count, and CNBC's reporters wrote about it in January 2018.

Sales of Latin music came to $1 billion in 2025, 8.8 percent of what the record companies took in across the United States. The RIAA reported in 2026 that Latin music's sales had reached a new high for the tenth year in a row.

Country radio. Jada Watson, a researcher, counts the songs played on country radio. She found that songs by women got 11 percent of the plays by 2022. She reported in 2023 that no song by a Black, Indigenous or other woman of color was in regular daytime rotation, the list of songs a station plays over and over each day.

Beyoncé. The Black singer Beyoncé sang her country song "Daddy Lessons" at the Country Music Association Awards on November 2, 2016. Some country fans said she did not belong there, and the association's staff deleted its online posts about her performance.

Her country album *Cowboy Carter*, from 2024, made her the first Black woman with a No. 1 album on the country album chart. The album got no nominations at the Country Music Association Awards that year. It won the Grammy Awards for Album of the Year and Best Country Album on February 2, 2025.

BY 2025: Streaming made up 82 cents of every dollar that record companies took in, Latin music's sales reached a new high for the tenth year in a row, and Taylor Swift had bought back the masters of her first six albums.

Kendrick Lamar

Who: A Black rapper and songwriter, the first musician outside classical music and jazz to win the Pulitzer Prize for Music.

When and where: Born June 17, 1987, in Compton, California.

He won a Pulitzer Prize for an album of rap.

Kendrick Lamar became the first musician outside classical music and jazz to win the Pulitzer Prize for Music, in 2018. His parents had moved to Compton, California, from the South Side of Chicago in 1984. When he was five, he saw a teenage drug dealer killed in a drive-by shooting outside his apartment. No record names the shooter. In seventh grade an English teacher, Regis Inge, introduced him to poetry.

The albums. He signed with the record label Top Dawg Entertainment in 2005. His albums include *Good Kid, M.A.A.D City* in 2012 and *To Pimp a Butterfly* in 2015. Protesters in the Black Lives Matter movement used his songs as anthems.

The prize. His album *DAMN.* won the Pulitzer Prize for Music on April 16, 2018. The Pulitzer board called it "a virtuosic song collection unified by its vernacular authenticity and rhythmic dynamism," praising the skill of the songs, their everyday speech and their strong rhythm. The prize was $15,000.

He performed at the Super Bowl halftime show on February 9, 2025. About 133.5 million people watched, more than had watched any halftime show before. By 2026 he had won 27 Grammy Awards, more than any other rapper.

Deaths at music festivals, 2017 and 2021

More than 22,000 people were at the last night of the Route 91 Harvest country music festival in Las Vegas, Nevada, on October 1, 2017. At 10:05 p.m., while the country singer Jason Aldean was playing, Stephen Paddock, who was 64, began shooting into the crowd from his rooms on the 32nd floor of the Mandalay Bay hotel.

In ten minutes he fired more than 1,000 bullets. He killed 58 people that night and wounded at least 413 with gunfire, and about 867 people were hurt in all. Two wounded women died later, in 2019 and 2020, so the official count is 60 dead. Paddock shot himself. Investigators never found out why he did it.

Astroworld. About 50,000 people came to the Astroworld Festival in Houston, Texas, on November 5, 2021. When the rapper Travis Scott, who had started the festival, came on stage, the crowd pushed toward him. Ten people died of compressive asphyxiation: they were squeezed so hard they could not breathe. Thousands were hurt. The youngest to die was a boy of 9 or 10, and the reports differ on his age.

A Harris County grand jury, a group of citizens who decide whether someone should be charged with a crime, decided in June 2023 not to charge Scott or five others. Among the five was Brent Silberstein, a festival manager for the concert company Live Nation. Families of people who died sued Scott and Live Nation.

Machines that make music

Auto-Tune is a computer program that moves a singer's off-key notes onto the right pitch. The engineer Andy Hildebrand invented it, and the company Antares put it on sale on September 19, 1997. The singer Cher used it as a sound effect on her song "Believe" in 1998, the first record sold in stores to use it that way. The rapper and singer T-Pain used it that way on his 2005 album *Rappa Ternt Sanga* and after, and Kanye West used it on his 2008 album *808s & Heartbreak*.

Songs made by programs. Companies such as Suno and Udio sell computer programs that make whole songs. To train such a program, its makers feed recordings into it, and the program uses them to work out how to make new songs.

The lawsuits. Record companies, led by the RIAA, sued Suno and Udio in June 2024. They said the two companies had trained their programs on the record companies' recordings without permission.

The settlements. Some of the cases were settled in 2025 and 2026, which means the two sides ended them by agreement. Universal settled with Udio, and Udio's owners agreed to use only music they had permission to use. Warner and BMG settled with Suno and gave it permission to use their music.

Still in court. Universal and Sony kept suing Suno. In court papers, Suno's lawyers admitted that it had downloaded audio from YouTube. They argued that this was fair use, a use of someone else's work that the law allows in some cases.

Suno put out a new version of its program in September 2026, and its makers said they trained it on music from companies that had given permission. Universal and Sony sued again that month over 60,202 recordings, saying the new version grew out of the old ones. The songwriter Jason Isbell and three other musicians sued Suno that month too, and asked to speak for other artists as well. In October a music publisher sued Suno over 1,050 songs.

No final ruling. A separate case is about song lyrics. In March 2025 a federal judge, Eumi Lee, turned down music publishers' request to stop the company Anthropic from using lyrics to train its computer program while that case went on. As of October 26, 2026, no American court had given a final ruling on whether a company may train a song-making program on recordings without permission.

The Kennedy Center, 2025 and 2026

The Kennedy Center is a building for music, theater and dance in Washington, D.C., named for President John F. Kennedy. The National Symphony Orchestra plays there. Members of its board chose President Donald Trump as its chairman in February 2025. Trump then removed board members who had been appointed by Democrats and appointed his allies.

Board members voted on December 18, 2025, to add his name to the building, CBS News reporters wrote. Representative Joyce Beatty, a member of the board, said she had been muted on the call and that the vote had not been on the list of business for the meeting.

In court. Beatty went to court against the name change. A federal judge, Christopher Cooper, ruled on May 29, 2026, that the board could not rename the building. "Congress gave the Kennedy Center its name, and only Congress can change it," he wrote. He ordered the signs with Trump's name taken down within 14 days. Many performers canceled their shows at the center, saying it had become political, and ticket sales fell.

Closed. Board members voted to close the building on September 15, 2026, minutes after Judge Cooper again blocked the name change, Anastasia Tsioulcas of NPR reported. Trump wrote that repairs would not begin unless a higher court allowed his name. In a court filing, the center's executive director, Matt Floca, pointed to falling plaster and decay under the roof. He extended the closure to September 30, 2026, and said he would review it each week, reporters at WTOP, a Washington radio station, wrote.

The building did not reopen on September 30. Engineers had found rust and water damage on most of the panels under the building's overhanging roof, which could fall on people below.

NBC News and ABC News reported on October 1, 2026, an email in which Floca told the staff that the main building would "remain temporarily closed" while engineers checked whether people could safely use it and get out of it in an emergency. He expected that check to take one to two weeks, and he called that "an assessment timeline, not a reopening date." Judge Cooper asked for weekly reports on the repairs.

The Honors moved. The center's leaders moved the 2026 Kennedy Center Honors, a yearly award show, to Capital One Arena in Washington for December 7, Newsweek reported on October 2. It was the first time in nearly 50 years that the show would be held outside the Kennedy Center.

The texts. Beatty's lawyers asked Judge Cooper on October 25, 2026, to order the government's lawyers to hand over text messages they had kept back. They included 19 texts between Floca and Trump's assistant Natalie Harp and about 180 between Floca and Commerce Secretary Howard Lutnick, the Associated Press reported. The judge did not rule right away. As of October 26, 2026, the main building was still closed, with no date set for it to reopen.

Dolly Parton

Who: A singer and songwriter from Sevier County, in the mountains of Tennessee, who wrote more than 3,000 songs and mailed free books to children.

When and where: Born January 19, 1946, in a one-room cabin in Pittman Center, Sevier County, Tennessee. Moved to Nashville in 1964. Died August 25, 2026, in Nashville, at 80.

Movie: *Dolly Parton: Here I Am* (2019), a documentary about her.

She told Elvis Presley's manager no, and kept her song.

Dolly Parton wrote more than 3,000 songs, and in 1974 she refused to give Elvis Presley's manager half the rights to one of them. She started a program that mails free books to children, one a month from birth to age five.

The cabin. She was the fourth of 12 children, born in a one-room cabin in Pittman Center, in Sevier County, Tennessee. Her father, Robert Lee Parton, farmed tobacco and could not read or write. He paid the doctor who delivered her with a sack of cornmeal. Her mother was Avie Lee Parton. From age six Dolly sang in her grandfather's church.

By ten she sang on a radio and television show in Knoxville. At 13 she made her first record and sang at the Grand Ole Opry. The day after she finished high school in 1964, she moved to Nashville.

Porter Wagoner. The country singer Porter Wagoner hired her for his weekly television show in 1967. Their duets made the country Top 10 for six years in a row. From 1969 Wagoner owned nearly half of Owe-Par, the company that she and her uncle Bill Owens had started to publish her songs.

Her first No. 1 single as a solo singer was "Joshua," which she wrote by herself. It reached the top of the country chart in February 1971. That same year she recorded "Coat of Many Colors," about her family's

poverty. She wrote "Jolene" and "I Will Always Love You" within a few days of each other in 1973.

"I Will Always Love You" was her goodbye to Wagoner, and she left his show in 1974. The two later settled a lawsuit between them, and their 1980 album came out as part of that settlement.

Saying no. That year Elvis Presley wanted to record "I Will Always Love You." His manager, Colonel Tom Parker, told her that the songwriter always signed over half the publishing rights, the rights to the song itself, on any song Presley recorded. She said no. Whitney Houston recorded the song in 1992, and her record sold more than 24 million copies around the world. "I made enough money to buy Graceland," Parton said later, meaning Presley's home.

Hits. She wrote "9 to 5" for a 1980 film of the same name, in which she also acted. It reached No. 1 on the country and pop charts in February 1981. She sold more than 100 million records, had at least 25 No. 1 country songs, and won 11 Grammy Awards. She turned down the Presidential Medal of Freedom three times.

Who owned what. Ed Christman wrote in the magazine *Billboard* in August 2026 that Parton owned her own songs for her whole career. The records do not say how long Wagoner kept his share of Owe-Par, so they do not settle how that share fits with Christman's account. Her older recordings belong to Sony Music: the ones from her years with RCA, and probably from her Columbia years, about 23 albums in all. From 1995 she owned most of her new recordings, through her own record label.

Dollywood. She became a partner in a theme park in Pigeon Forge, Tennessee, which reopened as Dollywood on May 3, 1986. It has about 4,000 to 4,500 workers, more than any other employer in Sevier County. From 2022 Dollywood paid college costs for workers who chose to go.

The Imagination Library. She started the Imagination Library in Sevier County in 1995. The program's website states that she started it because her father could not read or write. Each child who signs up gets

one free book a month in the mail, from birth to age five.

Her foundation pays the program's running costs, and its staff bargain down the price of the books. Local partners raise the money for the books and the mailing, and families pay nothing. By 2026 more than 300 million books had gone out in five countries.

Gifts. After wildfires burned homes near Gatlinburg, Tennessee, in November 2016, she paid $1,000 a month for six months through her My People Fund to more than 900 families whose homes had burned, and $5,000 in the last month.

She gave $1 million to Vanderbilt University Medical Center in Nashville in the spring of 2020 for research on the coronavirus. Her longtime friend Dr. Naji Abumrad had told her that researchers there were making progress. A research paper on Moderna's COVID-19 vaccine listed her fund among its supporters. US government money for that vaccine came to about $2.5 billion. After Hurricane Helene in 2024, she and her businesses gave $2 million.

Her death. Her husband, Carl Thomas Dean, whom she married in 1966, died on March 3, 2025. She went into the Vanderbilt-Ingram Cancer Center in Nashville on August 21, 2026, and died four days later. Her family did not say what kind of cancer she had. Her nephew Bryan Seaver, her head of security for more than 20 years, announced her death, as she had asked him to.

That day Representative Tim Burchett of Tennessee said, "Tennessee lost one of our greatest ambassadors in Dolly Parton." President Trump ordered flags at federal buildings flown at half-staff for a week. Her family asked people who wanted to honor her to support the Imagination Library. They held a private funeral on August 28, and she was buried beside her husband in Nashville.

BY TODAY

If you remember one thing: Since 2000 most Americans have stopped buying their music and started streaming it, and the money from each play goes first to whoever owns the recording.

- 2001: Napster's owners shut it down after record companies sued.
- 2019: A music manager buys the masters of Taylor Swift's first six albums. She records four of them again and, in 2025, buys all six back.
- 2026: Record companies and musicians are in court against Suno over a computer program that makes songs.

Next: The chapter closing is below. Chapter 34, Storytelling Evolution, follows.

THE THREE QUESTIONS, ANSWERED

1. **Where did the banjo and the blues come from?** The banjo came from West African instruments, and enslaved Black people played it in the colonies from at least 1736, about a hundred years before a white man played it on a stage. The blues grew out of the work songs and field calls of enslaved people and the songs of Black workers in the South after slavery, between about 1870 and 1900.
2. **Why did so many musicians make hit songs and still die poor?** Many were paid a set fee and no royalty, as Bessie Smith was at $125 a side, or someone else put his name on their song, as Don Robey did on "Hound Dog." Others, like Stephen Foster, sold their rights to future payments for money right away.
3. **Who tried to stop people from playing their own music, and why?** South Carolina lawmakers banned drums and horns in 1740, saying the sound could call enslaved people together to rise up. Spanish friars burned Pueblo masks in the 1600s to punish Pueblo people for keeping their own religion. Richard Henry Pratt gave Carlisle students brass horns to stop their drumming, at a school

whose own paper gave its aim as "the complete transformation of the Indians." Federal rules from 1883 to 1978 punished Native religious dances, which the Secretary of the Interior had called "heathenish."

What changed: Music in this land began as songs one singer taught to the next, and by 2026 most of it reached listeners as streams that paid the owner of a recording less than half a cent a play.

FIVE DATES TO KEEP

May 10, 1740: South Carolina lawmakers ban enslaved people from using drums and horns.

1843: Four white men in blackface perform in New York as the Virginia Minstrels.

October 6, 1871: The Fisk Jubilee Singers set out on their first tour.

August 10, 1920: Mamie Smith records "Crazy Blues," the first blues record to become a big hit.

August 11, 1973: Kool Herc plays records at the Bronx party that people name as the start of hip-hop.

NOT KNOWN: No one knows who first played the blues, or when.

Where to go: *The Old Plantation*, the earliest known painting of a banjo, is at the Abby Aldrich Rockefeller Folk Art Museum in Williamsburg, Virginia.

Next: Chapter 34, Storytelling Evolution. It asks how Americans acted out stories, from Native performance and the minstrel stage to film, television and video games.

Chapter 34: Storytelling Evolution

CHAPTER 34 OF 37 · STORYTELLING EVOLUTION · 10 ERAS · ABOUT 125 MINUTES

People here have acted out stories for centuries, and in every era someone fought over who was allowed to act, whom an actor could play, and who owned the performance.

The court of Accomack County, Virginia, kept a record of three men who acted a play called *Ye Bare and Ye Cubb* on August 27, 1665. A man named Edward Martin reported them. On November 16 the judges ordered the three to come back to court "in those habilemts that they then acted in," which meant in their costumes, and to bring the script. In January 1666 the judges found them not guilty and made Martin pay all the costs. Those court orders are the only record of the play.

This chapter follows acting in this land from masked dancers before 1500 to computer copies of actors after 2000. Each new way of telling a story borrowed from the stage. The first films recorded stage acts, and the first television dramas were plays performed live.

Watch who is allowed to act. Priests burned Pueblo masks, lawmakers banned plays, and police arrested Black actors in the middle of a show. Watch, too, who plays whom. For more than a hundred years white actors blacked their faces to play Black people as fools, and film studios cast white actors as Asian and Native characters. After 2000 the fight moved to who owns an actor's face and voice.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. Who tried to stop Americans from acting, and why?

2. Why did white actors play Black, Asian and Native people for so long?
3. Who controls a computer copy of an actor's face and voice?

Five minutes? Read "The African Theatre, New York, 1821 to 1823" in 1800 to 1850, and the two stories after it.

Can skip: "Places built to hold a crowd", "Shakespeare on the rivers", "Big openings and home video", "YouTube and TikTok". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 7 MINUTES

In the Native nations here before 1500, acting was part of religion. A dancer in a mask took on the part of a spirit or an animal, in ceremonies and to ask the animals to give themselves to hunters. Among the Pueblo peoples, men carved dolls of these spirits so that girls would learn who each one was.

Some of what is known about these traditions comes from the nations themselves. Leaders of the Haudenosaunee, six nations whose lands stretch across what is now New York State and into Canada, published a policy on their masks in 1995. An Ojibwe teacher explained his people's storytelling rules in 2024. Older evidence survives in the ground. People built wide open squares called plazas and large round rooms for ceremonies, and they painted masked figures on walls and pots.

Who is inside the mask?

Pueblo men wear katsina masks and special clothing in dances, and the people believe that the spirit shown on the mask is present with or inside the dancer while the dance goes on. The Pueblo peoples, among them the Hopi, are Native nations of the Southwest. In their religion, katsinam are spirit beings, more than 500 of them. Men also carve katsina dolls and give them to girls, so the girls learn who each spirit is.

The katsina religion reached Homol'ovi around 1350. Homol'ovi is a group of towns near Winslow, in what is now Arizona, built by ancestors of today's Hopi.

Yup'ik masks. In what is now Alaska, the Yup'ik people held a winter ceremony in which dancers wore masks and took on the spirits of the animals the masks showed. Ann Fienup-Riordan, quoted in *Archaeology* magazine in 2015, said that the dancers asked the animals to give themselves to hunters in the coming year. After a dance, people usually burned the masks, broke them or left them out on the tundra, the flat treeless land of the far north.

People lived at Nunalleq, a village near Quinhagak, from 1300 to the 1650s. Archaeologists, scientists who dig up and study what people left behind long ago, found masks there that are the oldest complete Yup'ik masks anywhere. The masks were made before 1650, while people lived in the village.

Haudenosaunee masks. Among the Haudenosaunee, groups called medicine societies use masks of wood and of cornhusk. The Haudenosaunee have not published a date for when the societies began.

The Grand Council of the Haudenosaunee published its policy on these masks in 1995. The policy says only that a medicine society is made up of Haudenosaunee who have taken part in the medicine, and it does not explain the phrase further. It states that all the masks are sacred, whatever their size or age, and that only members of a medicine society should make masks. The masks must not be shown in public, and photographs and drawings of them should not be used in public displays.

Rules about who tells what, and when

Some nations set rules about which stories may be told, by whom, and at what time of year. An Ojibwe teacher described his people's rules in 2024. A Tlingit heritage group describes the Tlingit rules.

Ojibwe people tell their sacred stories, called aadizookaanag, only in winter. James Vukelich Kaagegaabaw, who is of Turtle Mountain Ojibwe descent, said in 2024 that tellers wait until the lakes freeze over and snow covers the ground. By then the frogs, snakes and other amphibians and reptiles are asleep for the winter, and so are the bears.

He said the spirits in the stories are thought to be asleep too, and "you wouldn't want to be thought of as gossiping about them." If someone tells the stories out of season, he said, "a frog or a toad may jump into your bed."

Tlingit crests. The Tlingit live in Southeast Alaska. They belong to clans, large family groups that trace back to the same ancestors. Each clan owns its crests, the animal and spirit figures that stand for the clan, and the stories, songs and names that go with each crest. The Tlingit word for this sacred clan property is at.óow.

The Sealaska Heritage Institute, led by Rosita Worl, published the first list of Tlingit clan crests in 2023. Its writers say that a clan got the right to a crest when an ancestor met a spirit being or what they call an "animal person." A clan "often acquired" the right "as payment for the life of an ancestor," they add, and the article does not say more about that payment. Clan members hold the crest and its stories through the generations.

Places built to hold a crowd

At Cahokia, in what is now Illinois across the Mississippi River from St. Louis, people built a Grand Plaza of about 47 acres. It was the largest of the city's five plazas. The builders cut down a ridge of sand and moved the sand to fill low places and make a level surface. Archaeologists see the plazas as the places where people from all around gathered for their most important ceremonies, meetings and social events.

Casa Rinconada. At Chaco Canyon, in what is now northwestern New Mexico, the people of Chaco built a great kiva called Casa Rinconada. A kiva is a round room, partly underground, used for ceremonies. Casa Rinconada is about 63 feet across inside, with a bench around the wall and 34 small openings, called niches, set into the wall.

A tunnel 39 feet long ran under the floor. Through it, a person, perhaps a leader of the ceremonies, could enter the kiva unseen and then come up suddenly in front of the people there. Building probably began in about the middle of the 1000s, and people stopped using the kiva in the early 1100s.

What the record does not have

No person from before 1500 in this land who acted, danced or told stories is named in any surviving record.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 7 MINUTES

The first European play on record in what is now the United States was acted on the day a Spanish leader claimed the land for his king, and his men made Native people act in it. Spanish soldiers and priests put it on beside the Rio Grande on April 30, 1598. They made Manso people, who lived near their camp, take part.

The Spanish belonged to an expedition, a large group of soldiers, priests and settlers, led by Juan de Oñate. They had come north from Mexico to take New Mexico for the king of Spain. Later that year Oñate's soldiers acted a second play at a pueblo, a Native town, farther north. No other European play acted in this land in the 1500s is on record.

The play at the river, 1598

Oñate's expedition reached the Rio Grande near present-day San Elizario, Texas, on April 20, 1598. Ten days later the colonists held a Mass of thanksgiving, a Catholic church service, in a chapel that Oñate had ordered set up in a grove of cottonwood trees.

"The taking." That day Oñate also read out a statement called "La Toma," which means "the taking." In it he claimed for King Philip II of Spain all the land that the river drained. Accounts differ on whether he read it before or after the play. Manso people lived near the camp.

After the Mass the expedition put on a play nearby. Captain Marcos Farfán de los Godos, one of Oñate's officers, wrote it. The stage was bare ground, and a canvas curtain hung between two tree trunks behind it. Soldiers and friars, Catholic priests who belong to a religious order, played the main parts.

The Manso actors. Members of the expedition made Manso people found near the camp take part in the play, the historian Marc Simmons writes. Simmons does not say who gave the order. In the play the Manso acted the parts of the Pueblo people who lived farther north.

An officer who watched described the story. Friars arrive in New Mexico, and the Native people there kneel and ask to be baptized, made members of the Catholic church in a ceremony with water. At the end, the people watching cheered and fired their guns into the air. No copy of the script survives, and its title is not known.

Marcos Farfán de los Godos

Who: A captain in Juan de Oñate's expedition who wrote the first European play on record in what is now the United States.

When and where: The Rio Grande near present-day San Elizario, Texas, April 30, 1598.

The author opened his play by calling it a poor one.

Marcos Farfán de los Godos wrote the play that Oñate's expedition acted on April 30, 1598, and he spoke first. In his opening speech he said he was unworthy to have written such a poor play. He offered it for the fun of his fellow soldiers and of Oñate.

Farfán came from the city of Seville, in Spain. When the expedition's officers checked each man and wrote down what he brought, Farfán had two servants, 16 horses, a tent, weapons and armor.

In November 1598 Farfán led a party west from the Hopi villages to look for mines. They reached the Verde Valley, in what is now Arizona. Near present-day Jerome they marked out 14 or 15 mining claims, pieces of ground where they said they had the right to dig for ore, rock that holds metal. What happened to Farfán after 1599, and when he died, is not known.

The same expedition at Acoma

About eight months after the play, men of the same expedition attacked Acoma Pueblo. The play had shown Pueblo characters kneeling and asking the friars to baptize them. At Acoma the expedition's soldiers killed real Pueblo people, and Oñate sentenced most of the people they captured to slavery. Acoma is a town built on top of a mesa, a steep hill with a flat top.

The demand for food. Oñate's nephew Juan de Zaldívar and his soldiers climbed the mesa in early December 1598 and demanded food. The All Pueblo Council of Governors is a council of the leaders of the Pueblo nations. In 2023 its leaders said that the soldiers had demanded food and supplies, and had forced the Acoma to promise loyalty to the king of Spain.

In the Acoma people's own account, as the Rio Grande Sun newspaper reported it in 2019, the soldiers also raped an Acoma woman, forcing her into sex. Acoma people killed Zaldívar and between 11 and 14 of his men. Accounts differ on the number.

War "by fire and blood." Oñate sent Zaldívar's brother, Vicente de Zaldívar, with about 70 soldiers in January 1599, and he declared a war "by fire and blood." The soldiers fought their way up the mesa. Over two or three days of fighting, they killed Acoma men, women and children and burned much of the pueblo. The soldiers took about 500 people prisoner.

No one counted the Acoma dead. Published estimates run from about 300 to about 1,500. The figure given most often is about 800 men, women and children, and it is the figure the Pueblos themselves use.

The sentences. Oñate put the prisoners on trial in February 1599 and sentenced them. Every Acoma man over 25 was to have one foot cut off and to be forced to work for Spanish masters for twenty years, as their slaves. Males from 12 to 25, and females over 12, got the same twenty years of forced work. Oñate also sentenced two Hopi men captured in the fighting to have their right hands cut off.

Oñate ordered the old people handed over as slaves to the Plains Apache, and children under 12 taken from their families and given to the friars. Under that order, Acoma girls were taken south to Mexico and placed in convents, houses where nuns live. The National Park Service's account gives about 70 girls, and the All Pueblo Council of Governors gives 60 children. The records do not name the men who took them. None is known to have come home.

The 24. Oñate's sentence is in the written record. Acoma people have passed down their own account since 1599: Oñate had the right feet of 24 captive men cut off. The Associated Press, NPR and the New York Times have reported that number. No one has traced it to a written record from the time. The historians Marc Simmons and John Kessell doubt that the cutting was carried out.

Oñate's own trial, years later. Spanish officials charged Oñate with 30 crimes in 1612 or 1613. In 1614 judges in Mexico found him guilty of 12 of them, including using too much force at Acoma. The judges ordered him out of New Mexico for life and barred him from Mexico City for four years. One account says five years. They also fined him 6,000 ducats, which were Spanish gold coins.

Los Moros y Cristianos

Oñate's soldiers had acted a second play months before the attack on Acoma. They put it on in the middle of 1598 to celebrate the expedition's safe arrival at a town of the Tewa, one of the Pueblo peoples, farther north. The Spanish renamed the town San Juan and made it their first capital. Today that pueblo is called Ohkay Owingeh.

The play was *Los Moros y Cristianos*, which means *The Moors and the Christians*. It shows the battles between the Moors, who were Muslims, and the Christians in Spain from the 700s to the 1400s. The leaders of each side make long speeches, and the battle scenes are full of clashing weapons.

New Mexicans have acted the play now and then in recent times, most of all a group of actors from Chimayó. Actors performed it at the University of New Mexico in 1998, for the 400th anniversary of Oñate's colony.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 6 MINUTES

People with power on both sides of the ocean tried to stop acting in the 1600s. Members of England's Parliament ordered stage plays stopped in 1642. In Virginia a man named Edward Martin reported three actors to a county court in 1665, and the court tried them. The first play in English on record in what is now the United States is known only from that court's orders.

In New Mexico, Spanish priests went into Pueblo ceremonial rooms and burned the masks used in the dances. In 1680 the Pueblos drove the Spanish out and brought back their own ceremonies.

Plays stopped in England, and a play at Harvard

England's lawmakers meet in Parliament, which has two parts, the House of Lords and the House of Commons. Members of both houses ordered on September 2, 1642, that "Public Stage Plays shall cease." Plays were to stop while "these sad causes and set Times of Humiliation do continue," meaning while the country was in trouble and kept times of sad, serious worship.

The order called plays "Spectacles of Pleasure, too commonly expressing lascivious Mirth and Levity." That meant shows put on for pleasure that too often made rude jokes about sex and joked about serious things.

Harvard. Students at Harvard College, in Cambridge, Massachusetts, acted *Gustavus Vasa* in 1690. It was a tragedy, a serious play with a sad ending, by Benjamin Colman. Local officials disapproved of the play. Arthur Hornblow, who wrote a history of the American theatre in 1919, called it the first play written by an American to be acted in America.

A play, a complaint and a court, 1665

Three men named Cornelius Watkinson, Philip Howard and William Darby acted a play called *Ye Bare and Ye Cubb* in Accomack County, Virginia, on August 27, 1665. The court record does not say where. A local history site, Secrets of the Eastern Shore, says they acted it at Fowkes Tavern near Pungoteague.

A man named Edward Martin reported the play to the court. The king's attorney for the county, the lawyer who brought cases to court in the king's name, took up the case. The record gives the charge only as "acting a play." It does not say what Martin objected to, or what law the attorney said the men had broken.

"In those habilemts." The king's attorney accused the three men in the county court on November 16, 1665. The judges ordered the men to come to the next court "in those habilemts that they then acted in." Habilemts was the court clerk's short spelling of habiliments, an old word for clothes, so the men had to come in their costumes. They also had to bring a written copy of the verses and speeches.

The judges ordered the sheriff to hold Watkinson and Howard until they gave security, a promise backed by money or property that they would come back. They ordered him to arrest Darby.

The verdict. The judges found the three men "not guilty of fault" at a court in January 1666. They ordered Edward Martin, who had reported the men, to pay all the costs of the case. The record does not say whether the men acted the play in front of the judges. The court orders are the only record of the play from its own time.

William Darby

Who: One of the three men who acted *Ye Bare and Ye Cubb* in Virginia in 1665, and the one the sheriff was ordered to arrest.

When and where: Accomack County, Virginia, August 27, 1665, and the county court, November 1665 to January 1666.

Later writers name him as the author of the lost play.

William Darby is one of the first people on record to act a play in English in what is now the United States. The Accomack County court record names him as an "actour," an old spelling of actor, in *Ye Bare and Ye Cubb*. He was the one actor of the three whom the judges ordered arrested, "to answere at his ma'ties suit." That meant he had to answer a case brought in the name of His Majesty, the king.

Later writers say he wrote the play or helped write it. The reference book *American Eras* lists it as "*Ye Bare and Ye Cubb*, by William Darby." Writers at the Oscar G. Brockett Center for Theatre History call him "one of the piece's authors."

NOT KNOWN: The court record is the only account of Darby from his own time, and it does not say what work he did, when he was born or when he died.

Pueblo ceremonies attacked, and brought back

In New Mexico, Spanish officials and priests tried to end the Pueblo ceremonies that the masked dancers performed. Franciscan friars, one group of Catholic friars, had set up churches in several Pueblo towns.

The Franciscan leader Alonso de Posada forbade the Pueblo people to hold their ceremonies from 1656 to 1665. He ordered the missionaries, priests sent to win people over to Christianity, to go into the kivas, burn the masks there, and take or destroy the sacred objects. Armed Spanish soldiers protected the missionaries while they did it.

The arrests. Governor Juan Francisco Treviño ordered the arrest of 47 Pueblo religious leaders for sorcery, using magic to do harm, in 1675. Spanish officials sentenced four of the men to death by hanging. They hanged three of them, and the fourth killed himself. They shamed the others, whipped them in public and put them in prison. Pueblo men then came to Santa Fe and demanded that the prisoners be freed, and the Spanish let them go. One of the men freed was Po'pay of Ohkay Owingeh, the pueblo the Spanish called San Juan.

The knotted ropes. Po'pay planned a revolt of all the Pueblo towns at once. He sent runners carrying knotted ropes to the towns, and the people in each town untied one knot a day. When the last knot was gone, the revolt would begin. On August 9, 1680, the Spanish caught two of the runners, Pedro Omtua and Nicolas Catua of Tesuque Pueblo, and tortured them. The Smithsonian's account does not say how.

When Po'pay learned the two had been caught, he started the revolt a day early, on August 10. Pueblo fighters killed about 400 people, including 21 of the 33 Spanish priests in New Mexico. About 2,000 settlers who survived fled south to El Paso. After the Spanish left, the Pueblo people destroyed the churches and went back to their own religious ceremonies. The Spanish stayed away for 12 years.

What the record does not show

English colonists in the 1600s enslaved Africans, owning them as property and forcing them to work without pay. Religion, storytelling, music and dancing were important parts of enslaved people's lives, and helped them pass African ways from parents to children. No record from the 1600s describes a performance by an enslaved person in the English colonies. The earliest known picture of a stick dance, a dance of enslaved people, is a watercolor called *The Old Plantation*, painted in the late 1700s.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 7 MINUTES

Two of the first actors in the English colonies were not free. They were servants, bound by contract to the man who built the first playhouse, in Williamsburg, Virginia, between 1716 and 1718. Builders in Charleston, South Carolina, put up a theatre made for plays in 1735 and 1736.

Some colonists wanted no plays at all. In Boston, a judge of the colony's high court wrote against acting one. The preacher George Whitefield, who had prepared to act plays as a schoolboy, preached in the fields. According to newspaper reports that Benjamin Franklin read, one crowd numbered 25,000. In New York, enslaved Black people gathered with music and dancing for a holiday called Pinkster.

The first actors and the first playhouses

The British actor Anthony Aston reached Charleston, South Carolina, in about 1702 and wrote a play about the colony there. Accounts give his arrival as 1701, 1702 or 1703. No copy of his play survives.

Williamsburg. A merchant named William Levingston signed a contract in 1716 with Charles Stagg and his wife, Mary Stagg. The Staggs were his indentured servants, people bound by a contract to work for a master for a set number of years. Under the contract, Levingston agreed to build a playhouse in Williamsburg, and the Staggs agreed to act and dance in it.

The first play on record there was acted in 1718. Lieutenant Governor Alexander Spotswood, the colony's leader at the time, sponsored it. No list of the plays acted in Levingston's playhouse survives.

Whose land. Williamsburg stands on land that the Paspahegh and Chiskiack peoples used before the English came. Both belonged to Tsenacomoco, a group of nations that Powhatan led until 1618. Its people spoke Algonquian languages, one family of related Native languages.

Charleston. A company of actors put on Thomas Otway's tragedy *The Orphan* in Charleston on January 24, 1735. They acted it in the "Court-room" of a tavern on Broad Street, a room that colony officials rented for trials. The company gave six shows through March.

A ticket cost forty shillings in South Carolina money, which was worth less than English money, so the ticket was worth a little less than six English shillings. Most of the actors' names are not recorded. A dancer named Henry Holt probably led them.

Builders then put up a theatre on Dock Street, made for plays. It opened on February 12, 1736, with George Farquhar's comedy *The Recruiting Officer*.

The Etiwan. The Etiwan people lived on the Charleston peninsula until 1672. That year the colony's Grand Council, the group of men who governed it, decided to build the town there. Colonists paid the Etiwan in trade goods to

move away. Maurice Mathews, one of the colonists who probably arranged it, wrote in 1680 that the settlers paid the Etiwan "to remove them from their old habitations," meaning their old homes.

Philadelphia. A company led by Walter Murray and Thomas Kean gave its first show in Philadelphia on August 22, 1749. It acted Joseph Addison's tragedy *Cato* that month.

Anthony Aston

Who: A British lawyer who became an actor and wrote a play about South Carolina while he was there.

When and where: Charleston, the Albemarle region of North Carolina, New York and Virginia, about 1701 to 1703.

He reached Charleston "full of lice, shame, poverty, nakedness and hunger."

Anthony Aston told his own story in the preface, the short opening piece, of his play *The Fool's Opera*, printed in 1730 or 1731. He listed himself as "a gentleman, lawyer, poet, actor, soldier, sailer, exciseman, publican," the last two meaning a collector of taxes on goods and a tavern keeper.

In Charleston, he wrote, he "turned player," or actor, "and poet and wrote one play on the subject of the country." That Charleston play was a different play from *The Fool's Opera*, and no copy of it survives.

He then spent about a month in the Albemarle region of North Carolina, where two settlers, Allen and Abraham Waights, supported him. On the way to New York, a storm blew his ship off course to the coast of Virginia. In New York he spent a winter "acting, writing, courting, fighting." Then he sailed to Virginia, and later he went back to England.

William Levingston

Who: A merchant and dancing teacher who built the first playhouse in the English colonies, with two indentured servants as his actors.

When and where: New Kent County and Williamsburg, Virginia, 1716 to 1723.

He built a theatre beside his bowling alley and stable.

William Levingston built the first theatre in the English colonies, in Williamsburg, Virginia. Before that, he ran a dancing school that traveled around New Kent County, with Charles and Mary Stagg as its star dancers.

Their contract, dated July 11, 1716, and recorded at Yorktown, set out how the theatre would work. Charles Stagg was an actor, a violin player and a dancer. Mary Stagg was an actor. The three agreed to share the costs of costumes, music and everything else needed to put on plays.

The theatre lot. Levingston bought land in Williamsburg on November 21, 1716. On it he built a house, a kitchen, a stable, a bowling alley and the theatre. He borrowed money from Dr. Archibald Blair with the property as security. In 1723 Blair foreclosed, which means he took the property because the debt was not paid.

Charles Stagg died in Williamsburg in 1735 or early 1736. After his death, Mary Stagg earned her living by holding dancing parties. College of William and Mary students acted plays in the theatre in 1735 and 1736. In 1745 a group of Virginia men bought the building and gave it to Williamsburg to use as a town hall.

Boston against plays

Samuel Sewall, a judge of the Massachusetts high court who later became its chief justice, wrote a letter on March 2, 1714, against a plan to act a play in the Council Chamber in Boston. The Council Chamber was the room where the colony's council met.

Sewall wrote that even the Romans had not been so set on plays as to "turn their Senate House into a Play-House." He went on: "Let not Christian Boston goe beyond Heathen Rome in the practice of Shamefull vanities." No record shows that the play was ever acted.

How far could one preacher's voice carry?

Benjamin Franklin worked out that the English preacher George Whitefield could be heard by more than 30,000 people at once. Franklin heard Whitefield preach from the courthouse steps on Market Street in Philadelphia, and he walked backward down the street until he could no longer hear clearly. Then he worked out how many people could stand in a half circle that size, giving each person two square feet. He "computed that he might well be heard by more than thirty thousand."

Whitefield first came to the colonies in 1738 and made a preaching tour from 1739 to 1741. According to newspaper reports that Franklin read, Whitefield once preached outdoors to 25,000 people. As a schoolboy of about twelve in Gloucester, England, he wrote later, he "was very fond of reading plays." He stayed away from school "for days together to prepare myself for acting them."

Practice on tour. Franklin noticed that Whitefield spoke each sermon better every time he repeated it on tour. By then "every accent, every emphasis, every modulation (rise and fall) of voice, was so perfectly well turn'd and well plac'd." Franklin wrote that a preacher who traveled could improve a sermon "by so many rehearsals," or practice runs.

Pinkster and Black election days

In New York, enslaved Black people gathered for a holiday called Pinkster, with music and dancing. In Connecticut, Black communities chose their own governor.

Dutch settlers brought Pinkster to New Netherland, later New York, in the 1620s. The oldest written account of Pinkster appeared in the *New-York Weekly Journal* in March 1737. It describes a gathering in fields outside New York City, with African-style musical instruments.

Enslavers gave the people they held time off for the holiday. For many enslaved Africans it was a chance to see loved ones and family members who lived some distance away. Africans and Europeans alike drank, played games, made music and danced at these gatherings, with dances called the jig, the breakdown and the double shuffle.

A Black governor. Black communities in Connecticut held their own elections for a governor by 1749, when a man named Hercules served as governor at New London. The voting took place the day after the white colonists' elections, and the celebration went on for a full week. Some of the clothes people wore were borrowed from the men and women who enslaved them. By custom, the enslaver of the man elected was expected to help pay for food, decorations and liquor.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 9 MINUTES

Lawmakers kept passing laws against plays even as paid actors arrived and found audiences. A family company of actors from London landed in Virginia in 1752 and toured the colonies. One reference work describes their *Merchant of Venice* in Williamsburg that year as the beginning of truly professional theatre in America.

Lawmakers in Massachusetts, Pennsylvania and Rhode Island passed laws against plays between 1750 and 1761. Even so, professional actors staged the first play by an American writer in 1767. In 1774, as the fight with Britain grew, the delegates to the First Continental Congress promised to discourage plays, and shortly before the war the leading company of actors left for the West Indies.

During the war, British soldiers acted a play in Boston, and American officers acted one at Valley Forge. After the war the actors came back. In 1787 an American comedy brought a new character to the stage, the plain-spoken Yankee.

Why lawmakers banned plays

Lawmakers in Massachusetts said that plays made people less moral and less religious. Members of the Massachusetts General Court, the colony's lawmakers, passed "An Act for preventing Stage-Plays, and other Theatrical Entertainments" in 1750. It stated that plays "tend to increase immorality, impiety, and a contempt of religion," impiety meaning a lack of respect for God. The act set fines for anyone who put on a play or took part in one.

Three more colonies. Members of the Pennsylvania House of Representatives voted through a law against acting plays on May 31, 1759, with a fine of five hundred pounds. Two years later the lawmakers of Rhode Island passed "an act to Prevent Stage Plays and other Theatrical Entertainments."

Members of the New Hampshire House of Representatives refused in 1762 to let a company of actors into the town of Portsmouth. They said that plays had a "peculiar influence on the minds of young people and greatly endanger their morals," peculiar meaning special, and morals meaning a person's ideas of right and wrong.

The crowd in Chapel Street. New Yorkers learned on May 5, 1766, that members of the British Parliament had voted to end the Stamp Act, a British tax that many colonists had protested. A crowd tore down the theatre in Chapel Street, where a comedy called *The Twin Rivals* was advertised for that night.

David Malinsky, writing in the *Journal of the American Revolution* in 2013, says that the New York Sons of Liberty did it. They were secret groups of colonists, sometimes violent, who fought the Stamp Act. Malinsky writes that the crowd severely beat an actor who was dressed as a woman and killed a small child. The older accounts record only that the theatre was destroyed. No record names the child, the actor, or who led the crowd.

The first touring company, 1752

The London actor Lewis Hallam led a company of actors to Virginia in 1752. It included members of his family, among them his son Lewis, about twelve years old. It opened in Williamsburg with Shakespeare's *The Merchant of Venice* on September 15, 1752. William Dunlap, an early historian of the American stage, gave the date as September 5.

The company acted tragedies by Shakespeare and Joseph Addison, and comedies by William Congreve and Richard Steele. *Hamlet*, *Othello* and *Richard III* were among its plays. It played Williamsburg, Annapolis, Philadelphia and New York. Hallam had trouble getting permission to act in New York and Philadelphia, and he did not even try in Boston. In New York, Hallam built a theatre on Nassau Street in 1754.

The American Company. Lewis Hallam then died in Jamaica, where the company had gone to perform. His widow, Sarah Hallam, married the actor and manager David Douglass. In 1758 they formed the American Company. Douglass built a theatre in Philadelphia in 1759. In Annapolis he opened a brick theatre on March 3, 1760, that held five to six hundred people.

Charles Daly, writing in 1896, says Douglass also built a theatre in Chapel Street, New York, in 1761. Gabriel Furman's notes name another man, Phil Miller, as its builder.

Lewis Hallam the Younger

Who: A boy in the first touring company of actors in the colonies, who grew up to be the leading actor and manager of the American Company.

When and where: Born about 1740 in England. Came to Virginia in 1752. Died in Philadelphia on November 1, 1808.

He landed in Virginia at about twelve and acted for fifty years.

Lewis Hallam the Younger spent about fifty years on the stage in America. He was about twelve years old when his father's company landed in Virginia in 1752. The historian William Dunlap got that story from Hallam himself.

At eighteen, in 1758, Hallam became the leading man of the American Company, which his mother and stepfather ran. He acted in *The Prince of Parthia* in 1767, the first play by an American writer that professional actors staged. He also acted in *The Contrast* in 1787.

His mother died in 1774, and his stepfather retired to Jamaica. Hallam then took over the family company. Shortly before the Revolution, he moved it to the West Indies. He brought the company back in 1784 or 1785, depending on the account, and managed it until 1796. He kept acting until shortly before he died. *Encyclopaedia Britannica* describes him as "known as a quarrelsome and financially inept manager," which means he argued with people and handled money badly.

Nancy Hallam

Who: An actress and singer in the American Company, and the subject of an early painting of an actress in a role in America.

When and where: Annapolis, Maryland, 1770 and 1771.

A newspaper letter praised "the Musick of her Tongue."

Nancy Hallam was an actress whom the painter Charles Willson Peale painted in the costume of one of her roles. She was the niece of Sarah Hallam Douglass. She trained as a singer in England from 1760 to 1765, and she was acting with the American Company by 1766. In 1769 she moved from the parts of young women to leading roles.

In Annapolis in 1770 she played Imogen in Shakespeare's *Cymbeline*, a princess who disguises herself as a young man named Fidele. On September 6, 1770, the *Maryland Gazette* printed a letter signed only with the initials "Y.Z." It praised her "Delicacy of Manner" and "the Musick of her Tongue."

Peale painted her dressed as Fidele, and the painting was on view by September 1771. Colonial Williamsburg owns it today. Nancy Hallam went back to Britain in 1773. What happened to her after that, and when she died, is not known.

The first American plays

Thomas Godfrey wrote a tragedy called *The Prince of Parthia*. The American Company acted it at the Southwark Theatre in Philadelphia on April 24, 1767. It was the first play by an American writer that professional actors performed. Godfrey had died of a disease called yellow fever in 1763, so he never saw it on the stage.

Mercy Otis Warren of Massachusetts wrote plays in which she attacked the policies of the colony's British governor. At the time, Massachusetts law banned acting plays.

The Yankee. Royall Tyler wrote a comedy called *The Contrast*. It opened at the John Street Theatre in New York in 1787, the first comedy by an American that professional actors performed. Tyler wrote it after he met Thomas Wignell, the American Company's leading comic actor.

Its leading character, Jonathan, has rough, plain-spoken manners. He is a Yankee, a word that can mean a person from New England. Playwrights after Tyler kept writing Yankee characters like him.

Mercy Otis Warren

Who: A Massachusetts writer who used plays to attack the royal government at a time when Massachusetts law banned acting them.

When and where: Born in Barnstable, Massachusetts, on September 14, 1728. Wrote plays from 1772 to 1779. Died in 1814.

She wrote five plays against the royal governor and signed none.

Mercy Otis Warren's first play, *The Adulateur*, came out in 1772 in a newspaper, the *Massachusetts Spy*. *The Defeat* followed in 1773, *The Group* in 1775, *The Blockheads* in 1776 and *The Motley Assembly* in 1779.

The National Women's History Museum's biography of her states that she likely left her name off the plays to avoid being punished, and also so that readers would take her work seriously even though a woman wrote it. In 1805 she published a history of the American Revolution in three volumes.

Congress against plays, and armies acting them

The First Continental Congress was a meeting of delegates, men chosen by each colony to speak for it. On October 20, 1774, they signed an agreement called the Continental Association. In its eighth article they promised to "discourage every species of extravagance and dissipation," meaning spending too much and wasting time and money on pleasure. The list that followed named horse racing, cockfighting, "shews, plays, and other expensive diversions and entertainments." Shortly before the war, the American Company left for the West Indies.

A play in Boston. British soldiers acted a play in Boston while American troops surrounded the city. On December 2, 1775, they staged *Zara*, a tragedy by the British writer Aaron Hill, in Faneuil Hall. The poster states that it was put on "by a Society of Ladies and Gentlemen." General John Burgoyne wrote a prologue for it, a speech given before the play begins. By one account, Francis Rawdon-Hastings, a British officer, read it. The money from tickets went to the widows and children of soldiers.

A play at Valley Forge. American officers at Valley Forge acted Joseph Addison's *Cato* in the spring of 1778. Lieutenant Colonel William Bradford Jr. wrote in a letter that "Cato was performed before a very numerous & splendid audience." He wrote that "His Excellency and Lady" were there, and that the performance was "admirable." His letter uses only that title and gives no names.

The historian Nancy K. Loane writes that General George Washington and his wife, Martha, attended the play. Accounts date the performance May 4 or May 11, 1778. The audience was officers and their guests. Shawn David McGhee, writing in the *Journal of the American Revolution* in 2024, argues that it may have been a reading of the play rather than a full staging.

Congress again. The delegates to Congress asked the states to stop "theatrical entertainments" in October 1778. On October 16 the delegates voted that any official who would "act, promote, encourage or attend such plays, shall be deemed unworthy to hold such office."

After the war

Lewis Hallam the Younger brought the American Company back from the West Indies in 1784 or 1785 and started it up again.

The Massachusetts law of 1750 still banned plays. In 1791 a group of men who wanted a theatre in Boston tried and failed to get it repealed, which means ended by a vote. In 1792 they opened the "New Exhibition Room" on Board Alley anyway. They sometimes advertised its plays as "moral lectures," talks meant to teach right from wrong. Governor John Hancock forced it to close in June 1793.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 15 MINUTES

White audiences paid to watch white actors play Black people as fools, while Black actors who played Shakespeare were attacked and arrested. The first known Black theatre company in the United States opened in New York in 1821, and police arrested its actors in the middle of a play. In 1824 a young actor from the company, Ira Aldridge, left for England. In the United States he faced discrimination, which means he was treated worse because he was Black.

Blackface. A white actor named Thomas Dartmouth Rice blacked his face with burnt cork in 1828 and played a Black man as a fool. White audiences paid to laugh at the act, and by 1843 four white men in the same makeup were performing together as a group.

Actors also played Shakespeare in city theatres and on boats on the rivers. In 1849 the fans of two rival actors fought outside a New York theatre. City officials gave soldiers the order to fire into the crowd, and the soldiers killed at least 22 people.

The African Theatre, New York, 1821 to 1823

The first known Black theatre company in the United States opened in New York in 1821. Its founder, William Brown, was a free Black man from the West Indies who had worked as a steward, a servant on a ship. He ran a tea garden behind his house at 38 Thomas Street, an outdoor place for refreshments and shows, with music on Sunday afternoons.

Brown opened a theatre in 1821 with about 300 seats on the second floor of a building at Mercer and Bleecker Streets. Its actors were Black. It opened with Shakespeare's *Richard III*. Accounts give the first night as September 17, 21 or 24, 1821. A ticket cost 25 cents, or 50 cents for a better seat.

A curtain for a robe. On the first night, an enslaved man played the king in a robe made from a window curtain. After that, an actor named James Hewlett took over the part. The company also played Shakespeare's *Othello* and other plays such as *The Poor Soldier*. White New Yorkers came too, and some of them made trouble.

A group of people that included a man named George Bellmont broke into the theatre. They attacked the actors and wrecked the costumes and scenery. Police arrested Bellmont and several of the others.

The arrests. Brown then moved his company next door to the Park Theatre, run by a white manager named Stephen Price. Brown's company played *Richard III* on the same nights as Price's company. White members of the audience shouted at Brown's actors and broke up the show. According to the Shakespeare Theatre Company, which has published Hewlett's history, Price started a riot because he hoped to destroy Brown's company.

During one performance, police arrested the actors and put them in jail. The police let them go only after they promised to stop acting Shakespeare. The surviving records do not give the date or name the officers.

The end. Mordecai Noah, the editor of a newspaper called the *National Advocate*, mocked the company in print. He warned that free Black New Yorkers might one day "outvote the whites." In October 1822 Noah's

newspaper included a notice that the theatre was closing because of an outbreak of a disease called yellow fever. The last known playbill of the company, a printed poster for a show, is from June 1823.

In London, the English comedian Charles Mathews mocked the company in his show *A Trip to America*, although he had never been to its theatre. In May 1824 James Hewlett answered him in a letter in the *National Advocate*: "Was this well for a brother actor?"

William Alexander Brown

Who: A Black ship's steward from the West Indies who started the first known Black theatre company in the United States, and wrote the first known play by a Black writer to be acted there.
When and where: New York City, 1816 to 1823.

His own play told of a 1796 war on St. Vincent.

William Brown wrote *The Drama of King Shotaway*, the first known play by a Black writer to be staged in the United States. Accounts give his full name two ways, as William Alexander Brown and as William Henry Brown.

Brown bought his house on Thomas Street in 1816. Neighbors and police complained about the shows in its tea garden again and again until the garden closed. After the attacks and arrests at his theatre, he moved his company several times.

Brown staged *King Shotaway* in 1823. It told the story of the war that the Black Caribs of the Caribbean island of St. Vincent fought against English and French settlers in 1796. The Black Caribs, now called the Garifuna, were a people whose ancestors were both free Africans and Native people of the Caribbean. No copy of the play survives. What happened to Brown after his company's last known playbill, in June 1823, is not known.

Ira Aldridge

Who: A Black actor from New York who left the United States in 1824 and spent more than forty years acting Shakespeare in Britain and Europe.

When and where: Born in New York about July 24, 1807. Went to England in 1824. Died on tour in Łódź, Poland, on August 7, 1867.

A London critic said his skin was not dark enough for Othello.

Ira Aldridge became a successful Shakespearean actor in Britain and across Europe. He is not known to have acted on a stage in the United States after he left. He went to the African Free School in New York, and as a teenager he acted with William Brown's company. Because he was Black, he faced discrimination in the United States, and in 1824 he sailed to England.

In October 1825 he played Oroonoko in a play called *The Revolt of Surinam, or A Slave's Revenge*, at a London theatre. A writer in *The Times* of London made fun of the shape of his lips. The same writer said his skin was not dark enough for him to play Othello.

Aldridge played Othello anyway, and King Lear and Macbeth. In 1828 he became the manager of the theatre in Coventry, England. In 1833 he took over the part of Othello at the Theatre Royal, Covent Garden, in London. *Encyclopaedia Britannica* describes that first appearance there as "highly successful."

He also played white characters, such as Shylock and Richard III, wearing greasepaint, a thick stage makeup, and a wig. On the last night of a run, he spoke to the audience against slavery. Rulers in Prussia, Austria and Russia gave him honors, and in 1863 he became a British citizen.

After the Civil War, Aldridge planned a tour of the United States and agreed to act in New York in September 1867. He died in Poland that August, before he could make the trip.

Blackface minstrelsy: the act and the makeup

In blackface minstrelsy, white actors darkened their faces with burnt cork and acted Black people as fools. They built caricatures of Black people, acts that made fun of them by blowing up some of their features, and played them as singing, dancing, grinning fools. White audiences paid to watch.

Writers at the Jim Crow Museum at Ferris State University state that Rice and the actors who copied him helped to spread the belief that Black people were lazy, stupid and less than human. They write that the shows also helped white people argue for keeping Black people apart from them.

"Jim Crow." Thomas Dartmouth Rice was a white actor who did short comic acts between the scenes of plays. In 1828 he first went on stage as "Jim Crow," a Black character acted as a fool, with his skin blacked with burnt cork. Rice said he copied a Black man he had seen. Some accounts say the man was old, enslaved and walked with difficulty. Others say he was a ragged stable boy. No record names him.

Rice took the act from Louisville to Cincinnati, Pittsburgh and Philadelphia, and he reached New York in 1832. The act made him rich and famous. He died poor in New York on September 19, 1860.

People were using "Jim Crow" as an insult for Black people by 1838. By the end of the 1800s, "Jim Crow" was the name for the segregation laws and customs, which kept Black Americans apart from white Americans by race. Those laws came after 1877 and lasted until the mid-1960s.

The first group. Four white men in New York performed together in blackface as the Virginia Minstrels on January 31, 1843, the first group act of its kind. Years later, Black performers took up minstrelsy too, and they also blacked their faces with burnt cork. They acted the same caricatures that white actors had invented. In the 1840s one young Black dancer was already working in blackface.

William Henry Lane (Master Juba)

Who: A young Black dancer, known on stage as Master Juba, who danced in blackface and who toured with a white minstrel company.
When and where: New York and London, 1840s. Born about 1825, died about 1854.

"A black man imitating a white man imitating a black man."

William Henry Lane was a Black dancer, known on stage as Master Juba. He learned to dance in the Five Points, a neighborhood in New York. By the early 1840s he was dancing for food and for coins people tossed him. Charles Dickens described a young Black dancer in the Five Points in a book in 1842, and later writers decided the dancer was Lane.

The reference book *Notable Black American Men* states that he was the only Black dancer of his time to get top billing, which means his name came first on the posters, in a minstrel company whose other members were all white. He toured with that company in the United States and in Britain.

The fake contests. A letter printed in a newspaper called the *Sunday Flash*, in 1841 or 1842, made a charge against the showman P. T. Barnum. The letter said that Barnum had made the Black boy up in blackface and advertised him as John Diamond, an Irish-American dancer who performed in blackface. It also said that Barnum staged fake dance contests with him: "Not one dollar is ever bet or staked."

The historian Eric Lott called the act "a black man imitating a white man imitating a black man." Lane later danced against the real John Diamond in public dance contests.

Lane went to London in 1848 with the Ethiopian Serenaders, a white minstrel company. A writer for *The Times* of London said that Lane "was compelled to repeat his efforts three times," which means the crowd made him dance again and again. He died in about 1854, when he was about 29.

NOT KNOWN: No record states the cause of his death. Historians think that overwork and too little food killed him.

Shakespeare on the rivers

Actors carried plays to river towns by boat. The actor Noah Ludlow bought a flatboat, a wide boat with a flat bottom, 25 feet long, at Olean, New York, in 1816. He named it Ludlow's Noah's Ark. He and eleven others floated down the Allegheny, Ohio and Mississippi rivers and stopped to perform wherever they could.

The Floating Theatre. William Chapman, a British-born actor, built a boat called the Floating Theatre at Pittsburgh in 1831. It was 14 feet wide and 100 feet long, the first boat built to be a theatre. Chapman and his family acted plays such as Shakespeare's *The Taming of the Shrew* at each landing, with songs and dances added.

When they reached New Orleans, they broke up the boat and went back to Pittsburgh on a steamboat to build another. From 1836 Chapman used a small steamboat to tow the theatre back up the river.

A night on the Floating Theatre began with a play. Then came a speech and a set of short scenes and songs. A ticket cost fifty cents, and people who had no cash could pay with fruit, potatoes or bacon. Minstrel shows in the same years acted comic versions of Shakespeare, with titles such as "Julius Sneezer."

The Astor Place riot, May 10, 1849

Soldiers in New York fired into a crowd outside the Astor Opera House, on Astor Place, on May 10, 1849, and at least 22 people died. City officials and the soldiers' own general had given the order. The crowd had come to stop the English actor William Charles Macready from playing Shakespeare's *Macbeth*.

The quarrel began between two actors. Edwin Forrest, the American star, was jealous of Macready. In 1846, in a theatre in Edinburgh, Scotland, Forrest hissed at Macready from a private box.

The first night. Forrest's supporters stopped Macready's *Macbeth* inside the opera house on May 7 by throwing rotten eggs, potatoes, shoes and pieces of ripped-up seats. Forty-seven New Yorkers, including the writers Herman Melville and Washington Irving, signed a letter asking Macready to play again.

Captain Isaiah Rynders and the writer Ned Buntline put up posters that spoke to working men. Rynders belonged to Tammany Hall, a political group in New York. The posters read "WORKINGMEN! SHALL AMERICANS OR ENGLISH RULE IN THIS CITY?" The two men also handed out free tickets.

The order to fire. A crowd of about 10,000 gathered outside the opera house on May 10. Mayor Caleb Woodhull had called out the militia, an army of part-time soldiers who have other jobs. General Charles Sandford brought about 350 soldiers of the Seventh Regiment, one unit of that army. People in the crowd threw stones at the building and at the soldiers.

Frederick Talmadge was the city's recorder, an elected city officer who also served as a judge. He told General William Hall, who commanded the soldiers on the spot, "You must order your men to fire." Sandford, the general who had brought the soldiers, said his men would not "stand and be pounded to death with stones." Then the sheriff, whose name no record gives, said, "you have permission to fire." Sandford gave the order. The soldiers fired first over the crowd's heads. Then they lowered their guns and fired into the crowd.

The dead. The counts differ. Betsy Golden Kellem, writing in *Smithsonian* magazine in 2017, counts 18 dead that night and five more who died of their wounds in the next few days, 23 in all. Miguel Hernandez, writing in the *New*

York Almanack, counts 25. The historian Nigel Cliff counts between 22 and 31.

Kellem writes that many of those shot were bystanders, people who were only watching. Seven of the dead were Irish immigrants. The dead included carpenters, clerks, printers and laborers, both men and women. About 48 people in the crowd were hurt, along with 50 to 70 police officers and 141 soldiers. The next night, in more fighting near Astor Place, a young boy was killed.

A jury later found that the events "justified the authorities in giving the order to fire." In September 1849 Buntline and nine others were found guilty of starting the riot, fined and jailed. Kellem does not name the judge. Kellem calls the shooting "the most significant loss of civilian life in New York since the Revolution."

Edwin Forrest

Who: An American-born star actor whose fans rioted against his English rival, William Charles Macready, at Astor Place in 1849.

When and where: Born in Philadelphia on March 9, 1806. Acted from about 1817 to 1872. Died December 12, 1872.

He paid prizes for new plays with a big part for himself.

Edwin Forrest was an American star actor. In 2006 the Theatre Alliance of Greater Philadelphia, a group of the city's theaters, called him "America's first superstar of the stage and the highest paid actor in the world in the mid-nineteenth century." He first acted at eleven, at the South Street Theatre in Philadelphia. He became a star playing Othello at New York's Bowery Theatre in 1826.

Metamora. From 1828 Forrest paid prizes for new American plays that had a leading part written for him. The first winner was *Metamora*, by John Augustus Stone. Its hero, Metamora, stands for Metacom, a leader of the Wampanoag nation whom the English called King Philip. Forrest, a white actor, played Metamora from December 15, 1829. At the end of the

play, Metamora kills his wife to save her from the settlers, and then he dies. The theatres made record profits from the play, and Stone got very little of the money.

An English visitor, Thomas Hamilton, called Forrest "a coarse and vulgar actor." Hamilton also wrote that his audience "were enraptured," meaning they loved him. No record shows that Forrest led the crowd at Astor Place in 1849, or that he was there that night.

Forrest beat the writer Nathaniel Parker Willis with a whip in Washington Square, in New York, in 1850. Willis took him to court and won $2,500. Forrest's wife, Catherine, won their divorce case on January 24, 1852, after a six-week trial in New York. Forrest had to pay her money every year, and he kept acting almost until he died, partly to pay it.

BY 1850

If you remember one thing: White actors in burnt-cork makeup made a paying business of mocking Black people, while the Black actors who played Shakespeare in New York were arrested and made to promise to stop.

- 1821: William Brown opened the African Theatre in New York.
- 1828: Thomas Dartmouth Rice first went on stage as "Jim Crow."
- May 10, 1849: soldiers fired into the crowd at Astor Place, and at least 22 people died.

Next: Harriet Beecher Stowe refused in 1852 to let her novel against slavery become a play, and theatre managers staged it anyway.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 16 MINUTES

The biggest touring shows after 1850 told the stories of Black and Native people, and white showmen decided how. From 1852 until well after 1900, white actors in blackface toured the country playing the enslaved people in stage versions of *Uncle Tom's Cabin*, a novel written against slavery. Buffalo Bill's Wild West opened in 1883, and Native performers in it acted out attacks on settlers. Black minstrels such as Billy Kersands worked in the same burnt-cork makeup that white minstrels wore.

Other stages. John Wilkes Booth, a working actor, shot President Abraham Lincoln in 1865 in a theatre where he often performed. From 1881 theatre managers in New York and Boston built a new kind of show called vaudeville. In 1894 the first paying customers in New York watched films, and most of those films showed stage performers doing their acts.

A novel against slavery, acted in blackface

Harriet Beecher Stowe published *Uncle Tom's Cabin*, a novel against slavery, in 1852. That year she refused to let it be made into a play, writing that "it would not be advisable." She never earned a cent from any stage version of it.

Theatre managers staged it anyway. The version that lasted opened in Troy, New York, on September 27, 1852. The manager, G. C. Howard, paid his 22-year-old cousin, George L. Aiken, $40 and a gold watch to write it in a week. When Aiken's play reached New York in July 1853, it ran for about 300 performances.

Blackface again. White actors in blackface played the enslaved characters. In Troy, the company's leading man, Green Germon, did not want to play a blacked-up character. He feared audiences would then expect minstrel dances and "Jim Crow" songs from him. The manager's wife, Mrs. Howard, played the enslaved girl Topsy and danced a minstrel dance called a breakdown. In January 1854 Thomas Dartmouth Rice, the actor who had created "Jim Crow," played Uncle Tom at New York's Bowery Theatre.

P. T. Barnum put on a version by Henry J. Conway at his American Museum in New York. His advertisement stated that this version "does not foolishly and unjustly elevate the Negro above the white man in intellect or morals," using a word of that time for a Black person. The advertisement promised white audiences that the play would not show Black people as being as smart or as good as white people.

Tom shows. People called these stage versions Tom shows. In the 1890s between 400 and 500 touring companies were playing the story. An agent's price list from 1893 offered actors to play Uncle Tom by the week, with "prime" ones at $60, "fair" ones at $50 and "culls," the leftovers, at $40.

One report counted a quarter of a million performances by 1902. A dozen companies were still touring the story in 1927.

Charlotte Cushman

Who: A Boston-born actress who played men's parts, including Romeo and Hamlet, as well as women's parts.

When and where: Born in Boston on July 23, 1816. Acted in the United States and Britain from 1835 to 1875. Lived in Rome from 1852. Died in Boston on February 18, 1876.

She played Romeo while her sister Susan played Juliet.

Encyclopaedia Britannica describes Charlotte Cushman as "the first native-born star on the American stage." A Philadelphia theater group has called Edwin Forrest, who was born in Philadelphia ten years before her, "America's first superstar of the stage," so the two descriptions do not agree on who came first. Cushman first trained to sing opera. Her voice failed after she sang parts that were too high for it, and she turned to acting. In 1836 she played Lady Macbeth.

Cushman played men's parts as well as women's. In London in 1845, and again in 1854 and 1855, she played Romeo while her sister Susan played Juliet. She also played Hamlet.

> Cushman lived with the writer Matilda Hays from 1848, and people in Europe knew the two women as a couple. In 1852 Cushman settled in Rome, among a group of American women who were artists. She later lived with the sculptor Emma Stebbins. Cushman helped the career of the sculptor Edmonia Lewis, whose mother was of Ojibwe and African American descent.
>
> During the Civil War, Cushman acted to raise money for the care of Union soldiers. In 1869 doctors began treating her for breast cancer. She kept acting and reading on stage. She announced her farewell at least seven times before her last performance in Boston on May 15, 1875.

The actor who shot Lincoln

The man who killed President Abraham Lincoln was an actor. John Wilkes Booth came from a family of actors, and he often performed at Ford's Theatre in Washington. On April 14, 1865, he learned that Lincoln would come that night to see a comedy called *Our American Cousin*.

That night Booth found the president's box almost unguarded. He went in, barred its outer door from the inside, and waited for a line that he knew would bring a big laugh. Then he burst into the box and shot Lincoln once in the back of the head with a small pistol called a derringer. Booth also slashed Major Henry Rathbone, one of Lincoln's guests, in the shoulder with a knife. The play stopped at the line "you sockdologizing old man-trap," a joking insult made of slang of the time.

Booth jumped from the box to the stage below. He broke his left leg in the fall, though some people believe the leg broke later. Accounts differ on what he shouted: "Sic semper tyrannis," Latin for "Thus always to tyrants," or "The South is avenged!", or both. Lincoln died the next morning.

The theatre after. The federal government bought the theatre in 1866. Edwin Stanton, the Secretary of War, ordered it turned into offices. Workers were digging in the basement on June 9, 1893, to put in an electric light plant,

when a brick pillar that held up the floors gave way. Part of the inside of the building fell in. Twenty-two clerks who worked there were killed, and at least 68 were hurt.

An inquest jury, a jury that looks into a death, met to find out why. It found three men guilty of criminal negligence, which means carelessness so serious it is a crime. The three were Colonel Fred C. Ainsworth, the head of the office whose clerks worked there, the engineer, and George Dant, the contractor in charge of the building. The jury blamed Dant most, because he had not propped up the brick pillars before the digging began. The charges against all of them were later dropped.

The restored theatre held its first public performance since Lincoln's death in 1968.

Edwin Booth

Who: An American actor of Shakespeare who played Hamlet a record hundred nights in a row, and the older brother of John Wilkes Booth.
When and where: Born in Bel Air, Maryland, on November 13, 1833. Acted mostly in New York and on tour. Died in New York on June 7, 1893.
Movie: *Prince of Players* (1955), a feature film about his life.

He pulled the president's son out from beside a moving train.

Edwin Booth once saved the life of Robert Lincoln, the president's son. Late in 1863 or early in 1864, on a train platform in Jersey City, New Jersey, Robert slipped into the gap between the platform and a moving train. Booth grabbed his coat collar and pulled him out. Robert Lincoln described the rescue in a letter in 1909.

Booth played Hamlet about a hundred nights in a row in New York in 1864 and 1865. That was a record, and no actor broke it until 1922. He was the son of the actor Junius Brutus Booth. Edwin supported the Union in the Civil War. His brother John Wilkes supported the Confederacy, the group of Southern states whose leaders broke away from the United States to keep slavery.

After the shooting. After his brother killed President Lincoln, Edwin Booth stayed off the stage for about nine months. He came back as Hamlet in January 1866. He opened his own theatre in New York in 1869. It never made a profit, and in 1874 it went bankrupt, which means Booth could not pay its debts.

A salesman named Mark Gray fired two shots at him on a stage in Chicago in 1879 and missed. In 1888 Booth bought a house in New York and founded The Players, a private club, in it. He kept an upper floor as his home, and he died there.

How vaudeville began

Vaudeville was a show made of many short, separate acts, one after another. Tony Pastor, a theatre manager, took over a theatre on 14th Street in New York in 1881. He sold no alcohol and kept the acts clean, so that women and families would come. *Encyclopaedia Britannica* credits Pastor with the first show of the kind later called vaudeville.

Boston. Benjamin Franklin Keith opened a museum of oddities on Washington Street in Boston in 1883. Its first exhibit was a very small baby, three months old, shown to paying customers as "Baby Alice." Keith added a theatre with 123 seats. He ran a "continuous" show there from 10 in the morning to 11 at night, so customers could walk in at any time.

From 1885 Keith and Edward F. Albee ran the Bijou Theatre in Boston together, and the two men went on to build a chain of vaudeville theatres.

Billy Kersands

Who: A Black minstrel comedian, the most popular Black comedian of his day, who performed in burnt-cork blackface.

When and where: Born about 1842 in Baton Rouge, Louisiana. Toured the United States and Europe. Died on June 30, 1915, in Artesia, New Mexico.

He filled his mouth with billiard balls to get laughs.

Billy Kersands was a Black comedian who blacked his face with burnt cork and played the character that white minstrels had invented. He worked in Black minstrel companies such as Sam Hague's Georgia Minstrels. On stage he played a slow, foolish Black man. He filled his wide mouth with billiard balls, or with a cup and saucer. Tom Fletcher, a Black performer who knew him, wrote that Kersands once told Queen Victoria that if his mouth were any bigger, his ears would have to be moved.

A tavern owner named Charles Callender bought the Black minstrel company that Kersands worked in. That was in 1872. When Kersands and other stars asked for more pay and better treatment, Callender fired them. Most of them later came back to him.

The pay. Kersands earned about $15 a week in 1879, and by 1882 he was reportedly earning $80 a week, only a little less than a white minstrel star. On tours of Europe he earned up to $250 a week. White and Black audiences in the South came to see him. Because he drew such crowds, some theatre owners relaxed their rules limiting Black customers to separate sections of the theatre.

People asked Kersands why he never moved to vaudeville. Fletcher recorded his answer: "All of my money came from the people of the South, the white and the colored (Black), while playing down there." Kersands died shortly after a show, at about 73.

The Wild West: Lakota performers

William F. Cody, called Buffalo Bill, started a show called Buffalo Bill's Wild West near North Platte, Nebraska, in 1883. In its arena, Native performers acted out attacks on stagecoaches, wagon trains and a settler's cabin. Then cowboys and soldiers drove them off, and in the last scene Cody rode to the rescue.

Sitting Bull's contract. The Hunkpapa Lakota leader Sitting Bull signed a contract on June 6, 1885, to tour with the show for four months. It paid him $50 a week and let him sell his own photographs and autographs. He signed at the Standing Rock Agency, the office of the Indian agent at Standing Rock. An Indian agent was the federal official who ran a reservation, land that US officials had set aside for a Native nation. James McLaughlin, the agent at Standing Rock, signed as a witness.

Deaths on tour. Several performers died on the show's tours of Europe. Surrounded by the Enemy, an Oglala Lakota man, died of a lung infection in London in 1887 and was buried there. Four months before him, a one-year-old boy named Red Penny, the son of Little Chief and Good Robe, died and was buried in the same London cemetery.

Chief Hawick died of typhoid fever on January 1, 1890, and Featherman died of smallpox, two diseases that often killed people then. Both men had been left in a hospital in Marseilles, France. Wounds One Another died after he fell from a train in Germany, with $108 in wages still owed to him. No full count of the deaths survives.

The pay. Most Lakota men in the show earned far less than Sitting Bull's $50 a week. The Lakota performer No Neck came home from Europe in July 1890 and told reporters that the men had been paid $25 a month. He said that no more Lakota would go for less than $50 a month. He also said that Cody had given him "a suit of clothes, paid my wages, and gave me $100 besides," and had told him to give "a good report of the treatment of the Indians."

The permits. To hire Lakota people from their reservations, Cody needed permits, written permission from federal officials. John Noble, the Secretary of the Interior, ordered an investigation because of the deaths on the 1889 to

1890 tour and the poor condition of the performers coming home. He also stopped giving new permits for Native performers.

Wounded Knee. Soldiers of the 7th Cavalry, a regiment of soldiers on horseback, were taking the guns of Spotted Elk's band of Lakota at Wounded Knee Creek, in South Dakota, on December 29, 1890. The soldiers opened fire with carbines, which are short rifles, and Hotchkiss guns, which are small cannon. They killed between 250 and 300 Lakota people, most of them women and children.

After the killings, army officers held Lakota Ghost Dancers, people who took part in a religious ceremony called the Ghost Dance, as prisoners at Fort Sheridan, Illinois.

In early 1891 Cody and Nate Salsbury, who had started the show with him, wrote to the Commissioner of Indian Affairs, the federal official over all the agents. They asked for 60 men and 15 women and children. They said the men would be paid $25 a month, that men they called "chiefs" would get $30 to $60 and that women would get $10. The officials in charge of Indian affairs agreed. In March 1891 federal officials released 23 of the Fort Sheridan prisoners to Cody, on the condition that they tour Europe with his show. General Nelson Miles, Cody's close friend, commanded the army in the region.

The prisoners included Short Bull and Kicking Bear. Short Bull said of Wounded Knee, "twenty-three of my own relations were killed in this fight, men, women and children, this is like butchery." In Cody's arena, the prisoners played "hostiles," the Indians who attacked.

The historian Sam Maddra studied these tours and concludes that the Lakota who joined the show got wages, travel and standing among their people. She adds that, perhaps more important, they got away from the control of government officials. They also earned far more than farming on the reservation paid.

Dances made crimes. United States officials and missionaries worked in the same years to stop Native ceremonies and dances. In 1883 Hiram Price, the Commissioner of Indian Affairs, issued rules that made the Sun Dance and

other dances "Indian offenses," or crimes, for the Courts of Indian Offenses on the reservations.

For a first offense, the rules specify stopping the person's rations, the food handed out to them on the reservation, for up to ten days. For a later offense, the rations could be stopped for 15 to 30 days, or the person could be locked in the agency jail for up to 30 days.

Missionaries from the Moravian Church arrived at Quinhagak, Alaska, in 1885. They called the masked dances of the Yup'ik people "heathen rites," meaning the religion of people who were not Christian. No traditional dancing took place in Quinhagak for more than a century, until 2013. *Archaeology* magazine's 2015 account of the village does not name the missionaries or say how the dancing was stopped.

What did the first films show?

Many of the first films were recordings of performers doing their stage acts. In December 1892 Thomas Edison's staff began building a film studio at West Orange, New Jersey. They called it the Black Maria. It was a studio lined with tar paper, with a roof on hinges that flipped open, and the whole building could turn on a track.

The first paying customers. The Holland brothers opened a Kinetoscope parlor at 1155 Broadway in New York on April 14, 1894. A Kinetoscope was a machine that showed one short film to one person looking into it. The parlor had ten machines and ten films, each 15 to 20 seconds long, all shot in the Black Maria.

They showed Sandow, a strongman, and Bertoldi, a contortionist who bent the body into unusual shapes. The other films showed wrestlers, a trapeze act, a Highland dancer, blacksmiths and a barber shop.

A stage kiss. A film projector called the Vitascope showed films on a screen to a seated audience in a theatre for the first time on April 23, 1896, at Koster and Bial's Music Hall, a vaudeville theatre in New York.

That same month, the actors May Irwin and John Rice made a film of a stage kiss. They had kissed at the end of a Broadway musical, *The Widow Jones*, in 1895. They acted the same kiss again in front of Edison's camera. The film, *The Kiss*, runs about 18 seconds.

BY 1900

If you remember one thing: Black and Native performers found paying work on the touring stage in these fifty years, mostly in parts that white managers had written to mock them or to act out their defeat.

In 1850: Theatres played Shakespeare and minstrel shows, and Cody's Wild West, vaudeville and films did not yet exist.

In 1900: Hundreds of companies had been touring *Uncle Tom's Cabin* in blackface, Keith and Albee ran a chain of vaudeville theatres, and New Yorkers had been paying to watch films for six years.

Next: The first film companies kept their actors' names secret, so fans called one star only "the Biograph Girl."

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 24 MINUTES

Acting moved onto film and into radio in these fifty years, and the people in charge kept the parts of the old minstrel stage, where white men had blacked their faces to mock Black people. Americans in 1903 saw films mostly in vaudeville theatres, which put on shows made of many short live acts. From 1905 small theatres charged five cents to see short films, and by 1908 there were about 8,000 of them.

The first film studio in Hollywood opened in 1911. In 1927 *The Jazz Singer* put recorded songs and speech into a full-length film, and by the 1930s eight companies made most American films.

Who played whom. White actors in blackface, dark makeup that made a white face look Black, played Black characters, and white actors made up to look Chinese played Chinese characters.

On the radio, two white men used put-on voices to play Black characters in one of the most popular shows of the time. Because of state laws against marriage between races, producers would not let the Chinese American star Anna May Wong kiss a white actor on screen. The studio heads' own rules banned showing romance between white and Black characters.

Radio plays and, from 1928, the first television plays brought actors into people's homes.

Story films, nickelodeons and actors with no names

Edwin S. Porter made *The Great Train Robbery* for Thomas Edison's company in November 1903. The film runs about 12 minutes. Porter cut between places to show things happening at the same time. He took the title from a stage play of 1896. Later legends called it the first film with a story. That claim is wrong: films with plots came before it.

The nickel theatres. Harry Davis and John P. Harris opened a small theatre in a Pittsburgh storefront on June 19, 1905, and charged a nickel to see films. They named it the Nickelodeon, and small theatres like it were called nickelodeons. By 1908 there were about 8,000 nickelodeons in the United States. Most of them seated fewer than 200 people. William Fox, Carl Laemmle and Louis B. Mayer, who later ran big film studios, all started out as nickelodeon owners.

Hollywood. The Nestor company opened the first permanent film studio in Hollywood on October 27, 1911, at Sunset Boulevard and Gower Street. Hollywood lies in the Los Angeles Basin, the homeland of the Tongva people, whom the Spanish called the Gabrielino. In 1994 California officials named the Gabrielino the first people of the Los Angeles Basin. Federal officials do not list any Tongva group as a tribe.

Actors with no names. The first film companies did not publish their actors' names. The owners of the Biograph company refused to name Florence Lawrence, one of their leading actors, so fans called her "the Biograph Girl." Her biographer writes that the owners feared famous actors would ask for more pay.

The producer Carl Laemmle hired her in 1910. He spread a false story that she had been killed by a streetcar. Then he named her in newspaper ads headed "We nail a lie." Lawrence is often called the first film star, and her headstone says "The First Movie Star." Evidence published in 2019 points to the French actor Max Linder as the first film actor named in public.

Films and free speech. All nine justices of the Supreme Court ruled in 1915 that showing films was "a business, pure and simple." That meant films had no protection as free speech. State and city censors, officials who decided which films could be shown, could cut any film or ban it. In 1952 the justices reversed that ruling.

The Birth of a Nation, 1915

D. W. Griffith's *The Birth of a Nation* showed members of the Ku Klux Klan hunting down and lynching a Black man, killing him with no lawful trial, and stopping Black men from voting. Many of its Black characters were played by white actors in blackface.

The Ku Klux Klan was a secret group that Confederate veterans founded in December 1865. Klansmen, armed and in disguise, whipped freed Black people and the white people who worked with them, burned their homes and murdered them.

The film opened in Los Angeles on February 8, 1915. It ran about three hours, longer than any film released before it. Griffith based it on a novel by Thomas Dixon called *The Clansman*.

What the film shows. The film shows its Black characters as unintelligent and as sexually aggressive toward white women, which means wanting to force sex on them. In one scene, Gus, a freed man played by a white actor in blackface, follows a white girl named Flora Cameron into the woods and says he wants to marry her. She runs from him to the edge of a cliff and jumps to her death.

Klansmen in the film hunt Gus down, hold their own trial, lynch him and leave his body at the house of a character named Silas Lynch.

At the end of the film, armed Klansmen on horseback stop Black men from voting. Griffith said that he had decided to have "no black blood among the principals," the main actors. Black extras, actors hired to fill out crowd scenes, appear in many shots. The filmmakers housed them apart from the white cast.

At the White House. President Woodrow Wilson watched the film in the East Room of the White House on February 18, 1915, with his family and members of his Cabinet, the officials who head the government's departments. Dixon and Wilson had been graduate students together. Wilson's secretary later wrote that Wilson had not known what the film contained.

In 1937, 22 years later, a magazine reported that Wilson had said of the film, "It is like writing history with lightning. And my only regret is that it is all so terribly true." No record from 1915 contains those words, and whether he said them is disputed. In May 1915 Dixon wrote to Wilson's secretary that "the real purpose of my film was to revolutionize Northern sentiments," meaning to change completely what Northerners thought.

The protests. Protests began at the Los Angeles opening in February 1915 and went on when the film opened in New York the next month. In Boston in April 1915, the managers of the Tremont Theatre refused to sell tickets to William Monroe Trotter, the editor of a newspaper called the *Guardian*, and to others with him. Police arrested Trotter and ten others.

Trotter and the Boston branch of the NAACP, the National Association for the Advancement of Colored People, then led rallies of thousands of people against the film.

The bans. Twelve mayors banned the film in 1915, and the mayor of Cedar Rapids, Iowa, was the first. In Chicago, Black voters pressed the mayor to act, and he banned showings on May 17, 1915. Officials in Denver, Pittsburgh, St. Louis and Minneapolis kept the film out too, and officials in the state of Ohio banned it on March 4, 1916. Most cities and states let it play.

The money. No one knows how much people paid to see the film. The company that made it reported $4.8 million by the end of 1917. The historian Richard Schickel estimates more than $60 million from its first run. No American film earned more until *Gone with the Wind* in 1939.

The Klan again. After the film opened in Atlanta, a preacher named William J. Simmons started the Klan again. He led a cross burning, setting a large cross on fire, on Stone Mountain, Georgia, in November or December 1915.

Encyclopaedia Britannica states that Simmons was "directly inspired" by the film. In the 1970s David Duke, a Klan leader, showed the film to bring in new members.

Lilian St. Cyr (Red Wing)

Who: A Ho-Chunk actress who played the leading woman in the first Western made in Hollywood.

When and where: Born on the Winnebago Reservation in Nebraska in February 1884. Acted in films from 1908 to 1925. Died in March 1974.

"He's working with a one hundred percent American."

Lilian St. Cyr played a leading part in the first Western made in what is now Hollywood, and she was paid far less than the man who starred with her, Dustin Farnum. She was Ho-Chunk, born on the Winnebago Reservation in Nebraska. By 1888 both of her parents had died.

The schools. She spent ten years in Indian boarding schools and graduated from the Carlisle Indian School in Pennsylvania in 1902. At these schools, run or paid for by the federal government, staff cut Native children's hair, gave them English names and forbade them to speak their own languages. Staff punished children with beatings, locked rooms and withheld food. A federal report in 2024 counted at least 973 children who died at the schools and said the true number is higher.

She married James Young Deer in 1906. The couple performed in Wild West shows, and from 1908 they acted in short Western films. She used the name Red Wing. In 1909 the director D. W. Griffith hired the couple as technical consultants, people who advise filmmakers on how to get details right.

The film. A film by Cecil B. DeMille opened on February 23, 1914, in which St. Cyr played a Ute woman who marries an Englishman and then kills herself. The film's title used an insult for Native women. St. Cyr made her own costumes. The male lead, Dustin Farnum, earned $1,000

a week. Someone told her she should be proud to act with such a star. She answered, "What about him? He's working with a one hundred percent American."

She acted until 1925. Then she made costumes in New York and worked for a national day to honor Native Americans. Accounts differ on her birth date, February 14 or February 23, 1884, and on the day she died, March 12 or March 13, 1974.

Wounded Knee acted again, 1913

Buffalo Bill Cody made a film in the fall of 1913 that acted out Wounded Knee. There, on December 29, 1890, soldiers of the 7th Cavalry had killed between 250 and 300 Lakota people, most of them women and children, with rifles and small cannon.

Cody filmed in the Badlands and the Black Hills of South Dakota. He got $50,000 for it from the Essanay film company and from the owners of two newspapers. Lindley Garrison, the Secretary of War, supplied soldiers of the 12th Cavalry to play the troops. Franklin K. Lane, the Secretary of the Interior, allowed more than 1,000 Lakota people to take part. General Nelson Miles advised on the film, although he had written that such a show was not "for the welfare of the Indians."

Short Bull. Short Bull acted in it. Twenty-three of his relatives had been killed at Wounded Knee. In 1891 federal officials had released him from prison at Fort Sheridan, an army post in Illinois, to tour Europe with Cody.

The film was called *The Indian Wars*. Only a few minutes of it survive. Ben Black Elk later said that "the government put a ban on it" and destroyed it. No surviving record names the official who did so.

BY 1915: Hollywood had its first film studio, the Supreme Court had ruled that films had no protection as free speech, and the longest film yet made showed Klansmen lynching a Black man.

Bert Williams

Who: A Black comedian who wore blackface on stage and starred in an otherwise all-white Broadway show.

When and where: Born in Nassau, in the Bahamas, on November 12, 1874. Performed in the United States and Britain from 1895. Died in New York City on March 4, 1922.

"I don't belong to either side. Nobody wants me."

Bert Williams was a Black comedian who blacked his face to work, even as a star on Broadway. He moved to the United States at ten. From 1895 he worked with another Black comedian, George Walker. The two men wore burnt-cork blackface, as white minstrels did.

Their stage name paired the word "Real" with an insult for Black people. It told audiences that these two were real Black men, unlike the many white performers in blackface. On stage Williams played the slow-witted, shuffling Black man that was then a standard part on the minstrel and vaudeville stage.

In August 1900, during a riot in New York, a white mob pulled Walker off a streetcar and beat him. In 1903 the two men starred in *In Dahomey*, a musical with an all-Black cast. It played on Broadway and then at Buckingham Palace in London.

One Black act. In 1909 a group of white vaudeville performers called the White Rats, who opposed Black performers and women gaining ground in vaudeville, made theatre managers cut Williams's billing, the size and place of his name on the posters. Managers of the big chains of vaudeville theatres allowed only one Black act on each program. Williams had to travel, eat and sleep apart from the white performers.

The Follies. Florenz Ziegfeld hired Williams for his Broadway revue, the *Follies*, a show of songs and comic scenes, in 1910. Several white cast members demanded that Ziegfeld fire him. Ziegfeld answered, "I can replace every one of you," except Williams. Williams starred in the *Follies* until 1919. On one three-year contract he was paid $62,400 a year.

In August 1919 the rest of the cast went on strike, and no one told him. He said, "I don't belong to either side. Nobody wants me." He collapsed on stage in Detroit in February 1922 and died in New York at 47. More than 5,000 people filed past his coffin.

Charlie Chaplin

Who: A London comedian who became a film star around the world by acting without speaking.

When and where: Born in London on April 16, 1889. Made films in Los Angeles from 1914 to 1952. Died in Switzerland on December 25, 1977.

Movie: *Chaplin* (1992), a feature film about his life, directed by Richard Attenborough.

When he came back, the audience stood and applauded for 12 minutes.

Charlie Chaplin became famous around the world for acting with his face and body, with no spoken words. He grew up poor in London. Before he was nine, he was sent twice to a workhouse, a place where poor people lived and worked in return for food and a bed.

Chaplin came to the United States with a touring comedy company. In September 1913 he signed with the Keystone studio for $150 a week. His character the Tramp first appeared on screen on February 7, 1914. In 1916 the Mutual company paid him $670,000 for one year of work.

His own company. Chaplin formed a company called United Artists on February 5, 1919, with the actors Mary Pickford and Douglas Fairbanks and the director D. W. Griffith. The four could then pay for their own films and control them. Chaplin kept making films with no spoken words after sound arrived, including *City Lights* (1931) and *Modern Times* (1936). In his first talking film, *The Great Dictator* (1940), Chaplin attacked Adolf Hitler and Benito Mussolini, the dictators, or rulers with total power, of Germany and Italy.

Shut out. FBI agents under J. Edgar Hoover investigated Chaplin. On September 18, 1952, he sailed for London. The next day Attorney General James McGranery canceled his permit to come back into the United States. Chaplin settled in Switzerland. He came back once, in April 1972, to accept an honorary Academy Award, and the audience stood and applauded for 12 minutes.

Sound, and the Production Code

The Jazz Singer opened in New York on October 6, 1927. It was the first full-length film with songs and speech recorded to match the actors' lips, in a few scenes. Its star, Al Jolson, was a Jewish performer born in Lithuania who worked in blackface. At the end of the film he sings in blackface.

The Code. The heads of the big studios agreed in 1930 to follow a set of rules called the Production Code. Martin Quigley, a Catholic publisher, and Daniel Lord, a Catholic priest, wrote it. The studio heads adopted the Code through their own trade group, led by Will H. Hays. From July 1, 1934, no film from those studios could open without a seal of approval from an office run by Joseph Breen.

One rule in the Code read: "Miscegenation (sex relationships between the white and black races) is forbidden," using an old word for marriage or romance between people of different races. The studio heads rewrote that rule in 1956. On November 1, 1968, they replaced the whole Code with movie ratings.

BY 1934: Films talked, eight companies made most of them, and no film from the big studios could open without the approval of Joseph Breen's office.

How a seven-year contract ran longer

Actors signed contracts with a studio for up to seven years, and studio heads did not count any time when an actor was not working. So a contract could run much longer than seven years. The actress Olivia de Havilland sued Warner Bros. over this in 1943. On December 8, 1944, California judges ruled that seven years meant seven years on the calendar.

Eight companies. Eight companies made most American films by the 1930s. Five of them, MGM, Paramount, Warner Bros., 20th Century-Fox and RKO, also owned chains of theatres. By 1939 there were 15,000 movie theatres in the country.

The justices of the Supreme Court ruled against the five studios that owned theatres on May 4, 1948, in a case called the Paramount case. The justices also outlawed block booking, the studios' practice of selling films to theatres only in large bundles. By 1954 the studios had sold their theatres.

Oscar Micheaux

Who: A Black homesteader and novelist who made more than 40 films for Black audiences outside the Hollywood studios.

When and where: Born in Metropolis, Illinois, on January 2, 1884. Made films from 1919 to 1948. Died in Charlotte, North Carolina, on March 25, 1951.

Movie: *Midnight Ramble: Oscar Micheaux and the Story of Race Movies* (1994), a PBS documentary about him and about films made for Black audiences.

The only known copy of his second film turned up in Spain.

Oscar Micheaux made more than 40 films for Black audiences outside the Hollywood studios. He worked as a Pullman porter, an attendant on railroad sleeping cars. Then he farmed a homestead in Gregory County, South Dakota, a farm on land that the federal government gave to settlers who lived on it and worked it. In 1906 he bought the claim from a settler who had given it up, and he lost the farm in 1911. He wrote novels about that life and sold them door to door.

George Johnson, the manager of the Lincoln Motion Picture Company, a Black-owned film company, offered in 1918 to film his novel *The Homesteader*. Micheaux wanted to make the film himself. He started his own company and sold shares in it for $75 to $100 each. The film came out in 1919.

Within Our Gates. His next film, *Within Our Gates* (1920), shows a white mob lynching a Black couple and burning their bodies. Micheaux gave it to Chicago's censor board in December 1919, and the board's members first rejected it. Five months earlier, gangs of white youths in Chicago had attacked Black residents during a riot in which 38 people were killed, 23 of them Black. Critics feared the film would set off more violence. Officials in Omaha and New Orleans also blocked it or demanded cuts.

> Micheaux's films played in about 700 theatres. He paid for each new film by touring with the last one and raising money from investors along the way, often carrying the copies of the film by hand. The only known copy of *Within Our Gates* was found in Spain in 1979.

Plays on the radio

Radio drama was acting for listeners who could not see the actors. Two white men, Freeman Gosden and Charles Correll, started *Amos 'n' Andy* on a Chicago radio station on March 19, 1928. They knew the traditions of the minstrel show. They voiced Amos, Andy and many other characters, more than 170 in the first ten years. One storyline in 1930 and 1931 drew about 40 million listeners. In 1930 Gosden and Correll played the parts in blackface in a film.

The petitions. Robert L. Vann, the publisher of the *Pittsburgh Courier*, a Black newspaper, collected petitions, written requests signed by many people, against the show from more than 700,000 Black Americans in 1931. Vann sent them to the Federal Radio Commission, the government office in charge of radio. Writers at the *Chicago Defender*, another Black newspaper, praised the show that same year.

The War of the Worlds. Orson Welles, who was 23, and his Mercury Theatre on the Air performed H. G. Wells's novel *The War of the Worlds* on the CBS radio network on October 30, 1938. They acted it as a string of fake news bulletins about Martians landing in New Jersey. The announcement that it was a play came almost 40 minutes in.

The next morning, newspaper stories across the country described a national panic. The *New York Times* ran an opinion piece headed "Terror by Radio." Later researchers found that the panic was far smaller than those stories said. Jefferson Pooley and Michael J. Socolow, writing in *Slate* in 2013, called it a myth, and they wrote that newspapers, which had been losing advertising money to radio, blew the story up.

That night workers for C. E. Hooper, a company that counted radio listeners, had telephoned 5,000 homes. Only 2 percent said they were listening to the Welles program, and none said they were hearing a news broadcast. Some

listeners were frightened and called police stations and newspapers. Six weeks later, Princeton researchers checked six New York City hospitals and found no one brought in because of the broadcast. No death has ever been traced to it.

The Federal Theatre Project, 1935 to 1939

Federal officials set up the Federal Theatre Project on August 27, 1935, to pay theatre workers to put on plays. It was part of the Works Progress Administration, a federal program that gave people jobs. Harry Hopkins, the head of that program, chose Hallie Flanagan, a theatre professor at Vassar College, to lead the project.

Within a year it employed 15,000 people at $23.86 a week, when the actors' union said an actor should get at least $40. About 30 million people saw its roughly 1,200 productions, and most of the shows were free.

Macbeth in Harlem. Federal Theatre officials set up 17 Negro Theatre Units, companies of Black actors, in cities from Seattle to Birmingham. On April 14, 1936, the New York unit opened *Macbeth* at the Lafayette Theatre in Harlem. It had an all-Black cast of about 150 and was set on an island like Haiti in the 1800s. Orson Welles, then 20, directed it. A free show on April 20 drew 3,000 more people than the theatre could seat.

The end. In 1938 Martin Dies Jr. and the other members of a House of Representatives committee he led held hearings and charged that the project spread communism, a system in which one party runs the government and the government owns the farms and factories. The committee's members argued that "racial equality forms a vital part of the Communist dictatorship." On December 6, 1938, Flanagan testified before the committee. Members of Congress then cut off the project's money in June 1939, and 8,000 people lost their jobs.

Anna May Wong

Who: A film actress often called the first Chinese American film star, who spoke out against the parts that film studios gave her.

When and where: Born Wong Liu Tsong in Los Angeles on January 3, 1905. Acted in the United States and Europe from 1919. Died in Santa Monica, California, on February 3, 1961.

"Why is it that the screen Chinese is always the villain?"

Anna May Wong became a film star while producers kept her out of leading parts written for Chinese women. Her parents were Chinese Americans. She got her first film job as an extra in 1919. She starred in *The Toll of the Sea* (1922), one of the first films made in color.

Studio producers would not let her kiss a white actor on screen, because state laws banned marriage between races. That held even when the white actor was playing an Asian man. Producers cast her as villains, as the sly and dishonest "Dragon Lady," or as the gentle "Butterfly" who gives up everything. In 1933 she wrote in a magazine article called "I Protest," "Why is it that the screen Chinese is always the villain?"

The Good Earth. The producers at MGM refused to consider her for O-Lan, the Chinese heroine of *The Good Earth* (1937). They gave the part to Luise Rainer, a white actress made up to play a Chinese woman. Rainer won the Academy Award for Best Actress. MGM's producers tested Wong for Lotus, a dishonest singer. She turned the part down. She told the producer Irving Thalberg that he was asking her, "with Chinese blood," to play "the only unsympathetic role" in a film where white actors played the Chinese characters.

She starred in *The Gallery of Madame Liu-Tsong* in 1951, the first American television series with an Asian American star. In 2022 her picture went on the quarter, which made her the first Asian American shown on United States coins.

Hattie McDaniel

Who: The first Black person to win an Academy Award.

When and where: Born in Wichita, Kansas, on June 10, 1893. Acted in Los Angeles from the 1930s. Won the award on February 29, 1940. Died on October 26, 1952.

She won the Academy Award and sat at a separate table.

Hattie McDaniel won the Academy Award in 1940 and had to sit apart from the white stars of her film to receive it. She was the youngest of 13 children, and her parents had been enslaved.

In *Gone with the Wind* she played Mammy, an enslaved house servant, for $450 a week. The film opened in Atlanta on December 15, 1939, at the Loew's Grand Theatre. The producer, David O. Selznick, asked that she attend. Officials at MGM advised against it because of Georgia's segregation laws, under which Black and white people had to stay apart. She did not go. Clark Gable, the film's star, threatened to stay away too, and she talked him into going.

The award. She won the Academy Award for Best Supporting Actress on February 29, 1940. The ceremony took place at the Cocoanut Grove in the Ambassador Hotel in Los Angeles. The hotel had a strict rule against Black guests, and Selznick had to ask a special favor to get her into the building. She sat at a small table with her escort and her white agent, away from the film's white stars. In her speech she said she hoped to "always be a credit to my race."

Accounts differ on where the table stood. *The Hollywood Reporter* places it against a far wall. A 2008 book places it at the back of the room. A 2019 article places it in a separate back room used to store the trophies.

At least 74 of her film parts were maids and other servants. Walter White of the NAACP and others criticized her for taking those parts. She often answered, "I'd rather play a maid than be a maid."

Her house and her grave. In 1945 white neighbors in West Adams Heights, her Los Angeles neighborhood, sued her and 30 other Black homeowners. They wanted to force them out under a rule that only white people could live there. Judge Thurmond Clarke threw the case out. McDaniel died of breast cancer in 1952. She had asked to be buried in Hollywood Cemetery, but the people who ran it refused, because the cemetery took only white people. She was buried at Rosedale Cemetery.

The first television plays

The radio station WGY in Schenectady, New York, broadcast a short spy play called *The Queen's Messenger* by television on September 11, 1928. It was the first television drama. Two actors, Izetta Jewell and Maurice Randall, performed it. Viewers watched on screens three inches wide.

Twenty years later, on June 8, 1948, the NBC network began broadcasting a comedy show called *Texaco Star Theater*. The comedian Milton Berle became its host that fall, and people called him "Mr. Television."

BY 1950

If you remember one thing: Films and radio carried the old minstrel parts to millions of people, and studio rules and state laws kept actors of color out of love scenes with white actors.

One number: about 40 million. That many people listened to one storyline of *Amos 'n' Andy*, in which two white men played Black characters, in 1930 and 1931. In 1931 more than 700,000 Black Americans signed petitions against the show.

Next: Ten Hollywood writers and directors refused in 1947 to tell a House committee whether they belonged to the Communist Party.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 17 MINUTES

The fight over who could act turned political after 1947. Members of a House committee questioned film workers about communism, a system in which one party runs the government and the government owns the farms and factories. Studio executives announced that they would not knowingly hire any Communist. Hundreds of writers, directors and actors lost work, some for more than ten years.

Live and on film. Actors in the early 1950s performed plays live on television, with no second takes. By 1961 about 80 percent of evening programs were filmed ahead of time.

The parts on offer. White actors still played Asian and Native characters. Actors of color such as Rita Moreno and Sidney Poitier won Academy Awards, and they were still offered a narrow set of parts.

Studio executives began opening big films in hundreds of theatres on the same day in 1975. Families could record shows at home from 1975, and in 1984 the Supreme Court justices ruled that taping a broadcast to watch later was legal. A physicist built one of the first video games in 1958, and by the 1990s game makers were hiring actors.

Who lost work in the blacklist?

Hundreds of people in film, radio and television lost their jobs in the late 1940s and 1950s because of their politics, or because they would not answer questions about it. Studio executives put them on a blacklist, a list of people they would not hire. The list was rarely written down. It grew out of many separate decisions by studio executives.

The hearings. Members of the House Un-American Activities Committee, a group of members of the House of Representatives, ordered 42 people from the film industry in late September 1947 to answer questions about communism. The hearings began in October. Walt Disney, the studio head Jack Warner, and the actors Gary Cooper and Ronald Reagan answered the committee's questions. Disney named former employees of his who, he said, were probably Communists.

The Hollywood Ten. Ten writers and directors refused to say whether they belonged to the Communist Party. They became known as the Hollywood Ten. On November 24, 1947, members of the House voted 346 to 17 to charge them with contempt of Congress, the crime of refusing to cooperate with Congress.

The next day, nearly 50 film executives met at the Waldorf-Astoria hotel in New York. Eric Johnston, who led the group that spoke for the film producers, then announced that the ten would be fired or suspended without pay. He said the studios would not "knowingly" hire any Communist. The promise is called the Waldorf Statement.

The ten were found guilty in 1948. They appealed, and the justices of the Supreme Court refused to hear their case again. They went to prison in 1950, for up to a year each. Others lost their jobs after witnesses named them, or after they refused to answer the committee's questions. The list grew to hundreds of names, and no one kept a complete count.

False names. Some writers kept working under false names. In 1957 the Academy Award for the story of *The Brave One* went to "Robert Rich." That was a false name for the blacklisted writer Dalton Trumbo. The real Robert

Rich was the nephew of the film's producer. In 1975 Academy officials reissued the award in Trumbo's name.

Some people named others to the committee, among them the director Elia Kazan and the writer Budd Schulberg. The actor Sterling Hayden said in 1963, "I was a rat, a stoolie, and the names I named of those close friends were blacklisted and deprived of their livelihood," using "stoolie" for a person who informs on others.

The blacklist began to break in 1960. The director Otto Preminger announced on January 20 that Trumbo had written *Exodus*, and the actor Kirk Douglas gave Trumbo credit on screen for *Spartacus*.

Paul Robeson. Paul Robeson was a Black actor who also gave concerts. In 1943 he became the first Black actor to play Othello on Broadway. In 1949 he gave a speech in Paris that was misquoted, and his concerts were canceled. Britannica's account does not name who misquoted him or who canceled the concerts.

That year near Peekskill, New York, people against communism started a riot and burned a straw figure of him. In 1950 officials of the State Department took away his passport, so he could not travel outside the country. His yearly income fell from $100,000 to $6,000 between 1947 and 1952.

He told the House committee in 1956, "I am not being tried for whether I am a communist." He said he was being tried "for fighting for the rights of my people, who are still second-class citizens in these United States of America."

Lee Grant

Who: An actress who was blacklisted for twelve years at the start of her film career, and who later won an Academy Award for acting. A documentary she directed won another Academy Award.

When and where: Born Lyova Haskell Rosenthal in New York City on October 31. The year is disputed, and every year from 1925 to 1931 has been given. Acted in New York and Los Angeles from 1948.

"Twelve working, acting years from my life."

Lee Grant lost twelve years of work in film and television to the blacklist. In 1949 she played a shoplifter in the play *Detective Story* on Broadway, and she played the part again in the 1951 film. It earned her an Academy Award nomination and the Best Actress prize at the Cannes Film Festival in France.

Two reasons. The actor J. Edward Bromberg died in 1951 soon after members of the House committee questioned him. At his memorial service, Grant gave a speech that suggested the committee's pressure had caused his death. In April 1951 the director Edward Dmytryk had named the writer Arnold Manoff to the House committee as a Communist. Grant married Manoff in 1952.

Accounts give two reasons why film and television employers put her on the blacklist, and they do not name those employers. One is her speech for Bromberg. The other, as the actor Kirk Douglas remembered it, is that she refused to testify about her husband.

For twelve years she could get little work in film or television. She taught acting and took small parts under other names. In her 2014 book about her own life she wrote of "my rage at those who had taken twelve working, acting years from my life."

She came back in the television series *Peyton Place* and won an Emmy award in 1966. She won the Academy Award for Best Supporting Actress for *Shampoo* (1975). Her documentary *Down and Out in America* (1986)

> won the Academy Award for Documentary Feature.

The Actors Studio, and plays on live television

Elia Kazan, Cheryl Crawford and Robert Lewis, all from a theatre company called the Group Theatre, opened the Actors Studio in New York in 1947, a place where working actors trained. About 700 actors tried out in the first year, and 50 were chosen, including Marlon Brando. Teachers at the studio taught "method acting," a way of acting built on the teaching of Konstantin Stanislavsky, a Russian director at the Moscow Art Theatre. Lee Strasberg ran the Actors Studio from 1952 until he died in 1982.

Brando played Stanley Kowalski in Tennessee Williams's play *A Streetcar Named Desire* on Broadway on December 3, 1947. Kazan directed it, and he directed the film version in 1951.

One chance. The television networks broadcast plays performed live from 1947, such as *Kraft Television Theatre*, from May 7, 1947, and *Studio One*, from November 7, 1948. The actors had one chance, with no second takes. The first practical videotape came in 1957. By 1961 about 80 percent of evening programs were filmed ahead of time.

I Love Lucy: a stage comedy on film

I Love Lucy was filmed like a stage play, in front of a live audience. It ran on CBS from October 15, 1951, to May 6, 1957. Lucille Ball and Desi Arnaz acted each episode in order, like a play, before an audience of about 300 people. Three film cameras recorded it at the same time.

Jerry Fairbanks had used the three-camera method on other shows before. Karl Freund, the man in charge of the cameras, filmed *I Love Lucy* with three 35 mm film cameras. It was the first scripted television show filmed on 35 mm film in front of a studio audience.

The deal. Executives at Philip Morris, the company that paid for the show, wanted it performed live in New York. Ball and Arnaz wanted to stay in Los Angeles, because Ball was pregnant, and to make the show on film. They offered to take a pay cut of $1,000 a week, and executives at CBS and Philip Morris agreed. In return Ball and Arnaz got 80 percent ownership of the films. Because they owned the films, they could sell the episodes again as reruns.

Lucille Ball

Who: A film actress who starred in the television comedy *I Love Lucy* and then became the first woman to run a major television studio.

When and where: Born in Jamestown, New York, on August 6, 1911. Worked in Los Angeles from the 1930s. Died on April 26, 1989.

Movie: *Being the Ricardos* (2021), a feature film about Ball and Arnaz, written and directed by Aaron Sorkin.

About 44 million people watched Lucy have a baby.

Lucille Ball became the first woman to run a major television studio in 1962. Through the 1930s she acted in films under contract to the RKO studio. People called her "Queen of the B's," after the low-budget films called B movies.

She starred in a radio comedy, *My Favorite Husband*, on CBS in 1948. Her real husband was Desi Arnaz, a Cuban American bandleader and actor. When CBS made *I Love Lucy*, the network's executives at first did not want Arnaz, a Cuban, cast as Ball's husband.

The episode of *I Love Lucy* in which Lucy has a baby aired on January 19, 1953, and about 44 million people watched it. In 1957 Desilu, the company Ball and Arnaz owned, bought the old RKO studios for more than $6 million. Ball had once worked there as a contract actress.

Running the studio. Ball and Arnaz divorced in 1960. In November 1962 she bought his share of Desilu and became its president. Desilu's staff developed the television series *Star Trek* and *Mission: Impossible*. She agreed in 1967 to sell Desilu for $17 million, and the sale closed in 1968.

Lorraine Hansberry

Who: The first Black woman to have a drama produced on Broadway.

When and where: Born in Chicago on May 19, 1930. *A Raisin in the Sun* opened in New York on March 11, 1959. Died in New York City on January 12, 1965, at 34.

Movie: *Lorraine Hansberry: Sighted Eyes/Feeling Heart* (2017), a documentary about her life and work.

Her family's fight over a house reached the US Supreme Court.

Lorraine Hansberry wrote *A Raisin in the Sun*, the first drama by a Black woman to be produced on Broadway. Her father, Carl Hansberry, bought and sold houses for other people in Chicago. When she was about seven, the family bought a house in Woodlawn, a white neighborhood. Owners there had signed a restrictive covenant, an agreement not to sell to Black people.

Anna M. Lee, a homeowner in the neighborhood, sued to cancel the sale. A violent mob harassed the family. The judges of the Illinois Supreme Court ruled against the Hansberrys, and the family had to leave. In 1940, in the case *Hansberry v. Lee*, the justices of the US Supreme Court reversed that ruling. Only 54 percent of the owners had signed the agreement, and it needed 95 percent.

The play. *A Raisin in the Sun* tells of the Younger family, a Black family in Chicago who buy a house in a white neighborhood. Karl Lindner, a white man sent by that neighborhood, offers to buy them out so they will stay away. The producer, Philip Rose, spent 18 months raising money for a play in which all but one character is Black.

Lloyd Richards directed it, the first Black director of a Broadway play. Sidney Poitier and Ruby Dee starred. The play ran for 530 performances. Richards said it was the first play on Broadway that large numbers of Black people came to see. Hansberry died of pancreatic cancer in 1965.

Who was allowed to play whom

White actors kept playing Asian characters. In *Breakfast at Tiffany's* (1961), Mickey Rooney, a white actor, played a Japanese landlord named I. Y. Yunioshi. In 2008 an Asian American group in Sacramento, California, told the city council that the part spread "hateful racial stereotypes," unfair ideas that every member of a group is the same, and the film was pulled from a free film series there. Rooney said that if he had known people would be so offended, "I wouldn't have done it."

Iron Eyes Cody. Espera de Corti was born in Kaplan, Louisiana, in 1904. Under the name Iron Eyes Cody, he played Native Americans in more than 200 films, and he said his parents were Cherokee and Cree. In 1971 he appeared in a television advertisement against litter, with a tear rolling down his face. In 1996 a New Orleans newspaper reported what his half-sister and his baptism record showed: his parents were Sicilian and Italian, and he was Italian American. He denied it.

Rita Moreno

Who: A Puerto Rican actress, dancer and singer who became the first Hispanic woman to win an Academy Award.

When and where: Born Rosa Dolores Alverío Marcano in Humacao, Puerto Rico, on December 11, 1931. Moved to New York in 1936. Acted in Hollywood from 1950. Won the award on April 9, 1962.

Movie: *Rita Moreno: Just a Girl Who Decided to Go for It* (2021), a documentary about her.

"I was always barefoot. It was humiliating, embarrassing stuff."

Rita Moreno became the first Hispanic woman to win an Academy Award on April 9, 1962, and film producers went on offering her the same narrow parts. Her mother brought her from Puerto Rico to New York City in 1936. Moreno was acting on Broadway at 13, and as a teenager she signed a contract with MGM.

Studio producers cast her again and again in the same kind of part. She later said, "I was always offered the stereotypical Latina roles. The Conchitas and Lolitas in westerns. I was always barefoot. It was humiliating, embarrassing stuff. But I did it because there was nothing else."

Anita. In the film *West Side Story* (1961) she played Anita, a Puerto Rican woman in New York. The part won her the Academy Award for Best Supporting Actress. She said the offers that followed were "pretty much the same thing. A lot of gang stories." She did not make another film for seven years. She went on to win a Grammy award for recorded music in 1972, a Tony award for theatre in 1975, and Emmy awards for television in 1977 and 1978.

Sidney Poitier

Who: The first Black man to win the Academy Award for Best Actor.

When and where: Born in Miami on February 20, 1927. Raised in the Bahamas. Acted in New York and Los Angeles from the 1940s. Won the award on April 13, 1964. Died on January 6, 2022.

Movie: *Sidney* (2022), a documentary about him, directed by Reginald Hudlin.

An older waiter helped him read the newspaper every night.

Sidney Poitier became the first Black man to win the Academy Award for Best Actor on April 13, 1964. His parents were tomato farmers on Cat Island in the Bahamas. He was born two months early in Miami, while they were there on business, so he was a US citizen. He grew up on Cat Island and in Nassau. He went to Miami at 15 and moved to New York at 16, where he worked washing dishes.

The audition. Poitier failed his first audition at the American Negro Theatre, a Black theatre company in New York, because he could not read the script well. An older waiter sat with him every night for several months and helped him read the newspaper. In November 1943, at 16, he joined the Army. Later he tried out again and won a part.

> He became the first Black actor nominated for Best Actor in 1958, for *The Defiant Ones*. In 1959 he starred on Broadway in *A Raisin in the Sun*. He won Best Actor for *Lilies of the Field* in 1964. In 1967 more people bought tickets to his films than to any other star's. Critics complained that his characters were too perfect. At the time, he was the only major Black actor being cast in leading parts.

Why Brando refused his Oscar, 1973

Marlon Brando won the Academy Award for Best Actor for *The Godfather* on March 27, 1973, and he refused it in protest. He stayed away from the ceremony and sent Sacheen Littlefeather, who said her father was White Mountain Apache and Yaqui, to refuse the award for him.

She spoke for about 60 seconds. She said Brando was protesting "the treatment of American Indians today by the film industry," and the armed standoff then going on at Wounded Knee, South Dakota. Some people in the audience booed, and some applauded. In 2022 she said that some people mocked her with the "tomahawk chop," a chopping arm motion that makes fun of Native people, as she was led off the stage.

Wounded Knee, 1973. About 200 Oglala Lakota people and members of the American Indian Movement held the village of Wounded Knee for 71 days, from February 27 to May 8, 1973. They were protesting broken treaties and the chairman of the Pine Ridge tribal government. Federal marshals, officers who work for the courts, and FBI agents surrounded them.

Two of the people holding the village were shot and killed. Frank Clearwater was shot in the head during a gun battle with federal forces, and a federal agent's sniper shot Lawrence "Buddy" Lamont through the heart. A US marshal, Lloyd Grimm, was shot and paralyzed from the waist down.

Afterward. Academy officials sent Littlefeather a letter of apology in June 2022. Littlefeather died on October 2, 2022. After her death, her two sisters told the Navajo writer Jacqueline Keeler that the family was not Native American. They said their father was of Spanish and Mexican descent.

Big openings and home video

Jaws opened on 409 screens in the United States at once on June 20, 1975, with advertisements on national television. Columbia Pictures executives had done something like it a month earlier with a film called *Breakout*. *Jaws* earned more than any film before it. *Star Wars* opened on May 25, 1977, in only a small number of theatres, because few theatre owners wanted it. It quickly became a surprise success and passed *Jaws* in earnings.

Taping at home. Sony's Betamax video recorder went on sale in the United States in November 1975. The first VHS recorder in the United States, made by RCA, followed on August 23, 1977. In 1976 Universal and Walt Disney Productions sued Sony to stop people from taping at home. On January 17, 1984, the justices of the Supreme Court ruled 5 to 4, in *Sony v. Universal*, that recording a broadcast at home to watch later was legal.

Games, and the first actors in them

The physicist William Higinbotham built *Tennis for Two* in 1958 for a public exhibition at Brookhaven National Laboratory in New York. Visitors lined up to play it on an oscilloscope, a screen that draws lines of light. In 1972 the Atari company sold *Pong* to arcades. It was the first video game to sell well.

Filmed actors. The early games had no actors. From 1983 some arcade games played filmed scenes stored on laser discs, shiny discs read by a beam of light. In the early 1990s, games on compact discs used filmed actors, often from low-budget films and television. *Night Trap* (1992) and *The 7th Guest* (1993) were two of them. In 1994 the makers of *Wing Commander III*, published by Electronic Arts, cast Hollywood actors in it, including Mark Hamill.

BY 2000

If you remember one thing: Actors lost work for their politics after 1947, and actors of color won the top awards while studios went on offering them narrow parts.

The question this era leaves open: Game makers had begun to hire actors. Would the people who acted in games be paid like film and television actors?

Next: The English actor Andy Serkis played the creature Gollum in a marker suit, and people argued over whether that was acting.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 26 MINUTES

The newest fight over acting is over computer copies of actors' faces, bodies and voices. Since 2000, actors have performed in suits covered with markers while computer artists turned their movements into creatures and game characters, and game makers now hire actors to perform whole stories. In 2023 film and television actors and writers went on strike together for the first time since 1960.

Video game performers struck from July 2024 to July 2025. Both strikes were partly about who controls a computer copy of a performer's face, body and voice.

Screens and seats. People could watch films and series streamed into their homes over the internet from 2007. Moviegoers in the United States and Canada spent 22 percent less on tickets in 2025 than in 2019.

Who is on screen. Michelle Yeoh and Ke Huy Quan won Academy Awards for acting in 2023, and in 2024 Lily Gladstone became the first Native American nominated for Best Actress.

Acting in a marker suit

In motion capture, cameras record the movements of an actor's body, and a computer uses those movements to move a character that artists have drawn. When the cameras also record the actor's face, the method is often called performance capture.

Gollum. In the *Lord of the Rings* films (2001 to 2003), the English actor Andy Serkis played the creature Gollum on set, beside the other actors. Artists at a company called Weta Digital used the recorded movements of his body and face. They painted Serkis out of each shot, one frame, or single picture, of the film at a time, and put the computer-made Gollum in his place.

For *The Two Towers*, the second film, the crew fed Serkis's movements into the Gollum model while he performed. It was the first feature film to use capture as the actor acted.

Other actors followed. Tom Hanks played several characters this way in *The Polar Express* (2004). The actors who played the Na'vi people in *Avatar* (2009) did too, and so did Mark Ruffalo as the Hulk in *The Avengers* (2012).

Andy Serkis

Who: An English actor whose performance-capture work started an argument. People asked whether a performance turned into a computer-made body still counts as acting.

When and where: Born April 20, 1964. Played Gollum in films released from 2001 to 2003. Played the ape Caesar in the *Planet of the Apes* films from 2011 to 2017.

He called the animators' work "painting digital makeup."

After Andy Serkis played Gollum, people argued in public over whether an actor whose body is replaced on screen by a computer image is still acting. Serkis also gave Gollum his voice, and for the second and third films the artists redesigned Gollum's face to look more like his.

The Oscar campaign. The films' producer, Barrie M. Osborne, argued that Serkis should be nominated for an Academy Award as an actor, because his voice, his body movements and his facial expressions were on screen. In 2011 staff at the studio 20th Century Fox campaigned for a nomination for his work as the ape Caesar in *Rise of the Planet of the Apes*.

The actor James Franco called Serkis "the undisputed master of the newest kind of acting called 'motion capture.'" Serkis said the apes were "infused with the heart and soul of an actor." He has never been nominated for an acting Oscar. *War for the Planet of the Apes* (2017) was nominated for its visual effects instead.

Serkis described the animators' work in 2014 as "painting digital makeup" onto an actor's performance. Animators objected that the phrase made their work sound small. The director Matt Reeves said the phrase had come from Weta's own artists. In 2011 Serkis opened a capture studio in London, called the Imaginarium.

Games as acted stories

The game company Naughty Dog released *The Last of Us* on June 14, 2013. Troy Baker played Joel, and Ashley Johnson played Ellie, with their voices and their bodies. About 85 percent of the movement in the game was recorded on a motion-capture stage. Some lines were recorded later in a sound studio. The two actors changed their characters as they worked.

The HBO television version began on January 15, 2023, with Pedro Pascal as Joel and Bella Ramsey as Ellie. Ramsey was told not to play the game, so as not to copy Johnson's performance.

The first game strike. Game actors went on strike for the first time from October 2016 to September 2017, for 340 days. They asked for residuals, payments that grow when a game sells well, and they did not get them. In 2016 the voice actor Jennifer Hale told NPR that game actors were paid $825 for a four-hour session, with nothing more however many copies sold.

Ashley Johnson

Who: A child television actor who later played Ellie in the video game *The Last of Us* with her voice and her body, and won the British Academy's game award for performance twice.

When and where: Born in Camarillo, California, on August 9, 1983. Acting in Los Angeles from 1990.

She talked the director into making Ellie tougher.

Ashley Johnson played Ellie in *The Last of Us*, and her acting changed who Ellie is. She began acting at six, as Chrissy Seaver on the comedy *Growing Pains*, from 1990 to 1992. By the time she was 12 she had been in the casts of eight television series.

She persuaded the game's director, Neil Druckmann, to rewrite Ellie as tougher and more independent. She said, "There were some days when we would shoot things that even at my age made me feel a little uncomfortable."

> **Her face.** Her own face shaped the character. The actor Elliot Page complained that the first design of Ellie looked like Page. The studio's artists then redrew Ellie to look younger and more like Johnson.
>
> Johnson won the British Academy Games Award for Performer for the 2013 game. She won it again on March 12, 2015, for the added chapter *Left Behind*. She is the only person to have won it twice. She played Ellie again in *The Last of Us Part II* (2020). In the 2023 television series, she played Ellie's mother, Anna.

Streaming, and fewer people in movie theatres

Since 2007 people have watched films and series streamed into their homes, and moviegoers now spend less at theatres than they did before 2020. Streaming means watching a film or show sent over the internet while it plays, instead of on a disc or at a set broadcast time. Netflix, a company that then mailed DVDs to renters, began its streaming service in January 2007, with 1,000 titles.

Every episode of *Lilyhammer*, a Norwegian series Netflix had bought, came out on the same day in February 2012. *House of Cards*, the first series Netflix had ordered made for itself, came out in February 2013. By 2026 Netflix had 325 million paid memberships in more than 190 countries.

The empty theatres. Theatres in North America had their lowest ticket sales since 1998 over one weekend in March 2020, as the COVID-19 disease spread. Days later, Universal executives announced that three new films would be sold for home viewing within the week. Disney put *Mulan* on its own streaming service instead of in American theatres.

In July 2020 executives at the AMC theatre chain and at Universal agreed that Universal could sell a film for home viewing after at least 17 days in AMC theatres.

Fewer tickets. Moviegoers in the United States and Canada bought about 780 million tickets in 2025, about 5 percent fewer than the more than 820 million of 2024, according to the research company Comscore. Because the

average ticket cost more, they still spent 1.5 percent more than in 2024, a total of $8.87 billion. That was 22 percent less than the $11.4 billion they spent in 2019, before the theatres closed.

Broadway dark for eighteen months

New York Governor Andrew Cuomo ordered on March 12, 2020, that gatherings of 500 people or more be canceled. Under his order, the Broadway theatres had to close at 5 p.m. that day, a day earlier than other large events. According to the theatre magazine *Playbill*, all 41 Broadway theatres stayed dark, which means closed, for 18 months.

Pass Over. The first play back on Broadway was *Pass Over*, by the playwright Antoinette Nwandu. It began previews, the shows before the official opening, at the August Wilson Theatre on August 4, 2021, and it opened on August 22. Full productions of other shows returned that fall.

Nwandu had started writing it in 2012, after Trayvon Martin, an unarmed Black 17-year-old, was shot and killed in Sanford, Florida. George Zimmerman, a man who volunteered to watch his neighborhood for crime, shot him. In 2013 a jury found Zimmerman not guilty.

The Broadway League reported in May 2026 that in the season ending May 24, 2026, audiences bought 14,577,322 tickets and paid $1.91 billion. That was the most money in any Broadway season on record.

YouTube and TikTok

Chad Hurley, Jawed Karim and Steve Chen, three former workers at the payment company PayPal, started YouTube in February 2005. The first video went up on April 23, 2005.

From May 2007, makers of videos in YouTube's Partner Program got a share of the advertising money, usually 55 percent, and YouTube kept 45 percent. From 2018 a channel needed at least 10,000 lifetime views to join the program. Since November 2020, YouTube's staff can put advertisements on any video in the United States. When the maker is not in the program, Google, which owns YouTube, keeps all of that money.

An app called Musical.ly was merged into TikTok, an app owned by the company ByteDance, on August 2, 2018. That October, TikTok was the most downloaded app in the United States.

BY MAY 2026: Actors in marker suits played creatures and game characters, Netflix had 325 million paid memberships, and Broadway had just finished the season that took in the most money on record.

Who is on screen, and who votes on the awards

All 20 actors nominated for Academy Awards on January 15, 2015, were white. That day April Reign started the Twitter hashtag #OscarsSoWhite, a tag that people added to their posts to join the protest. On January 14, 2016, all 20 were white again. The director Spike Lee and the actress Jada Pinkett Smith said they would stay away from the ceremony.

The voters. Members of the Academy of Motion Picture Arts and Sciences vote on the Oscars, and in 2015 most of them were white men. That year 92 percent of the members were white, and three of every four were men. In 2016 the Academy's president, Cheryl Boone Isaacs, promised to double the number of women and people of color among its members by 2020. The Academy then had about 6,000 members.

By 2019 women were 32 percent of the members, up from 25 percent, and people of color were 16 percent, twice the 8 percent of 2015. The Associated Press reported in June 2026 that if everyone invited that year joined, the Academy would have 11,319 members. Of them, 75 percent would be white, down from 92 percent in 2015, and 64 percent would be men.

The count. Hispanic and Native characters were rare in the most popular films of 2024. Researchers at the USC Annenberg Inclusion Initiative count the speaking characters in each year's 100 most popular films. In the films of 2024, they reported in August 2025, 63.6 percent of speaking characters were white, 13.2 percent Black and 13.5 percent Asian. Only 3.1 percent were Hispanic or Latino, and fewer than 1 percent were American Indian or Alaska Native. Ninety-eight of the 100 films had no Native American girls or women.

Asian people are about 6.3 percent of the US population, so Asian characters had about twice that share overall. They were bunched into some of the films, though: 29 of the 100 films had no Asian speaking characters at all.

Reservation Dogs. *Reservation Dogs* ran on the Hulu streaming service from August 9, 2021, to September 27, 2023. Sterlin Harjo, a filmmaker from Oklahoma, created it with Taika Waititi. It is about four Native teenagers in a

small town in the Muscogee Nation. It was the first American series with all Native writers and directors and an almost all Native cast.

Killers of the Flower Moon. *Killers of the Flower Moon* opened on October 20, 2023. It is about the murders of Osage people for their oil money in Oklahoma in the 1920s. Each Osage person held a share of the tribe's oil money, called a headright. When a holder died, the headright passed to the heirs, who could be people who were not Osage.

Under a 1921 law, local judges put many Osage adults' money under white "guardians," men who controlled it for them. Guardians and some of the men who married Osage women stole that money. Between about 1920 and 1925, more than 60 Osage headright holders died in murders and suspicious deaths, by the Osage Nation's count. The FBI counts at least two dozen.

The cattleman William Hale ordered the murders of the family of Mollie Kyle, an Osage woman, so that their headrights would pass to Hale's nephew, Ernest Burkhart, Mollie's husband. Mollie's sister Anna Brown was shot on May 22, 1921. The sisters' mother, Lizzie Q. Kyle, died in July 1921, and poison was suspected. Their cousin Henry Roan was shot in January 1923.

On March 10, 1923, the house of Mollie's sister Rita and Rita's husband, Bill Smith, was blown up, killing them and their servant, Nettie Brookshire. Ernest Burkhart pleaded guilty in 1926, and Hale was found guilty in 1929. Both were sentenced to life in prison.

Osage actors. The director, Martin Scorsese, met with the chief of the Osage Nation, Geoffrey Standing Bear. The film's makers held a meeting with about 200 Osage people. They cast Osage actors in at least 40 parts and hired Christopher Côté to teach the actors the Osage language.

At the premiere, Côté spoke about the film's telling of Mollie's marriage to Burkhart, the man who pleaded guilty in the murders of her family: "when somebody conspires to murder your entire family, that's not love. That's not love, that's just beyond abuse." In 2024 he said, "I still stand by what I said."

Lily Gladstone, who grew up on the Blackfeet Reservation in Montana, played Mollie Kyle, the Osage wife. In January 2024 she became the first Native American to win a Golden Globe for acting, and the first Native American

nominated for the Academy Award for Best Actress.

Everything Everywhere All at Once is about a Chinese immigrant woman who runs a laundromat. On March 12, 2023, it won seven Academy Awards. Michelle Yeoh won Best Actress, and Ke Huy Quan won Best Supporting Actor.

Ke Huy Quan

Who: A child actor from a refugee family who quit acting when he could not get parts as an adult Asian American actor, and came back decades later to win an Academy Award.

When and where: Born in Saigon, South Vietnam, in 1970. Came to the United States in 1979. Acted in Los Angeles from 1984. Won the award on March 12, 2023.

"My journey started on a boat."

Ke Huy Quan gave up acting because he could not get parts, and he did not act on screen again for 19 years, from 2002 to 2021. Then he came back to win an Academy Award.

His family's ancestors were Chinese, and the family lived in Vietnam. They left Vietnam three years after the war there ended in 1975. Quan, his father and five of his brothers and sisters went to a camp in Hong Kong for refugees, people who flee their country to be safe. His mother and three of the other children went to Malaysia. In 1979 the whole family came to the United States as refugees and settled in Los Angeles.

At 13 Quan played Short Round, Harrison Ford's young sidekick, in *Indiana Jones and the Temple of Doom* (1984). In 1985 he played Data in *The Goonies*. As he grew up, he said, "the opportunities got fewer, and the wait time longer. I was still working, but once a year, or once every two years. And the roles got smaller."

The wait. In 1993 he tried out for a part and never heard back. "I remember sitting at the edge of my bed, completely frozen," he said in 2023. He blamed himself: "I thought I wasn't tall enough, I wasn't good-

> looking enough, I was not a good enough actor." In time he quit acting and studied film at the University of Southern California. He arranged fights for the film *X-Men* (2000) and worked as an assistant director.
>
> He watched the film *Crazy Rich Asians* in 2018. "I was sitting in the theatre, fantasising, wishing I was up there with them," he said. He went back to acting and played Waymond Wang in *Everything Everywhere All at Once*. On March 12, 2023, he won the Academy Award for Best Supporting Actor, and he began his speech, "My journey started on a boat." He was the first actor born in Vietnam to win an Oscar.

#MeToo in Hollywood: Harvey Weinstein

Actresses were among the women who accused the film producer Harvey Weinstein of sexual attacks, and juries in New York and Los Angeles later found him guilty of rape and other sex crimes. Reporters at *The New York Times* and *The New Yorker* published the first accounts, from more than a dozen women, in October 2017. The women said Weinstein had sexually harassed them, meaning unwanted sexual remarks, demands or touching. Some said he had sexually assaulted them, meaning attacked them sexually, or raped them, meaning forced them into sex.

By the end of that month, more than 80 women had made such accusations. Leaders of his own company fired him, and the leaders of the Academy expelled him. Weinstein said he had never had sex with anyone against her will.

The spies. A month later a reporter for *The New Yorker* reported that Weinstein had hired a private spy company called Black Cube. Its investigators used false names to follow reporters and actresses. The people they followed included the actress Rose McGowan, who had said Weinstein raped her.

The first trials. A New York jury found Weinstein guilty in 2020 on two of the five charges against him: rape, and forcing oral sex on a woman. The jury found him not guilty on the other three, including the charge called predatory sexual assault. A judge sentenced him to 23 years in prison.

A Los Angeles jury found him guilty in 2022 on three of seven charges, for attacks in 2013: rape, forcing oral sex on a woman, and a third charge listed as sexual misconduct. The jury did not convict him on the other four. A judge sentenced him to 16 years.

The new trial. In 2024 the judges of New York's highest court threw out the two New York guilty decisions. They found that the trial judge had made "egregious errors," meaning very serious mistakes, and they ordered a new trial. Weinstein stayed in prison because of the California guilty decision.

At the new trial in 2025, a jury found him guilty of forcing oral sex on Miriam Haley, a former production assistant, a helper on a film crew, in his Manhattan apartment in 2006. The jury found him not guilty on the charge that involved the model Kaja Sokola. Two juries in a row could not agree on the charge that he raped the actress Jessica Mann, and in 2026 Manhattan's chief prosecutor announced that there would be no further trial on it.

The sentence. In September 2026 a judge, Curtis Farber, sentenced Weinstein to 15 years in prison for the attack on Haley. He told Weinstein, "You took what you wanted by force, and you have never accepted responsibility." Haley told the court that what he did to her was "a life sentence for me."

California judges had upheld his Los Angeles guilty decision earlier in 2026 but ordered a new sentence, and the California Supreme Court's justices declined to review the case. As of late September 2026, no date had been set for the new sentence.

BY SEPTEMBER 2026: Michelle Yeoh and Ke Huy Quan had won Academy Awards for acting, Lily Gladstone had become the first Native American nominated for Best Actress, and Harvey Weinstein was in prison.

The 2023 strikes, and scanning

The Writers Guild of America is the union of 11,500 screenwriters. Its members struck against the studios from May 2 to September 27, 2023, for 148 days. Their new contract forbids the studios to use writers' work to train AI, or artificial intelligence: computer programs that can make new text, images and voices by copying patterns from the work of real people. It also forbids the studios to use AI to cut writers or writers' pay.

Members of SAG-AFTRA, the actors' union, with about 160,000 members, struck from July 14 to November 9, 2023. It was the longest actors' strike against the film and television studios, and the first time since 1960 that actors and writers had struck at the same time.

The scans. The union's chief negotiator, Duncan Crabtree-Ireland, said on July 13, 2023, that the studios' negotiators had proposed scanning background actors, extras with no lines, for one day's pay, with the studio owning the scans. The studios' negotiators answered that a scan would be used only in the film the actor was hired for.

In August 2023 NPR interviewed five background actors who had been scanned. Most had signed agreements not to talk about their work. They said they feared that if they refused a scan, they would be called difficult and not hired again. No public count exists of how many background actors were scanned.

The contract. The union's members approved the contract that ended the strike on December 5, 2023. It requires a studio to get clear consent, meaning permission, from an actor before it makes or uses a digital replica, a computer copy of the actor's face, body or voice. A studio that wants to use a replica in a different production must ask again and bargain over pay. The consent lasts after the actor dies unless the contract says otherwise. Studios may not use replicas to avoid hiring background actors.

The writers approved a new four-year contract in April 2026. SAG-AFTRA's members approved theirs on June 4, 2026. Of the members who voted, 91 percent said yes, but only about 19 percent of members voted. According to

Los Angeles Magazine, it lets producers use a performer made entirely by computer only when that performer adds "significant additional value" over a live actor.

Alexandria Rubalcaba

Who: A background actor whom a television crew scanned into a digital copy of her face and body, with no word to her on how anyone would use it.

When and where: On the Disney+ series *WandaVision* during the COVID-19 pandemic. She told her story to NPR in 2023.

"Let us see your scared face. Let us see your surprised face."

Crew members on a television set scanned Alexandria Rubalcaba into a digital copy, and no one told her how or whether the copy would be used. She worked for four weeks as a background actor on the series *WandaVision*. Then the crew sent her to a truck trailer.

Inside, dozens of background actors stood one at a time in front of cameras mounted on metal frames. She remembered the instructions: "Have your hands out. Have your hands in. Look this way. Look that way. Let us see your scared face. Let us see your surprised face."

Each scan took about 15 minutes, and a digital copy of each actor was made from it. Rubalcaba earned the union rate for background actors, $187 a day. She would not be paid for any use of the scan, and she did not give permission for her copy to appear in any scene. "What if I don't want to be on MarioVision, or SarahVision?" she asked. "I fear that AI is eventually going to weed out background actors. They won't have any use for us anymore."

Disney did not answer NPR's questions, and no record shows whether her scan was ever used. Her account came out in August 2023, during the actors' strike that won the rules on consent for replicas.

The video game strike, 2024 to 2025

About 2,600 game performers who work in voice and motion capture struck from July 26, 2024, to July 9, 2025. They struck against companies including Activision, Electronic Arts, Epic Games, Take-Two and Warner Bros. Games. Their old contract had run out in November 2022. The one issue left unsettled was consent and pay for AI copies of the performers' voices and bodies.

Darth Vader's voice. Staff at Epic Games added Darth Vader to the game *Fortnite* on May 16, 2025. The character talked with players in a computer-made copy of the voice of James Earl Jones, who had died on September 9, 2024. In 2022 Jones had signed a deal that allowed his recorded voice to be used this way, and his family worked with Epic and Disney on it.

Union officials filed a charge with the National Labor Relations Board, the federal agency that hears complaints about unfair treatment of workers, on May 19, 2025. The charge was against Llama Productions, a company owned by Epic Games. It said the company's staff had replaced actors' work with AI without telling the union.

The contract. The strike ended when 95 percent of the members who voted approved a new contract on July 9, 2025. Before a company makes a digital replica of a performer, it must now get written consent that names what the replica will be used for. It must pay for the replica's use and tell the performer how it is used. During a future strike, performers can stop companies from using their replicas to make new material.

Faces and voices nobody performed

In *Rogue One* (December 16, 2016), the actor Guy Henry played the character Grand Moff Tarkin. Effects artists then placed a digital copy of the face of Peter Cushing, an actor who had died in 1994, over Henry's face. Lucasfilm staff got permission from Cushing's estate, the people in charge of his property after his death.

New laws. Tennessee Governor Bill Lee signed the ELVIS Act on March 21, 2024. Under it, copying a person's voice with AI without permission is against the law in Tennessee.

California Governor Gavin Newsom signed two laws at the actors' union headquarters on September 17, 2024. The first, AB 2602, requires a contract to describe how a digital replica of a living performer will be used. The second, AB 1836, forbids using a digital replica of a dead performer in films, games and recordings without the estate's consent. As of September 2026, members of Congress had not passed a national law, the NO FAKES Act.

Tilly Norwood. Eline Van der Velden, whose company made a computer-generated "actress" called Tilly Norwood, said in September 2025 that studios were interested in it and that a talent agency, a company that finds work for actors, would represent it. The leaders of SAG-AFTRA answered in a statement that Tilly Norwood "is not an actor." They said it was made by a computer program "trained on the work of countless professional performers," without their permission or pay.

Sora 2. The company OpenAI released its Sora 2 video app on September 30, 2025. Users soon made clips with the face and voice of the actor Bryan Cranston, without his consent. Cranston and the union complained.

OpenAI, the union, Cranston and several talent agencies put out a joint statement on October 20, 2025. It said OpenAI would require a person's permission before the app copies that person. Sam Altman, the head of OpenAI, said the company was "deeply committed to protecting performers

from misappropriation," meaning having their faces and voices taken. Cranston said he was "deeply concerned not just for myself, but for all performers whose work and identity can be misused in this way."

BY TODAY

If you remember one thing: Since 2000 actors' unions have won written rules that a studio or game company must get a performer's consent before it makes or uses a computer copy of that performer.

- June 14, 2013: *The Last of Us* came out, with Troy Baker and Ashley Johnson acting Joel and Ellie on a motion-capture stage.
- December 5, 2023: SAG-AFTRA's members approved the contract that ended their strike, with its rules on digital replicas.
- July 9, 2025: game performers approved a contract that requires written consent and pay for any replica.

Next: The chapter closing is below. Chapter 35, Styles, follows it.

THE THREE QUESTIONS, ANSWERED

1. **Who tried to stop Americans from acting, and why?** Early on, church leaders and lawmakers tried to stop it, for reasons of religion and morals. Spanish priests burned Pueblo masks to end the ceremonies, and Massachusetts lawmakers banned plays, saying they made people less moral and less religious. Later, police arrested Black actors after a rival white manager, by one account, started a riot to destroy their company, and studio heads blacklisted hundreds of film workers over communism.
2. **Why did white actors play Black, Asian and Native people for so long?** White audiences paid to laugh at blackface from 1828 on, and producers carried the old minstrel parts into film and radio. Because of the studio heads' own Code and state laws against

marriage between races, producers kept actors of color out of leading parts.

3. **Who controls a computer copy of an actor's face and voice?** Since the strikes of 2023 and 2024 to 2025, union contracts require a studio or game company to get the performer's consent before it makes or uses one, and the game contract also requires pay. Lawmakers in Tennessee and California passed laws of their own in 2024, and as of September 2026 Congress had passed no national law.

What changed: Acting moved from masked dancers in Native ceremonies to stages, screens and games, and the fight moved with it, from who was allowed to act at all to who owns a copy of an actor.

FIVE DATES TO KEEP

April 30, 1598: Spanish soldiers and priests acted the first European play on record here, beside the Rio Grande.

1821: William Brown opened the African Theatre in New York, the first known Black theatre company in the United States.

1828: Thomas Dartmouth Rice first went on stage as "Jim Crow," in blackface.

February 8, 1915: *The Birth of a Nation* opened in Los Angeles.

July 14, 2023: film and television actors began the longest actors' strike against the studios.

> **NOT KNOWN:** The title of that first European play of 1598 is not known, and no copy of its script survives.

Where to go: Ford's Theatre in Washington, D.C., where John Wilkes Booth shot President Lincoln in 1865, held its first public performance since that night in 1968.

Next: Chapter 35, Styles. It asks who made the rules about Americans' clothes and hair, and who made the cloth they wore.

Chapter 35: Styles

CHAPTER 35 OF 37 · STYLES · 10 ERAS · ABOUT 100 MINUTES

From the first colonial dress laws to the CROWN Acts, laws against punishing people for their natural hair, Americans with power made rules about who could wear what, and much of the cloth came from people who were enslaved, held captive or paid by the piece.

Hannah Lyman was about 16 when the judges of the Hampshire County court in Northampton, Massachusetts, fined her 10 shillings for wearing silk. The year was 1676. Massachusetts lawmakers had passed laws saying who was allowed to wear silk, lace and "great boots." The charge against Hannah said she wore her silk "in a flaunting manner," and that she wore it "not only before, but when she stood presented." She wore silk even while she stood charged before the court.

This chapter follows what Americans wore, and what it was made from, through all ten eras, from turkey-feather blankets to sneakers. It also looks at furniture in two eras, because styles changed in American homes too. As you go, watch who made the rules, such as the Massachusetts judges who fined people for wearing silk. Watch, too, who made the cloth: enslaved people in the cotton fields and indigo vats, and women sewing in Bangladesh and Los Angeles.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. Why did lawmakers and officials make rules about other people's clothes and hair?
2. Who made the cloth Americans wore?
3. Which new materials changed what Americans wore?

Five minutes? Read "Cotton picked in the South, woven in the North" in 1800 to 1850, and the section after it.

Can skip: "Wigs in Williamsburg, 1769 to 1775", "The Federal style, 1780 to 1820", "Shirtwaists and the Gibson Girl, 1890s". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 7 MINUTES

The people of North America before 1500 dressed in what they could grow, hunt or get by trade. They wore deer hide, rabbit fur and turkey feathers, and cloth woven from cotton and from the fiber of the yucca, a desert plant. Their ornaments were sea shells from the Gulf of Mexico and copper from the country around Lake Superior. Their colors came from plants and from a mineral called red ochre.

No written record names anyone who wove this cloth or wore these beads. Archaeologists, scientists who dig up and study the things people left behind, have found the cloth, the feathers, the beads and the copper. What is known comes from those objects.

How many feathers went into one blanket?

A blanket made in the 1200s used about 11,550 turkey feathers, pulled from 4 to 10 turkeys. Its makers wrapped the feathers around more than 590 feet (180 meters) of cord twisted from yucca fiber. The blanket is kept at the Edge of the Cedars State Park Museum in southeastern Utah.

Its makers were Ancestral Puebloan people, the ancestors of today's Pueblo peoples. They lived in the Four Corners, the place in the Southwest where Utah, Colorado, Arizona and New Mexico meet. Most of their clothing was deer hide, rabbit skin and yucca fiber.

Bill Lipe and Shannon Tushingham, researchers at Washington State University, studied the blanket. In 2020 they reported that the makers probably pulled most of the feathers from live birds. In this region, feather blankets had replaced blankets made from strips of rabbit fur many centuries earlier.

Cotton. Cotton came north by trade from Mexico. The oldest farmed cotton found in the Tonto Basin of Arizona dates to about the year 250, and cotton reached the Four Corners around 600. By about 900, Ancestral Puebloan men were growing cotton, spinning it into thread and weaving large cloths and blankets on upright looms, frames that hold threads tight so a weaver can pass other threads over and under them.

The Salado people lived in the Tonto Basin from about 1250 to 1450, and by about 1300 their basin was one of the leading cotton-growing areas of the Southwest. They wove plain cotton cloth and openwork cloth, with small openings left in the weave as a pattern. They made blankets from strips of worn-out cotton cloth. One brightly dyed strap they wove is a tumpline, a band worn across the forehead to carry a load on the back. Their sandals were woven from agave and yucca, two desert plants.

Shell and copper along the Mississippi

Cahokia was a city of earth mounds in Illinois, a few miles east of the Mississippi River and today's St. Louis. Its people traded for copper from the Lake Superior region and for sea shells from the Gulf of Mexico. Archaeologists call the way of life of Cahokia and the towns like it the Mississippian culture.

Mississippian metalworkers heated copper, hammered it while the heat kept it soft, let it cool, and did the same again and again, a way of working metal called annealing. They made hair ornaments, pieces for headdresses and flat plates.

The bird-man. Some plates show a figure that is part bird and part man, pushed out by hammering from the back of the sheet. Artists at Cahokia began making pictures of this bird-man between 1100 and 1300. Mississippian copper plates were made from about 800 to 1600, and they have been found from Florida and Georgia to Oklahoma and Wisconsin.

At Cahokia, archaeologists found a copper workshop with raw copper nuggets, scraps of worked copper and stone tools for working it.

A bed of shell beads. People at Cahokia buried a man and a woman in the 1000s on a bed of shell disc beads laid out in the shape of a bird. The beads were made from sea shells. The magazine *Archaeology* gives the count as 20,000 beads, and another published count gives about 10,000.

Melvin Fowler dug up this burial in a mound called Mound 72 between 1967 and 1971, and he described both bodies at the center as men. In 2016 a team led by Thomas Emerson of the Illinois State Archaeological Survey studied the bones again. They found that the two were a man and a woman, with other pairs of a man and a woman buried around them.

Mound 72 holds about 272 people, buried at different times over about a century. Archaeologists judge that almost 62 percent of them were sacrifices, people whom others at Cahokia killed on purpose as part of the burial ceremonies. No written record names them or the people who killed them.

Colors from plants and earth

Ochre is a mineral made of iron and oxygen, and it can be brown, red or yellow. Red ochre is the red kind. Accounts written after Europeans arrived say that the Karankawa people of the Texas coast painted symbols on their faces with ochre, using their fingers or the stalks of plants. The Karankawa got their ochre by trade from inland. At a burial site called Mitchell Ridge, red ochre stains the bones of 18 people.

Native people of North America decorated clothing with porcupine quills, the stiff, hollow spines that cover a porcupine, before Europeans arrived. The Huron, Cheyenne, Arapaho, Cree and Gwich'in were among the nations that did quillwork. Men hunted the porcupines, and women did the work. They flattened the quills with an awl, a pointed tool, or with a piece of bone, then dyed them and sewed them onto moccasins, pouches, baby carriers and clothing.

The dyes. Red came from the bark of the tamarack tree, from spruce cones and from berries, and black from walnuts and wild grapes. For yellow, quillworkers used wild sunflower, pine bark or willow root. Blueberries and larkspur, a flower, made blue. Writers at the Penn Museum in Philadelphia list these dye plants. The museum's own quilled pieces date from the 1830s and later, and among the oldest are pieces that George Catlin collected between 1832 and 1839. Quillwork itself is much older, from before Europeans arrived.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 5 MINUTES

The first written descriptions of what Native people wore come from the Spanish, French and English explorers and soldiers who arrived in the 1500s. They wrote down deerskin, cloth of bark fiber and feathers, and ornaments of pearls. Some of them took what they found. Hernando de Soto's soldiers dug up Native graves at the town of Cofitachequi in 1540 to take the pearls buried there.

Spanish colonists drove churro sheep into New Mexico in 1598, onto the land of the Pueblo peoples. Wool from those sheep went into Native, Spanish and Mexican weaving for about 300 years.

Cloth and pearls at Cofitachequi, 1540

Hernando de Soto's army reached Cofitachequi, a Native town beside a river in the Southeast, in May 1540. A Portuguese man who marched with the army wrote an account of the march, printed in Portugal in 1557. His name is not known, so he is called the Gentleman of Elvas, after the Portuguese town of Elvas. He described what the people of the town wore and what they kept.

A woman ruled the town. No record gives her own name, and the Spanish called her the Lady of Cofitachequi. She crossed the river by canoe to meet de Soto and gave him mantles, or cloaks, and deerskins. Then she took a long string of pearls from her own neck and put it around his. He gave her a gold ring set with a ruby.

Elvas wrote that the town's storehouses held mantles woven from yarn made of tree bark. Other mantles were made of feathers colored white, green, red and yellow, and people wore them in winter. The storehouses also held deerskins with many panels drawn on them, and some of the deerskins had been made into leggings, stockings and shoes. Elvas wrote that everyone in the town wore shoes and clothes.

The graves. De Soto was looking for treasure. According to Elvas, the ruler told him to search the town's graves for pearls, because she had seen how much the Spaniards valued them. De Soto's men dug up the graves. They took the pearls, and small figures of babies and birds made from pearls.

The accounts disagree on how many pearls the men took. They give weights from about 200 pounds, about the weight of a large man, to 392 pounds.

In the same town, de Soto's men found a dagger and beads. They came from a colony that Lucas Vázquez de Ayllón had started in 1526 on the coast of today's South Carolina or Georgia. Ayllón died there, and the surviving colonists left within about two months.

De Soto then took the ruler with him as a prisoner, guarded by enslaved women. On the march she told her guards she needed to relieve herself. She walked into the woods and escaped, carrying off a cane box full of pearls that had not yet been drilled.

What an Algonquian leader wore, 1585

The English painter John White painted Native people who spoke Algonquian languages, a large family of related languages, in 1585. Thomas Hariot wrote the words that went with the pictures. One painting shows a leader of one of these peoples, dressed for a great hunt or a feast. He wears an apron of animal skin with a fringe, and a tail hangs down behind it. His quiver, the case that holds his arrows, is tied to the tail.

Feathers decorate his hair. One side of his head is shaved. Hariot wrote that the shaving kept the hair from tangling in the bowstring.

Spanish clothes in St. Augustine, 1565 to 1600

Spanish soldiers and settlers founded St. Augustine, in Florida, in 1565, on land where the Timucua people lived. Archaeologists from the Florida Museum have dug up many of the things the colonists wore. Rich residents wore costly cloth trimmed with metal lace, buttons, beads and metal ornaments. Buttons were worn mostly by soldiers and the rich.

Most people tied their plain clothes shut with laces. Each lace had a small metal tip, called an aglet, so it could pass through a hole. Many soldiers in the town married Native women.

A widow's bed. Juan de Cevadilla was the official in Mexico who collected the pay for the soldiers of St. Augustine. He died suddenly in 1590 and left his widow, Doña Petronilla (Doña is a Spanish title of respect for a woman), a carved bed covered with a thin layer of gold. Over the bed hung a cloth roof, called a canopy, made of taffeta, a smooth silk cloth, from China, with designs stitched into it. He also left her a large amount of costly cloth and clothing.

Churro sheep and red from Mexico

Juan de Oñate led Spanish colonists north from Mexico onto the land of the Pueblo peoples in New Mexico in 1598. They came on the road called El Camino Real de Tierra Adentro, the Royal Road of the Inland Country, and they brought churro sheep, a Spanish breed. By the 1700s the churros in New Mexico numbered in the hundreds of thousands. For the next 300 years their wool was the base of Native, Spanish and Mexican weaving there.

Before the sheep came, Pueblo weavers worked in cotton on upright looms. The Spanish brought a loom that lay flat on the floor. Weavers in New Mexico later used it to make Rio Grande blankets and serapes, blankets that can be worn as a cloak. After the Spanish brought churro wool and new dyes, wool became the main thread for weaving there, and the old Pueblo cotton weaving declined.

Cochineal. Far to the south, in Oaxaca, Puebla and Tlaxcala in Mexico, Native people had long bred a small insect called cochineal to make red dye. As early as the 100s BC they used it to dye cloth and feathers and to color books painted by hand. After Spanish soldiers conquered Mexico, traders carried cochineal around the world. Native Mexicans still did all the skilled work and all the labor of making it. Writers at Harvard's science museums note that they were never given credit for it.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 10 MINUTES

Lawmakers in the English colonies of the 1600s wanted clothes to show who ranked above whom, and in Virginia and Massachusetts they wrote laws to keep it that way. In Massachusetts, a person whose property was worth less than 200 pounds was not allowed to wear silk hoods, gold or silver lace, or boots called "great boots." Judges in the county courts fined people who did. Lists of belongings made after New England colonists died record clothes in red, blue, violet, grey and green, as well as black.

In New Mexico, Spanish soldiers and colonists demanded a woven cotton blanket from each Pueblo household every year. This was tribute, a payment that conquerors force a conquered people to make.

Virginia taxes clothing, 1619

The General Assembly of Virginia, the colony's lawmaking body, met for the first time on July 30, 1619. At that meeting its members passed a law "against excesse in apparel," meaning too much spending on clothes. They voted that each man's share of all public costs, collected through the church, would be set by his clothes. An unmarried man paid according to his own clothes. A married man paid according to his own clothes and his wife's.

A Virginia resolution of 1621 states the aim to "supress excess in cloaths." Under it, men who held no office in the colony could not wear gold in their clothes.

Mary Ring

Who: A widow of Plymouth Colony whose list of belongings shows the colonists there dressed in red, violet and blue.

When and where: Leiden in Holland, then Plymouth Colony, 1629 to 1631.

Her red petticoat was worth 16 shillings.

Mary Ring owned two petticoats, the skirts women wore, one red and one violet. She also owned two violet waistcoats, which were vests or short jackets, and three blue aprons. When she died, everything she owned was listed and given a value, in a list called a probate inventory. Hers gives values in pounds, shillings and pence, the English money of the time. Only one piece of her clothing was worth more than the red petticoat: a hooded cloak called a huke.

The inventory also lists a black kirtle, a kind of gown, and a waistcoat of "mingled coloured" cloth. It lists an apron in murrey, a dark purplish red, and pieces of blue cloth and red cloth. She owned blue stockings, white Irish stockings and a piece of grey kersey, a rough wool.

She also owned six ruffs, stiff pleated collars, and seven smocks, long linen shirts worn under the other clothes. She had three linen caps, two hats and two pairs of shoes. Her will left green cloth "to make a coat." Caleb Johnson wrote notes on her list for the Plymouth Colony Archive Project. He points out that it shows the English colonists of Plymouth wore violet, red, blue and grey as well as black and white.

Who she was. Mary Ring was the widow of William Ring, who died in Leiden, in Holland, in the 1620s. She came to Plymouth in 1629 or 1630 with her children Elizabeth, Susanna and Andrew. The English had built Plymouth in 1620 on the site of Patuxet, a town of the Wampanoag people. About 2,000 Wampanoag had lived in the area. Before 1620 a wave of sickness, now called the Great Dying, killed most of the people of Patuxet, and the few who lived left to join other Wampanoag towns.

> She died on July 15 or 19, 1631. She signed her own will, and she owned books. Governor William Bradford and Edward Winslow owed her money when she died.

Did the Puritans dress only in black?

The Puritan colonists of Massachusetts wore many colors, which they called "sad" colors, meaning serious rather than unhappy. A list from 1638 names some of them: liver color, tawny, russet, purple, French green, orange and "deer colour." The Puritans were English Protestants who wanted their leaders to strip the Church of England of the customs it still shared with the Catholic Church.

The historian David Hackett Fischer writes that black cloth was kept for the ruling elders, the men who led the church, and for the families who governed the colony. A portrait of Governor John Winthrop, painted in about 1629, shows him in black velvet with slashed sleeves, cut so that the cloth underneath showed through.

Lists of belongings and bills from the colony record "pinck hose," or pink stockings, "green sleeves," and "a Scarlet petticoat with Silver Lace." Fischer writes that Winthrop's own niece, Mary Downing, was scolded for wearing a little lace. His sentence about her does not say who scolded her.

Massachusetts dress laws, 1634 to 1682

The General Court of Massachusetts Bay was the colony's body of lawmakers and magistrates, its chief officials and judges. Its members passed their first sumptuary law, a law that limits what people may wear according to their rank, in 1634. It banned "new fashions, or long hair," silver and gold hatbands and belts, cloth woven with gold thread, and lace.

It also limited the slashes in a sleeve. The magazine *Atlas Obscura* gives the limit as two slashes in a sleeve, and the historian David Hackett Fischer gives it as one. A person caught wearing these things had to give them up. A law of 1639 banned more kinds of lace and banned short sleeves.

"Utter detestation." The members of the General Court wrote in 1651 that they felt "utter detestation," or hatred, when "men or weomen of meane condition," meaning people of low rank, dressed like gentlemen. They named gold or silver lace, gold or silver buttons, laces tied at the knees and "great boots." For women of that rank they named silk hoods and silk scarves. Anyone whose property was worth less than 200 pounds owed a fine of 10 shillings each time he or she wore them.

Magistrates, officers, soldiers and their families did not have to obey this law. Neither did people who had once been rich and had lost their money. The lawmakers gave the selectmen, the elected men who ran each town, the power to tax people who dressed above their rank.

In court. Judges in the county courts enforced the law. Judges in Essex County heard 18 cases in 1653, and they let 12 of the people go because they were worth more than 200 pounds. Ten years later, in 1663, the lawmakers made the law cover children and servants too, and barred tailors from making the forbidden clothes. A first offense brought a warning, a second a fine of 20 shillings, and later offenses up to 40 shillings.

The judges of the Hampshire County court charged 35 married women from five towns with wearing silk at one session in 1673. They found all but one of the seven from Northampton not guilty, and they warned, fined or let go the women from the other towns.

Whose land. Northampton stood on the land of the Nonotuck people. John Pynchon got a deed, a paper that hands over land, from seven Nonotuck men, including Chickwalloppe, on September 24, 1653. He paid 100 fathoms of wampum, strings of shell beads, and 10 wool coats. A fathom is 6 feet. The historian Margaret Bruchac writes that the Nonotuck signers probably understood the deed as an agreement to share the land, and that they probably expected to keep their own right to hunt, fish and plant there.

The war. King Philip's War was fought in 1675 and 1676. Metacom, a leader of the Wampanoag whom the English called King Philip, led several Native nations against the New England colonies. About 9,000 people died in the war, and by some counts about half of all the Native people of New England died. A Native man fighting for the colonists shot Metacom dead on August 12, 1676. The colonists sold hundreds of Native captives into slavery.

During the war the Northampton minister Solomon Stoddard asked the colony's leaders to act against "that intolerable pride in clothes and hair." In November 1675 the members of the General Court passed a law listing the sins they said were common in the colony. A law of 1675 also lowered the fine for a second or later offense to 10 shillings.

March 1676. The Hampshire County judges heard charges against 23 people of Northampton, women and young men, on March 27, 1676, "for wearing silk in a flaunting manner and for long hair and other extravagances" (flaunting means showing off, and extravagances meant spending too much on show). They warned them all and made each one pay court fees of 2 shillings 6 pence, except the wife of Samuel Holton. She had offended before, so they fined her 10 shillings. That March the same judges fined 45 more people from four other towns for silk and long hair.

The five towns of Northampton, Hadley, Hatfield, Westfield and Springfield were themselves charged at the county court between about 1680 and 1682. Their selectmen had failed to tax residents who wore silk "beyond their ranks." James Russell Trumbull, who wrote the history of Northampton, reports that nothing more was heard of these charges.

Hannah Lyman

Who: A Northampton girl of about 16 who was fined for wearing silk, and who wore it even while she stood charged before the court.

When and where: Northampton, Massachusetts, 1676.

Her charge said she wore silk even on days set apart for prayer.

Hannah Lyman of Northampton was about 16, and her father, Richard Lyman, had died. The charge against her said she wore silk "not only in ordinary times, but in extraordinary times, when the people of God were falling before the Lord in public humiliation." A day of public humiliation was a day when the people of the town prayed together and humbled themselves before God, because of "the heavy judgments and calamities that were threatening to come upon us."

Her case came to a later session of the county court than the one in March 1676. The judges fined her 10 shillings. The charge also said she wore silk "not only before, but when she stood presented," which means she kept wearing it even while she stood charged before the court.

Counts of the people charged in Northampton that year differ. The town's historian, James Russell Trumbull, who quoted the court records, gives 23 at the March session and Hannah at a later one. The magazine *American Heritage* and the historian David Hackett Fischer write that she was one of 36 young women of Northampton charged that year.

Blankets taken as tribute in New Mexico

Some Spanish colonists in New Mexico, called encomenderos, held the right to collect tribute from Pueblo households after 1598. Researchers for the Beyond Origins of New Mexico Families project report that by the 1660s each household owed one fanega of corn in the spring, a fanega being a Spanish measure of grain. In the fall each household owed one woven cotton blanket, called a manta, or one hide. The Spanish king allowed no more than 35 encomenderos at a time.

Ginés de Herrera Horta was a Spanish legal officer in Oñate's colony. In 1601 he testified that soldiers demanded a blanket each year from each household. When people said they had no blankets to give, the soldiers took the blankets off the women who were wearing them and left the women naked. The Spanish records of these seizures give no names for the women whose blankets were taken.

Most of the Pueblo peoples rose up against the Spanish colonists in 1680, in the Pueblo Revolt, led by Po'pay of San Juan Pueblo. They killed about 400 Spaniards and forced about 2,000 settlers to flee New Mexico for about 12 years. Among the Pueblo people's complaints was the tribute of labor, ground corn and cloth that the colonists had forced them to hand over.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 7 MINUTES

In the English colonies between 1700 and 1750, a wig showed that a man ranked near the top, and coarse cloth showed that a person was enslaved. The historian Thomas Ford calls the wig a badge of rank. A traveler in Maryland in the 1740s wrote that only a few men of the highest rank wore wigs, and that other men wore caps.

South Carolina's lawmakers wrote the coarse cloth into law in 1740. They named cheap fabrics and barred enslaved people from wearing anything finer. They ordered constables, local officers who kept order, and anyone else who found finer clothes on an enslaved person to take them away and keep them. In the 1740s South Carolina planters began growing indigo, a plant that gives a blue dye, in large amounts and shipping the dye to England. Enslaved people did the work of turning the leaves into dye.

Who wore a wig?

Only a few men of "the very elevated Sort" wore wigs, a traveler in Maryland wrote in the 1740s. Ordinary men wore caps of wool or yarn. Better-off men wore caps of white linen or cotton, even on journeys of 50 miles.

A wig of this time was called a peruke. A wigmaker built it from rows of hair sewn onto a cap of net and ribbon, using human hair and also hair from horses, cows and goats. The historian Thomas Ford writes that a wigmaker preferred to measure a customer whose head was shaved, so the wig would fit. He calls the wig "an important badge of social rank."

Some rich men, including Councillor Robert Carter, a member of the governor's council, and Dr. John Sequeira, had enslaved men trained to shave them and to dress their hair. Ford writes that rich planters may sometimes have dressed their enslaved coachmen and house servants in white wigs.

The 1740 clothing law in South Carolina

Enslaved people in South Carolina rose up against their enslavers in the Stono Rebellion in September 1739. On May 10, 1740, the lawmakers of the South Carolina assembly passed the Negro Act. Its full name was An Act for the Better Ordering and Governing Negroes and Other Slaves in this Province, and it used "Negroes," the lawmakers' word for Black people. Section 40 of the act was about clothes.

What Section 40 said. It began by claiming that "many of the slaves in this Province wear clothes much above the condition of slaves." The lawmakers said enslaved people got those clothes by "sinister and evil methods," meaning wrong and wicked ones. The section barred any owner from letting an enslaved person "have or wear any sort of apparel whatsoever, finer, other, or greater value" than the cloths it named. Servants in livery, a uniform the master chose, did not fall under this rule.

The list read: "Negro cloth, duffels, kerseys, osnabrigs, blue linen, check linen or coarse garlix, or calicoes, checked cottons, or Scotch plaids." All of them were cheap cloths, and many were coarse, which means rough and thick. Negro cloth was a coarse cloth made for enslaved people's clothes. Osnaburg,

which the law spells "osnabrigs," was a plain cloth first woven from flax in the German city of Osnabrück. An earlier South Carolina act, passed in 1735, had already named cheap cloth for enslaved people's clothing.

Who took the clothes. The law required "all and every constable and other persons" to seize finer clothes from any enslaved person wearing them. The person who seized the clothes could keep them "to his or their own use." An owner who thought the clothes had been taken wrongly could take the matter to a justice of the peace, a local judge. The surviving records do not show how often anyone seized clothes under this law.

Jack

Who: A man taken from Gambia and enslaved in Virginia, who ran away within five weeks of his sale.
When and where: Hanover County, Virginia, 1745.

Within five weeks of his sale, Jack ran away.

Slave traders brought Jack and another man from Gambia, in West Africa, on the ship *Ranger*. They sold the two men at Newcastle, Virginia, on September 5, 1745. Neither man spoke English, and both were nearly 6 feet tall.

Almost everything known about Jack comes from an advertisement that his owner, Margaret Arbuthnott of Hanover County, placed in the *Virginia Gazette* in October 1745 to get him back. The advertisement does not name the traders. Arbuthnott described Jack as having a scar over his right eyebrow. The other man, whose name she did not give, had what she described as "3 small Strokes on each Side of his Face."

The two men ran away in new jackets and in breeches, short pants that ended at the knee. Both were made of napped cotton, brushed so that its surface was soft and fuzzy, with no buttons and no buttonholes. The men also wore shirts of osnaburg and felt hats.

> Arbuthnott accused the two men of taking a damask tablecloth, its pattern woven into the cloth, along with fine Scottish linen, checked cloth, a white linen shirt and a silk handkerchief. She offered a reward to anyone who caught them and brought them back.
>
> The record does not say whether Jack was caught.

Indigo blue, 1739 to 1750

Indigo seeds came to South Carolina with the first English settlers in 1670. In the late 1730s and early 1740s, hundreds of South Carolina planters tried out new crops, and indigo was one of them.

Eliza Lucas. Eliza Lucas began trying to grow indigo in 1739 at Wappoo Plantation, on Wappoo Creek west of the Ashley River, near Charleston. She was 17 and managed the plantation and the 20 people enslaved on it. She worked first with an indigo maker from the island of Montserrat. She had the most success with an indigo maker of African descent whom her father hired from the French West Indies. In 1744 she used her crop to make seed and shared it with other planters.

The historian Nic Butler of the Charleston County Public Library writes that her part has been greatly exaggerated in recent times. Many of her neighbors were following the same steps. Her husband, Charles Pinckney, whom she married in 1744, published her methods in articles in 1744 and 1745 under the name "Agricola."

The bounty. South Carolina's lawmakers voted in 1744 to pay planters a bounty, a reward from the government, of 1 shilling for each pound of indigo. They canceled it in 1746. Members of the British Parliament, the lawmakers in London, voted a bounty of 6 pence a pound in 1748, starting in 1749.

Planters began shipping large amounts of indigo to England in 1747. Exports rose from about 5,000 pounds in 1745 and 1746 to about 130,000 pounds in 1748, about 26 times as much.

Who did the work. Enslaved people of African descent did almost all of the work. They planted and tended the indigo. They built the vats, big tubs for making dye, and filled them with water and cut leaves. After the leaves soaked, the workers beat the liquid with paddles or with buckets that had no bottoms. They added lime, made from burnt oyster shells, so that the blue settled out. Then workers scooped the blue mud into bags, dried it and cut it into cubes.

Charles Woodmason wrote in 1755 that 15 enslaved workers could plant and tend 50 acres of indigo, and that it took 25 skilled workers to turn that crop into dye. The accounts of indigo making from these years do not name the enslaved workers who made the dye.

One enslaved man who built the vats is named. He was Quash, a carpenter whom the Lucas family held in slavery at Wappoo. In 1744 George Lucas, Eliza's father, wrote that "Quashe" should build a wooden indigo works at the family's Garden Hill plantation. Eliza told her father that Quash had spent 33 days building indigo vats at other Lucas plantations. The minister Alexander Garden baptized him on April 16, 1746. The historian Tiffany Momon, who wrote about his life, calls him John "Quash" Williams.

South Carolina's indigo was shipped to England for British cloth makers. South Carolinians bought most of their own cloth from England, already dyed.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 8 MINUTES

Colonists who opposed British taxes turned their clothes into a protest. From the Stamp Act tax of 1765 until the Revolution, they agreed again and again to boycott, or refuse to buy, British goods, including cloth. Delegates at the First Continental Congress, a meeting of leaders from the colonies, voted in 1774 to ban British goods in every colony from December 1.

During the boycott of 1768 and 1769, a colonist who wore homespun, cloth spun and woven in America, often at home, showed that he or she backed the boycott. Women held public spinning meetings. Harvard's graduating class of 1768 voted not to wear imported British clothes at their graduation.

George Washington took the oath as the first president in 1789 in a suit of brown wool woven in Connecticut. Furniture makers in the new country copied a style of sharp edges, legs that grew thinner toward the floor, and inlaid eagles, now called the Federal style. In Spanish New Orleans in 1786, the governor ordered Black women and women of mixed race to stop wearing feathers and jewels in their hair and to wear it plain or covered with a cloth.

Homespun as a protest, 1765 to 1776

During the boycotts of British goods in the 1760s, Boston merchants opened spinning schools again. In Hartford, members of a society offered a prize of 12 pounds to whoever made the most yards of wool cloth in a year. Newspaper printers ran reports of spinning meetings in Massachusetts, Connecticut and Rhode Island. In Newport one spinner was a woman of 70 who had never spun a thread before. Only six of the newspaper stories called the spinners "Daughters of Liberty."

A day at the wheel. Women met at their minister's house in Brookfield, Massachusetts, at 5 in the morning one day in August 1769. A report of the meeting said the best young spinner at the linen wheel, a spinning wheel for linen thread, spun 70 knots of yarn, a knot being a measured length.

One married woman did her morning housework and made cheese first. Then she rode more than 2 miles carrying her own spinning wheel, spun 53 knots between 9 and 7, and went home to milk the cows.

The seniors at Harvard College voted in the autumn of 1767 not to drink tea or wear imported British clothes at their commencement, the ceremony at which students graduate. They did it to protest the Townshend taxes on goods from Britain. The printed sheets for the 1768 commencement, which listed the statements the graduates would argue for, were on paper made in New England. The next year's seniors did the same.

Charity Clarke

Who: A young New Yorker who wrote to her cousin in London that American women would spin, weave and dress in their own cloth rather than buy British clothes.

When and where: Her father's estate called Chelsea, on Manhattan, 1768 to 1774.

She promised "a fighting army of Amazons" armed with spinning wheels.

Charity Clarke was 21 or 22 when she wrote to her cousin in London in 1769. If the English did not give Americans the liberty they asked for, she told him, she would lead "a fighting army of Amazons," the women warriors of old Greek stories. She would gather "a number of ladies armed with spinning wheels." The historian Alan Singer dates the letter June 1769, and other accounts date it December 8, 1769.

Her ladies would have helpers "who shall all learn to weave and keep sheep," and they would all be "clothed with the work of our hands." They would be "no more slave to fashion and ceremony."

Her cousin was Joseph Jekyll, a lawyer in London, and she wrote to him between 1768 and 1774. Columbia University holds the letters today. She wrote to him again in 1774: "Though this body is not clad with silken garments, these limbs are armed with strength."

She was born in New York on June 28, 1747, and grew up on her father's estate, called Chelsea, on the island of Manhattan. She married the Rev. Benjamin Moore of Trinity Church in 1778. Their son, Clement Clarke Moore, wrote the poem "A Visit from St. Nicholas."

Wigs in Williamsburg, 1769 to 1775

Edward Charlton came to Williamsburg, Virginia, from London and became the town's leading barber and wigmaker. In 1769 eight barbers and wigmakers worked in the town. Charlton's account book for 1769 to about 1775 shows that in one year he sold sixty brown wigs of a style called the "dress bob." They cost 43 shillings each.

For shaving a man and dressing his wig for a year, Charlton usually charged 2 pounds 3 shillings. Peter Pelham paid 1 pound 5 shillings, and Speaker Randolph, the leader of the colony's lawmakers, paid 4 pounds.

Wigmakers needed hair. George Long of Petersburg, another Virginia town, advertised that he would pay one shilling an ounce for human hair.

Wigs were going out of fashion in England, and Charlton retired shortly before the Revolution.

Indigo's peak and end

South Carolina planters shipped more than one million pounds of indigo to England in 1775, more than seven times the 130,000 pounds of 1748. Enslaved workers did almost all of the work of making it. The British bounty on indigo ran out in 1777, during the war with Britain. Some planters grew indigo again after the war ended in 1783. In the 1790s most of them gave up indigo, and many turned to cotton.

Why did a governor ban feathers in women's hair?

Governor Esteban Rodríguez Miró of Spanish New Orleans ordered Black women and women of mixed race to stop wearing feathers and jewels in their hair in 1786. The historian Virginia Meacham Gould writes that he aimed the rule at women who dressed "too elegantly" or "competed too freely with white women for status."

The rule was part of a set of rules Miró issued on June 2, 1786, called the *bando de buen gobierno*, the order of good government. It said the women could "no longer have feathers nor jewelry in their hair." They had to wear their hair plain or cover it with a *pañuelo*, a head cloth. People later called such a cloth a tignon.

Gould found little written evidence that officials enforced the rule, and no record that anyone was punished under it. Portraits painted in New Orleans in the early 1800s show free Black women and women of mixed race wearing head wraps tied in many different styles. Gould reads the head wraps in these portraits as a mark of distinction.

George Washington

Who: The first president, who took the oath of office in a suit made from American wool.

When and where: Mount Vernon, Virginia, and New York City, January to April 1789.

He took the oath in brown wool woven in Connecticut.

George Washington wrote on April 8, 1789, three weeks before he took the oath as the first president of the United States: "I shall allways take a peculiar pleasure in giving every proper encouragement in my power to the manufactures of my Country" (manufactures meant goods made by hand or by machine). He took the oath on April 30, in New York.

Finding the cloth. In January 1789 a writer in *The Federal Gazette* had urged American leaders to wear clothing made in America. He signed himself "a Philadelphia mechanic," meaning a skilled worker who made things. The Hartford Woolen Manufactory in Connecticut had just begun making cloth. A merchant in Philadelphia could not get the cloth for Washington, so Henry Knox, then the secretary of war, dealt with the Hartford factory himself. The cloth reached Alexandria, Virginia, in early April. Washington left Mount Vernon for New York on April 16.

The staff at Mount Vernon believe that Cavan Boa made the coat, waistcoat and breeches. Boa was Washington's indentured tailor, a servant bound to work for him for a set number of years. Kathrin Breitt Brown makes copies of old clothes for Mount Vernon. She calls the coat "well-made but hastily finished," and she thinks Boa probably had help. Washington asked for six large engraved buttons.

In England the color of the cloth was called London brown. Americans called it Congress brown. The coat came to the collection at Mount Vernon in 1933.

Washington did not wear a wig. He powdered his own hair.

The Federal style, 1780 to 1820

Styles changed in American homes as well as in clothes. From about 1780 to 1820, American cabinetmakers, the skilled makers of fine furniture, worked in a style now called Federal. They copied many of its designs from English pattern books by George Hepplewhite and Thomas Sheraton. Federal pieces had legs that grew thinner toward the floor, and sharp edges. Makers covered them with veneers, thin sheets of fine wood laid over the surface. They inlaid pictures of eagles, urns and bellflowers, setting small pieces of different wood into the surface.

The main wood was mahogany, and makers also used satinwood, maple and birch. Makers of Federal furniture included John and Thomas Seymour in Boston and Duncan Phyfe in New York.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 10 MINUTES

Enslaved people in the South grew and picked the cotton that American mills spun between 1800 and 1850. Workers in New England mills spun and wove that cotton into cloth. In some mills in Rhode Island and in Lowell, Massachusetts, workers also wove a rough, cheap cloth that planters bought to dress the people they enslaved.

Fashionable women wore high-waisted white cotton dresses in the early 1800s. Later they wore corsets, stiff garments laced tight around the body, and wide skirts held out by layers of petticoats, the skirts worn under the outer skirt. Men stopped powdering their hair and cut it short. Some still wore knee breeches, pants that ended at the knee, and by the 1840s men wore narrow trousers.

Who made the clothes. A government report in 1811 stated that two-thirds of all the clothes Americans wore were made at home. People who could pay for it had a tailor or a seamstress, a woman who sewed for pay, make their clothes. The first shops that sold clothes already made stood near the docks, and their customers were sailors and other working men.

What fashionable people wore, 1800 to 1850

The fashionable dress for a woman in the first ten years of the 1800s had its waistline just under the breasts. It was made of muslin, a thin cotton cloth, and white was the most fashionable color. White dresses were hard to keep clean, and cleaning them cost money. For every day, women wore printed cottons and patterned silks, and wool in cold weather.

Men in the same years stopped powdering their hair and cut it short. They gave up embroidered silk and lace for plain wool coats in dark colors. Some still wore knee breeches. Others wore pantaloons, tight pants that reached the calf or the ankle. By the 1840s the frock coat was the standard coat for men. It was a fitted coat with a skirt that reached to just above the knee, worn with narrow trousers and vests of brightly patterned silk.

Women's sleeves puffed out wide from the shoulder in the early 1830s. This shape was called the gigot, or leg-of-mutton, sleeve, mutton being sheep meat. Skirts became very wide, and women wore more and more petticoats under them. Under the dress, a woman wore a corset laced tight from the chest to the hips.

The corset. A fashionable corset of the 1840s ran from a woman's breasts down over her hips. Heavy cords and strips of whalebone, a stiff, bendable material from the mouths of some whales, stiffened it. A long, flat piece of steel, wood or whalebone, called a busk, ran down the front. Sleeves were cut so tight that a woman often could not lift her arms higher than her shoulders. By the end of the decade some women wore six or seven petticoats.

Godey's Lady's Book, a magazine for women published in Philadelphia from 1830, showed its readers pictures of the latest dresses. Each issue opened with a fashion plate, a picture of the newest styles colored by hand. Sarah Josepha Hale edited the magazine from 1837 to 1877. The number of copies of each issue grew from about 10,000 in 1837 to about 150,000 by 1860.

Cotton picked in the South, woven in the North

The owners and workers of the cotton mills in Lowell, Massachusetts, depended on cotton grown in the South by enslaved people. US Senator Charles Sumner called the tie between Southern planters and New England mill owners an "unholy union." On one side, he said, stood "the cotton planters and fleshmongers of Louisiana and Mississippi." On the other stood "the cotton spinners and traffickers of New England" (a fleshmonger traded in human beings, and a trafficker was a trader).

In Lowell, workers at the Merrimack Company printed calico, cotton cloth printed with colored patterns. The company's owners hired skilled printers from England. The head printer they hired in 1825 was paid more than the company's treasurer, the officer in charge of its money.

Solomon Northup. Solomon Northup described how the cotton was picked. He was a free Black man, born in Minerva, New York. In 1841 two white men who called themselves Merrill Brown and Abram Hamilton offered him work with a circus. They took him to Washington and gave him a drink that drugged him.

He woke up alone in the dark, in chains, in a slave pen, a building where traders locked up enslaved people until they were sold. The pen stood near the US Capitol. The slave trader James H. Burch beat him for saying he was free. In New Orleans, Burch's partner Theophilus Freeman sold him, and enslavers in Louisiana held him until January 1853. For almost ten years he picked cotton on the plantation of Edwin Epps, on Bayou Boeuf.

The day's weight. Northup wrote that the pickers had to be in the field as soon as it was light. They stayed until it was too dark to see, with 10 or 15 minutes at noon to eat cold bacon. At night each picker's basket was weighed. An ordinary day's work was 200 pounds of cotton.

Epps and his drivers, the men who ran the work in the field, whipped anyone who brought in less. The more a picker came up short, the more lashes, or blows of the whip, he or she got. Epps set each picker's daily amount by what that person had shown he or she could pick.

Northup called a woman named Patsey "the most remarkable cotton picker on Bayou Boeuf." He wrote that 500 pounds a day was not unusual for her. In his words, she "would surely have been beaten if she failed to produce twice as much" as the 200 pounds of an ordinary day's work.

Cloth made for enslaved people's clothes

Planters called the rough fabric they bought for enslaved people's clothes "negro cloth" or "slave cloth." The names covered several coarse fabrics. Two of them were osnaburg, a coarse plain cloth, and kersey. Both were on the list in South Carolina's 1740 law, which barred enslaved people from wearing anything finer. Another was linsey-woolsey, a cheap cloth of wool mixed with cotton or linen. Jeans was a cotton and wool cloth woven in a twill, a weave that makes thin diagonal lines.

The Hazard family owned a woolen mill in Peace Dale, Rhode Island, where workers made this rough cloth for Southern planters to clothe the people they enslaved. In the 1820s Isaac Peace Hazard traveled through the South taking orders from plantation owners. By 1845 the owners of 17 of Rhode Island's 40 textile mills had made this cloth their main product. Workers in the Lowell mills made it too.

Southern buyers told the Hazards what they wanted. One wrote in 1824 that the cloth "would not suit servants unless it was blue." By "servants" he meant enslaved people. A complaint of the time described clothes "as thin as baize, threads not beat close together, others split all to pieces" (baize was a thin wool cloth).

Handing it out. Enslavers handed out clothing on set days. On Colonel Edward Lloyd's plantation in Maryland it came once a year. In Charleston, the people Mary Pringle enslaved as house servants got a summer share and a winter share.

Stephen Duncan owned the Carlisle plantation in Mississippi in the 1850s. There each man got enough cloth for three shirts, two pairs of summer pants and one pair of winter pants, along with a coat and two pairs of shoes. Each

child got four slips, short loose dresses. John Potter's rice plantation in South Carolina used 1,800 yards of cloth a year for the 400 people he enslaved, about 4.5 yards for each person.

Harriet Jacobs was enslaved in Edenton, North Carolina, in the household of Dr. James Norcom, whom she calls Dr. Flint in her book. She wrote: "I have a vivid recollection of the linsey-woolsey dress given me every winter by Mrs. Flint. How I hated it! It was one of the badges of slavery." Her grandmother's work, she wrote, "supplied my scanty wardrobe" (scanty means too little).

The slave trader Theophilus Freeman held Solomon Northup and other captives in his slave pen in New Orleans in 1841. Northup wrote that the traders made the captives wash and made the men shave. Then they gave each person "a new suit each, cheap, but clean." The men got a hat, a coat, a shirt, pants and shoes, and the women a calico dress and a handkerchief to tie around the head.

Frederick Douglass

Who: A man enslaved in Maryland who described the clothes he was given as a child, and who escaped to freedom dressed as a sailor.
When and where: Talbot County and Baltimore, Maryland, the 1820s to 1838.

As a child, his only clothing was one linen shirt.

As a child, Frederick Douglass had nothing to wear but one coarse linen shirt that reached to his knees. It came from the clothing that Colonel Edward Lloyd and his overseers, the men who ran the work for him, handed out each year. He had no shoes, stockings, jacket or trousers, "in hottest summer and coldest winter."

He had no bed. On the coldest nights he took a bag used for carrying corn to the mill, crawled into it and slept on the cold, damp clay floor. He wrote: "My feet have been so cracked with the frost, that the pen with which I am writing might be laid in the gashes."

Allowance-day. Douglass was born enslaved in Talbot County, Maryland, and as a child he lived on Lloyd's home plantation. Lloyd enslaved people on several farms, and they came to the home plantation for their food and their yearly clothing. Each enslaved adult got two coarse linen shirts, one pair of linen trousers, one jacket, one pair of winter trousers "made of coarse negro cloth," one pair of stockings and one pair of shoes a year. Douglass wrote that all of it "could not have cost more than seven dollars."

Children too young to work in the fields got only two coarse linen shirts a year. "When these failed them," he wrote, "they went naked until the next allowance-day."

When he was about seven or eight, his owners sent him to Baltimore. Before he left, Lucretia Auld, the daughter of his old master, told him he could have a pair of trousers if he scrubbed the dirt off his skin first. He wrote: "The thought of owning a pair of trousers was great indeed!"

The escape. Douglass escaped from Baltimore by train on September 3, 1838. He wrote: "I had on a red shirt and a tarpaulin hat, and a black cravat tied in sailor fashion carelessly and loosely about my neck" (a tarpaulin hat was a sailor's waterproof hat, and a cravat was a cloth tied around the neck). He carried a paper called a sailor's protection, borrowed from a friend who was a sailor. It described a free American sailor, and Douglass used it in place of papers showing he was free.

Anna Murray, a free Black woman who washed other people's clothes for pay, helped him. She married him in New York that same month. According to *The Frederick Douglass Encyclopedia*, her laundry work gave her access to sailors' clothing, and she got some of it for him. Other accounts say she sewed the sailor's outfit herself. She also gave him part of her savings, and she sold one of her feather beds to add to it.

Who bought the first ready-made clothes?

Sailors and other working men bought the first clothes sold ready to wear in America, in the early 1800s. They bought them at shops called slop shops, on the streets next to the docks of Boston, New York, Philadelphia and Baltimore, and of smaller whaling and fishing towns. The clothes came in one size, and a sailor heading out to sea made them fit as best he could.

More and more clothing makers sewed cheap clothes for planters to give to enslaved people between 1840 and 1860. Many New York firms made what they called "Negro clothing." A planter who bought these clothes did not have to use the time of enslaved workers to sew them.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 12 MINUTES

Sewing machines and chemists' new dyes changed how Americans' clothes were made and colored after 1850. Isaac Singer began making sewing machines in 1851, and from 1856 his partner, Edward Clark, let families pay for one a few dollars a month. A chemistry student in London made the first man-made dye to be sold in 1856, a purple, from chemicals in coal tar.

A tailor in Reno and a merchant in San Francisco got a patent in 1873 for work pants with metal rivets, small metal pins that hold cloth together. The patent, a government paper, gave them the right to be the only ones to make the pants that way for a set number of years. The riveted pants were later called blue jeans.

Mockery and rules. A few leaders of the fight for women's rights wore short skirts over trousers in 1851, and men mocked them for it. Members of San Francisco's Board of Supervisors, the men who made the city's laws, ordered in 1876 that every man in the county jail have his hair cut to one inch.

Sheriff Matthew Nunan used the order to cut off Chinese prisoners' long braids, and a federal judge later found that the order was meant only for the Chinese. From 1879, the staff at the Carlisle Indian School in Pennsylvania cut Native children's hair and took away their clothes.

The Bloomer costume, 1851 to 1854

Elizabeth Smith Miller visited Amelia Bloomer in Seneca Falls, New York, in February 1851, wearing a dress that reached the knee, over trousers. It was sometimes called the Turkish dress. Bloomer began wearing it too, and she printed articles and pictures of it in her newspaper, *The Lily*. Elizabeth Cady Stanton, a leader of the fight for women's rights, also wore it. People named the outfit bloomers, after Amelia Bloomer, the woman best known for wearing it and speaking up for it.

Bloomer wrote that "letters came pouring in upon me by the hundreds from women all over the country" asking about the dress. The number of copies of *The Lily* sent out each month rose from 500 to 4,000, by the count of the National Park Service. Another count gives 3,000.

Men mocked the women who wore it and called them "Amazons," after the women warriors of old Greek stories. Some young women who wore it were turned away when they asked to join a church. By about 1854, Stanton and other leaders had gone back to long skirts and corsets. They feared that wearing the dress took attention away from their fight for the right to vote.

Hoops, sewing machines and paper patterns

Women began to wear the cage crinoline, a frame of steel hoops that held a skirt out wide, in 1856. With it, women no longer needed the heavy stacks of petticoats, sometimes as many as seven, that they had worn to get the same shape.

The sewing machine. Isaac Singer began making sewing machines in 1851. He used the lockstitch, a stitch that locks two threads together, which Elias Howe had invented. Sewing a man's frock coat, a fitted coat with a skirt to the knee, by hand took almost 17 hours. By machine it took two and a half.

A Singer machine cost about $100 in 1856. That September, Edward Clark, Singer's partner, began to sell machines on installments, which means a buyer paid a little each month. The magazine *American Heritage* gives the terms as $5 a month. Earlier in 1856 Clark had offered $50 off a new Singer for any old sewing machine, even a worthless one.

Paper patterns. Ebenezer Butterick and his wife, Ellen Augusta Pollard Butterick, of Sterling, Massachusetts, began selling sewing patterns, paper shapes that a person who sews pins to cloth and cuts around, in 1863. They cut the patterns from tissue paper. By one report, the idea came from Ellen Butterick, who was tired of patterns that came in only one size.

The Buttericks' patterns came in a range of standard sizes. Members of the family cut and folded the first ones at home. They sold patterns for men's and boys' clothes first, and added women's dresses in 1866.

Elizabeth Keckley

Who: A dressmaker, born enslaved, who bought her freedom with money from her sewing and made Mary Todd Lincoln's dresses.
When and where: Virginia, St. Louis and Washington, D.C., 1818 to 1868.

"With my needle I kept bread in the mouths of seventeen persons."

Elizabeth Keckley wrote those words about St. Louis, where the Garland family who owned her lived on the money her sewing brought in. She kept them fed that way "for two years and five months." She wrote that "the best ladies in St. Louis" were her customers, and in the end those customers lent her the price of her freedom. Later she made the dresses of Mary Todd Lincoln, the wife of President Abraham Lincoln.

Growing up. Keckley was born enslaved in February 1818 at Dinwiddie Court House, Virginia. The Burwell family enslaved her and her mother, Agnes. Her father was Armistead Burwell, of the family that enslaved her. Agnes made clothes for 82 people: the 12 members of the Burwell family and the 70 people they enslaved. As Keckley grew up, she helped her mother make the clothes.

Her old master sent her to work for his eldest son, Robert Burwell, a minister, and his wife. When she was nearly 18, she moved with them to Hillsboro, North Carolina, where Robert Burwell led a church. A schoolmaster named Bingham had promised Mrs. Burwell that he would "subdue," or crush, what he called Keckley's "stubborn pride." He whipped her. When she asked him why, he hit her with a chair and knocked her to the floor.

While she lived in Hillsboro, a white man raped her again and again for four years, forcing her to have sex with him. Keckley wrote that the man "had base designs upon me" and "persecuted me for four years." She refused to name him. "I spare the world his name," she wrote. She gave birth to his son, George, the only child she ever had.

Freedom. Her owner agreed to free her and George for $1,200. One of her customers, Mrs. Le Bourgeois, raised the money among Keckley's other customers. Keckley and her son were freed on November 15, 1855. She took the money only as a loan, and she paid back every cent from her sewing.

The White House. She moved to Washington in 1860 and later employed 20 seamstresses. Abraham Lincoln took office on March 4, 1861. At eight o'clock the next morning, Tuesday, she went to the White House. Three other dressmakers were already waiting, and Mary Todd Lincoln chose Keckley. She wrote that she made "fifteen or sixteen dresses" for Mrs. Lincoln that spring and summer. Her customers also included Varina Davis, the wife of Jefferson Davis.

People freed from slavery were coming to Washington from Maryland and Virginia in the summer of 1862. In August 1862 Keckley and other Black residents of Washington started the Contraband Relief Association to help them. During the Civil War, Union soldiers used the word "contraband" for people who had escaped slavery. The association's members gave out food, shelter, clothing and medical care, and in the first year they handed out 5,150 pieces of clothing.

She published a book about her life in 1868, *Behind the Scenes, or, Thirty Years a Slave, and Four Years in the White House*. The Smithsonian holds a purple velvet gown she made for Mrs. Lincoln. She died in Washington in May 1907.

Where did the first man-made dye come from?

The first man-made dye came from coal tar, a thick black liquid made from coal. William Henry Perkin, an 18-year-old student at the Royal College of Chemistry in London, made it in 1856, while he was trying to make quinine, a drug for the disease malaria. He was on his Easter break.

Every dye before then came from plants, insects, shellfish or minerals: indigo blue from a plant, cochineal red from an insect and red ochre from a mineral. Perkin was working with chemicals that come from coal tar. Instead of quinine he made a purple dye, now called mauve or mauveine. It was the first man-made dye sold for use, and in 1857 he opened a factory near London.

Chemists were making other new colors from coal tar by 1859, such as fuchsine, a deep crimson red. These are called aniline dyes, after aniline, one of the coal-tar chemicals used to make them.

Levi Strauss and Jacob Davis

Who: A tailor in Reno who put metal rivets on work pants, and the San Francisco merchant who shared the patent with him.
When and where: Reno, Nevada, and San Francisco, California, 1870 to 1875.

A woodcutter's wife asked for strong work pants.

A woman asked Jacob Davis, a tailor in Reno, Nevada, to make strong work pants for her husband, a woodcutter. Davis had been using copper rivets on horse blankets. He put rivets at the weak points in the seams and pockets, so that the seams would not tear. In a court statement, Davis dated this to January 1871. Other accounts date it to December 1870.

The patent. Davis and Levi Strauss's company got a patent for the idea on May 20, 1873. The patent, number 139,121, covered "a metal rivet or eyelet at each edge of the pocket opening to prevent the ripping of the seam." The riveted pants were later called blue jeans.

Davis and Levi Strauss & Co. took A. B. Elfelt and others to court in January 1874, saying that they had used the patented rivets without permission. On February 10, 1875, the judge decided for Davis and Strauss. They had asked for $20,000 and were awarded $2,000.

The two men. Davis was born Jacob Youphes in the city of Riga on May 14, 1831. He came to New York in 1854, changed his name, and by 1869 ran a tailor shop in Reno. Levi Strauss was born in Buttenheim, Bavaria, on February 26, 1829. He came to the United States in 1847 and reached San Francisco in 1854, where he sold cloth and clothing to stores as Levi Strauss & Co.

Davis ran the San Francisco factory that made the riveted pants. Strauss died on September 26, 1902, and Davis died in 1908.

Cutting Chinese men's braids in San Francisco, 1876 to 1879

Chinese men in the 1800s shaved the front of the head and wore the rest of their hair in one long braid called a queue. Stephen Field, a federal judge, later wrote that Chinese men saw the loss of the queue as a disgrace that brought "misfortune and suffering after death."

Members of San Francisco's Board of Supervisors voted for an order to cut prisoners' hair in 1873. Mayor William Alvord vetoed, or rejected, the hair-cutting part.

The lodging law. California's lawmakers passed a law about lodging houses, buildings that rent out rooms, in April 1876. It made it a crime to sleep in a room with less than 500 cubic feet of air for each person. That is about the space of a room 8 feet long, 8 feet wide and 8 feet high. A history of the case by the Federal Judicial Center, the research office of the federal courts, states that the law was aimed at Chinese residents.

The hair order. Members of the Board of Supervisors voted on June 14, 1876, that every man jailed in the county have his hair cut to one inch from the scalp. Field later wrote: "The ordinance was intended only for the Chinese in San Francisco" (an ordinance is a city law).

Ho Ah Kow was found guilty under the lodging law in April 1878 and fined $10. Field's opinion in his case does not name the judge who sentenced him. His sentence was five days in the county jail if he did not pay. He did not pay, and he went to jail. Sheriff Matthew Nunan cut off his queue. Nunan and his deputies, the officers who worked under him, cut off other men's queues too. The records do not say how many.

Ho Ah Kow sued Nunan. On July 7, 1879, Justice Field ruled that the hair order went against the Fourteenth Amendment to the Constitution. That amendment states that no state may deny any person the equal protection of the laws, which means the same treatment under the law. Field wrote that the order was not meant to stop prisoners from escaping. Its purpose, he wrote, was "merely to aggravate the severity of his confinement," which means to make the prisoner's time in jail harder to bear.

Uniforms and short hair at Carlisle, 1879 on

Richard Henry Pratt, an Army officer, opened the Carlisle Indian Industrial School in Pennsylvania in 1879 for Native children. In 1892 Pratt said his aim was to "Kill the Indian in him and save the man." In a proclamation of December 2024, President Joe Biden stated that federal officials had tried to make Native children give up their own ways of life "by stripping them of their languages, religions, and cultures."

Hair and clothes. At Carlisle the staff cut the children's hair and took away their clothes. They dressed the boys in military uniforms and the girls in Victorian dresses, the long dresses of the time. Chapter 2, Native Nations, tells the full story of the boarding schools.

Carlisle's photographer, John N. Choate, took pictures of students when they arrived. He photographed the same students again after they had been at the school for a while. His "before and after" pictures show a student in the Native clothes he or she arrived in, then the same student in a school uniform. One pair has the caption "Tom Torlino, Navajo. As he entered the school in 1882. As he appeared three years later."

Shirtwaists and the Gibson Girl, 1890s

Women in the 1890s wore a separate skirt and a shirtwaist, a blouse cut like a man's shirt. Women who worked for pay wore it every day. Sleeves puffed out wide again and were biggest around 1895. Most working men wore the sack suit, a loose jacket with pants.

About 50,000 people rode bicycles in 1885, and about 10 million in 1896, by one estimate. Some women rode in bloomers, but most wore shorter skirts.

Charles Dana Gibson lived from 1867 to 1944. He drew for *Life*, *Collier's Weekly*, *Harper's Weekly* and other magazines. In the 1890s he drew a young woman whom people called the Gibson Girl. The Library of Congress showed his drawings in an exhibition. Its writers say she "pursued higher education, romance, marriage, physical well-being, and individuality" (pursued means went after) with more freedom than young women had had before. They also write that from the 1890s until World War I she "set the standard for beauty, fashion, and manners."

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 12 MINUTES

Chemists made the new materials that Americans wore and handled every day in the first half of the 1900s. Leo Baekeland made Bakelite, a hard plastic, in 1907, and chemists at the DuPont company made nylon in 1935. Nylon went on sale as women's stockings in 1939. Many women in the 1920s cut their hair short and wore shorter, looser dresses. Black women built companies that sold hair products to Black customers, and Madam C. J. Walker and Annie Turnbo Malone each grew rich from that work.

Government officials also used clothes and hair to control people. The US commissioner of Indian affairs, the head of the federal office for Native affairs, told officials on the reservations, the lands the government had set aside for Native nations, to make Native men cut their hair in 1902.

Officials in Washington limited how much cloth a dress or a suit could use in 1942. In June 1943, servicemen in Los Angeles beat Mexican American young men and tore off their zoot suits, outfits with very wide pants and long coats. Police officers then arrested many of the bloodied young men.

The order to cut Native men's hair, 1902

William A. Jones was the US commissioner of Indian affairs. On January 11, 1902, he sent a letter to the superintendents, the officials who ran the federal reservations and the offices on them, telling them to make Native men cut their hair. He wrote that long hair on the men was "not in keeping with the advancement they are making, or will soon be expected to make, in civilization." He called short hair "a great step in advance."

Jones wrote that "Indian costume and blanket" should be discouraged, and that "Indian dances and so-called Indian feasts should be prohibited." He claimed that the paint Native people wore caused "the majority of blindness among the Indians of the United States." He told the superintendents they could force men to obey by holding back their jobs and their rations, the food and supplies that officials handed out on reservations. Each superintendent had to report his progress by June 30, 1902.

Charles Burton was the superintendent for the Hopi and the Navajo. The historian Tisa Wenger writes that he reportedly used "whips, guns, and sheep shears" to enforce the order. The surviving accounts do not say how many men were forced to cut their hair.

The letter drew an outcry, and writers at *Harper's Weekly* criticized it in February 1902. Jones backed down. Officials then received new instructions to use "persuasion and example, rather than force."

Shirtwaists, short hair and short skirts

The shirtwaist, the blouse cut like a man's shirt, stayed the everyday top for working women in the early 1900s. Young immigrant women sewed shirtwaists in New York factories.

The Triangle fire. The Triangle Waist Company made shirtwaists on the top floors of a building in New York. A fire there killed 146 workers on March 25, 1911. Most of them were young immigrant women, and some were only 14. A stairwell door on the ninth floor was locked, and dozens of workers jumped from the windows.

The owners, Max Blanck and Isaac Harris, were tried for manslaughter, a killing the law treats as less serious than murder. The jury found them not guilty on December 27, 1911, because the prosecutors could not prove that the owners knew the doors were locked.

The flapper look. Many women cut their hair into a short style called a bob in the 1920s. Dresses hung straight from the shoulders, with the waistline low on the hips. This slim, straight shape is often called the flapper look. Hemlines, the bottom edges of skirts, rose until 1926 and then began to fall.

Many women gave up stiff, formal layers for lighter, looser clothes. With new fabrics such as jersey, a soft knitted cloth, and "artificial silk," a man-made cloth that looked like silk, more women could dress in the new styles. Fashion historians at the Fashion Institute of Technology call this change a "democratization of fashion," which means that fashion spread to ordinary people.

Hair care built by Black women

Annie Turnbo, later known as Annie Turnbo Malone, made a hair product she called Wonderful Hair Grower and sold it door to door. She was born on August 9, 1877, in Metropolis, Illinois, and her parents had been enslaved in Kentucky. She moved to St. Louis in 1902 and opened a shop. She later named her company Poro.

She opened Poro College in St. Louis in 1918, a building that held a factory, a store, rooms where students slept, a gym, a chapel and an auditorium. Nearly 200 people worked there. About 75,000 women, in several parts of the world, trained in her Poro system. In 1924 she paid nearly $40,000 in taxes.

Madam C. J. Walker

Who: A Black businesswoman, born to parents who had been enslaved, who built a hair-care company and trained thousands of women to sell her products.

When and where: St. Louis, Denver and Indianapolis, 1889 to 1919.

Movie: *Two Dollars and a Dream* (1987), a documentary about her life by Stanley Nelson.

Her own hair falling out led her into the hair business.

Sarah Breedlove, the woman who later became Madam C. J. Walker, was washing clothes for pay and working as a cook in St. Louis when her hair began to fall out. A skin disease, harsh hair products, poor food and a home without running water all played a part. In 1904 she began using Annie Turnbo's hair product, and she became one of Turnbo's sales agents in St. Louis.

She was born on December 23, 1867, in Delta, Louisiana, and her parents had been enslaved. Her parents died when she was 7, and she married at 14. She moved to St. Louis in 1889.

Her own company. She moved to Denver in July 1905 and began selling her own product, "Madam Walker's Wonderful Hair Grower," almost the same name as Turnbo's Wonderful Hair Grower, which she had sold in St. Louis. She married Charles Joseph Walker in 1906 and took his name. In 1910 she moved her company to Indianapolis and built a factory there. The company made hair products for Black women, and she trained thousands of women to sell them.

Her company said that by 1917 nearly 20,000 women had trained with it. According to the National Women's History Museum, she employed 40,000 people. She gave money to the YWCA, the Young Women's Christian Association. She also gave $5,000 to the NAACP, the National Association for the Advancement of Colored People, for its work against lynching, the killing of a person by a mob without a trial.

She died on May 25, 1919. Accounts of her wealth differ. One account puts it between half a million and a million dollars. According to the National Women's History Museum, it was more than $1 million.

Plastics and nylon

The chemist Leo Baekeland made Bakelite in 1907 by heating two chemicals, phenol and formaldehyde, under pressure. Bakelite was the first plastic made entirely from chemicals, rather than from plants or animals. He got a patent for his method, the right to be the only one to use it for a set number of years, on December 7, 1909. Makers used Bakelite for jewelry, telephones, radios and billiard balls, and in cars.

Nylon stockings. Nylon went on sale as women's stockings. On October 24, 1939, the DuPont company sold its first 4,000 pairs to the wives of its employees in Wilmington, Delaware. They sold out in three hours. On May 16, 1940, called Nylon Day, four million pairs went on sale in stores across the country at about $1.15 a pair. They sold out in two days. Some sources give the date as May 15.

Japanese forces attacked Pearl Harbor, in Hawaii, on December 7, 1941. For the rest of World War II, DuPont's nylon went into parachutes, tire cords, ropes and other war goods instead of stockings. Stockings came back in 1945. In Pittsburgh, 40,000 people stood in a line more than a mile long for 13,000 pairs.

Wallace Carothers

Who: The chemist who led the DuPont laboratory where nylon was made.

When and where: DuPont's research station, called the Experimental Station, 1928 to 1937.

Half an ounce of nylon, made on February 28, 1935.

Gerard Berchet, a chemist working under Wallace Carothers at DuPont, made half an ounce of the nylon later used in stockings on February 28, 1935. Carothers led the team at DuPont that made two of the most widely used man-made materials of the 1900s, neoprene and nylon. In April 1930 his team made neoprene, a man-made rubber.

Carothers was born on April 27, 1896, in Burlington, Iowa. He started work at DuPont's Experimental Station on February 6, 1928.

His illness. Carothers had depression, an illness that brings long periods of deep sadness and makes it hard to think and to work. He wrote: "I suffer from neurotic spells of diminished capacity." He meant that at times his mind could not work as well as usual. In the summer of 1936 he was treated in a psychiatric hospital, a hospital for illnesses of the mind. His sister Isobel died in January 1937.

Carothers killed himself in Philadelphia on April 29, 1937, at age 41, by taking cyanide, a poison. His daughter, Jane, was born in November 1937, seven months after his death. DuPont officials announced nylon to the public on October 27, 1938.

Ann Lowe

Who: A Black dressmaker from Alabama who made gowns for rich families in Tampa and New York, while the wider public hardly knew her name.

When and where: Alabama, New York and Tampa, 1898 to 1950.

Her gown went to the Academy Awards under another name.

The actress Olivia de Havilland wore a gown Ann Lowe made when she accepted her Academy Award in 1946. The credit for that dress went to the name "Sonia Rosenberg," not to Lowe. The record does not say who gave that credit. Lowe also made gowns for Jacqueline Kennedy and the heiress Marjorie Merriweather Post, but she stayed almost unknown to the wider public.

A family of dressmakers. She was born about 1898 in Clayton, Alabama, into a family of Black dressmakers. Her great-grandmother was enslaved on an Alabama plantation, and the man who owned that plantation was Ann's great-grandfather. He held her as his property, and by law she could not refuse him. He was the father of her daughter, Georgia, who was Ann's grandmother.

Her mother, Jane, and her grandmother, Georgia, made dresses for well-known families in Montgomery, and Ann learned the trade from them. Her mother died in 1914, when Ann was 16, and Ann took over the business.

She went to the S. T. Taylor Design School in New York in 1917. She was taught in a classroom by herself, apart from the white students. The accounts of her life do not name who ordered it. She was ready to graduate after six months. She then made gowns in Tampa, Florida, and opened her own dress shop there in 1920.

She moved to New York in 1928 with $20,000. For years she made gowns to order for stores such as Henri Bendel, Neiman Marcus and Saks Fifth Avenue. The Winterthur Museum showed 40 of her gowns in 2023. The

> museum's description of the show describes her work as part of "a legacy of Black women's knowledge and skills that began as enslaved labor."

Cloth rules in World War II, 1942 to 1946

Officials of the War Production Board issued General Limitation Order L-85 on April 8, 1942, to save cloth and workers' time for the war. The War Production Board was the federal agency whose officials controlled materials during the war, and its chairman was Donald M. Nelson. The order set how long and how wide women's coats, dresses, suits and skirts could be.

What it banned. To save cloth, the order banned hoods and capes attached to coats. It banned belts and hems, the folded-up bottom edges of clothes, more than 2 inches wide, and it banned cuffs, turned-back bands of cloth, on slacks, or loose pants.

Wedding gowns, dresses for pregnant women, children's clothes, burial gowns and religious robes did not fall under the rules. The rules lasted until 1946.

Stanley Marcus, a co-owner of the Neiman-Marcus department stores, was asked on December 27, 1941, to head the board's section for women's and children's clothing. Makers and stores that broke the rules could be fined or jailed. In April 1942 the board's officials also limited the elastic used in bras and in girdles, tight underwear that shaped the waist and hips. Nylon and rubber went to the military.

The zoot suit attacks in Los Angeles, June 1943

A zoot suit had high-waisted, very wide pants that narrowed at the ankle and a long coat with wide lapels, the folded-back flaps at the front of a coat below the collar. It began among Black men in Harlem, in New York. In Los Angeles in the early 1940s young Mexican American men wore it. So did some Filipino American and Japanese American young men, and some Mexican American young women. The War Production Board's officials had stopped the making of zoot suits because they used so much cloth.

The attacks. Sailors, soldiers and Marines, joined by civilians, went through the Mexican American neighborhoods of Los Angeles from June 3 to June 8, 1943. They hunted young men in zoot suits, beat them, tore off their clothes and burned the suits in street fires. The National WWII Museum says the attacks began on June 3 with about 50 sailors. Another account says about 11 sailors started them, and about 200 joined the next day. By the later days, thousands of servicemen had joined.

More than 150 people were injured. Los Angeles police officers stood by while the attackers claimed they were defending themselves. The officers arrested bloodied and bruised Mexican American men for "disturbing the peace." They arrested nearly 600 Mexican Americans, by the National WWII Museum's count, or more than 500 by another count. The police arrested far fewer servicemen, and no soldiers were arrested for the beatings.

Navy and Marine Corps commanders ordered their men to stay out of Los Angeles on June 8, 1943, and the attacks stopped. Members of the Los Angeles City Council voted for a resolution, a statement of what they wanted, to make wearing a zoot suit in the city a crime. No such law was ever passed.

Governor Earl Warren of California chose a committee to study the attacks. Its members reported that most of the people attacked were Mexican Americans or Black people. On the cause of the attacks, they wrote that "the existence of race prejudice cannot be ignored," race prejudice meaning hating or looking down on people because of their race.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 16 MINUTES

After the mid-1950s, the people who designed American clothes began to take their ideas from teenagers, and plastics went into everyday clothes and furniture. In the 1950s young men copied the jeans, white T-shirts and leather jackets that film stars wore. The first suits made partly of polyester, a plastic made into thread, went on sale in 1951. From 1950 the furniture company Herman Miller sold chairs that the designers Charles and Ray Eames had shaped from plastic and glass fiber.

In court. People also went to court over clothes and hair. Seven of the nine justices of the Supreme Court, the highest court in the country, ruled in 1969 that students could wear black armbands to school to protest a war. Judges disagreed about boys' long hair, and in 1981 a federal judge allowed an airline to ban a Black woman's braids.

State and federal officers found 72 Thai workers held behind razor wire in El Monte, California, in 1995, sewing clothes that were sold in American chain stores.

Jeans, T-shirts and teenagers in the 1950s

The leading women's style of the early 1950s was still the "New Look" that Christian Dior showed in 1947. It had a tight waist and a full skirt. By the middle of the decade, dressmakers cut dresses straighter and slimmer, and designers began to take ideas from teenagers.

Young men took up a working-class look: jeans, a white T-shirt and a leather jacket, with the hair greased back. Marlon Brando wore it in the film *The Wild One* in 1953, and James Dean wore it in *Rebel Without a Cause* in 1955. Fashion historians at the Fashion Institute of Technology describe the look as young people turning away from their parents' generation. Young men who wore it got a reputation as rebels and troublemakers. By the end of the decade, boys wore jeans to most places.

Polyester and wash-and-wear

Two British chemists, John Rex Whinfield and James Tennant Dickson, patented polyester in 1941. The DuPont company bought the right to make it in the United States in 1946, and DuPont named its polyester fiber Dacron.

Hart, Schaffner & Marx of New York began selling men's suits made of cloth that was 55 percent Dacron and 45 percent wool on May 8, 1951. According to the Hagley Museum and Library, it was the first polyester fiber sold to the public anywhere in the world. The makers of the cloth liked it because it did not crease or wear through easily and was easy to clean. In 1953 DuPont opened a Dacron plant in Kinston, North Carolina.

Clothes made with Dacron could be washed and worn without ironing, so they were sold as "wash and wear." Most of the ironing time they saved was women's time.

The Polyester Decade. People in the 1970s could buy fashionable styles at any price, because of man-made cloth. Polyester and other man-made fabrics were so common that people called the decade the "Polyester Decade." Men wore leisure suits, a casual kind of suit often made of man-made cloth, as a cheap stand-in for a regular suit.

People dancing at disco clubs wore satin, sequins (tiny shiny disks sewn onto cloth) and Lycra, a stretchy man-made cloth. By the late 1970s people wore sweatshirt cloth and leggings, once clothes for the gym, every day.

Charles and Ray Eames

Who: A husband and wife who designed furniture of molded plywood and plastic, meant to be sold cheaply to families in small homes after World War II.

When and where: Los Angeles, 1941 to 1978.

Movie: *Eames: The Architect and the Painter* (2011), a documentary about them in the PBS series American Masters.

Their first molded plywood was leg splints for wounded servicemen.

During World War II, Charles and Ray Eames made leg splints of molded plywood for wounded servicemen, with money from the Navy. Plywood is made of thin sheets of wood glued together, and a splint holds a broken bone still. In 1945 and 1946 they used the same method to make plywood chairs. They wanted chairs that could be made from a few parts, so that good chairs could be sold at low prices.

The contest. The Museum of Modern Art in New York held a contest in 1948 for low-cost furniture for the small homes being built after the war. The Eameses entered a chair seat made in one piece of stamped steel, and they won second place. Managers at Herman Miller would not pay $80,000 for a machine to press the steel. So the Eameses used fiberglass instead, a plastic that hardens around threads of glass. The military had used it in the war.

Herman Miller sold their chairs from 1950, with seats molded in one piece from fiberglass. Workers at Zenith Plastics of Los Angeles shaped the seats in metal molds on hydraulic presses, machines that press with the force of liquid under pressure. The first colors were greige, a gray-beige, elephant-hide gray and parchment. Buyers could put the same

seat on metal legs, wooden legs or rockers. The Eameses described their aim as "getting the most of the best to the greatest number of people for the least."

Who got the credit. The Eameses designed a costly lounge chair of leather and molded rosewood plywood in 1956. Ray called it "comfortable and un-designy." Its first label said "designed by Charles Eames." While she was alive, Ray got less credit than writers, museums and filmmakers have given her since her death.

Charles Eames was born on June 17, 1907, in St. Louis, Missouri, and studied architecture. Ray Kaiser was born on December 15, 1912, in Sacramento, California, and trained as a painter. They married in June 1941 and moved to Los Angeles. Charles died on August 21, 1978. Ray died on August 21, 1988, ten years later to the day.

Who made Jacqueline Kennedy's wedding dress?

Ann Lowe, the Black dressmaker in New York, made it. Janet Auchincloss hired her in 1953 to make the wedding dress for her daughter, Jacqueline Bouvier, and Lowe also made the bridesmaids' dresses. Jacqueline Bouvier married Senator John F. Kennedy that September. The wedding dress used 50 yards of ivory silk taffeta, a smooth, crisp silk cloth, and cost $500.

Ten days before the wedding, water flooded Lowe's workroom. She and her workers made the ruined dresses again. Lowe paid the extra cost herself and did not tell the family. She got no public credit for the dress until after Lee Harvey Oswald shot and killed President Kennedy in Dallas on November 22, 1963.

Money troubles. Her rich customers often talked her out of charging hundreds of dollars for her gowns. After she paid her workers, she often lost money, and at the height of her career she was almost broke. She lost her New York shop in 1962 because she had not paid her taxes.

The same year doctors removed her right eye because of glaucoma, a disease in which pressure inside the eye destroys the nerve that carries sight. She declared bankruptcy, a step in court for a person who cannot pay what he or she owes, in 1963. She opened a new shop on Madison Avenue in 1968, and she retired in 1972. She died on February 25, 1981.

Mary Beth Tinker

Who: A 13-year-old junior high student who wore a black armband to school to protest the Vietnam War. She was suspended, and her case led to a Supreme Court ruling on students' rights.
When and where: Des Moines, Iowa, December 1965 to February 1969.

She was 13, and she wore a black armband to school.

Mary Beth Tinker wore a black armband to Warren Harding Junior High School in Des Moines, Iowa, on December 16, 1965. She wore it to protest the Vietnam War. School officials sent her home and suspended her.

That December a group of adults and students had met at the home of Christopher Eckhardt's family in Des Moines. They decided to wear black armbands through the holidays to object to the war and to call for a truce, an agreement to stop fighting. On December 14 the principals of the Des Moines schools agreed that any student who wore an armband would be told to take it off. A student who refused would be suspended.

Christopher Eckhardt, 16, wore an armband to his high school on the same day as Mary Beth. Her brother John, 15, wore his the next day. School officials suspended all three. They did not go back to school until after New Year's Day. Her younger brother Paul, 8, and her sister Hope, 11, also wore armbands, but the rule did not cover elementary schools.

The three students' fathers sued the school district for them, with help from the Iowa Civil Liberties Union. The Tinker family received hate mail and threats to kill them. No surviving record names who sent them. A federal judge ruled for the school district, and the judges of the appeals court, a higher court that checks the rulings of lower courts, split evenly.

> **The ruling.** Seven of the nine Supreme Court justices ruled for the students on February 24, 1969. Justice Abe Fortas wrote that students do not "shed their constitutional rights to freedom of speech or expression at the schoolhouse gate." He meant that students keep the right to free speech that the Constitution gives every American. He called the armbands "a silent, passive expression of opinion, unaccompanied by any disorder or disturbance," meaning that the students stated their opinion quietly and caused no trouble. Justices Hugo Black and John Harlan disagreed.

Long hair and braids at school

In the Tinker case, seven justices protected the armbands as a way of speaking. They did not decide what students could wear or how they could cut their hair. Justice Fortas wrote that the case did not concern "the length of skirts or the type of clothing, to hair style." Boys with long hair lost some court cases and won others.

Three Dallas boys tried to enroll at W. W. Samuell High School in September 1966. They were Phillip Ferrell, Stephen Webb and Paul Jarvis, and they played in a band called Sounds Unlimited. School officials turned them away because of their "Beatle" haircuts. In 1968 the judges of a federal appeals court sided with the school.

Chesley Karr of El Paso, Texas, challenged his school's rule in 1970 that a boy's hair could not hang over his ears or his collar. He lost. In 1972, in a case called Arnold v. Carpenter, judges on a different federal appeals court ruled for long-haired students.

The Supreme Court justices never agreed to hear a school hair case. In 1971 Justice Hugo Black wrote that he could not see why "anyone should think the Federal Constitution imposes on the United States courts the burden of supervising the length of hair that public school students should wear." Justice William O. Douglas disagreed when the other justices turned such cases away.

The Pawnee boys. One of those cases came from Pawnee boys in Oklahoma. The boys wore their hair parted in the middle with a long braid on each side, to follow "the old traditional ways." One of them said it was "one way of telling people that I am proud [to be an Indian]."

Officials at Pawnee Junior High School suspended the boys with no end date on April 24, 1972, under a rule that a boy's hair could not reach his collar or his ears. The first name on their case is Norman New Rider. Federal appeals judges ruled that the school could keep its rule. On December 10, 1973, the Supreme Court justices refused to hear the case. Justices Douglas and Thurgood Marshall disagreed. Douglas wrote that the boys were telling other students of "their pride in being Indian."

From Nebraska to Oklahoma. The Pawnee Nation once lived in Nebraska and northern Kansas, and the Sioux attacked the Pawnee there for four decades. In 1874 the Pawnee began a two-year removal, a move of the whole nation away from its homeland, to Indian Territory, which later became Oklahoma. Some accounts say the Pawnee were forced to go. The US government's agent for the Pawnee chose their new reservation, on land that had belonged to the Cherokee.

The Afro, braids and a court ruling

Many Black Americans straightened their hair before the 1960s. The creams they used to straighten it, called relaxers, often held lye, a chemical that could burn the scalp and the ears. In the 1960s many Black men and women in the "Black is beautiful" movement began wearing their hair natural. The Afro, hair combed out into a round shape, became a sign of Black pride. Angela Davis wore one in 1969. A person could keep up an Afro at home without paying a hairdresser.

Renee Rogers was an airport operations agent for American Airlines. The airline's managers had a rule against an all-braided hairstyle for workers in her job, and they told her to wear a hairpiece over her braids at work. She sued. On December 1, 1981, federal Judge Abraham Sofaer ruled for the airline.

Judge Sofaer ruled that a person can change a hairstyle but cannot change the texture of his or her hair. So, he ruled, the braid rule was not race or sex discrimination, treating people worse because of who they are, under the Civil Rights Act of 1964. The airline's lawyers said the style had been made popular by the actress Bo Derek, in the 1979 film *10*. Rogers said braids had a long history for Black women.

Sneakers and hip-hop in the 1980s

In New York in the 1980s, hip-hop groups such as Run DMC wore white Adidas sneakers, jeans, hooded sweatshirts, gold chains and baseball caps.

Nike began selling its Air Jordan basketball shoe, made for the player Michael Jordan, on April 1, 1985. NBA officials fined Jordan $5,000 a game for wearing shoes in colors that broke the league's rules. Reports of the shoe's sales in its first year range from $126 million to more than $150 million.

A killing for shoes. Costly sneakers could make the young person wearing them a target. James David Martin, 17, killed Michael Eugene Thomas, 15, on May 2, 1989, to take his Air Jordans. Thomas was a ninth grader at Meade Senior High School in Anne Arundel County, Maryland, and he had bought the shoes for $115.50. Martin led him into the woods near the school, raped him, forcing him into a sexual act, and strangled him to death. Then Martin took the shoes and ran.

Martin pleaded guilty to voluntary manslaughter, killing a person on purpose but without planning it ahead, a crime the law treats as less serious than murder. He was sentenced to seven years in prison.

In May 1990 the writer Rick Telander published a cover story in the magazine *Sports Illustrated*, "Your Sneakers or Your Life," about young people robbed for their sneakers and jackets, some of them killed. Police in a few cities counted such robberies. Atlanta police reported more than 50 muggings for sports clothes in four months, and a Chicago police sergeant counted about 50 jacket crimes and a dozen shoe crimes a month. Each count covered only one city. Richard Lapchick of Northeastern University called the news reports of these crimes "grossly exaggerated."

Slavery in a California sewing shop, 1995

State and federal officers and El Monte police raided a group of seven apartments in El Monte, California, near Los Angeles, on August 2, 1995. Inside they found 72 garment workers, people who sew clothes for a living, from Thailand. They had been held there and forced to sew.

Suni Manasurangkun, whom the workers called "Auntie," ran the shop with her sons. Recruiters in Thailand had promised the workers jobs, given them false passports and brought them to Los Angeles. The bosses took the passports and told each worker that he or she owed about $5,000 for the trip.

Behind the wire. A high fence topped with razor wire surrounded the apartments, and armed guards watched the workers. The guards showed them a picture of a man who had been beaten after he tried to escape. The records do not name who beat him. The workers sewed about 84 hours a week, from early morning to midnight, for about $1.60 an hour. Some of them had not been outside the fence for as long as seven years.

The officers learned of the shop after a woman escaped through a second-floor window. A letter written in pencil, with a map drawn by hand, reached the authorities. It said: "Very Dangerous. Please bring much manpower."

Who paid. The clothes carried "Made in the USA" labels and were sold in chain stores including Mervyn's, Montgomery Ward and Miller's Outpost. In February 1996 Suni Manasurangkun, three of her sons and three other people pleaded guilty to federal crimes. They were sentenced to up to seven years in prison. Two of her sons escaped the country and were never caught.

The workers sued the stores and clothing companies that had sold the clothes. In 1997 those companies agreed to pay the workers wages they were owed, and the lawsuits ended. The amount was $4 million by one account and more than $4.5 million by another.

Rotchana Cheunchujit

Who: A garment worker from Thailand who was held in the El Monte sewing shop until officers freed her in 1995.

When and where: El Monte, California, the early 1990s to 1995.

She was paid five to seven cents a piece.

Rotchana Cheunchujit sewed blouses and other clothes in the El Monte shop for five to seven cents a piece. That came to about $300 to $500 a month. The owners took half her pay first. Then they made the workers buy food and supplies from the owners' own store, at high prices. The bosses told her she owed about $5,000.

She came from Thailand, where she had heard that jobs in Los Angeles paid three times as much. She left her two young children with her mother there, hoping the job would help her family. The smugglers who brought her said that for about $4,800 they would get her to the United States and set her up with a job. She could pay them back from her wages. She arrived in 1994.

The raid. She was 24 and in bed when federal agents broke down the door in the early hours of August 2, 1995. Someone called out in Thai: "We're here to help you." "We were in shock," she said. "We didn't know what was going on." Immigration officers then held her and the other workers for nine days, until Asian American groups paid their bail, money paid to a court so that a person can go free while a case goes on.

Later she became a US citizen, learned English and was reunited with her children. She married Steve Sussman, a professor at the University of Southern California, and took his name. She spoke up for other garment workers and opened a vegetarian Thai restaurant in Arcadia, California.

BY 2000

If you remember one thing: Between 1950 and 2000, plastics such as polyester and fiberglass went into everyday clothes and chairs, and students and workers went to court over armbands, long hair and braids.

- 1951: Hart, Schaffner & Marx begins selling suits made partly of polyester.
- 1969: Seven Supreme Court justices rule that students may wear black armbands to school.
- 1995: Officers free 72 Thai garment workers held behind razor wire in El Monte, California.

Next: After 2000, almost all the clothes Americans bought were sewn in other countries, and in Bangladesh more than 1,100 people were killed when a building full of garment factories collapsed.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 14 MINUTES

Today almost all the clothes sold in the United States are sewn in other countries, and Americans throw away far more cloth than they did in 2000. They threw away 17 million tons of cloth in 2018, most of it clothing, by the count of the US Environmental Protection Agency. That was almost twice the 9.5 million tons they threw away in 2000.

Around the world, clothing sales more than doubled between 2000 and 2015, and people wore each piece fewer times, according to a 2017 report by the Ellen MacArthur Foundation.

Who sews them. Some of the clothes are sewn in Bangladesh, where a factory fire in 2012 and a building collapse in 2013 killed more than 1,200 people, most of them garment workers. Some of them had been sewing clothes for American stores.

In Los Angeles, garment workers were paid by the piece, often a few cents for each piece they sewed. Starting in 2022, a California law required pay by the hour, at least the minimum wage, the lowest hourly pay the law allows. After that, piece pay was allowed only as a bonus.

California lawmakers passed the first law against punishing workers or students for the natural texture of their hair in 2019. It also covers braids, twists and locs, long ropes of hair also called dreadlocks. Lawmakers in about 30 states have passed such laws since. Members of the CROWN Coalition, the group that worked for the first of those laws, counted the states.

Where do Americans' clothes come from?

About 97 percent of the clothes and shoes bought in the United States are made in other countries, most of them in Asia. The American Apparel & Footwear Association, a group of clothing and shoe companies, gave that figure in April 2025, from its latest data.

Workers in Bangladesh are among those who sew clothes for American stores. In the year from 2021 to 2022, the country's garment factories earned $42.6 billion, about 82 percent of the money Bangladesh earned from goods sold to other countries. About 4 million people worked in them. According to a 2023 report by the International Labour Organization, which studies work and workers around the world, the typical garment worker in Bangladesh was a woman of 23 who had moved to the city from a farming area.

The Tazreen fire and the Rana Plaza collapse

Tazreen. A fire started in a ground-floor warehouse of the Tazreen Fashions factory, on the edge of Dhaka, Bangladesh, on November 24, 2012. The building had nine floors. All three of its staircases led down through the ground floor, where the fire was. The fire killed at least 112 people, by the first count reported by the Associated Press. Later counts run from 117 to 124. Twelve people died jumping from windows.

Police arrested three supervisors and accused them of padlocking the exits. One survivor, Mohammad Ripu, said a manager told the workers: "The fire alarm had just gone out of order. Go back to work."

Workers at Tazreen had been sewing clothes sold by Walmart and other companies. In May 2011, inspectors checking the factory for Walmart had rated it high-risk. That same year Sridevi Kalavakolanu, Walmart's director of ethical sourcing, said that fire and electrical upgrades in factories were "not financially feasible for the brands." She meant they cost too much. Her job was checking how the companies that made goods for Walmart treated their workers.

After the fire, Walmart officials said a supplier, one of the companies that made clothes for Walmart, had sent work to the factory without permission, and they stopped doing business with that supplier.

Rana Plaza. Rana Plaza was a nine-story building in Savar, near Dhaka, with five garment factories on its upper floors. About 5,000 people worked in them. The building stood on a pond that had been filled in, and it was built in 2006 without proper permits, the government's written permission to build. Its owner, Sohel Rana, had the upper floors added without a permit. They were not built to hold the weight of factory machines and generators.

A Bangladeshi television channel showed cracks in the building on April 23, 2013. The shops and the bank on the lower floors closed. Sohel Rana told reporters that the building was safe. Factory managers ordered the garment workers back the next morning. Managers at the Ether Tex factory threatened to hold back a month's pay from any worker who stayed away.

The building fell at about 9 in the morning on April 24, 2013. It killed more than 1,100 people, 1,134 by the count of the Clean Clothes Campaign, a group that works for garment workers' rights. Counts of the injured run from about 1,500 to nearly 2,600. Some trapped workers could be freed only by amputating an arm or a leg, which means cutting it off.

Researchers for the Clean Clothes Campaign found at least 29 brands with recent orders at the factories in Rana Plaza. They included two American companies, Cato Fashions and The Children's Place. News reports also linked Walmart. Officials of J.C. Penney said that one factory there had made a small amount of clothing for another brand that Penney stores sold.

After Rana Plaza

After the collapse, officials of more than 200 clothing companies, most of them European, signed a safety agreement that bound them by law. Officials of Walmart and other North American companies did not sign it. In July 2013 leaders of 17 North American store chains, including Walmart, Gap, Target and Macy's, announced a safety plan of their own. It had no promise, binding by law, to pay for repairs to the factories.

Clothing brands paid into a fund for the families of the dead and for injured workers. The fund reached its target only after more than two years, when the last brands, such as Benetton, paid in. By October 2015, more than $34 million had been paid out, according to the International Labour Organization. According to the Clean Clothes Campaign, some of the brands linked to the building never paid.

In court. The husband of a worker who died and a worker who was injured sued J.C. Penney, The Children's Place and Walmart in a Delaware court. On May 4, 2016, the judge threw out the case, ending it without a trial, for two reasons. The law of Bangladesh allowed one year to bring such a case, and that year had passed.

The judge also ruled that the companies were not the workers' employers. So under Delaware law the companies were not required to keep those workers safe. No court has found an American company responsible for the deaths at Tazreen or Rana Plaza.

Sohel Rana was arrested near the border with India on April 28 or 29, 2013. He was still held in custody in April 2026. In 2017 a judge sentenced him to three years in prison for hiding his wealth. As of April 2026, judges in his murder trial had heard 145 of the 594 listed witnesses. The trial had not ended, *The Business Standard*, a newspaper in Dhaka, reported.

Paid by the piece in Los Angeles

Clothes are still sewn in Los Angeles, often in small shops that open and close quickly. In 2020 workers there were paid about 5 to 12 cents for each piece they sewed, according to the news site *CalMatters*. They worked about 10 hours a day, five and a half days a week, for about $300 a week in cash. That came to about $5.50 an hour, when the city's minimum wage was $15.

That year, at least 375 workers at the Los Angeles Apparel factory caught COVID-19, and four of them died.

The new law. Governor Gavin Newsom signed the Garment Worker Protection Act, which State Senator María Elena Durazo wrote, on September 27, 2021. From January 1, 2022, garment shops in California had to pay at least the minimum wage by the hour. They could pay by the piece only as a bonus on top. Workers could also claim unpaid wages from the brands and stores that sold the clothes.

Marissa Nuncio, director of the Garment Worker Center in Los Angeles, said in 2021 that the law applied to more than 45,000 garment workers in California. Most of them were immigrant women. In 2023 Remake, a group that works for garment workers, reported that a year after the law took effect some workers were earning the minimum wage, and others still reported wages they were owed and never paid.

Francisco Tzul

Who: A garment worker from Guatemala who sewed clothes in Los Angeles for decades, often for a few cents a piece, and told lawmakers about his work.

When and where: Los Angeles and Sacramento, the 1990s to 2021.

He sewed clothes that carried a TV star's name.

Francisco Tzul watched Kathie Lee Gifford's television talk show in the 1990s and recognized her name. It was on the labels of clothes he sewed in Los Angeles. He was paid a few cents for each piece of the sewing work, about a dollar for each finished item. He shared a one-bedroom apartment with three friends.

He came from Guatemala, and by 2020 he had sewn clothes in Los Angeles for decades. That year he was 56 and was living in the United States without legal papers. He has told his story in interviews with the news sites *CalMatters* in 2020 and Knock LA in 2021.

COVID-19. He sewed face masks at the Los Angeles Apparel factory in 2020, and the factory paid him by the hour: $15, the city's minimum wage, plus overtime. That was far more than the $5.50 an hour that piece pay came to in the small shops. He caught COVID-19 there. "My respiratory system was completely blocked and I wasn't able to breathe at all," he said. He spent 10 days in the hospital. When he came out, his roommates told him to leave. Staff at the Garment Worker Center found him a hotel room for two weeks.

He went to Sacramento in 2021 to tell California's lawmakers about his work. He called the day the Garment Worker Protection Act was signed the best day of his life.

What does the CROWN Act ban?

Under California's CROWN Act, employers and public schools may not treat people worse because of the texture of their hair, or because of styles such as braids, locs and twists. California became the first state with a CROWN Act on July 3, 2019. The name stands for "Creating a Respectful and Open World for Natural Hair." State Senator Holly Mitchell wrote the law with a group of supporters that included civil rights organizations and the company Dove.

New Jersey's governor, Phil Murphy, signed a CROWN Act on December 19, 2019. By July 2025, 27 states and Washington, D.C., had such laws, according to a list that GovDocs published. Pennsylvania's governor, Josh Shapiro, signed one on November 25, 2025. In September 2026 the CROWN Coalition, the group that worked for the first law, counted 30 states.

Members of the US House of Representatives passed a national CROWN Act in 2020 and again in 2022. Senators never voted on it. In September 2026 the United States had no national law against hair discrimination.

Damon Landor. Damon Landor's case over his hair went to court under a religious-freedom law, not a CROWN Act. Guards at a prison in Louisiana handcuffed him to a chair in 2020 and shaved off his dreadlocks. He had grown them for decades because of a promise he made as part of his Rastafarian religion, and he had three weeks left in his sentence. He showed the guards a court decision, and they threw it in the trash.

Six of the nine Supreme Court justices ruled on June 23, 2026, that he could not sue the guards for money under a federal law that protects the religious freedom of people in prison.

Andrew Johnson

Who: A high school wrestler in New Jersey whose locs were cut beside the mat so he could compete. His case led to a state law against hair discrimination.

When and where: Buena, New Jersey, December 2018 to December 2019.

The referee gave him 90 seconds: cut his hair or lose.

The team's athletic trainer cut off Andrew Johnson's locs beside the wrestling mat on December 19, 2018, while the crowd watched, so that Johnson could wrestle. The referee, Alan Maloney, had told Johnson that his hair broke the rules. Maloney rejected the cover Johnson wore over his locs and gave him 90 seconds to cut his hair or lose the match. Johnson was a junior at Buena Regional High School, and this was a home match.

The trainer who cut his hair was a white staff member. Johnson won the match in overtime. A local sports reporter, Mike Frankel, posted a video of the haircut. NBC News reported that the video had been viewed more than 14.5 million times.

Johnson's family said that Maloney had arrived late. The family said he had missed the weigh-ins, where referees check each wrestler before a match, and had raised no problem with the hair there. In 2016 Maloney had been accused of calling a Black referee an insulting name for Black people at a party. He was suspended for it, and then allowed back after an appeal.

What changed. In September 2019 officials of the New Jersey Division on Civil Rights and of the state's school sports association agreed that Maloney would be suspended for two seasons. They also agreed that all wrestling officials in the state would be trained that the rule is about the length of hair, not its style. On December 19, 2019, one year after the match, Governor Phil Murphy signed New Jersey's CROWN Act.

Where old clothes go

Americans threw away about 1.8 million tons of cloth in 1960. In 2018, the latest year the US Environmental Protection Agency has counted, they threw away 17 million tons, more than nine times as much. About 13 percent of old clothes and shoes were recycled that year. Another 3.2 million tons of cloth were burned to make power, and 11.3 million tons went to landfills.

The Ellen MacArthur Foundation reported in 2017 that, around the world, one garbage truck's worth of cloth is dumped or burned every second.

In April 2026 ThredUp, a company that sells used clothing online, published a report with the research firm GlobalData. It stated that in 2025, sales of used clothes in the United States grew nearly four times as fast as sales of clothes in general. ThredUp's researchers expect sales of used clothes to reach $78.8 billion a year by 2030. Nearly half of the shoppers they surveyed said they find used items through social media.

THE THREE QUESTIONS, ANSWERED

1. **Why did lawmakers and officials make rules about other people's clothes and hair?** To keep rank where everyone could see it, and to control the people below them: Massachusetts fined people worth less than 200 pounds for wearing silk, South Carolina held enslaved people to coarse cloth in 1740, and a federal official ordered Native men's hair cut in 1902. Since 2019, CROWN Acts in about 30 states have turned the rule around and forbidden punishing people for natural hair, braids, locs or twists.
2. **Who made the cloth Americans wore?** Native weavers first, then enslaved people who grew the cotton and made the indigo, and mill workers in New England. Today almost all of it is sewn in other countries, by workers in places like Bangladesh, and in small Los Angeles shops where workers were paid by the piece until a California law required hourly pay in 2022.

3. **Which new materials changed what Americans wore?** Churro wool, brought in 1598, became the main thread for weaving in New Mexico. Dyes made from coal tar, from 1856, gave clothes new colors such as mauve. In the 1920s "artificial silk" let more women dress in the new styles. Nylon made stockings from 1939, and polyester suits from 1951 could be washed and worn without ironing.

What changed: Before 1500 people here made blankets from turkey feathers and yucca cord, and today about 97 percent of the clothes and shoes Americans buy are made in other countries.

FIVE DATES TO KEEP

1651: Massachusetts lawmakers fine people worth less than 200 pounds for dressing like gentlemen.

1740: South Carolina's Negro Act holds enslaved people to coarse cloth.

1856: William Henry Perkin makes the first man-made dye, a purple, from coal tar.

1939: DuPont sells its first nylon stockings.

2013: Rana Plaza collapses in Bangladesh, and more than 1,100 people are killed.

NOT KNOWN: The surviving records do not show how often anyone took an enslaved person's clothes under South Carolina's 1740 law.

Where to go: George Washington's Mount Vernon, in Virginia, holds the brown wool coat he wore when he took the oath as president in 1789.

Next: Chapter 36, Sports and Play. It asks who was allowed to play, from chunkey at Cahokia to the leagues and screens of today.

Chapter 36: Sports and Play

CHAPTER 36 OF 37 · SPORTS AND PLAY · 10 ERAS · ABOUT 125 MINUTES

From chunkey at Cahokia to Fortnite, American games moved out of open fields and into leagues, arenas and screens run by adults and companies, and at almost every step someone in charge decided who was allowed to play.

On September 10, 1674, the judges of the York County court in Virginia punished a tailor named James Bullocke. He had bet 2,000 pounds of tobacco on a race between his mare and a gentleman's horse. Racing, the judges ruled, was "a sport only for Gentlemen," and they fined him. Then they found that the gentleman had fixed the race so that the tailor's mare would win. They sent the gentleman to sit in the stocks for an hour.

This chapter follows play through ten eras, from Native ball games on fields a mile long to games played on phones with strangers. Watch who runs the game. At first the players ran it themselves. Later club members wrote the rules, owners paid the players, adults ran leagues for children, and companies sold games played on a screen. And watch who gets kept out: a tailor in 1674, enslaved riders whose names the race cards left off, Black players after 1887, girls after 1951, Black children at city pools.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. Who invented baseball?
2. Who was kept out of American games, and how did they get in?
3. How has children's free time changed?

Five minutes? Read "Who wrote the rules of baseball?" in 1800 to 1850, then "Who could play Little League" and "How did a child's afternoon change?" in 1950 to 2000.

Can skip: "Games of chance", "Children, toys and the circus", "The Miracle on Ice", "Television and the Super Bowl". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 6 MINUTES

Native nations played games of skill and games of chance long before 1500, and their children made toys out of clay. Nobody wrote down the rules at the time. What survives are objects in the ground, found by archaeologists, the scientists who dig up and study the things people left behind. Stone disks for a game called chunkey, and little clay animals made by children, date from these centuries.

Archaeologists have also found split reeds used as dice and wooden pieces kicked along a race course, but no one has dated those. How the games were played is known from the nations' own traditions and from Europeans who watched them in later centuries.

Two kinds of games. Stewart Culin sorted Native games into two kinds in a long study printed in 1907 by the Bureau of American Ethnology, a government office in Washington that studied Native peoples.

In games of chance, players threw marked pieces and counted how they landed. In games of skill, players won by how well they used their hands and bodies. Culin found no game like chess, which a player wins by planning alone. Native children played many games with no objects at all, such as tag, he wrote, and he left those out.

Chunkey at Cahokia

Chunkey was a game played with a stone disk and long poles. One player rolled the stone along the ground. The players ran after it and threw their poles. The aim was to land a pole closest to the spot where the stone came to rest. The stones had rounded edges and hollowed sides, and some had a hole through the middle.

The game began about the year 600, in the area around present-day St. Louis. People built the city of Cahokia in that same area around 1050. By hand, they filled in and leveled a plaza, a huge open square, of about 50 acres. They used the plaza for ceremonies and for chunkey.

The stones got bigger. A chunkey stone made before Cahokia existed measures about 2.5 inches across. A stone from the 1100s measures about 3.5 inches. It is made of quartzite, a hard rock, from a single place on the Mississippi River. A shell collar found 90 miles south of Cahokia shows a chunkey player holding a pole and a stone.

Timothy Pauketat, an archaeologist at the University of Illinois, thinks messengers from Cahokia carried a chunkey stone in one hand and a war club in the other. In his account, they went out to the lands around the city to make peace or to make agreements with other peoples. He also writes that chunkey played a large part in how Cahokia's people lived together and how they were governed.

Chunkey stones from about 1300 have turned up as far away as Georgia, and in Maryland at sites in Frederick and Montgomery counties. Staff at the Jefferson Patterson Park and Museum in Maryland say Cahokia declined around 1500, and that people went on playing chunkey across North America after that.

Ball games with sticks

Nations in the East, among them the Choctaw, the Huron and the Haudenosaunee, played a ball game with sticks. The Choctaw call their game kapucha toli, which means "stick play." The Huron and the Haudenosaunee, also called the Iroquois, played the game known today as lacrosse. Writers for the Choctaw Nation, on the nation's website, say that stickball "has been the Choctaw national sport for unknown centuries."

No object or written record dates a stick-and-ball game before 1500. Jean de Brebeuf, a French missionary, a man who traveled to other peoples to spread the Christian religion, described Huron lacrosse in 1636. He belonged to the Jesuits, a group of Catholic priests. Another Jesuit missionary described a Choctaw match in 1729, the oldest written account of a Choctaw game.

How big a game could be. Fields ran from about 100 yards long to, perhaps, several miles, according to the same Choctaw writers. Some games had several hundred players on each side, and others had twenty or fewer. Among the Choctaw, women played alongside men. Betting was a large part of the game, especially for the women. The Choctaw writers also say that deaths were common in the old games.

People used the game to teach and to heal. The Choctaw have used it to show their young people how Choctaw families were arranged and what men and women each did, the Choctaw writers say. Among the Huron, Brebeuf wrote, a sick person or a healer could call for a lacrosse game to make the sick person well. Whole villages played against each other and bet beaver robes and what Brebeuf called "porcelain collars," his word for collars of wampum, beads made from shells.

Choctaw tradition says that towns sometimes played ball to settle an argument. The two games of this kind that someone wrote down took place long after 1500, around 1790 and 1800.

Games of chance

Pieces for games of chance survive in the Southwest. The archaeologist J. Walter Fewkes dug up split reeds used for a dice game at the Chevlon ruin, about 15 miles east of present-day Winslow, Arizona. Culin took the reeds as a sign that the Hopi and Zuni cane game was old. No one has dated them.

Pieces from a racing game survive too. Runners kicked a small wooden piece ahead of them along a race course. Pieces like these were found in cliff dwellings in Mancos Canyon, Colorado. One is 4 3/4 inches long and marked with lines cut into the wood.

What did children play with?

Most of the children's things that survive from before 1500 are made of clay. Toys made of wood, hide and grass rot away, so few of them last.

The archaeologist Kathryn Kamp studied clay objects about 800 years old from Sinagua village sites in northern Arizona. She measured the fingerprints left in the clay. The ridges of a child's fingerprint are narrower than an adult's. Kamp found that very young Sinagua children made little clay animals, and probably small dishes, to play with. While making them, the children learned how clay behaves.

People in the Southwest made animal figures out of split twigs about 2,000 years ago. Archaeologists had thought the figures were used in religious ceremonies for hunting. Then three of them, two deer and a duck, turned up in a child's grave. Archaeologists now think that some of the figures were toys.

Bacqueville de la Potherie, who wrote about the Huron in the early 1700s, said that Huron children played lacrosse. He wrote that they "never or rarely" played the dice games that Huron women played.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 2 MINUTES

Nearly everything written about games here in the 1500s describes Native games. The writers were Spanish and French soldiers, sailors and missionaries, and they set down what they saw Native people play. The Spanish soldiers at the forts of St. Augustine and Santa Elena on the Atlantic coast left guns, tools and pottery behind. No record from the 1500s describes what those soldiers played.

Timucua games in Florida, 1564 and 1565

René de Laudonnière led a French colony at Fort Caroline, near present-day Jacksonville, Florida, in 1564 and 1565. The Timucua lived there. Laudonnière wrote that they trained their young men to run. In one of their races, the runner who could keep going longest won. The young men also practiced often with bows and arrows.

Laudonnière described a Timucua ball game too. The players set up a tree trunk about 50 feet high in an open space. At the top they fixed a square mat woven from reeds. Whoever hit the mat with the ball won the game.

Jacques Le Moyne, the colony's artist, painted Timucua life. Theodor de Bry, an engraver in Europe, a man who cut pictures into metal plates so they could be printed many times, made prints from the paintings. He never went to Florida. One print shows young men running, shooting arrows and throwing a ball at a target on a tall pole.

Which record to trust. Most sources date the print to 1591, and a National Park Service web page gives 1587. The same page states that de Bry mixed in details from other parts of the Americas to sell more copies. Laudonnière's written account is the firmer record of the game.

Spanish games on horseback, 1598

Juan de Oñate led Spanish colonists north to the Rio Grande, in what is now New Mexico, in 1598. Gaspar Pérez de Villagrá wrote about that year in a book printed in 1610. Writers for the Museum of New Mexico's magazine, *El Palacio*, state that the colonists' celebrations in 1598 included "tilts with cane spears, running bulls and tilts at the ring."

In a tilt with cane spears, two lines of riders threw light spears made of cane at each other and blocked them with shields. In a tilt at the ring, a rider galloped at full speed and tried to push the point of a lance, a long spear, through a ring and carry it off.

Spanish friars, Catholic religious men who lived by strict rules, began building missions in Florida and Georgia in the 1590s. A mission was a church settlement where friars worked to make Native people Christians. About eighty years later, a friar in Florida set out to end a Native ball game.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 11 MINUTES

The men who governed the English and Dutch colonies in the 1600s wrote laws about when and where people could play. In Massachusetts and Plymouth, lawmakers and judges fined people for cards, dice and tavern games. In New Netherland, the Dutch director banned ball games, cards and bowling on Sunday before, between and during church services. Virginia planters, men who owned big farms, raced horses for thousands of pounds of tobacco, and one county court punished a tailor for racing, saying racing was "a sport only for Gentlemen."

Native nations kept playing their own games, and English and Spanish writers described some of them. In Spanish Florida, a friar and the governor worked to end the Apalachee ball game. Almost nothing written in these years describes what children did.

Bowling at Jamestown, 1611

Sir Thomas Dale arrived at Jamestown in May 1611 with about 300 soldiers, to govern the colony. The colonist Ralph Hamor later wrote that on his first day Dale found the colonists at "their daily and usuall works, bowling in the streetes."

The historians William Kelso and Karen Ordahl Kupperman argue that the colonists were sick and badly fed. In their view, hunger and disease made the men act in ways that could look like laziness.

Dale's code. Dale then put the colony under a code of military rules called the Lawes Divine, Morall and Martiall. Chapter 21 describes the punishments under those rules.

Massachusett football, 1634

William Wood, an Englishman, described the games of the Massachusett people on the coast in a book printed in 1634. He listed football, shooting, running and swimming. When one area played another, Wood wrote, "their goals be a mile long," set on sand as flat as a board. Players kicked a ball about the size of a handball with their bare feet. A game could last two days. The players marked the ground they had won and started again from that spot the next day.

The winners took the prizes hung on the goals: wampum, beaver skins and black otter skins. Players painted themselves before a game, as they did for war. Wood wrote that they did it so that no one could tell who had hurt him and take revenge later. While the men played, the boys played pipes and the women danced and sang. Wood also claimed that one Englishman could beat ten Native players at football.

Hubbub. Wood described a dice game called hubbub. A player put five small bones, black on one side and white on the other, in a small smooth tray. He thumped the tray on the ground so that the bones jumped, and scored by the colors that landed face up. The players shouted "Hub, Hub, Hub," and Wood wrote that they could be heard a quarter of a mile away.

Fines for games in New England

Lawmakers and judges in Massachusetts Bay and Plymouth fined people for playing games, although betting on the games was rare. The historian T. H. Breen found only a little betting in Massachusetts in the 1600s, most of it among poor people and servants, and none among the colony's leaders.

Tavern games. The lawmakers of Massachusetts Bay banned shuffleboard, a game of sliding pieces down a long board, in taverns in 1647. Three years later they banned bowling and every other game in taverns as well. They wrote that the games wasted "much precious time" and much wine and beer.

A tavern keeper who allowed the games paid 20 shillings, which made one pound in English money, and each player paid 5 shillings. Anyone who bet money had to pay three times the amount of the bet. A law of 1659 fined anyone caught playing cards or dice anywhere in the colony 5 shillings.

Fined by name. The judges of Plymouth Colony's court wrote down the name of each person they fined, wives among them. In June 1679 they fined John Holbrooke one pound for playing cards once in the woods, and "His man, Patricke," a servant who had played with him, 10 shillings. Mathew Gannet paid two pounds for playing cards several times and letting others play cards in his house.

New Netherland: Sunday bans, the goose and golf

New Netherland was the Dutch colony that is now New York. Peter Stuyvesant was its director, the man who governed it. He and the men of his council, who helped him govern, banned work on Sunday on October 26, 1656. They also banned "playing Ball, Cards, Tricktrack, Tennis, Cricket or Ninepins" (tricktrack was a board game like backgammon, and ninepins was bowling at nine wooden pins) before, between or during church services, along with boat and wagon trips. Anyone caught paid a double fine.

Pulling the goose. Dutch farmers brought a game from home called pulling the goose. They hung a goose by a rope between two poles and greased its neck and head with oil or soap. Riders galloped past and grabbed at the goose to pull it down. The winner was called king of the festival. The Dutch records printed in 1868 do not say whether the goose was alive.

Stuyvesant called the game "heathenish and Popish," which meant un-Christian and Catholic, and he banned it. Some farmers held it anyway. They were fined, and some were put in jail, even though the leaders of the town of New Amsterdam protested. Those printed Dutch records do not name the farmers or the officials who punished them.

The game first came to New Netherland in about 1654, and the records do not make clear in which year the farmers were fined. Farmers on Manhattan asked to hold the game in February 1658, and Stuyvesant refused. One later book dates his ban to that same month.

Golf in the streets. People in Fort Orange, now Albany, complained that men playing golf in the streets broke windows and put passers-by in danger of being hurt. The town's officers banned golf in the streets on December 10, 1659. The fine was 25 guilders, the Dutch unit of money.

Horse racing for tobacco

The English took New Netherland in 1664 and renamed it New York. A year later Colonel Richard Nicolls, its first English governor, laid out a two-mile racecourse on the Hempstead Plains of Long Island. He named it Newmarket, after a racecourse in England. According to the Encyclopaedia Britannica, he offered a silver cup to the best horses. Another account gives the prize as a silver crown or a bushel of wheat.

Native people had lived on that land. English settlers from Stamford, Connecticut, bought the land of the present towns of Hempstead and North Hempstead in 1643. They bought it from Tackapausha, a Marsapeague leader, and six other Native leaders. The town's history does not say what the leaders were paid or how they understood the sale.

Quarter races. Virginia planters ran quarter races, in which two horses sprinted a quarter mile along a dirt track. Men from leading families such as the Randolphs, Jeffersons and Washingtons appear in county court records of races. The largest bet in those records was made in Northumberland County in 1693. John Baker and John Haynie bet 4,000 pounds of tobacco and 40 shillings on their horses, Prince and Smoaker.

In early races a rider could shove, whip or knee the other rider and try to knock him off his horse. Later, riders agreed to "fair Rideing." They also chose a starter, judges and a stakeholder, the man who held the bets, before the race.

James Bullocke

Who: A tailor in York County, Virginia, punished for racing his horse against a gentleman's.

When and where: September 10, 1674, the York County court, Virginia.

The bet was 2,000 pounds of tobacco on one horse race.

James Bullocke bet a gentleman, Mathew Slader, that his mare would beat Slader's horse. On September 10, 1674, the justices of the York County court, the county's judges, punished Bullocke for it.

The justices ruled that it was "contrary to Law for a Labourer," a man who worked with his hands, "to make a race, being a sport only for Gentlemen." The court order, as it was printed in 1894, fined Bullocke 100 pounds of tobacco. The historian T. H. Breen read the same court book and gives the fine as 200 pounds.

The fixed race. The justices also found that the race had been fixed. Slader had signed a promise that his horse "should runn out of the way," which meant it would leave the track, so that Bullocke's mare would win. The justices called it "an apparent cheate." They ordered Slader, the gentleman, to sit for one hour in the stocks, a wooden frame that locked a person's ankles while he sat in a public place.

W. G. Stanard, a historian writing in 1894, called the court order the earliest notice of racing in Virginia's records.

NOT KNOWN: which law the justices meant. The order names none, and no such law has been found in the colony's printed laws.

The Apalachee ball game banned, 1676

The Apalachee and Yustaga nations of northern Florida played a ball game between towns. A town sent a messenger to challenge another town, naming the day and the number of players, about forty or fifty. Players kicked a small ball, a little bigger than a musket ball, at a single tall pole. Eleven hits won.

Fray Juan de Paiva was the Spanish friar at the mission of San Luis, where Tallahassee is now. He wrote a long paper against the game, dated September 23, 1676, with the royal interpreter Diego Salvador and Juan Mendoza, an Apalachee leader who interpreted for the church.

What the players did. Paiva described what players did to each other. They stepped on faces, heads and bellies. They pulled at arms and legs without caring whether the joints came apart. When a player swallowed the ball, others made him throw it up by squeezing his windpipe or kicking him in the stomach.

Paiva listed broken legs and ribs, people who had lost the use of one or both hands, and people blinded in one eye. He wrote of two players he knew who had been killed at San Luis. Five games in a row in 1676 ended in open fighting, he wrote, and soldiers were present at the games.

Paiva wanted the game banned. He also charged that people left their fields unplanted and their houses open to thieves while they watched. Governor Pablo de Hita Salazar backed him. So did Fray Francisco Perete, the head in Florida of the Franciscans, one group of Catholic friars.

The poles came down. Paiva wrote that the Apalachee chiefs pulled down the ball poles and put "the holy cross" in their place, and that Captain Juan Fernández de Florencia thanked the chiefs for it on the governor's behalf. Some people, he wrote, asked the governor in writing not to end the game. The historian Amy Bushnell dates the Spanish campaign against the game from 1675 to 1684. The Talimali Band of the Apalachee lives in Louisiana today.

Enslaved people and children

A law against gathering. Members of the Virginia General Assembly, the colony's lawmakers, passed a law against gatherings of enslaved people on June 8, 1680. They named it "An act for preventing Negroes Insurrections." "Negroes" was a word of the time for Black people. An insurrection is an uprising, so the lawmakers wrote the law to stop enslaved people from rising up against the men who held them.

The law's opening words stated that meetings of enslaved people "under pretence of feasts and burialls" were dangerous. The lawmakers meant that the feasts and funerals were only an excuse to meet.

An enslaved person who left the owner's land without a written pass was to get "twenty lashes on his bare back well layd on." That meant twenty hard blows with a whip on the bare skin. An enslaved person who raised a hand against "any Christian" was to get thirty lashes.

If an enslaved person hid out and fought back against the men sent by law to catch him, the same law said those men could kill him. Two years later the lawmakers barred enslaved people from gathering at another owner's plantation for more than four hours at a time.

Children. No one in the 1600s wrote down how a child spent the hours of a day. The only dated records of enslaved people's free time in these years are the laws of 1680 and 1682 that punished them for gathering.

The oldest marble that can be dated at Jamestown is made of brown stoneware, a hard kind of pottery, and dates from the middle of the 1600s. It may have been made in Germany, the Netherlands or England. Historic Jamestowne's description of the marble does not say whether a child or a grown person played with it.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 6 MINUTES

Horse races and cockfights, and the bets men made on them, fill most of the written record of play from 1700 to 1750. Virginia planters raced horses on straight quarter-mile paths. By the late 1730s they also held race meetings that lasted several days, with prizes for fiddlers, wrestlers and runners. Men in South Carolina and Massachusetts held cockfights, in which two roosters fought until one was dead.

No record shows adults organizing children's play into teams or clubs, and almost no one wrote down what children played. The few dated records are a boys' footrace at a Virginia race meeting in 1737 and an English children's book of 1744 with a rhyme called "Base-Ball."

Horses in Virginia

Robert Beverley wrote in 1705 that young Virginians loved to hunt wild horses. The horses were born in the woods of the upland country and had never been handled. An unmarked horse belonged to whoever caught it first.

The minister Hugh Jones wrote in 1724 that "almost every ordinary Person keeps a Horse." He had seen men spend a morning catching a horse in the woods, only to ride two or three miles to church, to court, "or to a Horse-Race."

Who could race? Historians disagree. In a quarter race, two horses sprinted along a straight, narrow path about a quarter mile long. Historians at Mount Vernon, George Washington's home in Virginia, write that owners rode their own farm horses, so ordinary farmers could race. The historian T. H. Breen found that gentlemen tried to keep racing to themselves, as the York County justices did in 1674.

A court record of 1678 shows a "boy" riding another man's horse, so not every rider owned his horse. The records of these races name the owners of the horses and seldom say who rode.

Horses from England. Planters began to bring racehorses from England. In 1730 a man named James Patton brought over a stallion, a male horse kept for breeding, named Bulle Rock. The horse was then 21 years old. Bulle Rock is thought to be the first English Thoroughbred, a breed raised in England for racing, brought to the colonies. Between 1740 and 1775 planters brought at least fifty stallions and thirty mares from England to Virginia.

Race meetings with prizes, 1736 to 1739

Prizes for fiddlers. A group of gentlemen in Hanover County, Virginia, offered prizes at Page's Warehouse on St. Andrew's Day, a church holiday, November 30, 1736. Their notice in the newspaper offered a hunting saddle to the fastest horse over a quarter mile. It offered a violin made in Cremona, Italy, to the best country fiddler. There were other prizes for dancing, singing, football, jumping and wrestling. A pair of silk stockings was to go to the young woman whom the crowd judged prettiest.

A later notice asked everyone who came to behave "with Decency and Sobriety," which meant politely and without getting drunk. Breen writes that poorer people apparently were welcome to come and watch.

A notice in the *Virginia Gazette* of July 1, 1737, stated that there would be horse races every Saturday until October near Williamsburg. That November, John Pinkerton held three days of races at the Old Field track in Virginia, with a three-mile race each day. Mount Vernon's historians call it the first documented long-distance race in Virginia.

Pinkerton's meeting also had a fiddling contest, a running race for boys, a contest for the prettiest unmarried woman, and a dinner with singing and dancing. Different sources spell the host's name Pinkerton or Brickerton, and the right spelling is not known.

A one-mile course. A Williamsburg fair in December 1739 had three days of races. On the first day, eight horses raced around a one-mile course for a saddle worth 40 shillings. Colonel Chiswell's horse Edgcomb won. The second horse won a bridle and the third won a whip.

Cricket

Colonists also played cricket, the English bat-and-ball game. William Byrd II owned the Westover plantation in Virginia. His diary for April 25, 1709, records that he played cricket and then "went to cricket again till dark." In Georgia in 1737, William Stephens wrote that townsmen, landowners and servants gathered in the main square to play cricket.

Cockfighting and gander pulling

In a cockfight, two roosters fought in a ring. Their owners strapped sharp spurs made of silver, steel or bone to the birds' legs, and the birds cut each other with the spurs. The fight went on until one bird was dead. Men bet on which bird would win. William Byrd II, Robert Carter and George Washington were among the men who followed cockfighting.

An advertisement in the *South Carolina Gazette* listed a cockfight at the house of a Mrs. Eldridge in 1732. Men in Salem, Massachusetts, held a cockfight in the Town House in 1744. Both Black and white people came to cockfights and bet on them. Some critics complained that "genteel people," meaning the well-off, mixed at the fights with people they called "the vulgar and debased," meaning common and low.

Gander pulling. Gander pulling was another game played on live birds. Men tied a live gander, a male goose, upside down by its feet to a tree branch and greased its neck. Riders galloped past and grabbed at the neck until one of them pulled the bird's head off.

Riders fell from their horses, and some lost fingers. In Virginia the game was often held on the Monday after Easter, and the crowd bet on the riders. Accounts describe gander pulling through the colonial years, but none gives a dated event before 1750.

Children

The London bookseller John Newbery printed *A Little Pretty Pocket-Book*, a book of rhymes and pictures for children, in 1744. He sold it with a ball for a boy or a pincushion for a girl. Its rhyme "Base-Ball" is the first known use of that word in print. It reads: "The Ball once struck off, / Away flies the Boy / To the next destin'd Post, / And then Home with Joy."

John Thorn, the historian of Major League Baseball, suggests that the game in the book may have been played without a bat. No copy of the 1744 printing survives. The rhyme is known only from later printings, such as one made in Worcester, Massachusetts, in 1787, and the words of the 1744 rhyme are taken from those later copies.

The records of these years do not show how much free time children had. Nor do they show how that time differed for free children, enslaved children and indentured children, who were bound to work for a master for a set number of years.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 10 MINUTES

The records of these fifty years start to say who owned the horses and who rode them. In Virginia the owners of racehorses came more and more from the top ranks of society, and enslaved men and boys often rode. The enslaved people at one Virginia plantation had a holiday on Easter Monday 1774 and went to cockfights. That June the planter's son Bob Carter pestered his tutor, his private teacher, for leave to go to a cockfight too.

The delegates to the First Continental Congress, men chosen in each colony to meet together, agreed in 1774 to stop buying British goods. They also promised to discourage horse racing, cockfighting and games.

People still played ball games. Soldiers at Valley Forge played a running game called base, and the voters of Pittsfield, Massachusetts, banned "baseball" near their new meeting house in 1791. No record from these years shows leagues, paid teams, or towns sharing written rules.

Native nations kept playing their own ball games. In Hawaii, British sailors wrote descriptions of surfing in 1779. Chapter 23 tells how those islands later became part of the United States.

Native games written down

James Adair described chunkey as the Choctaw played it, in a book printed in 1775. Only one or two players played on each side. The field was a square of ground, cleared and spread with fine sand, near the town house, the building where the town's leaders met.

Players ran after the rolling stone with 8-foot poles "most part of the day." They bet their silver ornaments, their nose, finger and ear rings, and even their clothes. Each town kept its chunkey stones from one generation to the next. Nobody buried a stone with the dead.

The beaver pond. The Creek and the Choctaw both claimed a large beaver pond on the Noxubee River, in present-day Mississippi, around 1790. Beaver furs sold well at the trading towns of Mobile and Pensacola. The two nations agreed to decide the claim with a game of stickball.

The account of that game comes from Stonie Hadjo, a Creek-born man whom the Choctaw adopted. He lived in Noxubee County, Mississippi, and often told the story to the white settlers there before he died in 1836. H. S. Halbert later wrote the story down, and H. B. Cushman printed it in 1899. Stonie Hadjo said that ten thousand people camped around the field. The Creek team won.

A fight broke out after the game, and the tellings differ on who started it. In Stonie Hadjo's telling, a Choctaw player insulted a Creek player, and the two began to fight. Choctaw accounts say the Creek player threw a petticoat, a woman's underskirt, on the Choctaw player first.

The fight spread to the warriors on both sides, who used sticks, knives, guns, tomahawks and bows and arrows. It lasted through the night until the chiefs arrived the next morning and stopped it. Stonie Hadjo said that the ball players "almost to a man perished," which means that nearly every ball player was killed. His account gives no count of the dead. The Choctaw kept the pond, even though the Creek team had won the game, and the account does not say why.

Writers for the Choctaw Nation describe two games around the 1790s played to settle land claims with the Creek, and both ended in battles. H. B. Cushman dates the second game, near the Black Warrior River, to about 1800.

Far to the north, the Mohawk and the Seneca played lacrosse at Grand River, in present-day Ontario, in 1797, with about 600 players on each side.

Surfing in Hawaii, 1779

No outside nation ruled Hawaii in 1779. Chiefs governed the islands, and Kalaniʻōpuʻu ruled the island of Hawaii. The islands were joined into one Hawaiian Kingdom starting in 1795.

British sailors with Captain James Cook watched Hawaiians surfing at Kealakekua Bay, on the island of Hawaii, in January 1779. The ship's surgeon's mate, David Samwell, the assistant to the ship's doctor, described surf riding there on January 22, 1779.

Lieutenant James King also wrote an account, which was printed in 1784. When storms made the waves highest, twenty or thirty people each took "a long narrow board, rounded at the ends," and swam out together. They dove under the breaking waves until they were past them. Then they lay on their boards and rode the largest wave back to shore.

Who owned the horses and who rode them

Almost every town in Virginia held yearly races by 1772, according to the English traveler J. F. D. Smyth. At Williamsburg the races ran for a week each spring and fall. The winner on the first day took a purse, a prize in money, of 100 pounds.

Jockey clubs. Horse owners in Fredericksburg, Petersburg, Richmond and other Virginia towns formed jockey clubs by the late 1700s. A jockey is a rider in horse races, but these clubs were groups of horse owners, and the members held races for one another. George Washington helped manage a race at Alexandria in May 1761.

The historian Gabrielle McCoy writes that the owners of racehorses came more and more from the top ranks of society. She writes that the riders "often came from the bottom of the social hierarchy," the ranking of people from the most powerful to the least. They were "enslaved men and boys."

Austin Curtis

Who: An enslaved jockey and horse trainer who became a free man.

When and where: Halifax, North Carolina, and the racecourses of Virginia and North Carolina, from the 1770s to 1807.

He kept his enslaver's racehorses safe from British raiders.

Willie Jones of Halifax, North Carolina, held Austin Curtis in slavery. In the 1770s Curtis rode Jones's horses in races in Virginia and North Carolina. During the Revolutionary War, British troops raided the Carolinas for horses to breed, and Curtis kept Jones's horses safe from them.

The petition. On December 5, 1791, Jones asked the lawmakers of North Carolina to free Curtis. He wrote that Curtis had shown "attachment to his Country during the War" and "fidelity," or loyalty, "to his Master," and so "has demonstrated that he deserves to be free." The lawmakers granted the request, and Curtis became free. His name was legally changed to Austin Curtis Jones.

Curtis kept working with horses as a trainer. He came to own more than 300 acres of land, and he bought the freedom of his son William. He and his wife, Nancy, had eleven children.

Curtis died at Halifax on December 10, 1807, at about 50 years old. A Raleigh newspaper, the *Minerva*, printed a notice of his death under the name Austin Jones on January 5, 1808. It called him "well known for many years past, as keeper of race horses," and said that he "particularly excelled" at managing them.

A plantation tutor's journal, 1773 and 1774

Philip Fithian taught the children of the planter Robert Carter at Nomini Hall, Virginia, from 1773 to 1774. He kept a journal. It records how the Carter children and the people Carter enslaved spent their free hours.

Easter Monday fell on April 4, 1774. Fithian wrote that the enslaved people had a holiday until Wednesday morning and were "at Cock Fights through the County." The next day his pupils complained that they had to study while the enslaved workers had the day off.

Sunday. Fithian saw a ring of enslaved people at the stable fighting cocks before breakfast on Sunday, April 10. Other enslaved people were digging the small garden plots that Carter allowed them to grow food on. Fithian explained that they did all their own work on Sundays because they worked for the Carters every other day.

On two winter evenings in 1774, enslaved people gathered in the schoolroom to play the fiddle and the banjo and to dance. Two of the Carter boys, Ben and Harry, joined them. The first time, Fithian sent them all away.

Another son, Bob, "teaz'd" Fithian, meaning he pestered him, on June 18 to let him go to a cockfight and a horse race two miles away. Fithian let him go after Bob promised to be home by sunset. Pupils at another school had "barred out" their teacher, Mr. Goodlet, in December 1773. They locked him out of the schoolhouse until he agreed to give them a Christmas holiday until January 6.

Fist fights with no rules

Fithian wrote on August 29, 1774, that four young men had arranged two fist fights near Mr. Lane's place. He listed what such fighters did, including kicking, scratching, biting, choking, "Gouging" and "Dismembring," which meant tearing or biting off parts of the other man's body. A crowd came to watch.

Gouging. Gouging was a kind of fighting in which only weapons were banned. A fighter tried to push his thumbs into the other man's eye socket and force the eye out. Jim L. Sumner, writing for NCpedia, says most historians think fighters seldom lost an eye. He writes that the fights still risked broken bones, scars, crippling injuries and death.

Gabriel Johnston, the governor of North Carolina, complained about this kind of fighting in 1746. North Carolina's lawmakers made it a crime to cut out tongues, pull out eyes, or bite off noses or fingers. Sumner's article does not give the year of that law.

The Revolution: a pause in racing and a game of base

A pause in racing. The delegates to the First Continental Congress agreed to the Continental Association, a pact among the colonies, on October 20, 1774. In it they agreed to stop buying goods from Britain, starting on December 1, 1774. They also promised to discourage "all horse-racing, and all kinds of games, cock fighting," plays and "other expensive diversions," meaning ways to have fun.

Members of the jockey clubs of Annapolis and New York called off their races that year. Four years later, on October 12, 1778, the members of Congress asked the lawmakers of each state to pass laws to stop "horse racing, gaming" and plays.

Base at Valley Forge. Soldiers in the Continental Army still played games. George Ewing was an ensign, a young officer, in the 3rd New Jersey Regiment, a unit of soldiers. At Valley Forge in April 1778 he wrote that the men drilled in the afternoon and "playd at base this evening."

General Washington dined with General Henry Knox on May 4, 1778. Afterward he played wicket, a bat-and-ball game like cricket, with Ewing and other officers. After the war, in 1793, Virginia's lawmakers banned bets of more than 7 dollars on horse races or "any other sport or pastime."

Toys and ball games

George Washington married Martha Custis in January 1759. Her children, Jacky and Patsy, were about six and four. In his first order of goods from London he asked for 10 shillings' worth of toys. He also ordered six little books for children learning to read, and a doll dressed in the latest fashion. When that doll was lost or broken, he ordered another that cost a guinea, which was 21 shillings. He also ordered a box of gingerbread toys and sugar figures.

Archaeologists at Mount Vernon found a small limestone marble at the House for Families. Most of the people George Washington enslaved at his Mansion House Farm lived in that building. Mount Vernon's historians think the marble may have belonged to one of the enslaved children who lived and worked there.

A reference book on leisure in America states that at fairs and on court days, the days when the county court met, poorer people ran footraces, wrestled, jumped, bowled and played football. They played for prizes such as a purse of money or a bottle of liquor, while wealthy people watched.

The printer Isaiah Thomas published *A Little Pretty Pocket-Book* in Worcester, Massachusetts, in 1787, with the English rhyme and a picture of "Base-Ball."

Baseball in Pittsfield. Voters at a town meeting in Pittsfield, Massachusetts, passed a rule on September 5, 1791, to protect the windows of their new meeting house, the town's main public building. They banned "any game of wicket, cricket, baseball, batball, football, cats, fives, or any other game played with ball" within 80 yards of the building. The rule is the oldest known record of people in an American town playing a game called baseball.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 15 MINUTES

Crowds of many thousands began to gather to watch sport in the first half of the 1800s, and the biggest crowds came to see horses race. By 1850 trotting races, in which a horse pulled a driver in a light cart, had begun to replace races with riders as the sport Americans most liked to watch. Prize fights, boxing matches with bare fists fought for money, had become about as popular to watch as trotting.

Members of clubs in Philadelphia and New York wrote down rules for their ball games, and in 1845 members of the Knickerbocker club of New York wrote the rules that grew into baseball.

Enslaved people played ball, wrestled and ran races on their few days off, and enslaved jockeys rode horses that other men owned. Children like Lucy Larcom in Massachusetts made their own toys from burrs and played outdoors. A Philadelphia firm began to make toys to sell in 1838.

Native ball games and the loss of Choctaw land

The Choctaw and the Creek both claimed the land between the Tombigbee and Black Warrior rivers, in present-day Alabama, about 1800. They agreed to settle the claim with a ball game about a mile below present-day Tuscaloosa. The Creek chief was Tuskeegee and the Choctaw chief was Luee. Both sides said they had won. A battle followed "in which many were killed and wounded on both sides," and more battles followed that fall. The account, which H. B. Cushman printed in 1899, gives no count of the dead.

The treaty. Choctaw leaders signed the Treaty of Dancing Rabbit Creek, a written agreement with the United States, on September 27, 1830. The men who bargained for the United States, Secretary of War John Eaton and John Coffee, gave the Choctaw two choices: move west of the Mississippi River, or stay and live under US and state law.

The chief Choctaw men at the talks were Greenwood LeFlore, Mosholatubbee and Nittucachee. Under the treaty, the Choctaw had to hand over about 11 million acres of their land to the United States, most of it in Mississippi. So staying meant living on land the Choctaw had handed over, under the laws of the state.

About 5,000 to 6,000 Choctaw stayed in Mississippi. US officials forced the rest, about 15,000 people, to leave their homeland and go west to Indian Territory, in present-day Oklahoma, in three groups between 1831 and 1833. A winter blizzard and an outbreak of cholera, a disease that kills by draining the body of water, struck them on the way. Writers for the Choctaw Nation say that more than a quarter of the Choctaw people forced out in those years died. Another count gives about 2,500 dead.

The graves. The ball players killed after the beaver-pond game of about 1790 had been buried at the ball ground with money and silver ornaments. A settler named Charles Dobbs took that ground in 1832, part of the land the Choctaw had to hand over under the 1830 treaty. Dobbs dug up their graves. He took about $500 in silver and about $250 in silver ornaments.

The game in Indian Territory. The Choctaw kept playing in their new land. The painter George Catlin watched a Choctaw ball game there in 1834. Several thousand people camped beside the field. Two leaders had chosen the players three or four months before and sent runners to each one with a decorated ball stick. The women placed the bets. They bet knives, dresses, blankets, pots and kettles, dogs, horses and guns.

Through the night before the game, the players danced by torchlight every half hour while the women sang. At 9 the next morning, at the firing of a gun, four old men who served as judges threw up the ball. Six or seven hundred players ran for it. Each player held a stick in each hand and could not touch the ball with his hands.

Catlin painted a Choctaw player named Tul-lock-chísh-ko, which means "Drinks the Juice of the Stone." Catlin called him "the most distinguished ball-player of the Choctaw nation." By the rules of the game he played barefoot, in a breechcloth, a strip of cloth worn around the hips, with a tail of white horsehair.

Surfing in Hawaii, 1847

Hawaii was still an independent kingdom. Hiram Bingham led the first American missionaries there from the Protestant churches, the Christian churches that broke away from the Catholic Church, and they arrived in 1820. He wrote in 1847 that surfing was "the favorite amusement of all classes." Surfers used boards from 3 feet to 14 feet long and paddled out as far as half a mile. People used to bet on it, he wrote.

Fewer Hawaiians surfed than before, Bingham wrote, because Hawaiians now wore cloth clothing in the missionaries' style and the people who made that clothing had less free time. He also gave the cause as more "modesty, industry or religion." In his time, modesty meant keeping the body covered, and industry meant hard work.

Was surfing banned? No law against surfing is on record. In the same passage, Bingham denied that the missionaries had caused any law against it. Peter T. Young, a historian of Hawaii, writes that only the king and the chiefs could make such a law, and that Hawaiians kept surfing through these years.

Games on the days off from slavery

Frederick Douglass was enslaved in Maryland. In his book of 1845 he wrote that the enslaved people he knew had the days from Christmas to New Year's Day off. Some of them made brooms, mats and baskets or hunted opossums, hares and raccoons. Most played ball, wrestled, ran footraces, fiddled, danced and drank whiskey. Douglass wrote that the drinking was what "our masters" liked best.

For a time Douglass taught other enslaved men to read on Sundays in St. Michael's, Maryland. Two class leaders, men who led small religious groups in the church, Wright Fairbanks and Garrison West, came in with other men carrying sticks and stones and broke up the school. Douglass wrote that the enslavers "had much rather see us engaged in those degrading sports," by which he meant wrestling, boxing and drinking whiskey.

In the South, planters set up boxing matches between enslaved men and bet on them. The reference book *American Eras*, which records this, gives the name of no fighter and no match.

Tom Molineaux

Who: A boxer from Virginia who fought twice for the championship of England.

When and where: Virginia, New York, England and Ireland, 1784 to 1818.

About 15,000 people watched the English champion break Molineaux's jaw.

Tom Molineaux fought the English champion, Tom Cribb, in Oxfordshire on December 18, 1810. In the 19th round the crowd pushed into the ring, and Molineaux hurt his left hand. Under the rules, a fighter had 30 seconds to come back to the line marked in the ring. Later in the fight, people argued over whether Cribb had taken longer than that. Cribb won. Accounts give the length of the fight as 35 rounds or about 39.

The English boxing writer Pierce Egan wrote that Molineaux surprised everyone with his power and his skill. About 15,000 people watched the second fight, on September 28, 1811. Cribb broke Molineaux's jaw and knocked him out in the 11th round.

Where he came from. Molineaux was born in Virginia on March 23, 1784. Writers at the Virginia Museum of History and Culture say he was born enslaved and fought other enslaved men while plantation owners bet on the fights. They say he won his freedom and $500 in one of those fights. Other accounts say the story comes from boxing writers of the 1800s and cannot be proved.

He had gone to New York and then to England by 1809. His trainer there was Bill Richmond, who had been born into slavery on Staten Island, New York, in 1763. The Virginia museum's writers say Richmond was born in Virginia.

Molineaux died in Ireland on August 4, 1818, at 34, with no money. He died in the band room of the 77th Regiment, a unit of soldiers, of tuberculosis, a lung disease, and of heavy drinking. The Galway City

> Museum in Ireland gives the place as an army barracks in Galway, and the Virginia museum's writers give Dublin.

Enslaved jockeys and trainers

Every state east of the Mississippi River had at least one racetrack by 1830, and Virginia had more than twelve. Enslaved men rode, trained and cared for horses at these tracks, and the records name a few of them.

An enslaved jockey named Simon raced against horses owned by Andrew Jackson, who later became president, from 1810 to 1815. The National Museum of Racing records nine races between them. Jackson's side lost eight times and gave up once without running.

An enslaver named John Henry Hammond bought an enslaved trainer and groom, a worker who cares for horses, named George in 1834. Hammond and other enslavers talked about splitting the ownership of George three ways.

Cato's win. An enslaved jockey named Cato rode the horse Wagner to victory at Louisville, Kentucky, on September 30, 1839, for a prize of $14,000. About 10,000 people watched. Some of them made bets in dollars and some bet enslaved people. Wagner's owner, John Campbell, also held Cato in slavery.

The Notable Kentucky African Americans Database states that Campbell freed Cato for the win and that Cato kept riding for him. Jessica Dallow, who has written about the painter Edward Troye's pictures of racehorses, writes that his freedom was only rumored at the time.

She points to the writer Edward Hotaling. He noted that each win made an enslaved jockey worth more to his owner, so freedom would have been an unusual reward. Enslaved jockeys could earn some money by riding, and Dallow writes that Cato may have been freed or may have bought his own freedom.

A race card, a printed list of the horses in a race, for the Washington Race Course at Charleston, South Carolina, in 1846 listed the owner of each horse, including Wade Hampton. It listed no rider. Each jockey appears only by the colors he wore.

Crowds for horses, runners and fighters

North against South. The northern horse American Eclipse beat the southern horse Sir Henry at the Union Course on Long Island, New York, on May 27, 1823. One history of the period puts the crowd at as many as 100,000 people. Horses from the North and the South raced each other in more matches of this kind until 1845.

People also came to watch men run. John Cox Stevens offered $1,000 in 1835 to any man who could run ten miles in under an hour. Henry Stannard did it in 59 minutes and 49 seconds. Trotting races began to take the place of races with riders on horseback about 1845.

Fights against the law. Prize fighting was against the law in most states, so organizers set up fights at the last minute. By 1850 prize fighting was about as popular to watch as trotting races. In the North, many fights set Irish Catholic immigrants against Protestants born in America.

Thomas McCoy, who was 21, died after a prize fight with Christopher Lilly at Hastings, New York, on September 13, 1842. A coroner's jury, a group of citizens who look into a sudden death, found that he died "by blows and injuries received in a fight with Christopher Lilly." The jury named eight men as the main people in the fight. None of them had been arrested when a Michigan newspaper printed the jury's finding on September 26.

A judge sentenced James "Yankee" Sullivan, who arranged the fight, to two years in prison. Sullivan served two months. He then paid a $200 bond, money a court keeps if a person breaks a promise, and promised not to fight for two years, and he was let out. The records do not say what happened to Lilly. Tom Hyer beat Sullivan in 17 minutes and 18 seconds in Maryland in 1849 and won a purse of $10,000.

Who wrote the rules of baseball?

No one person wrote them. Players in many towns played bat-and-ball games that went by local names, such as town ball, and clubs wrote down their own rules. Two groups of town ball players from Philadelphia met in Camden, New Jersey, on July 4, 1833, and joined to form one club, the Olympic. The club printed its rules and its list of members in 1838.

Twenty rules. The members of the Knickerbocker Base Ball Club of New York adopted twenty written rules on September 23, 1845. Two members, William Wheaton and William Tucker, wrote them down. A game ended when one side scored 21 runs. Three outs ended a side's turn at bat. A fielder put a runner out by throwing the ball to a baseman, not by hitting the runner with it. The members were merchants, lawyers and doctors. They played at the Elysian Fields in Hoboken, New Jersey.

The Knickerbockers played the New York club under the new rules on June 19, 1846, in one of the first recorded games between two clubs. One account says the New York club won 23 to 1. Another says the Knickerbockers won.

The Doubleday story. Albert Spalding and the members of a committee he asked for later spread a story about how baseball began that was not true. Spalding, a maker of sporting goods, asked for a study of how baseball began in 1905. Abner Graves, a 71-year-old mining engineer, wrote to an Ohio newspaper that Abner Doubleday had invented baseball in Cooperstown, New York, in 1839. Graves had been 5 years old in 1839. Doubleday was then a cadet, a student training to be an army officer, at West Point.

The historian Victor Salvatore found that baseball does not appear in any of Doubleday's 67 surviving diaries. Other writers say he mentioned it once in his letters or diaries. No member of Spalding's committee met Graves or wrote to him. Even so, the committee's chairman, Abraham Mills, wrote in a report of December 30, 1907, that Doubleday had invented the game.

Spalding wanted to show that baseball owed nothing to any English game. Salvatore titled his article about Doubleday "The Man Who Didn't Invent Baseball."

Children, toys and the circus

The toy firm Francis, Field and Francis opened on North Second Street in Philadelphia in 1838. It was Philadelphia's first toy maker and one of the first in the country. The owners sold toys brought from France and Germany and made toys of their own. According to the Encyclopedia of Greater Philadelphia, their toy fire engine pulled by horses is believed to be the first toy made in a factory in the United States.

The city leaders of Wilmington, Delaware, banned public shows in 1825. Joshua Purdy Brown put up a canvas tent for his circus just outside the city line. With his own tent, Brown could set up his circus in any town, and the circus became a traveling show.

Lucy Larcom

Who: A girl who went to work in a mill at 11 and later wrote about it.
When and where: Beverly and Lowell, Massachusetts, 1824 to the 1840s.

"The children will have to leave school and go into the mill."

Lucy Larcom grew up in Beverly, Massachusetts, in the 1820s and 1830s. She and her friends shaped burrs from burdock plants into chairs, cradles and sofas for their dolls. They played school on the doorsteps and climbed over the wall onto the hill. She wrote that the neighborhood children, from large families, enjoyed "a little wholesome neglect." She meant that the grown-ups mostly left them alone, and that this was good for them.

The move to Lowell. Her father, a retired sea captain, died in 1832. Three years later her mother, Lois Larcom, moved the family to Lowell, a mill town. There she ran a boarding house for women who worked in the mills, cooking and keeping house for up to forty of them. Each boarder paid her $1.25 a week. In her book about her childhood, Lucy wrote down the sentence that sent her to work: "The children will have to leave school and go into the mill." She was 11.

She went to work at the Lawrence Manufacturing Company as a doffer. A doffer took full bobbins, the spools that held thread, off the spinning machines and put on empty ones, about every 45 minutes. At first she told her family, "It is just like play." Between changes, she and the other little girls played games in a corner.

In winter the working day ran from first daylight to 7:30 at night. She earned one dollar a week plus her board, and her family needed the money, so she could not go on to high school. She wrote that mill work "was not, and could not be, the right sort of life for a child."

The mill rules banned books, so she pasted poems cut from newspapers all over the side of her window seat in the mill. She and her sister Emeline published poems in two magazines, the *Operatives' Magazine* and the *Offering*. Lucy Larcom grew up to teach school and to write poems. Her book about her childhood, *A New England Girlhood*, came out in 1889.

BY 1850

If you remember one thing: Sport turned into something huge crowds came to watch, while US officials forced the Choctaw west and enslaved jockeys rode horses that other men owned.

- 1823: as many as 100,000 people watch American Eclipse beat Sir Henry on Long Island.
- 1830: Choctaw leaders sign the Treaty of Dancing Rabbit Creek and must hand over about 11 million acres.
- 1845: the Knickerbocker club of New York writes down twenty rules for baseball.

Next: After 1850 a team paid its players openly, a teacher invented basketball, and the men who ran baseball shut Black players out.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 14 MINUTES

Sport turned into a business between 1850 and 1900, and the men who ran it decided who could play. Harry Wright put together the Cincinnati Red Stockings in 1869, the first known baseball team whose players were all openly paid. Students from Rutgers and Princeton played the first college football game that same year, and a teacher named James Naismith invented basketball in 1891. Black jockeys won most of the early Kentucky Derbies, and Isaac Murphy, who was born enslaved, won it three times.

The men who ran baseball's leagues shut Black players out, first in 1867 and again in 1887.

Adults also began to organize children's play. Members of a Boston health group put piles of sand in chapel yards for small children in 1885 or 1886, and people in other cities opened playgrounds in the 1890s. Many children had no time to play. Census takers in 1900, who counted everyone in the country, found more than 1.75 million children under 15 at work.

The first paid team and new games

Harry Wright hired ten players for the Cincinnati Red Stockings in 1869 and paid them openly. He and his brother George were two of the ten. They won all 57 of their games against clubs in the national association of that time. That September they traveled to San Francisco, and they became the first club to play on both coasts. The Brooklyn Atlantics beat them in 1870, in 11 innings, while 20,000 people watched.

Football. Rutgers beat Princeton 6 to 4 at New Brunswick, New Jersey, on November 6, 1869, in the first college football game. Each side had 25 players. They could kick the ball or hit it with their fists or hands, but they could not hold it or trip anyone. About 100 people watched. The game looked more like soccer than like football today.

Basketball. James Naismith was a young teacher from Canada at a YMCA training school in Springfield, Massachusetts, in the winter of 1891. Luther Gulick told him to take a class that needed a game to play indoors in winter: "Naismith, I want you to take that class and see what you can do with it."

Naismith wrote 13 rules. He asked the janitor for two boxes to use as goals, and the janitor brought two peach baskets instead. Nine players played on each side. Accounts date the first game to December 21 or 29, 1891.

James Connolly, a 27-year-old Harvard student from Boston, won the hop, skip and jump at Athens, Greece, on April 6, 1896. That event is now called the triple jump. It was the first final of the first modern Olympic Games, so Connolly was the first modern Olympic champion. A dean at Harvard had warned him that he might not be let back into the college if he left to compete, and he went anyway.

Games at home. Milton Bradley sold a board game called *The Checkered Game of Life* in 1860. Buyers took more than 45,000 copies by 1861. Six years later Bradley printed rules for croquet, a lawn game played by hitting wooden balls with mallets.

The color line in baseball

A color line was a rule, written or unwritten, that kept Black people out. The members of the National Association of Base Ball Players, the group that ran club baseball, put in place a formal ban on Black players and Black clubs in 1867.

Some Black men still played baseball for pay after that. Bud Fowler did in 1878. The Society for American Baseball Research calls him the first acknowledged Black professional baseball player. William Edward White, who had been born enslaved, played one game for Providence in 1879. He lived as a white man and gave his race as white in the census.

Moses Fleetwood Walker and his brother Weldy played for Toledo in the American Association, then a major league, in 1884. They were the first Black major-league players known to the public as Black men.

The vote in Buffalo. Cap Anson, the captain of the Chicago club, said in 1887 that his team would not play Newark if Newark's two Black players took the field. They were Walker and the pitcher George Stovey. On July 14, 1887, Newark played Chicago without them.

Newark played in the International League, a minor league, one of the lower leagues below the major leagues. That same day, at a meeting in Buffalo, New York, the league's owners, whom the surviving accounts do not name, voted 6 to 4 to tell the league's secretary, C. D. White, to approve no more contracts with Black players. The owners of teams with only white players voted for the ban, and those with a Black player voted against it.

Two Black players stayed in the league because their contracts had been signed before the vote: Frank Grant of Buffalo and Walker, who moved to Syracuse. Walker played in the league until 1889. After him, no Black player played in the International League until Jackie Robinson joined the Montreal Royals in 1946. The owners of the major-league teams, a step above, never wrote down a rule against Black players. They kept Black players out by an unwritten agreement among themselves.

Moses Fleetwood Walker

Who: A catcher, the first major-league player known to the public as a Black man.

When and where: Ohio, Toledo, Newark and Syracuse, 1856 to 1924.

A letter warned that a mob would attack if Walker played.

Moses Fleetwood Walker, born in Mount Pleasant, Ohio, in 1856, studied at Oberlin College and then studied law at the University of Michigan. He caught for Toledo in 1883. In a game that year that did not count in the standings, Cap Anson of Chicago used a racist slur about Walker and said his team would never again play a team with Walker on it.

Walker played his first major-league game for Toledo, at Louisville, on May 1, 1884. He played 42 games and batted .263, which means he got a hit in about 26 of every 100 times at bat. He often caught the ball barehanded, with little padding. Toledo's pitcher Tony Mullane later said Walker "was the best catcher I ever worked with, but I disliked a Negro." "Negro" was a word of the time for a Black person. Mullane said he threw his pitches without looking at the signals Walker gave him.

The letter. Toledo's manager got a letter in September 1884 warning that a mob would attack if Walker played in Richmond, Virginia. David Zang's account of Walker's life does not name the men who wrote it. The men who ran the Toledo team released Walker before the trip.

Syracuse, 1891. A group of white men attacked Walker outside a saloon in Syracuse on April 9, 1891. One of them, Patrick Murray, threw a stone that hit Walker in the head. Walker stabbed Murray with a pocketknife and killed him. On June 3, 1891, an all-white jury found Walker not guilty of second-degree murder, which means killing someone on purpose but without planning it ahead.

Walker was found guilty of robbing the mail in September 1898, and he spent a year in jail. He later ran an opera house, a theater, in Cadiz, Ohio. In 1908 he and his brother Weldy published *Our Home Colony*, a book

arguing that Black Americans should move to Africa. He died of pneumonia, an infection of the lungs, in Cleveland on May 11, 1924, at 67.

Black jockeys

Oliver Lewis rode the horse Aristides to win the first Kentucky Derby on May 17, 1875. The horse's trainer, Ansel Williamson, had been born enslaved in 1806. Black jockeys won 15 of the first 28 Kentucky Derbies.

Isaac Murphy

Who: A jockey born into slavery who won the Kentucky Derby three times.

When and where: Kentucky and the Eastern racetracks, 1861 to 1896.

By his own count he won 628 of his 1,412 races.

Isaac Burns Murphy was born into slavery in Clark County, Kentucky, on January 6, 1861. His father, Jerry Burns, joined the Union Army in 1864 and died that fall in the hospital at Camp Nelson.

Murphy won the Kentucky Derby in 1884, 1890 and 1891. He was the first jockey to win it three times and the first to win it two years in a row. By his own count, he won 628 of the 1,412 races he rode, about 44 of every 100.

The racing writer Terry Conway writes that Murphy was said to earn $15,000 to $20,000 a year, at a time when the average family of four earned about $1,200. He and his wife, Lucy, bought a 10-room house in Lexington for $10,000 in 1887.

The fall at Monmouth. Murphy rode the favorite, Firenze, in a race called the Monmouth Handicap in 1890. He swayed in the saddle and fell off after the finish. The race officials, called stewards, said he was drunk and barred him from riding for a time.

> Murphy said he had been drugged. One account says he blamed a sudden loss of weight. Someone had bet heavily against his horse, and that betting made some people suspect a crime. The accounts of the race do not say who placed those bets.
>
> Murphy died in Lexington in February 1896, at 35. Accounts give the cause as pneumonia or heart failure. How much money he left is not known. After he died, Lucy Murphy could not pay back a $5,500 loan from Gus Luigart, and she lost the house in a lawsuit. It was sold at auction in 1900.
>
> He was buried in African Cemetery No. 2 in Lexington. In later years the grave had no marker. He became the first jockey named to the Racing Hall of Fame in 1955. His body was moved in 1967 to a site near the grave of the racehorse Man o' War, and later to the Kentucky Horse Park.

Football deaths

Football players in the 1890s wore no helmets, no mouthpieces and no padding. Reporters at a New York newspaper, the *World*, counted at least eight deaths and more than 200 serious injuries in the 1897 season. Their list included broken bones, fractured skulls, twisted necks and crushed chests.

Richard Von Gammon, a 17-year-old University of Georgia player, dove into a pile of players to make a tackle against the University of Virginia in Atlanta on October 30, 1897. He lay still on the field and died early the next morning of a concussion, which is an injury to the brain from a hard blow to the head.

A mother's letter. Georgia's lawmakers voted to ban football at the state's colleges. Von Gammon's mother, Rosalind Burns Gammon, wrote to her representative. She asked that her son's death not be used as an argument against the sport. Governor William Atkinson vetoed the ban on December 7, 1897, which means he refused to sign it and it did not become law.

A Tennessee newspaper, the *Knoxville Tribune*, printed a full-page editorial, an article giving the paper's own opinion, calling for a ban on October 30, 1898. The editorial listed three deaths and gave no names. Two players' heads

struck together and one of them died. A player at the bottom of a pile had his neck broken. A player kicked in the head by a heavy shoe died three days later.

Women on bicycles

Frances Willard learned to ride a bicycle at 53. In 1895 she published a book about it. As a girl in the country she had almost no toys except the ones she made herself, such as a wooden plow. She practiced on the bicycle for three months. She wrote that women who rode "must, when riding, dress more rationally," which meant in clothes that made sense for the job.

Susan B. Anthony told the reporter Nellie Bly, in an article printed on February 2, 1896, that the bicycle "has done more to emancipate women," or set them free, "than anything else in the world." Anthony said that bloomers, which were loose pants gathered at the ankle, or very short skirts were the right clothes for riding.

The first playgrounds

Dr. Marie Zakrzewska wrote to a Boston health group, the Massachusetts Emergency and Hygiene Association. She told its leaders that in Berlin's public parks, children rich and poor dug and played in heaps of sand.

Which year? Accounts give two different years for the first sand in Boston. Joseph Lee, who wrote a book about helping the poor in 1902, gives 1886. That year, he wrote, members of the association put three piles of yellow sand in the yards of a children's mission, a church charity for children, and of two chapels, which are small churches.

A 1925 history by the Playground and Recreation Association of America says that a large sand pile was put in the yard of the Children's Mission on Parmenter Street in 1885.

The association had ten sand piles by 1887, and about 400 children came each day. The children's favorite games in the sand were "house" and "funeral." By 1900 members of the association ran 21 playgrounds, 20 of them in school yards.

Other cities. People in other cities opened playgrounds in the 1890s. Donors in Philadelphia started two summer playgrounds in 1893. A playground opened at Hull-House in Chicago in 1894, with swings, a may-pole, a tall pole that children danced around holding ribbons, a sand pile and benches. A kindergarten teacher and a policeman ran it, and the policeman usually captained one of the baseball teams.

The members of a New York City committee wrote in an 1897 report that New York "has as yet not a single municipal playground," meaning none run by the city. Jacob Riis was the committee's secretary.

People began to build amusement rides in these years too. LaMarcus Thompson opened a roller coaster, the Switchback Railway, at Coney Island in Brooklyn in 1884. A ride cost 5 cents, and the car went just over 6 miles an hour.

The children who had no time to play

Census takers counted working children for the first time in 1870. They found more than 750,000 workers under 15. That count left out children who worked on their own family's farm or in its shop. The number more than doubled by 1900, to more than 1.75 million children under 15 with jobs. After 1880 most working children aged 10 to 14 worked somewhere other than a farm.

One child in eight had a job in 1870, and more than one in five did by 1900. The census counts do not name the employers. About 25,000 of the nearly 100,000 workers in the cloth mills of the South in 1900 were children under 16. Children in the mills worked 12-hour days, six days a week.

Cherokee ball play, 1890

The researcher James Mooney described the Eastern Cherokee ball game in North Carolina in 1890. In the fall a game took place somewhere on the reservation, the land where the Eastern Cherokee lived, at least every other week. Each player carried two sticks just under 3 feet long, each with a net of twisted squirrel skin or hemp. For 7 to 28 days before a game, a player did not eat rabbit or frog or hot or salted food, and did not touch a woman.

The scratching. Before a game an old man named Standing Water scratched each player with a comb made of seven sharp splinters of turkey leg bone. He pressed the teeth into the skin from shoulder to elbow and from elbow to wrist, and down each leg. He also cut an X on each player's chest and back. The scratches added up to nearly three hundred cuts.

Mooney wrote that the cuts were shallow but painful, and that the players took them willingly as part of the ritual they believed would help them win. No order banning the Cherokee or the Choctaw ball game in these years is on record. The games drew large crowds, including local white people.

BY 1900

If you remember one thing: Paid teams, leagues and new games turned play into a business in these fifty years, and the men who ran baseball used that power to shut Black players out.

In 1850: no baseball team paid all its players, and nobody had played basketball or a college football game.

In 1900: paid baseball teams played in leagues closed to Black players, Isaac Murphy had won the Kentucky Derby three times, and more than 1.75 million children under 15 were at work.

Next: After 1900 adults filled children's free time with clubs, troops and leagues, and football deaths brought college coaches to the White House.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 23 MINUTES

Clubs, troops and leagues run by adults filled more and more of children's free time in the first half of the 1900s. Adults set up 4-H clubs in 1902, the Boy Scouts in 1910, the Girl Scouts in 1912 and Little League baseball in 1939. Children also spent many free hours watching and listening, at Saturday movies, beside the radio and over comic books. In Muncie, Indiana, in the 1930s, at least half of the children at Saturday movies stayed five or six hours.

At least 11 people died of football injuries in 1905, and President Theodore Roosevelt called coaches to the White House. The white owners of the major leagues, the top professional baseball teams, kept Black players out until Jackie Robinson played for Brooklyn in 1947. Black players had their own leagues from 1920. In the 1920s and 1930s, white officials and white swimmers in many Northern cities separated the public pools by race and kept Black children out of the pools where other children learned to swim.

Clubs and troops for children

A. B. Graham started a youth program in Clark County, Ohio, in 1902. Its first clubs were a Tomato Club and a Corn Growing Club, and they are counted among the beginnings of 4-H. William D. Boyce, a Chicago publisher, filed the legal papers that made the Boy Scouts of America an official organization on February 8, 1910.

Juliette Gordon Low signed up 18 girls in Savannah, Georgia, on March 12, 1912, as the first troop of what she called Girl Guides. The name changed to Girl Scouts in 1913. The Savannah girls started a basketball league and went camping.

Choctaw and Chickasaw ball play, 1903

Choctaw and Chickasaw people met near Allen, in Indian Territory, each spring and fall to race horses and play the stick-and-ball game. Allen is now in Oklahoma. In the spring of 1903 about 300 people came and bet on a game. A player hit a Choctaw player with a ball stick, and a fight spread through the crowd. The Choctaw Nation's mounted police, called Lighthorsemen, and US marshals, who were federal police officers, stopped it. After that fight the twice-yearly games between the two nations ended.

How many died playing football in 1905?

At least 11 people died of football injuries in the 1905 season, and counts of all the deaths tied to football that year run from 18 to 25. The firmest count comes from the writer Aaron Gordon, who later checked the newspaper reports. He found about 20 deaths tied to football, 11 of them directly from football injuries, and the cause of the others was not clear.

The NCAA's published history of its own beginnings states 18 deaths and 149 serious injuries. Reporters at the *Chicago Tribune* counted 19 deaths, and reporters at another newspaper, the *Cincinnati Commercial Tribune*, counted 25.

The dead included college players and high-school boys. Harold Moore, 19, a Union College player, was knocked out in a game against New York University. He died six hours later of bleeding inside his brain. In Rockville, Indiana, a broken rib pierced the heart of Carl Osborne, a high-school player, and killed him at once. Robert Brown, 16, of Sedalia, Missouri, was paralyzed by a neck injury and died without waking.

The White House meeting. President Theodore Roosevelt met coaches and graduates from Harvard, Yale and Princeton at the White House on October 9, 1905. They signed a statement against rough play. That December, Henry MacCracken, the head of New York University, called a meeting of college leaders for December 9.

At a second meeting, on December 28, the men from 62 colleges formed a group. Its members renamed it the National Collegiate Athletic Association, the NCAA, in 1910. The rules of the game changed for 1906. A team now had to gain 10 yards, not 5, to keep the ball. Jumping over the line was banned, and the forward pass was allowed.

Jack Johnson

Who: A Black heavyweight boxing champion. After he beat a white former champion in 1910, white crowds attacked Black people across the country.

When and where: Galveston, Texas, Sydney, Reno, Chicago and Leavenworth, 1878 to 1946.

His opponent said he fought to prove "a white man is better."

Jack Johnson, born in Galveston, Texas, in 1878, beat Tommy Burns in Sydney, Australia, on December 26, 1908. That made him the heavyweight boxing champion of the world, the champion of the boxers in the heaviest weight class.

He fought James Jeffries, a white former champion, in Reno, Nevada, on July 4, 1910. Before the fight Jeffries said he was fighting "for the sole purpose of proving that a white man is better than a Negro." "Negro" was a word of the time for a Black person. Jeffries's own helpers stopped the fight in the 15th round, and Johnson won.

That night. White crowds attacked Black people in more than 25 states. Between 11 and 26 people were killed, and hundreds were hurt. In Uvalda, Georgia, white gunmen fired into a work camp and killed three Black workers. In New York City a crowd clubbed a Black man to death. In Norfolk, Virginia, more than 300 white Navy sailors hunted Black people in the streets. The records do not name the people who were killed or the people who killed them.

Officials in many states and cities banned showing the film of the fight. The members of Congress banned carrying boxing films from one state to another in 1912. The ban lasted until 1940.

The arrest. Johnson opened a nightclub in Chicago, the Café de Champion, in July 1912, and Black and white customers mixed there. He was arrested on October 18, 1912, under the Mann Act, a federal law of 1910. It made it a crime to take "any woman or girl" across state lines "for

the purpose of prostitution or debauchery, or for any other immoral purpose." Prostitution means selling sex, and debauchery meant wild, immoral living.

Federal prosecutors, the lawyers who bring charges for the government, used the law against Johnson because he traveled with white women. An all-white jury, a group of citizens who decide whether a person is guilty, found him guilty in June 1913. Judge Kenesaw Mountain Landis ordered him to spend a year and a day in prison. Johnson fled to Canada and Europe and stayed away for seven years. He gave himself up on July 20, 1920, and served his sentence at Leavenworth prison in Kansas.

He died in a car crash near Franklinton, North Carolina, on June 10, 1946, after the staff of a diner that served only white people refused to serve him. President Donald Trump pardoned him on May 24, 2018. A pardon is an official act by a president or governor that forgives a crime and ends its punishment.

Black jockeys forced out

Jimmy Winkfield of Kentucky won the Kentucky Derby, a horse race held each spring in Louisville, in 1901 and 1902. No Black jockey has won it since. He left to ride in Russia in 1904, and later he rode in France. A Louisville newspaper, the *Courier-Journal*, printed the headline "Negro Jockeys Now Extinct" on January 21, 1912.

How it happened. Two economists, scholars who study money and business, Michael Leeds and Hugh Rockoff, studied why Black jockeys were driven out of American racing. They found that white jockeys attacked Black jockeys during races. The white riders boxed them in, ran them into the rail and hit them with their whips. Owners then stopped hiring Black jockeys, so that their horses would not be hurt. Henry King rode in the 1921 Kentucky Derby. No Black jockey rode in it again until 2000.

Jim Thorpe and his medals

Jim Thorpe was a Sac and Fox athlete, born in 1887 near Prague, in what is now Oklahoma. He played football at the Carlisle Indian Industrial School for the coach Glenn "Pop" Warner. At the 1912 Olympic Games in Stockholm, Sweden, he won the pentathlon, a contest of five track and field events, and the decathlon, a contest of ten. In the decathlon he beat the second-place man by 688 points.

The newspaper report. Roy Johnson, a reporter for the *Worcester Telegram* in Massachusetts, reported in January 1913 that Thorpe had been paid to play minor-league baseball, in the lower leagues below the major leagues, in North Carolina in 1909 and 1910. Accounts of his pay run from $2 a game to $35 a week. Olympic athletes then had to be amateurs, people who were never paid to play a sport.

Thorpe wrote to James E. Sullivan of the Amateur Athletic Union that he "was simply an Indian schoolboy and did not know all about such things." James Ring Adams wrote in the magazine of the National Museum of the American Indian that Warner and Moses Friedman, the head of the Carlisle school, may have written the letter for him.

Sullivan and the other officials of the Amateur Athletic Union took away Thorpe's amateur standing. The members of the International Olympic Committee struck out his wins. Their own rules allowed a complaint only within 30 days of the Games, and the newspaper report came about six months later. Warner took the medals from Thorpe's house and sent them back to Stockholm. Hugo Wieslander, who had come second in the decathlon, refused the gold medal.

Thorpe played major-league baseball for the New York Giants and other teams from 1913 to 1915 and from 1917 to 1919. He played pro football for the Canton Bulldogs for $250 a game. In 1920 he became the first president of the league that later took the name National Football League. In his last years he worked as a film extra, a laborer and a doorman. He died of heart failure in 1953, at 65.

The medals restored. A researcher, Florence Ridlon, found the 30-day rule in the 1912 rule book in 1982. On October 13 of that year, the leaders of the International Olympic Committee named Thorpe a co-champion, sharing each title with the second-place man: Hugo Wieslander in the decathlon and Ferdinand Bie in the pentathlon. On July 15, 2022, they named him the only champion of both events.

Baseball and the Negro Leagues

The Boston Americans beat the Pittsburgh Pirates 5 games to 3 in the first modern World Series, in October 1903. The owners of the two teams, Henry Killilea of Boston and Barney Dreyfuss of Pittsburgh, arranged it. About 100,000 people watched the eight games. There was no series in 1904, because the owners of the New York Giants refused to play.

BY 1920: Football had new rules after the deaths of 1905, Black jockeys were nearly gone from American racing, and the owners of Black baseball teams were about to start a league of their own.

A league of their own. Rube Foster, the owner and manager of the Chicago American Giants, met other owners of Black teams at a YMCA in Kansas City on February 13, 1920. Together they started the Negro National League. It had eight teams in its first year. The league closed in 1931, during the Great Depression, when millions of people lost their jobs. Teams in other Negro Leagues kept playing until 1948.

Major League Baseball's leaders began counting seven Negro Leagues of 1920 to 1948 as major leagues in December 2020. That added about 3,400 players to the major-league record. On May 28, 2024, they added the Negro League players' numbers to the official record books.

Babe Ruth

Who: A pitcher and home-run hitter for Boston and New York.
When and where: Baltimore, Boston and New York, 1895 to 1948.

His school's records called him "incorrigible," a child no one can control.

George Herman Ruth, born in Baltimore in 1895, was seven when he entered St. Mary's Industrial School for Boys on June 13, 1902. It was a reform school, a school meant to correct boys' behavior, and an orphanage, a home for children without parents. He spent most of the next 12 years there. A teacher there, Brother Matthias, taught him baseball.

Jacques Kelly, a writer for the *Baltimore Sun*, wrote in 1995 that Ruth's parents decided to place him at the school. The school's records listed the boy as "incorrigible," Kelly wrote. Writers have argued about the parents' reasons for many years.

The sale. Ruth pitched for the Boston Red Sox from 1914 to 1919. The owner of the Boston team, Harry Frazee, sold him to the New York Yankees for $100,000. The sale was made in December 1919 and announced in January 1920.

Ruth hit 54 home runs in 1920 and 60 in 1927, and he finished his career with 714. In 1936 he was one of the first five players chosen for the Baseball Hall of Fame. Cancer in the back of his nose and throat killed him on August 16, 1948, at 53.

Movies, radio and comic books

Children in the 1920s and 1930s spent many of their free hours at the movies. Walt Disney started Mickey Mouse Clubs that met at Saturday matinees, the afternoon showings, in 1929. Richard Butsch gathered studies of movie audiences from the 1930s in a study printed in 2001. In Muncie, Indiana, at least half of the children at Saturday matinees stayed five or six hours. In a working-class part of New Haven, Connecticut, more than half the children went twice a week or more.

Researchers of the time found that children were choosing movies over outdoor games. A child in the Bronx, in New York City, said that when the film broke, the children booed, stamped their feet and often got into fist fights.

Worried adults. The mayor of Chelsea, Massachusetts, closed a theater in 1930 because of how children in the audience behaved. Researchers paid by the Payne Fund, a private group that gave money to good causes, carried out 13 studies of how watching movies changed children's behavior from 1929 to 1933.

Little Orphan Annie, a radio show, began in Chicago in 1930 and was broadcast across the country from April 6, 1931. It had about 6 million listeners of all ages before it went off the air in 1942.

Comic books. Superman first appeared in a comic book, *Action Comics* number 1, on April 18, 1938. A comic book cost 10 cents. A survey for the publishers in 1944 found that 95 of every 100 boys and 91 of every 100 girls aged 6 to 11 read comic books, about 12 a month.

Sterling North, a newspaper book editor in Chicago, called comic books "badly drawn, badly written and badly printed" in 1940. He wrote that they strained children's eyes and nerves. Comic books were burned in the 1940s. The Comic Book Legal Defense Fund's history of these burnings does not name who burned them.

Lizzie Magie patented a board game called *The Landlord's Game* in 1904. Monopoly grew out of it, and Parker Brothers began selling Monopoly on November 5, 1935.

BY 1940: Children spent hours each week at the movies and with comic books, Babe Didrikson and Jesse Owens had won Olympic gold, and the owners of the major leagues still kept every Black player out.

Babe Didrikson Zaharias

Who: A track star, basketball player and golfer who won Olympic gold and helped start women's professional golf.

When and where: Texas, Los Angeles and golf courses in the United States and Britain, 1911 to 1956.

In three hours she won five events and tied for a sixth.

Mildred Didrikson was born in Port Arthur, Texas, in 1911, the sixth of seven children of Norwegian immigrants. She became known as Babe. Managers at the Employers Casualty Insurance Company in Dallas hired her in 1930 to do office work and to play on the company's women's basketball team, the Golden Cyclones.

At the national track championships of 1932 she was the company's whole team. In three hours she won five events and tied for first in a sixth. She scored more points than any other team.

The Olympics. At the 1932 Olympic Games in Los Angeles she won the javelin and the 80-meter hurdles. In the high jump she won second place, because the officials ruled that going over the bar head first was a foul.

Later that year the Amateur Athletic Union's officials banned her from amateur sport, the contests for unpaid athletes, because her name appeared in an advertisement for a car. Her family needed money, so she played for pay. She toured with a men's traveling baseball team, the House of David.

Golf. She took up golf. Officials of the US Golf Association barred her from amateur golf in 1935, after complaints from members of the Texas Women's Golf Association. She married the wrestler George Zaharias in 1938. She helped found the Ladies Professional Golf Association, in 1948

or 1950 by different accounts. She won the US Women's Open in 1948, 1950 and 1954. From 1950 she lived with the golfer Betty Dodd, and the two hid that they were a couple.

She had cancer of the bowel in April 1953. Surgeons removed the cancer and gave her a colostomy. In that operation, surgeons bring the end of the large bowel out through an opening cut in the belly, so that body waste collects in a bag outside the body. Fourteen weeks later she was playing golf again, and in 1954 she won the US Women's Open. The cancer came back in 1955, and she died of it on September 27, 1956, at 45.

Jesse Owens

Who: A runner and jumper who won four gold medals at the Olympic Games in Nazi Germany.
When and where: Alabama, Cleveland and Berlin, 1913 to 1980.
Movie: *Race* (2016), a drama film about Owens.

"I had four gold medals, but you can't eat four gold medals."

James Cleveland Owens was born in Oakville, Alabama, in 1913, the son of a sharecropper, a farmer who paid his rent with part of his crop. His family moved to Cleveland, Ohio, when he was nine. A teacher heard his initials, "J.C.," as "Jesse."

At a college track meet in Ann Arbor, Michigan, on May 25, 1935, he set five world records and tied a sixth in about 45 minutes.

Berlin. Owens won the 100 meters, the long jump, the 200 meters and the relay at the Olympic Games in Berlin in August 1936. Adolf Hitler's Nazi government ruled Germany then. The Nazis taught that white people they called "Aryans" were a superior race.

Back home, Owens had to ride the freight elevator, the one used for goods, to reach a party in his honor at the Waldorf Astoria hotel in New York. Accounts do not name who sent him there. President Franklin

> Roosevelt never invited him to the White House. Owens said later, "Hitler didn't snub me. It was our president who snubbed me. The president didn't even send me a telegram."
>
> When Owens refused to finish a tour of Europe, Avery Brundage and other officials of the Amateur Athletic Union barred him from amateur sport. He earned money by racing against horses. Later he went bankrupt, which means he could not pay his debts. He said, "I had four gold medals, but you can't eat four gold medals." He received the Presidential Medal of Freedom in 1976. Lung cancer killed him in Tucson, Arizona, on March 31, 1980.

Who was kept out of the pools

Jobless workers paid by a federal program, the Works Progress Administration, built about 6,000 athletic fields and playgrounds and 770 new swimming pools from 1935 to 1943. Each year tens of millions of Americans swam in city pools.

Jeff Wiltse, who wrote a book about public pools called *Contested Waters*, studied who was allowed in. Many cities in the North began letting men and women swim in the same public pools in the 1920s and 1930s. Wiltse found that white officials and white swimmers in those cities then separated the pools by race.

He wrote that "most northern whites did not want black men to have the opportunity to interact with white women" at the pools. Black children in those cities could not use the pools where other children learned to swim.

Fairground Park, 1949. John O'Toole, the head of public welfare in St. Louis, opened the Fairground Park pool to Black swimmers on June 21, 1949. He said, "They are taxpayers and citizens, too." About 30 to 40 Black people came.

Crowds of white young men gathered with baseball bats and bricks and beat Black people as they left the pool. The crowd grew to thousands. Twelve people were hurt, and police arrested seven, three white and four Black. The

published accounts of the attack do not name the attackers. Afterward, so few people came to the pool that it lost money, and it was closed.

Carl Stotz and the first Little League boys

Who: A Williamsport man who organized baseball for his nephews and the neighborhood boys, and two of the boys who played.
When and where: Williamsport, Pennsylvania, 1938 to 1955.

Three local businesses paid $30 each for the first uniforms.

Carl Stotz, 28, tried out rules and field sizes in the summer of 1938 with his nephews, Jimmy and Major Gehron, and other boys from his neighborhood in Williamsport, Pennsylvania. He had no children of his own.

The first season. Stotz, George Bebble and Bert Bebble each managed a team in 1939. Three local businesses paid $30 each for uniforms, and the teams took their names: Lycoming Dairy, Lundy Lumber and Jumbo Pretzel. Thirty boys played. The bases were 60 feet apart, and the pitcher threw from 40 feet. On June 6, 1939, Lundy Lumber beat Lycoming Dairy 23 to 8 on a vacant lot. It was the first Little League game.

Two boys on the Lycoming Dairy team were Bill Bair and Al "Sonny" Yearick. Yearick later became the first Little Leaguer to play baseball for pay, in the minor leagues. Both men died in January 2020. A volunteer remembered that they talked about Stotz and about how Little League had helped them stay out of trouble.

Only boys could play. Stotz said in 1973, "When we started the Little League, the idea of a girl playing baseball, even with other girls, was simply unthinkable." He left Little League's national company in November 1955 over "commercialization and central control," which meant that he objected to the league being run as a business from one head office.

Women's professional baseball, 1943 to 1954

More than 600 women played in the All-American Girls Professional Baseball League from 1943 to 1954. Philip Wrigley, the owner of the Chicago Cubs, started it. The league's rules required players to wear skirts and lipstick and banned pants. During spring training they went to evening classes at a charm school, a school that taught manners and how to look and dress. No Black women were recruited or hired. The accounts of the league do not name who made that choice.

Josh Gibson

Who: A catcher and home-run hitter whom the white major-league owners never signed.

When and where: Georgia and Pittsburgh, 1911 to 1947.

Movie: *Soul of the Game* (1996), a television drama about several Negro Leagues players, with Mykelti Williamson as Gibson.

His Hall of Fame plaque says he hit "almost 800" home runs.

The catcher for the Homestead Grays, a Black team near Pittsburgh, was hurt in a game on July 25, 1930. The Grays' owner, Cum Posey, called Josh Gibson, 18, out of the stands to catch. Gibson had been born in Buena Vista, Georgia, in 1911, and his family had moved to Pittsburgh in 1926. There he worked in an air-brake factory and at a steel company.

Gibson played for the Grays and for the Pittsburgh Crawfords. The Crawfords' owner, Gus Greenlee, sold him back to the Grays in 1937 for $2,500 and two players. People called him "the Black Babe Ruth."

Never in the majors. The white owners of the major-league teams kept Black players out, so Gibson never played in their leagues. Doctors told him in 1943 that he had a brain tumor. He died in Pittsburgh on January 20, 1947, at 35, less than three months before Jackie Robinson played his first game for Brooklyn.

Since 2024 the major-league record books have included the Negro Leagues. A batting average shows how often a player got a hit: .466 means about 47 hits in every 100 times at bat. Gibson's .466 for 1943 is the highest for a single season in those records, and his career average of .372 is also the highest.

The plaque. Gibson was named to the Baseball Hall of Fame in 1972. His plaque there says he hit "almost 800" home runs.

Jackie Robinson

Who: The first Black player in the white major leagues since the 1880s.

When and where: Georgia, California, Kansas City and Brooklyn, 1919 to 1972.

Movie: *42* (2013), a drama film with Chadwick Boseman as Robinson. An earlier film, *The Jackie Robinson Story* (1950), starred Robinson as himself.

"I need a Negro player with guts enough not to fight back."

Jackie Robinson was born in Cairo, Georgia, in 1919, the youngest of five children of sharecroppers. His father left, and in 1920 the family moved to Pasadena, California. At the University of California, Los Angeles, he was the first athlete to earn varsity letters, awards for playing on the college's top teams, in four sports.

As a soldier at Fort Hood, Texas, on July 6, 1944, he refused to move to the back of an Army bus. Officers charged him with disobeying orders. A panel of nine white officers found him not guilty.

The meeting with Rickey. Robinson played for the Kansas City Monarchs of the Negro Leagues in 1945. Branch Rickey, the head of the Brooklyn Dodgers, met him on August 28, 1945. Robinson asked, "Are you looking for a Negro who is afraid to fight back?" Rickey answered, "I need a Negro player with guts enough not to fight back." Rickey signed him for $600 a month. Robinson played the 1946 season for the Montreal Royals, a minor-league team.

He played his first game for Brooklyn on April 15, 1947, before 26,623 people. More than 14,000 of them were Black. During that first season, Ben Chapman, the manager of the Philadelphia team, told his players to "call Robinson everything and anything they wanted to." Chapman and his players shouted racial slurs, insulting names for Black people, at him. Chapman told him to "go back to the cotton fields." They kept it up until officials in the office of Happy Chandler, the commissioner who ran baseball, ordered them to stop.

Threats. Robinson got letters, signed by no one, telling him to leave baseball. Arthur Mann, who worked for Rickey, gave two of them to the police. A sportswriter, Stanley Woodward, reported that St. Louis players had threatened to strike rather than play against him. The St. Louis owners and managers denied it. The National League's president, Ford Frick, said he would suspend any player who went on strike. A St. Louis player, Enos Slaughter, cut Robinson's leg with the metal spikes on his shoe and left a seven-inch gash.

Robinson was named the first Rookie of the Year, the best first-year player, in 1947 and Most Valuable Player in 1949. He died on October 24, 1972, at 53. Officials of Major League Baseball retired his number, 42, for every team in 1997, so that new players could no longer be given it.

BY 1950

If you remember one thing: Adults filled children's free time with clubs, troops and leagues, and the white owners of the major leagues kept Black players out until 1947.

One number: 26,623 people watched Jackie Robinson's first game for Brooklyn, on April 15, 1947, and more than 14,000 of them were Black.

Next: After 1950 girls fought to get into Little League, television carried the Super Bowl into homes, and children began playing video games.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 18 MINUTES

Girls and Black children pushed their way into games that had kept them out in the second half of the 1900s, while more of children's afternoons went to lessons and organized sports. Fewer children walked or biked to school. Diaries of how children spent their days in 1981 and 1997 showed more time in organized sports and lessons, and less time in free play and watching television. Children could play video games for a quarter in arcades from 1972, and on game machines at home from 1975.

Little League officials kept girls out from 1951 until 1974. After Title IX became law in 1972, the number of girls playing high-school sports rose from about 294,000 to about 2.7 million by 1999.

Boxing officials took Muhammad Ali's title after he refused to be drafted in 1967. US Olympic officials suspended Tommie Smith and John Carlos and sent them out of the Olympic Village, where the athletes lived, after they protested on the medal stand in 1968. Two television networks, CBS and NBC, showed the first Super Bowl in 1967 to about 51 million viewers.

Kathryn "Tubby" Johnston

Who: A girl who played Little League baseball under a boy's name. Little League officials then banned girls.

When and where: Corning, New York, 1950.

"I ran into my brother's room, got a pair of his slacks."

Kathryn Johnston played baseball with boys on a sandlot near her home in Corning, New York, in the spring of 1950. She wanted to play on a Little League team, and only boys could play on Little League teams.

She described what she did next: "I ran into my brother's room, got a pair of his slacks, put on a baseball cap and signed up as Tubby Johnston." She took the name Tubby from a comic strip, *Little Lulu*. She tucked her hair under her cap and went to the tryouts with her brother.

She made the King's Dairy team and played first base. Then she told the coach she was a girl. He said she was good enough to make the team, so she could stay. More people came to the games once word got out.

The Tubby Rule. Little League officials made a rule in 1951 that no girls could play. Johnston said later, "It's known as the Tubby Rule because I was the reason why they put that rule in." She wrote to Little League's headquarters in 1974, after the ban ended. The officials there checked her story and wrote back that she was the first girl to play in Little League.

Who could play Little League

Little League officials also stopped a team of Black boys from playing on for a title. The Cannon Street YMCA in Charleston, South Carolina, entered its all-star team of 14 Black boys in the city Little League tournament in 1955. The adults who ran the 61 other teams, all of them white, pulled every team out rather than play them. Accounts do not name those adults. Cannon Street won the city and state titles because no one would play them.

At the regional tournament in Rome, Georgia, officials ruled that Cannon Street could not go on. The team had won without playing, and the officials said a team that had not won its games on the field could not advance. Little League's president agreed with the ruling. The managers of the white leagues left Little League and started their own league for white teams only.

Little League officials invited the Cannon Street boys to watch the Little League World Series in Williamsport. The crowd there chanted "Let them play." In 2023 one of the players, John Rivers, looked back on what had happened to the team: "So we didn't talk about it. So it tells me how painful it was."

Maria Pepe. Maria Pepe, 12, pitched three games for a Little League team in Hoboken, New Jersey, in 1972. Little League officials told the Hoboken league to drop her or lose its right to be part of Little League, and the Hoboken league's officials dropped her. Robert Stirrat, a Little League vice president, said, "as far as we're concerned, the incident is closed."

Members of the National Organization for Women, a women's rights group, took Pepe's case to New Jersey's civil rights office. Sylvia Pressler, the officer hearing the case, ruled in 1973 that keeping girls out broke the state's law. She called Little League "as American as the hot dog and apple pie," and wrote, "There is no reason why that part of Americana should be withheld from girls."

Little League's officials asked a higher court to overturn the ruling, and they lost in 1974. Little League held a charter from Congress, a paper that gave it official standing. President Gerald Ford signed a law in December 1974 that

changed the charter to let girls play. That year nearly 30,000 girls signed up for Little League's new softball program.

Who could swim

Some city officials closed their public pools rather than let Black residents swim in them. Officials in Jackson, Mississippi, closed four public pools in 1963. They gave up a fifth pool, and the YMCA then ran it for white people only. Five Supreme Court justices, the judges of the nation's highest court, ruled on June 14, 1971, in *Palmer v. Thompson*, that closing the pools to everyone was lawful. Four justices disagreed.

The Monson Motor Lodge. Black and white protesters jumped into the pool of the Monson Motor Lodge in St. Augustine, Florida, on June 18, 1964, in a protest against keeping Black and white swimmers apart. The motel's manager, James Brock, poured muriatic acid, a strong acid used to clean pools, into the water. A photograph of him doing it ran in newspapers across the country.

Jeff Wiltse, the historian of public pools, found that when Black swimmers won equal use of city pools, white swimmers "generally abandoned them for private pools," which means most of them left. He wrote that city officials then treated public pools as less important.

Television and the Super Bowl

The Green Bay Packers beat the Kansas City Chiefs 35 to 10 in Los Angeles on January 15, 1967. It was the first championship game between the two professional football leagues of the time. Tickets cost $6 to $12. Two television networks, CBS and NBC, both showed the game, to about 51 million viewers. A 30-second advertisement cost $42,000.

From the third game, in 1969, the official name was the Super Bowl. Lamar Hunt, who founded one of the two leagues, took the name from his children's toy, a Super Ball.

The 1993 game. NFL officials took the 1993 Super Bowl away from Arizona because its voters had said no to a holiday for Martin Luther King Jr. in November 1990. The league's officials moved the game to Pasadena, California. *PHOENIX* magazine says the game was to be played in Tempe, next to Phoenix, and the Pima County Public Library says Phoenix. People there had expected about $200 million from the game. Arizona hosted the Super Bowl in 1996. Chapter 37 tells the fight over the King holiday.

Muhammad Ali

Who: The heavyweight boxing champion whose title was taken from him when he refused to be drafted into the Army.

When and where: Louisville, Rome, Houston, Atlanta and Zaire, 1942 to 2016.

"I ain't got no quarrel with them Viet Cong."

Cassius Clay was born in Louisville, Kentucky, in 1942. When he was 12, someone stole his bicycle. A police officer, Joe Martin, taught boxing, and he got Clay started in the sport. Clay won an Olympic gold medal in Rome in 1960. On February 25, 1964, at 22, he beat Sonny Liston for the heavyweight title. He then joined the Nation of Islam, a Black Muslim religious group, and took the name Muhammad Ali.

Houston, 1967. Ali went to Houston to be drafted, which means ordered by law to join the Army, on April 28, 1967, during the Vietnam War. He had already said, "I ain't got no quarrel with them Viet Cong," the fighters the US Army was fighting in Vietnam. He refused three times to step forward when his name was called.

That same day the members of the New York State Athletic Commission suspended his boxing license, and officials of the World Boxing Association took away his title. Officials of other boxing commissions did the same. In a federal court in Houston on June 20, 1967, a jury of six white men and six white women found him guilty of draft evasion, which means refusing to serve when drafted. The judge sentenced him to five years in prison and a $10,000 fine.

Back in the ring. He could not box for more than three years. He fought again on October 26, 1970, in Atlanta. On June 28, 1971, all eight Supreme Court justices who heard his appeal overturned his conviction. On October 30, 1974, he beat George Foreman in Zaire, in Africa, and won the title back.

> Ali retired in 1981. In 1984 he said he had Parkinson's syndrome, a disease of the brain that makes the body shake and move slowly. He died on June 3, 2016.

The 1968 Olympic protest

Tommie Smith won the 200 meters at the Olympic Games in Mexico City on October 16, 1968, in a world-record 19.83 seconds. John Carlos came third. Peter Norman of Australia came second. During the US national anthem, Smith and Carlos each raised a fist in a black glove. They stood in black socks without shoes to stand for poor people. All three men wore the badge of a protest group, the Olympic Project for Human Rights.

Smith said they were protesting "the lack of black assistant coaches," the taking of Muhammad Ali's title, and the "lack of access to good housing."

Sent home. Avery Brundage, the head of the International Olympic Committee, called the protest "a domestic political statement unfit for the apolitical, international forum." He meant that the protest was about politics inside the United States, and that the Olympic Games were a world meeting place that should be kept free of politics.

The US Olympic Committee's officials refused at first to suspend the two men. Brundage then threatened to ban the whole US track team. The US officials suspended Smith and Carlos and sent them out of the Olympic Village. The sports commentator Brent Musburger called them "black-skinned storm troopers." Storm troopers were the street fighters of Hitler's Nazi party. Smith, Carlos and their families got death threats.

Both men later played pro football. Smith coached track at Oberlin College and taught at Santa Monica College. Norman was left off Australia's 1972 Olympic team, although his times qualified him, and accounts differ on why. Lawmakers in Australia's parliament apologized to him in 2012, six years after he died. Smith and Carlos carried his coffin at his funeral.

Players and owners

A team's owner could renew a player's contract year after year without his permission until 1975. The owner could also trade him to another team, and the player could not leave to sign with a team of his choice.

Curt Flood, a St. Louis Cardinals outfielder, refused to be traded to another team in December 1969. A television reporter, Howard Cosell, said to him, "You're a man who makes $90,000 a year, which isn't exactly slave wages." Flood answered, "A well-paid slave is nonetheless a slave." He sued baseball's commissioner. On June 19, 1972, five Supreme Court justices ruled against him and three sided with him.

About three years later, in 1975, an arbitrator named Peter Seitz ruled in a case brought by two pitchers, Andy Messersmith and Dave McNally. An arbitrator is a person both sides agree will settle a dispute. Seitz ruled that a team could renew a player's contract without his permission for only one season. After that the player was a free agent, free to sign with any team.

Girls' sports after Title IX

President Richard Nixon signed Title IX into law on June 23, 1972. Under it, no school or college program that gets money from the federal government may shut a person out because of sex.

The count. About nine times as many girls played high-school sports in 1999-2000 as in 1971-72, according to counts by the National Federation of State High School Associations. In the 1971-72 school year about 294,000 girls played, and girls were about 7 of every 100 players. By 1999-2000 about 2.7 million girls played, and girls were about 41 of every 100.

Yale University had 13 women's varsity teams, the college's top teams, in 1979. Writers for Yale's library later stated in an online exhibit that those teams got "only a grudging fraction of the resources" given to the men's teams.

Chris Ernst

Who: The captain of Yale's women's rowing team, who led a protest that won the team a locker room.

When and where: Yale University, New Haven, Connecticut, 1972 to 1977.

Movie: *A Hero for Daisy* (1999), a documentary about Ernst by Mary Mazzio.

Nineteen women wrote "Title IX" on their bodies and walked in.

Chris Ernst grew up in Scituate, Massachusetts. In high school she beat boys at arm wrestling to win time on the gymnastics equipment.

She began rowing at Yale in her second year and was captain of the women's team by her last year. The showers at the boathouse were for the men's team only. After practice, the women waited on a bus in wet clothes while the men showered. Then they rode back to campus to wash.

The protest. The 19 women on the team wrote "Title IX" on their bodies in early 1976 and went into the office of Joni Barnett, Yale's director of women's sports. They took off their clothes, and Ernst read a statement that began, "These are the bodies Yale is exploiting." To exploit someone means to use them for your own gain.

A *New York Times* reporter called the university that day. Yale officials set up a trailer with running water and planned a $250,000 addition to the boathouse. By 1977 the women had a locker room.

Ernst was a backup rower for the 1976 Olympic team, the first Olympic Games with women's rowing. She became the first woman in the plumbers' union in New Haven in 1980, and she won a world rowing title in 1986.

Billie Jean King

Who: A tennis champion who started the Women's Tennis Association and beat Bobby Riggs in a match called the "Battle of the Sexes."

When and where: Long Beach, California, and Houston, Texas, 1943 to 1973 and after.

She saved $8 to buy her first racket.

Billie Jean King was born in Long Beach, California, in 1943. At 11 she switched from softball to tennis after her parents suggested a more "ladylike" sport. She saved the $8 and took free lessons on the city's public courts. As a young player she was kept out of a group photograph because she wore shorts her mother had sewn instead of a tennis dress. The account does not name who left her out.

The Battle of the Sexes. King founded the Women's Tennis Association, a group that represents women players, in June 1973. Three months later she played Bobby Riggs in a match called the "Battle of the Sexes," because it set a man against a woman. Riggs was 55, and King was 29. She beat him 6-4, 6-3, 6-3 at the Houston Astrodome on September 20, 1973.

About 30,000 people watched in the stadium, about 50 million on television in the United States, and about 90 million more in 37 other countries. She won $100,000.

King won 39 Grand Slam titles, the four biggest tennis championships. She received the Presidential Medal of Freedom in 2009.

Arcades and game machines at home

Some computer games were made for school. Three student teachers from Carleton College, Don Rawitsch, Bill Heinemann and Paul Dillenberger, made *The Oregon Trail* for a junior high class in Minneapolis in 1971. It was first played on December 3, 1971. A Minnesota computer group for schools put out new versions in 1975 and 1985, and Oregon Trail games have sold more than 65 million copies.

Pong. Nolan Bushnell and Allan Alcorn of the company Atari put a test machine of their game *Pong* in a bar called Andy Capp's Tavern in Sunnyvale, California, in August 1972. *Pong* was a simple tennis game played on a screen. The bar's owner soon called them because the machine had stopped working. Its coin box was jammed full of quarters.

Atari sold *Pong* from November 29, 1972, at 25 cents a game, and sold more than 8,000 machines by the end of 1974. Bushnell said players sat "shoulder to shoulder" and could talk, laugh and challenge each other.

Sears sold a home version of *Pong* for $98.95 at Christmas 1975. Atari's own home game machine came out in 1977 for $199. By 1992 Atari had sold about 30 million of that one model.

The company Midway began selling the arcade game *Pac-Man* in North America in October 1980. Its designer, Toru Iwatani, wanted "a nonviolent, cheerful game" that women would play. By 1981 *Pac-Man* machines had taken in more than $1 billion in quarters.

The crash. About 30 million game machines of all makes sat in American homes by 1982, and about 35 million households had children aged 6 to 16. Then sales fell, from about $3.2 billion in 1983 to about $100 million in 1985. Workers for Atari buried about 728,000 unsold game cartridges in a landfill at Alamogordo, New Mexico, in September 1983.

Sales rose again after Nintendo began selling its home machine in the United States in 1985. Nintendo's Game Boy, a game machine small enough to hold in the hands, came out in 1989 for $89.95.

Senators Joe Lieberman and Herb Kohl led public hearings, meetings where senators question witnesses, on violent video games such as *Mortal Kombat* in December 1993 and March 1994. Leaders of the game companies then set up the Entertainment Software Rating Board. From September 13, 1994, its staff put age ratings on games.

The Miracle on Ice

The US Olympic hockey team beat the Soviet Union 4 to 3 at Lake Placid, New York, on February 22, 1980. The American players were college players with an average age of 21, coached by Herb Brooks. Two days later they beat Finland and won the gold medal.

The Iroquois Nationals

Haudenosaunee (Iroquois) people formed their own national lacrosse team in 1983, and the Grand Council of the Haudenosaunee approved it. Officials of the International Lacrosse Federation turned the team down for 1986 and accepted it as a member nation in 1988. In 1990 the team played in the world championship in Perth, Australia, and finished fifth of five.

How did a child's afternoon change?

Children spent less of it in free play and more of it in school, lessons and organized sports.

Walking or riding. Nearly half of children in kindergarten through eighth grade usually walked or biked to school in 1969, and about 12 of every 100 were driven, according to national travel surveys studied by Noreen McDonald and other researchers. A 1995 survey asked a slightly different question: how children got to school on the survey day. That day nearly half went by car, and about 14 of every 100 walked or biked.

Time diaries. The researchers Sandra Hofferth and John Sandberg compared diaries of how children spent their time in 1981 and in 1997. Children spent more time in school, day care, sports and art lessons. They spent less time in free play, housework and watching television. The drop in free play showed up among children whose mothers stayed home as well as those whose mothers had jobs.

More mothers did work for pay. In 1975, 47 of every 100 mothers with children under 18 were working or looking for work. By 2000 it was 73 of every 100, according to the US Bureau of Labor Statistics.

On their own. About 18 of every 100 children aged 5 to 14, some 6.9 million, regularly looked after themselves for part of the week in the fall of 1995. On average they did so for about six hours a week. More than twice as many children that age, about 15 million, took part in sports, lessons or clubs, according to the US Census Bureau.

Private teams. Organized sport also became more private. In a survey of adults published in 2025, about 4 of every 100 who were born in the 1950s said they had played on a private club or travel team as children. For those born in the 1990s it was 13 of every 100. The researchers, Chris Knoester and Chris Bjork, found that children whose parents had more schooling were more likely to play on these teams.

BY 2000

If you remember one thing: Girls won their way into Little League and school sports through a court case and a new law, while children spent less time in free play and more in lessons and organized sports.

One question this era leaves open: Senators held hearings on violent video games in 1993 and 1994. Do games and screens harm children? The next era gives what researchers later found about attention and mood, and where they disagree.

Next: After 2000 children's free time moved onto phones and into games played online with strangers.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 22 MINUTES

Much of children's free time moved onto phones and into games played online, often with strangers, after 2000. Researchers at the Pew Research Center, which surveys American teenagers, found that 73 of every 100 teenagers aged 13 to 17 had or could use a smartphone in 2014-15, and 95 of every 100 by 2022. Fewer children walked to school or played outdoors. The average sports family spent $883 on one child's main sport in 2022. Researchers disagree about whether screens harm children's attention and mood.

Doctors found a brain disease in football players who had died. A team doctor who had sexually abused more than 500 girls and women pleaded guilty, and judges gave him prison sentences so long that he will die in prison. College athletes won the right to be paid, betting on games became legal in most states, and the men's soccer World Cup was played in the United States, Canada and Mexico in 2026.

Phones and social media

Pew researchers ask American teenagers aged 13 to 17 how they use phones and the internet. In 2014-15, 24 of every 100 said they were online "almost constantly." In 2022 it was 46 of every 100, and in 2025 it was 40. In Pew's 2025 survey, about 90 of every 100 teenagers used YouTube, and about 60 used TikTok. That year 64 of every 100 teenagers had used an AI chatbot, a computer program that writes answers in plain language.

Hours a day. Common Sense Media, a group that studies children and media, surveyed children in 2021. Children aged 8 to 12 spent an average of 5 hours 33 minutes a day on screens for fun, not counting schoolwork. Teenagers aged 13 to 18 spent 8 hours 39 minutes. In 2019 the figures had been 4 hours 44 minutes and 7 hours 22 minutes.

When a child used two screens at once, the researchers counted the time on both, so two hours of screen time can fit into one hour of the day. The survey's authors wrote that they could not tell how much of the rise came from the COVID-19 pandemic.

The warning. The US Surgeon General, Vivek Murthy, the country's top public health doctor, issued an advisory, a public warning, about social media on May 23, 2023. The advisory states that "we do not yet have enough evidence to determine if social media is sufficiently safe for children and adolescents."

It cites a study of 6,595 American children aged 12 to 15. Those who spent more than 3 hours a day on social media had double the risk of symptoms of depression and anxiety. In the advisory, Murthy asked lawmakers to set safety rules and limits for children's use.

State lawmakers began to keep phones out of classrooms. Florida's lawmakers passed a law banning students' phone use during class time in 2023.

By January 2026, lawmakers in 26 states had banned phones for the whole school day, from the first bell to the last, according to a count by the group Ballotpedia. By July 2026, lawmakers in at least 39 states and Washington,

DC, had passed rules requiring schools to ban or limit phones, according to a tally by *Education Week*. The two counts differ because they count different kinds of laws.

Games played online, and with strangers

Minecraft is a game of building and digging in a world of blocks, played alone or with others. It came out in 2011. By 2023 it had sold more than 300 million copies, more than any other video game.

Roblox opened in 2006. Its players build games and play each other's games. According to the company, half of all American children under 16 play it each month. *Fortnite* came out in 2017. In its best-known version, up to 100 players land on an island and fight until one player or team is left.

Fortnite is free to play. The companies behind *Fortnite* and *Roblox* sell game money, called V-Bucks in *Fortnite* and Robux in *Roblox*, which players buy with real money and spend on costumes and other items inside the game.

The Fortnite case. Officials of the Federal Trade Commission, the government agency that enforces laws protecting buyers, accused Epic Games, the maker of *Fortnite*, of breaking the law on December 19, 2022. They said the company had collected information on children under 13 without their parents' permission. They said the game's settings turned on live voice and text chat for children, and that the company matched "children and teens with strangers to play Fortnite together."

Children had been "bullied, threatened, harassed," some of them sexually, and "exposed to dangerous and psychologically traumatizing issues such as suicide," the officials said. Epic employees had urged the company to change those settings as early as 2017. In a settlement, an agreement that ended the case, Epic Games agreed to pay $520 million.

Roblox. People who brought four lawsuits in June 2025 accused the company that runs *Roblox* of letting adults use the game for the sexual exploitation of children, which means using children for sex acts or sexual pictures. Every

Roblox player had to prove their age, with an ID or a video scan of the face, before chatting from January 2026. Chat was also limited to players of similar ages.

Esports are video game contests played for prize money. The first *Fortnite* World Cup, held from July 26 to 28, 2019, in New York City, paid $30 million in prizes. About 40 million players tried to qualify.

Kyle "Bugha" Giersdorf

Who: A 16-year-old who won the first Fortnite World Cup and $3 million.

When and where: Arthur Ashe Stadium, New York City, July 28, 2019.

He scored 59 points. The second-place player scored 33.

Kyle Giersdorf was born in 2002. His father, who also played video games, got him started on *Fortnite*. Kyle played under the name "Bugha." He joined an esports team called Sentinels on March 25, 2019. That summer he qualified for the first *Fortnite* World Cup, out of about 40 million players who tried.

The final. At 16, he played six games against 99 other finalists in Arthur Ashe Stadium in New York City on July 28, 2019. He scored 59 points, and the second-place player scored 33. He won $3 million, more than any other *Fortnite* player has won in total.

Hours after he won, someone broke into his Twitter account and his account on Twitch, a website where players show their games live to viewers. Later he became a streamer on Twitch, playing his games live for viewers there.

What is measured

Researchers who surveyed children after 2000 found that they walked less and had less free time than children in earlier years. Team sports cost families hundreds of dollars a year, children from richer homes played more, and more children had obesity.

Fewer children walk or bike to school. Nearly half did in 1969. By 2009 it was about 13 of every 100, according to the national travel surveys studied by Noreen McDonald and other researchers. In 2017 about 11 of every 100 students aged 5 to 17 usually walked or biked, according to a later government travel survey.

Less free time. Sandra Hofferth's later time diaries of children aged 6 to 12 showed their free time falling from about 57 hours a week in 1981 to about 48 hours in 2003, the year her diaries end.

The share who played a sport on the diary days fell from 76 to 60 of every 100 between 1997 and 2003. The share who spent time in outdoor activities fell from 16 to 10 of every 100.

The National Survey of Children's Health is a government survey of parents. It found in 2023 that 55 of every 100 children aged 6 to 17 played on a sports team or took sports lessons. Children from richer homes played more.

The gap was already plain in 2012. About 35 of every 100 children in homes earning under $25,000 a year played a sport regularly, against about 49 of every 100 in homes earning $100,000 or more. By 2024 the difference between those two groups had grown to about 20 of every 100 children, according to the Sports and Fitness Industry Association.

What it costs. The average parent spent $883 in a year on one child's main sport, in a 2022 survey by the Aspen Institute and Utah State University. Travel to games and tournaments cost more than any other part. The richest families spent about four times as much as the poorest.

Fifteen of the 50 states had rules in 2012 that recommended or required a daily recess, according to a 2013 report by the research group Bridging the Gap.

Doctors measure obesity by comparing a child's weight with the child's height. From 1971 to 1974, about 5 of every 100 children aged 2 to 19 had obesity. From 2017 to March 2020 it was about 20 of every 100, nearly four times as many, or about 14.7 million children, according to the Centers for Disease Control and Prevention. In the poorest homes it was about 26 of every 100, and in the richest about 12.

What researchers disagree about

ADHD stands for attention-deficit/hyperactivity disorder. Doctors diagnose it when a child has trouble paying attention, or is overactive and acts without thinking, badly enough to cause problems in more than one place, such as at home and at school.

The count. In national surveys of parents, 9.5 of every 100 children aged 4 to 17 had been diagnosed with ADHD in 2007, and 11 of every 100 in 2011. The researchers who reported those counts wrote that the rise "could also reflect better detection" and more awareness, not only more children with ADHD.

The American Psychiatric Association changed its rules for diagnosing ADHD in 2013. Its manual of mental disorders now allowed a diagnosis when symptoms began by age 12 instead of age 7. That change came after the 2011 count, so it could explain only a rise that came later.

In 2022, 11.4 of every 100 children aged 3 to 17 had been diagnosed, about 7.1 million children, according to a 2024 study by M. L. Danielson and other researchers. They wrote that the survey changed its methods in 2022, which makes it harder to compare 2022 with earlier years.

A study of screens and attention. Researchers have studied whether screens are linked to attention problems. A team at the University of Southern California, led by Chaelin Ra and Adam Leventhal, followed 2,587 high-school students in Los Angeles County for two years, in a study printed in 2018. None had serious ADHD symptoms at the start. Students who used more kinds of digital media many times a day later reported more ADHD symptoms.

Among students who used no kind of media that often, 4.6 of every 100 reported the symptoms. Among students who used seven kinds, 9.5 of every 100 did. The researchers called the link "modest." They wrote that more research was needed "to determine whether this association is causal," which means whether the media use caused the symptoms. The students rated their own symptoms, and doctors did not diagnose them.

Other researchers studied something different: how well teenagers felt. The Oxford researchers Orben and Przybylski studied surveys of 355,358 teenagers in the United States and Britain in 2019. They found that technology use explained "at most 0.4%" of the differences in how well teenagers felt. That is less than half of one percent. They called the link "too small to warrant policy change," meaning too small to be a reason for new laws or rules.

BY 2022: Ninety-five of every 100 teenagers had or could use a smartphone, 46 of every 100 said they were online "almost constantly," and researchers still disagreed about what screens did to children.

The argument over a book. The psychologist Jonathan Haidt of New York University published a book called *The Anxious Generation* in 2024. He wrote that phone and social media companies had "rewired childhood" by taking the place of play and time with friends.

The psychologist Candice Odgers of the University of California, Irvine, answered in the science journal *Nature* on March 29, 2024. She wrote that the book's "repeated suggestion that digital technologies are rewiring our children's brains and causing an epidemic of mental illness is not supported by science." She wrote that studies had found "a mix of no, small and mixed associations." She agreed that the social media companies needed to make large changes.

Football and the brain

Mike Webster was a center for the Pittsburgh Steelers who played 17 seasons in the NFL, from 1974 to 1990, and won four Super Bowls. After he retired he lost his memory, suffered from depression and pain, and at times lived in his pickup truck or in train stations. He died of a heart attack on September 24, 2002, at 50.

What Omalu found. Bennet Omalu, a doctor in Pittsburgh who examines bodies to find out why people died, studied Webster's brain. He found clumps of protein unlike those of Alzheimer's disease. Omalu and other doctors described the disease in a medical journal in July 2005. It is called chronic traumatic encephalopathy, or CTE.

Doctors link CTE to repeated blows to the head. Its signs can include problems with behavior, mood and thinking. It often gets worse over time, and it can lead to dementia, the loss of the ability to think and remember. Doctors can find it only by examining the brain after death.

What the league said. Paul Tagliabue, the league's commissioner, had set up the NFL's own brain injury committee in 1994. He named Elliot Pellman to lead it, a doctor who treated joints and muscles, not the brain.

The committee's papers stated from 2003 on that concussions, brain injuries from a hard blow to the head, caused no lasting harm in NFL players. In May 2006 committee members wrote to the journal asking it to take back Omalu's paper. Years later Jeff Miller, a league official, told members of Congress that "there is a link between football-related head trauma and chronic traumatic encephalopathy."

More than 4,500 former players sued the NFL, saying the league had hidden the dangers. Judge Anita Brody approved a settlement in April 2015 to pay retired players with brain illness for 65 years, expected to cost more than $1 billion. Families of players who died before 2006 were not covered, so Webster's family got nothing from it. The NFL's own Retirement Board had already paid his family $1.8 million in 2005, after finding that football caused his brain injuries.

The scoring rule. Until 2021 the dementia tests used to judge claims were scored as if Black players started with lower thinking skills than other players. That made it harder for Black players to prove dementia and be paid. The news accounts of the lawsuit do not name who set that scoring rule. After a lawsuit, NFL officials said in June 2021 that they would stop.

Children were hurt in football too. About 23,000 football brain injuries a year that did not kill the player sent people to emergency rooms, and 90 of every 100 of those hurt were aged 5 to 18. Pop Warner, a youth football program, had 9.5 percent fewer players in 2012 than in 2010, according to Robert Boland of New York University.

Researchers at Boston University had found CTE in the brains of 345 of the 376 former NFL players they studied by 2023. They warned that families who suspected the disease were the ones who gave the brains. So the figure does not mean that 92 of every 100 NFL players have CTE.

The team doctor who abused gymnasts

Larry Nassar worked with the USA Gymnastics national team from 1986. From 1996 to 2014 he was its national medical coordinator, the doctor in charge of the gymnasts' care. From 1997 to 2016 he was also a doctor for athletes at Michigan State University.

What he did. During appointments he said were treatment for pain, he put his ungloved finger into girls' vaginas. Sometimes a parent was in the room and could not see what he was doing. More than 500 girls and women were abused. Some were as young as 6.

Who was told. Many adults were told and did not stop him. Athletes said they told Michigan State employees about him as early as 1997. Court papers say the Michigan State gymnastics coach, Kathie Klages, was told in 1997, and they accuse her of pressuring gymnasts to stay quiet. Michigan State officials looked into a complaint in 2014 and let him keep treating patients.

A coach, Sarah Jantzi, reported him to USA Gymnastics on June 17, 2015. Its president, Steve Penny, told agents of the FBI, the federal police, in Indianapolis. The agents did not open a formal investigation or tell officials in

Michigan. Reporters at *USA Today* wrote that for more than a year Nassar went on "treating, and raping, gymnasts" in Michigan. Rape means forcing a person into a sex act.

Michael Horowitz, the Justice Department's inspector general, the official who checks for wrongdoing inside the department, reported in July 2021 that the FBI agent W. Jay Abbott had failed to act and later lied about it. At least 70 more girls and women were abused after the FBI was told. The victims put the number at 120.

The sentences. Reporters at the *Indianapolis Star* published the story in September 2016. Nassar pleaded guilty to federal crimes of having sexual pictures of children, and to ten counts of first-degree criminal sexual conduct with girls in two Michigan counties. Under Michigan law, first-degree criminal sexual conduct means sexual penetration of a person in certain cases, such as when the victim is under 13, and it can be punished with life in prison.

Judges sentenced him to 60 years in federal prison, and to 40 to 175 years and 40 to 125 years in Michigan, so he will die in prison. Before he was sentenced, more than 200 women and girls spoke about what he did to them, over nine days in court.

What happened to the others. The heads of USA Gymnastics, Michigan State and the US Olympic Committee resigned. Nassar's dean at Michigan State, William Strampel, was convicted of neglect of duty and spent a year in jail. Klages was convicted in 2020 of lying to police, and that conviction was overturned in 2021.

John Geddert, an Olympic coach who had employed Nassar at his gym, was charged in 2021 with human trafficking, forced labor, sexual assault and other crimes. Human trafficking means using force, tricks or threats to make people work or perform sex acts. He killed himself shortly after the charges were announced.

Michigan State paid $500 million to 332 victims in 2018. USA Gymnastics and the US Olympic and Paralympic Committee together agreed to pay $380 million in 2021. Three years later the Justice Department paid $138.7 million to victims who sued over the FBI's failure.

The Olympic gymnasts Simone Biles, McKayla Maroney, Maggie Nichols and Aly Raisman told senators on September 15, 2021, how FBI agents had handled their reports. Raisman said it "was like serving innocent children up to a pedophile on a silver platter." A pedophile is an adult who is sexually drawn to children. The FBI's director, Christopher Wray, said he was "deeply and profoundly sorry."

Rachael Denhollander

Who: A former gymnast who was the first woman to accuse Larry Nassar in public.

When and where: Kalamazoo and Lansing, Michigan, 2000 to 2018.

Movie: *Athlete A* (2020), a Netflix documentary by Bonni Cohen and Jon Shenk about the *Indianapolis Star* reporters and the scandal.

"How much is a little girl worth?" she asked the judge.

Rachael Denhollander was a club gymnast from Kalamazoo, Michigan. She was 15 in 2000 when she saw Larry Nassar for pain in her lower back. He sexually abused her on five visits.

At least seven other girls and women had told someone about Nassar over twenty years before she spoke. By 2016 she was a lawyer. She reported Nassar to the Michigan State University police and filed a complaint with the university in August 2016. The *Indianapolis Star* printed her accusation on September 20, 2016. Michigan State officials fired Nassar that day. By January 2018 more than 265 women and girls had been identified as his victims, and the count later passed 500.

In court. She spoke last at both of his sentencing hearings, in January and February 2018. She asked the judge, "How much is a little girl worth?" She answered that "everything is what these survivors are worth." Judge Rosemarie Aquilina called her "the bravest person I have ever had in my courtroom."

Time magazine named her one of its 100 most influential people of 2018. In 2019 she published a book about the case, *What Is a Girl Worth?*

College athletes paid

NCAA rules let college athletes receive only scholarships and school costs until 2021. California's governor, Gavin Newsom, signed the first state law letting college athletes be paid for their name, image and likeness, meaning for ads and appearances that use who they are, in September 2019.

All nine Supreme Court justices ruled against NCAA limits on education benefits on June 21, 2021, in *NCAA v. Alston*. Justice Brett Kavanaugh wrote that antitrust law, which forbids businesses from agreeing to hold down pay, "should not be a cover for exploitation of the student athletes." From July 1, 2021, NCAA officials let athletes be paid for their name, image and likeness.

The settlement. Grant House, a swimmer at Arizona State, and Sedona Prince, a basketball player, sued the NCAA in 2020. Judge Claudia Wilken approved a settlement on June 6, 2025. Athletes who played from 2016 to 2024 will share about $2.8 billion over ten years.

Each college may pay its athletes directly from the 2025-26 school year, up to about $20.5 million that year, a limit that rises 4 percent a year. Eight women athletes asked a higher court to change the settlement. They argued that most of the money would go to men who played football and basketball.

BY 2025: Doctors had tied CTE to football, Larry Nassar was serving prison sentences so long that he will die in prison, and a judge had approved a settlement under which colleges may pay their athletes directly.

Betting on games

A federal law of 1992 barred states from allowing betting on sports, except in Nevada and three other states. On May 14, 2018, in *Murphy v. NCAA*, a case New Jersey brought, the Supreme Court justices struck the law down. By September 2023, 38 states and Washington, DC, allowed betting on sports. Americans bet $121 billion with licensed sports betting companies in 2023, according to the American Gaming Association, the casino industry's trade group.

Jontay Porter. Adam Silver, the NBA's commissioner, banned Jontay Porter, a Toronto Raptors player, for life on April 17, 2024. League investigators found that Porter told a bettor about his own health before a game in March 2024. He then left that game after three minutes, saying he felt ill. A person he knew had bet $80,000 that Porter would play poorly. Porter had also placed at least 13 bets on NBA games.

Transgender athletes

A transgender girl is a girl who was counted as a boy at birth. Idaho's governor, Brad Little, signed the first state law keeping transgender girls and women off girls' and women's teams in March 2020. By June 2026, 27 states had passed such laws, according to the Supreme Court.

Lia Thomas, a transgender swimmer at the University of Pennsylvania, won a women's college title in 2022. On February 5, 2025, President Donald Trump signed an order titled "Keeping Men Out of Women's Sports." The next day NCAA officials limited women's college events to athletes counted as female at birth. In July 2025 officials of the University of Pennsylvania agreed with the federal government to change Thomas's records.

The Supreme Court. Six Supreme Court justices ruled on June 30, 2026, in *West Virginia v. B.P.J.* and *Little v. Hecox*, that Title IX allows schools to keep separate teams "defined by biological sex." Three justices disagreed in part. B.P.J., who is named in court only by her initials, had wanted to run on the girls' cross-country and track teams at her school in West Virginia. She was 11 when she first asked to play, according to Justice Sotomayor's opinion.

Protest and equal pay

Colin Kaepernick, the quarterback for the San Francisco 49ers, knelt during the national anthem before games in 2016. He was protesting police brutality, which means violence by police officers, and unfair treatment of Black Americans. He chose to end his contract with the 49ers in March 2017, and after that no team signed him.

Kaepernick accused the NFL's owners in October 2017 of secretly agreeing among themselves to keep him out. He settled with the league in February 2019, and the terms were kept secret. The NFL's commissioner, Roger Goodell, apologized in June 2020 for not listening to Black players' concerns.

Equal pay. Five players on the US women's soccer team, among them Hope Solo, Carli Lloyd and Megan Rapinoe, filed a complaint in April 2016 that they were paid less than the men's team. The women won the World Cup in 2019. US Soccer officials settled for $24 million in February 2022. In May 2022 they signed contracts that pay the women and the men equally.

The Haudenosaunee Nationals

The Haudenosaunee national lacrosse team, formed in 1983, is the same team as the Iroquois Nationals. The Haudenosaunee have issued their own passports since 1927. British officials refused to accept those passports for the world lacrosse championship in England in 2010. They told the 23 players to travel on US or Canadian passports. The players refused, and they did not play.

The team won third place at the world championships of 2014, 2018 and 2023. Olympic officials added lacrosse to the 2028 Los Angeles Games in October 2023, and they said that only countries with a national Olympic committee could enter. President Joe Biden and Canada's prime minister, Justin Trudeau, asked them on January 17, 2025, to let the Haudenosaunee play under their own flag. No decision on that request is on record as of September 2026.

The 2026 World Cup

FIFA, the group that runs world soccer, held the men's World Cup in the United States, Canada and Mexico from June 11 to July 19, 2026. It was the first with 48 teams. Of the 104 games, 78 were played in 11 American cities. About 6.8 million people went to the games, more than at any World Cup before.

Spain beat Argentina 1 to 0 after extra time in the final at MetLife Stadium in New Jersey. The US team lost to Belgium 4 to 1 in the round of 16.

Tickets for the final started at $6,730. For the first time, FIFA officials raised ticket prices as more people wanted them.

THE THREE QUESTIONS, ANSWERED

1. **Who invented baseball?** No one person did. Clubs wrote the rules, and the Knickerbocker club of New York adopted twenty of them in 1845. The story that Abner Doubleday invented it in 1839 rests on one letter from a man who was 5 years old that year.
2. **Who was kept out of American games, and how did they get in?** The people who ran the games kept out laborers, Black players, girls and Black swimmers, and left enslaved riders' names off the race cards. Some got in through courts and a new law, like Maria Pepe and the girls of Title IX. Jackie Robinson got in when Branch Rickey signed him, and Kathryn Johnston played anyway, under a boy's name.
3. **How has children's free time changed?** In the 1830s Lucy Larcom made doll furniture from burrs while the grown-ups left the children alone. Since then more of children's time has gone to lessons and organized sports, and by 2022, 95 of every 100 teenagers had or could use a smartphone.

What changed: Play moved from fields the players ran themselves to leagues, arenas and screens run by adults and companies, and the fight over who could play moved from a county court in Virginia to the Supreme Court.

FIVE DATES TO KEEP

September 10, 1674: a Virginia court calls racing "a sport only for Gentlemen."

September 23, 1845: the Knickerbocker club adopts twenty rules for baseball.

April 15, 1947: Jackie Robinson plays his first game for Brooklyn.

June 23, 1972: President Nixon signs Title IX.

July 28, 2019: Kyle Giersdorf, 16, wins the first *Fortnite* World Cup.

NOT KNOWN: how old the Native ball games played with sticks are, because no object or written record dates one before 1500.

Where to go: The National Baseball Hall of Fame in Cooperstown, New York, holds Josh Gibson's plaque, which says he hit "almost 800" home runs.

Next: Chapter 37, Holidays. It asks how each day on the American calendar got there, and who had the power to name a day.

Chapter 37: Holidays

CHAPTER 37 OF 37 · HOLIDAYS · 10 ERAS · ABOUT 95 MINUTES

Many American holidays exist because someone asked for a day and kept asking, and the arguing over some of them is not over.

In May 1877 a woman of 88 in Philadelphia had a helper write a letter for her, because her eyes were too weak. Her name was Sarah Josepha Hale. For about thirty years she had been asking governors and presidents to make Thanksgiving one day for the whole country. President Lincoln had proclaimed it in 1863. She was still asking Congress for a law that made the last Thursday in November a legal holiday. She died two years later. Congress passed that law in 1941.

Most of the days in this chapter were made that way. Someone asked for a day, and someone else said no, often for years. The chapter starts with the ceremonies the Native nations keep for corn, salmon and the winter sun, and with the Spanish, French and English colonists who each held a "first Thanksgiving" of their own. It follows the days Black Americans made for themselves when white Americans' holidays left them out, from election days in Connecticut to Juneteenth in Texas. It ends with the fights still going on over Columbus Day, King's day and Juneteenth. Watch for two things as you read: who had the power to name a day, and who kept a day without anyone's permission.

THREE QUESTIONS THIS CHAPTER ANSWERS

1. Who decided when Americans would give thanks, and why did it take until 1941 to fix the date?
2. Which days did Black Americans make their own, from election days to Juneteenth?

3. Why did President Harrison proclaim the first Columbus Day in 1892, and why do some states no longer keep it?

Five minutes? Read "Juneteenth, 1865" in 1850 to 1900. The Jack Yates story follows it.

Can skip: "Places named for holy days", "Washington's birthday", "Pinkster banned in Albany, 1811", "Columbus Day, 1905 to 1937". The chapter still makes sense without them.

Before 1500

ERA 1 OF 10 · BEFORE 1500 · ABOUT 6 MINUTES

The Native nations marked their year with ceremonies, and each one came at its own time. Some came when a group of stars rose, or when the sun reached the end of its path along the horizon. Others came when the corn ripened or when the salmon swam back up the river. At many of them, people gave thanks for food as it came in: maple sap, strawberries, the first ripe corn, the first salmon.

The oldest written descriptions of the Green Corn Ceremony date from the 1700s, and outsiders wrote them. The nations have written their own since, and they still hold many of these ceremonies today. The Wampanoag writer Nancy Eldredge says that her people and other Native peoples of the Northeast have given thanks this way "from time immemorial," which means since before anyone can remember. The five ceremonies below come from five parts of the land, the Northeast first and Hawaii last.

Who sets the dates in the Northeast

The Faith Keepers. On the Onondaga Nation's land just south of Syracuse, New York, men and women called Faith Keepers decide when each ceremony takes place. The Onondaga are one of the Haudenosaunee nations. They list seven ceremonies in their year: Midwinter, Maple Sap, Planting, Bean, Strawberry, Green Corn and Harvest. The Faith Keepers go by the seasons and the moon, so the dates change from year to year. Midwinter lasts 21 days, and on each day people give thanks for different things.

Haudenosaunee people often start and end their meetings with the Thanksgiving Address. They also call it the Words That Come Before All Else. The speaker gives thanks to the people, the earth, the waters, the fish and the plants, one at a time. Then come the food plants and the medicine plants, and the thanks go on from there. Each part ends with the words "Now our minds are one." An English translation of the Mohawk version was published in 1993.

Farther east lived the Wampanoag. Nancy Eldredge, a Nauset Wampanoag writer, wrote about her people's thanksgiving ceremonies in 1998. They held one in early spring, for a good growing season, and one in the fall, for the harvest. They also gave thanks for strawberries and cranberries as each one ripened, through the thirteen moons of their year. The Wampanoag Tribe of Gay Head (Aquinnah), on the island of Martha's Vineyard, still holds Cranberry Day each October. The day opens with a greeting at sunrise. People pick cranberries, share a meal and set aside a share for the elders.

Why every fire in a Creek town went out

Once a year, every fire in a Muscogee (Creek) town went out. The Muscogee and other nations of the Southeast held the Green Corn Ceremony in midsummer, when the first corn was ripe. It lasted four or eight days. Men fasted, which means they went without food, and women, children and old people could eat certain foods. During the ceremony, people forgave every crime except murder.

What Bartram saw. William Bartram, a Philadelphia man who studied plants and animals, traveled through Creek towns in the 1770s. In a book printed in 1791, he wrote that the Creek had a feast for almost every month of the year. He called the Green Corn Ceremony the busk and said it was the most important one. Each town held its own busk in August, when its own corn was ripe.

Families made new clothes, pots and pans, and swept their houses and the whole town. Then everyone piled the worn-out clothes and the old grain in one heap and set it on fire. On the fourth morning, the high priest made a new fire by rubbing dry wood together, and every house took its fire from it. Then the women brought in the new corn, and people danced in the square at night.

Accounts differ on how long the men fasted. Bartram gives three days. Eric Bowne, writing for the Encyclopedia of Alabama, gives one and a half to two days. Three men who saw the ceremony in the 1700s wrote early accounts of it: James Adair in the middle of the century, Bartram in the 1770s, and Benjamin Hawkins, who wrote about the Creek country in 1798 and 1799. Creek and Yuchi towns in Oklahoma still hold the ceremony at their stomp grounds, the grounds each town keeps for it.

How a Sun-priest sets the calendar

In Pueblo towns today, a man called the Sun-priest watches where the sun comes up over the horizon. He usually watches at sunrise, from a quiet spot not far from the town. (*Pueblo* is the Spanish word for a town, and the Pueblo peoples of the Southwest get their name from the towns they live in.) The point where the sun rises moves along the horizon through the year, so from his sightings he can tell the time of year. From them he sets the planting calendar and the dates of the ceremonies.

The Hopi of northeastern Arizona begin their year of ceremonies with the Soyal ceremony at the winter solstice in December. The winter solstice is the shortest day of the year. After Soyal, each village holds a ceremony about once a month until the Niman, or Home Dance, in late July.

The First Salmon Feast on the Columbia River

The Yakama, Umatilla, Warm Springs and Nez Perce peoples say that when the Creator was about to bring people onto the earth, Salmon offered his body to feed them. These peoples fish for salmon in the Columbia River and its branches in the Northwest. Each spring, before the fishing season opens, they hold a First Salmon Feast.

At the feast, drummers sing, and a bell rings for everyone to stand for a prayer song. People bless water and drink it first. Then they eat the salmon and the other foods. At Celilo, on the Oregon bank of the Columbia, people hold the feast in the longhouse, a long building where the community gathers for ceremonies. There the feast usually falls on the second weekend of April.

Makahiki, the season when chiefs could not make war

Hawaiians kept their own calendar long before the islands became American land. Their new year began when the Pleiades, a small group of stars they call Makaliʻi, rose at sunset in late October or early November. The season that followed was called Makahiki. Kaʻanoʻi Walk of the Kamehameha Schools gives mid-November as the usual start of Makahiki and late January or February as its end. (The islands became American land in July 1898, when members of the US Congress voted to take them over and President William McKinley signed their resolution on July 7.)

The Hawaiian historian David Malo was born in about 1793. He wrote that Makahiki lasted four months. Priests carried an image of the god Lono around the island. At the edge of each district, the local chief handed over the taxes the people owed to the king. They paid in goods: pigs, taro, sweet potatoes, feathers, kapa cloth and mats.

Taro is a plant with a starchy root that Hawaiians cooked and ate, and kapa is cloth made by beating tree bark thin. Chiefs could not make war on each other during the season. People held races, boxing and wrestling matches, and games of skill.

The 1500s

ERA 2 OF 10 · THE 1500S · ABOUT 5 MINUTES

Spanish and French colonists brought the Christian church year to a few places on the coast of Florida and along the Rio Grande. The church year is a calendar of holy days: Sundays, Easter, Christmas and the feast days of saints, the days kept each year to honor holy people. The colonists named places after those days. When they landed, they held church services to give thanks.

Today people in St. Augustine, in Jacksonville and in Texas each call a different one of those services the "first Thanksgiving." The national holiday came from English days of thanksgiving instead, as the National Park Service's own page on St. Augustine says. Across the rest of the land, the Native nations kept their own ceremonies.

Places named for holy days

Juan Ponce de León claimed the coast of what is now Florida for Spain on April 2, 1513. It was the Easter season, which Spanish speakers called *Pascua Florida*. He named the land *La Florida* after it.

Pedro Menéndez de Avilés sighted the same coast on August 28, 1565, the feast day of Saint Augustine. Menéndez named the town he founded St. Augustine.

Two services of thanks on the Florida coast, and the killings that followed

French Protestants, Christians whose churches had broken away from the Catholic Church, built Fort Caroline in June 1564, near what is now Jacksonville. The French called these Protestants Huguenots. The land belonged to the Timucua people. The Huguenots' leader, René de Laudonnière, wrote that on June 30, 1564, he had his people gather on the beach. There he ordered them to sing aloud and give thanks to God for their safe arrival.

Menéndez and about 800 Spanish settlers came ashore at Seloy, a Timucua town, on September 8, 1565. A priest, Father Francisco López de Mendoza Grajales, said a Mass of thanksgiving, the main church service of the Catholic Church. Afterward, the priest wrote, Menéndez "had the Indians fed and dined himself."

The historian Michael Gannon called this Mass and meal "the first community act of religion and thanksgiving in the first permanent European settlement" in North America, and the National Park Service repeats his words. The Mass came 56 years before the English colonists' harvest meal at Plymouth, in New England. The same Park Service page states that the day "did not become the origin of a national annual tradition."

What the Spanish did next. Within five weeks of the Mass, Menéndez's soldiers killed hundreds of French men, many of them after they had surrendered. They captured Fort Caroline on September 20, 1565, twelve days after the Mass, and killed most of the men there. They spared the women and children and shipped them to Havana, in Cuba.

Shipwrecked French survivors then surrendered at an inlet south of St. Augustine, in two groups. Menéndez wrote that his men tied the hands of the first group behind their backs and "put them to the knife," which means they stabbed them to death. The second group came in with the French commander, Jean Ribault. By the Park Service's count, the soldiers killed 111 men from the first group, in late September, and 134 from the second, in October. The Spanish named the inlet Matanzas, which means "slaughters."

Two counts. Menéndez's own letter to King Philip II of Spain records different numbers, and Chapter 22 tells the killings in full. He wrote that his men cut the throats of 132 men at Fort Caroline, and of 10 more the next day. He wrote that Ribault came in with up to 70 men, and that he spared only five of them: two young men of about 18, and three musicians who played the fife (a small flute), the drum and the trumpet. He killed Ribault and all the rest.

In the same letter, dated October 15, 1565, Menéndez told the king why he had killed them. He wrote that they "spread the Lutheran sect," which meant the Protestant faith. He also wrote that they had built their fort "without permission of Your Majesty."

The thanksgiving Texans claim, 1598

Juan de Oñate led about 500 people north across the Chihuahuan Desert to start a Spanish colony in New Mexico. They were soldiers, colonists, wives and children. They brought about 7,000 farm animals. The crossing took about 50 days. They reached the Rio Grande near what is now San Elizario, Texas.

Oñate ordered a day of thanksgiving after ten days of rest, on April 30, 1598. Franciscan friars, men who had promised their lives to prayer and service in the Catholic Church, said Mass. The colonists ate game they had hunted and fish that Manso people, who lived nearby, brought them. One of the colonists wrote, "We built a great bonfire and roasted the meat and fish." Then Oñate read out a claim to the land for King Philip II. The claim is called La Toma, "the taking."

Some Texans call this day the first Thanksgiving. Others have made the same claim for a celebration held by Francisco Vázquez de Coronado's men in Palo Duro Canyon in 1541. The *Texas Almanac* states that this claim was later questioned.

What John White painted at Secotan, 1585

The English artist John White visited Secotan, a town in what is now North Carolina, in July 1585. Its people spoke an Algonquian language, one of a family of related Native languages. White painted a large ceremony there. Men and women sang and danced around a circle of wooden posts. Some shook gourd rattles, and some carried leafy branches.

Thomas Hariot, an Englishman on the same voyage, wrote a description of the scene. He wrote that the posts were carved with heads like the faces of nuns in their veils. He wrote that the dancers dressed in "the most strange fashion they can devise" and had marks on their backs to show which place they came from.

Encyclopedia Virginia describes the ceremony as "perhaps connected to the corn harvest." The records that survive do not say what the ceremony was called or what it meant to the people of Secotan.

The 1600s

ERA 3 OF 10 · THE 1600S · ABOUT 9 MINUTES

John Smith and his men kept Christmas in a Native town in Virginia in the winter of 1608 to 1609. Fifty years later, in 1659, the lawmakers of Massachusetts Bay made keeping Christmas a crime. English colonists did not agree about holidays. The Puritans, English Protestants whose leaders ran the New England colonies, kept Sundays as holy days but did not keep Christmas, because nothing in the Bible told Christians to keep it.

When a drought threatened the crops, Puritan leaders called a day of fasting and prayer. After rain, a good harvest, the safe arrival of ships or a victory, they called a day of thanksgiving, spent in church.

In the fall of 1621, the colonists at Plymouth held a harvest meal. About ninety Wampanoag men joined them, and the meal went on for three days. Americans now call it the first Thanksgiving. Nobody in print gave it that name until 1841.

Christmas and thanksgiving in Virginia

John Smith and his men were caught by bad weather at Kecoughtan, a Native town in Virginia, in the winter of 1608 to 1609. They stayed six or seven days, over Christmas. Smith wrote that they "were never more merry." He wrote that they had never eaten more good oysters, fish, meat, wild birds and bread. He also wrote that he had never had better fires in England than in the dry, smoky houses of Kecoughtan.

Berkeley Hundred. The ship *Margaret* landed 35 settlers and their captain, John Woodlief, at Berkeley Hundred on the James River on December 4, 1619. The land there was home to Native nations, among them the Chickahominy, the Paspahegh and the Weyanock.

Before the settlers left England, a group of men there called the Berkeley Company had given them ten written orders. The first order said the day of arrival "shall be yearly and perpetually kept holy as a day of Thanksgiving to Almighty God," and perpetually meant forever. The settlers held a service of thanks that day. The records do not show whether they held it again in the next two years.

Powhatan men attacked the English settlements along the James River on March 22, 1622. Their leader, Opechancanough, meant to stop the English from taking more Powhatan land, as Chapter 22 describes. Powhatan fighters killed eleven people at Berkeley. In 1958 Senator John Wicker, the Jamieson family and descendants of John Woodlief began holding the Berkeley thanksgiving again.

The harvest meal at Plymouth, 1621

The Plymouth colonists built their town in 1620 on the site of Patuxet, a Wampanoag town. An epidemic, a disease that spread through many people at once, had killed most of the people of Patuxet between 1616 and 1619. Of the 102 people who came on the *Mayflower*, 53 were still alive by the fall of 1621: 24 men, 5 women and 24 children and teenagers.

Only two people who were there wrote about that fall's harvest. One was Edward Winslow, in a letter of December 1621 that was printed in London in 1622. The book it was printed in is now called *Mourt's Relation*. The other was William Bradford, the governor, who later wrote a history of the colony that runs to the year 1650.

Winslow wrote that after the harvest, the governor sent four men to hunt birds "so we might after a special manner rejoice together." Massasoit, the leader the English called the Wampanoag's "greatest king," came "with some ninety men." The English "entertained and feasted" them for three days. The Wampanoag men went out, killed five deer, and gave them to the governor and other leaders.

Massasoit's own name was Ousamequin. The two sides had made an alliance earlier that year. To the Wampanoag, an alliance was a spoken agreement sealed by giving gifts. Historians at Plimoth Patuxet Museums think Ousamequin's visit was probably a show of strength, and that the two sides needed to renew such agreements, perhaps regularly, to keep the terms alive in memory.

Neither Winslow nor Bradford called the meal a thanksgiving. To the colonists, a thanksgiving was a day of prayer in church.

Later Americans called the Plymouth colonists the Pilgrims. By 1816 New Englanders already credited the Pilgrims with starting their yearly thanksgiving. That year a writer in the *Salem Gazette* called it the festival that "our Pilgrim forefathers" began. In 1841 a Boston minister, Alexander Young, printed Winslow's letter. His note read: "This was the first Thanksgiving,

the harvest festival of New England." The Plimoth Patuxet Museums page identifies that note as the first time anyone called the 1621 meal the first Thanksgiving.

William Bradford

Who: Governor of Plymouth Colony, who wrote the colony's history, *Of Plimoth Plantation*.

When and where: Plymouth, in what is now Massachusetts, 1621 to 1623.

Christmas Day 1621: the governor took away the bat and the ball.

On Christmas Day 1621, Bradford called the men of Plymouth out to work. Most of the men who had just arrived on the ship *Fortune* said that working on Christmas went against what they believed was right. Bradford let them stay behind. At noon he came back and found them playing games in the street. Some were "pitching the bar," a contest to see who could throw a heavy bar or pole the farthest. Others were playing stool-ball, a game played with a ball, a bat and a stool.

Bradford took their equipment away. He told them that if keeping the day was a matter of faith, they could keep it by praying in their houses. He said there would be no games or noisy fun in the streets.

In 1623 no rain fell on Plymouth from the third week of May until the middle of July. Bradford wrote that the corn began to wither. The colonists held what Bradford called "a solemn day of humiliation," a day set aside for "humble and fervent prayer." Rain came, and the harvest was good. Then they held a day of thanksgiving.

Fast days and thanksgiving days in New England

The Puritan leaders of New England called a fast or a thanksgiving when something happened. Each one was a day of church services, so the dates changed from year to year. In Massachusetts Bay, the members of the General Court, the colony's lawmakers, set these days together with the elders who led the churches.

One example. The lawmakers asked the elders in September 1638 to keep a thanksgiving on the last Thursday of the eighth month. The colony's lawmakers counted the months from March, so their records call August "the 6th Month." So the eighth month was October. The thanks were for the many ships that had arrived safely that year, for the good weather in the spring and for the ripening harvest.

A thanksgiving for a massacre, 1637

The Massachusetts Bay colonists held a day of thanksgiving in 1637 for a victory in which colonists killed hundreds of Pequot people. Before dawn on May 26, 1637, Connecticut colonists under Captain John Mason, with Mohegan and Narragansett allies, attacked the Pequot town at Mystic. The town had a wall of wooden posts around it. Mason's men set it on fire and shot the people who tried to escape. They killed between 400 and 700 Pequot, most of them old men, women and children, by the count in the Mashantucket Pequot Tribal Nation's own history.

The order. That August the lawmakers asked the magistrates, the colony's judges and officials, to talk with the church elders about a day of thanksgiving for the soldiers' return. They also asked each town to hold a feast for its soldiers. Later that year they ordered that October 12, 1637, be kept as a day of thanksgiving to God.

The order lists the reasons for the thanks: "subdewing the Pecoits," meaning defeating the Pequot, and "bringing the soldiers in safety." It also lists "the successe of the conference" and good news from Germany. "The conference"

was most likely the meeting of ministers at Newtown, now Cambridge, from August 30 to September 22, 1637. The ministers met to settle a quarrel over church teachings.

A claim that spread. William B. Newell, a Penobscot scholar, said that "the first official Thanksgiving Day commemorated (marked the memory of) the massacre of 700 Indian men, women and children during one of their religious ceremonies." A massacre is the killing of many people who cannot defend themselves. Newell was described as a former head of anthropology, the study of human peoples and their ways of life, at the University of Connecticut. Jeremy Bangs, writing for the History News Network in 2005, answered that Newell never headed that department and that Plymouth Colony took no part in the attack.

KNOWN:	The court records show that the lawmakers set October 12, 1637, as a day of thanksgiving for the victory over the Pequot, and set other days for other reasons, such as the 1638 day for the ships, the spring weather and the harvest.
NOT KNOWN:	No record of the attack mentions a ceremony at Mystic that morning.

Christmas made a crime, 1659 to 1681

The law. The lawmakers of Massachusetts Bay passed a law against Christmas on May 11, 1659. Anyone found "observing any such day as Christmas or the like, either by forbearing of labor, feasting, or any other way" had to pay a fine of five shillings. Forbearing of labor meant not working, and twenty shillings made an English pound.

The Puritans saw Christmas as a season of too much eating and drinking, with nothing in the Bible behind it. The minister Increase Mather called Christmas "a profane and superstitious custom," meaning one that was not holy and rested on false beliefs about magic and luck.

In 1681, under pressure from King Charles II's government in London, the lawmakers canceled the Christmas law. People in Massachusetts went back to keeping Christmas slowly. By the 1750s some hymn books in Massachusetts had Christmas songs in them. By 1760 most almanacs, small books printed each year with a calendar, marked December 25 as Christmas. Families there began to make it a home holiday in the early 1800s.

Ceremonies banned in New Mexico

In New Mexico, Spanish church leaders and governors tried to end the Pueblo people's own ceremonies. From 1656 to 1665, the head of the Franciscan friars there, Alonso de Posada, forbade those ceremonies. He ordered the friars to break into the kivas, the underground rooms where the Pueblo people worship. There the friars were to burn the masks and take or destroy the sacred objects.

Treviño's arrests. Governor Juan Francisco Treviño had 47 Pueblo religious leaders arrested in 1675 for practicing sorcery, which means using magic to do harm. Spanish officials sentenced four of them to be hanged. They hanged three, and the fourth killed himself. The officials shamed the rest, whipped them in public and sent them to prison.

Then a force of Pueblo men went to Santa Fe, and Treviño freed the prisoners. One of the men freed was Po'pay, who had been whipped in public. Cliff Fragua's statue of Po'pay shows the scars of the whipping on his back. In August 1680 he led the Pueblo Revolt, and the Pueblo people drove the Spanish out of New Mexico for twelve years.

1700 to 1750

ERA 4 OF 10 · 1700 TO 1750 · ABOUT 4 MINUTES

Boston boys paraded every November 5 with figures of the Pope, and New York's enslaved and free Black people gathered each spring for Pinkster, a holiday the Dutch had brought. Between 1700 and 1750, people in different colonies kept different days, and many of those days came from Britain. New England governors ordered days of thanksgiving and days of fasting by printed order. In 1746 a Massachusetts governor banned ordinary work on a day of thanksgiving. In New England, Black communities began choosing their own governors and kings.

Thanksgiving and fast days by the governor's printed order

In Connecticut and Massachusetts, the governor named the days of thanksgiving and the days of fasting. Printers published his order on a large single sheet of paper called a broadside.

Governor Gurdon Saltonstall of Connecticut set Wednesday, November 8, 1721, as a day of thanksgiving, in an order dated October 14. Smallpox, a disease that passes from person to person and can kill, was then spreading in Boston. In his order, Saltonstall gave thanks that the sickness had not reached Connecticut. He also gave thanks for the peace, for that year's harvest and for the birth of a prince in the royal family, Prince William Augustus.

Governor William Shirley of Massachusetts ordered a thanksgiving for Thursday, August 14, 1746. Soldiers under the Duke of Cumberland had defeated rebels in Scotland. Shirley called on people to go to worship that day. His order said, "all servile Labour is prohibited on said Day." Servile labor meant ordinary work. Massachusetts governors also ordered fast days. Jonathan Belcher ordered one in 1734, and Spencer Phips ordered another in 1745.

Why Boston boys burned the Pope every November 5

Pope's Night began with a plot in England. In the early hours of November 5, 1605, men loyal to King James I searched the cellars under Parliament, England's lawmaking body, in London. They found a man named Guy Fawkes there, in a cloak and hat, with boots and spurs, carrying fuses and matches. He and a group of other English Catholics had planned to kill the king when Parliament opened.

The members of Parliament then passed a law for a public thanksgiving every November 5. In New England the day became Pope's Night, and crowds burned figures of the Pope, the head of the Catholic Church.

In Boston, young men and older boys built wagons that carried moving figures of the Pope, devils and political enemies. One figure was the Stuart Pretender, a man who claimed he should be king of Britain. Some of the young men dressed as devils in tall pointed caps, and some dressed as women. They paraded through town and asked homeowners for money. The night ended with a meal outdoors and a bonfire.

Boston had two gangs, one from the North End and one from the South End. Each gang built its own Pope wagon, and on Pope's Night the two gangs fought each other. The winners burned the losing gang's figures on Copp's Hill or on the Common, a large open field in the middle of Boston.

The printer Isaiah Thomas, born in 1749, remembered the crowds as a boy. They blew on conch shells, beat on the sides of houses with clubs and shouted "North end forever" or "South end forever." Thomas was once knocked out by a brick. Another Boston boy, Henry Knox, once held up a corner of a Pope wagon. Knox later became a general in the Revolution.

Pinkster in New York

Pinkster is the Dutch name for Pentecost, a Christian feast held seven weeks after Easter. Dutch settlers brought it to their colony of New Netherland in the 1620s. That colony later became New York. The oldest known written account of Pinkster appeared in the *New-York Weekly Journal* in March 1737. It describes a Pinkster gathering in the fields outside New York City, with African-style musical instruments.

The celebration lasted several days. Enslavers gave enslaved men and women time off at Pinkster. Many traveled from farms into the city to see family members who lived some distance away. They sold berries, herbs, drinks, oysters and sassafras bark, which people boiled to make tea.

Black governors and kings in New England

Black communities in New England held elections of their own. Where white men elected their governor, as in Connecticut and Rhode Island, Black communities elected a Black governor. Where the king of England appointed the governor, as in Massachusetts and New Hampshire, they elected a king.

The earliest Black governor whose name survives is Hercules, of New London, Connecticut, from about 1749. He is known from the gravestone of his wife, Florio. The elections in Connecticut may have begun that year.

In Connecticut the Black election came the day after the white men's election, and the celebration went on for a week. Some people borrowed clothes from the men and women who enslaved them. The enslaver of the man who won was expected to help provide the food, the decorations and the liquor. People ate gingerbread and thick election cakes full of fruit, and drank rum. The parades had gunshots, tambourines, banjos, fiddles and drums, and some marchers spoke African languages.

1750 to 1800

ERA 5 OF 10 · 1750 TO 1800 · ABOUT 11 MINUTES

Americans held the first planned Fourth of July celebrations on July 4, 1777, the first anniversary of independence. Within a few years they also celebrated George Washington's birthday. Neither day was a national holiday yet. The Continental Congress was the meeting of men sent by each state to lead the Revolution. Its members asked Americans to keep days of thanksgiving on dates they chose. Later President Washington did the same. None of them set a yearly date.

Older customs changed during the Revolution. Boston's crowds turned Pope's Night into a protest against British taxes, and General Washington banned it in his army. At Washington's own plantation, the evidence points to four days off at Christmas for most enslaved workers. The Washingtons made the enslaved people who worked in the house do extra work, serving their guests.

Pope's Night turns into protest, 1764 to 1775

A Pope wagon in Boston ran over and killed a boy named Brown on Pope's Night, November 5, 1764. Accounts give his age as five to nine. The records that survive do not give his first name or say who was driving. The boy died early in the day. The parades and the fight between the gangs went on that night.

The Stamp Act crowds. Crowds in Boston protested the Stamp Act, a British tax on printed paper, in August 1765. They used the customs of Pope's Night: they hanged and burned figures, marched through town and lit bonfires. They broke into three or four large houses and smashed the furniture. Ebenezer Mackintosh, a shoemaker and the captain of the South End gang, led the crowd on August 14. On August 26 a crowd attacked the house of Lieutenant Governor Thomas Hutchinson. Afterward Sheriff Stephen Greenleaf arrested Mackintosh, then let him go.

That fall Mackintosh made a deal with Henry Swift, the captain of the North End gang. A Boston printer, John Boyle, wrote it down: "A Union established between the South and North End Popes." On Pope's Night the two gangs

joined as one, and they sat down to a dinner that wealthy merchants paid for.

Washington's order. General George Washington ordered his soldiers on November 5, 1775, not to keep "that ridiculous and childish Custom of burning the Effigy of the pope." An effigy is a figure made to look like a person. He wrote that the custom was improper "at a time when we are soliciting (asking for), and have really obtained the friendship and alliance of the people of Canada."

Pope's Night ended in Boston during the Revolution. By one account it ended in the mid-1770s. By another, Boston crowds kept it again in 1776 and 1777 and stopped when soldiers from France, a Catholic country, arrived to fight on the American side.

The first Fourth of July, 1777

The members of the Continental Congress voted for independence on July 2, 1776. The next day John Adams wrote to his wife, Abigail. He wrote that July 2 would be celebrated as "the great anniversary Festival" and that the day "ought to be solemnized with Pomp and Parade, with Shews, Games, Sports, Guns, Bells, Bonfires and Illuminations from one End of this Continent to the other." By solemnized he meant marked with ceremony, shews were shows, and illuminations were candles lit in the windows. The members of Congress formally approved the Declaration of Independence on July 4, and that is the date Americans celebrate.

Crowds greeted the public readings of the Declaration in July 1776 with parades, bonfires and gunfire. The first planned Fourth of July celebrations came a year later, in Philadelphia and in Boston.

The first planned Fourth. In Philadelphia on July 4, 1777, the armed ships in the Delaware River were hung with flags. At one o'clock each ship fired thirteen cannon, one for each state. That night bells rang and fireworks went up over the city's common, and people lit candles in their windows. A Philadelphia newspaper, the *Pennsylvania Evening Post* of July 5, 1777, describes the day. In 1781 Massachusetts lawmakers made the Fourth of July an official state holiday, the first state to do so.

Henry Wight

Who: A minister and Revolutionary War veteran who started the Fourth of July celebration in Bristol, which the town still holds.

When and where: Bristol, Rhode Island, from 1785.

The oldest Fourth of July that never stopped: Bristol, since 1785.

Henry Wight began the yearly Fourth of July ceremony in Bristol, Rhode Island, in 1785, when he led the town's first Patriotic Exercises. In a speech that day he honored the veterans of the war and celebrated the new country's freedoms. The town has held the ceremony every year since, and the town government calls it the oldest Fourth of July celebration in the United States that has never stopped.

Wight had left his studies at Harvard to serve in the Revolutionary War. One account says he served as a soldier. Another says he served as a surgeon, a doctor who operates on the body. In January 1785 the 36 members of the First Congregational Church of Bristol hired him as their minister.

Whose land Bristol stands on. Bristol stands on Mount Hope, called Montaup in the Pokanoket language, in the homeland of the Pokanoket Wampanoag. The Wampanoag leader Metacom, whom the English called King Philip, had his base there and led a war against the New England colonies in 1675 and 1676, called King Philip's War. On August 12, 1676, in an ambush at Mount Hope led by the English captain Benjamin Church, a Native man serving with the English shot Metacom dead.

The English put his head on display at Plymouth and sold his wife and nine-year-old son into slavery. In 1680 Plymouth Colony's leaders sold Mount Hope to four Boston merchants for 1,100 pounds, and the town of Bristol was founded there.

Before Wight. The people of Bristol had already marked the Fourth with cannon. In 1777, one account says, "they ushered in the morning by firing 13 cannons, one for each colony." What began in 1785 was the

> yearly ceremony. The town's Fourth of July committee gives the early 1800s as the likely start of Bristol's parade. Wight died in 1837.

Thanksgiving days for the new country

The British general John Burgoyne and his army surrendered to American soldiers at Saratoga, New York, on October 17, 1777. The members of the Continental Congress then set December 18, 1777, as a day of thanksgiving for the whole country. Over the war years they named at least one day of fasting or of thanksgiving in every year from 1775 to 1783.

Elias Boudinot of New Jersey was a member of the new House of Representatives. In 1789 he asked the other members of Congress to request a day of thanksgiving. The members of both houses agreed. They asked the president to name a day of thanks for the chance "peaceably to establish a form of government." On October 3, 1789, President George Washington named Thursday, November 26, 1789, as a day of thanksgiving.

Washington sent his order to the state governors. On the day, he went to church at St. Paul's Chapel in New York City. He sent beer and food to men held in prison because they owed money.

A second day, 1795. Thousands of farmers in western Pennsylvania took up arms in 1794 against a federal tax on whiskey. This uprising is called the Whiskey Rebellion. Washington led an army of militia, citizen soldiers, against it, and the rebel leaders fled. On January 1, 1795, Washington named February 19 as a day of thanksgiving. One of the reasons he gave was the end of the uprising. None of these days became a yearly holiday.

Washington's birthday

Soldiers at the army's winter camp at Valley Forge, Pennsylvania, gathered on George Washington's birthday in 1778 to wish him well. In 1779 people in Milton, Massachusetts, held a public celebration of the day.

Washington was not born on February 22 by the calendar used in his time. When he was born, the date was February 11, 1731. In 1751 the members of Parliament passed a law that moved Britain and its colonies to the calendar used today.

To catch up with that calendar, they took eleven days out of September 1752. In Britain and the colonies, the day after September 2, 1752, was September 14. The same law moved the start of the year from March 25 to January 1. Under the old count, a February birthday fell near the end of the year 1731. Under the new calendar, Washington's birth date became February 22, 1732.

Four days off at Christmas, and who got none

Mount Vernon was George Washington's plantation in Virginia. Mary V. Thompson, writing for Mount Vernon, says the evidence shows that most enslaved workers there had four days off at Christmas. They used the days to rest and to visit family, at Mount Vernon and on nearby plantations. For the enslaved cooks, housemaids, waiters and others who worked in the house, Christmas brought no rest. The Washingtons had extra guests over the holiday, and they made these workers do extra work.

Philip Vickers Fithian was a tutor from New Jersey, in his twenties, a teacher who lived with a family and taught its children. He spent Christmas 1773 at Nomini Hall, the Virginia plantation of Robert Carter. His journal records that the workers who served him kept working that Christmas morning, and he gave five of them small tips in bits, small silver coins. He wrote that guns fired all around the house woke him.

Nelson, a boy Fithian counted among the "Servants," came in early, dressed only in his shirt and breeches, short pants that ended at the knee. He built a big fire, blacked Fithian's shoes, tidied the room and wished him a joyful Christmas. Fithian gave him half a bit.

Before Fithian was dressed, the man who made the fire in the schoolroom came in. He was dressed neatly in green and was almost drunk, and he bowed three or four times. Fithian did not write his name.

Then an enslaved worker sent in Fithian's clean clothes with a message asking for a "Christmas Box," a small gift of money. Fithian gave a bit to each of these two men. He gave two bits to Tom the coachman, who was caring for his lame horse, and half a bit to Dennis, a boy who waited at table. In all he gave five bits, a little over three shillings.

Black governors in wartime Hartford, 1776

Black communities in Connecticut kept electing Black governors through these years. In Hartford, London was governor in 1755, while Thomas Seymour held him enslaved. Quaw, governor in 1760, was enslaved by George Wyllys, the secretary of the colony. Cuff was governor from 1766 to 1776.

These governors had little power of their own. A Black governor had no power to punish a white person who wronged a Black person.

John Anderson

Who: An enslaved man who became Hartford's Black governor in 1776, in a dispute that white officials investigated as a possible plot.
When and where: Hartford, Connecticut, 1776 to 1780.

A Black governor named without an election, two months before independence.

John Anderson became the Black governor of Hartford in May 1776, two months before the Declaration of Independence. White officials investigated his choice as a possible British plot.

That May, white men in Connecticut elected Jonathan Trumbull governor again. He had been governor since 1769. Soon after, Cuff, the Black governor of Hartford, resigned. He named John Anderson as governor in his place, without an election. Major French recorded it in his journal on May 11, 1776.

Anderson was enslaved by Philip Skene, who had been a major in the British army. The Americans held Skene as a prisoner, because they suspected he was loyal to Britain. White people in Hartford feared that Skene planned to use Anderson to bring Black people over to the British side. Members of a committee of Connecticut officials investigated.

Who paid. The committee found that money had been offered to win Black people's support for Anderson. Two accounts disagree about who offered it: Skene, or Anderson himself. Chris Menapace writes that Skene tried to pay Black people to back Anderson, and that many refused to back an enslaved man owned by a Loyalist, a colonist who stayed on the king's side. Skene told the committee he had offered the money "for amusement." Andy Piascik writes that Anderson himself paid some Black people to support him, and that the committee cleared Anderson of any plot. By Piascik's account, Connecticut officials approved a four-year term for Anderson. He served as governor until 1780.

1800 to 1850

ERA 6 OF 10 · 1800 TO 1850 · ABOUT 10 MINUTES

Wealthier families and newspaper editors in American towns worked, in the first half of the 1800s, to turn Christmas from a noisy street holiday into a day for families and children. In a poem printed in 1823, St. Nicholas comes down the chimney to fill the children's stockings. Thanksgiving was still mostly a New England day. Sarah Josepha Hale, a magazine editor, began asking governors and presidents to make it one day for the whole country.

Enslavers in the South gave enslaved people three to six days off at Christmas. In Harriet Jacobs's town in North Carolina, New Year's Day then brought the hiring out and selling of enslaved people. Free Black Americans chose days of their own to celebrate, such as July 5, 1827, in New York.

Christmas becomes a children's day

In the early 1800s, Christmas in American towns still meant heavy drinking, begging from door to door and rowdy parades. Wealthier families and newspaper editors feared that these crowds threatened public order. They worked to turn Christmas into a quiet day at home, centered on children.

The poem. The *Troy Sentinel*, a newspaper in Troy, New York, printed a poem called "Account of a Visit from St. Nicholas" on December 23, 1823. It carried no author's name. It begins "'Twas the night before Christmas," and it describes stockings hung by the chimney for St. Nicholas to fill. "Down the chimney St. Nicholas came with a bound," the poem says. Eight reindeer pull his sleigh, and in the 1823 printing two of them are named Dunder and Blixem.

Who wrote it. A book called the *New York Book of Poetry* listed Clement Clarke Moore, a professor at a school for ministers in New York City, as the author in 1837. Moore put the poem in his own book of poems in 1844. The descendants of Henry Livingston Jr., a New York farmer and poet, say he wrote it as early as 1808. Accounts still differ about who wrote it.

A few years after the poem appeared, Catharine Maria Sedgwick of Stockbridge, Massachusetts, published a story about children who found a Christmas tree with gifts around it. Shopkeepers began to advertise gifts for children.

By the 1840s lawmakers in many states had begun to make Christmas a legal holiday, a holiday set by law. Alabama is often called the first state, in 1836, but Alabama's state archivists searched and found no law from that year. In 1848 Alabama's lawmakers made Christmas a bank holiday, a day when payments on loans were not due.

Christmas under slavery, three days in the year

Enslavers in the South gave enslaved workers three to six days off at Christmas. Edwin Epps, who held Solomon Northup in the 1840s on a plantation on Bayou Boeuf, a slow swampy stream in Louisiana, gave three days. Northup wrote that other enslavers gave four, five or six.

Northup wrote that the planters on Bayou Boeuf took turns holding a "Christmas supper" for enslaved people from nearby plantations. Three to five hundred people came, and white people came to watch them eat. The supper and the days off were, Northup wrote, "southern life as it is, three days in the year." The other 362 days, he wrote, were "days of weariness, and fear, and suffering, and unremitting labor." Unremitting means without a break.

Frederick Douglass was enslaved in Maryland. In 1845 he wrote that enslavers gave the days from Christmas to New Year's as holidays. He wrote that they did it because they knew it "would be unsafe to deprive them of it," that is, to take it away. Douglass called the holidays "safety-valves." By that he meant that enslavers used the days off to drain away the anger that could lead enslaved people to rebel.

In Edenton, North Carolina, enslaved men from the plantations went from door to door in costume on Christmas Day, until noon. Harriet Jacobs, who was enslaved in Edenton, called these groups the "Johnkannaus." Each group had about a hundred men. Two of them wore calico, a cheap printed cotton cloth, covered with a net of bright stripes, with cows' tails and horns.

The men beat a drum made from a box covered in sheepskin, and others played triangles and jawbones. They sang songs they had made up during the month before. At every door they asked for a penny or a glass of rum, and a group could collect twenty or thirty dollars.

Hiring day. In Jacobs's town, January 1 was hiring day. On that day enslavers rented enslaved people to other white men for the coming year. The next day, each person had to go to the new master. Jacobs wrote that anyone who refused "is whipped, or locked up in jail, until he consents to go." She did not name who did the whipping. After the hiring, enslavers sold people.

The sale days. Jacobs wrote that on one of these sale days she watched a mother lead her seven children to the auction block, the platform where people were sold. The mother knew some of them would be taken from her, but the buyers took all seven. A slave trader bought the children. A man from the town bought the mother. Jacobs did not give the mother's name.

On another New Year's Day, Jacobs's friend Fanny was sold at auction to pay her enslaver's debts. Jacobs does not say who ordered the sale. One master bought Fanny, and another master, far away, bought her four daughters. Fanny later escaped.

Why Black Americans celebrated on January 1, July 5 and August 1

The members of Congress had voted to ban bringing enslaved people into the United States from other countries. The ban took effect on January 1, 1808. That day Absalom Jones preached a sermon of thanks at St. Thomas's African Episcopal Church in Philadelphia. He asked Black Americans to keep January 1 every year as a day of thanks. On that day they would teach their children "the history of the sufferings of our brethren (brothers and sisters), and of their deliverance (being set free)." Enslavers inside the country kept buying and selling people after the law.

July 5, not July 4. New York's lawmakers voted on March 31, 1817, to end slavery in the state on July 4, 1827. On that day about 4,600 people were freed. Some of them still had to work for their former enslavers for a set number of years under written contracts called indentures. Black New Yorkers held church services on July 4, 1827, and held their public celebration on July 5. Nathaniel Paul had led a meeting in Albany that voted to celebrate on the fifth, because the fourth was the day white citizens celebrated.

The people at the July 4 church services went home quietly. They feared that white men celebrating Independence Day would pick fights with them. In New York City on July 5, between 2,000 and 4,000 people gathered in St. John's Park. Samuel Hardenburgh led them as the marshal of the day, the man in charge of the celebration.

August 1. The members of Parliament, Britain's lawmakers, set August 1, 1834, as the day slavery would begin to end in the British colonies of the West Indies. The West Indies are the islands of the Caribbean Sea. On that day enslaved people in Antigua, Montserrat and Bermuda went free. In the other colonies they became "apprentices." Apprentices still had to work about 40 hours a week for their former enslavers, without pay. Their protests helped end that system in 1838.

Black Americans in New York City held a celebration on August 1, 1834. After freedom was complete in 1838, the editors of *The Emancipator*, Arthur Tappan's antislavery newspaper, called for a yearly holiday. In Oberlin, Ohio, Sabram Cox, who had escaped slavery, led the town's first August 1 celebration

in 1842. The historian Jeffrey Kerr-Ritchie writes that for about thirty years, August 1 was the most important yearly celebration of freedom among Black people in the northern United States.

Pinkster banned in Albany, 1811

By the late 1700s, large crowds of enslaved and free Black people gathered in Albany, New York, for Pinkster. City leaders worried about so many Black people gathering in one place. In 1811 the members of the Albany Common Council, the city's governing board, banned the celebration.

Thanksgiving, Washington's birthday and the Fourth

Thanksgiving in these years was a New England custom. People in other parts of the country did not keep it.

People in New York, Philadelphia and Richmond held balls, dinners and parades on Washington's birthday, February 22. The balls and dinners were for rich families, and the parades filled the streets for everyone else.

The fiftieth Fourth. The Fourth of July in 1826 was the fiftieth anniversary of the day the members of the Continental Congress approved the Declaration of Independence. John Adams and Thomas Jefferson both died that day.

Sarah Josepha Hale

Who: A magazine editor who asked governors and presidents for years to make Thanksgiving one national holiday.

When and where: New England and Philadelphia, 1827 to 1879.

Thirty years of letters, and the law came after her death.

Sarah Josepha Hale spent decades asking governors and presidents to make Thanksgiving one holiday for the whole country, on the same Thursday in every state. Her husband, David Hale, died after nine years of marriage and left her with five children. She wrote poems and books to support them. One of her poems for children was "Mary Had a Little Lamb."

In her 1827 novel *Northwood*, she described a New England Thanksgiving dinner. Roast turkey sat at the head of the table. Of all the pies, "the pumpkin pie occupied the most distinguished niche," which means the place of honor.

The magazine. She became the editor of *Godey's Lady's Book*, a women's magazine read across the country, in 1837, and held the job until 1877. She used the magazine and her letters to ask for a national Thanksgiving. She sent her articles to the governors of every state and every territory, a part of the country that was not yet a state.

Accounts disagree about when she began. Plimoth Patuxet Museums gives the 1830s. The National Women's History Museum gives 1846. In 1863 Hale herself wrote that she had asked "for the last fifteen years," which points to about 1848.

Some Southern leaders saw Thanksgiving as a Northern holiday. Governor Henry Wise of Virginia wrote back to Hale that he wanted nothing to do with "this theatrical national claptrap of Thanksgiving." Claptrap means silly talk meant to win cheers. Northern ministers preached against slavery on the day, and that was what Wise objected to.

Hale supported ending slavery, and later she backed a plan to send freed Black Americans to Africa. She did not support the movement to give women the vote.

Still asking. She got her national day in 1863. After that, each president proclaimed it each year. To proclaim a day is to name it in a public order. No law yet set Thanksgiving as a holiday for the whole country. From 1870, under a federal law, national government workers in Washington, D.C., had the day off on any thanksgiving day the president named.

In May 1877, when she was 88, her eyes were so weak that a helper wrote a letter for her to George Washington Warren. In it she was still asking for "a Resolution of Congress making the last Thursday in November a legal holiday." She died in 1879.

1850 to 1900

ERA 7 OF 10 · 1850 TO 1900 · ABOUT 18 MINUTES

President Abraham Lincoln proclaimed the first national Thanksgiving in 1863, and the first national holidays followed between 1870 and 1894. In 1870 the members of Congress made New Year's Day, the Fourth of July, Christmas and any thanksgiving day the president named holidays for federal workers, the people who work for the national government, in Washington, D.C. The members of Congress added Washington's birthday in 1879, Decoration Day in 1888 and Labor Day in 1894. Decoration Day was a day for putting flowers on soldiers' graves.

Freed Black Americans made days of their own after the Civil War. Freed people in Texas celebrated June 19, the day in 1865 when a Union general announced that slavery had ended there, and in Charleston, South Carolina, freed people reburied Union prisoners of war and decorated their graves. In Norfolk, Virginia, in 1866, white men attacked a march held to celebrate a new civil rights law.

The Commissioner of Indian Affairs, the official who ran the government's office for Native affairs, ordered the government's boarding schools for Native children in 1890 to celebrate the anniversary of the Dawes Act. Under that law, federal officials broke up the land set aside for Native nations.

A mob in New Orleans killed eleven Italian American men in 1891. The next year, President Benjamin Harrison proclaimed the first national Columbus Day, and some writers say he meant it partly to calm Italy and Italian Americans after the killings.

How Thanksgiving became national, 1863

Some Southern leaders in the 1850s called Thanksgiving a Northern holiday. In 1856 the Richmond *Whig*, a Virginia newspaper, printed an attack on the thanksgiving day in the District of Columbia. The editors wrote that the day cost working men a day's pay and led to drunkenness. They called New England a "crazy society."

Hale's letter. Sarah Josepha Hale wrote to President Abraham Lincoln on September 28, 1863, in the middle of the Civil War. She asked him to proclaim the last Thursday in November as a national day of thanksgiving. Getting every state to pass a law, she wrote, "would require years."

Lincoln issued the proclamation on October 3, 1863. Secretary of State William Seward, the head of the government's dealings with other countries, wrote it. In it Lincoln invited Americans everywhere, even those at sea and in other countries, to keep the last Thursday in November as a day of thanks. He also asked them to pray for "all those who have become widows, orphans, mourners or sufferers" in the war.

After 1863 every president proclaimed a Thanksgiving Day each year. Most chose the last Thursday in November. Two presidents chose other days: Andrew Johnson the first Thursday in December in 1865, and Ulysses S. Grant the third Thursday in November in 1869. In Texas, Governor Oran Roberts, who had been a Confederate officer, still refused to proclaim Thanksgiving in the 1880s.

The first federal holidays, 1870 to 1888

Santa in the army camp. During the Civil War, a magazine called *Harper's Weekly* printed a drawing by Thomas Nast on January 3, 1863. Nast had come to America from Bavaria, in Germany. The drawing showed Santa Claus visiting a Union army camp. Santa wore a coat covered in stars and striped trousers. In his hands was a toy of the Confederate president, Jefferson Davis, with a rope around its neck.

A writer in Smithsonian Magazine calls the drawing Union propaganda, a picture made to win people to the Union side. Seven years later, Christmas Day became one of the first federal holidays.

The 1870 law. The members of Congress passed the first law that gave federal workers in Washington, D.C., holidays on June 28, 1870. The days were New Year's Day, the Fourth of July, Christmas Day and any day the president named for fasting (going without food, as a way to pray) or thanksgiving. Researchers at the Congressional Research Service, the office that writes studies for Congress, write that the law was apparently an answer to a written request from bankers and businessmen in the city. Representative Burton Cook of Illinois said it would match the holidays of the states around the city.

Washington's birthday, 1879. The members of Congress added Washington's birthday, February 22, in January 1879. The main purpose was to make it a bank holiday. Lawmakers in Massachusetts had already made Christmas, Washington's birthday and the Fourth of July state holidays in 1856. Irish Catholic voters in the state helped pass that law. A law of January 6, 1885, gave paid holidays to federal workers paid by the day, all over the country.

Decoration Day, 1888. The members of Congress made Decoration Day, May 30, a holiday for federal workers in the city in 1888. Many of those workers belonged to the Grand Army of the Republic, the organization of Union veterans. Before the law, they lost a day's pay when they went to the Decoration Day ceremonies.

Juneteenth, 1865

The Union general Gordon Granger announced in Galveston, Texas, on June 19, 1865, that slavery had ended there. The Confederate general Robert E. Lee had surrendered his army in Virginia on April 9, 1865, ten weeks earlier. Granger arrived with about 1,800 soldiers, according to the historian Henry Louis Gates Jr. Other accounts give about 2,000.

Granger issued General Orders No. 3. It stated that "all slaves are free," and that former masters and the people they had enslaved now stood as "employer and hired labor." The order stated that the freed people were advised "to remain quietly at their present homes and work for wages." It also stated that they would not be allowed to gather at army posts, and that they would not be "supported in idleness," which meant fed without working.

About 250,000 people were enslaved in Texas. After 1862, enslavers from other Southern states who were fleeing the Union army had forced more than 150,000 of them to move there.

Many enslavers in Texas did not tell the people they held that they were free until after the harvest was in. One formerly enslaved Texan said an enslaver "didn't tell us we were free til a whole year after we were." In Galveston, the mayor, a former Confederate, forced freed people back to work.

Susan Merritt had been enslaved in Texas. She said that right after freedom, she saw many Black people hanging from trees in the Sabine River bottom, the low land along the river. She said white men caught them swimming across the river and shot them. She did not name the people who were killed, and no record names the killers. Katie Darling kept working for her former mistress for six more years. Darling said the woman whipped her after the war just as she had before.

The Freedmen's Bureau was the federal office set up to help freed people. Its officials did not reach Texas until September 1865. In 1868 Texans met to write a new state constitution, the state's basic set of laws. A committee of that meeting counted 939 murders in the state between 1865 and 1868. In 379 of them, white people killed Black people. The figures, as the Handbook of Texas

reports them, do not say who killed the other 560 people. Outlaw gangs and armed groups such as the Ku Klux Klan, a secret group of white men who used terror against Black people, attacked freed people and Union soldiers.

The first Juneteenth. Freed people in Texas celebrated the day a year later, on June 19, 1866. People began to call the day Juneteenth, a word made from June and nineteenth. Some early celebrations were political meetings, where freed people learned about their new right to vote. In some towns, city officials made Black people hold their celebrations outside the town. Black Texans raised money to buy land of their own for the day.

Jack Yates

Who: A Baptist minister, born enslaved, who led Black Houstonians in buying land for their Juneteenth celebrations.
When and where: Virginia, then Houston, Texas, 1828 to 1897.

Eight hundred dollars for ten acres, so Juneteenth had a home.

Jack Yates and three other men paid $800 in 1872 for ten acres in Houston, Texas, so that the city's Black people had a place of their own for Juneteenth. The other three men were Richard Allen, Richard Brock and Elias Dibble. The members of two churches bought the land for the Black people of Houston. One was Antioch Missionary Baptist Church, where Yates was the pastor. The other was Trinity Methodist Episcopal Church.

The land became Emancipation Park, named for the freeing of enslaved people. It is the oldest park in Houston. For parts of the years of legal segregation, the system of laws that kept Black people and white people apart, it was the only public park in the area that Black people were allowed to use. Juneteenth celebrations are still held there.

Yates was born enslaved in Gloucester County, Virginia, in 1828, as John Henry Yates. His enslaver's child taught him to read, which was against the law. He married Harriet Willis, who was enslaved on a nearby farm, and they had eleven children.

In about 1863, Harriet's enslaver moved to Matagorda County, Texas. Yates could not bear to be separated from his wife and children, so he begged to go along. The Emancipation Park Conservancy, a group that works to keep up the park, says he had already gained his freedom. By its account, he went back into slavery to stay with his family.

When freedom came in June 1865, the family moved to Houston. Yates hauled goods by day and preached at night. In January 1866 freed people organized Antioch Missionary Baptist Church, the first Black Baptist church in Houston. Yates became its first pastor, in 1868 by one account. He bought land for his own house in 1869. In 1885 he started Houston Academy, a school that taught formerly enslaved people reading, writing, arithmetic and trades. He died on December 22, 1897.

Freedom celebrations, and the attack at Norfolk, 1866

Black Americans marked freedom on days of their own, and in Norfolk, Virginia, white men attacked one of those celebrations. Before the war, on July 5, 1852, Frederick Douglass spoke in Rochester, New York. He asked, "What, to the American slave, is your 4th of July?" He answered that the day showed an enslaved person "the gross injustice and cruelty to which he is the constant victim."

Midnight, 1863. The Emancipation Proclamation, President Lincoln's order freeing the enslaved people in the states fighting against the Union, took effect on January 1, 1863. On the night it took effect, Douglass and other Black leaders in the North led large celebrations that began at midnight.

Norfolk. The members of Congress passed a Civil Rights Act in April 1866 over President Andrew Johnson's veto, his refusal to sign it. The members of Congress can still make a bill law if two-thirds of each house vote for it again. On April 16, Black residents of Norfolk, Virginia, marched to celebrate the law. Black Union soldiers marched with them in uniform, carrying their guns.

Someone fired a shot. In the chase that followed, a white Confederate veteran was shot and killed. The records do not say who fired either shot. White men then attacked Black people. They killed at least two Black people, badly

wounded six, and destroyed property that belonged to Black people. The attacks went on through the night until United States Army soldiers stopped them. The records do not give the names of the dead.

Joseph T. Wilson was a Black Union veteran who published a newspaper in Norfolk, the *True Southerner*. He printed his side of the story in it. After that issue came out, white men attacked his printing office and destroyed his press.

Who started Decoration Day?

The first national Decoration Day was May 30, 1868, and the man who ordered it was General John A. Logan, the head of the Grand Army of the Republic, the organization of Union veterans. On May 5, 1868, he ordered its members to decorate the graves of Union soldiers on that day. The first ceremony was held at Arlington National Cemetery in Virginia, on land that had been the home of the Confederate general Robert E. Lee. Americans now call the day Memorial Day.

The veterans' organization itself credited the idea to a member who had written to it about a German custom of decorating graves. Logan's wife, Mary Logan, said the idea came from her visit to a Confederate cemetery in Virginia.

People in several towns say their town did it first, and people in at least three places had decorated soldiers' graves before Logan's order. A page of the National Cemetery Administration, the federal office that runs the national military cemeteries, lists the claims.

Boalsburg, 1864. In October 1864, three women in Boalsburg, Pennsylvania, decorated the graves of soldiers who had died.

Charleston, 1865. In Charleston, South Carolina, Confederate soldiers had held Union prisoners of war at the Washington Race Course, a track for horse racing. The prisoners were kept outdoors in the middle of the track. According to the historian David Blight, at least 257 of them died of disease and of exposure, which means being left outside with no shelter from cold and weather. They were buried quickly in a mass grave, one pit for many bodies, behind the stands.

In April 1865 freed people and Black workmen dug up the bodies and buried each man in his own grave. They built a fence and an arch over the gate that read "Martyrs of the Race Course" (a martyr is a person who dies for a cause).

On May 1, 1865, freed people and white allies from the North held a ceremony there. Blight found the account of it in old papers at Harvard and in Charleston. An account from the College of Charleston says the parade may have included as many as 10,000 people. Among them were 3,000 Black schoolchildren, who sang the song "John Brown's Body."

Columbus, 1866. On April 25 and 26, 1866, women in Columbus, Mississippi, and Columbus, Georgia, held days to put flowers on the graves of Confederate soldiers. In Columbus, Mississippi, they put flowers on Union soldiers' graves too. Mary Ann Williams of the Ladies Memorial Association in Columbus, Georgia, had asked for the day in a letter to the newspaper. Supporters of the Confederacy in the South kept a separate day of their own for the Confederate dead.

KNOWN:	Logan's order of May 5, 1868, started the national day. The three earlier days are each documented, Charleston's most fully, in the newspapers Blight found.
DISPUTED:	Whether Logan copied any of them. The College of Charleston says historians debate whether the Charleston ceremony and the 1868 day are connected. The National Cemetery Administration says recent scholarship points to the women of Columbus, Georgia.

Labor Day, 1882 to 1894

Union workers in New York City held the first Labor Day parade on Tuesday, September 5, 1882. A union is a group of workers who join together to bargain for better pay and conditions. The city's Central Labor Union, a group of unions, planned the parade. People have credited two men with the idea: Peter J. McGuire of the carpenters' union and Matthew Maguire, a machinist, a worker who made and repaired machines. The US Department of Labor states that recent research favors Maguire.

Oregon's lawmakers made Labor Day a state holiday on February 21, 1887. By 1894 Labor Day was a holiday in 23 or 24 states, counting Oregon. A senator brought a bill for a national Labor Day to Congress in August 1893. Senators passed it in June 1894, and members of the House passed it on June 26. President Grover Cleveland signed it on June 28, 1894. It gave federal workers the first Monday in September off.

Cleveland signed it in the first days of a national railroad strike. On June 26, members of the American Railway Union, led by Eugene Debs, had begun refusing to run trains that pulled Pullman sleeping cars. They did it to support the workers at the Pullman factory, who were on strike. On July 3, five days after he signed the bill, Cleveland sent federal soldiers to Chicago to break the strike. Cleveland left no letter or statement that explains why he signed the Labor Day bill.

Columbus Day, 1892, and the New Orleans lynching

The first national Columbus Day came a year and a half after a mob in New Orleans lynched eleven Italian American men, that is, killed them without a trial. The writer Richard Gambino is among those who say President Benjamin Harrison meant the holiday partly to calm Italy and Italian Americans after the killings.

The police chief. Someone shot and killed David Hennessy, the police chief of New Orleans, in October 1890. Police arrested Italian Americans, and 19 were charged, among them a 14-year-old boy. Nine were tried. The jury found six of them not guilty and could not agree about the other three. No solid evidence had been shown against them.

The mob. Thousands of people gathered in the city on March 14, 1891, after the verdicts. A lawyer, William S. Parkerson, told the crowd to "set aside the verdict," the jury's decision. Parkerson led an armed group into the city jail with three other men: Walter Denegre, James D. Houston and John C. Wickliffe.

The armed men killed eleven Italian American men. They shot and clubbed nine of them to death inside the jail. Outside, they hanged Emmanuele Polizzi from a lamppost and Antonio Bagnetto from a tree, and shot both men. Among the mob were John M. Parker, who later became governor of Louisiana, and Walter C. Flower, who later became mayor of New Orleans.

The eleven men were Antonio Bagnetto, James Caruso, Loreto Comitis, Rocco Geraci, Joseph Macheca, Antonio Marchesi, Pietro Monasterio, Emmanuele Polizzi, Frank Romero, Antonio Scaffidi and Charles Traina. Three had been found not guilty. Three had had a mistrial, which means the jury could not agree. Five had never been tried.

No one charged. The grand jury, a group of citizens who decide whether someone should be charged with a crime, worked under Judge Robert H. Marr, a friend of several men in the mob. Its members said they could not identify the killers. They called the mob "several thousands of the first, best, and even the most law-abiding, of the citizens," and they charged no one.

Italy's leaders called home their ambassador, the official who spoke for Italy in the United States. President Harrison agreed to pay $25,000 to the dead men's families. Members of Congress objected, and federal officials paid $2,211.90 to each family.

The proclamation. Harrison proclaimed Friday, October 21, 1892, a general holiday for the people of the United States, in an order dated July 21. It was the 400th anniversary of Columbus's landing in the Americas. He asked schools to lead the celebrations and to fly the flag over every schoolhouse. The proclamation does not mention Italy or New Orleans.

Dances made crimes, boarding schools and a holiday for losing land

Dances made crimes. Commissioner of Indian Affairs Hiram Price issued rules in 1883 that made the Sun Dance and other Native ceremonies "Indian offenses" on the reservations. He wrote them after a letter from Henry Teller, the Secretary of the Interior, the head of the federal department in charge of Native affairs, who had called the ceremonies "old heathenish dances." Heathen was an insulting word for people who were not Christian.

Under the rules, government agents punished a person who held one of these dances by taking away the person's food rations for up to ten days. For later offenses they could take the rations for 15 to 30 days or put the person in the agency jail for up to thirty days. US officials had promised those rations in treaties, in return for the nations' land, which US officials had taken.

The boarding schools. Commissioner Thomas J. Morgan ordered a new holiday for the government's boarding schools for Native children in 1890. From 1879 on, federal officials took Native children from their families and put them in those schools. Federal officials meant the schools to make the children give up their nations' languages and ways. Richard Henry Pratt, the Army officer who opened the Carlisle school in Pennsylvania in 1879, described its aim in 1892: "Kill the Indian in him, and save the man."

In 1891 the members of Congress let officials make rules to force Native children to attend. In 1893 they let officials take away food rations, clothing and payments from parents who refused. Some government agents sent reservation police to seize children.

At the schools, staff cut the children's hair, took their clothes and gave them English names. Staff beat children for speaking their own languages, shut them alone in rooms, kept food from them and washed their mouths out with soap. Interior Department investigators later counted at least 973 children who died at the schools, and their 2024 report says the true number is higher.

A holiday for losing land. Morgan's holiday marked the anniversary of the Dawes Act of 1887. Under that law, federal officials broke up reservation land, the land set aside for Native nations, into farms for single families, and sold the land left over. Native nations held about 138 million acres in 1887. By 1934 they held about 48 million. They had lost about 90 million acres, two-thirds of their land.

BY 1900

If you remember one thing: The first national holidays came between 1863 and 1894, and three of them began as somebody's campaign: Hale's Thanksgiving, the Union veterans' Decoration Day and the New York unions' Labor Day. Juneteenth began in the same years, and no one in Washington made it a holiday for another 155 years.

- 1863: Lincoln proclaims a national Thanksgiving on the last Thursday in November.
- 1865: Granger's order at Galveston, June 19, and the first Juneteenth a year later.
- 1892: the first national Columbus Day, a year and a half after the New Orleans lynching.

Next: The 1900s add Mother's Day and Armistice Day, and a president moves Thanksgiving to help stores.

1900 to 1950

ERA 8 OF 10 · 1900 TO 1950 · ABOUT 8 MINUTES

Presidents and members of Congress added new national days between 1914 and 1941 and fixed the dates of old ones. After a campaign by Anna Jarvis, Mother's Day became a national day in 1914. She spent the rest of her life fighting the businesses that sold flowers and cards for it.

After the First World War, Americans marked November 11, the day the fighting stopped, as Armistice Day. In 1938 lawmakers in Congress made it a holiday set by law, dedicated to world peace. In 1934 President Franklin Roosevelt proclaimed, that is, named in a public order, October 12 of each year as Columbus Day.

Store owners used the holidays to sell. Workers at Macy's department store in New York City marched in the store's first Thanksgiving parade in 1924. In 1939 Roosevelt moved Thanksgiving a week earlier to give stores more shopping days before Christmas. Governors in sixteen states refused to follow him, by the National Archives' count, and in 1941 the members of Congress fixed the date by law.

Who thought of Mother's Day first?

Julia Ward Howe, who wrote "The Battle Hymn of the Republic," came first. In 1872 she started a Mothers' Peace Day, a day for peace held each June 2, and people kept it with services until about 1913. Two more proposals came before Anna Jarvis's. In 1887 Mary Towles Sasseen of Henderson, Kentucky, made a plan for schools to honor mothers. In February 1904 Frank Hering of the Fraternal Order of Eagles, a men's club, gave a speech about a day for mothers. The Eagles still call themselves the "true founders" of Mother's Day.

The law. President Woodrow Wilson approved a joint resolution, a measure that both houses of Congress pass together, on May 8, 1914. It named the second Sunday in May as Mother's Day. The next day, Wilson asked Americans to fly the flag on that day "as a public expression of our love and reverence for the mothers of our country." He asked for nothing more, and since Mother's Day fell on a Sunday, no one got a day off for it.

Anna Jarvis

Who: The woman who campaigned to create Mother's Day and then fought the businesses that made money from it.
When and where: West Virginia and Philadelphia, 1905 to 1948.

She made Mother's Day, then got arrested fighting it.

Anna Jarvis campaigned for years to create Mother's Day, and then spent her money and the rest of her life fighting the people who sold things for it. She was born in Webster, West Virginia, in 1864, during the Civil War. Her mother, Ann Reeves Jarvis, ran Mothers' Day Work Clubs, which cared for sick and wounded soldiers from both armies.

Her mother died in 1905. To honor her, Anna Jarvis began asking for a national day for mothers. She chose the second Sunday in May, because her mother had died near that date.

The first formal Mother's Day church service was held on May 10, 1908, at Andrews Methodist Episcopal Church in Grafton, West Virginia. Jarvis sent 500 white carnations to it. She chose white, she wrote, for the "truth, purity and broad-charity of mother love." That day she was in Philadelphia, at a Mother's Day gathering in the department store of John Wanamaker. National Geographic reports that 15,000 people came, and each one was given a carnation.

Jarvis wrote letters to business owners, politicians, ministers and newspaper editors across the country. In 1914 the members of Congress and President Wilson made the second Sunday in May a national Mother's Day.

The fight. Florists raised the price of carnations before Mother's Day, and card companies sold printed Mother's Day cards. Jarvis wrote, "A printed card means nothing except that you are too lazy to write to the woman who has done more for you than anyone in the world." In the 1920s she wrote that she did not want Mother's Day to become a "burdensome, wasteful, expensive gift day."

Arrested. Police in Philadelphia arrested her in 1925, when she was 61, for disturbing the peace, which means making a public disturbance. She had burst into a meeting of the American War Mothers, a group that sold carnations to raise money on Mother's Day. She brought many lawsuits against groups that used the name "Mother's Day," and she spent much of her money on lawyers.

She started a petition, a list of signatures, in 1943, asking to end the holiday. Later she was placed in the Marshall Square Sanitarium, a hospital in West Chester, Pennsylvania. She stayed there until she died. The National Park Service's account of her life does not say who had her placed there or why. The historian Katharine Antolini found that people connected with the flower and greeting-card businesses paid her bills there. Jarvis died on November 24, 1948, at 84, with no money left. She never had children.

Armistice Day, 1919 and 1938

The fighting in the First World War stopped at 11 o'clock in the morning on November 11, 1918. It stopped under an armistice, an agreement to stop fighting. In November 1919 President Wilson asked Americans to mark the first anniversary as Armistice Day. He asked for parades, public meetings and a short stop in work at 11 a.m.

By 1926 the lawmakers of 27 states had made November 11 a holiday. That year senators and representatives asked the president to call for flags and for ceremonies of "friendly relations with all other peoples."

The 1938 law. The members of Congress made Armistice Day a holiday set by law on May 13, 1938, "dedicated to the cause of world peace." By then all 48 states kept the day. Groups of First World War veterans backed the law.

Why Thanksgiving is the fourth Thursday, not the last

The date fight. Thanksgiving falls on the fourth Thursday of November because of a fight over the date that began in 1939. That year November had five Thursdays, and the last one fell on November 30. President Franklin Roosevelt was worried that a short shopping season before Christmas would slow the country's recovery from the Great Depression. The Great Depression was the long period of hard times in the 1930s, when many Americans had no work. Roosevelt moved Thanksgiving a week earlier, to November 23, to help stores.

The governors of 32 states followed him. The governors of 16 states kept the last Thursday, by the National Archives' count, and a history website called Ghosts of DC counts 23 states that refused. For two years, Americans kept two different Thanksgivings.

The members of Congress ended the confusion in 1941. They set Thanksgiving by law as the fourth Thursday in November. In a year when November has five Thursdays, that is a week before the last one. Roosevelt signed the law on December 26, 1941.

The parade. Workers at Macy's department store in New York City marched to the store in costume on November 27, 1924. They brought floats and animals from the Central Park Zoo. At the end of the parade, Santa Claus arrived at the store. The parade was held again in later years, and in 1933 more than a million people watched it.

New York children had their own Thanksgiving custom before the parade. From about 1870 into the 1920s, on Ragamuffin Day, they dressed in costumes and begged from door to door. Fewer children kept the custom over the years, and the last ragamuffin parade in New York City was held in 1956.

Columbus Day, 1905 to 1937

Angelo Noce, an Italian immigrant in Denver, asked Colorado's leaders to honor Columbus. In 1905 Colorado's governor, Jesse McDonald, proclaimed the first state Columbus Day.

The Knights of Columbus, a Catholic men's organization, and Generoso Pope, an Italian American leader in New York City, asked Congress for a national day. On April 30, 1934, the members of Congress asked the president to proclaim October 12 each year as Columbus Day. They asked for flags and ceremonies. President Roosevelt did so that September, and again in 1937.

Federal workers, the people who work for the national government, did not get the day off until a law passed in 1968 took effect in 1971.

Christmas, Labor Day, Juneteenth and Memorial Day, 1921 to 1937

The first National Christmas Tree. Grace Coolidge, the president's wife, gave the public schools of Washington, D.C., permission in November 1923 to put up a tree near the White House. On Christmas Eve 1923 President Calvin Coolidge lit it. It was the first National Christmas Tree, a fir 48 feet tall from Vermont. About 3,000 people watched.

Labor Day. The 1894 Labor Day law covered only federal workers. As late as the 1930s, unions encouraged workers to strike to make sure they got the day off.

Juneteenth grows smaller. Juneteenth, June 19, marks the day in 1865 when a Union general announced in Galveston that slavery had ended in Texas. A Boston Public Library history says Juneteenth celebrations began to grow smaller in the early 1900s. One reason, it says, is that teachers taught that the Emancipation Proclamation, President Lincoln's 1863 order freeing enslaved people in the states fighting the Union, had ended slavery. During the Great Depression, the same history says, many people were forced to work in cities, and employers there did not want to give workers the day off.

Memorial Day 1937. Decoration Day was by then also called Memorial Day. On that holiday, May 30, 1937, Chicago police shot and killed ten people who were marching in support of striking steelworkers at the Republic Steel plant. Chapter 14 describes the march and the killings.

The dances. Commissioner Hiram Price's 1883 rules, which made the Sun Dance and other ceremonies "Indian offenses" punished by taking away food rations, were still in force. Charles Burke, the Commissioner of Indian Affairs, the official who ran the government's office for Native affairs, sent out an order in 1921 that let the officials in charge of reservations shut down Native dances. He added to it in 1923.

1950 to 2000

ERA 9 OF 10 · 1950 TO 2000 · ABOUT 16 MINUTES

After 1950, Americans argued over whose days the country should mark. In 1968 the members of Congress moved three holidays to Mondays, so that workers got more three-day weekends, and made Columbus Day a federal holiday, a paid day off for the national government's workers. Maulana Karenga and his group, called Us, started Kwanzaa in 1966. Students and marchers in the civil rights movement brought Juneteenth back.

Coretta Scott King, the Southern Christian Leadership Conference, Stevie Wonder and millions of people who signed petitions campaigned for 15 years for a holiday for Martin Luther King Jr. President Ronald Reagan signed that law in 1983. Some state leaders refused the King holiday for years. The last state named a day for King in 1999.

Native people began to mark Thanksgiving as a National Day of Mourning in 1970. In 1992 the members of the city council of Berkeley, California, renamed Columbus Day for Indigenous peoples. Indigenous peoples are the first peoples of a place and their descendants.

Veterans Day and the Monday holidays, 1954 to 1975

On June 1, 1954, the members of Congress renamed Armistice Day as Veterans Day. By then Americans had also fought in the Second World War and the Korean War. The members of Congress chose the new name so that one day would honor the veterans of every war.

Memorial Day, the old Decoration Day, got an official birthplace in 1966. That year the members of Congress and President Lyndon Johnson named Waterloo, New York, the "birthplace" of Memorial Day. People in several other towns still say their town held the first one.

The Monday holidays. Under a 1968 bill called the Uniform Monday Holiday bill, several holidays would move to Mondays. Robert McClory, a member of the House of Representatives from Illinois, took it through the House Judiciary Committee. He was a Republican, a member of one of the country's two main political parties. That committee of House members worked on the bill before the full House voted.

Four business groups backed it: the US Chamber of Commerce, the National Association of Manufacturers, the National Association of Travel Organizations and the National Retail Federation. McClory said it would give families more time together and more chances to visit historic places. Representative H. R. Gross of Iowa asked whether store clerks would get the days off or spend them selling. McClory answered that labor unions supported the bill.

President Johnson signed it on June 28, 1968, and it took effect in 1971. Under the law, Washington's Birthday fell on the third Monday in February, Memorial Day on the last Monday in May and Veterans Day on the fourth Monday in October. In the same law, the members of Congress made Columbus Day a federal holiday, on the second Monday in October.

McClory had also wanted to rename Washington's Birthday "Presidents' Day." He dropped the idea to win the votes of Virginia's lawmakers. No act of Congress and no order of a president changed the federal name, although many people call it Presidents' Day.

Veterans' groups objected to moving Veterans Day, and 46 states kept November 11 or went back to it. In 1975 the members of Congress put Veterans Day back on November 11.

Kwanzaa, from 1966

Maulana Karenga, a Black activist who led a group called Us in the Los Angeles area, created Kwanzaa in 1966. The Root, a news site, says members of Us created it together. Kwanzaa runs for seven days, from December 26 to January 1. In 1965 Karenga wrote seven principles, the Nguzo Saba, and families talk about one of them on each night of Kwanzaa. The first is Umoja, the Swahili word for unity. Swahili is a language spoken in East Africa. The name Kwanzaa comes from a Swahili phrase meaning "first fruits." The last day ends with a feast called Karamu.

At first Karenga said that Kwanzaa gave Black Americans "an alternative to the existing holiday." In 1997 he wrote that it "was not created to give people an alternative to their own religion or religious holiday."

The crimes. A California court convicted Karenga in 1971 of two crimes, felony assault and false imprisonment. Felony assault is a serious crime of attacking a person. False imprisonment means holding people against their will so they cannot leave. The charges came from what was done to two women at his home in Inglewood, California. The Root describes the crimes as torturing the two women. The women, Deborah Jones and Gail Davis, were members of his group.

At the trial, Jones and Brenda Karenga testified that Karenga believed the two women were plotting to poison him. Jones testified that the two women were ordered to take off their clothes. Then they were whipped with an electrical cord and beaten with a karate baton. By one fuller version of the report, they were also hit on the head with toasters.

She testified that a hot soldering iron, a tool that heats metal to join wires, was put in Davis's mouth and pressed against Davis's face. One of Jones's own big toes was squeezed in a vise, a clamp that tightens with a screw. Jones said Karenga himself put detergent and running water hoses in their mouths. The news report of her testimony does not say who did each of the other acts.

Karenga was sentenced to one to ten years in prison and was released on parole in 1975. Parole is an early release from prison under rules. He has denied the charges and called them "trumped up," which means made up, and "politically motivated." He says he was one of many people the FBI went after for political reasons.

After the trial. People went on keeping Kwanzaa after the trial and Karenga's years in prison. The US Postal Service issued the first Kwanzaa stamp in 1997, and that year President Bill Clinton sent the first Kwanzaa message from a president. Counts of how many Americans celebrate Kwanzaa are only rough estimates. One estimate in 2009 put the number between 500,000 and 2 million. In a 2019 National Retail Federation poll, 2.6 percent of the people who celebrated a winter holiday said they planned to celebrate Kwanzaa.

Juneteenth comes back, 1968 to 1980

People in the civil rights movement brought Juneteenth back. In Atlanta, students in the movement wore Juneteenth Freedom buttons. The Poor People's March on Washington ended on June 19, 1968. The marchers took the celebration home to their own cities, among them Milwaukee and Minneapolis. People in those two cities still hold some of the largest Juneteenth events.

Al Edwards, a Texas state lawmaker from Houston and a Democrat, a member of the other main political party, brought a bill to make Juneteenth a Texas state holiday. Texas lawmakers passed it in 1979, and Governor Bill Clements signed it. The first Juneteenth celebration held by the state of Texas took place in 1980.

Thanksgiving as a day of mourning, from 1970

The Wampanoag leader Frank James and other Native people gathered on Cole's Hill in Plymouth, above Plymouth Rock, on Thanksgiving Day, November 26, 1970, for the first National Day of Mourning. About 500 Native people came.

The gathering has been held every Thanksgiving since then. United American Indians of New England organizes it. Many who come go without food from the evening before.

The arrests, 1997. Plymouth police stopped the marchers from walking through the center of town on Thanksgiving Day 1997. Earlier that day, people dressed as Pilgrims had walked the same road. The marchers' group and other accounts say police used pepper spray, a spray made from hot peppers that burns the eyes and skin. One witness, Chris Groden, told the Associated Press that police sprayed mace, a similar spray, straight into several people's eyes.

The police arrested 25 marchers. They charged them with disorderly conduct, which means disturbing public order, and with unlawful assembly, which means gathering where the law does not allow it. The records do not name the officers.

The settlement. The charges were dropped in October 1998, when the town and the marchers' group reached an agreement. Plymouth officials agreed that the marchers could walk on Thanksgiving without a permit, forever. The town paid $135,000 in all. By the marchers' group's account, $100,000 went to a fund for teaching about Metacom, $20,000 to the lawyers of the American Civil Liberties Union and $15,000 to two plaques.

One plaque stands on Cole's Hill. The other stands in Post Office Square in Plymouth and tells of Metacom, the Wampanoag leader. He was killed in 1676 in an ambush led by the English captain Benjamin Church. The English then put his head on a pole in that square and left it there for 25 years.

Frank James (Wamsutta)

Who: A Wampanoag leader whose speech was stopped in 1970 and who started the National Day of Mourning.

When and where: Massachusetts, 1970.

Invited to speak, then told his speech was out of place.

In September 1970, Massachusetts officials planning the celebration of the 350th anniversary of the Pilgrims' landing invited Frank James to speak. Governor Francis Sargent was among the organizers. James was Aquinnah Wampanoag, and he led the Wampanoag Tribe of Gay Head. His Wampanoag name was Wamsutta, the same name as Massasoit's eldest son, a Wampanoag leader of the 1600s.

James wrote his speech from the Pilgrims' own records, including William Bradford's history and *Mourt's Relation*, a book of Pilgrim writings printed in London in 1622. It began: "I speak to you as a man, a Wampanoag Man."

In the speech, James wrote that within four days of landing, the Pilgrims "had robbed the graves of my ancestors and stolen their corn and beans." He wrote that "before 50 years were to pass, the Wampanoag would no longer be a free people."

The organizers read the speech in advance. A state commerce official told him that "the theme of the anniversary celebration is brotherhood and anything inflammatory would have been out of place." Inflammatory means likely to make people angry. United American Indians of New England says he refused to give a speech written by a public relations person, someone paid to shape what the public thinks of an event. James did not speak at the celebration.

On Thanksgiving Day 1970, he spoke instead on Cole's Hill in Plymouth, beside the statue of the Wampanoag leader Massasoit. Accounts differ on whether he read the same speech or a changed one. That year he founded United American Indians of New England.

Fifteen years to get King's day, 1968 to 1983

It took 15 years of campaigning to make Martin Luther King Jr.'s birthday a national holiday. James Earl Ray, a white man, shot and killed King in Memphis on April 4, 1968, and pleaded guilty the next year. Chapter 25 tells the killing and the later dispute over whether others planned it.

The first bill. Four days after the killing, Representative John Conyers of Michigan brought a bill to Congress for a national holiday on King's birthday, January 15. The House members on the committee in charge of the bill took no action on it. Members of the Southern Christian Leadership Conference, the group King had led, gathered 3 million signatures on petitions in the early 1970s. In 1973 lawmakers in Illinois made the first state King holiday. State lawmaker Harold Washington was the bill's sponsor, the lawmaker who brought it forward.

Four or five votes short. Coretta Scott King, King's widow, spoke for the holiday before Congress in 1979. That November the members of the House voted 252 to 133 for it. Under the rules for that vote, the bill needed two-thirds of the votes, and it fell short. The Congressional Research Service, a group that studies laws for Congress, counts it as four votes short. The King Institute at Stanford University counts five.

Stevie Wonder's song. The singer Stevie Wonder released "Happy Birthday," a song asking for the holiday, in 1980. His money paid for a lobbying office, an office whose staff pressed lawmakers to vote for the bill. Petitions reached more than 6 million signatures. On January 15, 1983, more than 100,000 people rallied at the Washington Monument.

The Senate. The members of the House passed the bill 338 to 90 on August 2, 1983. In the Senate, Jesse Helms of North Carolina led the opposition. He called for the FBI's secret recordings of King to be made public. The King Institute says he wanted to hurt King's reputation. A court had sealed the recordings until 2027. He also gave senators a 300-page paper that claimed King had ties to communists, people who wanted the government to own all land and businesses. Senator Daniel Patrick Moynihan called it a "packet of filth" and stamped on it.

Helms's plan to open the FBI records lost, 3 votes to 90. Other senators said another paid day off would cost too much.

Senators passed the bill 78 to 22 on October 19, 1983. Reagan had wanted a day of remembrance, not a paid holiday. He signed the law on November 2, 1983. The first King holiday was kept on January 20, 1986.

The states that held out, 1986 to 1999

The 1983 law made King's birthday a federal holiday. Each state's leaders decided for themselves whether to keep the day. By January 1989, 44 states kept a King holiday.

Some state lawmakers joined King's day to a day for Confederate generals. The Confederacy was the group of Southern states that fought the Union in the Civil War to keep slavery. Alabama's holiday was named for Robert E. Lee and King, and Mississippi's for King and Lee. Arkansas lawmakers combined King and Lee from 1985. Virginia's lawmakers called their day Lee-Jackson-King Day, for Lee, the Confederate general Thomas "Stonewall" Jackson and King.

In Arizona, Governor Bruce Babbitt made King's day a paid state holiday by his own order in 1986. His successor, Evan Mecham, canceled it in January 1987. Mecham said Babbitt had no legal power to create it. Groups across the country moved their conventions out of Arizona. Stevie Wonder and other musicians refused to perform there.

The Super Bowl. Arizona voters voted no in November 1990 on two questions on the ballot about a King holiday. Officials of the National Football League then took the 1993 Super Bowl away from Arizona and moved it to Pasadena, California. *PHOENIX* magazine says the game was to be played in Tempe, next to Phoenix, and the Pima County Public Library says Phoenix. People there had expected about $200 million from the game. In November 1992, 61 percent of Arizona voters approved Martin Luther King Jr./Civil Rights Day. Arizona is the only state whose voters approved the holiday themselves.

New Hampshire's lawmakers made a "Civil Rights Day" in 1991. In June 1999 they renamed it for King. New Hampshire was the last state to name a day for King.

Liz Byrd

Who: A Cheyenne schoolteacher and lawmaker who brought the King holiday bill to Wyoming's legislature nine times.
When and where: Wyoming, 1981 to 1990.

Nine bills in nine years before Wyoming said yes.

Liz Byrd brought a bill for a Martin Luther King Jr. holiday before the Wyoming legislature, the state's lawmakers, nine times. In 1990 the lawmakers passed it. Her full name was Harriett Elizabeth Byrd. Her grandfather Charles Rhone had come to Wyoming Territory as a boy in 1876.

Officials at the University of Wyoming did not accept her application. Her son believes it was because she was Black. She earned her teaching degree at West Virginia State College in 1949. Cheyenne school officials turned her down at first too, WyoHistory says probably because of her race. They hired her in 1959. A reference book, *Black America: A State-by-State Historical Encyclopedia*, calls her the first fully certified full-time Black teacher in Wyoming. She taught second grade for most of her 37 years as a teacher.

She served in the Wyoming House of Representatives from 1981 to 1988. In 1989 she became the first Black member of the Wyoming Senate.

One Republican who voted against her King holiday bill was Loren Willford. He said a Wyoming holiday should honor someone who had been in Wyoming, such as Chief Washakie, a Shoshone leader, or Jim Bridger, a fur trapper and guide. In 1990 the lawmakers passed the holiday with a longer name, "Martin Luther King, Jr./Wyoming Equality Day." Her son said she never liked the added words but took them rather than lose the bill again. Another account gives the year as 1991.

> She died on January 27, 2015, at 88. Governor Matt Mead ordered flags lowered in her honor.

Pride marches, and Columbus Day renamed, 1970 to 1999

Several thousand people marched for gay and lesbian rights in New York City on June 28, 1970. They walked 51 blocks, from Sheridan Square in Greenwich Village to the Sheep Meadow in Central Park. Their permit came two hours before the start. The march came one year after police raided the Stonewall Inn, a gay bar in the city. The organizers' counts ranged from 3,000 to 20,000, and the *New York Times* put the march on its front page. Craig Rodwell and three others had proposed a yearly march in 1969.

Pride Month. The New York march has been held every June since 1970. People call these marches Pride marches. On June 11, 1999, President Bill Clinton proclaimed June "Gay and Lesbian Pride Month." It was the first time a president had proclaimed it.

Columbus Day renamed. Columbus's men enslaved Taino people, as Chapter 1 tells, and Native groups and others protested a national day in his honor. In 1977, people at a United Nations conference in Geneva, Switzerland, discussed replacing Columbus Day with a day for Indigenous peoples.

The 500th anniversary of Columbus's first voyage came in 1992. That year a group from the San Francisco Bay Area called Resistance 500 persuaded the city council of Berkeley, California, to declare October 12 a "Day of Solidarity with Indigenous People." Solidarity means standing together. The council members renamed the day Indigenous Peoples Day.

BY 2000

If you remember one thing: After 1950 the fights were over whose days counted, and the longest one, for Martin Luther King Jr.'s birthday, took from 1968 to 1983 in Congress and until 1999 in the last state.

In 1950: the federal holidays were New Year's Day, Washington's Birthday, Memorial Day, the Fourth of July, Labor Day, Armistice Day, Thanksgiving and Christmas, and not one was named for a Black American or for the Native nations.

In 2000: King's day was a federal holiday and every state had named a day for him, Juneteenth was a Texas state holiday, Berkeley kept Indigenous Peoples Day, and a president had proclaimed Pride Month.

Next: Juneteenth becomes the newest federal holiday in 2021, and two presidents disagree about Columbus Day.

2000 to Today

ERA 10 OF 10 · 2000 TO TODAY · ABOUT 8 MINUTES

Since 2000 the members of Congress have added one federal holiday, Juneteenth, in 2021. Lawmakers in Virginia and Arkansas stopped joining King's day to days for Confederate generals. Alabama and Mississippi still honor Robert E. Lee on the same Monday as King.

In 2021 President Joe Biden became the first president to proclaim Indigenous Peoples' Day. In 2025 President Donald Trump proclaimed Columbus Day only, and the Associated Press reported that he stayed silent on Juneteenth. Some states also added days for other communities, such as Lunar New Year in New York's schools and Diwali in California. As of September 2026, Juneteenth, King's day and Columbus Day are all still federal holidays.

The end of most combined days, 2000 to 2020

South Carolina's governor, Jim Hodges, signed a law in May 2000 that gave all state workers King's day off. South Carolina was the last state to do so. Before then, state workers there could choose King's day or one of three Confederate holidays.

Virginia. Virginians kept Lee-Jackson-King Day from 1984 to 2000. It honored the two Confederate generals and King on the same day. From 2000 to 2020 Virginia had two separate holidays. In April 2020 Virginia's governor, Ralph Northam, signed a law under which Lee-Jackson Day ended and Election Day became a state holiday. Northam said the old day "commemorates a lost cause. It's time to move on." A lost cause is a cause that has failed. CNN reported that both generals had enslaved people and had fought to keep slavery.

Arkansas lawmakers moved Lee's day off King's day in 2017. Alabama and Mississippi still honor Lee's birthday on the same Monday as King's day.

Juneteenth becomes a federal holiday, 2021

Juneteenth, the June 19 celebration of the end of slavery in Texas, became a federal holiday in 2021. On May 25, 2020, Derek Chauvin, a Minneapolis police officer, killed George Floyd. That June, many Juneteenth gatherings called for changes in the way police do their work.

The vote. The senators passed the Juneteenth National Independence Day Act in June 2021. On June 16, 2021, the members of the House passed it 415 votes to 14, according to the House's own record of the vote. All 14 votes against it came from Republicans. President Biden signed it on June 17, 2021. It was the first new federal holiday since King's day in 1983.

The leaders of each state still decide whether state workers get the day off. In 2025 the Congressional Research Service, which studies laws for Congress, counted 31 states and Washington, D.C., with a permanent paid Juneteenth holiday. PolitiFact, a fact-checking news site, reported that count in June 2026. Alabama was the most recent state to add it, in May 2025. PolitiFact

also reported that New Mexico names the day each year, and that the governors of Kansas and Kentucky have declared it. Private employers do not have to give the day off.

Juneteenth 2025. President Trump signed no proclamation for the day on Juneteenth 2025, the Associated Press reported. The White House had said earlier that he planned to sign one. "I'm not tracking his signature on a proclamation today," his press secretary, Karoline Leavitt, said. President Trump said that America has "too many non-working holidays," CBS News reported.

Park fees. In December 2025, CBS News reported a change in the National Park Service's list of days with free entry to the parks. The 2026 list no longer included Martin Luther King Jr. Day and Juneteenth, which President Biden's officials had made free-entry days. It added June 14, which is Flag Day and President Trump's birthday. The change affects only park fees. Both days are still federal holidays.

Opal Lee

Who: A retired Fort Worth teacher who organized Juneteenth celebrations for about 40 years and campaigned for it to become a national holiday.
When and where: Fort Worth, Texas, 1939 to today.

At 89 she walked toward Washington, 2.5 miles at a time.

Opal Lee was the best-known campaigner for making Juneteenth a national holiday. She was there when President Biden signed the law on June 17, 2021, and he asked the crowd to stand and cheer for her. She was born Opal Flake in Marshall, Texas, in 1926, and her family moved to Fort Worth when she was nine.

In June 1939, her parents bought a house at 940 East Annie Street in Fort Worth, in a white neighborhood. On June 19, 1939, when she was 12, a white mob of about 500 people drove the family out. The mob dragged

the family's furniture out and burned it, and burned the house to the ground.

Lee remembered that police officers were there and did not stop the mob. She said her father came home from work with a gun. The police told him that if he fired, they would let the mob have the family. No record names anyone in the mob, and no record shows that anyone was arrested.

She became a teacher after she graduated from Wiley College in 1953. When she retired in 1977, she helped found the Tarrant County Black Historical and Genealogical Society. She began planning Fort Worth's Juneteenth celebrations, and she led them for about 40 years.

The walk. In 2016, when she was 89, she organized a walk of 1,400 miles from her home in Texas to Washington, D.C. The walk drew attention across the country to Juneteenth. Her family worried about her health. So she walked about 300 miles herself, in pieces of 2.5 miles each. The 2.5 miles stand for the two and a half years it took for the news of freedom to reach Texas. Her petition for the holiday gathered 1.6 million signatures, according to the National Women's History Museum.

President Biden gave her the Presidential Medal of Freedom, the country's highest honor for a civilian, a person who is not in the military, on May 3, 2024. That year builders put up a new house for her on the lot where her family's house had burned. She paid $10 for the land, KERA News reported in 2024.

On Juneteenth 2026, nearly 600 people walked Opal's Walk for Freedom in Fort Worth, the Fort Worth Report counted. Lee did not attend. Her family led the walk while she rested, a few months before her 100th birthday.

Two presidents, two Octobers: Indigenous Peoples' Day and Columbus Day, 2021 to 2026

President Biden proclaimed Indigenous Peoples' Day on October 8, 2021. He wrote that for generations "Federal policies systematically sought to assimilate and displace Native people and eradicate Native cultures." To assimilate people means to make them give up their own ways and take on someone else's, to displace them means to push them off their land, and to eradicate means to wipe out. Biden also proclaimed Columbus Day each year from 2021 to 2024. In 2020 Colorado's lawmakers replaced Columbus Day in their state with Cabrini Day, named for an Italian American nun.

October 2025. President Trump proclaimed Columbus Day in October 2025 and did not mention Indigenous Peoples' Day. His proclamation said of Columbus, "Left-wing radicals toppled his statues, vandalized his monuments, tarnished his character." NPR reported a count by the Pew Research Center, a group that studies public life. In 2025 Pew researchers counted 30 states and three territories that recognize Columbus Day in some way. They also counted 17 states and Washington, D.C., that honor Indigenous people on that day. Some states do both.

The National Day of Mourning is still held at noon on Cole's Hill in Plymouth every Thanksgiving. The most recent one was on November 27, 2025. Only Native people speak, and many of those who come go without food from the evening before. Frank James's granddaughter, Kisha James, helps organize it.

Pride Month, and new days for more communities

President Barack Obama proclaimed Lesbian, Gay, Bisexual and Transgender Pride Month in 2009. President Biden added more groups to the name in 2022.

Halloween, on October 31, is not a federal holiday, but Americans spend billions of dollars on it. The National Retail Federation, a trade group for stores, has surveyed shoppers each year since 2005. In September 2026 it reported that Halloween spending had reached a record $13.1 billion in 2025. Its survey forecast $13.5 billion for 2026. These are estimates from a survey, not counts of actual sales.

Americans also began to keep more communities' days. Cinco de Mayo, the fifth of May, marks the Mexican army's defeat of French troops at Puebla, Mexico, on May 5, 1862. Latinos in California began celebrating it during the Civil War, according to David Hayes-Bautista, a scholar at the University of California, Los Angeles. Hayes-Bautista says it is scarcely observed in Mexico. It is not Mexico's Independence Day, which is September 16.

New York's governor, Kathy Hochul, signed a law in September 2023 that closes all the state's public schools for Lunar New Year, the start of the year in calendars based on the moon. California's governor, Gavin Newsom, signed a law in October 2025 making Diwali a state holiday from 2026. California was the third state to do so, after Pennsylvania and Connecticut. Diwali is the festival of lights, kept mostly by Hindus, Sikhs, Jains and Buddhists.

THE THREE QUESTIONS, ANSWERED

1. **Who decided when Americans would give thanks, and why did it take until 1941 to fix the date?** Governors and church elders set the days one at a time, until Lincoln proclaimed a national Thursday in 1863 at Sarah Josepha Hale's request. Every president after him named the day by proclamation, so when Franklin Roosevelt moved it in 1939 to help stores, sixteen states refused by

the National Archives' count, and Congress ended the confusion with the 1941 law.

2. **Which days did Black Americans make their own, from election days to Juneteenth?** Black governors' election days in New England from about 1749, January 1 from 1808, July 5 in New York in 1827, August 1 after 1834, and Juneteenth from 1866, which Congress made a federal holiday in 2021.
3. **Why did President Harrison proclaim the first Columbus Day in 1892, and why do some states no longer keep it?** He proclaimed it for the 400th anniversary of Columbus's landing, a year and a half after a New Orleans mob lynched eleven Italian American men, and some writers say the holiday was partly meant to calm Italy. Native groups and others object to honoring a man whose men enslaved Taino people. Since Berkeley in 1992, cities and 17 states have used the day to honor Indigenous peoples, and some of those states keep Columbus Day too.

What changed: Ten eras ago the Faith Keepers and the Sun-priests set the days. By 2021 a majority in Congress did, and the days they chose included one, Juneteenth, that freed people in Texas had kept for 155 years without asking anyone.

FIVE DATES TO KEEP

Fall 1621: the harvest meal at Plymouth, called the first Thanksgiving only from 1841.

October 3, 1863: Lincoln proclaims a national Thanksgiving on the last Thursday in November.

June 19, 1865: General Granger announces in Galveston that slavery has ended in Texas.

October 21, 1892: the first national Columbus Day.

June 17, 2021: President Biden signs the law making Juneteenth a federal holiday.

NOT KNOWN: No surviving record gives the first name of the boy Brown, killed by a Pope wagon in Boston on November 5, 1764, or says who was driving it.

Where to go: Cole's Hill in Plymouth, Massachusetts, where the statue of Massasoit stands and the National Day of Mourning is held at noon every Thanksgiving.

Next: This is the last of the 37 chapters. Chapter 1, Exploration and Discovery, is where the grid begins.

How We Know What Happened

Nobody alive today saw the Pueblo Revolt, the founding of Jamestown or the first Thanksgiving. Nobody alive saw Cahokia when it was the largest city north of Mexico. Everything known about those times comes from what people left behind: papers, objects, bones, buildings, photographs, and the stories that families and nations told their children.

Historians are people who study the past and write about it. They gather that evidence and check it. Each kind of evidence keeps some facts and loses others, so a historian gathers as many kinds as possible and checks them against each other. Then the historian states three things: what is known, what is not known, and where the evidence disagrees. Those three show up all through this book. A fact the records show is stated as a fact. A fact no record kept is marked "not known." Where records conflict, the better-supported version comes first, and the other is given with its source.

Papers written at the time

A record made when something happened, by someone who was there, is called a primary source. Letters, diaries, court papers and newspaper reports are primary sources. A book written later by someone who studied those papers is called a secondary source. Historians trust a primary source most, but they still check it, because the person who wrote it saw only part of what happened.

A diary is a book in which a person writes down each day as it happens. Amelia Stewart Knight kept one in 1853, when she traveled by wagon from Iowa to Oregon with her husband and seven children. She wrote about rain, mud, dust, sick children and hard river crossings. She was pregnant the whole way. She did not mention it in the diary until her son Adam was born, on September 18, 1853. The family had reached Oregon the day before. A diary records what its writer chose to write down, and a careful reader notices what was left out.

Court records contain the judges' own words about how they punished people. On July 9, 1640, a court in Virginia judged three servants who had run away together from their master, Hugh Gwyn, and been caught. The judges gave the two European men four more years of work as punishment. They sentenced the third man, John Punch, an African, to serve "for the time of his natural Life." Historians count that ruling as the first known sentence of lifetime slavery in Virginia, because Punch had to serve until he died and his master could sell him or give him away. It is also the first record in which Virginia judges punished one man more harshly than the others because of his race. Nobody wrote down why.

Bones, ruins and things in the ground

Archaeology is the study of the past through the things people left in the ground: tools, pots, buildings, trash and graves. Archaeologists dig slowly and record exactly where each object lay, because where something was found is part of what it shows. For most of the thousands of years that people lived in North America, nobody wrote anything on paper. Most of what is known about those years comes from archaeology.

Sometimes bones confirm a written account. At Jamestown in Virginia, the English colonists ran out of food in the winter of 1609 to 1610. Powhatan, the leader of the Native nations around them, had cut off trade and surrounded their fort. The colonists ate their horses, their dogs, rats and leather. Written accounts from the time say starving colonists also ate the bodies of the dead. In 2013, researchers at the Smithsonian announced a find from that winter. The bones of a girl showed that starving colonists had eaten from her body. Researchers call her Jane. No record states her real name. For that winter, the written accounts and the bones agree.

Stories passed down

Oral tradition is history that people keep by telling it, from parents to children, across many lifetimes. Native nations kept their laws, treaties and histories this way for thousands of years before Europeans arrived, and many still do. Records written by colonists describe Native nations from the outside. A nation's own tradition records what its people remember and how they understood events. Where this book gives a Native nation's history, it gives the nation's own account beside the written one and says which is which.

Chapter 2, Native Nations, and Chapter 5, Migration Across America, describe a 2023 study in which scientists tested old horse bones to find their age. The bones showed that many Plains nations had horses by the early 1600s, as the nations' own histories say.

Counting

Numbers look exact, but every count depends on who did the counting, what they counted, and why. When two counts of the same thing differ, historians look for the reason.

A count changes when someone decides what to leave out. At Hoover Dam, built in the 1930s, the official count is 96 workers killed on the job. That count comes from the Bureau of Reclamation, the federal office that runs the dam, and it leaves out deaths from heat and sickness. The records list 42 more workers as dying of pneumonia, a sickness of the lungs. Workers blamed those deaths on carbon monoxide, a gas from engine exhaust, in the tunnels. The true number of workers who died is higher than 96, and nobody knows exactly how many.

The words "at least" in a count mean the real number may be higher. Where this book gives a number, it gives the range when the sources give a range, and it names who counted.

Who wrote the records, and who is missing

For most of American history, the people who wrote things down and kept the papers were the people with power: officials, officers, owners and ministers. Their records describe other people from the outside, and many people appear in them without names. In late August 1619, an English ship called the *White Lion*, which had sailed from the Netherlands, landed captive Africans at Point Comfort, Virginia. The colonist John Rolfe wrote that it brought "20. and odd Negroes." His record lists none of their names. The first record of Africans in English Virginia records them only as a number.

When an account names a person, this book names the person. When the only record names nobody, the book states the event without a name, because an invented name would be a false fact.

When sources disagree

When two records tell a story differently, historians check who wrote each one and whether that person was there. They check how long after the event it was written, whether the writer checked it with the people involved, and what the writer gained from telling it one way. A record made soon after, by a witness who checked it, is the better source. When neither is clearly better, a careful historian reports both. Chapter 25, Rights and Movements, contains the clearest case in this book: the two versions of Sojourner Truth's 1851 speech, one printed three weeks later by a man who knew her, the other written twelve years later by a woman who never checked it with her.

Questions with no answer

Some questions cannot be answered, because no record of the answer was ever made or none survived. When that happens, a careful historian states that the record is missing and leaves the gap empty instead of guessing. No record made in 1619 names any of the Africans who landed that year, and the records do not settle whether the Virginia colonists treated them as servants, who could earn their freedom after some years, or as slaves for life. Virginia's laws did not yet use the word "slave." This book leaves that gap open, and every gap like it.

A quotation keeps the words the person actually used, even words people today find hurtful, because changing them would change the record. Rolfe's "Negroes" was the common word of his time for Black people. Words made to insult a whole people are not repeated. Instead, the account says plainly what the word called people.

The past keeps changing

What is known about the past changes as new evidence is found. New tests find new facts in old bones. Lost letters turn up in attics and in archives, the places where old papers are kept. People who were left out of the old records are found again when someone looks for them. Each new piece of evidence can confirm an old account, correct it, or show that it was wrong.

Glossary

Every hard word the chapters explain, from A to Z, with the chapter where it first appears.

0 to 9

10 a.m. policy: the 1935 Forest Service rule that crews bring each fire under control by 10 o'clock the morning after it was spotted (Chapter 3) 215

3D printer: a machine that builds a solid object out of many thin layers, one on top of another (Chapter 8) 570

55th parallel: an east-west line across North America. North of it, hunters went on using the atlatl beside the bow for more than 1,000 years (Chapter 8) 512

A

AAA: the Agricultural Adjustment Administration, the federal office that paid farmers to grow less in the 1930s (Chapter 16) 1084

AAA purge: the firing, in February 1935, of the lawyers at the Agricultural Adjustment Administration who ruled that landlords had to keep the same tenants (Chapter 16) 1084

aadizookaanag: the Ojibwe sacred stories, told only in winter (Chapter 34) 2814

abbots: the heads of monasteries, the houses where monks live and pray together (Chapter 30) 2392

abolished: ended by law (Chapter 2) 126

abolition society: a group that worked to end slavery (Chapter 9) 591

abolitionist: someone who worked to end slavery (Chapter 5) 352

abortion: a medical procedure that ends a pregnancy (Chapter 25) 1909

about going: about to die (Chapter 19) 1256

abridged: cut back (Chapter 20) 1341

absentee ballots: ballots mailed to voters who vote from home (Chapter 20) 1390

abstract art: art that shows shapes and colors instead of things (Chapter 32) 2660

Abstract Expressionism: painting that shows no real objects, as Pollock's did (Chapter 32) 2679

abstractions: ideas (Chapter 30) 2414

abuse of power: using the powers of an office for wrong purposes (Chapter 20) 1372

academy: a school for older pupils, a step above the town school and a step below a college (Chapter 30) 2359

Acadia: a French colony on the Atlantic coast of what is now Canada (Chapter 5) 346

Acadians: French-speaking Catholic farm families of Nova Scotia (Chapter 5) 346

accessory: a person who helps a crime happen without doing the act (Chapter 21) 1442

accountability: judging schools by how their students scored on tests (Chapter 20) 1390

achievement gap: the difference between the test scores of different groups of children, such as rich and poor children (Chapter 30) 2474

Achilles tendon: the cord just above the heel (Chapter 24) 1676

Acoma Pueblo: the Acoma people's town, with their fields around it (Chapter 2) 102

acre: a piece of land a little smaller than a football field (Chapter 1) 39

acre-foot: enough water to cover one acre of land one foot deep (Chapter 3) 240

act of God: a natural event that no person could be blamed for or could have prevented (Chapter 27) 2068

act of oblivion: a Cherokee act of 1810 in which the clans forgave every life one clan still owed another. Oblivion means forgetting (Chapter 21) 1434

acting governor: the official running a colony for the king while the governor was away (Chapter 18) 1182

active duty: serving full-time in the military (Chapter 22) 1585

active shooter: a person who is still attacking people (Chapter 30) 2474

active volcano: a volcano that is erupting, throwing out gas and melted rock (Chapter 9) 633

activists: people who campaign for a cause (Chapter 6) 452

actour: an old spelling of actor, used in the 1665 court record (Chapter 34) 2823

addiction: a need for a drug so strong that stopping is very hard (Chapter 15) 1039

adelantado: a Spanish office that a man received by signing a contract with the king (Chapter 20) 1308

ADHD: attention-deficit/hyperactivity disorder, a condition doctors find in a child who has trouble paying attention, or is overactive and acts without thinking, badly enough to cause problems in more than one place (Chapter 36) 3058

admirable: in Roger Williams's English, worth wondering at (Chapter 11) 726

adobe: sun-dried mud brick (Chapter 6) 395

adulation: too much praise (Chapter 20) 1322

adulterated: made impure or mixed with something that should not be in it (Chapter 15) 1015

adultery: sex between a married person and someone outside the marriage (Chapter 21) 1412

advance: money paid before the work is done (Chapter 18) 1204

advertising agency: a business that plans advertisements for sellers and buys space for them in newspapers and magazines (Chapter 18) 1193

advertising exchange: the online market where websites sell ad space to advertisers (Chapter 19) 1291

advisory: a public warning (Chapter 36) 3058

advocacy groups: groups that campaign for a cause (Chapter 7) 495

adze: a carving tool with a curved blade set across the end of its handle (Chapter 32) 2598

Aesop's fables: a set of old animal stories (Chapter 30) 2351

affirmative action: letting colleges consider an applicant's race, in a limited way, to gain the benefits of having students of many races (Chapter 25) 1909

affluence: wealth (Chapter 20) 1372

African Methodist Episcopal Church: a church run by Black Methodists (Chapter 12) 832

Afro: hair combed out into a round shape (Chapter 35) 2959

aftershocks: smaller quakes that follow a large one (Chapter 27) 2041

agency: the office of the US official who ran a reservation (Chapter 2) 134

agency prison: the jail at the government office on a reservation (Chapter 33) 2746

agent: an organizer for a society (Chapter 25) 1778

Agent Orange: a plant-killing chemical that American forces sprayed over South Vietnam, tainted with a poison called dioxin (Chapter 22) 1575

aglet: the small metal tip of a lace, so it can pass through a hole (Chapter 35) 2912

agnostic: a person who holds that no one can know whether God exists (Chapter 29) 2304

agricultural experiment station: a place where scientists run tests to improve farming (Chapter 9) 604

AI (artificial intelligence): computer programs that do tasks such as recognizing a face or writing a paragraph (Chapter 8) 570

AI chatbot: a program that answers typed questions in sentences (Chapter 8) 570

aide: a helper to a general (Chapter 22) 1522

AIDS: a disease caused by a virus that destroys the body's defenses against other illnesses (Chapter 4) 310

air brake: a brake worked by air pressure (Chapter 11) 745

air shafts: narrow gaps between buildings meant to let in air and light (Chapter 7) 480

air traffic controllers: the workers who guide airplanes in and out of airports (Chapter 14) 963

airship: a giant aircraft held up by a gas lighter than air, with engines to push it and a cabin for passengers (Chapter 13) 868

alcalde: an official who acted as the judge in a Spanish town (Chapter 21) 1409

alchemy: the older practice that came before chemistry, in which alchemists tried to turn ordinary metals such as lead into gold (Chapter 13) 847

alcoholic: a person who cannot stop drinking (Chapter 28) 2127

alcoholism: the illness of being addicted to alcohol (Chapter 28) 2165

aldermen: the members of a city council (Chapter 18) 1178

Algonquian: a large group of related Native languages (Chapter 9) 584

alibi: proof that a person was somewhere else when a crime happened (Chapter 4) 275

aliens: people from other countries who were not citizens (Chapter 25) 1770

alimony: the money a person pays a former husband or wife after a divorce (Chapter 18) 1214

All Pueblo Council of Governors: the governors who lead the 20 Pueblo nations of New Mexico and Texas (Chapter 2) 102

alliance: a promise to stand together against enemies (Chapter 2) 108

Allies: the countries fighting Germany in the two world wars (Chapter 10) 691

allotment: cutting land that a whole nation owned together into private pieces (Chapter 2) 99

almanac: a book printed once a year with a calendar and tables of the sun, moon and stars (Chapter 6) 407

almshouse: a public home for poor people (Chapter 9) 596

alpha particles: the tiny particles americium gives off (Chapter 8) 561

alpha radiation: the kind of radiation radium gives off (Chapter 13) 868

alphabet houses: Oak Ridge houses built in a few standard types named by letters, such as the A house and the B house (Chapter 6) 431

ALS: a disease that destroys the nerve cells that carry orders from the brain to the muscles (Chapter 25) 1909

altar boy: a boy who helped the priests during church services (Chapter 2) 102

alter, modify, or repeal: change or cancel (Chapter 19) 1250

alternating current (AC): electricity that flows back and forth many times a second (Chapter 8) 541

aluminum oxide: a compound of aluminum and oxygen (Chapter 13) 863

amaranth: a plant whose tiny seeds are eaten like grain (Chapter 15) 1039

amateur sport: the contests for unpaid athletes (Chapter 36) 3028

amateurs: people who were never paid to play a sport (Chapter 2) 149

Amazons: the women warriors of old Greek stories (Chapter 35) 2928

ambassador: an official who speaks for one country in another (Chapter 21) 1442

ambrotype: a small photograph on glass (Chapter 22) 1543

amendment: a change to the Constitution (Chapter 3) 240

American national: a person who can live in the United States and carry an American passport but is not a citizen (Chapter 23) 1634

americium: a radioactive element, used in ionization smoke detectors (Chapter 8) 561

ammonium nitrate: a chemical used as fertilizer that can explode (Chapter 27) 2078

amplifier: a device to make a signal stronger (Chapter 9) 614

amputate: to cut off an arm or leg (Chapter 32) 2627

amputation: an operation that cuts off an arm or leg (Chapter 22) 1534

anarchist: a person who believes there should be no government (Chapter 14) 929

ancestral lands: the lands a people's ancestors lived on (Chapter 3) 215

Ancestral Puebloan people: the ancestors of today's Pueblo peoples (Chapter 2) 99

anchor: the person who reads the news and introduces the reports on a news program (Chapter 31) 2572

anchor store: a big store that draws shoppers to the smaller shops around it (Chapter 18) 1222

Anderson Bill: the 1947 California law that repealed the state's law on segregated schools (Chapter 20) 1356

Andes: the high mountains of South America (Chapter 1) 74

anemia: having too few red blood cells, which leaves a person weak and tired (Chapter 13) 868

anemic: pale and weak because the blood is not carrying enough of what the body needs (Chapter 14) 941

anesthesia: the use of a drug so that a patient does not feel pain during an operation (Chapter 9) 633

anesthetic: a drug that puts a patient to sleep so the patient feels no pain (Chapter 22) 1534

Anglican: a member of the Church of England (Chapter 29) 2213

aniline dyes: dyes named after aniline, one of the coal-tar chemicals used to make them (Chapter 35) 2940

Anishinaabe: a family of related nations that includes the Ojibwe, the Odawa and the Potawatomi (Chapter 15) 986

annealing: heating copper, hammering it while the heat keeps it soft, letting it cool, and doing the same again and again (Chapter 35) 2908

annex: to take over as part of the United States (Chapter 1) 64

annexation: moving a city's legal boundary out to take in neighboring land (Chapter 6) 443

annihilate: wipe out (Chapter 20) 1341

annual percentage rate: the cost of a loan over a full year as a share of the amount borrowed (Chapter 17) 1160

annually: each year (Chapter 30) 2367

annuities: the food and goods US officials promised a tribe every year in a treaty, as payment for land (Chapter 3) 215

anode: a battery's negative end (Chapter 8) 570

Anschluss: the takeover of Austria by Nazi Germany in March 1938 (Chapter 18) 1214

anteroom: a small room next to a classroom (Chapter 25) 1871

anthem: an official song, or a church song (Chapter 25) 1909

anthracite: a hard kind of coal from northeastern Pennsylvania, which people then called stone coal (Chapter 10) 677

anthropologist: a scientist who studies how groups of people live (Chapter 2) 102

anthropology: the study of human peoples and their ways of life (Chapter 9) 614

antibiotic: a medicine that kills bacteria (Chapter 26) 1990

Anti-Masonic Party: the party formed by men who opposed the Freemasons (Chapter 20) 1333

antinomian: a word that means "against the law," used by Anne Hutchinson's opponents to say her teaching let a saved person ignore the rules (Chapter 29) 2213

antiproton: a tiny particle with the opposite electric charge of the proton, a particle in the center of every atom (Chapter 9) 614

antisemitic: hateful toward Jewish people (Chapter 9) 614

anti-Semitism: hatred of Jews (Chapter 29) 2274

antitrust laws: laws against trusts and other combinations of companies (Chapter 19) 1256

anxious seat: seats at the front of a church where people worried about their souls sat in front of everyone (Chapter 29) 2256

aplastic anemia: radiation damage to the bone marrow until the marrow stops making blood cells (Chapter 13) 868

apocryphal: probably made up (Chapter 3) 200

Apollo: the Moon program (Chapter 1) 82

apoplexy: an old word for a sudden stroke (Chapter 21) 1434

apostate: a person who has abandoned their faith (Chapter 25) 1767

apostle: one of the highest leaders of the Church of Jesus Christ of Latter-day Saints (Chapter 29) 2256

Apostles' Creed: a short statement of Christian belief (Chapter 30) 2367

Appalachian backcountry: the land in and near the Appalachian Mountains, far from the coast (Chapter 4) 267

apparent suicides: deaths in which people appeared to have killed themselves (Chapter 4) 320

appeal: a request for a higher court to change a ruling (Chapter 2) 170

appeals court: a higher court that checks the rulings of lower courts (Chapter 4) 320

appendicitis: an infection of a small part of the gut (Chapter 1) 44

appointed: provided free, said of a lawyer for a person who cannot pay for one (Chapter 20) 1372

apportionment population: the count used to divide the seats in the House among the states (Chapter 20) 1390

appraiser: a person whose job is to judge what a property is worth (Chapter 6) 431

apprehended: caught (Chapter 4) 320

apprentice: a young worker who learns a trade from a master (Chapter 4) 267

apprentice musician: a boy learning the work of a band musician (Chapter 33) 2746

apprentices (British West Indies): freed people who, after 1834, still had to work about 40 hours a week for their former enslavers, without pay (Chapter 37) 3101

apprenticeship: working beside the older people of the community until a child has their skills (Chapter 30) 2345

aqua vitae: a strong liquor like brandy (Chapter 28) 2127

aquanauts: people who live and work underwater (Chapter 1) 82

aqueduct: a channel built to carry water a long way, as the Croton Aqueduct (Chapter 6) 413

arbitrary power: power used without limits (Chapter 20) 1317

arbitration: settling a dispute by letting a neutral panel decide (Chapter 23) 1605

arbitrator: a person both sides agree will settle a dispute (Chapter 36) 3045

arc lamp: a lamp that makes light from a spark between two rods (Chapter 8) 541

arcade: a covered walkway (Chapter 18) 1214

archaeologist: a scientist who digs up and studies the things people left behind (Chapter 1) 17

archbishop: a bishop who leads the main church area of a region (Chapter 4) 260

Archbishop of Canterbury: the head of the Church of England (Chapter 4) 260

archive: a building that stores old papers (Chapter 1) 21

Archivist of the United States: the federal official who certifies and publishes amendments (Chapter 25) 1909

ardent spirits: strong liquor such as rum, gin and whiskey (Chapter 28) 2138

arks: the boats that carried anthracite down the Lehigh River to Philadelphia (Chapter 10) 677

armistice: an agreement to stop fighting (Chapter 22) 1559

Armistice Day: November 11, the day the fighting in the First World War stopped (Chapter 37) 3119

armorer: a man who makes and repairs weapons (Chapter 17) 1123

armory: a building where weapons are made or stored (Chapter 8) 528

armory and arsenal: places where the government made and stored guns (Chapter 22) 1543

Army Corps of Engineers: the part of the Army that builds dams and waterways (Chapter 2) 170

Army National Guard: a part-time state army force that can be sent to war (Chapter 22) 1585

ARPANET: a computer network paid for by the Department of Defense to link computers at universities, the network the internet began with (Chapter 8) 561

arrange: to write out the parts of a song for each voice (Chapter 33) 2746

arranged marriage: a marriage planned by other people rather than by the couple (Chapter 7) 480

arsenic: an element and a strong poison (Chapter 13) 868

arson: the crime of setting a fire on purpose (Chapter 27) 2104

arsonist: a person who sets fires on purpose (Chapter 21) 1456

art dealer: a person who buys and sells art for a living (Chapter 32) 2679

artery: a large tube that carries blood from the heart (Chapter 26) 1983

Article 5: the part of the NATO treaty that states that an attack on one member is an attack on all of them (Chapter 23) 1656

articles: the written rules of a group (Chapter 6) 404

Articles of Confederation: the country's plan of government before the Constitution (Chapter 20) 1322

articles of impeachment: formal charges that could lead to a president's removal from office (Chapter 20) 1372

artificial silk: a man-made cloth that looked like silk (Chapter 35) 2949

artillery: soldiers who fire the big guns (Chapter 8) 553

artillery firing tables: charts that told soldiers how to aim their big guns (Chapter 8) 553

Aryans: the name the Nazis gave the white people they taught were a superior race (Chapter 36) 3028

asbestos: a mineral that separates into thin, strong fibers, used to fireproof and insulate buildings (Chapter 6) 431

asbestosis: a lung disease from breathing asbestos fibers, which scar the lungs. It brings shortness of breath, coughing and lasting lung damage (Chapter 19) 1280

ASCAP: a group that collected money for songwriters (Chapter 33) 2759

Ashley's Hundred: the men who answered William Ashley and Andrew Henry's 1822 newspaper advertisement for one hundred "enterprising young men" (Chapter 1) 44

asiento: the contract that gave British traders the only right, for thirty years, to carry enslaved Black people into Spain's colonies in the Americas and sell them there (Chapter 23) 1602

ask no quarter and give none: no one would be spared, even people who tried to surrender (Chapter 1) 44

assaulted: attacked (Chapter 20) 1390

assembly: in colonial Virginia, the colony's lawmakers (Chapter 15) 991

assembly center: a short-term holding camp, such as the Tanforan racetrack, where horse stalls were turned into rooms for families (Chapter 20) 1356

assembly line: a line of workers where each worker did one job over and over (Chapter 8) 553

assessment: a test or written review of how a child is doing (Chapter 30) 2474

assigns: anyone a master sold or handed a servant to (Chapter 24) 1670

assimilate: to make people give up their own ways and take on someone else's (Chapter 29) 2274

assumption: the national government taking over the states' war debts (Chapter 16) 1062

astronomy: the science of the stars and planets (Chapter 6) 407

asylum: a hospital where people thought to be insane were locked up (Chapter 21) 1442

at two or three removes: through other groups (Chapter 32) 2679

Athabascan migration: the long move of the ancestors of the Navajo and Apache south from western Canada and eastern Alaska (Chapter 5) 333

atheism: the belief that there is no God (Chapter 29) 2304

atlatl: a spear-thrower stick that holds the back end of the spear during the throw (Chapter 8) 512

atoll: a ring of small coral islands (Chapter 13) 886

atom: one of the tiny pieces, far too small to see, that everything is made of (Chapter 9) 614

atomic bomb: a bomb that gets its huge power from the tiny centers of atoms (Chapter 6) 431

Atomic Energy Commission (AEC): the federal agency in charge of atomic energy and nuclear weapons (Chapter 10) 702

at.óow: the Tlingit word for sacred clan property: crests and the stories, songs and names that go with them (Chapter 33) 2713

atrophy: organs shrinking and stopping working (Chapter 25) 1795

attained: reached (Chapter 25) 1871

attendance zones: the areas whose children go to each school (Chapter 20) 1390

Attorney General: the top lawyer of the nation, or of a state (Chapter 4) 310

auction block: the platform where people were sold (Chapter 37) 3101

audit: a check of records (Chapter 29) 2324

authentic: real and true to its roots (Chapter 32) 2660

authenticated: proven by records (Chapter 14) 920

autobahns: Germany's highways (Chapter 11) 764

autobiography: a book a person writes about their own life (Chapter 2) 134

automated teller machine: a machine that pays out cash without a bank clerk (Chapter 17) 1153

autopsy: an examination of a body to find the cause of death (Chapter 10) 711

Auto-Tune: a computer program that moves a singer's off-key notes onto the right pitch (Chapter 33) 2795

avarice: greed (Chapter 20) 1322

awl: a thin pointed tool for punching holes (Chapter 13) 844

aye: yes (Chapter 20) 1372

B

B movies: low-budget films (Chapter 34) 2877

Baby Bells: the seven regional companies made from AT&T's local telephone companies in 1984 (Chapter 19) 1280

baby boom: the years 1946 to 1964, when about 76 million babies were born in the United States (Chapter 7) 495

bachelor: a man who has never married (Chapter 4) 298

back a loan or a bond: to promise to pay the lender or the buyer if the borrower cannot (Chapter 16) 1067

back pay: pay that workers were owed and had not been paid (Chapter 14) 963

backcountry: the valleys and hills behind the older coastal settlements (Chapter 4) 267

background actors: extras with no lines (Chapter 34) 2889

background check: a search of national criminal records that a gun store must run before it sells a gun (Chapter 29) 2324

backlot: the outdoor area of a film studio's sets and storage buildings (Chapter 33) 2795

Bacon's Rebellion: a revolt in Virginia in 1676 (Chapter 16) 1052

bacteria: tiny living things, one kind of germ (Chapter 13) 899

bad faith: dishonestly (Chapter 8) 570

badge of inferiority: a mark that one group is lower than another (Chapter 20) 1341

badly vented stove: a stove that did not let its smoke out properly (Chapter 1) 74

baffle: a hollow iron wall at the back of the Franklin stove that warmed room air (Chapter 8) 524

bail: money paid to a court so that a person can leave jail until the trial (Chapter 4) 267

bailout: government money given to businesses in trouble (Chapter 17) 1160

baize: a thin wool cloth (Chapter 35) 2934

Bakelite: the first plastic made entirely from chemicals, rather than from plants or animals (Chapter 8) 553

bale: a large bundle of cotton pressed tight and tied (Chapter 8) 528

ballad: a song that tells a story (Chapter 12) 795

ballast: heavy dirt carried low in a ship to keep it steady (Chapter 3) 182

ballot question: a question put on the ballot for voters to decide, such as California's Proposition 22 (Chapter 11) 773

band: a group of families who lived and traveled together (Chapter 2) 134

bando de buen gobierno: the order of good government, a set of rules Governor Miró issued in New Orleans (Chapter 35) 2928

baneful: harmful (Chapter 20) 1322

banish: to order a person to leave and never return (Chapter 2) 102

bank examiner: a person who checks that banks follow the rules (Chapter 27) 2093

bank holiday: a day when payments on loans were not due (Chapter 37) 3101

bank holiday (1933): Roosevelt's closing of every bank in the country on March 6, 1933 (Chapter 17) 1143

bank note reporters, counterfeit detectors: printed guides that listed each bank's discount and described the fake notes going around (Chapter 17) 1128

bank run: a rush by many people to take their money out of banks (Chapter 16) 1074

banknote: paper money printed by a bank (Chapter 17) 1123

bankrupt: unable to pay your debts, so that your lenders can take what you own (Chapter 7) 502

bankruptcy: the court process for a person or a company that cannot pay its debts (Chapter 10) 691

bankruptcy law: the rules for what happens when a person or a company cannot pay its debts (Chapter 10) 691

banter: to haggle over the price (Chapter 18) 1188

baptism: the Christian ceremony with water that makes a person a member of a church (Chapter 7) 463

baptize: to make a person a member of the Christian church in a ceremony with water (Chapter 2) 102

bar: the body of lawyers allowed to practice in a court (Chapter 25) 1795

bar iron: iron hammered into bars (Chapter 13) 852

bar lines: the lines that divide music into equal parts of time (Chapter 33) 2723

barbarian: an insult for a person thought to be wild and without learning (Chapter 32) 2619

barbarity: cruelty (Chapter 25) 1767

Barbary states: Algiers, Tunis, Tripoli and Morocco, states on the coast of North Africa (Chapter 23) 1605

baristas: the workers who make the coffee drinks (Chapter 14) 974

barracoon: a pen for captives (Chapter 24) 1712

barred out: locked a teacher out of the schoolhouse until he agreed to a holiday (Chapter 36) 2999

barricaded subject: a person shut in a room (Chapter 30) 2474

barrios: Mexican American neighborhoods (Chapter 30) 2442

barter: swapping one good for another (Chapter 16) 1049

base: a running game with bases (Chapter 36) 2999

baseless allegations: claims with nothing true behind them (Chapter 14) 941

Basque Country: a mountain region on the border of Spain and France (Chapter 18) 1173

bastinado: a punishment in which men threw a person down, tied him and beat the soles of his bare feet with sticks. James Leander Cathcart took 28 blows and lost four toenails (Chapter 23) 1605

bastions: towers that stuck out from a wall, where archers could stand and shoot at attackers (Chapter 22) 1499

bathyscaphe: a deep-diving craft (Chapter 1) 82

battalion: an army unit of a few hundred soldiers (Chapter 3) 200

batteries: gun positions (Chapter 24) 1712

battery electric car: a car that runs on electricity alone (Chapter 10) 711

batting average: how often a player got a hit, so .263 means about 26 hits in every 100 times at bat (Chapter 36) 3019

bayonet: a blade fixed to the end of a rifle (Chapter 2) 134

bayou: a slow-moving stream through low, wet land (Chapter 5) 346

BC: years counted back before the year 1, so 1700 BC to 1100 BC is about 3,700 to 3,100 years ago (Chapter 12) 783

Bell Labs: the research laboratory of the telephone company AT&T (Chapter 8) 553

bellows: giant bags that squeeze air into a fire (Chapter 8) 517

benefactors: the people who gave the money (Chapter 30) 2351

benefit of clergy: an old English rule that let a first-time offender who could read escape a death sentence once (Chapter 21) 1427

benevolence: kindness and help given to other people (Chapter 29) 2256

benign offices: kind duties (Chapter 25) 1795

Bering Strait: the narrow strip of sea between Asia and North America (Chapter 1) 36

besieged: surrounded a town or fort and cut it off (Chapter 2) 108

bibles: the chunks of blubber whalers cut up for boiling (Chapter 10) 677

Biennale: an international art show held in Venice, Italy (Chapter 32) 2695

Big Bang: the hot beginning of the universe (Chapter 9) 633

Big Dipper: the group of stars that points to the North Star (Chapter 33) 2736

bigamy: the crime of marrying a second wife while the first is still living (Chapter 29) 2274

bigot: a person who hates or looks down on people who believe differently (Chapter 29) 2287

bigotry: hatred of people for who they are or what they believe (Chapter 22) 1534

bilboes: iron rings locked around the ankles and joined to a bar, so the person could not walk away (Chapter 21) 1412

bilingual teaching: classes taught in both Spanish and English (Chapter 30) 2442

bill: a proposed law (Chapter 3) 196

Bill of Rights: the first ten amendments to the Constitution (Chapter 20) 1322

billing: the size and place of a performer's name on the posters (Chapter 34) 2861

bills of credit: the paper money Massachusetts lawmakers printed from 1690 (Chapter 17) 1115

biochemist: a scientist who studies the chemistry inside living things (Chapter 9) 648

birch rods: thin sticks, or bundles of twigs, cut from a birch tree and used to beat children (Chapter 30) 2351

birth control: ways to keep from becoming pregnant (Chapter 23) 1634

birth defect: a problem in a baby's body that is there when the baby is born (Chapter 3) 229

bishop: a church leader in charge of the priests and churches of a whole area (Chapter 4) 275

bit: a small silver coin, one of the eight parts of a piece of eight, so two bits made a quarter of a dollar (Chapter 17) 1113

bitcoin: a digital coin that no government and no bank puts out (Chapter 17) 1160

Black Codes: laws Southern lawmakers passed from November 1865 that let officials arrest, hire out and force to work Black people who could not prove they had a job (Chapter 14) 929

Black Drink: a tea made from the leaves of yaupon holly or dahoon holly (Chapter 28) 2120

Black governor or king: a leader Black communities in New England elected for themselves, a governor where white men elected the colony's governor and a king where the king of England appointed it (Chapter 37) 3091

black hole: a place in space where gravity is so strong that not even light can get out (Chapter 9) 648

black lead: a kind of pencil (Chapter 32) 2605

black lung: a disease caused by breathing coal dust, which scars the lungs. In the worst form, masses of scar tissue leave the miner "gasping for every breath" (Chapter 10) 702

black powder: an early kind of gunpowder (Chapter 4) 283

Black Sunday: the dust storm of April 14, 1935 (Chapter 3) 215

black vomit: blood from the stomach, mixed with stomach acid and vomited up black, in the late stage of yellow fever (Chapter 6) 407

blackface: dark makeup that made a white face look Black (Chapter 33) 2736

blackface minstrelsy: shows in which white actors darkened their faces with burnt cork and acted Black people as fools (Chapter 33) 2736

blackjack: a short heavy club (Chapter 22) 1559

blacklist: a list of workers that employers agree never to hire (Chapter 19) 1256

blackmail: to make people pay money by threatening to tell their secrets (Chapter 20) 1356

bladder: where urine is held (Chapter 22) 1575

blank: a gun shell with gunpowder but no bullet (Chapter 1) 64

blasphemous: insulting to God (Chapter 29) 2304

blasphemy: insulting God (Chapter 21) 1412

blast furnace: a furnace where air blown into the fire makes it hot enough, about 3,000 degrees Fahrenheit, to melt iron out of rock (Chapter 8) 517

blatant: done openly (Chapter 22) 1585

blight: run-down property (Chapter 21) 1484

blighted: a legal label for an area that officials judged run-down enough to tear down (Chapter 6) 443

block booking: the studios' practice of selling films to theatres only in large bundles (Chapter 34) 2861

blockade: closing off a harbor with a line of warships (Chapter 20) 1341

blockbusting: agents and speculators pushing white families to sell and move out by telling them Black families were moving in, then selling the same houses to Black families for much more (Chapter 6) 443

bloodletting, letting blood: cutting open a vein, most often in the arm, and letting blood run out into a bowl (Chapter 26) 1954

bloomers: a dress that reached the knee, worn over loose pants gathered at the ankle, named after Amelia Bloomer (Chapter 35) 2940

blower and striker: the blacksmith's helper who pumps the bellows and swings the heavy hammer (Chapter 8) 535

blowout: an uncontrolled burst of oil and gas up a well (Chapter 3) 229

blubber: the thick layer of fat under a whale's skin (Chapter 10) 677

blue-collar jobs: jobs working with one's hands in factories, mines and building trades (Chapter 14) 963

bluff: a high, steep bank (Chapter 6) 407

BMI: the group radio station owners started in 1939 to collect fees for songwriters (Chapter 33) 2759

Board of Fire Wards: a group of town officers for fires (Chapter 6) 404

Board of Regents (New York): the New York state board that oversees the state's schools and licenses doctors (Chapter 20) 1372

Board of Regents (Smithsonian): the group that governs the Smithsonian (Chapter 9) 596

Board of Supervisors: the officials who made San Francisco's laws (Chapter 25) 1795

Board of Trade: the group of British officials in London who oversaw the colonies and, later, British ships (Chapter 20) 1317

boarders: people who paid to sleep in a family's rooms (Chapter 7) 480

boarding around: a teacher living with the students' families, staying with one family and then the next, as part of the pay (Chapter 7) 474

boarding school: a school where children live as well as study. Federal officials put Native children taken from their families in government boarding schools to make them give up their nations' languages and ways (Chapter 2) 134

boardinghouse: a house where people paid to sleep and eat (Chapter 4) 275

boat people: Vietnamese who escaped in small boats (Chapter 4) 310

bob: a short hairstyle of the 1920s (Chapter 35) 2949

bobbin: a spool that holds thread (Chapter 16) 1074

bobbin boy: a boy who changed the spools that held the thread in a cotton mill (Chapter 16) 1074

body camera: a camera worn on an officer's uniform (Chapter 21) 1484

bog iron: iron ore that workers collected from swamps and ponds (Chapter 13) 848

boiler: a closed tank of water heated by a fire to make steam (Chapter 8) 528

boll weevil: a beetle that eats cotton plants (Chapter 5) 376

bolts: iron shackles (Chapter 28) 2127

bona fide: real (Chapter 18) 1193

bond: a paper promise to repay a loan with interest (Chapter 11) 745

bond (in court): money paid to a court so a person can go home. The court keeps it if the person breaks a promise (Chapter 25) 1909

bond (in slavery): held in slavery (Chapter 20) 1309

bondage: slavery (Chapter 24) 1670

bondholders: people who had lent money by buying bonds (Chapter 17) 1136

bone marrow: the soft center of the bones that makes blood cells (Chapter 13) 868

bonus: an extra payment for war service (Chapter 16) 1084

Book of Common Prayer: the Church of England's prayer book (Chapter 30) 2367

boomers: settlers who entered the Unassigned Lands against the law before 1889 (Chapter 5) 363

booming out: the Mohawk ironworkers' name for traveling to bridge and skyscraper jobs wherever the steel work was (Chapter 6) 418

boomtown: a town whose number of people grows very fast, in a few years (Chapter 6) 413

booster: a person who promoted a city to bring in money and business (Chapter 6) 418

bootleggers: people who made or sold liquor against the law (Chapter 28) 2165

borax: a white powder made from a mineral (Chapter 26) 1961

Border Patrol: the federal agents who guard the border (Chapter 4) 310

bosun chairs: seats hung from a cable (Chapter 12) 815

botanic garden: a garden where plants are grown so they can be studied (Chapter 1) 44

botanist: a plant scientist (Chapter 9) 581

bots: accounts run by computer programs (Chapter 31) 2585

bottomlands: the low, flat lands beside a river (Chapter 10) 702

bound laborer: a person who had to work for whoever bought them until their term ended (Chapter 4) 267

bound out: made to work for a farmer until turning 21 (Chapter 18) 1188

bound servant: someone who had to work for a family without pay until a set number of years ran out (Chapter 33) 2736

bound workers: workers who could not leave their work for years or for life (Chapter 4) 267

bounty: a reward paid for each dead animal, or for each pound of a crop (Chapter 3) 215

bow priests: the Zuni priests who handled dealings with outsiders (Chapter 20) 1304

bowels: the long tube in the belly that food passes through after the stomach (Chapter 26) 1949

boycott: refusing to buy, use or handle something as a protest (Chapter 11) 756

Bozeman Trail: a road opened in 1863 for white settlers to reach the Montana gold fields, through Lakota country (Chapter 2) 134

bracero: a Mexican farm worker hired under contract. The Spanish word means a man who works with his arms (Chapter 4) 298

brakeman: the crew member who set the brakes and joined the cars (Chapter 11) 745

branding: burning the skin with a hot iron to leave a mark that never goes away (Chapter 4) 260

brass: a yellow metal made by melting copper and zinc together (Chapter 8) 516

breadbasket colonies: Pennsylvania, New York and New Jersey, where farmers grew more wheat than their families needed (Chapter 15) 995

breadline: a line for free food (Chapter 15) 1015

break ties: choose between students who ranked the same (Chapter 20) 1390

breakdown: a minstrel dance (Chapter 34) 2851

breaker: the wooden building where coal was broken and sorted (Chapter 10) 681

breaker boys: boys who sat on benches in the breakers and picked slate, a kind of rock, out of the coal (Chapter 14) 929

breaking on the wheel: a way of putting a person to death in which the executioner broke the person's arms and legs with a heavy bar or club and tied the body to a large wooden wheel (Chapter 21) 1412

breechcloth: a strip of cloth worn around the hips (Chapter 36) 3008

breeches: pants that end at the knee (Chapter 33) 2723

breeding: each year taking seed only from the plants farmers chose and planting it again, so the crop changed a little at a time (Chapter 15) 986

brethren: brothers, or brothers and sisters (Chapter 2) 116

Bretton Woods system: the agreement the governments of many countries made after World War II, under which foreign governments could trade dollars for gold at $35 an ounce (Chapter 17) 1153

brew-house: a building for making beer (Chapter 28) 2127

brewing: the making of beer (Chapter 7) 471

brief: a written argument filed with a court (Chapter 19) 1291

brigade: a larger group of soldiers made up of several regiments (Chapter 33) 2746

brine: very salty water, used to keep meat (Chapter 11) 734

Brittany: a part of France (Chapter 22) 1502

Broad Arrow: the mark on the king's trees, three slashes cut with a hatchet (Chapter 3) 189

broadband: a fast internet connection that is always on (Chapter 7) 502

broadside: a single large printed sheet (Chapter 26) 1954

broiler: a young chicken raised for its meat (Chapter 15) 1015

broke the buck: a money market fund's shares fell below $1 (Chapter 17) 1160

broker: a person who arranges sales for others (Chapter 5) 363

Bronze Star: a medal for brave or useful service in war (Chapter 32) 2679

brothel: a house where people paid for sex (Chapter 21) 1442

Brother: a Jesuit who was not a priest (Chapter 30) 2348

brushes: the sliding electrical contacts that older motors used to carry current to their turning part (Chapter 8) 541

bubble: a time when prices climb far above what things are worth and then fall (Chapter 16) 1102

budget surplus: a year when federal tax money coming in is more than federal spending (Chapter 16) 1096

buffalo runners: what the hide hunters called themselves (Chapter 3) 200

bugging: hiding microphones in a place to listen in (Chapter 31) 2572

building code: a set of rules for how strong buildings must be (Chapter 27) 2093

building trades unions: groups that carpenters, plumbers, ironworkers and other builders join to bargain together for jobs and pay (Chapter 12) 825

bull boat: a boat made of buffalo hide (Chapter 1) 44

bulletin: a small printed booklet (Chapter 15) 1015

bulwark: a strong wall that protects (Chapter 25) 1778

bum blockade: the Los Angeles police chief's 1936 use of his officers at the state line to turn back poor migrants (Chapter 5) 376

bumpers: glasses filled to the brim and drunk off at once (Chapter 28) 2133

bundle: to build one program into another (Chapter 19) 1280

bungalow: a house of one main floor with a low roof and a front porch, and sometimes rooms tucked under the roof (Chapter 7) 485

Bureau of American Ethnology: a government office in Washington whose staff studied Native peoples (Chapter 36) 2981

Bureau of Indian Affairs: the federal office in charge of the government's dealings with Native nations (Chapter 2) 158

Bureau of Labor Statistics: a federal office whose staff gather facts about work (Chapter 8) 553

Bureau of Reclamation: the federal office whose staff run Hoover Dam (Chapter 3) 240

burgess: an elected member of the assembly (Chapter 20) 1309

burial mound: a mound people built over the graves of their dead (Chapter 13) 844

burned in effigy: setting fire to dummies made to look like people (Chapter 31) 2533

burning at the stake: chaining a person to an upright post with wood piled around it and setting the wood on fire, so the person burned to death (Chapter 21) 1422

burning lens: a glass lens that bends sunlight to one hot point (Chapter 13) 855

bushel: a measure of grain or other dry goods that fills a large basket (Chapter 3) 200

busing: carrying children by bus to schools outside their neighborhoods (Chapter 25) 1871

busk: a long, flat piece of steel, wood or whalebone down the front of a corset (Chapter 35) 2934

busk (ceremony): William Bartram's name for the Green Corn Ceremony (Chapter 21) 1406

bust: a sculpture of a person's head and shoulders (Chapter 32) 2643

Butler Act: the 1925 Tennessee law that made it unlawful to teach evolution in the state's public schools (Chapter 20) 1356

butte: a steep hill with a flat top (Chapter 9) 581

buy out an indenture: pay to free a servant from the rest of his years of work (Chapter 4) 260

buying on contract: buying a house while the seller keeps the deed until the last payment, so that one missed payment loses the down payment, every monthly payment and the house (Chapter 7) 495

buying on credit: taking the goods home and paying for them later (Chapter 18) 1174

bystanders: people who were only watching (Chapter 24) 1712

C

cabaret card: the New York City police license a performer needed to work in any club that sold alcohol (Chapter 33) 2759

Cabinet: the group of the president's top officials who each run a department (Chapter 14) 941

cabinet office: the job of heading one of the main federal departments (Chapter 2) 170

cabinetmakers: the skilled makers of fine furniture (Chapter 35) 2928

cable: a message sent by wire under the ocean (Chapter 31) 2559

cable television: wires that carried many channels into homes (Chapter 18) 1214

Cabrini Day: the day Colorado's lawmakers put in place of Columbus Day in 2020, named for an Italian American nun (Chapter 37) 3135

cacao: the bean that chocolate is made from (Chapter 15) 989

cache: a hidden store of food (Chapter 3) 200

cacos: Haitian fighters who rose against the American occupation (Chapter 23) 1634

cadaver: a dead body that doctors and medical students cut open to study the human body (Chapter 21) 1442

cadet: a student training to be an army officer (Chapter 36) 3008

cage crinoline: a frame of steel hoops that held a skirt out wide (Chapter 35) 2940

Cahokia: a city on the Mississippi River near present-day St. Louis (Chapter 1) 17

caisson disease, or the bends: the illness that struck men who came up out of the air under pressure too quickly, when bubbles of gas formed in their blood, causing great pain in the joints and sometimes paralysis or death (Chapter 12) 807

caissons: huge boxes, open underneath, sunk to the bottom of a river, where men dug out the riverbed in air pumped in under pressure (Chapter 12) 807

Cajun: a descendant of the Acadians in Louisiana, from the word Acadian (Chapter 5) 346

calico: cotton cloth printed with colored patterns (Chapter 18) 1182

California cuisine: cooking built on fresh food from local farms (Chapter 15) 1028

California Gold Rush: when crowds of people went to California to look for gold (Chapter 4) 283

California Labor Commissioner: the state office that handles pay disputes (Chapter 11) 773

call in loans: ask borrowers to pay back money right away (Chapter 16) 1067

camas: a root that people dug up and ate (Chapter 18) 1170

Camino Real: the Royal Road, which ran about 1,600 miles north from Mexico City (Chapter 5) 336

camp meeting: an outdoor revival where families pitched tents and stayed for several days of preaching (Chapter 29) 2256

camphene: a cheap lamp fuel of one part turpentine, four parts alcohol and a little camphor, whose fumes caught fire easily (Chapter 10) 677

Canaan: in the Bible, the land God promised to the people of Israel after they escaped from slavery in Egypt (Chapter 33) 2736

canal: a waterway that people dug so boats could travel where no river ran (Chapter 1) 74

cannabis: the plant marijuana comes from (Chapter 28) 2165

cannibalism: eating human flesh (Chapter 4) 310

canning: sealing food in a container and then heating it, so it keeps without spoiling (Chapter 14) 941

canopy: a cloth roof hung over a bed (Chapter 35) 2912

cantharides: a poison made from blister beetles (Chapter 32) 2643

Cantino map: a map made in 1502 that already shows a shape like Florida (Chapter 1) 21

cap-and-trade: a state program that makes polluters pay for permits to pollute (Chapter 11) 773

capital: money or property that an owner uses to make more money (Chapter 16) 1067

capital laws: the laws whose penalty was death (Chapter 20) 1309

capitol: the building where a state's lawmakers meet (Chapter 4) 275

Capitol: the building where Congress meets (Chapter 2) 108

captains: the party workers under a district leader (Chapter 20) 1356

captives: people seized by force and traded away with the other goods (Chapter 4) 260

carbines: short rifles (Chapter 2) 134

carbon dioxide: the gas people breathe out (Chapter 1) 82

carbon monoxide: a gas with no smell that stops the blood from carrying oxygen (Chapter 1) 74

carbonated water: water with bubbles of gas in it (Chapter 13) 855

carcasses: the dead bodies of animals (Chapter 3) 200

carcinogen: a substance that causes cancer (Chapter 19) 1280

carcinogenic: causing cancer (Chapter 3) 240

cardiac arrest: the heart stopped (Chapter 21) 1468

cardinal directions: north, south, east and west (Chapter 29) 2287

carding machine: a machine that combed raw cotton so the fibers lay straight (Chapter 8) 528

carhops: the servers who had carried food out to people's cars (Chapter 15) 1028

caricature: an act that makes fun of people by blowing up some of their features (Chapter 34) 2841

carroting: soaking fur in a liquid that contained mercury nitrate so it matted into felt (Chapter 13) 863

carte blanche: full freedom (Chapter 19) 1256

cartels: Mexican crime groups that make fentanyl outside the law (Chapter 28) 2190

cash crop: a crop grown to sell rather than to eat (Chapter 16) 1052

cash tenant: a farmer who rented land and paid in money (Chapter 16) 1084

cast: a copy made by pouring material into a mold (Chapter 32) 2613

cast iron: iron poured into a mold while it is melted (Chapter 10) 669

caste system: a system that sorts people at birth into ranks they can never leave (Chapter 16) 1052

casting in bronze: pouring melted metal into a mold of a sculpture (Chapter 32) 2660

castor oil: a laxative, a medicine that makes the muscles of the bowels push out their contents. It can cause diarrhea, stomach pain, sickness to the stomach and vomiting (Chapter 29) 2287

castration: cutting off a man's testicles, which left him unable to father children (Chapter 24) 1670

casualties: soldiers killed, wounded or missing (Chapter 2) 120

catalog: a printed list of goods that customers could order by mail (Chapter 7) 485

catechism: a set of questions and answers about Christian beliefs that people learn by heart (Chapter 29) 2207

catechist: a person who teaches the faith and prepares people for baptism (Chapter 29) 2287

cathode: a battery's positive end (Chapter 8) 570

Catholic: a Christian who follows the pope in Rome (Chapter 1) 21

catlinite: a pipe stone from quarries in southwestern Minnesota (Chapter 32) 2598

cat-o'-nine-tails: a whip of nine knotted cords, made to tear the skin and cause great pain (Chapter 1) 44

Caucasian: white (Chapter 6) 443

causal: whether one thing caused another (Chapter 19) 1280

cause for sainthood: the first step toward the Catholic Church naming a person a saint (Chapter 29) 2287

cautery: burning the skin at a painful spot on purpose, as a treatment (Chapter 26) 1949

cavalry: soldiers on horseback (Chapter 2) 134

caveat: a notice that an inventor was working on an invention and planned to apply for a patent (Chapter 8) 541

CDC: the federal disease agency (Chapter 13) 899

ceiling price: the highest price government officials allowed (Chapter 18) 1204

cemesto: ready-made panels of cement and asbestos (Chapter 6) 431

censors: army officials who read soldiers' mail (Chapter 22) 1559

censors: officials who decided which films could be shown (Chapter 34) 2861

censorship: checking and cutting what a printer may print before it comes out (Chapter 31) 2512

censure: a vote to blame someone officially (Chapter 17) 1128

census: the government's count of everyone in the country, taken every ten years (Chapter 1) 64

Census Bureau: the federal office that counts the population (Chapter 4) 320

Census of Agriculture: the federal government's count of the country's farms (Chapter 8) 553

census takers: the government workers who count every person in the country (Chapter 2) 102

census tract: a small area the census counts separately (Chapter 33) 2779

Centennial Exhibition: a big fair in Philadelphia in 1876 that marked 100 years since 1776 (Chapter 12) 807

central bank: a bank that holds other banks' cash and lends to them in a crisis (Chapter 6) 431

Central Labor Union: the group of unions in New York City that planned the first Labor Day parade (Chapter 37) 3107

central power station: a plant that makes electricity in one place and sends it through wires to many buildings (Chapter 10) 681

Cepheid: a variable star that grows brighter and dimmer over and over, in a steady rhythm (Chapter 9) 614

cerebral palsy: a condition from birth that affects movement (Chapter 25) 1829

ceremonial: built for religious gatherings and ceremonies (Chapter 29) 2203

certificate of disability: a paper saying a soldier was not fit to serve (Chapter 22) 1543

certified: officially declared part of the Constitution (Chapter 20) 1356

certified teachers: teachers licensed by the state (Chapter 20) 1372

cervix: the narrow lower end of the womb (Chapter 9) 633

chain gang: a crew of prisoners chained together and forced to work (Chapter 24) 1712

chain reaction: each atom that splits setting off more atoms splitting (Chapter 9) 614

chain store: one of many stores that belong to the same owners and sell the same kinds of goods (Chapter 18) 1193

Challenger Deep: the deepest known place in the ocean, in the Mariana Trench near Guam (Chapter 1) 82

Chamber of Commerce: a group of a city's business owners (Chapter 5) 376

chamber pot: a bowl kept in the room for use as a toilet (Chapter 33) 2736

Chancellor: the British government's top money official (Chapter 17) 1160

chapel: a small church (Chapter 12) 789

chaplain: a minister who serves people far from home (Chapter 9) 585

charcoal: wood burned slowly with little air until only a black fuel is left (Chapter 1) 74

charge: an accusation, not proof (Chapter 2) 102

charge card: a card whose holder had to pay the whole bill each month (Chapter 17) 1153

charity schools: schools where a society in London paid the teacher so that pupils could read the catechism and the Bible (Chapter 30) 2359

charm school: a school that taught manners and how to look and dress (Chapter 36) 3028

charter: the legal paper that gives a colony, bank or company the right to exist and states what it may do (Chapter 3) 189

charter from Congress: a paper that gave Little League official standing (Chapter 36) 3045

charter school: a public school run by its own board under an agreement, called a charter, instead of by the school district (Chapter 20) 1372

chassis: the frame of a car, with its wheels (Chapter 8) 553

chattel: movable property (Chapter 17) 1119

chattel slavery: holding a person as property for life and passing that status on to the person's children, from chattel, an old word for property (Chapter 24) 1666

chemic process: a kind of chemistry, Henry David Thoreau's words for cooking on a stove (Chapter 7) 474

chemical thermodynamics: the science of energy in chemical changes, whose rules let chemists work out from the energy in a change whether it will happen on its own (Chapter 9) 604

chemotherapy: strong drugs that kill cells, here the cells left in the bone marrow (Chapter 26) 2022

chert: a hard stone that holds a sharp edge (Chapter 1) 17

cherubs: carvings of baby angels (Chapter 32) 2608

Chesapeake: the country around the Chesapeake Bay, in Virginia and Maryland (Chapter 2) 102

Chesapeake colonies: Virginia and Maryland, the two colonies around Chesapeake Bay (Chapter 16) 1052

Chevalier: a French title, which means knight (Chapter 1) 36

Chief Justice: the head judge of the Supreme Court (Chapter 2) 126

chiefdom: a group of towns under a single ruler (Chapter 2) 102

child psychiatrist: a doctor who treats problems of the mind (Chapter 30) 2442

children's mission: a church charity for children (Chapter 36) 3019

Children's Online Privacy Protection Act: a law that requires a company to get a parent's permission before it collects personal information from a child under 13 (Chapter 18) 1222

chimney bay: the part of the house that held the chimney, the front door and the stairs (Chapter 7) 465

Chinese Exclusion Act: the 1882 law under which no Chinese laborer could come into the country for ten years (Chapter 4) 283

chloride and lime: chemicals that kill germs (Chapter 26) 1983

chlorinated hydrocarbons: a kind of chemical that contains chlorine (Chapter 3) 229

chlorine: the chemical that kills germs in drinking water (Chapter 3) 229

cholera: a disease people catch from dirty water or food, which causes heavy diarrhea and can kill within days (Chapter 4) 275

chondrosarcoma: a slow-growing bone cancer (Chapter 9) 614

Christmas Box: a small gift of money (Chapter 37) 3094

chromosome: a thread inside a cell that carries genes (Chapter 3) 229

chronic bronchitis: a long-lasting swelling of the air passages (Chapter 26) 2005

chronic traumatic encephalopathy (CTE): a brain disease doctors link to repeated blows to the head, which can bring problems with behavior, mood and thinking and lead to dementia, and can be found only by examining the brain after death (Chapter 36) 3058

chuckwagon: the kitchen on wheels that fed cowhands on cattle drives (Chapter 15) 1009

chunkey: a game in which one player rolled a stone disk across the ground and the players threw spears to see whose landed closest to where the stone stopped (Chapter 6) 395

Church of England: the official church of England (Chapter 4) 260

church year: a calendar of holy days, among them Sundays, Easter, Christmas and the feast days of saints (Chapter 37) 3080

churchwardens: officers of the local church (Chapter 16) 1052

churro sheep: a Spanish breed of sheep (Chapter 35) 2912

chuse: choose (Chapter 30) 2367

CIA: the Central Intelligence Agency, the American government's spy service (Chapter 19) 1280

Cibao: the part of Hispaniola with the gold mines (Chapter 1) 21

Cibola: seven rich cities the Spanish went looking for (Chapter 1) 21

cilia: the tiny hairs that sweep the airways clean (Chapter 15) 1015

Cinco de Mayo: the fifth of May, which marks the Mexican army's defeat of French troops at Puebla, Mexico, on May 5, 1862 (Chapter 37) 3135

circuit: the path electricity flows through and the parts along it that do jobs such as switching it on and off (Chapter 8) 561

circular: an order sent to every office at once (Chapter 9) 604

cirrhosis: damage to the liver from heavy drinking (Chapter 28) 2165

cistern: a tank for catching rain (Chapter 6) 413

citation: an honor outside the Pulitzer Board's usual prizes (Chapter 25) 1909

citations: the official notices for breaking safety rules (Chapter 10) 711

cite (a court decision): to point to an earlier decision to show a judge how courts have ruled in similar cases (Chapter 8) 570

citizen science: research done by ordinary volunteers (Chapter 9) 614

citizen's arrest: an arrest by someone who is not a police officer (Chapter 20) 1390

citrus fruit: the family of fruit that includes oranges and lemons (Chapter 5) 376

city charter: a city's basic set of laws (Chapter 4) 283

city directory: a book that listed a town's people and their trades (Chapter 32) 2627

civil case: a lawsuit rather than a criminal trial (Chapter 25) 1871

civil government: one run by elected or appointed officials outside the armed forces (Chapter 23) 1623

civil judgment: a court's order in a lawsuit to pay money (Chapter 20) 1390

Civil Liberties Act of 1988: the law in which members of Congress apologized for the wartime imprisonment and voted to pay $20,000 to each person who had been held (Chapter 20) 1356

civil list: a set list of paid government posts (Chapter 20) 1317

civil rights: the rights every citizen has to equal treatment under the law (Chapter 2) 149

Civil Rights Act of 1964: the law that banned segregation in places that serve the public and discrimination in jobs and in programs paid for with federal money (Chapter 12) 825

civil service exam: a test a person had to pass to get a government job (Chapter 21) 1442

civil war: a war inside one country (Chapter 4) 320

civilian: a person who is not in the military (Chapter 9) 604

Civilian Conservation Corps: a government jobs program of the 1930s (Chapter 3) 215

civilian noninstitutionalized population: everyone except people who live in institutions (Chapter 25) 1909

civilian use: use that is not for the military (Chapter 10) 702

Civill body politick: a government the signers of the Mayflower Compact promised to form together (Chapter 20) 1309

clan: a large group of families who come down from the same ancestor (Chapter 7) 460

clan crest: an animal symbol that belongs to a clan (Chapter 32) 2598

clan mother: the eldest or most respected woman of the clan, the head of a longhouse (Chapter 7) 460

claptrap: silly talk meant to win cheers (Chapter 37) 3101

class leader: a church member in charge of a small group of members (Chapter 29) 2256

Classical Revival: a style of building that copies the temples of ancient Greece and Rome (Chapter 12) 799

classics: the old Greek and Latin writers (Chapter 30) 2414

classified: officially secret (Chapter 2) 149

clause: one part of a written law or constitution (Chapter 7) 485

clear estate: an old legal phrase meaning owning property outright (Chapter 20) 1322

clemency: a governor's mercy that cuts a punishment short (Chapter 21) 1468

clerical work: office work such as typing, filing and answering phones (Chapter 14) 963

clerk: a worker who keeps written records for a business (Chapter 1) 44

clockwork motor: a motor that runs on gears like the inside of a wind-up clock (Chapter 8) 535

close-in neighborhood: a neighborhood near downtown (Chapter 6) 452

cloture: the motion that ends debate (Chapter 20) 1372

cloud computing: renting out computer storage and computing power over the internet (Chapter 19) 1291

coal heaver: a man who moved coal on and off boats (Chapter 14) 922

coal tar: a thick black liquid made from coal (Chapter 35) 2940

coalition: a group that agrees to act together (Chapter 2) 108

coarse: rough and thick (Chapter 15) 991

cocaine: a drug made from coca leaves (Chapter 20) 1390

cochineal: a small insect bred in Mexico to make red dye (Chapter 35) 2912

cochlear implants: devices placed in the ear that help deaf people hear (Chapter 25) 1909

cockfight: a fight in a ring between two roosters with sharp spurs strapped to their legs, until one was dead (Chapter 36) 2995

code talkers: Native soldiers who sent military messages in their own languages, which the enemy could not understand (Chapter 2) 149

codes of fair competition: rules for whole industries (Chapter 20) 1356

coerced: forced out of a person (Chapter 29) 2304

coerced emigration: being forced to leave the country (Chapter 25) 1829

coercive assimilation: forcing a group of people to give up their own language and ways of life (Chapter 2) 158

coffin ships: what people called the crowded ships that carried the Irish in the famine years (Chapter 4) 275

coffle: a chained line of enslaved people that traders marched overland (Chapter 5) 352

coke: a fuel baked from coal that steel makers burn to melt iron ore (Chapter 19) 1256

cold front: the edge of a large mass of cold air (Chapter 27) 2068

Cold War: the long rivalry between the United States and the Soviet Union after World War II (Chapter 9) 633

colic: sharp pains in the belly (Chapter 13) 868

collateral: property a borrower promises to hand over if the loan is not repaid (Chapter 16) 1067

collective bargaining: bargaining as a union with employers (Chapter 14) 963

collier: a man who made charcoal (Chapter 8) 517

colonization: a plan to send free Black Americans to live in Africa (Chapter 31) 2533

colony: a settlement ruled from a faraway country (Chapter 1) 21

color line: a rule, written or unwritten, that kept Black people out (Chapter 25) 1829

colorblind: taking no notice of race at all (Chapter 25) 1909

Colored: a common word for Black people in the 1800s and 1900s, no longer used (Chapter 1) 82

colors: a regiment's flag (Chapter 22) 1543

colostomy: an operation in which surgeons bring the end of the large bowel out through an opening cut in the belly, so that body waste collects in a bag outside the body (Chapter 36) 3028

Columbian Exchange: the carrying of crops and farm animals across the Atlantic in both directions, named by the historian Alfred W. Crosby in 1972 (Chapter 15) 989

column: the long line of people, wagons and animals on the march (Chapter 5) 336

coma: a state like deep sleep that a person cannot wake from (Chapter 21) 1468

co-managers of the fishery: tribal governments and the state running the salmon catch and its waters together (Chapter 2) 158

Comanchería: Comanche country, the land the Comanche held on the southern Plains (Chapter 2) 116

comfit-maker: a maker of sugar-coated sweets (Chapter 28) 2127

command module: the part of the spacecraft that would carry all three men home (Chapter 1) 82

commemorates: honors (Chapter 12) 832

commencement: the ceremony at which students graduate (Chapter 35) 2928

commercial bank: a bank that keeps people's money safe and lends money to merchants and businesses (Chapter 19) 1245

commercial broadcasters: stations paid for by advertising (Chapter 31) 2585

commercial herds: herds raised for sale (Chapter 3) 240

commercialization and central control: running Little League as a business from one head office (Chapter 36) 3028

commission: a group of people chosen to study a question and recommend what to do (Chapter 1) 82

commission: the paper that gave a person the job (Chapter 20) 1333

commissioner: the head of the INS (Chapter 4) 310

Commissioner of Indian Affairs: the federal official in charge of the government's dealings with Native nations (Chapter 2) 134

commissioner of the Patent Office: the head of the government office that grants patents (Chapter 8) 535

commissioners: officials sent to do a certain job (Chapter 3) 192

committed: sent to live in a state institution by a court's order (Chapter 20) 1356

committee of correspondence: a small group of men chosen to write letters to other towns and share news (Chapter 31) 2520

commodity: a thing to be bought and sold (Chapter 17) 1115

commodity money: money that is a useful thing in itself (Chapter 17) 1115

commodore: a navy officer who commands a group of ships (Chapter 11) 745

Common: a large open field in the middle of Boston (Chapter 22) 1499

Common Council: Albany's governing board (Chapter 37) 3101

common school: a free public school open to the children of the town (Chapter 20) 1333

Commons House: South Carolina's lawmaking body (Chapter 26) 1967

Commonwealth (Estado Libre Asociado): the name Puerto Rico took in 1952, under which it stayed a territory of the United States (Chapter 23) 1647

communion: the Christian ceremony of sharing bread and wine in memory of Jesus (Chapter 4) 267

communism: a system in which one party runs the government and the government owns the farms and factories (Chapter 29) 2304

Communist: a person who wanted the government to own the land and the businesses (Chapter 29) 2304

communist country: a country where the government owned the businesses and only one party was allowed (Chapter 4) 310

communities of color: places where most people are not white (Chapter 3) 229

commute: to change a sentence to a lighter one (Chapter 29) 2287

compact: a formal agreement between a nation and a state about gaming (Chapter 2) 158

compactor: the part of a garbage truck that crushes the garbage (Chapter 14) 963

company town: a town where one company owned the houses and its managers collected the rent (Chapter 14) 929

compensated: paid (Chapter 12) 807

compensation: money paid to make up for a loss (Chapter 2) 158

compensation claims: payments owed when a worker is hurt or killed on the job (Chapter 12) 815

compiler: a program that takes instructions written closer to human language and translates them into instructions the computer can carry out (Chapter 8) 561

complexion: skin color (Chapter 20) 1317

compliance: obeying the ruling (Chapter 20) 1372

compost: rotted plant and animal matter (Chapter 15) 1028

compound: two or more elements joined together, such as iron and oxygen in iron oxide (Chapter 13) 844

comprehensive plan: a plan setting out what a whole city should become, with its streets, parks and waterfront planned together (Chapter 6) 431

compress: to squeeze together (Chapter 16) 1096

compressive asphyxiation: being squeezed so hard that a person cannot breathe (Chapter 33) 2795

compulsory: required (Chapter 20) 1356

compulsory attendance law: a law that requires children to go to school (Chapter 30) 2392

compulsory vaccination: a law that made people get a shot against a disease (Chapter 30) 2414

computer: a person whose job was to do calculations and measurements (Chapter 1) 82

computer terminal: a keyboard and a printer or screen connected to a computer somewhere else (Chapter 8) 561

concentration camp: a place where people are held by force without a trial (Chapter 4) 298

concept artist: an artist who draws the first designs for characters and scenes (Chapter 8) 570

concrete deterioration: concrete breaking down (Chapter 27) 2104

concubine: an old word for a woman a man kept for sex without marrying her (Chapter 24) 1684

concussion: an injury in which a blow shakes the brain (Chapter 22) 1585

condemn: to take land by law without the owner's agreement, at a price the government sets (Chapter 6) 443

condolence: comfort for people in grief (Chapter 21) 1406

condominium: an apartment that each owner buys (Chapter 6) 452

conduct to the prejudice of good order and military discipline: behaving in a way that harmed order and discipline in the armed forces (Chapter 23) 1634

confederacy: a group of nations that keep their own governments but act together on matters they share (Chapter 2) 99

Confederacy: the group of Southern states whose leaders broke away from the United States to keep slavery (Chapter 5) 363

Confederate army: the army of the Southern states that fought to keep slavery in the Civil War (Chapter 12) 815

Confederate states: the Southern states whose leaders broke away from the United States to keep slavery, and which then fought the United States in the Civil War (Chapter 8) 541

Confederates: the Southerners who fought against the United States in the Civil War to keep slavery (Chapter 5) 363

Confederation Congress: the national government of the United States before the Constitution (Chapter 3) 192

conference: a regional group of Methodist churches (Chapter 29) 2256

confession: telling a priest your sins (Chapter 30) 2351

confirm: to approve (Chapter 20) 1372

congestive heart failure: a heart that cannot pump blood well enough (Chapter 32) 2695

conglomerate: one company that owns many businesses that have nothing to do with each other (Chapter 19) 1280

congregation: the people of a church (Chapter 5) 339

Congregationalist: a member of the churches the Puritans founded in New England (Chapter 29) 2231

Congressional Budget Office: the office that estimates the cost of laws for Congress (Chapter 15) 1039

Congressional Research Service: the office that does research for members of Congress (Chapter 15) 1028

Connecticut Compromise: the deal that gave every state two senators and gave each state seats in the House by its population (Chapter 20) 1322

conscientious objector: a person who refuses to fight because their religion forbids it (Chapter 22) 1559

consensual: agreed to by both adults (Chapter 25) 1871

consensus: a way of deciding in which every member must agree, so no law passes while even one member is against it (Chapter 20) 1304

consent: agreeing to something after being told what it is (Chapter 4) 283

consent decree: an agreement that a judge enforces (Chapter 25) 1909

conservation: protecting land, water, plants and animals so that people do not use them up (Chapter 3) 185

conservation of charge: the idea that electric charge is never made or destroyed, only moved from one object to another (Chapter 9) 588

conservationist: a person who works to protect wild land (Chapter 6) 431

conservative: political views that favor keeping old ways and limiting government (Chapter 24) 1744

conspiracy: a secret plan by two or more people to break the law (Chapter 14) 922

conspiracy to murder: planning a murder with others (Chapter 31) 2572

conspiring: plotting with others (Chapter 10) 711

constable: a town officer who kept order and made arrests (Chapter 21) 1427

constituent: one of the people a member of Congress represents (Chapter 29) 2304

constitution: a written plan for a government and its basic laws (Chapter 2) 126

constitutional convention: a meeting of men chosen to rewrite the state constitution (Chapter 20) 1333

constitutionality: whether a law is allowed by the Constitution (Chapter 20) 1322

construction: stretching the meaning of the words (Chapter 20) 1333

consul: an official who looks after his country's trade and citizens in another country (Chapter 23) 1605

consumer: a person who buys goods to use them (Chapter 16) 1096

Consumer Financial Protection Bureau: a government office that watches over lenders (Chapter 17) 1153

consumer prices: the prices of the things people buy for daily life (Chapter 16) 1096

consumer revolution: historians' name for the big change in buying in the 1700s, when colonists began buying the clothes, tools and kitchen things they had once made (Chapter 18) 1178

consumption: the name people then used for the disease Caleb Cheeshahteaumuck died of, which Martha's Vineyard Magazine states was "presumably" tuberculosis (Chapter 30) 2351

container: a large shipping box (Chapter 11) 764

containment: American leaders' plan, from 1947, to block the spread of Soviet power (Chapter 23) 1647

contempt of Congress: the crime of refusing to obey Congress or one of its committees (Chapter 20) 1356

contempt of court: disobeying a court's order (Chapter 14) 929

content moderation: checking posts and removing those that break a site's rules (Chapter 31) 2585

Continental Association: a pact among the colonies to stop buying goods from Britain (Chapter 34) 2833

Continental bills: the paper money members of the Continental Congress printed from June 1775 to pay for the war (Chapter 17) 1123

Continental Congress: the meeting of leaders from the colonies (Chapter 5) 346

Continental Divide: the line of high ground that separates rivers flowing east from rivers flowing west (Chapter 1) 44

Continental dollars: the paper money the Continental Congress printed to pay for the Revolution (Chapter 16) 1062

Continental money: paper money printed during the Revolution, which by 1780 had lost most of its value (Chapter 29) 2242

contortionist: a performer who bends the body into unusual shapes (Chapter 34) 2851

contour plowing: plowing along the curves of a slope instead of up and down it (Chapter 3) 215

contraband: the word Union soldiers used for people who had escaped slavery (Chapter 22) 1543

contraband camps: camps run by Union army officials, and later the Freedmen's Bureau, for people who had escaped slavery (Chapter 24) 1712

contraband of war: property of the enemy that an army may seize (Chapter 24) 1712

contraception: ways to prevent pregnancy (Chapter 25) 1795

contract: a written deal that a court can make people keep (Chapter 1) 21

contract laborer: a worker brought over without free consent, already bound to work for someone for a set time (Chapter 4) 283

contract sale: a sale under which a buyer who missed a single payment could be put out and lose everything already paid (Chapter 6) 443

contract workers (Hawaii): workers the sugar planters brought in from overseas, bound to work for a set number of years (Chapter 15) 1015

contractor: a man who ran a section of the work (Chapter 11) 734

contralto: a singer with a low woman's voice (Chapter 33) 2759

contrived: arranged (Chapter 22) 1522

controlled fires: fires started on purpose and kept in bounds, to shape the land (Chapter 8) 512

convent: a house of nuns, women who have promised their lives to the Catholic church (Chapter 2) 102

convent school: a school that nuns ran in their own home (Chapter 4) 275

convention: a large organized meeting (Chapter 11) 732

convention: a written agreement between governments, such as the Convention of Kanagawa (Chapter 23) 1623

conversion: the changing of a person's religion (Chapter 30) 2348

conversion experience: a moment when a person feels that God has changed him or her (Chapter 29) 2213

conversion therapy: any practice that tries to change a person's sexual orientation or gender identity (Chapter 25) 1909

converted: turned to God and became a true believer (Chapter 29) 2256

convict leasing: state officials renting out prisoners to mines, railroads and planters, who forced them to work (Chapter 14) 929

convicted: found guilty (Chapter 4) 275

convicts: people found guilty of crimes (Chapter 4) 267

convoy: a group of vehicles traveling together (Chapter 11) 764

convulsions: fits of violent shaking a person cannot control (Chapter 13) 886

cooper: a person who makes barrels (Chapter 4) 275

cooperative: a business owned by the people who use it (Chapter 10) 691

coppersmith: a person who makes things out of copper (Chapter 13) 844

copyright: the legal right to control who copies and sells a piece of writing (Chapter 2) 134

copyright law: the law that protects an artist's right to decide who copies their work (Chapter 8) 570

coquina: a soft stone made of packed seashells (Chapter 12) 789

cord (of wood): a stack 8 feet long, 4 feet wide and 4 feet high (Chapter 8) 517

corduroy road: logs laid side by side across swampy ground, named after a cloth with raised ribs (Chapter 11) 728

cordwainers: shoemakers (Chapter 14) 920

core: the center of a reactor, where the fuel sits (Chapter 10) 702

corn knife: a long blade used for cutting cornstalks (Chapter 29) 2256

cornea: the clear front of the eye (Chapter 25) 1829

corner a stock: to buy up so much of it that the buyers can set its price (Chapter 17) 1143

cornerstone: the first stone set at a corner of a new building (Chapter 12) 795

cornet: a brass horn like a small trumpet (Chapter 33) 2746

Coromantee: Akan people from the Gold Coast of West Africa, which is Ghana today (Chapter 24) 1676

corona: the bronze-colored shape in three levels on the outside of the National Museum of African American History and Culture (Chapter 12) 832

coroner: the official who looks into deaths and finds out how people died (Chapter 2) 149

coroner's jury: a group of citizens who decide how people died (Chapter 27) 2078

corporal punishment: an adult hitting a child on purpose, to hurt the child, as a punishment (Chapter 7) 485

corporate culture: a company's habits and ways of working (Chapter 10) 711

corporation: a company that goes on after its first owners are gone, one the law treats as one body (Chapter 10) 691

correct: in the words of that time, to punish (Chapter 8) 541

correction: a beating (Chapter 21) 1412

corridor: a long, narrow strip of land (Chapter 3) 240

corrosion control: a treatment that keeps water from eating into pipes (Chapter 13) 899

corruption: officials using their jobs to get money or favors illegally (Chapter 2) 158

corruptly: by dishonest deals (Chapter 20) 1356

corset: a stiff garment laced tight around the body (Chapter 35) 2934

corvée: a system of forced labor (Chapter 23) 1634

cosmic microwave background: the cooled light left over from the early universe (Chapter 9) 633

cosmonaut: the Russian word for an astronaut (Chapter 1) 82

cotton belt: the part of the South where cotton was grown (Chapter 16) 1074

cotton gin: a machine that pulls the seeds out of cotton (Chapter 8) 528

cotton press: a machine that squeezed cotton into bales (Chapter 8) 528

cotton ridge: a raised row of soil where the cotton grows (the middles are the low strips between the rows) (Chapter 8) 541

council: a meeting of leaders (Chapter 17) 1112

council house: the building where a town's leaders met (Chapter 1) 21

Council of Economic Advisers: a group of economists who advise the president (Chapter 16) 1096

Council of State: the leaders who ran England's government in 1650 (Chapter 8) 517

Council of the Indies: the king's council in Spain for the American colonies (Chapter 1) 21

counsel: a lawyer (Chapter 25) 1829

counterfeit bill: a fake banknote (Chapter 25) 1909

counterfeiters: people who make fake money (Chapter 17) 1119

counterfeiting: making fake money (Chapter 17) 1123

country born: born in America and not brought from Africa (Chapter 32) 2627

country pay: payment in goods (Chapter 17) 1115

counts: charges (Chapter 20) 1390

county supervisors: the officials who ran the county (Chapter 25) 1829

county unit system: Georgia's system for statewide elections, under which the candidate who won a county got all of that county's unit votes (Chapter 20) 1372

coup: a sudden takeover of a government by a small group, often the army (Chapter 23) 1647

coupling: the job of joining railroad cars together (Chapter 11) 745

court days: the days when the county court met (Chapter 36) 2999

Court of Appeals: a court that hears appeals from trial courts (Chapter 12) 832

Court of Assistants: the Massachusetts colony's ruling council (Chapter 11) 726

court of inquiry: a panel of officers looking into what Marines had done in Haiti (Chapter 23) 1634

Court of Oyer and Terminer: a special court, the words mean "to hear and to decide" (Chapter 21) 1412

court-martial: a trial held by the military (Chapter 1) 44

covenant (in a deed): a section written into the deed of a house, such as one that forbade the owner to sell or rent it to a Black buyer. It is also called a restrictive covenant (Chapter 6) 431

covenant (promise): a serious promise (Chapter 2) 108

cover version: a new recording of a song that someone else has already recorded (Chapter 33) 2779

coverture: the old English rule that a married woman was "covered" by her husband and had no legal standing of her own (Chapter 25) 1760

COVID-19: an illness caused by a coronavirus that spreads in the droplets and tiny particles an infected person breathes out (Chapter 14) 974

cowpeas: a kind of bean (Chapter 15) 1015

cowpox: a mild disease of cows (Chapter 26) 1975

co-writer: a person named as one of a song's writers, with a right to part of the money the song earns its writers (Chapter 33) 2779

cowskin: a whip made of dried, twisted cow's hide, also called the cowhide (Chapter 24) 1693

crack: a form of cocaine that is smoked (Chapter 21) 1468

craft union: a union of the skilled workers of one trade, such as cigar makers or carpenters (Chapter 14) 929

Cranberry Day: the day each October when the Wampanoag Tribe of Gay Head (Aquinnah) greets the sunrise, picks cranberries, shares a meal and sets aside a share for the elders (Chapter 37) 3075

craniometry: measuring skulls, part of a false "racial science" used to rank the races (Chapter 9) 604

crash: a sudden fall in prices, of stocks or of homes (Chapter 7) 480

cravat: a cloth tied around the neck (Chapter 35) 2934

crawlspace: the low space under a floor (Chapter 27) 2078

craze: something that very many people took up at the same time (Chapter 11) 745

creation science: the teaching that a supernatural being created humankind (Chapter 29) 2304

credentials: the letters that proved an official's position (Chapter 23) 1605

credentials committee: the group that decided which delegates could take their seats (Chapter 25) 1871

credit: a person's record of paying back debts (Chapter 7) 502

credit: a loan, or the right to buy now and pay later (Chapter 15) 1009

credit card: a card whose holder could pay part of the bill and owe the rest later (Chapter 17) 1153

creditor: a person who is owed money (Chapter 16) 1067

credulity: a willingness to believe things (Chapter 9) 614

creed: a religion (Chapter 14) 941

Cremona fiddle: a violin made in the town of Cremona, in Italy (Chapter 33) 2723

crest: an animal or spirit figure that stands for a clan (Chapter 34) 2814

cricket: the English bat-and-ball game (Chapter 36) 2995

Crime of '73: the silver side's name for the Coinage Act of 1873 (Chapter 17) 1136

criminal negligence: carelessness so serious it is a crime (Chapter 26) 1975

criminal sexual act: under New York law, forcing a person into sex acts such as oral sex (Chapter 25) 1909

criminalizing: making something a crime (Chapter 28) 2179

criminally negligent homicide: causing a death through carelessness (Chapter 21) 1468

cripple: an old, unkind word for a person who cannot use part of the body (Chapter 26) 2005

CRISPR: a tool for changing genes (Chapter 8) 570

crisscross row: the alphabet row on a hornbook, from "Christ's Cross row" (Chapter 30) 2359

crop rotation: changing the crop planted in a field from one year to the next (Chapter 15) 1015

cropping: cutting off part or all of each ear (Chapter 17) 1123

croquet: a lawn game played by hitting wooden balls with mallets (Chapter 36) 3019

cross burning: setting a large cross on fire (Chapter 34) 2861

CROWN Act: a law, first passed in California, that bars employers and public schools from treating people worse because of their hair's texture or styles such as braids, locs and twists. The name stands for "Creating a Respectful and Open World for Natural Hair" (Chapter 25) 1909

crowning utility: the most useful thing a person ever did (Chapter 20) 1333

crucifix: a model of Jesus on the cross (Chapter 32) 2679

crucify: to put someone to death by nailing them to a cross (Chapter 17) 1136

crude oil: the oil that comes straight out of the ground (Chapter 3) 240

crypt: a burial room beneath a church (Chapter 4) 271

cryptocurrency: digital money such as bitcoin (Chapter 17) 1160

cudgel: a heavy club (Chapter 29) 2242

cuffing: hitting with an open hand (Chapter 30) 2392

cuffs: turned-back bands of cloth (Chapter 35) 2949

culls: the leftovers (Chapter 34) 2851

cult of domesticity: the strongly held belief that the home was a place set apart from paid work and that it was the mother's to run, named by the historian Aileen Kraditor in 1968 (Chapter 7) 474

cultivate: to break up the soil and clear weeds between rows of growing crops (Chapter 8) 553

cultural burning: lighting small fires on purpose and keeping them under control to help the plants and animals people use for food, clothing and ceremonies (Chapter 3) 240

cultural fire: burning done by Native people to care for the land (Chapter 3) 200

Cumberland Gap: a low pass through the Appalachians (Chapter 1) 39

curator: the person in charge of a museum's collection (Chapter 9) 604

curfew: an order to stay off the streets at night (Chapter 6) 452

curie: a unit that measures how much radioactive material is let loose (Chapter 10) 702

current: the flow of electricity (Chapter 8) 553

current (ocean): a stream of moving water inside the ocean (Chapter 9) 596

curriculum: the set of lessons a school teaches (Chapter 30) 2367

custody: control over a child and where the child lives (Chapter 3) 200

custody: being held by officers (Chapter 4) 320

customs informer: a person paid by customs officials, who collected the taxes on goods brought in by ship, to report smugglers (Chapter 18) 1182

customs officers: officers who collected the taxes on goods coming in (Chapter 23) 1600

customs officials: officials who check what comes into a country at its border (Chapter 13) 899

cut: a channel dug through high ground so railroad tracks can run level (Chapter 14) 922

cutlass: a short curved sword (Chapter 1) 39

cyanide: a poison that stops the cells of the body from using oxygen, so the cells cannot make the energy they need to live (Chapter 29) 2304

cyclotron: a machine that speeds tiny particles around in a circle and smashes them into atoms (Chapter 8) 553

D

DACA: Deferred Action for Childhood Arrivals, the 2012 policy under which some people brought to the country as children can apply for protection from being deported and for permission to work (Chapter 4) 320

Dacron: DuPont's name for its polyester fiber (Chapter 35) 2959

daguerreotype: an early kind of photograph made on a polished metal plate (Chapter 8) 535

damages: a payment of money for a harm (Chapter 9) 604

damask: cloth with its pattern woven into it (Chapter 35) 2923

dame school: a school a woman ran in her own home for small children, from an old word for a woman (Chapter 30) 2359

Danbury shakes: the mercury poisoning of the hatters of Danbury, Connecticut (Chapter 13) 863

Darién: a jungle between Colombia and Panama (Chapter 4) 320

dark: closed, said of a theatre (Chapter 34) 2889

dark money: election spending by groups that do not have to name their donors (Chapter 19) 1291

dark patterns: confusing buttons and screens that led players into charges they did not mean to make (Chapter 18) 1222

dastardly: an old word for cowardly and cruel (Chapter 2) 134

data brokers: companies that collect records of what people look at online, combine them with records from outside the internet and sell what they gather (Chapter 18) 1222

data elements: separate facts (Chapter 18) 1222

datura: a flowering plant that holds two drugs that make people see and hear things that are not there (Chapter 28) 2120

Daughters of Liberty: a name for women on the side of the protest against British taxes (Chapter 18) 1182

Dawes Act: the 1887 law under which federal officials broke up the land set aside for Native nations into farms for single families and sold the land left over (Chapter 2) 134

day laborer: a worker paid by the day (Chapter 15) 1015

day of fasting: a day when people went without food and prayed (Chapter 27) 2047

DDT: a white powder for killing insects, which thinned the eggshells of birds that hunt (Chapter 3) 229

deacon: a church officer who helps the minister (Chapter 11) 726

deadline: at Andersonville, a line inside the wall that guards shot any prisoner for crossing (Chapter 22) 1543

dean: the head of a law school (Chapter 25) 1829

death row: where people sentenced to death wait to be executed (Chapter 21) 1468

debauchery: wild, immoral living (Chapter 36) 3028

debt bondage: being forced to keep working to pay off a debt (Chapter 18) 1204

debtors' prison: a jail for people who could not pay what they owed (Chapter 15) 1004

decathlon: a contest of ten track and field events (Chapter 2) 149

Decency and Sobriety: politely and without getting drunk (Chapter 36) 2995

deceptive lending: lending by misleading borrowers (Chapter 7) 502

decimal ratio: counting up by tens (Chapter 17) 1123

declaration of taking: a paper under which the government could take land right away, whether or not the owners wanted to sell, and settle the price later (Chapter 6) 431

declared legally dead: counted as dead under the law (Chapter 1) 74

Decoration Day: the first name of Memorial Day, the day for putting flowers on soldiers' graves (Chapter 37) 3107

decorous: calm and proper (Chapter 29) 2256

dedicated: opened with a public ceremony (Chapter 12) 804

deed: a paper that says who owns a piece of land (Chapter 1) 39

deemed: counted (Chapter 8) 528

"deemed a mere brush": thought of as a small punishment (Chapter 8) 528

deep-learning era: the time after 2012 when neural networks came into wide use (Chapter 8) 570

Deep South: the cotton lands from Georgia west to Texas (Chapter 5) 352

deer tallow: the fat of a deer (Chapter 8) 512

defamation: harming a person's good name with false statements (Chapter 20) 1390

default: to be unable to repay a loan (Chapter 15) 1028

defendants: the people and companies being sued (Chapter 27) 2104

defense: a reason that can keep a person from being found guilty (Chapter 20) 1317

deferred: put off (Chapter 4) 320

defrauded: cheated (Chapter 19) 1291

degenerate: Buffon's word for animals and people growing smaller and weaker in the Americas (Chapter 9) 591

dehumanizing: treating people as if they were not human (Chapter 25) 1757

DEI: diversity, equity and inclusion (Chapter 3) 240

deist: a person who stressed living a good life and rejected the Christian teaching that Jesus was God (Chapter 29) 2231

delegate: a person chosen to speak and vote for others at a meeting (Chapter 2) 116

delegation: a group sent to speak for its people (Chapter 3) 200

deliberate: careful and unhurried (Chapter 20) 1372

delirious: confused and out of one's mind (Chapter 27) 2061

delirium tremens: an illness of heavy drinkers who suddenly stop, in which the body shakes, the mind is confused and the person sees things that are not there. It can kill (Chapter 28) 2147

deliverance: being set free (Chapter 37) 3101

Delmarva Peninsula: the land where Delaware, Maryland and Virginia meet (Chapter 15) 1015

delta: the low, wet land where a river splits into many channels near the sea (Chapter 1) 64

deluder: someone who tricks people (Chapter 20) 1309

dementia: the loss of the ability to think and remember (Chapter 15) 1015

democracy: a government in which the people have a say (Chapter 2) 99

Democrat: a member of the Democratic Party, one of the two main political parties (Chapter 20) 1322

Democratic-Republicans: the party led by Thomas Jefferson and James Madison, whose members wanted more of the government's power left with the states (Chapter 20) 1322

democratization of fashion: fashion spreading to ordinary people (Chapter 35) 2949

denatured alcohol: factory alcohol with chemicals added so that no one could drink it (Chapter 28) 2165

denomination: a group of churches that share the same beliefs and leaders (Chapter 24) 1693

dentalium shells: the shells of a small sea animal, each shaped like a tiny elephant tusk, which traders used to measure what other goods were worth (Chapter 18) 1170

department store: a large store with many kinds of goods, each kind in its own section, called a department (Chapter 18) 1188

deport: to force a person to leave the country (Chapter 4) 298

deportment: behavior (Chapter 30) 2442

deposit insurance: a promise backed by the government to repay people's savings if their bank fails (Chapter 17) 1136

deposition: sworn testimony taken outside a courtroom and written down (Chapter 19) 1268

deposits: money kept in a bank's care (Chapter 17) 1128

depot for immigrants: a building where officials received newcomers, checked them and recorded them (Chapter 4) 283

depression: a long time when many businesses fail and many people lose their jobs, as in the Depression of the 1930s (Chapter 4) 298

depression (illness): an illness that brings long periods of deep sadness and makes it hard to think and to work (Chapter 35) 2949

deprive: to take away (Chapter 37) 3101

deputies: the officers who worked under a sheriff (Chapter 4) 283

deputize: to give men the power to act as officers of the law (Chapter 14) 929

deputy marshal: a federal officer who makes arrests (Chapter 20) 1322

derringer: a small pistol (Chapter 34) 2851

desegregation: an end to keeping children of different races apart (Chapter 25) 1829

deserter: a soldier who leaves his army without permission (Chapter 22) 1534

despotism: rule by a tyrant (Chapter 25) 1770

destitute: so poor that a person has nothing to live on (Chapter 32) 2660

detainees: people being held (Chapter 4) 298

detention: holding people in custody while officials decide whether to deport them (Chapter 4) 320

deterred: put off from doing something (Chapter 29) 2324

Dey: the ruler of Algiers (Chapter 23) 1605

dialect spelling: spelling meant to show how a person's speech sounded (Chapter 8) 535

dialysis: a treatment that cleans the blood of people whose kidneys have failed (Chapter 27) 2104

dictator: a ruler with total power (Chapter 34) 2861

dictatorial tyrannies: countries ruled by dictators (Chapter 25) 1829

dies (for coins): the stamps that make coins (Chapter 8) 517

diethylene glycol: a chemical used in antifreeze, and a poison (Chapter 26) 1990

diffusion: spreading (Chapter 9) 596

digital replica: a computer copy of an actor's face, body or voice (Chapter 34) 2889

digital token: a record kept on a network of computers that names one person as the owner of a file (Chapter 32) 2695

dike: a bank of earth built to keep water back (Chapter 27) 2078

dilapidated: falling apart (Chapter 25) 1871

dime novel: a novel of about 100 pages sold for ten cents (Chapter 32) 2643

Diné: the Navajo people's own name for themselves (Chapter 2) 99

Dinka: an ethnic group of southern Sudan (Chapter 4) 320

diocesan priest: a priest who serves in a bishop's region (Chapter 29) 2324

diocese: the group of churches under one bishop (Chapter 29) 2242

dioxin: a group of chemicals that cause cancer and harm babies before they are born (Chapter 3) 229

diphtheria: an infection by bacteria that kills the tissue of the throat and nose until the coating of dead tissue stops a child breathing (Chapter 26) 1961

diplomacy: the work of dealing with other nations through talks and agreements (Chapter 2) 116

diplomat: a person sent to speak and bargain for a nation (Chapter 1) 39

diptych: a picture in two parts (Chapter 32) 2679

direct current (DC): electric current that flows in one direction only, like the current from a battery (Chapter 10) 681

director general: the man who governed the Dutch colony of New Netherland for the Dutch West India Company (Chapter 6) 399

disaffected: unfriendly (Chapter 22) 1522

disappeared: taken by the government's forces and never seen again (Chapter 23) 1647

disc jockey: a person who plays records on the radio or for dancers, called a DJ for short (Chapter 33) 2779

disclaimer: a statement that refuses blame (Chapter 3) 229

discount: the difference between the amount printed on a bank's note and the smaller amount people far from the bank would take it for (Chapter 17) 1128

discount chain: stores selling goods at prices below what other stores charged (Chapter 18) 1214

discountenanced: treated with disapproval (Chapter 29) 2213

discretion: the power to decide (Chapter 11) 756

discrimination: being treated worse because of who you are, such as your race (Chapter 12) 825

disfranchise: to take away a person's vote (Chapter 20) 1333

dishonest graft: blackmailing gamblers and squeezing money out of illegal businesses (Chapter 20) 1356

dismembring: tearing or biting off parts of another man's body (Chapter 36) 2999

disorderly conduct: disturbing public order (Chapter 37) 3125

disowning: a Quaker meeting's formal statement that a member no longer shared an essential part of the faith (Chapter 25) 1767

dispatcher: a worker who directs trains, drivers or police officers and keeps track of them (Chapter 8) 541

dispatches: official letters for a government (Chapter 23) 1605

displace: to push people off their land (Chapter 37) 3135

displaced persons: Europeans who had lost their homes in World War II (Chapter 4) 298

Displaced Persons Act: the 1948 law, the first American law for refugees (Chapter 4) 298

disposition: whether people were likely to be friendly or to fight (Chapter 1) 64

disproportionate: more than their share (Chapter 11) 764

dissection: the cutting open of a dead body to look at its insides (Chapter 18) 1188

dissent: a judge's written disagreement with the other judges (Chapter 20) 1317

dissident beliefs: beliefs that go against those of the people in power (Chapter 25) 1871

dissolution: the breakup of a company (Chapter 19) 1268

distemper: an old word for a sickness (Chapter 26) 1961

distill: to heat a drink and catch the steam, which cools into a liquor stronger than beer or wine (Chapter 28) 2120

distillery: a place where liquor is made (Chapter 6) 418

Distinguished Flying Cross: a medal for bravery or great skill in flying (Chapter 1) 74

Distinguished Service Cross: an army medal for bravery in battle (Chapter 22) 1559

distributing reservoir: a large basin that held the water and fed it out to the city's pipes (Chapter 6) 413

district: the land set aside for the capital (Chapter 6) 407

district leader: the party's boss in one part of the city (Chapter 20) 1356

District of Columbia: the capital city (Chapter 12) 799

district schools: country schools, which usually held a summer term and a winter term (Chapter 7) 474

disturbing the peace: making a public disturbance (Chapter 35) 2949

diversion tunnels: tunnels dug to carry a river around a building site (Chapter 12) 815

diversions: ways to have fun (Chapter 34) 2833

dividend: a share of a company's profits paid to its owners (Chapter 19) 1245

Divine Service: the church service (Chapter 33) 2719

Diwali: the festival of lights, kept mostly by Hindus, Sikhs, Jains and Buddhists (Chapter 37) 3135

Dixiecrats: the States' Rights Democratic Party, formed by Southern delegates in 1948 (Chapter 20) 1356

DNA: the set of chemical instructions inside every living cell (Chapter 9) 633

doctorate: the highest degree a university gives (Chapter 9) 604

doctrina: a mission town with a friar living in it (Chapter 29) 2207

doctrine: the beliefs of the church (Chapter 30) 2348

doctrine of discovery: a rule in American law under which a land that no European had known before belonged to the European government whose explorers found it first, and no other European government could claim it. No one asked the Native nations who already lived there (Chapter 1) 44

doffer: a mill worker who took full bobbins off the spinning machines and put on empty ones (Chapter 14) 922

doffing: taking the full bobbins, the spools that held the spun thread, off a spinning machine and putting empty ones on (Chapter 14) 922

dolly: a wooden stick for stirring clothes as they boiled (Chapter 7) 485

domestic servants: people paid to cook, clean and care for other families' homes (Chapter 7) 485

domestic service: paid work in another family's home (Chapter 7) 480

domestic terrorism: an attack meant to frighten people inside the country (Chapter 29) 2324

domestic workers: people who cleaned, cooked and cared for children in other people's homes (Chapter 16) 1084

Doña: a Spanish title of respect for a woman (Chapter 29) 2207

door-yards: the yards in front of houses (Chapter 32) 2643

dormitory: a large room full of beds (Chapter 4) 298

Dorset: the name archaeologists give a Native people who lived at L'Anse aux Meadows about 300 years before the Norse (Chapter 1) 17

dot-com bubble: the boom and crash in technology stocks from about 1995 to 2002, named after companies that did business on the internet (Chapter 16) 1102

Douay Bible: the Bible translation Catholics use (Chapter 29) 2256

double helix: two long strands wound around each other in a spiral (Chapter 9) 633

double jeopardy: the rule that a person found not guilty cannot be tried a second time for the same crime (Chapter 21) 1468

double-woven basket: two baskets woven one inside the other from the same strips, so both the inside and the outside show a finished pattern (Chapter 32) 2613

Dow Jones average: a number built from the stock prices of a group of large companies (Chapter 16) 1084

down payment: part of the price paid up front (Chapter 7) 485

downwinders: people who lived where the wind carried fallout from nuclear bomb tests (Chapter 9) 648

dowry: the money or goods a bride's family gives when she marries (Chapter 17) 1115

draft: the system that called men into the military, or ordered them to come and work (Chapter 7) 474

draft board: the local officials who chose which men in an area were drafted (Chapter 22) 1575

draft evasion: refusing to serve when drafted (Chapter 36) 3045

draftsman: someone who makes exact drawings of machines and buildings (Chapter 8) 541

dram: a small drink of liquor (Chapter 28) 2147

drawback: money a railroad would pay a shipper on every barrel his rivals shipped (Chapter 19) 1256

drawing wire: pulling iron through small holes to make it thin (Chapter 8) 517

Dred Scott decision: the 1857 Supreme Court ruling that African Americans were not citizens (Chapter 8) 541

drilling: practicing marching and handling weapons with a company of soldiers (Chapter 22) 1522

drive pipe: a pipe driven down to the rock so the drill could work inside it, which kept water and loose ground out (Chapter 10) 681

driver: an enslaved man put in charge of other enslaved workers (Chapter 9) 604

drought: a long time with too little rain (Chapter 2) 99

dry goods: cloth, clothing and sewing supplies (Chapter 18) 1188

dubious: open to doubt (Chapter 30) 2442

ducat: a Spanish gold coin (Chapter 2) 102

due process: the rules a court must follow to give an accused person a fair trial (Chapter 21) 1442

duff: a thick, soft layer of fallen leaves on a forest floor (Chapter 3) 182

duffel: a heavy wool used for blankets and coats (Chapter 35) 2923

dugout: a home dug into the side of a hill or a creek bank (Chapter 7) 480

dugout (canoe): a canoe made from one log that builders hollowed out with fire and tools (Chapter 11) 721

dumb (in an old book title): unable to speak (Chapter 30) 2375

dumbbell tenement: a tenement pinched in at the middle around a narrow air shaft, wide at both ends and thin in the middle, like an exercise weight with a ball at each end of a short bar (Chapter 6) 418

dunce's cap: a pointed paper hat that a teacher made a pupil wear to shame him (Chapter 30) 2375

Dunmore's War: the war Virginians fought against the Shawnee in 1774 (Chapter 1) 39

Dust Bowl: the parts of Oklahoma, Texas, Kansas, Colorado and New Mexico where drought and windstorms tore the topsoil off farms in the 1930s (Chapter 3) 215

dust pneumonia: an illness that came when dust settled deep in a person's lungs and kept the tiny hairs that sweep the airways clean from moving. The person had fever, chest pain, coughing and trouble breathing (Chapter 15) 1015

duster: a dust storm (Chapter 27) 2078

Dutch West India Company: the trading company whose officials ran New Netherland and gave its governor his orders (Chapter 4) 260

duty: a tax on goods brought in (Chapter 16) 1057

dynamo: a machine that makes electricity when it is turned (Chapter 8) 541

dysentery: an infection of the gut that causes severe, bloody diarrhea (Chapter 1) 31

E

eagle: a ten-dollar gold coin (Chapter 13) 855

earth lodge: a dome made of timber and packed over with earth (Chapter 7) 460

earthworks: mounds and long banks of piled earth (Chapter 12) 783

easement: legal permission to cross land (Chapter 2) 170

Eastern Agricultural Complex: the group of crops Native people in eastern North America bred on their own, a squash and six seed plants (Chapter 15) 986

Eastern Woodlands: the forests of the eastern part of the continent (Chapter 7) 460

eclectic: chosen from many sources (Chapter 30) 2375

ecology: the ways living things depend on each other and on the land (Chapter 9) 581

economist: an expert on money, prices and trade (Chapter 11) 764

economy: the ways people have of making, sharing and trading the things they need (Chapter 16) 1049

ecumenical: bringing together people of different churches (Chapter 16) 1096

Edict of Nantes: a French law of 1598 under which French Protestants could worship in the towns they held (Chapter 4) 260

editorial: an article that gives a newspaper's opinion (Chapter 5) 376

education savings account (ESA): state money set aside for one child that the family can spend on private school fees, a tutor, books or an online course (Chapter 30) 2474

effigy: a figure made to look like a person (Chapter 31) 2533

egregious errors: very serious mistakes (Chapter 25) 1909

Eighteenth Amendment: the change to the Constitution that banned alcoholic drinks from January 1920 (Chapter 20) 1356

Eighth Amendment: the part of the Constitution that forbids cruel and unusual punishment (Chapter 20) 1372

El Camino Real de Tierra Adentro: Spanish for "the royal road of the interior," the route from Mexico City to northern New Mexico (Chapter 5) 336

elder: a leader in charge of a church, or a man respected for his learning (Chapter 29) 2242

election cakes: thick cakes full of fruit, eaten at the Black election celebrations (Chapter 33) 2729

elective franchise: the right to vote (Chapter 25) 1778

Electoral Commission: the fifteen representatives, senators and Supreme Court justices who settled the disputed electoral votes of 1876 (Chapter 20) 1341

Electoral Count Reform and Presidential Transition Improvement Act: the 2022 law that changed the rules for counting the electoral votes (Chapter 20) 1390

electoral votes: the votes cast by electors, the people each state chooses to pick the president (Chapter 20) 1322

electors: the people who pick the president (Chapter 20) 1322

electric chair: a chair that kills a person by sending a strong electric current through the body (Chapter 10) 681

electrocution: killing a person by sending a strong electric current through the body, which stops the heart and burns the skin where the metal touches it (Chapter 21) 1442

electromagnet: a magnet that works only while electricity flows through it (Chapter 8) 535

electromagnetic induction: the making of an electric current with a magnet (Chapter 9) 596

electron: one of the tiny particles inside every atom, which carries electricity (Chapter 8) 553

electron volt: a very small unit of energy used for particles (Chapter 8) 553

element: a substance made of only one kind of atom (Chapter 8) 553

elementary and secondary schools: the schools for children from first grade through high school (Chapter 20) 1372

elevator (on an airplane): a movable part at the front that controls pitch (Chapter 8) 553

elimination: a disease no longer spreading nonstop inside the country for at least a year (Chapter 26) 2022

emaciated: so thin from hunger that the bones show (Chapter 22) 1522

emancipate: to set enslaved people free (Chapter 11) 745

Emancipation Park: the ten acres Black Houstonians bought in 1872, named for the freeing of enslaved people (Chapter 37) 3107

Emancipation Proclamation: President Abraham Lincoln's 1863 order declaring the enslaved people in the Confederate states free (Chapter 8) 541

embargo: an order that stops trade (Chapter 10) 702

embezzlement: stealing money that others trusted a person to handle (Chapter 10) 691

embroidery: sewing pictures and patterns with colored thread (Chapter 18) 1182

emergency manager: an official the governor appointed to run a city in place of its elected leaders (Chapter 13) 899

Emergency Quota Act: the 1921 law, the first with a set limit on how many immigrants could come (Chapter 4) 298

emigrant: a person leaving one home to settle in another (Chapter 5) 352

emigrate: to leave your own country to live in another (Chapter 4) 267

eminent: famous and respected (Chapter 27) 2078

eminent domain: the power of a government to take private property for public use, paying the owner whether the owner wants to sell or not (Chapter 6) 418

emissions: the pollution a plant sends into the air (Chapter 3) 240

Emmys: the top awards for television (Chapter 24) 1741

emotional distress: harm to a person's mind and feelings (Chapter 9) 604

emotionally disturbed: having serious trouble controlling feelings and behavior (Chapter 20) 1372

emphysema: a lung disease in which the thin walls between the lungs' tiny air sacs break down, so the person cannot get enough air (Chapter 26) 2005

employer sanctions: punishments for employers who knowingly hire workers without legal permission (Chapter 4) 310

encomenderos: Spanish colonists in New Mexico who held the right to collect tribute from Pueblo households (Chapter 35) 2916

encomienda: a system set up by the king of Spain under which Spanish settlers could force Native people to work for them and hand over tribute (Chapter 14) 912

encroachments: steps that go beyond what is allowed (Chapter 20) 1322

encumber: to crowd or block (Chapter 16) 1067

endangered species: a kind of plant or animal in danger of dying out (Chapter 3) 229

endowment: a sum of money kept and invested so that its earnings pay for a school's work (Chapter 25) 1778

energy independence: a country producing more energy in total than it uses, while still buying some fuel from other countries (Chapter 10) 711

engine knock: a pinging sound in the engine (Chapter 19) 1268

engineered road: a road planned and built to a design, with a prepared surface (Chapter 11) 732

English Separatists: people who wanted to worship apart from the Church of England, among them the church that moved to Leiden and founded Plymouth (Chapter 4) 260

English subject: a person with the rights of someone born English (Chapter 32) 2613

engraver: a man who cuts designs into metal plates for printing (Chapter 6) 407

engraving: a picture printed from lines cut into metal or wood (Chapter 6) 418

enlisted soldier: a soldier who is not an officer (Chapter 22) 1543

enrolled citizens: people officially listed as members of a nation (Chapter 2) 170

ensign: a young officer (Chapter 36) 2999

enslaved person: a person owned by another person as property and forced to work for no pay (Chapter 4) 275

entering wedge: a first step that opens the way to more (Chapter 16) 1084

enterprising young men: bold young men ready for hard work (Chapter 1) 44

entradas: the Spanish name for armed expeditions into the north (Chapter 2) 102

entrails: the organs inside the body (Chapter 11) 734

enumerated goods: listed goods (Chapter 16) 1052

environmental justice: the campaign to stop companies and government officials from putting polluting sites next to poor, Black, brown and Native communities (Chapter 3) 229

Environmental Protection Agency (EPA): the federal office whose staff work to protect the country's air, water and land (Chapter 3) 229

environmental racism: Benjamin Chavis's name for choosing communities of color for waste sites and polluting factories (Chapter 3) 229

envoys: men sent to bargain for their government (Chapter 23) 1616

epidemic: a disease that spreads quickly to many people (Chapter 1) 64

epilepsy: a disease of the brain that causes seizures (Chapter 25) 1829

Equal Employment Opportunity Commission: the federal office that handles complaints of unfair treatment at work (Chapter 11) 764

equal protection: the rule that a state has to apply its laws the same way to everyone (Chapter 20) 1341

Equal Protection Clause: the part of the Fourteenth Amendment that requires states to treat people equally under the law (Chapter 20) 1356

equinox: one of the two days, in spring and fall, when day and night are the same length (Chapter 6) 395

eradicate: to wipe out (Chapter 37) 3135

erosion: the wearing away of soil by wind or water (Chapter 3) 215

erroneous: wrong (Chapter 25) 1829

espionage: spying (Chapter 31) 2559

esports: video game contests played for prize money (Chapter 36) 3058

essential workers: workers in grocery stores, warehouses, delivery and health care who kept going to work in person during the pandemic (Chapter 14) 974

established church: a church that the government supports with tax money (Chapter 29) 2242

establishing a religion: setting up an official religion (Chapter 20) 1372

estate: the money and property a person leaves when he dies (Chapter 7) 480

estate (land): a large holding of land (Chapter 1) 64

estate taxes: a tax on what a person leaves at death (Chapter 25) 1909

ether: an unseen substance that scientists once thought light traveled through as waves (Chapter 9) 604

ether (drug): a drug breathed as a vapor that kept a patient from feeling an operation (Chapter 22) 1543

Ether (money): a kind of digital money (Chapter 32) 2695

Ethical Culture: a group that meets to teach right conduct (Chapter 29) 2304

ethnicity: the group a person is born into, with its own language and customs (Chapter 4) 283

ethnomusicologist: a scholar who studies the music of a people and its place in their lives (Chapter 33) 2729

eugenics: the false idea that a country could improve its people by stopping some people from having children (Chapter 4) 298

evacuee: a person who leaves a place to escape danger (Chapter 5) 387

evangelicalism: the kind of Protestant faith whose preachers called on each listener to be converted (Chapter 29) 2256

evasive and nonresponsive: dodging the questions (Chapter 19) 1280

Everglades: the swamps of southern Florida (Chapter 2) 126

Every Student Succeeds Act: the 2015 law that replaced No Child Left Behind (Chapter 20) 1390

evict: to force people out of their homes (Chapter 3) 229

evolution: the scientific idea that living things, people included, developed over a very long time from earlier forms (Chapter 20) 1356

excess in apparel: too much spending on clothes (Chapter 35) 2916

excessive force: far more force than was needed (Chapter 14) 941

excise: a tax on goods made and sold inside the country (Chapter 16) 1062

exciseman: a collector of taxes on goods (Chapter 34) 2827

exclusion orders: the military orders that kept people of Japanese descent away from the west coast (Chapter 20) 1356

excommunication: putting a person out of the church (Chapter 21) 1412

execrable: hateful (Chapter 26) 1967

executive order: a written order from the president (Chapter 3) 200

exemption: a rule that lets some people off a requirement (Chapter 20) 1372

exile: being forced to live far from one's homeland (Chapter 25) 1778

Exodusters: Black Southerners who moved to Kansas around 1879, named after the Exodus, the Bible story of the Israelites' escape from slavery in Egypt (Chapter 5) 363

exoneration: a judge or a governor clearing a person of a crime after a conviction, because new evidence shows the person did not do it (Chapter 21) 1484

exoplanet: a planet that circles a star other than our Sun (Chapter 9) 648

expansion: a stretch of growth without a downturn (Chapter 16) 1096

expedited: quick (Chapter 25) 1909

expedition: a group of men sent out to explore (Chapter 1) 21

expelled: put out of the school altogether (Chapter 30) 2474

experiment station: a station run by a land-grant college where scientists studied soil, seed and farm animals and sent their results to farmers (Chapter 9) 604

experimental physicist: a scientist who runs experiments and measurements (Chapter 9) 648

exploit: to use someone for your own gain (Chapter 36) 3045

Explorers Club: a society of explorers (Chapter 1) 74

export trade: the business of sending goods away to be sold in another place (Chapter 16) 1052

exposition: a large public show of new machines and goods (Chapter 6) 418

exposure: dying from cold or other harsh weather without shelter (Chapter 2) 149

expressway: a wide road for fast traffic (Chapter 6) 443

expropriation: taking property away from its owners (Chapter 3) 200

expunge: to strike from the record (Chapter 20) 1333

exterminate: to kill off entirely (Chapter 3) 200

extinction: dying out completely (Chapter 30) 2375

extinguish a title: to end someone's ownership of land (Chapter 11) 745

extirpate: to wipe out completely (Chapter 22) 1522

extort: to force people by threats to pay (Chapter 21) 1442

extras: actors hired to fill out crowd scenes (Chapter 34) 2861

extravagance and dissipation: spending too much, and wasting time and money on pleasure (Chapter 34) 2833

extravagant: spending too much on show, or living too freely (Chapter 4) 310

exuberant: full of wild feeling (Chapter 29) 2256

F

faʻa Sāmoa: the Samoan way of life, which includes land held in common by families and the matai system of chiefs (Chapter 23) 1656

face recognition: a computer comparison of a photo of a face with a collection of photos that names possible matches (Chapter 8) 570

fair use: a use of someone else's work that the law allows in some cases (Chapter 33) 2795

fairness doctrine: the rule of the Federal Communications Commission that stations cover important public questions fairly, air more than one side, and give people attacked on the air a chance to answer (Chapter 31) 2572

Faith Keepers: the Onondaga men and women who decide when each ceremony takes place (Chapter 37) 3075

fallacy: a mistake in reasoning (Chapter 20) 1341

fallopian tubes: the tubes that carry eggs to the womb (Chapter 20) 1356

fallout: radioactive dust that falls back to the ground after a nuclear explosion (Chapter 9) 614

falls (of a river): where the river drops over rocks (Chapter 8) 517

false imprisonment: holding people against their will so they cannot leave (Chapter 37) 3125

famine: a time when food runs so short that many people die of hunger (Chapter 2) 102

famine relief: the food and work given to people who were starving (Chapter 4) 275

"fancy" trade: the sale of enslaved women and teenage girls, at much higher prices, to men who bought them in order to rape them (Chapter 24) 1693

fanega: a Spanish measure of grain (Chapter 35) 2916

fanner baskets: coiled baskets in which enslaved workers tossed rice to separate the grain from its husks (Chapter 15) 995

Farewell Address: Washington's written message to the country in 1796 saying he would not run again (Chapter 20) 1322

farm-to-table: buying food straight from local farms (Chapter 15) 1028

fascists: the followers of the dictators who ruled Italy and Germany (Chapter 33) 2759

fashion plate: a picture of the latest dresses colored by hand (Chapter 35) 2934

fasted: went without food (Chapter 21) 1406

fathom: six feet (Chapter 11) 745

fathom of wampum: a string of beads six feet long (Chapter 18) 1174

fault: a crack in the earth's crust where the rock on each side can move (Chapter 27) 2032

FBI: the Federal Bureau of Investigation, a national police agency (Chapter 2) 149

FCC: the Federal Communications Commission, the government office that licenses radio and television stations (Chapter 31) 2559

FDA: the Food and Drug Administration, the name given in 1930 to the Bureau of Chemistry, the office that enforced the food law (Chapter 15) 1015

FDIC: the Federal Deposit Insurance Corporation, the government agency that insures bank deposits (Chapter 17) 1143

feast day: a day the church sets aside to honor a saint (Chapter 4) 258

federal: part of the national government in Washington (Chapter 1) 82

Federal Bureau of Narcotics: the government's drug police (Chapter 28) 2165

Federal Communications Commission: the government office that licenses stations (Chapter 18) 1204

federal corporation: a company owned by the national government (Chapter 10) 691

federal crime: a crime the national government can charge (Chapter 20) 1356

federal district judges: the judges of the lowest federal courts (Chapter 20) 1372

federal funds rate: the rate banks charge one another for overnight loans (Chapter 17) 1153

federal grants: money the national government had promised (Chapter 11) 773

federal holiday: a paid day off for the national government's workers (Chapter 14) 929

federal law: a law made by Congress for the whole country (Chapter 3) 200

federal marshals: officers who work for the federal courts (Chapter 2) 158

federal prosecutors: the government lawyers who bring criminal charges for the United States (Chapter 4) 320

federal regulation: rules made and enforced by the national government (Chapter 19) 1256

Federal Reserve: a bank for the nation's banks, the central bank of the United States (Chapter 6) 431

Federal Reserve Bank of Chicago: a branch of the country's central bank (Chapter 6) 431

federal territories: the lands that were not yet states (Chapter 20) 1341

Federal Trade Commission: the federal office whose officials act against companies that cheat or mislead buyers (Chapter 13) 868

Federal Writers' Project: a government program that gave jobs to writers (Chapter 24) 1735

Federalists: the party led by Alexander Hamilton and John Adams, whose members wanted a strong national government (Chapter 20) 1322

feeble-minded: a label officials put on people they judged to be slow to learn (Chapter 4) 298

feeble-minded, moron, imbecile: names test makers gave to ranges of low scores (Chapter 30) 2414

feeblemindedness, insanity, criminality, dependency: old words for low intelligence, mental illness, crime and needing public charity (Chapter 4) 298

feed: the list of posts a site shows each user (Chapter 31) 2585

felling saws: saws for cutting down trees (Chapter 8) 517

fellow (of the Royal Society): a full member (Chapter 9) 585

felony: one of the most serious kinds of crime (Chapter 13) 899

felony assault: a serious crime of attacking a person (Chapter 37) 3125

felony child neglect: a serious crime of failing to protect children (Chapter 21) 1484

felony conspiracy: planning together to commit a serious crime (Chapter 25) 1871

felony obstruction of justice: a serious crime of getting in the way of an investigation (Chapter 31) 2585

felt: a thick cloth made by pressing fur together (Chapter 3) 185

FEMA: the Federal Emergency Management Agency, the national government's office for disaster help (Chapter 5) 387

female complaint: a health problem of women, in the words of patent-medicine advertisements (Chapter 18) 1193

female seminary: a school for girls and young women (Chapter 7) 474

feme covert: the legal name for a married woman, a covered woman (Chapter 25) 1760

feme sole: an adult woman who had never married or whose husband had died, a woman on her own in law (Chapter 25) 1760

fencerow to fencerow: planting every acre up to the fences (Chapter 15) 1028

fentanyl: an opioid made in a lab, 50 to 100 times stronger than morphine (Chapter 26) 2022

feral hogs: pigs from farm stock that live in the wild (Chapter 3) 182

ferule: in the Cambridge report's words, "a flexible instrument, made of two flat pieces of leather, sewed together, and filled with some soft substance" (Chapter 30) 2392

fetus: the medical word for the unborn offspring growing in the womb after the first weeks of pregnancy (Chapter 25) 1909

feud: a long run of killings in which each side took revenge for the last death (Chapter 21) 1406

feudal: like the old system in Europe in which farm workers were bound to a lord's land (Chapter 25) 1757

Feynman diagrams: simple drawings that show how particles act on each other (Chapter 9) 633

fiat money: money backed by no metal and worth what it can buy (Chapter 17) 1153

fiberglass: plastic that hardens around threads of glass (Chapter 35) 2959

fidelity: loyalty (Chapter 25) 1909

fife: a small, high-pitched flute (Chapter 33) 2729

Fifteenth Amendment: the 1870 change to the Constitution that barred the states from denying a man the vote because of his race (Chapter 20) 1333

filament: a thin thread inside an electric lamp that glows when an electric current heats it (Chapter 8) 541

filibuster: a way of blocking a bill by talking on and on so that no vote can happen (Chapter 20) 1372

fill: earth dumped on top, used in Chicago to raise the streets over the sewer pipes (Chapter 6) 418

finished goods: things already made (Chapter 13) 852

finished ironware: iron goods ready for use (Chapter 13) 852

fire engine: the name people in the 1700s used for a steam engine (Chapter 10) 671

fire insurance: many owners each pay a small amount into a shared fund, and the company that keeps the fund pays any owner whose house burns (Chapter 7) 495

fire limits: an area with strict building rules meant to stop fires spreading (Chapter 25) 1829

fire tower: a shaft that ran up through a building (Chapter 6) 431

firemaster: an officer chosen by a vote whose orders at a fire everyone had to obey as if they were the law (Chapter 6) 404

fireside chat: a radio talk by President Franklin Roosevelt to the country (Chapter 17) 1143

firestorm: many fires joined into one huge fire that uses up the oxygen in the air (Chapter 22) 1559

firing squad: a group of shooters who fire rifles at the prisoner's heart (Chapter 21) 1468

First Continental Congress: the meeting of leaders from the colonies in 1774 (Chapter 34) 2833

first-degree criminal sexual conduct: under Michigan law, a sex act that goes inside another person's body, in certain cases, such as when the victim is under 13. It can be punished with life in prison (Chapter 36) 3058

first-degree murder: the most serious kind of murder, planned ahead of time (Chapter 12) 832

First International Polar Year: the time when scientists from several countries studied the far north and far south at the same time (Chapter 1) 64

First Salmon Feast: the feast the Yakama, Umatilla, Warm Springs and Nez Perce peoples hold each spring before the fishing season opens (Chapter 37) 3075

fiscal year: the government's budget year (Chapter 14) 974

fish-in: people fishing in the open in front of state officers and letting themselves be arrested, to force the treaties into a courtroom (Chapter 2) 158

fish ladder: rising pools that let salmon swim upstream past a dam (Chapter 10) 691

fish weir: a fence of wooden stakes set across the water, with bundles of brush woven between the stakes, that traps fish when the tide goes out (Chapter 8) 512

fission: the splitting of the center of an atom, called the nucleus, into two pieces, which gives off energy (Chapter 9) 614

five-and-dime stores: stores that sold small goods for 5 and 10 cents (Chapter 18) 1214

Five Tribes: the Cherokee, Choctaw, Muscogee (Creek), Chickasaw and Seminole nations (Chapter 5) 363

fixed rate: an interest charge that never changes (Chapter 7) 485

flag of truce: a white flag, a sign that both sides promise not to attack or seize anyone while they talk (Chapter 2) 126

flagrant disregard: openly ignoring something (Chapter 27) 2093

flagship: the ship that carried a fleet's leader (Chapter 4) 260

flapper look: the slim, straight shape of 1920s dresses (Chapter 35) 2949

flash-bang: an explosive device that makes a loud noise and a bright flash of light (Chapter 2) 170

flash flood emergency: a more urgent alert than a flash flood warning (Chapter 27) 2104

flat-top: a flat-roofed house (Chapter 6) 431

flatboat: a large, flat-bottomed boat that carried farm goods and people downriver (Chapter 27) 2061

flatirons: solid metal irons heated over the coals and held with a rag around the handle (Chapter 7) 485

flaunting: showing off (Chapter 35) 2916

flax: a plant whose stems give the threads for linen (Chapter 15) 1000

fleshmonger: a person who traded in human beings (Chapter 35) 2934

flint and chert: two hard stones that people made into tools (Chapter 13) 844

flint clay: a stone from near St. Louis, Missouri, used for the Birger figurine (Chapter 32) 2598

flogging: beating a person's bare back with a whip, which cuts the skin and leaves welts and scars (Chapter 1) 44

flogging round the fleet: a sentence under which a sailor was whipped aboard each ship of the squadron in turn (Chapter 1) 44

flood plain: the low land beside a river that the river covers when it floods (Chapter 27) 2093

florins: Dutch coins (Chapter 26) 1954

flue: a channel that draws hot air and smoke upward, as a chimney does (Chapter 6) 418

flux, bloody flux: the old word for diarrhea, and diarrhea with blood in it (Chapter 26) 1954

flying boat: a plane that takes off from and lands on water (Chapter 11) 756

flywheel magneto: an engine part that makes electricity (Chapter 8) 553

folklorist: someone who collects the stories, songs and sayings people pass along by word of mouth (Chapter 32) 2660

follies: silly shows (Chapter 31) 2572

folly: a foolish project (Chapter 1) 64

foment a rebellion: to stir one up (Chapter 25) 1770

food deserts: low-income areas far from a supermarket, more than 1 mile away in a city or more than 10 miles in the country (Chapter 15) 1039

food sovereignty: Native nations' work to control their own food (Chapter 15) 1039

forbearing of labor: not working (Chapter 37) 3083

forced assimilation: making people give up their own ways of life (Chapter 29) 2324

forced labor: work people could not refuse and could not leave (Chapter 3) 200

forcible feeding: holding a person down, pushing a tube through the nose or mouth down the throat into the stomach, and pouring liquid food through it (Chapter 25) 1829

forcibly removed: made to go whether they wanted to or not (Chapter 1) 64

ford: a shallow place where people and horses can wade across a river (Chapter 11) 728

foreclose: to take a house back from a borrower who cannot pay (Chapter 7) 485

foreclosure filing: the paper a lender files to start taking back a home (Chapter 7) 502

foreign agent: someone acting on behalf of another country's government (Chapter 20) 1390

foreman: the head juror (Chapter 21) 1434

forerunner: an earlier event of the same kind (Chapter 3) 192

Forest Finns: settlers of New Sweden who were skilled at building with logs (Chapter 7) 471

forest reserve: public forest land that a president could set aside under the 1891 Forest Reserve Act, the start of the national forests (Chapter 3) 200

forester: a person trained to study and manage forests (Chapter 3) 215

forfeit: to lose something as a punishment, or to lose a match without playing it (Chapter 25) 1909

forge: a workshop where workers heat iron and hammer it (Chapter 8) 517

forge (papers): to fake (Chapter 24) 1693

"formal racial barrier": a bar based on race written into the rules (Chapter 8) 541

fortify: to make stronger (Chapter 20) 1322

Forty-Eighters: German revolutionaries of 1848 who came to the United States (Chapter 4) 275

forty-niners: the people who rushed to California for gold in 1849 (Chapter 5) 352

forum: a website where users wrote to one another (Chapter 11) 745

foster care: living with families paid to raise children not their own (Chapter 30) 2442

foundry: a workshop where metal is melted and poured into molds (Chapter 7) 474

Four Corners: the place in the Southwest where Utah, Colorado, Arizona and New Mexico meet (Chapter 6) 395

Fourteenth Amendment: the 1868 change to the Constitution that made all persons born or naturalized in the United States citizens and promised them the equal protection of the laws (Chapter 4) 283

fracking: short for hydraulic fracturing, a way of getting gas and oil out of rock deep underground by pumping water, sand and chemicals down a well at high pressure to crack the rock (Chapter 10) 711

frame: a single picture of a film (Chapter 34) 2889

Frame of Government: William Penn's plan for running Pennsylvania (Chapter 29) 2213

franchise: a deal that lets other people open stores under an owner's name and system in return for fees (Chapter 15) 1028

Franciscans: one group of Catholic friars (Chapter 29) 2207

frankly and unequivocally: openly and with no doubt (Chapter 30) 2414

Fraternal Order of Eagles: a men's club (Chapter 37) 3119

fraud: cheating people by lying (Chapter 10) 691

fraud, deceit and unprofessional conduct: legal words for cheating, lying and breaking the rules of one's profession (Chapter 26) 2005

free agent: a player free to sign with any team (Chapter 36) 3045

free association: being a separate country tied to the United States by a formal agreement, as the Marshall Islands are (Chapter 23) 1656

free-banking laws: state laws with few rules for opening a bank (Chapter 17) 1128

free labor: workers who were not enslaved (Chapter 11) 734

free people of color: people of African or mixed descent who were not enslaved (Chapter 4) 271

free, prior and informed consent: a yes given freely and beforehand, by people who have been told everything about the request (Chapter 9) 648

Free Public School Act: the 1834 Pennsylvania law for a statewide system of common schools paid for by taxes (Chapter 20) 1333

free silver: the government coining all the silver brought to it, at 16 ounces of silver to 1 ounce of gold (Chapter 17) 1136

Free Speech Movement: a 1964 protest by Berkeley students for the right to speak and organize about politics on campus (Chapter 8) 561

Freedmen: the people the Five Tribes had enslaved and freed after 1866 (Chapter 24) 1712

Freedmen's Bureau: a federal office set up to help people freed from slavery (Chapter 24) 1712

freedom dues: a payment of clothes, tools or money at the end of an indenture (Chapter 4) 260

freedpeople: the men, women and children who had been freed from slavery (Chapter 15) 1009

freelance reporter: a reporter who works for himself rather than for one newspaper (Chapter 31) 2572

freeman: a man who was neither enslaved nor bound as a servant (Chapter 20) 1309

Freemasons: a secret society of men (Chapter 20) 1333

freight: goods being shipped (Chapter 5) 352

freight elevator: the elevator used for goods (Chapter 36) 3028

freight station: a building where trains loaded and unloaded goods (Chapter 18) 1193

friar: a member of a Catholic religious order (Chapter 1) 21

friend-of-the-court brief: a written argument sent to a court by people who are not in the case (Chapter 25) 1829

frock coat: a fitted coat with a skirt that reached to just above the knee (Chapter 35) 2934

from time immemorial: since before anyone can remember (Chapter 37) 3075

frontier: the edge of the colonists' settlements, on land where Native nations lived (Chapter 1) 64

frontier line: the edge of thinly settled land in the West, where two to six people lived on each square mile (Chapter 1) 64

frostbite: damage to skin and flesh from freezing (Chapter 27) 2068

fuchsine: a deep crimson red made from coal tar (Chapter 35) 2940

fuel (for fires): the dead wood and brush that burns (Chapter 3) 240

fuel assembly: a tall bundle of fuel rods (Chapter 10) 711

fuel-economy standards: rules for how far a car must go on a gallon of gas (Chapter 10) 702

fugitive: a person who has escaped (Chapter 24) 1712

fugitive clause: the part of the Constitution that said a person "held to Service or Labour" who escaped to another state had to be handed back (Chapter 24) 1684

fully synthetic: made entirely from chemicals rather than from anything that grew (Chapter 8) 553

fundamental right: a right the Constitution itself protects (Chapter 20) 1372

fundamentalist: a Christian who reads the Bible word for word (Chapter 29) 2287

funeral procession: the line of people walking behind the coffin (Chapter 18) 1182

fur trade: the buying and selling of animal skins between European traders and Native trappers (Chapter 2) 108

furnace: the tall oven where iron is melted out of rock (Chapter 8) 517

furnish: the food, seed, tools and cabin a landowner gave a sharecropping family on credit, to be paid for later (Chapter 15) 1009

G

gag rule: the House rule, from 1836 to 1844, that set aside every antislavery petition without reading it (Chapter 25) 1778

galena: a lead ore (Chapter 13) 859

gallery: a balcony above a church's main floor (Chapter 29) 2242

gallows: a frame for hanging people (Chapter 4) 283

game: the wild animals people hunted (Chapter 3) 180

Game Boy: a game machine small enough to hold in the hands (Chapter 36) 3045

gamed: tricked an app (Chapter 14) 974

gaming: gambling businesses such as casinos (Chapter 2) 158

gander: a male goose (Chapter 36) 2995

gander pulling: a game in which riders grabbed at the greased neck of a live gander hung upside down until one pulled its head off (Chapter 36) 2995

gang system: overseers driving enslaved people in gangs, row by row across the fields (Chapter 24) 1693

gangrene: the rotting of dead flesh in a living body (Chapter 1) 44

garlix: a coarse linen (Chapter 35) 2923

garment workers: people who sew clothes for a living (Chapter 14) 941

garroted: strangled to death with a cord or an iron collar that was tightened around the neck (Chapter 1) 21

gas chamber: a sealed room filled with poison gas (Chapter 21) 1484

gas works: plants that made gas (Chapter 10) 677

gash: a deep cut (Chapter 12) 825

gasometers: large tanks for storing gas made from coal (Chapter 10) 677

gavilleros: guerrillas in the east of the Dominican Republic (Chapter 23) 1634

gay: a man who loves men or a woman who loves women (Chapter 1) 82

GDP: the total value of all the goods and services made in the country in a year (Chapter 16) 1084

Gendarmerie: the Haitian police force that Marines commanded (Chapter 23) 1634

gender dysphoria: the medical term for the distress a person feels when the sex recorded at birth does not match their own sense of their gender (Chapter 25) 1909

gender identity: a person's own sense of being a boy or a girl, a man or a woman (Chapter 25) 1909

genealogist: a person who traces family histories through old records (Chapter 4) 283

General Accounting Office: the federal office that checks how federal money is spent (Chapter 2) 158

General Assembly of Virginia: the colony's lawmaking body (Chapter 35) 2916

General Conference: the gathering where United Methodist delegates write the church's rules (Chapter 29) 2324

General Court (Massachusetts): the Massachusetts colony's lawmakers (Chapter 4) 260

General Court (Virginia): the governor of Virginia and his council, sitting together as the colony's highest court (Chapter 14) 914

general incorporation law: a law that let any group form a corporation by following set steps, without a special vote (Chapter 19) 1250

General Orders No. 3: General Gordon Granger's order at Galveston on June 19, 1865, which stated that "all slaves are free" (Chapter 37) 3107

general strike: workers in many different trades stopping work at the same time (Chapter 14) 922

general-purpose computer: one that could be set up to solve many kinds of problems (Chapter 8) 553

generative AI: AI that makes new pictures, text or sound (Chapter 8) 570

generator: a machine that turns motion into electric current (Chapter 10) 681

genes: the tiny instructions inside every living thing that parents pass on to their young (Chapter 3) 229

genetically engineered seed: seed whose DNA scientists changed in a laboratory (Chapter 15) 1039

genetics: the study of how living things pass on their traits (Chapter 9) 614

genitals: the parts of the body used to make babies (Chapter 4) 298

genius: unusual ability (Chapter 25) 1829

genome: the complete set of DNA in a living thing (Chapter 9) 633

genteel: well-off (Chapter 36) 2995

Gentile: a person who is not Jewish (Chapter 29) 2242

gentrification: what happens when buyers and lenders return to a neighborhood they had avoided for years: new owners fix up the houses, rents and prices rise, and the people who lived there can no longer afford to stay (Chapter 6) 452

genus: a group of closely related kinds of animals or plants (Chapter 9) 591

geologist: a scientist who studies rocks and the earth (Chapter 1) 64

Georgian house: a style of house with both sides built to match and a balanced look taken from ancient Greek and Roman buildings (Chapter 7) 468

germ: a living thing too small to see that can cause disease (Chapter 7) 485

German measles: an illness that spreads from person to person (Chapter 1) 82

germanium: a chemical element (Chapter 8) 553

gerrymandering: drawing the lines of voting districts so that one side wins more seats (Chapter 20) 1390

Ghost Dance: the religion that spread across the Plains reservations in 1889 and 1890 (Chapter 2) 134

ghost forests: the dead trunks of cedar trees killed by salt water when the coast dropped in 1700 (Chapter 27) 2047

G.I. Bill: a 1944 law under which federal officials paid for veterans' schooling and backed their home loans (Chapter 16) 1096

giardia and amoebas: tiny living things that cause stomach infections (Chapter 26) 1946

gig platform: an app or website that hands out short jobs one at a time (Chapter 14) 974

gigafire: a fire that burned more than a million acres (Chapter 3) 240

gigot or leg-of-mutton sleeve: a sleeve that puffed out wide from the shoulder (Chapter 35) 2934

gilded: covered with a thin layer of gold (Chapter 16) 1074

Gilded Age: the name for the years 1850 to 1900, from an 1873 novel by Mark Twain and Charles Dudley Warner (Chapter 16) 1074

gin-house: the building where the cotton gin stood (Chapter 8) 528

girdle: tight underwear that shaped the waist and hips (Chapter 14) 963

give-away dance: a gathering at which people give gifts, such as horses, to others (Chapter 29) 2287

glaciers: thick sheets of ice that once covered the north (Chapter 3) 182

glaucoma: a disease in which pressure inside the eye destroys the nerve that carries sight (Chapter 35) 2959

glider: an airplane with no engine (Chapter 8) 553

Godey's Lady's Book: a women's magazine read across the country (Chapter 35) 2934

gold album: the RIAA's award for 500,000 copies sold (Chapter 33) 2713

gold certificates: paper notes that could be traded for gold (Chapter 17) 1143

gold leaf: thin sheets of gold (Chapter 12) 825

gold standard: a dollar backed by gold alone (Chapter 17) 1136

Golden Rule: the teaching that people should treat others as they want to be treated (Chapter 25) 1760

gonorrhea and chancroid: diseases passed during sex (Chapter 26) 1990

Good Friday: the Christian holy day before Easter (Chapter 22) 1515

gospel: a kind of Black church music (Chapter 33) 2759

gouging: fighting in which only weapons were banned and a fighter tried to push his thumbs into the other man's eye socket and force the eye out (Chapter 36) 2999

gourd: a large fruit with a hard shell that can be dried and hollowed out (Chapter 33) 2729

gout: painful, swollen joints (Chapter 13) 868

Government Accountability Office: the office that checks federal agencies for Congress (Chapter 4) 320

government agent: an official sent to deal with a Native nation (Chapter 21) 1406

government bonds: papers the government promises to pay back with interest (Chapter 11) 745

governor's council: the six men who advised the governor (Chapter 20) 1309

GPS: the Global Positioning System, which uses signals from satellites to show a GPS device where it is (Chapter 8) 561

grace: in Puritan teaching, God's gift of being saved and going to heaven (Chapter 4) 260

grade: to level the ground for railroad tracks (Chapter 14) 922

gradual abolition: ending slavery step by step over many years (Chapter 24) 1684

graft: money a person gets by using a public office (Chapter 20) 1356

grain elevator: a tall building where grain is stored before it is shipped (Chapter 16) 1074

grammar (book): a book that explains how a language works (Chapter 30) 2351

grammar school: a school to prepare boys for the university (Chapter 20) 1309

grammar school (1800s): the school that came after primary school (Chapter 25) 1795

Grand Army of the Republic: the organization of Union veterans (Chapter 37) 3107

Grand Council (Carolina): the group of men who governed the Carolina colony (Chapter 34) 2827

Grand Council (Haudenosaunee): the Haudenosaunee league's lawmaking body, with fifty seats (Chapter 2) 99

grand jury: a group of citizens who decide whether there is enough proof for a trial (Chapter 4) 275

Grand Sachem: the head of Tammany Hall (Chapter 20) 1341

Grand Slam titles: the four biggest tennis championships (Chapter 36) 3045

grandfather clause: a rule that let a man who failed the voting tests still register if his father or grandfather had voted in 1867 (Chapter 20) 1341

Grange: the Patrons of Husbandry, the first large farmers' group with members across the whole country (Chapter 15) 1009

grant: a gift of money (Chapter 20) 1390

graphical browser: a program that shows web pages with pictures (Chapter 8) 561

grate: a rack that holds coal up off the floor of a fireplace so air can flow in underneath (Chapter 10) 677

graven image: an idol (Chapter 29) 2287

gravitational waves: ripples in space and time (Chapter 9) 648

greasepaint: a thick stage makeup (Chapter 34) 2841

Great American Desert: Stephen Long's name for the high plains (Chapter 1) 44

Great Awakening: the revivals that swept the colonies in the 1730s and 1740s (Chapter 29) 2231

Great Basin: a huge dry region between the Rocky Mountains and the Sierra Nevada (Chapter 1) 44

Great Charter: the paper the leaders of the Virginia Company put out in 1618 that let the governor call a General Assembly to make laws (Chapter 20) 1309

Great Compression: the sharp narrowing of the gap between high and low wages in the 1940s that lasted into the 1970s (Chapter 16) 1096

Great Depression: the hard years of the 1930s when many people had no work (Chapter 4) 298

Great Famine: the Irish famine of 1845 to 1852 (Chapter 4) 275

great house: one of the large stone buildings of many stories at Chaco Canyon (Chapter 6) 395

Great Law of Peace: the laws the five Haudenosaunee nations agreed to live by when they joined together (Chapter 2) 99

Great Migration: the coming of about 20,000 Puritans to New England in the 1630s (Chapter 4) 260

Great Migration: the move of about 6 million Black Americans out of the South between 1910 and 1970 (Chapter 5) 376

Green Corn Ceremony: the midsummer ceremony of the Muscogee (Creek) and other nations of the Southeast, held when the first corn was ripe (Chapter 21) 1406

Green Revolution: the rise in grain harvests in poor countries that followed Borlaug's wheat (Chapter 15) 1028

green wood: freshly cut wood (Chapter 10) 671

greenbacks: the national paper money of 1862, called United States Notes, printed with green ink on the back (Chapter 17) 1136

greenhouse gas: a gas that takes in heat and gives it off again (Chapter 9) 633

greige: a gray-beige (Chapter 35) 2959

grid: a pattern of straight streets crossing at right angles (Chapter 6) 398

grid: the network of power plants and wires that serves an area (Chapter 10) 711

grid (in a vacuum tube): a bent wire between the filament and the plate (Chapter 8) 553

grievance: a wrong worth complaining about (Chapter 25) 1770

griot: a keeper of history who tells it from memory (Chapter 24) 1741

grist mill: a mill that grinds grain into flour (Chapter 8) 517

grog shop: a saloon (Chapter 28) 2154

groom: a worker who cares for horses (Chapter 36) 3008

gross negligence: a serious failure to take the care a job requires (Chapter 27) 2093

grossly inadequate: far short of enough (Chapter 13) 868

GU272: the 272 enslaved people whom the Maryland Jesuits, priests of a Catholic religious order, sold to plantations in Louisiana in 1838, in part to keep Georgetown College from running out of money (Chapter 24) 1744

guano: the droppings of seabirds, which make crops grow (Chapter 23) 1623

guardhouse: the old jail of an Army post (Chapter 30) 2392

guardian: a person given legal control of someone else's money (Chapter 2) 149

guerrillas: fighters in small bands who hide among the people and attack by surprise (Chapter 23) 1623

Guggenheim Fellowship: a grant of money for artists and writers (Chapter 32) 2679

guilder: a Dutch coin (Chapter 6) 399

guinea: a coin worth 21 shillings (Chapter 36) 2999

guise: a false cover (Chapter 30) 2474

gurdwara: a Sikh house of worship (Chapter 29) 2324

gynecologist: a doctor who treats the parts of a woman's body that carry and deliver babies (Chapter 9) 633

H

H-2A visa: a paper that lets a farmworker from another country come for one season of farm work (Chapter 14) 974

habeas corpus: a person's right to be brought before a judge, who decides whether the government may go on holding that person (Chapter 4) 283

haberdashery: small sewing goods such as thread, ribbons and buttons (Chapter 18) 1178

habiliments: an old word for clothes ("habilemts" in the 1665 court record) (Chapter 34) 2823

half-freedom: the Dutch status under which a man could hold land of his own but still owed the Dutch West India Company work and a yearly payment, and his children stayed the Company's property (Chapter 6) 399

halfpenny: a small British coin (Chapter 31) 2520

hall: the single room of the basic English colonial house (Chapter 7) 465

hall-and-parlor house: a house with a hall for cooking and work and a second room, the parlor, the best room (Chapter 7) 465

hallucination: seeing or hearing things that are not there (Chapter 13) 863

handbill: a short printed notice (Chapter 5) 363

handcart: a small two-wheeled cart pulled by hand (Chapter 5) 352

handicapped: an older word for disabled (Chapter 20) 1372

haole: the Hawaiian word for white people who are not Native Hawaiian (Chapter 23) 1623

harassment: a steady stream of acts meant to frighten people (Chapter 7) 495

hard labor: heavy work done as a punishment (Chapter 2) 126

hardrock mine: a mine dug into solid rock (Chapter 13) 863

harmony: two or more notes sung together (Chapter 33) 2729

harpoon: a heavy iron spear thrown into a whale from a rowed boat, which whalers called an iron (Chapter 10) 677

hate crimes: crimes against people chosen because of their race, religion or a similar trait (Chapter 12) 832

Haudenosaunee: a league of Native nations in what is now New York State (Chapter 1) 31

hawk's bell: a small round bell (Chapter 1) 21

hazardous waste: waste that can harm people's health (Chapter 3) 229

head: the word for counting cattle, used in an 1824 loan to count enslaved people (Chapter 17) 1128

headman: a leader (Chapter 3) 200

headright: an equal share of the Osage nation's oil money (Chapter 2) 149

headright: Virginia's rule that whoever paid for a person's passage received 50 acres of land for that person (Chapter 16) 1052

health insurance: a plan that pays doctor and hospital bills (Chapter 26) 2005

hearing: a meeting where each side tells its story to an official who decides (Chapter 2) 102

hearing officer: the official who runs a hearing (Chapter 11) 773

heart transplant: an operation that gives a person the heart of someone who has died (Chapter 32) 2695

hearth: the open fireplace that gave a room its heat and light (Chapter 7) 465

heat illness: what happens when the body gets too hot and cannot cool itself down (Chapter 18) 1222

heat shield: the part that protects a spacecraft from the heat of coming back through the atmosphere (Chapter 1) 92

heater's helper: one of the workers who heated the steel (Chapter 19) 1256

heathen: an insulting word for people who were not Christian (Chapter 29) 2274

heathen rites: missionaries' words for the religion of people who were not Christian (Chapter 29) 2274

heathenish: an insult for the ways of people who were not Christian (Chapter 29) 2274

heathenish and Popish: un-Christian and Catholic (Chapter 36) 2987

heavy rotation: playing a song often on television or radio (Chapter 33) 2779

heavyweights: the boxers in the heaviest weight class (Chapter 36) 3028

hectare: a square of land 100 meters on each side (Chapter 3) 182

heirs: the family members who inherit a person's things (Chapter 8) 524

heirs' property: land that all of a landowner's heirs owned together after the owner died without a will, each owning a share of the whole farm (Chapter 15) 1028

HeLa: the name of Henrietta Lacks's cells, from the first two letters of her first and last names (Chapter 9) 633

heliotrope: a small purple flower (Chapter 18) 1193

helium: an element, a gas that does not burn (Chapter 6) 431

hematoma: a pocket of blood under the skin (Chapter 20) 1372

hemlines: the bottom edges of skirts (Chapter 35) 2949

hemophilia: a condition in which the blood does not clot (Chapter 26) 2005

hemp and flax: plants whose fibers are made into rope and cloth (Chapter 15) 1000

hems: the folded-up bottom edges of clothes (Chapter 35) 2949

henceforth: from now on (Chapter 23) 1616

hepatitis: an infection of the liver, a disease that inflames the liver (Chapter 26) 1946

hereditary diseases: illnesses passed from parents to children (Chapter 25) 1829

heredity: the passing of traits from parents to children (Chapter 9) 614

heresy: teaching against the church's beliefs (Chapter 4) 260

heroin: a drug made from morphine (Chapter 19) 1291

herpes: a virus that causes sores (Chapter 26) 1946

hides: the skins of animals such as bison (Chapter 3) 200

Higgs boson: a particle tied to how other particles get their mass, the amount of matter in an object (Chapter 9) 648

high cuffing: chaining a prisoner standing to the cell bars with the hands crossed and pulled up high, so only the toes touch the floor, which strained the arms and shoulders until they swelled (Chapter 22) 1559

high steel: joining the steel frames of bridges and buildings high above the ground (Chapter 6) 418

hired out: rented by an owner to another employer, who paid wages that the owner kept (Chapter 1) 44

hiring day: January 1, when enslavers rented enslaved people to other white men for the coming year (Chapter 37) 3101

Hispaniola: an island in the Caribbean (Chapter 1) 21

historically Black colleges and universities: the colleges first founded for Black students (Chapter 30) 2392

HIV: a virus that destroys the white blood cells that fight infection, passed through blood, semen and other body fluids (Chapter 26) 2005

Hmong: an ethnic group from the mountains of Laos (Chapter 4) 310

hoax: a lie made up on purpose (Chapter 28) 2154

hobbled: having the legs tied so a person can only shuffle (Chapter 29) 2242

hogan: a traditional Navajo house (Chapter 13) 899

hoggee: a boy who drove the mules that pulled canal boats (Chapter 11) 734

hogshead: a large barrel (Chapter 31) 2506

hogtied: ankles bound and hands tied to the feet (Chapter 21) 1468

holding company: a company that owns shares, or pieces of ownership, of other companies (Chapter 10) 691

Holocaust: the Nazis' murder of Jews and other people during World War II (Chapter 4) 298

Homebrew Computer Club: a group of people who built their own computers (Chapter 8) 561

homespun: cloth made at home (Chapter 18) 1182

homestead: a farm on land that the federal government gave to settlers who lived on it and worked it (Chapter 3) 200

Homestead Act: the 1862 law under which a person could claim up to 160 acres of public land and keep it after five years of living on it or farming it (Chapter 3) 200

homesteader: a settler who claimed land from the US government to live on and farm (Chapter 3) 200

homesteading: claiming public land and farming it for years in order to own it (Chapter 3) 215

homicide: on a death record, a death that another person caused, which is not a finding that anyone broke the law (Chapter 4) 320

hominy: dried corn cooked in water (Chapter 15) 991

homogeneity: sameness (Chapter 4) 298

homogeneous population: a group of people who are all alike (Chapter 13) 886

homosexuality: another word for being gay (Chapter 29) 2324

honest graft: learning where city officials planned to build something, buying the land first and then selling it to the city at a profit (Chapter 20) 1356

honeycombing: drilling rows of holes close together (Chapter 12) 815

honorable discharge: a record that a soldier served well and left in good standing (Chapter 22) 1522

honorary degree: a degree given as an honor instead of for study (Chapter 4) 298

Hooverville: the name people gave the shantytowns of the 1930s (Chapter 16) 1084

Hopewell culture: a name archaeologists gave the Native people who built the Ohio earthworks, not the name of any nation (Chapter 12) 783

horizontal drilling: drilling wells that turn and run sideways through the rock for thousands of feet (Chapter 10) 711

hormone treatment: giving a person the hormone of the sex they identify as, which changes the body in that direction (Chapter 25) 1909

hornbook: a wooden paddle about the shape of a table-tennis bat with one printed sheet tacked to it, covered by a thin, clear sheet of animal horn (Chapter 30) 2359

horse litter: a stretcher carried by horses (Chapter 5) 339

Horse People, Bow People and Little Cherry People: the French names for Plains nations the La Verendrye brothers traveled with (Chapter 1) 36

horsepower: a measure of power based on the work one horse can do (Chapter 8) 541

hose: stockings (Chapter 35) 2916

hostage: a person held prisoner so that his or her people do what the captor wants, such as letting an army pass safely (Chapter 1) 21

Hotchkiss guns: small cannon (Chapter 2) 134

hotplate: a small electric burner for cooking (Chapter 6) 431

house arrest: being kept under guard in one's own quarters (Chapter 22) 1575

House of Burgesses: colonial Virginia's elected lawmaking body (Chapter 21) 1422

House of Commons: one of the two groups of lawmakers in England's Parliament (Chapter 19) 1235

house of correction: a kind of jail for people found guilty of small crimes (Chapter 25) 1778

hoyaneh: a leader who holds a seat on the Grand Council (Chapter 20) 1304

Hudson River School: a group of American landscape painters, about 1825 to 1870, who painted American land in careful, true-to-life detail (Chapter 32) 2627

Huguenots: French Protestants (Chapter 4) 258

huke: a hooded cloak (Chapter 35) 2916

hulk: the hull of an old ship that no longer sailed (Chapter 6) 413

hull: the body of a boat (Chapter 8) 512

human trafficking: using force, tricks or threats to make people work or perform sex acts (Chapter 14) 963

humbug: a trick or a false claim made to fool people (Chapter 18) 1188

humor: an old word for a fluid of the body (Chapter 26) 1961

hundreds: districts five or six miles square in Jefferson's plan (Chapter 30) 2367

hunger strike: refusing to eat as a protest (Chapter 25) 1829

Huntington's disease: a disease passed down in families that destroys parts of the brain, causing movements a person cannot control, changes in mood, and the loss of the ability to think (Chapter 33) 2759

husbandry: an old word for farming (Chapter 15) 1009

hush harbors: brush arbors, shelters built of branches, where enslaved people worshipped out of their owners' sight (Chapter 24) 1693

hush money: money paid to keep someone quiet (Chapter 21) 1484

hybrid: a car with both a gasoline engine and an electric motor (Chapter 10) 711

hybrid seed: seed that comes from crossing two different parent plants (Chapter 15) 1015

hydraulic: worked by liquid under pressure (Chapter 1) 92

hydroelectric dam: a dam that holds back a river, so that water rushing down through it turns machines that make electricity (Chapter 10) 691

hydrogen: a gas that burns (Chapter 8) 553

hydrogen bomb: a bomb far more powerful than the first atomic bombs (Chapter 13) 886

hydrogen ions: hydrogen atoms with an electric charge (Chapter 8) 553

hydropower: electricity made from flowing water (Chapter 10) 711

hymn: a church song (Chapter 29) 2256

hypodermic syringe: a hollow needle for pushing a drug under the skin (Chapter 28) 2154

hypothermia: a body temperature fallen too low to keep a person alive (Chapter 10) 711

hysterectomy: an operation in which a surgeon cuts out the womb, the organ in which a baby grows, after which a woman can never become pregnant (Chapter 2) 158

I

ICE: a federal immigration agency, whose agents arrest and deport people (Chapter 4) 256

icebox: a cabinet cooled by a block of ice (Chapter 7) 485

iconoclastic traditionalist: someone who breaks with old ways and keeps them at the same time (Chapter 33) 2713

identity theft: pretending to be someone else by using that person's private information (Chapter 31) 2585

ideological deviation: holding ideas that Cuba's rulers banned (Chapter 4) 310

ideology: a set of ideas (Chapter 25) 1909

idolatry: worshipping false gods (Chapter 29) 2213

ignoramus: a person who knows very little (Chapter 29) 2287

illuminations: candles lit in the windows (Chapter 37) 3094

image dissector: Philo Farnsworth's camera tube (Chapter 8) 553

ImageNet: a contest that scored computer programs on naming what is in photographs (Chapter 8) 570

Imbangala: African fighters paid to fight for others (Chapter 4) 260

imbecile: an insulting label for a person judged slow to learn (Chapter 20) 1356

immersion school: a school where teachers give every lesson in the language the children are learning (Chapter 2) 170

Immigration and Nationality Act: the 1965 law that ended the national quotas and admitted immigrants on the basis of family ties and skills (Chapter 4) 310

Immigration and Naturalization Service (INS): the federal office in charge of immigration (Chapter 4) 310

immune: able to fight off a disease, so the person will not catch it again (Chapter 26) 1946

immunities: the protections the law gives every citizen (Chapter 23) 1616

impairing: weakening (Chapter 19) 1250

impartial: fair (Chapter 21) 1427

impeach: to charge an official with wrongdoing in office, so that the Senate puts him on trial (Chapter 20) 1322

imperial wizard: the top leader of a Ku Klux Klan group (Chapter 25) 1871

impiety: a lack of respect for God (Chapter 34) 2833

importation: bringing people or goods in from abroad (Chapter 4) 275

impress: to seize men and force them to serve on a navy ship (Chapter 14) 918

Impressionists: a group of painters in France (Chapter 32) 2643

impressment: British navy officers taking sailors off American ships and forcing them to serve on British warships (Chapter 22) 1534

impunity: no fear of punishment (Chapter 21) 1442

imputation: an accusation (Chapter 25) 1795

in blast: lit and making iron (Chapter 10) 671

in custody: held by police and not free to leave (Chapter 4) 320

in restraint of trade: blocking free buying and selling between the states (Chapter 19) 1256

inadequate: not good enough (Chapter 13) 868

inalienable: a right that nobody can take away (Chapter 25) 1778

inaugural address: a new president's first speech as president (Chapter 20) 1322

Inca: the people who ruled an empire in the Andes Mountains before the Spanish arrived (Chapter 1) 74

incitement of insurrection: stirring people up to rise against the government (Chapter 20) 1390

inciting to riot: urging a crowd to violence (Chapter 6) 443

inconsequential: mostly unimportant (Chapter 19) 1242

incorporate: to form a corporation (Chapter 19) 1250

incorporated: recognized by the state as a town by law, with its own government (Chapter 32) 2660

incorporated in the Union: made part of the country (Chapter 23) 1616

incorrigible: a child no one can control (Chapter 36) 3028

indenture: a written contract that required a person to work for a master for a set number of years (Chapter 4) 260

indentured servant: a person who worked for a master for a set number of years, often four to seven, to pay for the trip to America (Chapter 3) 189

independent contractor: a person who works for themselves and sells their work to companies (Chapter 11) 773

Indian agent: a US official who dealt with Native nations (Chapter 1) 44

Indian Citizenship Act: the 1924 law under which American Indians became citizens (Chapter 2) 149

Indian country: the legal name for Native land (Chapter 9) 604

Indian offenses: the crimes that Hiram Price's 1883 rules made of the Sun Dance and other Native ceremonies on the reservations (Chapter 29) 2274

Indian police: Native men who worked as police for the agency that ran the reservation (Chapter 2) 134

Indian removal: the plan to force the Cherokee and other Native nations off their land (Chapter 5) 352

Indian Removal Act: the 1830 law under which United States soldiers forced the Native nations of the Southeast out of their homes and moved them west (Chapter 2) 126

Indian Territory: the land in present-day Oklahoma where United States officials sent Native nations they forced from their homes (Chapter 2) 126

indicted: charged with a crime (Chapter 21) 1456

indictment: the criminal charge against a person (Chapter 25) 1829

Indies: Spain's islands and lands across the Atlantic (Chapter 1) 21

Indigenous: belonging to the people who lived in a place first (Chapter 2) 170

Indigenous Peoples Day: the name Berkeley's city council gave Columbus Day in 1992 (Chapter 37) 3125

indigent: poor (Chapter 26) 1975

indigo: a plant used to make blue dye (Chapter 15) 995

Indochina: the region that includes Vietnam, Laos and Cambodia (Chapter 31) 2572

induction: a changing electric current in one wire making a current flow in another wire nearby, without the two touching (Chapter 8) 541

induction center: the place where new soldiers were sworn in (Chapter 22) 1575

industrial country: a country where much of the work is done in mines, mills and factories (Chapter 16) 1074

industrial union: a union that takes in every kind of worker in an industry, instead of one craft at a time (Chapter 14) 929

industry: in the 1800s, hard work (Chapter 36) 3008

ineligible for citizenship: unable to become a citizen under US law (Chapter 4) 298

inestimable: too precious to measure (Chapter 25) 1770

inevitable: certain to happen (Chapter 19) 1268

infamous: known for something bad (Chapter 21) 1442

infantry: soldiers on foot (Chapter 16) 1084

inferior: lower or less able (Chapter 9) 591

infidel: a person who believes in no religion (Chapter 29) 2242

infiltration: a word for an enemy sneaking in, which appraisers used for Black families moving in (Chapter 6) 431

inflammatory: likely to make people angry (Chapter 37) 3125

inflation: a general rise in prices, so that each dollar buys less than before (Chapter 16) 1096

influenza: the flu, a disease caused by a virus that infects the nose, throat and lungs (Chapter 3) 182

informant: a person who secretly passes information to the FBI (Chapter 25) 1871

informed consent: the rule that every person in a study must first be told what will be done and what the risks are, and must agree (Chapter 26) 2005

informer: a person who secretly passes information to the police or the FBI (Chapter 18) 1182

infringing: breaking (Chapter 25) 1829

ingratitude: giving no thanks in return for kindness (Chapter 26) 1975

inhaler: a breathing device (Chapter 26) 1975

inherently: by their very nature (Chapter 9) 633

initialed: wrote one's initials on (Chapter 20) 1372

initiative: a law that citizens propose and then vote on themselves (Chapter 29) 2287

injunction: a court order to stop doing something (Chapter 6) 431

inlaid: made by setting small pieces of different wood into the surface (Chapter 35) 2928

inlet: a narrow arm of the sea that reaches into the land (Chapter 22) 1502

inoculation: giving a healthy person a small case of smallpox on purpose, by putting dried pus from a smallpox sore into a cut, so the person would not catch it again. To inoculate is to do this (Chapter 7) 471

inquest jury: a jury that looks into a death (Chapter 34) 2851

inquiry: an official hearing to find out what had happened (Chapter 2) 102

insane: the word of the time for a person whose mind worked in ways that their family or their town could not manage (Chapter 13) 868

insinuation: a hint (Chapter 12) 815

insolent: rude to someone in charge (Chapter 25) 1770

inspector general: an official who checks the work of a government department (Chapter 4) 320

installments: paying for goods in small amounts over time, after taking them home (Chapter 18) 1193

institution: a company or other group (Chapter 19) 1235

insubordination: refusing to obey the people in charge of you (Chapter 6) 407

Insular Cases: the Supreme Court decisions of 1901 to 1922 that the islands taken in 1898 belonged to the United States but were not fully part of it, insular meaning having to do with islands (Chapter 23) 1634

insuperable obstacles: problems a person cannot get past (Chapter 32) 2619

insurance company: a company that takes a regular fee from people and pays them back after a loss such as a fire (Chapter 19) 1245

insurance marketplaces: websites where people compare health plans and sign up (Chapter 26) 2022

insurance policy: a written deal in which the buyer pays a fee and the company pays out money when something happens, such as a death (Chapter 16) 1067

insure a loan: to promise to repay the lender if the buyer cannot (Chapter 6) 431

insurrection: armed uprising (Chapter 20) 1390

intake towers: towers that take in water (Chapter 12) 815

integral: a necessary part (Chapter 30) 2345

integrate: to let Black and white students learn in the same schools (Chapter 25) 1829

integrated circuit (chip): a whole electronic circuit built on one small piece of material (Chapter 8) 561

integration: the mixing of Black and white students in one school (Chapter 30) 2442

intellectual disability: a condition that makes learning and thinking much harder (Chapter 20) 1372

intelligence test: a set of questions meant to measure how well a person can think (Chapter 25) 1829

interchangeable parts: gun parts made by machine so that any part would fit any gun of the same model (Chapter 8) 528

interest: the fee for borrowing money (Chapter 2) 158

International Astronomical Union: the scientists' group that names places in space (Chapter 1) 74

International Hydrographic Organization: a group of countries that work together on sea charts (Chapter 1) 92

International Labour Organization: a world body that sets rules for workplaces (Chapter 13) 868

International Space Station: a laboratory that circles the Earth (Chapter 1) 92

internment: imprisonment in a camp (Chapter 30) 2351

interpret: to put each side's words into the other's language (Chapter 15) 991

interpreter: a person who translates between two languages (Chapter 1) 44

interrogation room: a room for questioning suspects (Chapter 20) 1372

interstate commerce: trade between the states (Chapter 19) 1256

Interstate Commerce Commission: the federal officials in charge of trade and travel between states (Chapter 11) 764

Interstate Highway System: a network of big highways across the country (Chapter 5) 383

interstellar space: the space between the stars (Chapter 1) 92

intervention: a meeting at which a family asks a person to go into treatment (Chapter 28) 2179

intoxicating liquors: alcoholic drinks (Chapter 20) 1356

intreated: asked (Chapter 30) 2351

Inuit: the Native people of the far north, from Alaska to Greenland (Chapter 1) 64

Inuk: one of the Inuit (Chapter 1) 64

invalid: a person too sick to live a normal life (Chapter 25) 1795

inventory: a list of a dead person's belongings, written down one by one (Chapter 7) 465

inverted siphon: the U-shaped passage behind the stove's baffle that made the smoke go up, down and up again (Chapter 8) 524

investment bank: a firm that sells bonds and shares to raise money for businesses such as railroads (Chapter 16) 1074

investor: a person who puts in money hoping for a profit (Chapter 7) 502

involuntary land loss: land lost when the owners did not choose to sell, as when a land buyer bought one heir's share of a farm and then had a court sell the whole farm at auction (Chapter 15) 1028

involuntary manslaughter: causing a person's death through carelessness without meaning to kill (Chapter 13) 899

iron furnace: a tall oven where fire melts iron out of rock (Chapter 8) 524

iron gag: an iron piece clamped over a prisoner's tongue and chained to his hands, held behind his back (Chapter 21) 1434

iron lung: a metal tube about seven feet long in which a pump changed the air pressure to pull air into a paralyzed patient's lungs (Chapter 26) 2005

iron ore: the rock that iron comes from (Chapter 8) 524

iron oxide: a compound of iron and oxygen, which gives ochre its color (Chapter 13) 844

ironmonger: a seller of iron goods (Chapter 8) 524

ironworkers: workers who put up the steel frames of buildings and bridges (Chapter 2) 149

ironworks: a place where workers make iron from rock dug out of the ground (Chapter 4) 267

Iroquois: a league of six nations, also called the Six Nations or the Haudenosaunee (Chapter 1) 31

irradiate: expose to radiation (Chapter 22) 1575

irrigation: water brought to the fields by pipes and ditches (Chapter 15) 1028

ISBN: the identifying number books for sale carry (Chapter 32) 2695

ISIS-K: a terror group in Afghanistan that was also fighting the Taliban (Chapter 22) 1585

island of stability: a group of superheavy elements that physicists predict would last longer before breaking apart (Chapter 9) 648

isolate: to collect a gas apart from everything else (Chapter 13) 855

Israelites: the people of ancient Israel in the Bible (Chapter 5) 363

IUPAC (International Union of Pure and Applied Chemistry): the world organization of chemists whose officials approve element names (Chapter 9) 648

J

jackscrew: a screw inside a case that a man turned by hand with a lever, used by the hundreds to lift buildings (Chapter 6) 418

jake leg: the illness people got in 1930 from Jamaica ginger, a medicine that was mostly alcohol, after Harry Gross began making his with a poisonous chemical called TOCP. The poison destroyed nerve cells in the spinal cord and took away the use of the hands and feet (Chapter 28) 2165

Japanese ancestry: having a family that came from Japan (Chapter 5) 376

jaundice: an illness that turns the skin and eyes yellow (Chapter 1) 44

jeans (cloth): a cotton and wool cloth woven in a twill (Chapter 35) 2934

jerking exercise: the jerking of people's bodies in the crowds at Lorenzo Dow's preaching (Chapter 29) 2256

jersey: a soft knitted cloth (Chapter 35) 2949

Jesuit mission: a group of priests from the Jesuit order of the Catholic church, with helpers, sent to turn people to Christianity (Chapter 2) 102

Jesuits: a group of priests within the Catholic Church (Chapter 1) 31

Jim Crow: the laws and customs in the South under which white lawmakers and officials kept Black people apart from white people and took away their rights. White mobs enforced it with murder (Chapter 5) 376

Jim Crow car: the railroad car set aside for Black passengers (Chapter 5) 376

jockey: a rider in horse races (Chapter 36) 2999

jockey club: a group of horse owners who held races for one another (Chapter 36) 2999

Johnkannaus: Harriet Jacobs's name for the groups of enslaved men who went from door to door in costume on Christmas Day (Chapter 37) 3101

johnnycakes: flat cakes baked from cornmeal (Chapter 15) 991

joiner: a woodworker who makes the fine wooden parts inside a house, such as doors, trim and furniture (Chapter 12) 799

joint resolution: a measure passed by members of both the House and the Senate, which passes when more than half of each vote for it (Chapter 23) 1616

joint-stock company: a company with many owners at once, each holding shares (Chapter 19) 1234

journal (a shopkeeper's): the book that listed every sale and every purchase in the order it happened (Chapter 18) 1174

journeyman: the middle rank of a trade, a skilled worker paid wages by the day (Chapter 14) 918

juba: beating out rhythms on one's own body with the hands (Chapter 33) 2736

Judge Advocate General: the Army's top lawyer (Chapter 27) 2068

judicial department: the courts (Chapter 20) 1333

judicial review: the power of judges to refuse to follow a law that goes against the Constitution (Chapter 20) 1333

Juneteenth: the holiday that marks June 19, 1865, the day Major General Gordon Granger reached Galveston, Texas, with the news that enslaved African Americans were free (Chapter 12) 832

Juneteenth National Independence Day Act: the 2021 law that made Juneteenth a federal holiday (Chapter 24) 1744

jurisdiction: the area a government rules (Chapter 4) 260

jury: a group of citizens who decide whether a person is guilty (Chapter 2) 108

jury commission: the board that chose jurors (Chapter 25) 1871

just war: a war that is right and fair (Chapter 21) 1409

justice of the peace: a local judge (Chapter 20) 1333

justices: the judges of the Supreme Court (Chapter 2) 158

justices: a county's judges (Chapter 36) 2987

justifiable homicide: a killing the law excuses (Chapter 33) 2779

juvenile court: a separate court for children accused of crimes, run to help the child instead of only punishing (Chapter 21) 1442

K

Kanien'kehaka: the Mohawk people's own name for themselves (Chapter 22) 1515

kapa: cloth made by beating tree bark thin (Chapter 37) 3075

kapucha toli: the Choctaw stick-and-ball game, "stick play" (Chapter 36) 2981

Karamu: the feast that ends Kwanzaa (Chapter 37) 3125

Katipunan: a secret society fighting Spanish rule in the Philippines (Chapter 23) 1623

Katsina masks: Pueblo ceremonial masks that show spirit beings (Chapter 32) 2608

katsinam: spirit beings in Pueblo religion, more than 500 of them (Chapter 34) 2814

Keeling Curve: the line that the carbon dioxide measurements on Mauna Loa make on a graph (Chapter 9) 633

Keepers of the Central Fire, of the Eastern Door and of the Western Door: the Onondaga, the Mohawk and the Seneca (Chapter 20) 1304

keloid scars: thick raised scars that grow over a healed wound (Chapter 24) 1712

Kentucky Derby: a horse race held each spring in Louisville (Chapter 36) 3028

kerosene: a cheap lamp fuel that refiners made from oil (Chapter 7) 485

kersey: a rough, thick, coarse wool (Chapter 35) 2916

keyed bugle: a brass horn with keys (Chapter 33) 2736

kickback: a secret payment for a favor (Chapter 27) 2068

kill hole: a hole punched on purpose through the bottom of a Mimbres bowl before it was set over a dead person's face or head (Chapter 32) 2598

kilns: very hot ovens (Chapter 12) 789

kin: a person's relatives by birth or by marriage (Chapter 7) 460

Kinetoscope: a machine that showed one short film to one person looking into it (Chapter 34) 2851

King Cotton: the name for cotton, the most valuable American export, grown by enslaved people (Chapter 16) 1067

King James Bible: the Bible that Protestants used (Chapter 29) 2256

King Philip's War: the war Metacom led against the New England colonies in 1675 and 1676 (Chapter 14) 922

King Tides: the name used in Miami Beach for the highest tides of the year (Chapter 6) 452

king's attorney: the lawyer who brought cases to court in the king's name (Chapter 34) 2823

kirtle: a kind of gown (Chapter 35) 2916

kitchenette: a one-room unit split from an apartment and rented separately, with a hotplate and a bathroom shared with other families (Chapter 6) 431

kiva: a round room used for ceremonies and meetings, usually sunk into the ground (Chapter 6) 395

KKK: the Ku Klux Klan, a white group that has threatened, beaten and killed Black people (Chapter 32) 2679

Knights of Columbus: a Catholic men's organization (Chapter 37) 3119

knock: a pinging sound in a gasoline engine (Chapter 13) 868

knot: a measured length of yarn (Chapter 18) 1182

Know-Nothings: the American Party of the 1850s, against immigrants and Catholics, named for members' answer "I know nothing" (Chapter 4) 283

kosher: following Jewish food laws (Chapter 29) 2274

Kristallnacht: the Night of Broken Glass, November 9 and 10, 1938, when Nazi leaders set off attacks on Jews across Germany (Chapter 4) 298

Ku Klux Klan: a group started in December 1865 by men who had fought for the Confederacy, whose members whipped, burned and murdered freed people and the people who helped them (Chapter 1) 74

Ku Klux Klan Act: the 1871 law that made it a federal crime to deny anyone the rights the Constitution protects (Chapter 20) 1341

Kwanzaa: the seven-day holiday from December 26 to January 1, created in 1966, whose name comes from a Swahili phrase meaning "first fruits" (Chapter 37) 3125

L

la junta: Puerto Ricans' name for the seven-member board that has power over Puerto Rico's budget. Its members are appointed in Washington under PROMESA, a law Congress passed in 2016 (Chapter 23) 1656

la operación: the Puerto Rican name for tubal ligation, an operation in which a doctor cut or tied the two tubes that carry eggs from the ovaries to the womb, so the woman could never become pregnant again (Chapter 23) 1634

La Toma: "the taking," the ceremony in which Oñate claimed New Mexico for Spain (Chapter 5) 336

lab-grown meat: meat, such as chicken, grown from animal cells instead of from a live animal (Chapter 15) 1039

labor force: everyone who has a paid job or is looking for one (Chapter 7) 495

labor recruiter: a person hired to find workers (Chapter 5) 376

labourer: a man who worked with his hands (Chapter 36) 2987

Lake Itasca: Schoolcraft's name for Elk Lake, made up from pieces of the Latin words for "truth" and "head" (Chapter 1) 44

lance: a long spear with a sharp blade (Chapter 10) 677

lancet: a small blade (Chapter 7) 471

land bridge: a stretch of dry ground that joined Asia to North America during the ice age (Chapter 4) 256

land cession: an agreement in which a Native nation gave up land to the United States. Two journalists who traced many of these agreements write that they were backed by violence (Chapter 30) 2392

land ethic: Aldo Leopold's idea that people count themselves as members of the land community and stop acting as its conquerors (Chapter 3) 215

land fraud: cheating people in land deals (Chapter 31) 2572

land grant: a gift of land from a government (Chapter 19) 1256

land held in trust: land the United States holds on behalf of a Native nation or person (Chapter 2) 149

land office: an office where settlers filed their claims (Chapter 6) 418

Land Ordinance: the 1785 law that stated how the public land would be sold (Chapter 3) 192

land patent: the government paper that made homestead land the owner's (Chapter 15) 1009

land reform: a plan to share out farmland (Chapter 23) 1647

land run: a race in which settlers rushed in at a set signal to claim pieces of land (Chapter 6) 418

land-grant colleges: colleges started with money from selling public land under the Morrill Act, teaching farming and the skills of working with machines (Chapter 9) 604

landscape: a picture of the land and sky (Chapter 32) 2627

landscape architect: a person who plans outdoor spaces such as parks (Chapter 12) 832

landscape architecture: designing the land itself, its paths, lawns, trees, water and roads (Chapter 6) 418

landslide: a win by a huge margin (Chapter 20) 1372

lapels: the folded-back flaps at the front of a coat below the collar (Chapter 35) 2949

lard oil: oil made from pig fat (Chapter 10) 677

Large Hadron Collider: a machine that smashes tiny particles together at very high speed (Chapter 9) 648

large language models: programs that write text by predicting the next word, over and over (Chapter 8) 570

largest private employer: the company with more workers than any other company (Chapter 18) 1214

larkspur: a flower (Chapter 35) 2908

laser discs: shiny discs read by a beam of light (Chapter 34) 2877

laser interferometer: a detector that uses laser beams to measure very small changes in distance (Chapter 9) 648

lash: one stroke of a whip on a person's bare body, hard enough to cut the skin (Chapter 8) 528

last hired, first fired: the pattern of employers hiring Black workers last and firing them first (Chapter 16) 1084

latchkey children: children who went home after school to an empty house and carried their own key (Chapter 7) 495

late blight: a potato disease caused by a water mold, a tiny living thing that destroys potato plants (Chapter 15) 1004

Latino or Hispanic: Americans whose families came from Spanish-speaking countries (Chapter 16) 1102

latrine trenches: the ditches soldiers used as toilets (Chapter 26) 1983

laudanum: a painkiller made of opium dissolved in alcohol (Chapter 28) 2147

launder money: to hide where money from crime came from (Chapter 21) 1468

Laws of the Indies: the written orders of 1573 for Spain's lands in the Americas, which the Spanish called the Indies. They stated how the founders of Spanish towns had to lay them out (Chapter 6) 398

Le Grand Dérangement: "the great upheaval," the French name for the forced removal of the Acadians that British officials ordered in 1755 (Chapter 5) 346

lead encephalopathy: swelling and damage of the brain caused by lead (Chapter 13) 886

leadsman: the crew member who measured the depth of the water (Chapter 11) 745

league: a measure of distance of about 3 miles, so 370 leagues is about 1,185 miles (Chapter 23) 1597

League of Nations: a group of countries that would settle quarrels by talking instead of fighting (Chapter 23) 1634

learned society: a group of people who meet to share and discuss what they have found out (Chapter 9) 588

lease: an agreement to use land or a building for a set time in return for payment. To lease is to rent or to rent out (Chapter 3) 215

ledger: the shopkeeper's book that gave each customer a page, purchases on the left and payments on the right (Chapter 18) 1174

ledger art: Plains drawings made on paper in ledgers, lined account books (Chapter 32) 2643

Lee-Jackson-King Day: Virginia's day for Robert E. Lee, Thomas "Stonewall" Jackson and Martin Luther King Jr. (Chapter 37) 3125

leg irons: metal rings locked around the ankles and chained together (Chapter 2) 134

legal guardian: a person the law makes responsible for children (Chapter 1) 44

legal holiday: a holiday set by law (Chapter 37) 3101

legal segregation: the system of laws that required Black people and white people to be kept apart (Chapter 37) 3107

legal status: the right to stay in the country (Chapter 4) 310

legal tender: money the law says people have to accept to pay a debt (Chapter 17) 1113

legion: an army unit, such as Anthony Wayne's legion of 3,300 men (Chapter 2) 120

Legion of Honor: an order of people honored by France for their work (Chapter 32) 2643

Legionnaires' disease: a lung infection and a kind of pneumonia, caused by bacteria that grow in poorly treated water (Chapter 13) 899

legislate: make laws (Chapter 20) 1309

legislative body: a group of lawmakers (Chapter 25) 1778

legislative districts: the areas that elect a state's lawmakers (Chapter 20) 1372

legislature: a state's lawmakers (Chapter 25) 1770

leisure suit: a casual kind of suit often made of man-made cloth (Chapter 35) 2959

Lenapehoking: the Lenape name for their homeland (Chapter 4) 260

leprosy: a disease caused by bacteria that damages the skin and nerves (Chapter 26) 1990

leptospirosis: an infection by bacteria that rats carry in their urine (Chapter 26) 1954

lesbian: a woman who loves women (Chapter 1) 82

Lesser Antilles: the chain of small islands at the eastern edge of the Caribbean (Chapter 27) 2054

less-lethal bullet: a bullet made to hurt rather than kill (Chapter 25) 1909

lest: for fear that (Chapter 20) 1341

lethal injection: killing a person with drugs put into a vein through a tube in the arm. In the usual method, the first drug puts the person to sleep, the second stops the muscles and the breathing, and the third stops the heart (Chapter 21) 1468

letter of reprimand: a written scolding (Chapter 4) 310

leukemia: a cancer of the blood (Chapter 9) 633

levee: a wall of earth or concrete built to hold back water (Chapter 5) 387

LGBT: short for lesbian, gay, bisexual and transgender (Chapter 25) 1909

LGBTQ: short for lesbian, gay, bisexual, transgender and queer, words for people who are attracted to people of their own sex, or whose sense of being male or female differs from the body they were born with (Chapter 1) 82

LGBTQ+: a short name for lesbian, gay, bisexual, transgender and queer people and others (Chapter 29) 2324

liable: able to be made to pay a debt (Chapter 19) 1242

libel: printing something false that harms a person's good name (Chapter 18) 1193

license: written permission (Chapter 2) 126

licks: blows on the buttocks with a flat wooden paddle (Chapter 20) 1372

lien: a legal claim on property, such as a crop, until a debt is paid (Chapter 15) 1009

lieutenant: a junior officer (Chapter 1) 44

lieutenant governor: the official just below the governor (Chapter 5) 346

life class: a class where students draw from a model without clothes (Chapter 32) 2627

life expectancy: the average age a newborn would reach if that year's death rates held (Chapter 26) 2022

light infantry: lightly armed foot soldiers (Chapter 22) 1522

light trucks: pickups, sport utility vehicles (SUVs) and minivans (Chapter 11) 773

Lighthorsemen: the Choctaw Nation's mounted police (Chapter 36) 3028

lightning rod: a metal rod on a building that carries lightning into the ground (Chapter 8) 528

light-year: the distance light travels in a year (Chapter 9) 614

likely: a sellers' word of praise for an enslaved person, meaning healthy, good-looking and fit for work (Chapter 19) 1242

lime: a white powder, made by burning oyster shells, that went into the mortar (Chapter 12) 789

limited liability: the rule that a company's owners cannot also be made to pay its debts from their own property (Chapter 19) 1245

limner: an old word for a painter of portraits (Chapter 32) 2619

Lincoln Memorial Commission: the group in charge of building the Lincoln Memorial (Chapter 12) 815

lineal descendant: a child or grandchild (Chapter 20) 1356

linen wheel: a spinning wheel for linen thread (Chapter 18) 1182

linguistics: the study of how languages work (Chapter 2) 170

lining out: a way of singing in which a leader read or sang one line and the congregation sang it back (Chapter 33) 2719

linsey-woolsey: a cheap cloth of wool mixed with cotton or linen (Chapter 35) 2934

lip-pointing: drawing a paintbrush between the lips to shape its tip, which made the dial painters swallow radium (Chapter 13) 868

liquid transmitter: a sending part that used a liquid (Chapter 8) 541

liquidity problems: banks not having enough cash on hand to pay the people who had put money in them (Chapter 17) 1143

literacy test: a reading and writing test that officials used to keep Black citizens from voting (Chapter 20) 1372

lithium-ion battery: a kind of battery that can be recharged many times (Chapter 8) 570

lithography: printing pictures from drawings made on stone (Chapter 32) 2643

livery: a uniform the master chose (Chapter 35) 2923

livery stable: a place where horses were kept for hire (Chapter 29) 2287

livestream: to show something live on the internet (Chapter 31) 2585

loan guarantee: the government's promise to repay a loan if the borrowers cannot (Chapter 16) 1096

lobby: to try to talk lawmakers into acting (Chapter 11) 764

lobbying office: an office whose staff pressed lawmakers to vote for the bill (Chapter 37) 3125

lobbyist: a person hired to persuade lawmakers (Chapter 19) 1245

loblollie: a thick porridge (Chapter 4) 260

local: a branch of a union (Chapter 16) 1096

lockout: an employer shutting workers out of their jobs, as Henry Clay Frick did at Homestead in 1892 (Chapter 14) 929

lockstep: marching in step with arms locked together (Chapter 21) 1434

lockstitch: a stitch in which two threads lock together through the cloth (Chapter 8) 535

locomotive: a train engine (Chapter 11) 734

locomotive fireman: the worker who shoveled coal into the engine's fire (Chapter 14) 929

locs: long ropes of hair, also called dreadlocks (Chapter 25) 1909

locusts of Egypt: the swarms of insects sent on Egypt in the Bible (Chapter 25) 1795

lode: a long, rich band of ore inside the rock (Chapter 13) 863

lodges: the tent homes of a Plains band (Chapter 22) 1543

lodging houses: buildings that rent out rooms (Chapter 35) 2940

loft: the open upper floor of a building (Chapter 14) 929

logwood: a wood that gives a dye (Chapter 19) 1242

longhouse: a long building with a frame of wooden posts, covered with bark, that held many related families (Chapter 7) 460

loom: a machine that weaves thread into cloth (Chapter 16) 1067

looters: people who steal from damaged buildings (Chapter 27) 2078

looting: stealing during a riot (Chapter 21) 1456

Lords Proprietors: the English noblemen who owned the Carolina colony (Chapter 24) 1670

lost cause: a cause that has failed. Virginia's governor used the words in 2020 for a holiday that honored two Confederate generals who had fought to keep slavery (Chapter 37) 3135

lottery: a drawing of names by chance (Chapter 13) 859

Louisiana: La Salle's name for the whole Mississippi River basin, after King Louis XIV (Chapter 1) 31

Lowcountry: the low coastal land of South Carolina (Chapter 4) 267

lower 48 states: every state except Alaska and Hawaii (Chapter 3) 229

low-to-moderate income: earning well below the typical family in the area (Chapter 6) 431

Loyalists: colonists who sided with the British king against the Revolution (Chapter 4) 271

LSD: a drug that makes people see and hear things that are not there (Chapter 28) 2179

lucre: an old word for money (Chapter 32) 2695

lunar module: a small landing craft (Chapter 1) 82

Lunar New Year: the start of the year in calendars based on the moon (Chapter 37) 3135

lung fibrosis: scarring that makes the lungs stiff, so that breathing gets harder (Chapter 13) 886

Lutheran sect: Menéndez's words for the Protestant faith (Chapter 22) 1502

Lycra: a stretchy man-made cloth (Chapter 35) 2959

lye: a chemical in some hair straighteners that could burn the scalp and the ears (Chapter 35) 2959

lynch mob: a crowd that kills a person without any trial (Chapter 5) 376

lynching: the murder of a person by a mob, without any trial (Chapter 12) 832

M

MacArthur Fellowship: a large prize of money given to people for creative work (Chapter 2) 170

Mace: a stinging chemical spray (Chapter 14) 963

machinist: a worker who made and repaired machines (Chapter 37) 3107

macular degeneration: an eye disease that destroys the center of sight (Chapter 32) 2660

magistrates: officials with the power to judge cases (Chapter 8) 517

magnesium flash powder: a powder that burns with a sudden bright light (Chapter 32) 2643

magnet school: a school where officials offer special teaching to draw families from across a district (Chapter 30) 2442

magnitude: the number scientists use for an earthquake's size (Chapter 10) 711

Mahicannittuk: the Mohican name for the Hudson River (Chapter 1) 31

Mahometan: an old word for a Muslim (Chapter 29) 2242

maids: unmarried women (Chapter 25) 1770

mail contractor: a person paid to carry the mail (Chapter 31) 2533

main stockholder: the person who owns the most shares in a company (Chapter 19) 1268

maize: corn (Chapter 9) 614

major leagues: the top professional baseball teams (Chapter 36) 3028

majority leader: the leader of the larger party (Chapter 20) 1372

majority-minority: where most of the people living there are not white (Chapter 6) 431

Makahiki: the Hawaiian season after the new year began, when chiefs could not make war on each other (Chapter 37) 3075

malaria: a disease spread by mosquitoes that causes high fevers and chills again and again (Chapter 11) 734

Malcontents: Georgia colonists who complained that the rum ban hurt trade (Chapter 28) 2133

malignant: cancerous (Chapter 9) 633

malnutrition: not getting enough of the right food (Chapter 6) 418

"mammy": a made-up picture of an enslaved Black woman who cared for a white family's children and seemed happy in slavery, which hid the truth that enslavers separated these women from their own children (Chapter 12) 832

mandatory evacuation: an order for everyone to leave (Chapter 27) 2104

mandatory minimum: the shortest sentence a law allows for a crime. A judge cannot give less (Chapter 21) 1468

Manhattan Project: the Army's secret program to build an atomic bomb (Chapter 6) 431

Manifest Destiny: the idea, held by many Americans, that the United States was meant to spread across the continent to the Pacific Ocean. People used it to argue for going to war with Mexico (Chapter 5) 352

Mann Act: a federal law of 1910 that made it a crime to take "any woman or girl" across state lines for prostitution or any "immoral purpose" (Chapter 36) 3028

manoomin: a wild rice that grows in shallow water. In Ojibwe the word means "the good berry" (Chapter 15) 986

manslaughter: the crime of killing someone without planning to (Chapter 4) 283

manta: a woven cotton blanket (Chapter 35) 2916

mantles: cloaks (Chapter 35) 2912

manual labor: hard work with the hands (Chapter 30) 2367

manual training: work with tools (Chapter 30) 2414

manufactures: goods made by hand or by machine (Chapter 16) 1062

manufacturing: the making of goods in workshops, mills and factories (Chapter 3) 240

manumission: freeing an enslaved person by a legal paper (Chapter 27) 2054

manure (to manure ground): to bury something in the soil to feed the crops, as the Plymouth colonists buried fish with their corn seed (Chapter 15) 991

manuscript: written by hand (Chapter 9) 591

maple sugaring: boiling down the sap of maple trees to make sugar (Chapter 14) 911

marasmus: severe malnutrition, a form of starvation in which the body gets too little food of every kind, uses up its own fat and then its own muscle, and the child wastes away (Chapter 6) 418

margin: the gap between the two candidates' totals (Chapter 20) 1390

marijuana: the dried leaves and flowers of the cannabis plant (Chapter 21) 1468

marine biologist: a scientist who studies life in the sea (Chapter 1) 82

marine hospital: a hospital for sailors (Chapter 26) 1967

marines: soldiers who served on ships (Chapter 1) 39

mark: an English unit of money (Chapter 27) 2041

market day: a set day when farmers brought meat, milk, butter, cheese, fruit and vegetables into town to sell (Chapter 18) 1174

market dominance: a lead in a market (Chapter 19) 1268

market revolution: the change from families growing and making most of what they used to growing crops and making goods to sell, and buying what they needed (Chapter 16) 1067

market value: the price of one share times the number of shares (Chapter 19) 1291

marriage bar: the rule that made a woman teacher choose between teaching and marriage (Chapter 30) 2414

marrow: the soft center of the bone, the tissue that makes blood (Chapter 13) 868

marshal: an officer who carried out a court's orders (Chapter 2) 126

marshal of the day: the man in charge of the celebration (Chapter 37) 3101

mart: an old word for a market (Chapter 18) 1170

martial law: rule by army officers instead of by ordinary courts (Chapter 21) 1412

martyr: a person who dies for a cause (Chapter 37) 3107

masculinization: a girl's body taking on a man's traits (Chapter 25) 1795

mason: a builder in stone (Chapter 12) 789

masonry building: a building of brick or stone (Chapter 6) 418

masonry fort: a fort built of stone or brick (Chapter 12) 789

Mass: the main Catholic church service (Chapter 29) 2207

mass casualty: an event in which many people are hurt or killed at once (Chapter 27) 2093

mass execution: putting many people to death at one time (Chapter 2) 134

mass grave: one pit for many bodies (Chapter 27) 2078

Massa: master, as Jo Anderson's words were written down in 1885 (Chapter 8) 535

Massachusetts General Court: the colony's lawmakers (Chapter 8) 517

massacre: the killing of many people who could not defend themselves (Chapter 2) 102

massive resistance: a campaign by Virginia's leaders to block the Supreme Court's *Brown* ruling and keep Black children out of white schools (Chapter 30) 2442

mast: the tall pole that holds up a ship's sails (Chapter 3) 189

master (of a school): the head teacher of a school (Chapter 30) 2392

master (of a servant or an enslaved person): the person a servant or an enslaved person had to work for (Chapter 1) 44

master (of an apprentice): the adult an apprentice lived with and worked for (Chapter 4) 267

master collier: a collier in charge of the pits and of the helpers who worked them (Chapter 10) 681

master recording: the original recording that every copy is made from (Chapter 33) 2779

Matanzas: the Spanish word for "slaughters," the name of the Florida inlet where Spanish soldiers killed about 245 French prisoners who had surrendered (Chapter 1) 21

mate: the officer just below the captain (Chapter 1) 31

matinee: an afternoon showing of a movie (Chapter 36) 3028

matron: the woman in charge of housekeeping and care in a hospital or a boarding school (Chapter 25) 1778

mauve or mauveine: the purple dye Perkin made, the first man-made dye sold for use (Chapter 35) 2940

Mayflower Compact: the agreement forty-one men signed off Cape Cod on November 11, 1620, to keep order (Chapter 20) 1309

may-pole: a tall pole that children danced around holding ribbons (Chapter 36) 3019

mean condition: low rank (Chapter 35) 2916

Meat Inspection Act: the 1906 law that required federal inspectors in meatpacking plants, set rules for cleanliness and banned false labels (Chapter 15) 1015

meatpacker: a businessman who ran a plant where animals were killed and cut up into meat for sale (Chapter 15) 1009

meatpacking plant: a plant where animals are killed and cut up for meat (Chapter 14) 974

mechanic arts: the skills of building things and working with machines (Chapter 3) 200

mechanical refrigerator: a refrigerator cooled by a motor instead of a block of ice (Chapter 8) 553

mechanics: people who build and repair machines. In 1789 a mechanic was a skilled worker who made things (Chapter 8) 528

Medal of Honor: the top award the United States military gives for bravery in battle (Chapter 1) 74

median: the one in the middle when all are ranked by size, with half above and half below (Chapter 7) 502

mediator: a go-between who helps both sides reach a deal (Chapter 14) 941

Medicaid: health insurance for people with little money (Chapter 26) 2005

medical examiners: the doctors who find out why a person died (Chapter 4) 320

medical sociology: the study of health and illness in society (Chapter 25) 1909

Medicare: health insurance for people 65 and older (Chapter 26) 2005

medicine men: Native healers and religious leaders (Chapter 5) 339

medicine society: a group made up of Haudenosaunee who have taken part in the medicine, as the Haudenosaunee Grand Council's 1995 policy describes it (Chapter 34) 2814

mediocrity: work that is only average or poor (Chapter 30) 2442

meetinghouse: a building used as a church and as a town's main public building (Chapter 12) 789

megawatt: a million watts (Chapter 10) 711

meltdown: an accident in which a reactor's fuel gets so hot that it melts (Chapter 10) 702

melting pot: a pot in which different metals melt together, used to mean newcomers blending into one nation (Chapter 4) 298

membrane: a thin sheet that shakes in time with sound (Chapter 8) 541

Memento Mori: Latin words on gravestones that mean "remember you will die" (Chapter 32) 2608

memoir: a book about the writer's own life (Chapter 2) 149

memorial: a formal written statement (Chapter 25) 1778

Memorial Day: the day for putting flowers on soldiers' graves, first called Decoration Day (Chapter 19) 1268

menace: a danger. To menace someone is to threaten them (Chapter 3) 215

mental age: a test score given as the age of an ordinary child who would score the same (Chapter 25) 1871

mercantilism: the belief that colonies existed to make the home country richer (Chapter 16) 1052

merchant fleet: all the ships that carry a country's goods for trade (Chapter 16) 1057

Merchant Marine: the crews of American cargo ships (Chapter 14) 963

mercuric oxide: a compound of the element mercury and oxygen (Chapter 13) 855

mercury (quicksilver): a metal and element that stays liquid at room temperature (Chapter 13) 863

merger: two or more companies joining into one (Chapter 19) 1268

meridian: a north-south line on a map (Chapter 1) 64

Merino sheep: a kind of sheep raised for its wool (Chapter 3) 196

mesa: a hill with a flat top and steep sides (Chapter 2) 102

Mesoamerica: the region that is now Mexico and Central America (Chapter 11) 721

mesothelioma: a cancer of the thin linings of the chest and belly that asbestos fibers can cause (Chapter 19) 1280

mess attendant: a sailor who cooked and served food (Chapter 22) 1559

meteorite: a piece of rock or metal from space that has fallen to Earth (Chapter 1) 64

methane: the main gas in natural gas (Chapter 10) 711

method acting: a way of acting built on the teaching of Konstantin Stanislavsky, a Russian director (Chapter 34) 2877

methyl alcohol: wood alcohol, which blinds and kills people who drink it (Chapter 28) 2165

methyl isocyanate: the poison gas that leaked at Bhopal. It damaged people's eyes and filled their lungs with fluid (Chapter 19) 1280

methylmercury: the form of mercury that builds up most easily in living bodies and is most poisonous to people (Chapter 13) 863

metric ton: about 2,205 pounds (Chapter 16) 1096

Metro: Washington's subway (Chapter 6) 452

metro area: short for metropolitan area, a city together with its suburbs (Chapter 5) 387

Mexican Cession: the land Mexican officials gave up to the United States after losing the Mexican-American War (Chapter 5) 352

Mexican Repatriation: officials pushing people of Mexican descent out of the United States from 1929 to 1936. The name comes from a word for sending people back to their own country, but by the larger counts most of them had been born in the United States (Chapter 4) 298

mica: a shiny rock that splits into thin sheets (Chapter 17) 1119

microgram: one millionth of a gram (Chapter 3) 240

microplastic: bits of plastic too small to see easily (Chapter 3) 240

midazolam: a drug that makes people calm and sleepy and in large doses slows and then stops a person's breathing (Chapter 27) 2104

Middle America: ordinary American families (Chapter 31) 2572

Middle Atlantic colonies: the group of colonies that included Maryland (Chapter 32) 2613

Middle Passage: the crossing of the Atlantic Ocean on which ship crews carried captive Africans to be sold (Chapter 5) 352

middle-class families: the families in between the rich and the poor (Chapter 7) 474

middlemen: the sellers between the maker and the buyer (Chapter 18) 1193

midwife: a woman who helps other women give birth (Chapter 7) 471

migrant farm workers: people who moved from farm to farm to pick crops (Chapter 27) 2078

migrant workers: farm workers who move from place to place to follow the harvests (Chapter 30) 2414

migration path: the route a people traveled as they moved from one home to another (Chapter 29) 2203

militant: ready to fight hard for a cause (Chapter 25) 1829

military attaché: an officer posted to an embassy (Chapter 23) 1647

military commission: a court run by the army (Chapter 2) 134

military demonstration: a show of armed force (Chapter 23) 1623

military governor: an army officer put in charge of a place (Chapter 31) 2545

military installations: Army forts (Chapter 1) 64

military-industrial complex: the ties between the armed forces and the companies that made their weapons (Chapter 19) 1280

militia: a force of ordinary citizens called up to serve as soldiers, or any armed group outside the regular army (Chapter 2) 126

militiamen: part-time citizen soldiers (Chapter 5) 352

mill: one tenth of a cent (Chapter 17) 1123

Mill Creek chert: a hard stone, found only in southern Illinois, that could be shaped into tools (Chapter 1) 17

milligram: a thousandth of a gram (Chapter 13) 899

millisievert: a unit that measures how much radiation a body takes in (Chapter 10) 702

mimeograph: a machine that prints copies from a cut paper stencil (Chapter 31) 2559

mine: a bomb placed in the water (Chapter 31) 2545

mineral leasing: renting out the right to take minerals from the ground (Chapter 3) 240

mineralogist: a person who studies rocks (Chapter 1) 44

minié ball: a soft lead bullet shaped like a cone that often flattened when it hit a body (Chapter 22) 1543

minimum wage: the lowest hourly pay the law allows (Chapter 11) 773

mining: using a computer to create new bitcoins (Chapter 17) 1160

mining claim: a legal claim to the right to mine minerals on public land (Chapter 3) 240

miniseries: a story told on television over several nights (Chapter 7) 471

minister: a man who led church services, or a government's representative in another country (Chapter 2) 108

Minister Plenipotentiary: a title meaning full power to act for one's country in another country (Chapter 23) 1605

minister to France: the man who represented the United States to the French government (Chapter 12) 799

minor leagues: the lower leagues below the major leagues (Chapter 36) 3019

minority leader: the leader of the smaller party (Chapter 20) 1372

minors: young people who are not yet adults (Chapter 4) 320

mint: the place where workers make the country's coins (Chapter 9) 591

mintmaster: the man in charge of the mint (Chapter 17) 1115

minutes: the written record of what was said at a meeting (Chapter 2) 116

mirliton: a pale green squash (Chapter 15) 1015

misanthrope: a person who hates other people (Chapter 30) 2392

misappropriate: to take and misuse something that belongs to others (Chapter 29) 2324

misappropriation: taking and misusing something that belongs to someone else, such as a performer's face and voice (Chapter 34) 2889

misbranding: selling a drug with false or misleading claims about it (Chapter 19) 1291

miscarriage: the death of an unborn baby before it can live outside the mother's body (Chapter 3) 229

miscegenation: an old word for marriage or romance between people of different races (Chapter 34) 2861

misconduct and unprofessional conduct: breaking the rules of one's profession (Chapter 27) 2093

misdemeanor: a less serious kind of crime, such as being drunk in public (Chapter 10) 711

misdemeanor manslaughter: a minor charge of killing a person without planning to (Chapter 21) 1468

misprision of treason: knowing about a plot against the government and not reporting it (Chapter 23) 1623

mission: a settlement run by Catholic priests, where Native people lived and were taught the Catholic religion (Chapter 1) 31

mission town: a town built around a church where ministers taught Christianity (Chapter 29) 2207

missionaries: people sent to bring others into their religion (Chapter 2) 102

Mississippi appendectomy: Fannie Lou Hamer's name for operations like hers, in which a doctor cut out a woman's womb without asking her, so she could never become pregnant. She named them after the ordinary operation that takes out the appendix, a small part of the gut (Chapter 25) 1871

Mississippian culture: the name archaeologists give the way of life of Cahokia and the towns like it (Chapter 35) 2908

Mississippians: the town-building peoples of the Mississippi Valley and the Southeast (Chapter 2) 102

Missouri Compromise: the 1820 law that banned slavery in the northern part of the Louisiana Purchase lands. Supreme Court justices struck it down in *Dred Scott* (Chapter 20) 1341

mistrial: a trial that ends with no verdict, as when the jury cannot agree (Chapter 21) 1442

mita: the system under which Spanish officials forced Native men to work in the mines in turns (Chapter 17) 1113

mixed schools: schools for Black and white children together (Chapter 20) 1341

model law: a sample law for lawmakers to copy (Chapter 4) 298

modesty: in the 1800s, keeping the body covered (Chapter 36) 3008

modulation: the rise and fall of the voice (Chapter 34) 2827

molasses: a thick, dark syrup left over when sugar is made (Chapter 7) 468

moldboard: the curved blade of a plow that turns the soil over (Chapter 8) 535

molecule: a group of atoms joined together (Chapter 9) 633

molested: in the old laws, bothered or attacked (Chapter 29) 2213

Molotov cocktails: bottles filled with fuel and set on fire (Chapter 7) 495

monetary compensation: payment in money (Chapter 12) 815

money laundering: hiding where money from a crime came from (Chapter 17) 1160

money market fund: a fund that pools many people's money to buy short-term loans to the government and to large companies, a way for small savers to earn more than the legal limit on bank interest (Chapter 17) 1153

Mongolian: a word white Americans once used for people from East Asia (Chapter 25) 1795

monopolize: to become the only seller of something (Chapter 19) 1256

monopoly: the right to be the only company doing a kind of business somewhere, or a company with no real rivals (Chapter 11) 734

Montaup: the Pokanoket name for Mount Hope (Chapter 37) 3094

Moors: Muslims who fought Christians in Spain from the 700s to the 1400s (Chapter 34) 2818

moral lectures: talks meant to teach right from wrong (Chapter 34) 2833

morals: a person's ideas of right and wrong (Chapter 29) 2242

Moravians: members of a Protestant church from central Europe (Chapter 5) 343

Mormons: members of the Church of Jesus Christ of Latter-day Saints (Chapter 1) 64

morphine: a strong painkilling drug made from opium that slows a person's breathing, so that too much can kill, especially a child (Chapter 18) 1193

Morrill Act: the 1862 law under which the federal government gave each state 30,000 acres of federal land for each of its members of Congress, to pay for colleges (Chapter 3) 200

Morse code: the pattern of dots and dashes for every letter and number (Chapter 8) 535

mortar: a paste that hardens (Chapter 12) 789

mortgage: a loan in which the borrower promises property, such as a house or enslaved people, to the lender, who can take that property if the loan is not repaid (Chapter 6) 431

mortgage lenders: lenders who lend money to buy houses (Chapter 18) 1214

mosque: a Muslim house of worship (Chapter 29) 2304

most distinguished niche: the place of honor (Chapter 37) 3101

most integrated setting: at home or in the community rather than in an institution (Chapter 25) 1909

most rigid scrutiny: the closest possible look (Chapter 25) 1829

motion capture: cameras record an actor's movements, and a computer uses them to move a character artists have drawn (Chapter 34) 2889

motions (in a court case): formal requests to the judge (Chapter 8) 570

mountain man: a trapper who lived in the western mountains (Chapter 1) 44

mounted: stuffed and set up for display (Chapter 3) 215

mourning war: a Haudenosaunee custom in which a family that had lost someone in war adopted a captive to take the dead person's place (Chapter 24) 1666

Mourt's Relation: the book of Pilgrim writings printed in London in 1622 that contains Edward Winslow's letter about the 1621 harvest (Chapter 37) 3083

moving assembly line: a line on which a motor pulls the car or part past the workers, and each worker adds parts or does one task as it goes by (Chapter 8) 553

MRI machine: a machine that takes pictures of the inside of the body (Chapter 13) 899

muckraker: a reporter of the early 1900s who dug into one subject and wrote long reports about it. Theodore Roosevelt meant the word as an insult, after a man raking up muck (mud and filth) in *The Pilgrim's Progress*. The reporters took it as a name to be proud of (Chapter 31) 2559

Muhheakantuck: the Lenape name for the Hudson River (Chapter 1) 31

mulatto: an old word for a person with both Black and white parents or ancestors (Chapter 20) 1317

mulch: a covering that keeps soil from drying out (Chapter 27) 2032

municipal playground: a playground run by the city (Chapter 36) 3019

muriatic acid: a strong acid used to clean pools (Chapter 36) 3045

murrey: a dark purplish red (Chapter 35) 2916

Muses: in old Greek stories, nine goddesses who watched over poetry and the other arts (Chapter 32) 2608

music publisher: a company that owns or manages the rights to songs and collects money when people use them (Chapter 33) 2795

musket: a long gun (Chapter 14) 914

muslin: a thin cotton cloth (Chapter 35) 2934

muster list: a count of the living and the dead at each settlement (Chapter 14) 914

mutable loci: places on a chromosome that can change (Chapter 9) 614

mutiny: a rising up against the people in charge, such as a ship's captain or an army's officers (Chapter 1) 31

mutual fire society: a group of neighbors who promised to help save one another's houses, and only those (Chapter 6) 404

My Lai: a village in South Vietnam where American soldiers killed the unarmed people on March 16, 1968, at least 175 of them by the Army's own count (Chapter 22) 1575

myriads: huge numbers (Chapter 3) 200

N

NAACP: the National Association for the Advancement of Colored People, a group that works for the rights of Black Americans (Chapter 6) 431

NAACP Legal Defense and Educational Fund: a law office whose lawyers took civil rights cases to court (Chapter 20) 1372

NACA: the government agency that came before NASA (Chapter 1) 82

NAGPRA: the Native American Graves Protection and Repatriation Act of 1990, under which museums and agencies that take federal money must return Native remains and sacred objects (Chapter 2) 158

naloxone: a drug that can undo an opioid overdose if someone gives it fast enough (Chapter 26) 2022

name, image and likeness: payment for ads and appearances that use who an athlete is (Chapter 36) 3058

napalm: gasoline thickened into a jelly that sticks to whatever it lands on, including skin, and keeps burning (Chapter 22) 1559

napped cotton: cotton brushed so its surface is soft and fuzzy (Chapter 35) 2923

narcotics: in the 1914 law, drugs made from opium or from coca (Chapter 28) 2165

NASA: the US space agency, the National Aeronautics and Space Administration (Chapter 1) 82

NASDAQ: an index, a single number built from the stock prices of many companies, among them many technology companies (Chapter 16) 1096

Nation of Islam: a Black Muslim religious group (Chapter 22) 1575

national bank: a bank that got its permission to do business from the national government, such as the bank members of Congress set up in 1791 to hold the government's money (Chapter 17) 1128

National Bureau of Economic Research: the group of economists that sets the dates when hard times begin and end (Chapter 16) 1074

National Cemetery Administration: the federal office that runs the national military cemeteries (Chapter 32) 2643

national convention: a large meeting of a party, where delegates choose its candidate for president and write its platform (Chapter 20) 1356

National Day of Mourning: the gathering Native people have held on Cole's Hill in Plymouth every Thanksgiving since 1970 (Chapter 37) 3125

national debt: the total the federal government owes on money it has borrowed (Chapter 16) 1096

National Endowment for the Arts: a US government agency that gives money and honors to artists (Chapter 8) 512

national forest: public land where federal foresters look after the trees (Chapter 3) 215

National Guard: a state's own force of part-time soldiers (Chapter 10) 691

National Heritage Fellowship: the highest honor in the United States for folk and traditional arts, the crafts and music that families and communities hand down (Chapter 8) 512

National Historic Person: a title Canadian officials give to people who were important in Canada's history (Chapter 5) 346

National Institute of Standards and Technology: a federal science office (Chapter 3) 240

National Labor Relations Board: the government office that hears complaints about unfair treatment of workers (Chapter 14) 974

national laboratories: the government's big science labs (Chapter 9) 614

national medical coordinator: the doctor in charge of the care of the national team's gymnasts (Chapter 36) 3058

national monument: land a president protects by proclamation under the Antiquities Act (Chapter 3) 215

national origin: the country a person or their family came from (Chapter 14) 941

National Priorities List: the list of the country's most dangerous waste sites, chosen for cleanup under the federal Superfund program (Chapter 13) 886

National Recording Registry: the Library of Congress's list of recordings chosen to be kept for the future (Chapter 33) 2779

National Retail Federation: a trade group for stores (Chapter 37) 3135

National Transportation Safety Board: the federal board that investigates crashes (Chapter 11) 773

nationality: the country a person comes from (Chapter 4) 283

national-origins quotas: the rules that limited immigration country by country from the 1920s to 1965 (Chapter 4) 310

nationals: people who belong to the United States without being full citizens (Chapter 20) 1390

native copper: copper found pure in the ground (Chapter 11) 721

nativism: hatred of immigrants (Chapter 14) 922

nativists: people who opposed immigrants and wanted power kept for native-born Protestants (Chapter 4) 275

NATO: the North Atlantic Treaty Organization, a military alliance (Chapter 23) 1634

natural history: the study of plants, animals and rocks (Chapter 9) 596

natural philosophy: the old name for the study of nature, so a philosophical society was a group for studying nature (Chapter 9) 585

natural selection: Darwin's name for the way species change, when living things with a helpful trait have more young and the trait spreads (Chapter 9) 604

naturalist: a scientist who studies plants and animals (Chapter 1) 36

naturalization: the legal process by which a person born in another country becomes a citizen (Chapter 4) 271

naturalized: made a citizen by a legal process (Chapter 20) 1341

naturallists: Bradford's spelling of naturalists, people who study nature (Chapter 27) 2041

nature printing: printing the shapes of real leaves on bills to stop counterfeiters (Chapter 17) 1119

naval magazine: a Navy base for storing explosives (Chapter 27) 2078

Navigation Acts: the laws by which members of Parliament decided what English colonists could buy and sell (Chapter 16) 1052

navigation engineer: a person who works out where a spacecraft is and where it is heading (Chapter 9) 633

navigator: the person who worked out where they were and which way to go (Chapter 1) 74

Navy Cross: a navy medal for bravery in battle (Chapter 22) 1559

Nazis: Adolf Hitler's party, which ruled Germany (Chapter 4) 298

NBA draft: the yearly event in which basketball teams choose new players (Chapter 4) 320

NEA: the National Endowment for the Arts, a federal agency that gives money to artists and museums (Chapter 32) 2679

nebula: a cloud of gas and dust in space (Chapter 9) 604

necrosis of the jaw: the jawbone dying and breaking down, which the Essex County medical examiner named "radium jaw" (Chapter 13) 868

neglect of duty: failing to do one's job (Chapter 13) 899

negligence: carelessness, in the law's word (Chapter 17) 1160

negotiated under duress: worked out under threat or pressure (Chapter 30) 2367

Negro: an old word for a Black person, in common use until the 1960s (Chapter 1) 74

negro cloth: a cheap, rough cloth Northern mills made and sold to planters to clothe the people they enslaved, named with the word white Americans of that time used for Black people (Chapter 16) 1067

"Negro hire": the commissioners' name for renting enslaved men from their owners by the year, using "Negro," a word of that time for Black people (Chapter 12) 799

neonatal tetanus: an infection in newborn babies that locks the jaw and other muscles in spasms (Chapter 26) 1975

neoprene: a kind of man-made rubber (Chapter 3) 240

net domestic migration: the number of people who move into a state from other states, minus the number who move out to other states (Chapter 5) 387

network: a group of stations in different cities that carry the same programs (Chapter 31) 2559

neural network: a kind of AI program that learns from examples: a computer compares each of its answers with the right answer and adjusts its settings so the next answer comes closer (Chapter 8) 570

neutral: taking neither side (Chapter 2) 116

neutrally: favoring no religion and no lack of one (Chapter 20) 1390

neutron: a tiny particle in the center of an atom (Chapter 13) 886

never know want: never be poor (Chapter 19) 1256

new birth: a conversion that a person could feel happening inside (Chapter 29) 2231

New Deal: the set of programs President Franklin Roosevelt started in the 1930s (Chapter 14) 941

New France: the French colony in North America (Chapter 2) 116

New Great Migration: the return of Black Americans to the South since the 1970s (Chapter 5) 383

New Laws: laws King Charles I of Spain issued in 1542 stating that no one could enslave Native people and that an encomienda ended when its holder died (Chapter 24) 1667

New Lights and Old Lights: the Congregationalists who supported and opposed the revival, called the New Side and the Old Side among Presbyterians (Chapter 29) 2231

New Netherland: the Dutch colony that later became New York (Chapter 4) 260

New Spain: the Spanish colony that included Mexico (Chapter 5) 336

New York State Supreme Court: the state's main trial court (Chapter 6) 418

New York Stock Exchange: the market in New York City where people buy and sell shares of companies (Chapter 16) 1074

news desert: a county with no local newspaper, news website or station (Chapter 31) 2585

newsreels: short news films shown in movie theaters (Chapter 27) 2078

Nguzo Saba: the seven principles Maulana Karenga wrote in 1965, one talked about on each night of Kwanzaa (Chapter 37) 3125

niacin: a vitamin, also called vitamin B3 (Chapter 15) 1015

niches: small openings set into a wall (Chapter 34) 2814

nickelodeon: a small theatre that charged a nickel to see films (Chapter 34) 2861

nicotine: the drug in tobacco, which makes people addicted (Chapter 19) 1280

Niman: the Home Dance, the Hopi ceremony in late July (Chapter 37) 3075

ninepins: bowling at nine wooden pins (Chapter 36) 2987

Nineteenth Amendment: the 1920 change to the Constitution stating that no state and no federal official may keep a citizen from voting because of whether the citizen is a man or a woman (Chapter 18) 1193

NIOSH: the federal agency that studies workers' health (Chapter 10) 711

nitrogen: a gas in the air that plants need to grow (Chapter 3) 180

nitroglycerin: a liquid explosive that can go off from a jolt (Chapter 4) 283

No Child Left Behind Act: the 2002 law that members of Congress wrote as a new version of the 1965 school law. With it they began to focus on judging schools by how their students scored on tests (Chapter 20) 1390

NOAA: the US government's ocean and weather agency (Chapter 1) 82

Nobel Prizes: awards first given in 1901 under the will of Alfred Nobel, a Swedish inventor (Chapter 9) 614

nominated: named (Chapter 4) 320

nominating convention: a meeting where a party's members choose its candidates (Chapter 20) 1333

non compos mentis: Latin for "not of sound mind" (Chapter 25) 1829

noncommissioned officer: a soldier who had risen through the ranks to lead other soldiers (Chapter 24) 1712

nonconsensual sex: sex the other person did not agree to (Chapter 25) 1909

nones: people who say they have no religion (Chapter 29) 2324

nonpartisanship: not taking the side of any political party (Chapter 31) 2585

nonprofit: a group run for a cause rather than for profit (Chapter 8) 561

nonprofit corporation: a group organized like a company that does not pay profits to owners (Chapter 20) 1390

nonsectarian: not tied to any religious group (Chapter 29) 2324

non-venereal syphilis: another name for bejel, syphilis not passed by sex (Chapter 26) 1946

normal college: a college that trained teachers (Chapter 32) 2660

normal school: a school for training teachers, from the French école normale, a school that taught the norms, or rules, of teaching (Chapter 30) 2375

Norse: the people often called Vikings (Chapter 1) 17

Northwest Territory: the US name for the land north and west of the Ohio River, which later became Ohio, Indiana, Illinois, Michigan and Wisconsin (Chapter 3) 192

nose-slitting: cutting a person's nose open (Chapter 24) 1670

nostrums and quackery: fake cures and the selling of fake medicine (Chapter 18) 1193

not worth a Continental: worth nothing at all (Chapter 16) 1062

notched-corner log cabin: a cabin whose builders cut notches near the ends of the logs so that the logs locked together at the corners (Chapter 7) 471

notes: written promises to pay (Chapter 18) 1182

nourtering: bringing up (Chapter 30) 2351

nova: a star that suddenly grows much brighter for a time (Chapter 9) 604

novice: a person training to become a monk, a man who gives his life to his religion and lives by its rules (Chapter 29) 2304

nuclear chemist: a chemist who studies atoms that break apart and give off radiation (Chapter 9) 633

nuclear reactor: a machine that makes heat from uranium fuel in its core, with water flowing around the core to cool it (Chapter 10) 711

Nuclear Regulatory Commission: the federal agency that oversees nuclear plants (Chapter 10) 702

nuclear weapons: atomic bombs and the stronger bombs that came after them, all of which get their huge power from the tiny centers of atoms (Chapter 22) 1575

null result: a result where the test finds nothing (Chapter 9) 604

nullity: something with no force (Chapter 20) 1333

nun: a Catholic woman who makes religious promises and lives with others in a convent (Chapter 29) 2256

nylon: a strong thread-like material made from chemicals (Chapter 1) 82

O

oakum: old rope fiber picked apart and used to seal the seams of ships (Chapter 27) 2047

oath: a solemn promise before the law (Chapter 4) 298

oath of office: the promise each new president makes (Chapter 20) 1322

obelisk: a tall stone pillar with four sides that narrows toward a pointed top (Chapter 12) 804

obesity: a body weight high enough to raise the risk of illness (Chapter 15) 1039

obituary: the published notice of a person's death (Chapter 1) 82

obscene: too sexual for the law to allow (Chapter 21) 1468

observatory: a building for studying the sky (Chapter 9) 604

obsidian: a black natural glass formed by volcanoes, which chips to a sharp edge (Chapter 1) 17

obstructing religion resulting in death: the federal crime of using force to stop people from practicing their religion, in a way that kills someone (Chapter 29) 2324

obstructing traffic: blocking the road (Chapter 25) 1829

obstruction of Congress: blocking Congress's investigation (Chapter 20) 1390

obstruction of justice: trying to block an investigation (Chapter 20) 1372

obtrusive and ostentatious: pushing forward to be seen (Chapter 25) 1778

occupy: to hold a country with troops and control its government (Chapter 23) 1634

oceanographer: a scientist who studies the ocean (Chapter 1) 82

ochre: a colored earth that went into paint (Chapter 13) 844

Office of the Comptroller of the Currency: the government office that oversees national banks (Chapter 17) 1136

official misconduct: police, prosecutors or other officials breaking the rules (Chapter 21) 1484

offspring: children (Chapter 20) 1356

oil reserves: land kept for the Navy's future oil (Chapter 20) 1356

Okies: what Californians called the newcomers from the Dust Bowl (Chapter 5) 376

Old Order Amish: a Christian church whose members keep apart from the outside world (Chapter 20) 1372

old-age pension: regular payments to people too old to work (Chapter 16) 1084

olive jars: big Spanish storage jars that carried wine and olive oil by ship (Chapter 28) 2124

Olympic Village: where the athletes lived during the Games (Chapter 36) 3045

omnibus: a horse-drawn coach (Chapter 11) 734

on credit: getting something now and paying for it later (Chapter 15) 1009

on relief: getting government help (Chapter 15) 1015

one-judge grand jury: a single judge who decides alone whether to charge someone with a crime (Chapter 13) 899

only for cause: for a real reason such as wrongdoing (Chapter 23) 1656

Onondaga: one of the Haudenosaunee nations (Chapter 2) 99

OPEC: a group of countries that sell oil (Chapter 10) 702

open range: the unfenced grassland where cattle could graze and travel freely (Chapter 5) 363

open secret: something many people know but few say out loud (Chapter 29) 2274

open source: free for anyone to copy and change (Chapter 8) 570

openwork cloth: cloth with small openings left in the weave as a pattern (Chapter 35) 2908

opera house: a theater (Chapter 34) 2841

operating license: permission to run a reactor (Chapter 10) 711

operating system: the main program that runs a computer and the other programs on it (Chapter 19) 1280

operetta: a short comic opera (Chapter 33) 2746

opiates: drugs made from the opium poppy (Chapter 31) 2559

opinion: a judge's written explanation of a court's decision (Chapter 2) 170

opioid: a drug from the same family of chemicals as heroin, such as the painkillers oxycodone and fentanyl. Too much slows a person's breathing and can kill (Chapter 19) 1291

opium: a drug made from the opium poppy that dulls pain and brings sleep (Chapter 26) 1975

opium den: a room where people paid to lie down and smoke opium (Chapter 28) 2154

optics: the science of light (Chapter 30) 2392

oral histories: accounts passed down by word of mouth, or recorded interviews about people's lives (Chapter 2) 108

oral tradition: teaching by the spoken word (Chapter 30) 2345

ordained: officially made a minister by church leaders (Chapter 29) 2242

order: a group of Catholic men or women who promise to live by one set of rules, such as the Jesuits or the Franciscans (Chapter 1) 21

Orderly Departure Program: a legal way to leave Vietnam without the boat trip (Chapter 4) 310

ordinance: a city law (Chapter 25) 1829

ordinance of secession: a law declaring that a state was leaving the United States (Chapter 20) 1341

ordinary: the old name for a tavern (Chapter 28) 2127

ore: rock that holds a metal (Chapter 8) 524

organic farming: growing food without man-made chemical fertilizers and pesticides (Chapter 15) 1028

organic matter: the carbon-based material that living things are made of (Chapter 9) 633

organized crime: crime run by gangs (Chapter 31) 2572

Oriental: an old word for Asian (Chapter 25) 1795

Original Proprietors: the owners of the land when Washington, D.C., was laid out (Chapter 6) 407

O-rings: rubber rings that seal a joint, such as a joint of a booster rocket, so that hot gas cannot escape (Chapter 1) 82

ornithologist: a scientist who studies birds (Chapter 9) 614

orrery: a machine that shows the planets moving around the sun (Chapter 9) 591

Orteig Prize: a $25,000 prize offered for the first nonstop flight between New York and Paris (Chapter 1) 74

orthophosphate: a chemical that keeps water from eating into pipes (Chapter 13) 899

oscilloscope: a screen that draws lines of light (Chapter 34) 2877

OSHA: the government's workplace safety office (Chapter 18) 1222

osnaburg: a coarse, plain cloth first woven from flax in the German city of Osnabrück (Chapter 35) 2923

Ousamequin: Massasoit's own name (Chapter 37) 3083

out of order: against a meeting's rules (Chapter 25) 1871

outing system: Pratt's name for sending children to live with white families and work for them for part of each year (Chapter 2) 134

outpost: a small fort or settlement (Chapter 13) 847

overdose: too much of a drug at once, enough to make a person very sick or kill them (Chapter 19) 1291

overhang: a place where the rock of a cliff sticks out above like a roof (Chapter 12) 783

override a veto: to make a bill law without the president's signature (Chapter 20) 1372

overrule: to cancel a ruling with a new ruling (Chapter 20) 1356

overseer: the man in charge of the workers, such as the man who drove enslaved people at their work on a plantation. At Harvard, the overseers were the men on one of the college's governing boards (Chapter 8) 524

overseer of the highways: a man put in charge of the roads (Chapter 11) 728

overshot wheel: a water wheel turned by the weight of water poured onto its top (Chapter 10) 665

overtime: extra hours of work. Overtime pay is extra pay for hours past 40 in a week (Chapter 14) 941

Oviraptor: a meat-eating dinosaur (Chapter 1) 74

P

pacifist: a person who refuses to take part in war or violence (Chapter 25) 1871

pack line: the rope a person used to carry loads (Chapter 27) 2047

packing house: a building where fruit was packed for sale (Chapter 5) 376

paddle: a wooden board that an adult swung against a child's buttocks (Chapter 20) 1372

pagans: in Dartmouth's charter, people who were not Christian (Chapter 30) 2367

Page Act: the 1875 law, the first federal law to limit immigration, which barred Chinese laborers brought over under contract (Chapter 4) 283

Palatines: people from the Palatinate, a region along the Rhine River (Chapter 4) 267

Pale of Settlement: the region of the Russian Empire where Jews were allowed to live (Chapter 4) 283

paleontology: the study of ancient life through fossils (Chapter 9) 591

palisade: a wall of tall upright logs (Chapter 1) 21

pamphlet: a short printed booklet (Chapter 8) 524

pandemic: a disease that spreads around the world (Chapter 6) 452

pandered: gave people what they wanted, to win their favor (Chapter 32) 2695

panic: a time when fear spreads, many people rush to take their money out of the banks at once, and businesses close (Chapter 7) 480

Panic of 1873: a money crash in which many people lost their jobs (Chapter 7) 480

panpipe: a row of tubes held together, which a player blows across, each tube making a different note (Chapter 33) 2713

pantaloons: tight pants that reached the calf or the ankle (Chapter 35) 2934

pañuelo: a head cloth (Chapter 35) 2928

paper sons and paper daughters: Chinese arrivals who claimed a family tie that existed only on paper (Chapter 4) 298

paradox: something that seems to contradict itself (Chapter 19) 1291

paralegal: a worker who helps lawyers (Chapter 12) 832

parallax: looking at an object from two different places, so that a near object seems to shift against the stars far more than a distant one (Chapter 9) 585

parallel: an east-west line on a map (Chapter 1) 64

paralysis: being unable to move part of the body (Chapter 13) 868

paralyzed: unable to move parts of the body (Chapter 12) 807

paramedic: a medical worker who rides an ambulance (Chapter 5) 387

paramilitary unit: an armed group organized like an army (Chapter 29) 2256

paramount: most important (Chapter 2) 108

paramount chief (mamanatowick): a chief whom other chiefs answer to (Chapter 2) 108

paramount chiefdom: a group of many towns and chiefs under one head chief (Chapter 27) 2041

paratrooper: a soldier trained to jump from planes by parachute (Chapter 2) 149

parcel: a group (Chapter 19) 1242

parch (corn): to swirl corn kernels in a hot pan until they toast (Chapter 15) 1039

pardon: an official act that forgives a crime and ends the punishment (Chapter 2) 102

Paris climate agreement: an agreement in which the governments that join promise to cut the gases that are warming the earth (Chapter 23) 1656

Paris Salon: a large yearly art show (Chapter 32) 2643

Paris Universal Exposition: a world's fair in Paris (Chapter 12) 807

parish: the area served by one church. In Louisiana, a parish is what other states call a county (Chapter 3) 240

parish house: the house beside a church where priests live (Chapter 29) 2324

parish school: a school run by a local Catholic church (Chapter 29) 2274

Parkinson's syndrome: a disease of the brain that makes the body shake and move slowly (Chapter 36) 3045

Parliament: the lawmakers in London (Chapter 4) 275

parochial school: a school run by a church (Chapter 30) 2414

parole: letting a prisoner out early, watched by officials (Chapter 2) 149

parole board: the officials who decide whether a prisoner may leave prison early (Chapter 33) 2779

parole camp: a camp where freed prisoners waited to go home (Chapter 27) 2068

parsonage: the pastor's house (Chapter 29) 2304

partisan: favoring one political party (Chapter 20) 1390

partnership: a business in which two or more men put their money together and shared the profits (Chapter 18) 1178

parts per million: molecules of a gas in every million molecules of air (Chapter 9) 633

partus sequitur ventrem: a Latin phrase, "the child follows the womb", the rule that a child born to an enslaved mother was enslaved for life (Chapter 24) 1670

Pascua Florida: what Spanish speakers called the Easter season (Chapter 37) 3080

pasha: the ruler of Tripoli (Chapter 23) 1616

pass: a note from an owner that allowed an enslaved person to travel (Chapter 24) 1693

passage: the cost of the ocean trip (Chapter 16) 1052

passbooks: the small books that recorded depositors' savings (Chapter 17) 1136

passenger pigeon: a wild pigeon that flew in huge flocks (Chapter 3) 196

pastel: a crayon made from a paste of colored powder and resin (Chapter 32) 2613

pastor: the priest in charge of a local church (Chapter 5) 339

paten: the metal dish the priests used in the Mass, their main church service (Chapter 30) 2348

patent: a government paper that gives only the inventor the right to make and sell an invention for a set number of years. In the 1600s, a patent was also a paper giving permission to settle a colony (Chapter 8) 512

patent examiner: a person who checks patent applications for the government (Chapter 8) 541

patent medicines: medicines sold under a brand name whose makers did not have to say what was in them (Chapter 18) 1188

Patriots: the colonists fighting the British in the Revolution (Chapter 24) 1684

patron: a person who pays an artist to make work (Chapter 32) 2627

patronage: paying an artist for pictures (Chapter 32) 2627

pauper: a person too poor to feed themselves without help (Chapter 16) 1067

pavilion: a large roofed meeting place, or the building where a country shows its artists at the Biennale (Chapter 29) 2304

pawnshop: a store that lends money and sells things people leave there and do not come back for (Chapter 32) 2679

payday loan: a small loan meant to be paid back from the borrower's next paycheck (Chapter 17) 1160

paymaster: the man who pays out an army's or a navy's money (Chapter 19) 1242

payola: secret payments to a disc jockey or a radio station to play a record (Chapter 33) 2779

payroll: a company's list of the people it paid (Chapter 11) 745

PCBs: a group of chemicals made by people, used in electrical, heating and hydraulic equipment (Chapter 3) 229

Peace Corps: a US government program that sends volunteers to work in other countries (Chapter 1) 82

pearlash: a salt made from wood ashes, used to make dough rise before baking powder existed (Chapter 15) 1000

peasants: poor farm workers (Chapter 4) 283

peck: a measure of about 8 quarts, as in the weekly peck of cornmeal Jefferson gave each enslaved worker at Monticello (Chapter 15) 1000

peculiar: special (Chapter 20) 1333

peddler: a seller who traveled a route through the countryside and sold goods at people's doors (Chapter 18) 1188

pedestal: the stone base a statue stands on (Chapter 4) 283

pedophile: an adult who is sexually drawn to children (Chapter 21) 1484

Peking: the city in China now called Beijing (Chapter 1) 74

pellagra: a disease caused by a diet missing a vitamin called niacin. It brought skin rashes, diarrhea and dementia and could end in death (Chapter 15) 1015

pen name: a made-up name for signing one's writing (Chapter 11) 745

pence: two or more of the small English coins called pennies (Chapter 11) 726

pence, shillings and pounds: English money, with twelve pence to a shilling and twenty shillings to a pound (Chapter 17) 1115

pendant: an ornament that hangs from a cord (Chapter 13) 844

pending: undecided (Chapter 3) 240

Pendleton Act: the 1883 law under which some federal jobs went to people who passed a competitive exam (Chapter 20) 1341

penicillin: a drug made from a mold that kills many kinds of bacteria, the first antibiotic made in large amounts (Chapter 26) 1990

peninsula: a piece of land with water on almost every side (Chapter 1) 21

penitentiary: a prison. The word comes from penitence, being sorry for wrongdoing (Chapter 21) 1427

Pennsylvania Dutch: German settlers of Pennsylvania, from Deutsch, the German word for German (Chapter 4) 267

pension: money paid to someone every year, such as a former soldier or a worker who has retired (Chapter 10) 681

Pentagon: the headquarters of the US military, near Washington (Chapter 4) 320

Pentagon Papers: the secret history of what American leaders had done in Vietnam since World War II. *The New York Times* began printing stories about it in 1971 (Chapter 31) 2572

pentathlon: a contest of five track and field events (Chapter 2) 149

Pentecostal: the kind of Christian worship in which believers hold that God's Spirit fills a person, and that speaking in tongues is the proof (Chapter 29) 2287

peonage: forcing a person to work to pay off a debt (Chapter 16) 1074

pepper balls: small balls fired from a gun that burst into a stinging powder (Chapter 31) 2585

pepper spray: a spray made from hot peppers that burns the eyes and skin (Chapter 21) 1484

performance artist: an artist who puts on live shows (Chapter 32) 2679

performance capture: motion capture that also records the actor's face (Chapter 34) 2889

periauger: a shallow sailboat with two masts (Chapter 11) 745

periodic table: the chart of all the chemical elements (Chapter 9) 614

period-luminosity law: Henrietta Leavitt's rule that the time of a Cepheid's blink tells its true brightness (Chapter 9) 614

perjury: lying under oath (Chapter 20) 1372

permanent memory: a part of a computer that keeps what is stored in it even when the power is off (Chapter 8) 561

permits: written permission from government officials (Chapter 4) 320

pernicious sect: a harmful religious group (Chapter 25) 1760

perpetually: forever (Chapter 37) 3083

persecuted: punished again and again for who a person is and what he says or writes (Chapter 4) 310

persistent pesticide: a pesticide that stays in soil, water and living things for a long time (Chapter 3) 229

peruke: a wig of the 1700s (Chapter 35) 2923

perverse: stubbornly wrong (Chapter 4) 275

pesos: Spanish coins (Chapter 12) 789

pest house: a building where people who might carry disease were held and checked (Chapter 4) 267

pesticide: a chemical made to kill insects or weeds (Chapter 3) 229

pesticide plant: a factory that makes poisons to kill insects (Chapter 19) 1280

pestilence: a deadly disease that spreads (Chapter 26) 1983

pet banks: the state banks Jackson chose for the government's money, as his opponents called them (Chapter 17) 1128

petition: a paper that many people sign to ask for something (Chapter 7) 495

petition for habeas corpus: a request that a judge order a person held prisoner brought to court, and freed if no one can show a lawful reason to hold the prisoner (Chapter 25) 1829

petitioner: the person who brings a case to the Supreme Court (Chapter 25) 1778

petroglyph: a picture cut or pecked into rock (Chapter 32) 2598

petticoat: a woman's underskirt (Chapter 25) 1770

Pew Research Center: a group that studies public life (Chapter 4) 320

pewter: a gray metal made mostly of tin and used for plates, bowls, mugs and spoons (Chapter 13) 852

peyote: a small cactus whose top holds mescaline, a drug that causes visions (Chapter 28) 2120

pharmacy degree: a degree in preparing medicines (Chapter 25) 1795

PhD: the highest degree a university gives (Chapter 9) 581

Philadelphia lawyer: a very clever lawyer, skilled at the fine points of the law (Chapter 20) 1317

phlegm: the thick slime that comes up from the lungs (Chapter 10) 702

phone contract: a promise to pay a phone company for service every month (Chapter 8) 570

phonograph: a machine that records sound and plays it back (Chapter 8) 541

photo essay: a set of photographs that tell a story (Chapter 32) 2679

photo lineup: a set of photos shown to someone who might pick out the thief (Chapter 8) 570

photographic plate: a glass sheet coated with chemicals that change where light hits them (Chapter 6) 418

physic: medicine (Chapter 26) 1967

physical anthropology: the study of human bodies and bones (Chapter 9) 614

physicist: a scientist who studies matter and energy (Chapter 1) 82

physiognotrace: a machine that traced the outline of a sitter's face onto paper through a set of connected rods (Chapter 32) 2627

picket line: a group of protesters standing outside with signs (Chapter 25) 1829

picketing: standing outside a place with signs as a public protest (Chapter 25) 1829

pictograph: a picture painted on rock (Chapter 32) 2598

picture factory: a shop that turned out many portraits fast (Chapter 32) 2627

piece of eight: a Spanish silver coin worth 8 reales, also called the Spanish dollar (Chapter 17) 1113

Piedmont: the hill country of the Carolinas (Chapter 5) 343

pig iron: the iron that came out of a blast furnace (Chapter 13) 848

pikes: long spears (Chapter 25) 1760

Pilgrims: what later Americans called the Plymouth colonists (Chapter 4) 260

pillory: a wooden frame on a post, on a platform in a public place, that locked a person's neck and wrists while the person stood (Chapter 21) 1412

pilot: the man who steered a ship (Chapter 11) 745

Pinkerton detective agency: a private company that hired out guards and detectives (Chapter 14) 929

Pinkster: the Dutch name for Pentecost, a Christian feast held seven weeks after Easter (Chapter 34) 2827

pinnace: a small sailing ship (Chapter 27) 2041

pinole: flour made from ground seeds (Chapter 1) 39

pinta: a slow skin disease in the syphilis family (Chapter 26) 1946

pious: devoted to religion (Chapter 30) 2375

pistole: a Spanish gold coin used in the colonies (Chapter 33) 2723

piston: a tight-fitting plug pushed into the cylinder (Chapter 8) 528

pit: the pile of stacked wood, covered with leaves and dust, in which a collier made charcoal (Chapter 10) 671

pitch: a sticky tree sap (Chapter 8) 512

pitching the bar: a contest to see who could throw a heavy bar or pole the farthest (Chapter 37) 3083

piteous: full of pain (Chapter 25) 1778

place of public accommodation: a place that serves the public (Chapter 20) 1372

placebo: a shot with no medicine in it (Chapter 26) 2005

placer miner: a miner who washes gold out of sand and gravel in streams (Chapter 13) 863

plague: a disease that spread quickly and killed many people (Chapter 7) 465

Plains: the wide grasslands in the middle of the continent (Chapter 1) 17

plaintiff: a person who brings a case to court (Chapter 25) 1909

plank: one position in a platform (Chapter 20) 1356

planned city: a city whose builders decide ahead of time where each open square, wall and mound will go (Chapter 6) 395

plantation: a large farm, owned by a planter. Until slavery ended, planters forced enslaved people to do the work (Chapter 3) 189

planter: the owner of a plantation, a large farm (Chapter 1) 64

plaque: a metal sign with words on it (Chapter 4) 298

plate tectonics: the idea that the Earth's outer shell is broken into huge pieces, called plates, that slowly shift (Chapter 9) 633

plates: the huge slabs the outer layer of the earth is broken into (Chapter 27) 2032

platform: a party's list of positions (Chapter 17) 1136

platinum album: the RIAA's award for one million copies sold (Chapter 33) 2713

playbill: a printed poster for a show (Chapter 34) 2841

player: an actor (Chapter 34) 2827

plaza: a public square of open ground with the town built around it (Chapter 6) 398

plea agreement: a statement in which a person accused of a crime admits to it under a deal with prosecutors (Chapter 25) 1909

plea deal: an agreement to admit a crime in return for a lighter punishment (Chapter 22) 1585

plead guilty: to tell a court one has broken the law (Chapter 14) 963

pledge: a written promise not to drink (Chapter 28) 2147

Pledge of Allegiance: the promise of loyalty to the flag (Chapter 29) 2304

Pleiades: a small group of stars Hawaiians call Makali‘i (Chapter 37) 3075

plow under: to turn growing plants back into the soil (Chapter 16) 1084

ploy: a trick (Chapter 22) 1534

plural wife: one of several wives a man had at the same time (Chapter 29) 2274

plutonium: a radioactive metal that gives off heat (Chapter 1) 92

plywood: thin sheets of wood glued together (Chapter 2) 170

pneumonia: a sickness of the lungs (Chapter 12) 815

pocket veto: what happens when the president does not sign a bill and Congress ends its meeting, so the bill never becomes law (Chapter 3) 200

pogrom: a violent riot in which a crowd attacks Jewish people and their homes, shops and synagogues (Chapter 4) 283

police brutality: violence by police officers (Chapter 25) 1909

polio: a disease that can paralyze muscles (Chapter 9) 633

political action committee (PAC): a group that collects money and gives it to candidates (Chapter 19) 1280

political machine: a party organization that wins votes by handing out jobs and favors (Chapter 20) 1341

political party: a group of people who work together to win elections and run the government their way (Chapter 4) 283

poll tax: a tax a man had to pay before he could vote (Chapter 20) 1341

polyester: a plastic made into thread (Chapter 35) 2959

polygenism: the false and racist claim that the races of people were created separately (Chapter 9) 604

Polynesians: the people of the many islands of the central and southern Pacific (Chapter 1) 17

pomp: showy display (Chapter 20) 1322

Pong: a simple tennis game played on a screen (Chapter 34) 2877

pools: agreements among owners to hold prices up (Chapter 19) 1268

poorhouse: a building where a town kept people who had no money (Chapter 25) 1778

Pope's Night: November 5 in New England, when crowds burned figures of the Pope (Chapter 37) 3091

porcelain collars: Brebeuf's word for collars of wampum (Chapter 36) 2981

porcupine quills: the stiff, hollow spines that cover a porcupine (Chapter 35) 2908

pornography: pictures or objects made to show sex (Chapter 32) 2679

port: a small opening in a ship's side (Chapter 1) 31

portage: a crossing over land, carrying the canoes, from one river or lake to the next (Chapter 11) 721

porter: a worker who carried passengers' bags on the trains (Chapter 9) 614

positive and negative (electricity): Franklin's words for an object holding more or less of the electric fluid than normal (Chapter 9) 588

posse: a group of men gathered to chase someone (Chapter 21) 1442

post rider: a man on horseback who carried letters (Chapter 11) 726

postdoc: a scientist doing research for a few years after a PhD before taking a permanent job (Chapter 9) 648

posterity: the people who live later (Chapter 18) 1182

Postmaster General: the official in charge of the national mail service (Chapter 18) 1193

post-polio syndrome: new muscle pain and weakness 15 to 40 years after polio (Chapter 26) 2005

post-traumatic stress disorder: nightmares and memories of combat that keep coming back (Chapter 22) 1559

potash: a salt made from wood ashes (Chapter 19) 1242

potato blight: a plant disease, a water mold, that rotted Ireland's potatoes (Chapter 4) 275

potter's field: a burial ground for poor people (Chapter 9) 596

pound (£): the main unit of English and British money (Chapter 16) 1057

power loom: a weaving machine driven by water power (Chapter 19) 1250

Powhatan: a union of Native towns and peoples under one head chief. The English also called that head chief, Wahunsenacawh, the Powhatan (Chapter 2) 102

Praying Indians: the English name for the Christian Native people of New England's praying towns (Chapter 29) 2213

praying towns: villages of Native people who had become Christians (Chapter 2) 108

precarious: easily lost (Chapter 3) 200

precedent: the Court's own earlier rulings (Chapter 25) 1909

precinct: one small voting area (Chapter 20) 1356

preclearance: the federal permission listed places needed before changing a voting rule (Chapter 25) 1909

predator: an animal that hunts other animals for food (Chapter 3) 215

preface: the short opening piece of a book (Chapter 34) 2827

prehistoric: built before anyone here kept written records (Chapter 6) 395

prejudice: a dislike of a whole group of people without knowing them (Chapter 5) 376

Presbyterians: members of a Protestant church (Chapter 4) 267

prescribed burns: fires set on purpose by fire managers to burn off fuel (Chapter 3) 240

prescription: a doctor's written order for a medicine (Chapter 19) 1291

prescriptive: telling people exactly what to do (Chapter 30) 2474

preservation: keeping something safe (Chapter 3) 196

President of the Senate: the vice president (Chapter 20) 1390

Presidential Medal of Freedom: the country's highest honor for a civilian (Chapter 1) 82

Presidents' Day: the name many people use for Washington's Birthday, though no act of Congress and no order of a president changed the federal name (Chapter 37) 3125

presides: runs the meeting (Chapter 20) 1390

presidio: a Spanish fort (Chapter 29) 2256

press gangs: the groups of men sent to seize sailors and dock workers for the navy (Chapter 14) 918

press pool: the small group of reporters that covers the president up close (Chapter 31) 2585

pressing: forcing a plea by laying a prisoner under a wooden board and piling heavier and heavier stones on it until the prisoner answered or died (Chapter 21) 1412

pretext: a false excuse (Chapter 4) 283

prevalent: very common (Chapter 26) 1990

previews: the shows before a play's official opening (Chapter 34) 2889

previous condition of servitude: having once been enslaved (Chapter 20) 1341

price discrimination: charging different buyers different prices for the same goods (Chapter 19) 1268

Pride marches: the name for marches like the one held in New York City every June since 1970 (Chapter 37) 3125

primary: the election in which a party chooses its candidates (Chapter 20) 1356

prime contract: a contract made directly between the government and a company (Chapter 19) 1268

prime minister: the head of the British government (Chapter 4) 275

primer: a first reading book (Chapter 29) 2213

Principal Chief: the Cherokee Nation's top leader (Chapter 2) 158

principal (of a loan): the money borrowed, not counting interest (Chapter 30) 2474

printing press: a machine that presses paper hard onto metal letters covered in ink (Chapter 8) 517

prior restraint: a court order that stops something from being printed before it comes out (Chapter 31) 2572

prisoners of war: people an army holds after capturing them in a war (Chapter 2) 134

pristine: untouched and pure (Chapter 26) 1946

privateer: a privately owned armed ship with a government's permission to attack enemy ships (Chapter 4) 260

privy: an outdoor toilet built over a pit in the ground (Chapter 6) 413

Privy Council: the English king's inner council (Chapter 19) 1235

prize fight: a boxing match with bare fists fought for money (Chapter 36) 3008

probable cause or reasonable suspicion: the legal words for a good reason to believe a person has done something wrong (Chapter 25) 1829

probate inventory: a list of everything a person owned, each thing given a value, made after the person died (Chapter 35) 2916

probation: a time when a person found guilty lives under a court's watch instead of in prison, or any trial period under watch (Chapter 20) 1356

probes: robot spacecraft sent to study faraway places (Chapter 1) 92

process: a series of steps for making something, such as Hall's way of making aluminum (Chapter 8) 535

processed foods: foods that were canned, dried or frozen (Chapter 15) 1015

proclaim: to name a day in a public order (Chapter 37) 3101

proclamation: an official public announcement of an order (Chapter 2) 120

Proclamation of Neutrality: Washington's 1793 statement that the United States would take neither side (Chapter 23) 1605

production assistant: a helper on a film crew (Chapter 25) 1909

Production Code: the set of rules for what films could show, which the heads of the big studios agreed in 1930 to follow (Chapter 34) 2861

profane: not holy (Chapter 37) 3083

profession: a skilled job that people study for and that schools teach (Chapter 7) 474

professionals: people trained for skilled work such as law or medicine (Chapter 4) 275

proficient: good enough to meet the standard that officials in each state set (Chapter 30) 2474

profit-sharing: a share of a company's profits (Chapter 14) 941

programming language: a set of words and rules for writing instructions a computer can follow (Chapter 8) 561

Prohibition: the years from 1920 to 1933 when making and selling alcohol was against the law (Chapter 21) 1456

prologue: a speech given before a play begins (Chapter 34) 2833

promiscuity: sex with many partners (Chapter 20) 1356

promissory notes: written promises to pay money later (Chapter 17) 1128

prone: lying face down (Chapter 25) 1909

propaganda: messages meant to push people to one side (Chapter 12) 815

propaganda campaign: a huge effort to push one side of the story (Chapter 12) 832

propagandist: a person who spreads one side's story (Chapter 9) 614

property tax: a tax on the value of land and buildings (Chapter 20) 1372

prophecy: a teaching about what was to come (Chapter 15) 986

Proposition 22: a law put to California voters directly (Chapter 11) 773

proscribed: shut out (Chapter 30) 2392

prosecutor: the lawyer who brings criminal charges for the government (Chapter 8) 570

proselytizing: trying to convert people to a religion (Chapter 29) 2324

prospector: a person who searches for gold or other minerals (Chapter 1) 64

prostitution: selling sex for money (Chapter 4) 283

protein: a molecule that does work inside living cells, and the part of food the body uses to build muscle (Chapter 9) 648

Protestant: a Christian whose church broke away from the Catholic Church (Chapter 4) 258

Protestant church: one of the Christian churches that broke away from the Catholic Church (Chapter 4) 267

Protoceratops: a dinosaur that scientists first thought laid the Gobi eggs (Chapter 1) 74

proton: a tiny particle with a positive electric charge in the center of every atom, whose count gives each element its number (Chapter 9) 614

proved (a will): agreed by court officials to be real, so it could be carried out (Chapter 7) 465

province: proper job, or a colony (Chapter 20) 1333

provisional government: a government set up for a short time until a lasting one is formed (Chapter 23) 1623

provost marshal: an army officer who ran the draft (Chapter 22) 1543

Prussia: a kingdom in what is now Germany (Chapter 4) 275

psalm: a religious song from the Bible (Chapter 7) 465

psalm book: a book with the songs from the Bible's Book of Psalms (Chapter 7) 465

psilocybin: a drug from certain mushrooms that causes visions (Chapter 28) 2179

psychiatric hospital: a hospital for illnesses of the mind (Chapter 35) 2949

psychiatric unit: the ward for mental illness (Chapter 25) 1909

psychiatrist: a doctor who treats illnesses of the mind (Chapter 25) 1829

psychological warfare: using fear, rumors and false stories to turn people against their leaders (Chapter 23) 1647

psychologist: a scientist who studies how people think (Chapter 30) 2414

psychology: the study of the mind and of how people behave (Chapter 7) 485

psychopathic ward: the part of a hospital for people thought to be insane (Chapter 25) 1829

puberty blocker: a drug that pauses the hormones that start puberty (Chapter 25) 1909

public assistance: money from a government aid program (Chapter 17) 1153

public conveyances: trains, boats and coaches for hire (Chapter 25) 1795

public execution: a hanging in front of a crowd (Chapter 21) 1434

public hearings: meetings where senators question witnesses (Chapter 30) 2414

public housing: apartments owned by a government and rented to families with low incomes (Chapter 6) 443

public humiliation: a day when the people of a town prayed together and humbled themselves before God (Chapter 35) 2916

public land: land that US officials claimed for the nation, much of it lived on by Native nations (Chapter 3) 192

public land bank: a public office through which colonial officials lent paper money to people who pledged their land as security (Chapter 17) 1119

public nuisance: a place that harms the people around it (Chapter 25) 1795

Public Proclamation: an official public order (Chapter 20) 1356

public relations firm: a company paid to shape what the public thinks of its clients (Chapter 19) 1280

public relations person: someone paid to shape what the public thinks of an event (Chapter 37) 3125

public school: a school that a town or a state runs for its children (Chapter 7) 495

public works: projects that the government pays for and the public uses (Chapter 11) 764

publican: a tavern keeper (Chapter 34) 2827

"Published by Authority": printed with the approval of the people in power (Chapter 31) 2512

publishing rights: the rights to a song itself (Chapter 33) 2795

Publius: the made-up name Hamilton, Madison and Jay signed their essays with (Chapter 20) 1322

pueblo: a Native town of connected houses built of stone or dried mud, named from the Spanish word for town (Chapter 1) 21

Pueblo Revolt: the 1680 uprising, led by Po'pay, in which the Pueblo people drove the Spanish out of New Mexico for twelve years (Chapter 2) 108

puffing: praising someone too much (Chapter 9) 591

Pulitzer Prize: a top yearly American prize for writing, reporting or music (Chapter 6) 443

pulley and tackle: a set of ropes and wheels for lifting heavy loads (Chapter 12) 807

pulling the goose: a Dutch game in which riders galloped past a goose hung by a rope and grabbed at it to pull it down (Chapter 36) 2987

Pullman porter: a Black worker who served passengers on railroad sleeping cars (Chapter 31) 2559

pulpit: preachers in churches (Chapter 19) 1280

Pūnana leo: the name of the Hawaiian-language preschools, meaning "nest of voices" (Chapter 30) 2442

punch: a mixed drink made with liquor (Chapter 21) 1422

purchasing power: how much people can buy with their money (Chapter 16) 1096

Pure Food and Drug Act: the 1906 law that banned selling mislabeled or impure food, drink or drugs across state lines (Chapter 15) 1015

purge: a medicine that emptied the bowels (Chapter 26) 1967

purify: to remove everything else from a substance (Chapter 13) 899

Puritan: an English Protestant who wanted to "purify" the Church of England. Puritans started the Massachusetts colony (Chapter 4) 260

Purple Heart: the medal for being wounded or killed in battle (Chapter 22) 1559

purse: a prize in money (Chapter 36) 2999

pursued: went after (Chapter 35) 2940

put them to the knife: stabbed them to death (Chapter 22) 1502

Q

quahogs: hard-shelled clams of the Atlantic coast (Chapter 17) 1112

Quaker: a member of the Religious Society of Friends, a Christian group that began in England in the 1600s (Chapter 4) 260

Quaker meeting: a group of Quakers who worship and make decisions together. A monthly meeting is local, a quarterly meeting joins several local groups, and a yearly meeting joins a whole region (Chapter 25) 1760

Quaker missionaries: people sent out by the Quaker church to spread its faith (Chapter 30) 2392

qualified immunity: a rule that shields government officials from being sued unless the right they broke was already clearly established, meaning already made clear in the law (Chapter 25) 1909

quantum mechanics: the branch of physics that describes very tiny particles (Chapter 9) 614

quarantine: keeping people or animals that may carry a disease apart from others so it does not spread. President Kennedy also used the word for stopping ships carrying weapons to Cuba (Chapter 4) 267

quarantine law: a law keeping animals apart to stop the spread of disease (Chapter 5) 363

quarantine line: the border Texas cattle could not cross into Kansas under a Kansas law of 1885 and 1886 (Chapter 15) 1009

quarantine station: a place where new arrivals were kept apart so that any disease they carried would not spread (Chapter 4) 267

quarks: the smaller particles that protons and neutrons are built from (Chapter 9) 633

quarried: cut from the ground (Chapter 12) 799

quarry: a pit where stone is cut out of the ground (Chapter 12) 789

quarter: one of the three-month periods for which companies report their results (Chapter 19) 1291

quarter race: a race in which two horses sprinted a quarter mile along a straight track (Chapter 36) 2987

quartermaster: an army supply officer (Chapter 27) 2068

quartzite: a hard rock (Chapter 36) 2981

Quasi-War: the undeclared war at sea with France, 1798 to 1800, from a word meaning "almost" (Chapter 23) 1605

queer: a word many gay and lesbian people use for themselves (Chapter 1) 82

Query: an old word for a question, Jefferson's name for each chapter of his book (Chapter 9) 591

queue: one long braid, worn by Chinese men who shaved the front of the head (Chapter 35) 2940

quinine: a drug for the disease malaria (Chapter 35) 2940

quitrent: a small yearly rent on land (Chapter 19) 1235

quiver: the case that holds arrows (Chapter 35) 2912

Quivira: a rich land the Turk told of, where Coronado found Wichita towns and no gold (Chapter 1) 21

quota: a fixed share (Chapter 4) 298

quota laws: laws that fixed how many people could come from each country (Chapter 4) 298

QWERTY: the keyboard arrangement that begins Q, W, E, R, T, Y on the top row of letters (Chapter 8) 541

R

rabbi: a teacher and leader of a Jewish congregation (Chapter 29) 2274

race card: a printed list of the horses in a race (Chapter 36) 3008

race prejudice: hating or looking down on people because of their race (Chapter 5) 376

race records: record company managers' name in the 1920s for records made for Black buyers (Chapter 33) 2759

racial bias: unfair treatment because of race (Chapter 16) 1084

racial gerrymander: a set of districts drawn by race in a way the Constitution forbids (Chapter 25) 1909

racial slurs: insulting names for Black people (Chapter 22) 1559

racially nondiscriminatory basis: no child could be turned away because of race (Chapter 20) 1372

rack: an old device for torturing a person by stretching the body (Chapter 21) 1456

racketeering law: the law against running a business through a pattern of fraud (Chapter 19) 1291

radiation: energy that substances such as a reactor's fuel give off, which can damage the cells of the body (Chapter 10) 702

radiation sickness: fever within two days, then hair falling out and bleeding from the gums, nose and under the skin, caused by radiation (Chapter 22) 1559

radio direction finder: a radio that locks onto a signal to show which way it came from (Chapter 1) 74

radioactive: describes a material whose atoms break down and give off energy and tiny particles (Chapter 1) 92

radiocarbon date: an age measured from something that was once alive, such as wood or bone (Chapter 13) 844

radiocarbon dating: a way to measure the age of anything that was once alive, by how much of one kind of carbon is left in it (Chapter 2) 108

radium: a radioactive metal (Chapter 9) 633

radium jaw: a jaw bone wasting away and breaking apart from radium (Chapter 13) 868

radon: a radioactive gas from uranium that caused lung cancer in miners who breathed it (Chapter 10) 702

radon daughters: radioactive specks that radon atoms break apart into, which miners breathed in (Chapter 13) 886

Ragamuffin Day: a Thanksgiving custom, from about 1870 into the 1920s, when New York children dressed in costumes and begged from door to door (Chapter 37) 3119

ragtime: piano music with a "ragged" rhythm, in which the tune lands between the beats while a steady beat keeps time (Chapter 33) 2746

raid: a quick attack to seize goods, horses or people (Chapter 2) 116

railhead: a town at the end of a railroad line (Chapter 5) 363

ranch house: a long, low house of one story (Chapter 7) 485

Ranger: a soldier of a specially trained Army unit (Chapter 22) 1585

ransacked: tore through a house and wrecked it (Chapter 28) 2138

rape: forcing a person to have sex (Chapter 1) 21

raptors: birds that hunt other animals (Chapter 3) 229

Rastafarian vow: a religious promise not to cut one's hair (Chapter 29) 2324

ratchet: a bar with teeth (Chapter 6) 418

ratify: to approve formally (Chapter 2) 120

ration: a set amount of food given out (Chapter 3) 200

ration points: numbers printed on ration stamps and used, along with money, to pay for rationed foods (Chapter 18) 1204

rational: having a sensible reason (Chapter 20) 1372

rationing: limiting how much of a food each person could buy (Chapter 15) 1015

rations, clothing and annuities: the food, goods and yearly payments promised to a nation in its treaties (Chapter 2) 134

rattan: a thin, bendable cane cut from a kind of palm (Chapter 30) 2392

Raven and Eagle sides: the two halves of the Tlingit people, each made up of clans (Chapter 32) 2598

raw iron: iron not yet made into finished goods (Chapter 13) 852

razed: torn down completely (Chapter 3) 229

reactor: a machine where atoms are split in a chain reaction (Chapter 9) 614

read publicly out of meeting: expelled in front of the whole church (Chapter 29) 2242

read the Constitution strictly: hold that the government can do only what the document says it can (Chapter 20) 1333

real: a Spanish silver coin (Chapter 12) 789

real GDP: GDP counted with the change in prices taken out, to show how much the country actually made (Chapter 16) 1084

reaper: a machine that cuts ripe grain (Chapter 8) 535

rear admiral: one of the highest ranks in the Navy (Chapter 1) 74

reasonable diligence: reasonable care (Chapter 14) 974

rebate: money a railroad would pay back to a shipper on every barrel he shipped (Chapter 19) 1256

receiver: an official who takes over a failed bank and pays its debts from what is left (Chapter 17) 1128

recess appointment: a president filling a seat while the Senate is away (Chapter 20) 1372

recession: a time when business shrinks and people lose jobs (Chapter 16) 1049

recitation bench: the bench at the front where a pupil said a lesson out loud to the teacher (Chapter 30) 2375

reckless endangerment: putting people in danger through carelessness (Chapter 21) 1468

reclamation: taking something back (Chapter 2) 170

recognition: United States officials dealing with a nation as a government (Chapter 2) 158

recognize (a country): to accept officially that it exists (Chapter 2) 120

recognize a union: to accept it and bargain with it (Chapter 14) 941

recognized (federally): accepted by federal officials as a nation with its own government (Chapter 2) 126

reconcentration: forcing civilians out of their homes into camps or zones that soldiers guarded (Chapter 23) 1623

reconciliation: making peace after a wrong (Chapter 24) 1744

Reconstruction: the rebuilding of the Southern states' governments after the Civil War, in the years when members of Congress wrote Black Americans' rights into three amendments to the Constitution and into new federal laws (Chapter 20) 1341

Reconstruction Acts: the laws members of Congress passed for Reconstruction (Chapter 20) 1341

recorded Quaker minister: a speaker whom a Quaker meeting officially recognized (Chapter 25) 1767

recorder: a city official who also served as a judge (Chapter 25) 1795

recording secretary: the keeper of the written record of a union's meetings (Chapter 16) 1096

recount: a second count of the votes (Chapter 20) 1390

rectum: the end of the bowel (Chapter 26) 1975

redlining: drawing a line around a neighborhood on a map and then refusing to lend money for houses inside it (Chapter 6) 431

refinery: a plant that turns crude oil into fuels (Chapter 3) 240

refining: the work of turning crude oil from the ground into fuels people can use (Chapter 16) 1074

reform school: a school where courts sent children who were in trouble (Chapter 33) 2759

refuge: a safe place, or land where wild animals are kept safe (Chapter 2) 102

refuge of last resort: a place to go when there is nowhere else (Chapter 27) 2104

refugee: a person who flees their home to be safe (Chapter 2) 102

refugee (Refugee Act of 1980): a person outside their own country who cannot go back because of a real fear of being harmed for their race, religion, nationality, group or political beliefs (Chapter 4) 310

regiment: a unit of the army (Chapter 7) 463

Register of Deeds: the county office that keeps records of land (Chapter 17) 1119

registrar: the official who signed up voters or students (Chapter 20) 1341

regular singing: singing from written notes (Chapter 33) 2723

regulating parties: companies of men who made sure people obeyed the Cherokee Nation's laws (Chapter 21) 1434

Regulation Q: a federal rule that forbade banks to pay more than a set rate of interest on a savings account (Chapter 17) 1153

regulator clock: a very exact clock (Chapter 6) 407

rejection: the body's defenses attacking an organ from almost anyone else (Chapter 26) 2005

rekindle: to start a fire burning again (Chapter 27) 2104

relaxers: creams used to straighten hair (Chapter 35) 2959

relay: a device that boosts a weakening signal at points along a telegraph line (Chapter 8) 535

relays: one party hauled loads part of the way and left them, and the next party carried them on (Chapter 1) 74

relief: public money for people without work (Chapter 4) 298

relief office: a place that gave out food or money to the poor (Chapter 25) 1829

relief valve: a valve that opens to let out pressure (Chapter 10) 702

religion clauses: the two parts of the First Amendment about religion (Chapter 29) 2324

religious order: a group of priests, brothers or sisters who live under shared religious promises (Chapter 1) 21

religious test: an oath about religious beliefs that a person had to swear before taking office (Chapter 29) 2242

relocation: the program under which officials of the Bureau of Indian Affairs moved Native people off reservations and into cities, giving those who signed up a one-way ticket and short-term help (Chapter 2) 158

remonstrance: a formal protest (Chapter 29) 2242

removal (from the country): the government's word for deportation, forcing a person to leave the country (Chapter 4) 320

removal (of a Native nation): forcing a whole Native nation out of its homeland and moving it away, as United States soldiers did to the nations of the Southeast (Chapter 2) 126

renaissance: a French word that means rebirth (Chapter 32) 2660

rendezvous: the gathering where the trappers met every summer, from the French word for a meeting (Chapter 1) 44

renewable energy: wind, solar, flowing water and other sources that do not run out (Chapter 10) 711

repair: payments or other steps to make up for what slavery did (Chapter 24) 1666

reparations: payments made to make up for a wrong (Chapter 16) 1067

repartimiento: a Spanish system of forced labor under which officials sent Native workers in groups, by turns, to work on Spanish projects, and were supposed to pay them (Chapter 14) 912

repatriation: sending human remains and sacred objects home to the nations and families they came from (Chapter 2) 158

repeal: to cancel a law (Chapter 19) 1250

repellant: disgusting (Chapter 32) 2643

repent: to be sorry for doing wrong and to change (Chapter 32) 2627

repoussé: shaping thin copper sheets by hammering (Chapter 12) 807

reprehensible: deserving strong blame (Chapter 9) 633

reprieve: an order that calls off or puts off an execution (Chapter 2) 134

reprimand: scold officially (Chapter 4) 310

reprisal: punishment by government officials (Chapter 29) 2324

republic: a country governed by elected representatives (Chapter 20) 1322

Republican: a member of one of the country's two main political parties (Chapter 1) 44

research and development: the work of trying out new ideas (Chapter 18) 1214

reservation: a piece of land set aside for a Native nation in a treaty or by an order. United States officials and soldiers forced the nations onto reservations, and officials and settlers took the rest of their land (Chapter 1) 44

reserve: an area set aside for a nation to live on (Chapter 3) 192

reserves: the money a bank keeps on hand instead of lending it out (Chapter 17) 1143

reservoir: a lake made by a dam to store water (Chapter 3) 215

Resident Commissioner: Puerto Rico's one member in the House, who cannot vote on the House floor (Chapter 20) 1390

residuals: payments that grow when a game sells well (Chapter 34) 2889

resin: a sticky stuff that comes from trees (Chapter 32) 2613

resolution: a written statement that a meeting or a group of lawmakers votes on (Chapter 1) 64

restrictive covenant: a section written into the deed of a house that forbade the owner to sell or rent it to a Black buyer, and sometimes to Jewish or Asian buyers, and bound every later owner (Chapter 6) 431

retailer: a business that sells goods to the people who use them (Chapter 18) 1204

retainer: the money paid to a lawyer to take a case (Chapter 29) 2256

retarded: the word then used for children and people with intellectual disabilities (Chapter 25) 1829

retweet: a post shared again on Twitter (Chapter 31) 2585

revelation: a message a person says came from God (Chapter 25) 1760

revenue: the money a company takes in (Chapter 19) 1291

revival: a series of meetings meant to stir people to a stronger faith (Chapter 29) 2231

revue: a show of songs and comic scenes (Chapter 34) 2861

rhetoric: the art of speaking and writing well (Chapter 25) 1778

RIAA: the Recording Industry Association of America, the record companies' own group, which gives sales awards and counts what the companies take in (Chapter 33) 2713

Rice Coast: the part of West Africa that included Senegambia and Sierra Leone (Chapter 15) 995

ridden out on a rail: carried out of town on a wooden pole (Chapter 21) 1442

rider: a short passage attached to a spending bill (Chapter 2) 134

riding bosses: the men on horseback who watched over the field workers (Chapter 15) 1015

rift valley: a valley that forms where the Earth's crust, its rocky outer layer, is pulling apart (Chapter 9) 633

right of Representation in the Legislature: a say in the body that makes the laws (Chapter 25) 1770

rights movement: a group of people who organize together to change a rule that denies them something (Chapter 12) 832

ringleaders: the leaders of the fighting (Chapter 30) 2392

Rio Grande: the river along the border between Texas and Mexico (Chapter 1) 21

river basin: all the land whose rain drains into one river (Chapter 1) 31

river bottom: the low land along a river (Chapter 37) 3107

river cane: a tall plant with hollow stems that grows along rivers (Chapter 32) 2613

riveting gang: a crew that joined steel beams together with hot metal pins called rivets (Chapter 2) 149

rivets: hot metal pins that lock steel beams together, or small metal pins that hold cloth together (Chapter 2) 149

rocket-propelled grenade: a small rocket fired from a tube carried on a fighter's shoulder (Chapter 22) 1585

rod: a stick or switch used for punishment (Chapter 7) 474

roentgen: a unit for measuring radiation (Chapter 9) 614

roll, pitch and yaw: an airplane's wing tips moving up and down, its nose moving up and down, and its nose swinging from side to side (Chapter 8) 553

rolling and slitting mill: a mill that pressed iron into flat sheets and cut it into thin rods (Chapter 8) 517

rolling outages: planned power cuts that move from area to area (Chapter 10) 711

Romanism: an insulting word for the Catholic Church (Chapter 29) 2274

Rookie of the Year: the best first-year player (Chapter 36) 3028

Ross Ice Shelf: a huge sheet of ice floating on the sea (Chapter 1) 74

rostrum: a speaker's stand (Chapter 20) 1356

rotation: the list of songs a station plays over and over each day (Chapter 33) 2795

rotation in office: Jackson's name for filling government jobs with his own supporters (Chapter 20) 1333

rote: learned by repeating things over and over (Chapter 7) 495

Rotunda: the round central hall of the US Capitol (Chapter 4) 320

roundhouse: a round building for gatherings (Chapter 3) 240

rovers: robot vehicles (Chapter 1) 92

royal colony: a colony with a governor and council chosen by the king (Chapter 19) 1235

Royal Commission: a group set up to find the cause of the Quebec Bridge collapse (Chapter 12) 815

Royal Proclamation of 1763: the British king's order of 1763 that set aside much of the western land for Native nations and banned private buyers from buying Native land (Chapter 5) 346

royal prosecutor: the lawyer who brought a case for the king (Chapter 22) 1502

royal treasury: the king's own money (Chapter 31) 2520

royalties: a share of the money from every sale (Chapter 2) 149

rudder: a movable upright part at the back of an airplane that controls yaw, the nose swinging from side to side (Chapter 8) 553

ruffs: stiff pleated collars (Chapter 35) 2916

rule of reason: the court's test that the Sherman Act banned only "unreasonable" limits on trade (Chapter 19) 1268

ruling elders: the men who led the Puritan church (Chapter 35) 2916

rum: a strong liquor made from molasses (Chapter 15) 1000

run: the yearly trip of fish up a river, or a rush on a single bank, when people crowd in to trade its notes or their deposits for coins (Chapter 3) 196

runoff: a second election between the top two candidates in a party's primary (Chapter 20) 1372

rural free delivery: a service in which postal workers carried mail to farm families' homes (Chapter 18) 1193

Rust Belt: a nickname for the older factory states of the North (Chapter 5) 383

RV: a recreational vehicle, a home on wheels (Chapter 16) 1102

S

Sabbath: the day of rest and worship (Chapter 21) 1412

sabotage: secretly wrecking someone else's work (Chapter 31) 2572

sachem: a leader of a Native nation (Chapter 2) 108

sack suit: a loose jacket with pants (Chapter 35) 2940

sacrament: a sacred act of worship (Chapter 29) 2304

sacred music: music for worship (Chapter 33) 2729

sacrifices: people whom others at Cahokia killed on purpose as part of the burial ceremonies (Chapter 35) 2908

sad colors: the colors Puritans wore, "sad" then meaning serious rather than unhappy (Chapter 35) 2916

sadistic: taking pleasure in hurting people (Chapter 22) 1585

"safe level" theory: the lead industry's claim that lead below a certain amount did no harm (Chapter 13) 868

safety valve: a part that lets steam out before the pressure gets too high (Chapter 27) 2068

safety-valves: Frederick Douglass's word for the Christmas holidays, which enslavers used to drain away the anger that could lead enslaved people to rebel (Chapter 37) 3101

sagas: old stories written down in Iceland (Chapter 1) 17

sailing master: the officer in charge of sailing a ship (Chapter 27) 2061

sailor's protection: a paper describing a free American sailor (Chapter 35) 2934

saloon: a bar, mostly for men, that sold drinks by the glass (Chapter 17) 1136

salpingectomy: an operation that cuts out a section of each of the two tubes that carry an egg from an ovary to the womb, so that a woman can never become pregnant (Chapter 20) 1356

salt domes: large masses of salt buried deep underground (Chapter 10) 691

salt lick: a place where animals lick salt from the ground (Chapter 11) 721

salutes of artillery: cannons fired as a greeting (Chapter 33) 2717

salvage: bringing up goods from a wreck (Chapter 27) 2047

same-sex couple: two men or two women (Chapter 25) 1909

samp: corn pounded into coarse meal and boiled into a mush. The name comes from the Narragansett word nasàump (Chapter 15) 991

sampler: a strip of cloth that kept a record of stitches and patterns to copy later (Chapter 32) 2608

sanction: approval (Chapter 29) 2256

sanitized depictions: pictures with the cruelty cleaned out (Chapter 12) 832

saplings: thin young trees (Chapter 7) 460

sappers and miners: soldiers who dug the trenches that let an army surround a fort (Chapter 22) 1522

sarcophagus: a stone coffin (Chapter 12) 825

sassafras bark: a bark people boiled to make tea (Chapter 37) 3091

satisfied: said of a judgment whose terms have been met (Chapter 20) 1390

savings and loans, thrifts: businesses that took in people's savings and made long-term home loans at fixed interest rates (Chapter 17) 1153

sawmill: a mill that cuts logs into boards (Chapter 3) 192

sawyer: a man who saws logs into boards (Chapter 12) 799

scalp: the skin and hair cut away from the top of a person's head (Chapter 2) 120

scalp hunters: men who hunted Native people for their scalps (Chapter 22) 1515

scalpel: a surgeon's knife (Chapter 22) 1543

scandal: wrongdoing that becomes publicly known (Chapter 20) 1372

scanty: too little (Chapter 35) 2934

scapegoating: putting the blame on people who were not at fault (Chapter 25) 1770

scarlet fever: a disease that causes a high fever and a rash (Chapter 30) 2375

Schedule I: the federal list for drugs with a high risk of abuse and no accepted use as medicine (Chapter 28) 2179

Schedule III: a federal list of drugs that doctors may order as medicine (Chapter 28) 2190

school book ban: in PEN America's use, any removal of a book, or any limit on reading it, because of what is in it (Chapter 30) 2474

schooner: a sailing ship with two masts or more (Chapter 27) 2061

science journal: a magazine where scientists publish their research (Chapter 5) 387

scientific racism: the use of the look of science to claim that some races are better than others (Chapter 9) 596

scintilla of proof: almost no evidence (Chapter 27) 2078

Scots-Irish: families of Scottish background who had lived in the north of Ireland (Chapter 4) 267

scour: for a plow, to clean itself as it moves (Chapter 8) 535

scourged: whipped (Chapter 24) 1712

scribe: a person who writes documents for someone else (Chapter 30) 2359

scrip: paper that stood in for money (Chapter 15) 1015

scripture: a holy book. "The Scriptures" means the Bible (Chapter 20) 1309

scrub: brush and small trees (Chapter 3) 189

scrutiny: close study (Chapter 16) 1084

scurvy: a disease caused by a severe lack of vitamin C, which comes from fresh food, that makes people weak, damages their gums and makes them bleed under the skin (Chapter 1) 21

scythe: a long curved blade for cutting grass (Chapter 3) 185

Sea of Tranquility: a flat plain on the Moon (Chapter 1) 82

Seabed 2030: an international project in which people from many countries are working to map the whole floor of the ocean (Chapter 1) 92

seafloor spreading: the idea that new ocean floor forms along the undersea mountain ranges and spreads outward (Chapter 9) 633

sealed bid: a sale where buyers send in secret offers and the highest offer wins (Chapter 32) 2660

seamstress: a woman who sewed for pay (Chapter 14) 929

search index: the huge list of web pages a search engine keeps (Chapter 19) 1291

search warrant: a paper from a judge that allows a search (Chapter 21) 1468

seasonal round: a yearly circuit from one camp to the next (Chapter 5) 333

seasoning: the sickness that killed between 50 and 90 percent of early newcomers to Virginia (Chapter 8) 517

Second Bank of the United States: a national bank (Chapter 16) 1067

Second Continental Congress: the meeting of delegates each colony chose to speak for it (Chapter 23) 1605

Second Middle Passage: the forced move of enslaved people inside the country, from the Upper South to the Deep South (Chapter 5) 352

second-class mailing privilege: the permit that let a paper go by mail as a newspaper (Chapter 31) 2559

second-degree murder: killing someone on purpose but without planning it ahead (Chapter 21) 1468

second-degree murder (Georgia): causing a death while, through criminal carelessness, causing a child under 18 "cruel or excessive physical or mental pain" (Chapter 30) 2474

secondhand smoke: the smoke other people breathe in (Chapter 28) 2190

Secretary of State: the official who runs the country's dealings with other countries (Chapter 1) 64

Secretary of the Interior: one of the heads of government departments who advise the president (Chapter 2) 134

Secretary of the Treasury: the head of the government department in charge of money (Chapter 17) 1123

sect: a religious group (Chapter 22) 1502

section: one square mile, which is 640 acres (Chapter 3) 192

Section 230: the 1996 law under which a website is not treated as the publisher of what its users post (Chapter 31) 2585

secularization: Mexican officials turning the missions into ordinary parish churches (Chapter 29) 2256

security: something a lender can take if a loan is not paid back. Security is also a promise backed by money or property that a person will come back to court (Chapter 11) 734

sedative: a drug that makes a person calm and sleepy (Chapter 29) 2304

sedition: words or acts that stir people up against the government (Chapter 20) 1322

Sedition Act: the 1798 law that made it a crime to write or publish "any false, scandalous and malicious writing" against the government (Chapter 20) 1322

seditious libel: the crime of printing words that blame a public official or the government, whether or not the words were true (Chapter 4) 267

seed-stock: the animals or plants that farmers keep for breeding, a word Harry Laughlin used for people (Chapter 25) 1829

segregated: kept apart by race (Chapter 12) 815

segregated schools: schools that kept children of different races apart (Chapter 20) 1356

segregation: keeping people apart by race (Chapter 1) 82

segregation academy: a private school started so that white children would not have to sit in class with Black children (Chapter 30) 2442

segregationist: a person who wants the races kept apart (Chapter 12) 832

seismologist: a scientist who studies earthquakes (Chapter 27) 2061

seized: taken by force (Chapter 1) 21

seizure: under the Constitution, a way of stopping or holding a person by force. A seizure is also a sudden burst of activity in the brain that can make a person shake or pass out (Chapter 25) 1909

Selective Availability: the policy under which US government officials made public GPS signals less exact on purpose until 2000 (Chapter 8) 561

selectmen: a town's elected leaders (Chapter 20) 1309

self-deportation: leaving the country on one's own, without being deported by officers (Chapter 4) 320

self-determination: a nation deciding its own affairs (Chapter 2) 158

self-induction: a coil of wire making its own push of electricity against a change in its current (Chapter 9) 596

self-service: customers picking goods off the shelves themselves instead of asking a clerk to fetch them (Chapter 18) 1204

selling short: a bet that a stock's price will fall, made by selling borrowed shares that must later be bought back and returned, for less if the price has fallen (Chapter 18) 1204

semi-dwarf wheat: wheat with short stems (Chapter 15) 1028

seminary: a school that trains people for church work. A seminary was also a school for older girls or young women (Chapter 4) 275

Senegambia: the land along the Senegal and Gambia rivers (Chapter 15) 995

sensible: aware (Chapter 20) 1317

sent by subscription: paid for by a group of people (Chapter 32) 2643

separate but equal: the rule of Plessy v. Ferguson (1896) that let states keep Black and white people apart by law (Chapter 24) 1712

Separatists: English Pilgrims who wanted to worship apart from the Church of England (Chapter 4) 260

Sephardic Jews: Jews whose families had come from Spain and Portugal (Chapter 4) 267

sequins: tiny shiny disks sewn onto cloth (Chapter 35) 2959

serape: a blanket that can be worn as a cloak (Chapter 35) 2912

sergeant major: a regiment's top sergeant (Chapter 22) 1543

sermon: a talk given in church (Chapter 12) 795

service line: the pipe that carries water from the main line under the street into a house (Chapter 13) 899

servile labor: ordinary work (Chapter 37) 3091

servitude: slavery (Chapter 20) 1341

setback: a place where the upper floors of a building step back from the street (Chapter 6) 431

settle: to agree to take money and end a lawsuit (Chapter 18) 1222

settlement: an agreement that ends a lawsuit (Chapter 4) 320

Seventeenth Amendment: the 1913 change to the Constitution under which voters, not state lawmakers, choose senators (Chapter 20) 1356

Seventh-day Adventist: a member of a Christian church (Chapter 30) 2442

Seward's Folly, Seward's Icebox: what some opponents called the purchase of Alaska (Chapter 1) 64

sewing patterns: paper shapes that a person who sews pins to cloth and cuts around (Chapter 35) 2940

sexton: the caretaker of a church (Chapter 12) 795

sexual abuse of a child: an adult using a child's body for sex (Chapter 29) 2324

sexual assault: any sexual touching or attack against a person's will, including rape (Chapter 15) 1039

sexual exploitation of children: using children for sex acts or sexual pictures (Chapter 36) 3058

sexual harassment: unwanted sexual words or touching (Chapter 25) 1909

sexual orientation: which sex a person is attracted to (Chapter 25) 1909

sexually aggressive: wanting to force sex on someone (Chapter 34) 2861

shackles: metal rings locked around a person's wrists or ankles (Chapter 14) 914

shaft: a deep hole that leads down into a mine (Chapter 10) 681

shale: a soft rock made of hardened mud (Chapter 10) 681

shallop: a small open boat (Chapter 11) 726

shaman: a religious or spiritual leader (Chapter 29) 2242

shanty: a small, roughly built house (Chapter 7) 480

shantytown: a group of shacks (Chapter 16) 1084

shape notes: printed notes whose shape tells the singer which sound to sing (Chapter 33) 2736

share tenant: a tenant who owned mules or tools and kept two-thirds to three-quarters of the crop (Chapter 16) 1074

sharecropper: a person who farms someone else's land and pays the owner with a share of the crop (Chapter 1) 74

sharecropping: farming a landowner's fields in return for a share of the crop, buying tools, seed and food on credit at the landowner's prices (Chapter 15) 1009

shares: small pieces of ownership in a company (Chapter 4) 260

sharpshooter: a soldier who shoots at a distance with a rifle (Chapter 32) 2643

sheet music: the printed music people bought to play at home (Chapter 33) 2736

shelterbelts: rows of trees planted to slow the wind (Chapter 3) 215

shews: shows (Chapter 34) 2833

shilling: a coin of English money, 20 of which made one pound (Chapter 3) 192

shingled: cut short (Chapter 30) 2392

shipping container: a metal box 35 feet long, the size of a truck trailer (Chapter 11) 764

ship's log: the daily record a crew keeps of the ship's position, the wind and the sea (Chapter 9) 596

shirtwaist: a woman's blouse (Chapter 14) 941

shock: what happens when too little blood is left in the body, so the person becomes confused, the heart beats fast and the blood pressure drops (Chapter 14) 922

short rations: less food than people need (Chapter 27) 2036

shortgrass: the short native grass of the southern Plains (Chapter 3) 215

shuffleboard: a game of sliding pieces down a long board (Chapter 36) 2987

sickle: a curved blade for cutting wheat by hand (Chapter 15) 1004

sickle cell disease: a disease that bends red blood cells into a curved shape, so they slow the blood and carry less oxygen, causing attacks of severe pain (Chapter 26) 2022

side: one song on one face of a record (Chapter 33) 2759

side arms: the small weapons officers carried (Chapter 22) 1543

siege: surrounding a place and cutting it off until the people inside give up (Chapter 2) 120

Siete Partidas: an old Spanish code of laws that listed rights for enslaved people (Chapter 24) 1667

sieve: a strainer full of holes (Chapter 16) 1084

Signal Corps: the Army's communications branch (Chapter 8) 553

silhouette: an outline portrait cut from paper (Chapter 32) 2619

silica: the hard mineral that sand is made of (Chapter 14) 941

silicon: a chemical element, used for chips (Chapter 8) 561

Silicon Valley: the area south of San Francisco where many computer companies started (Chapter 8) 561

silicosis: a disease caused by breathing silica dust. The dust forms scar tissue in the lungs, the scarred lungs cannot take in enough oxygen, it cannot be cured, and in bad cases it kills (Chapter 14) 941

silkscreen printing: pushing ink through a design on a fine screen with a rubber blade, so the same picture can be printed again and again (Chapter 32) 2679

Silver Star: a medal for bravery in battle (Chapter 22) 1585

silversmith: a craftsman who makes things out of silver (Chapter 2) 126

singing in parts: different voices singing different notes at the same time (Chapter 33) 2717

singing school: a class where a teacher taught people to read and sing music (Chapter 33) 2723

sinister and evil methods: wrong and wicked means (Chapter 35) 2923

sister: a nun, a woman who belongs to a Catholic religious order (Chapter 29) 2324

sit-down strike: a strike in which workers stop working but stay inside the plant, so the company cannot bring in other workers (Chapter 14) 941

site plan: the layout of the grounds (Chapter 6) 418

sit-in: a protest in which people sit inside a building and refuse to leave (Chapter 8) 561

Six Nations: six Native nations joined in one league, the Iroquois (Chapter 2) 116

sixpence: six British pennies (Chapter 16) 1057

Sixteenth Amendment: the 1913 change to the Constitution that lets Congress tax incomes (Chapter 20) 1356

skepel: a Dutch measure for dry goods (Chapter 6) 399

skid: one of the long metal bars a helicopter lands on (Chapter 27) 2093

Skraelings: the Norse name for the people they met in Vinland (Chapter 1) 17

slacks: loose pants (Chapter 35) 2949

slashed sleeves: sleeves cut so the cloth underneath showed through (Chapter 35) 2916

slates: thin boards of dark stone that children wrote on and wiped clean (Chapter 30) 2375

slave broker: a dealer in enslaved people (Chapter 17) 1119

slave code: a set of laws listing what enslaved people could not do, how they could be punished and what their owners could do to them (Chapter 16) 1052

slave patrol: a group of white men who rode out to watch and control enslaved people (Chapter 21) 1422

slave pen: a building where traders locked up enslaved people until they sold them (Chapter 24) 1693

slave-trade clause: the part of the Constitution that barred Congress from ending the import of enslaved people before 1808 (Chapter 24) 1684

slaw: a salad of shredded cabbage (Chapter 15) 1000

sleeping car: a railroad car with beds (Chapter 11) 745

slickwater fracturing: a cheaper way of fracking that an engineer, Nick Steinsberger, used on the Barnett Shale in the late 1990s (Chapter 10) 711

slighted: treated without respect (Chapter 25) 1770

slips: short loose dresses (Chapter 35) 2934

sloop: a small sailing ship (Chapter 24) 1684

slop shops: the first shops that sold ready-made clothes, next to the docks (Chapter 35) 2934

SLS: Space Launch System, the rocket for NASA's Orion spacecraft (Chapter 1) 92

slump: a time when business falls off (Chapter 16) 1096

smallpox: a disease that spreads from person to person and can kill (Chapter 2) 120

smelter: a plant where workers melt ore to get the metal out (Chapter 13) 868

smelting: heating rock until the metal inside it melts out (Chapter 13) 844

smiths: people who shape metal into tools (Chapter 8) 516

smocks: long linen shirts worn under the other clothes (Chapter 35) 2916

smoke easement: a legal right to send a company's smoke over a farm (Chapter 13) 868

smolder: to burn slowly with very little air (Chapter 10) 671

smuggling: bringing goods in secretly (Chapter 12) 789

Snake: the expedition members' name for the Shoshone (Chapter 1) 44

SNAP: the Supplemental Nutrition Assistance Program, once called food stamps (Chapter 15) 1039

SNCC: the Student Nonviolent Coordinating Committee (Chapter 33) 2779

sniper: a hidden marksman (Chapter 2) 158

social hierarchy: the ranking of people from the most powerful to the least (Chapter 36) 2999

Social Security: the government's program of payments to people who are old or cannot work (Chapter 14) 941

socialist: a person who wants the public, rather than private owners, to own big businesses (Chapter 14) 929

Socialist Realism: the Soviet government's official style of art, paintings that looked like real life, only better, and showed simple stories in support of the government's ideas (Chapter 32) 2679

sociologist: a scholar who studies how groups of people live together (Chapter 29) 2304

sod: the top layer of soil, held together by the tangled roots of grass (Chapter 3) 215

sod corn: corn set straight into newly plowed prairie sod (Chapter 15) 1009

sojourner: a traveler who stays in a place for a while (Chapter 25) 1778

soldering iron: a tool that heats metal to join wires (Chapter 37) 3125

Soldier's Medal: the Army's highest award for bravery outside combat with an enemy (Chapter 22) 1575

solemn day of humiliation: a day set aside for "humble and fervent prayer" (Chapter 37) 3083

solemnized: marked with ceremony (Chapter 37) 3094

soliciting: asking for (Chapter 37) 3094

Solicitor General: the officer who argues the government's own cases in the Supreme Court (Chapter 20) 1372

solidarity: standing together (Chapter 37) 3125

solitary confinement: being locked up alone (Chapter 2) 134

solstices: the longest day and the shortest day of the year (Chapter 6) 395

Sons of Liberty: colonists who organized against British taxes and rule (Chapter 19) 1245

Sooners: people who sneaked in before the start of the 1889 Land Run to grab land (Chapter 5) 363

soot: the black powder that smoke leaves behind (Chapter 3) 192

sorcery: using magic to do harm (Chapter 2) 108

soul liberty: Roger Williams's name for the freedom to follow one's own conscience (Chapter 29) 2213

sounding: a measurement of how deep the water is (Chapter 9) 633

sources: the people who give a reporter information (Chapter 31) 2572

sousaphone: a large brass horn made for marching bands (Chapter 33) 2746

South Pass: a crossing of the Rocky Mountains in present-day Wyoming (Chapter 1) 44

Southern Christian Leadership Conference: the group Martin Luther King Jr. had led (Chapter 37) 3125

Southern Poverty Law Center: a group that campaigns for civil rights (Chapter 12) 832

sovereignty: the right of a nation to govern itself (Chapter 2) 120

Soviet Union: a large country ruled from Moscow, in Russia, from 1922 to 1991 (Chapter 1) 82

sower of sedition: a person who stirs people up against the government (Chapter 29) 2213

Soyal: the Hopi ceremony at the winter solstice that begins their year of ceremonies (Chapter 37) 3075

space shuttle: a spacecraft that rode rockets up into space and landed on a runway when it came back (Chapter 1) 82

Spanish Armada: a fleet of Spanish warships (Chapter 4) 258

spawn: to lay eggs, for fish (Chapter 3) 196

speakeasy: a hidden bar that sold liquor against the law (Chapter 28) 2165

Speaker: the officer who runs an assembly's meetings (Chapter 20) 1309

Speaker of the House: the member chosen to run the House's meetings (Chapter 28) 2179

speaking in tongues: speaking sounds that the speaker has not learned and does not understand (Chapter 29) 2287

special counsel: the title of the NAACP's chief lawyer. A Special Counsel is also an outside lawyer appointed to investigate (Chapter 25) 1829

special deputies: men given a police officer's powers for a time (Chapter 21) 1456

special education: classes or programs set up for disabled children (Chapter 25) 1871

special election: a vote held to fill an empty seat (Chapter 20) 1341

special prosecutor: a lawyer brought in from outside to handle a case (Chapter 20) 1372

special session: an extra meeting of lawmakers (Chapter 27) 2104

specialist: a person who spends most of their time on one kind of work, such as making tools, instead of growing food (Chapter 16) 1049

specie: coins of gold and silver (Chapter 17) 1128

spectral evidence: an accuser's word that the spirit of the accused person had come to her in a dream or a vision and hurt her (Chapter 21) 1412

spectroscope: an instrument that splits light into its colors (Chapter 13) 863

speculate: to buy something in the hope of selling it later at a higher price (Chapter 16) 1067

speculation: buying something only to sell it later at a higher price (Chapter 15) 1004

speculator: a person who buys property to sell it again at a profit (Chapter 6) 443

spermaceti: a waxy oil found in the head of the sperm whale, made into the brightest and costliest candles (Chapter 10) 669

spherical trigonometry: the mathematics of angles and distances on a sphere, such as the sky (Chapter 9) 591

sphinx: a creature with a lion's body and a human head (Chapter 32) 2695

spiked: stopped a story (Chapter 31) 2585

spillway: the channel that lets extra water out of a dam (Chapter 27) 2068

spinal cord: the bundle of nerves inside the backbone that carries messages between the brain and the body (Chapter 22) 1575

spinal tap: pushing a needle between the bones of the lower back to draw out fluid from around the spinal cord (Chapter 26) 1990

spindle: the rod that twists cotton fibers into thread (Chapter 19) 1250

spire: a tall pointed top (Chapter 6) 431

spirits: a strong liquor (Chapter 16) 1062

spiritual: a religious song made by enslaved Black people (Chapter 24) 1693

spittoon: a bowl for spitting into (Chapter 28) 2147

spleen: an organ that cleans the blood (Chapter 9) 614

splint: something that holds a broken bone still (Chapter 35) 2959

splints: thin strips cut for weaving (Chapter 32) 2660

spoils: the goods an army takes from the side it beats (Chapter 20) 1333

spoils system: the practice of presidents handing out government jobs to their supporters (Chapter 20) 1333

sponsor: the lawmaker who brings a bill forward (Chapter 37) 3125

sprawl: the spreading of cities outward in subdivisions of houses (Chapter 6) 443

spreadsheet program: a program for working with tables of numbers (Chapter 8) 561

Sputnik: the first satellite to circle the Earth (Chapter 1) 82

squadron: a group of warships (Chapter 1) 44

squatters: people living on land without the owner's permission (Chapter 11) 732

squatting: settling on land without any right (Chapter 32) 2627

stabilize: make firm (Chapter 12) 832

stablecoins: digital coins whose makers promise to trade each one for a fixed amount, such as one dollar (Chapter 17) 1160

staff: a mix of plaster, cement and plant fiber that workers poured into molds, used for the fronts of the 1893 fair buildings (Chapter 6) 418

stage: the raised platform where a Hidatsa family dried its corn (Chapter 7) 474

stage 4 cancer: cancer that has spread through the body (Chapter 33) 2795

stage line: a wagon or coach carrying passengers along a fixed route between towns (Chapter 11) 728

stagflation: a mix of inflation and a stagnant economy, one that is not growing (Chapter 16) 1096

stakeholder: the man who held the bets (Chapter 36) 2987

stalemate: a fight that neither side can win (Chapter 31) 2572

stallion: a male horse kept for breeding (Chapter 36) 2995

Stamp Act: a British tax on printed paper (Chapter 31) 2520

stand presented: to stand charged before the court (Chapter 35) 2916

standard wage: the same pay for the same work across a trade (Chapter 14) 920

standardized test: the same test, given and scored the same way, for every child who takes it (Chapter 30) 2474

standards: lists of what students should learn (Chapter 20) 1390

starboard: a ship's right side (Chapter 27) 2061

Starvation Winter: the winter of 1883 and 1884, when about 600 Blackfeet died of starvation. Hide hunters had killed nearly all the bison, and members of Congress had cut the money for the food promised to the tribe in a treaty (Chapter 3) 215

Starving Time: the winter of 1609 to 1610 at Jamestown, when about 500 colonists fell to about 61 (Chapter 15) 991

state assembly: one of the two groups of lawmakers in New York State (Chapter 20) 1356

state constitution: the state's basic set of laws (Chapter 10) 681

state geologist: a scientist the state paid to study its rocks (Chapter 13) 859

State Law Librarian: the librarian in charge of the state's law library (Chapter 6) 443

state of emergency: an official order saying that people are in danger and need help fast (Chapter 3) 229

State Security: the political police of Fidel Castro's government (Chapter 4) 310

state troopers: the state police (Chapter 7) 495

stateless: counted by no country as its citizen (Chapter 4) 320

States General: the lawmaking assembly of the Netherlands (Chapter 19) 1235

station license: the government permit a station needs to broadcast (Chapter 31) 2572

Stations of the Cross: a set of markers used in Catholic prayer (Chapter 29) 2231

statute: a law (Chapter 25) 1795

statute of limitations: a time limit after which a person can no longer sue (Chapter 25) 1829

stay: an order that stops a hanging until a court can hear the case (Chapter 21) 1456

steamboat pilot: the person who steers the boat (Chapter 11) 745

steelhead: a trout that swims to the sea and back (Chapter 10) 691

steelyard: a kind of weighing scale (Chapter 8) 517

steeple: the tall pointed tower on top of a church (Chapter 12) 795

steer: one of the male cattle raised for beef (Chapter 15) 1009

steerage: the cheapest space on a ship, below the decks (Chapter 4) 298

stenographer: a clerk who wrote down every word (Chapter 4) 298

stereolithography: a method of 3D printing in which the machine hardens each thin layer in turn (Chapter 8) 570

stereotype: an unfair, fixed idea about a whole group of people (Chapter 32) 2695

sterility: being unable to have children (Chapter 25) 1795

sterilization: an operation after which a person can never have a baby. For a woman a doctor cut or tied the tubes that carry eggs to the womb, cut out a piece of each, or removed the womb. For a man a doctor cut the tubes that carry sperm. It could not be undone. To sterilize a person is to do this operation (Chapter 2) 158

steward: a ship's servant. A steward was also the man in charge of supplies at a hospital or a college, or a man who helped look after a church's business (Chapter 20) 1341

stewardess: a woman who served passengers on an airplane, now called a flight attendant (Chapter 11) 764

stewards: race officials (Chapter 36) 3019

stick dance: a dance of enslaved people (Chapter 34) 2823

still: the equipment used to distill liquor (Chapter 28) 2138

stillbirth: a baby born dead (Chapter 9) 614

stillborn: born dead (Chapter 20) 1333

stimulus bill: a plan to spend federal money to bring back jobs (Chapter 16) 1102

stock: shares in owning a company (Chapter 8) 541

stock exchange: a place where people buy and sell shares of companies (Chapter 16) 1074

stock yards: pens where cattle, hogs and sheep were held until they were sold (Chapter 15) 1009

stockade: a pen fenced with upright logs. A stockade is also a military jail (Chapter 2) 126

stockholders: the people who own a company's shares (Chapter 19) 1250

stocks: a wooden board with holes that locked a person's ankles while the person sat in a public place (Chapter 21) 1412

stomp grounds: the grounds each Creek and Yuchi town keeps for the ceremony (Chapter 37) 3075

Stonewall Inn: a gay bar in New York City that police raided in 1969 (Chapter 25) 1871

stonewalling: refusing to answer or act (Chapter 29) 2324

stoneware: a hard kind of pottery (Chapter 36) 2987

stool: bowel movements (Chapter 4) 298

stool-ball: a game played with a ball, a bat and a stool (Chapter 37) 3083

stoolie: a person who informs on others (Chapter 34) 2877

stop and frisk: police stopping a person they suspect is armed and patting the outside of the clothes for weapons (Chapter 21) 1468

storm and sewer lines: pipes that carry away rainwater and waste (Chapter 6) 431

storm surge: the wall of seawater that a hurricane's winds push onto land (Chapter 27) 2093

storm troopers: the street fighters of Hitler's Nazi party (Chapter 36) 3045

straitjacket: a coat that pins a person's arms to the body (Chapter 13) 868

strap: a long, flat strip of leather used to hit children (Chapter 30) 2414

Strategic Petroleum Reserve: a store of crude oil kept for emergencies (Chapter 10) 702

streetcar: a passenger car that ran on rails laid in the streets (Chapter 6) 418

streetcar suburb: a neighborhood of homes at the edge of a city, along a streetcar line, where people lived and from which they traveled in to work (Chapter 6) 418

strike: a time when workers stop working until their employer agrees to better pay or conditions (Chapter 4) 283

strike fund: a fund of money the strikers set up to support one another during a strike (Chapter 14) 920

stripe: one stroke of the whip (Chapter 24) 1670

structural iron: the metal frames that hold up bridges and tall buildings (Chapter 2) 149

strychnine: a poison park managers put inside dead animals for wolves to eat (Chapter 3) 215

Stuart Pretender: a man who claimed he should be king of Britain (Chapter 37) 3091

student deferment: putting off a full-time college student's draft call while he stayed in school (Chapter 22) 1575

stylus: a pen-like point on the end of an arm (Chapter 8) 535

sub-captain: one of the leaders under a company's captain (Chapter 5) 363

subcommittee: a small group of senators or House members assigned to one subject (Chapter 2) 158

subdewing the Pecoits: defeating the Pequot (Chapter 37) 3083

subdivision: a tract of land divided into lots for single-family houses (Chapter 6) 443

subduction: one plate sliding down under another (Chapter 27) 2032

subprime loan: a loan with a higher interest rate, meant for borrowers that lenders think are more likely to fall behind (Chapter 7) 502

subscribers: the people who paid to get every copy of a newspaper (Chapter 18) 1178

subsidy: money paid to help a business grow (Chapter 16) 1062

subsist: to stay alive (Chapter 3) 200

substitute: a man hired to go into the army in a drafted man's place (Chapter 22) 1543

suburb: a town at the edge of a city (Chapter 4) 320

suffocate: to die because one cannot get air (Chapter 14) 941

suffrage: the right to vote (Chapter 20) 1341

sumptuary law: a law that limits what people may wear according to their rank (Chapter 35) 2916

Sun Belt: the warm states of the South and the West (Chapter 5) 383

Sun Dance: a sacred ceremony of the Plains nations (Chapter 29) 2304

Sun-priest: the man in a Pueblo town who watches where the sun comes up over the horizon and sets the planting calendar and the dates of the ceremonies (Chapter 37) 3075

sunstroke: an illness in which the body gets so hot that it can no longer cool itself (Chapter 4) 310

super PAC: a committee that may raise and spend unlimited sums on elections (Chapter 19) 1291

Superfund: the 1980 law under which federal officials could make companies that polluted a site pay for cleaning it up (Chapter 3) 229

superintendent: the official in charge of a national park, a reservation or a district's schools (Chapter 1) 64

Superintendent of Finance: the official in charge of the Continental Congress's money (Chapter 19) 1245

supermarket: a store that meets the Smithsonian's five tests: separate departments, self-service, low prices, many stores under one name and buying goods in huge amounts (Chapter 14) 963

superstitious: resting on false beliefs about magic and luck (Chapter 3) 200

supervised release: a time after prison when a court officer checks on a person (Chapter 10) 711

Supplemental Security Income: a federal payment for people with very low incomes who are elderly, blind or disabled (Chapter 23) 1656

supplier: one of the companies that made clothes for a store chain (Chapter 35) 2970

supply chains: the network of factories, ships and trucks that moves goods (Chapter 16) 1102

supported in idleness: fed without working (Chapter 37) 3107

suppress: stop (Chapter 19) 1291

Supreme Court: the highest court in the country (Chapter 2) 126

Supreme Court justices: the nine judges of the country's highest court (Chapter 2) 158

Surgeon General: the country's top public health doctor (Chapter 13) 868

surplus: extra, the name officials gave to land left over after allotment (Chapter 2) 134

surreptitiously: secretly (Chapter 20) 1390

surveillance: a close watch (Chapter 19) 1280

survey: to measure land and mark its borders (Chapter 3) 192

survey teams: groups sent to measure and map the western lands in detail (Chapter 1) 64

surveyor: a worker who measures land (Chapter 3) 192

surveyor-general: the chief surveyor of a colony (Chapter 6) 399

suspend: to shut a bank's doors or stop paying out cash (Chapter 17) 1136

suspension: keeping a child out of class for a set number of days, in a separate room at school or at home (Chapter 30) 2474

suspension bridge: a bridge whose roadway hangs from cables strung between tall towers (Chapter 12) 807

swab pole: a long pole with a mop on the end for putting out sparks on roofs (Chapter 27) 2041

Swahili: a language spoken in East Africa (Chapter 37) 3125

sweatshop: a crowded workshop where people sewed clothing for long hours and low pay (Chapter 14) 929

sweetgrass: a plant used to make baskets (Chapter 9) 581

swill milk: thin, dirty milk from cows kept in stables beside distilleries and fed the leftover grain mush from making liquor (Chapter 6) 418

swindles: tricks to cheat people out of their money (Chapter 18) 1188

switch: a thin stick cut from a tree (Chapter 7) 474

switchboard: the board where an operator connected each telephone caller to the person being called (Chapter 14) 929

sworn statement: a statement made with a promise under the law to tell the truth (Chapter 10) 665

syllabary: a set of written characters in which each character stands for a whole syllable, not a single sound (Chapter 2) 126

synagogue: a building where Jews worship (Chapter 4) 283

synthesizer: a machine that makes musical sounds electronically (Chapter 33) 2729

syphilis: a disease passed during sex, or from a mother to her unborn baby, caused by bacteria (Chapter 21) 1456

systemic: built into the way a company worked (Chapter 14) 974

T

taffeta: a smooth silk cloth (Chapter 35) 2912

tailings: the ground-up rock left behind after the uranium is taken out (Chapter 13) 886

"taken indiscriminately": taken without anyone choosing which ones (Chapter 8) 570

taking faces: painting portraits (Chapter 32) 2619

talent agency: a company that finds work for actors (Chapter 34) 2889

Taliban: the armed group American forces fought in Afghanistan from 2001 (Chapter 22) 1585

tallow candles: candles made of animal fat (Chapter 10) 677

Tammany Hall: a political machine of the Democratic Party in New York (Chapter 20) 1341

tanner: a worker who turns animal skins into leather (Chapter 33) 2729

tannery: a place where animal skins are made into leather (Chapter 3) 200

tanning (hides): treating animal skins so they stay soft and do not rot (Chapter 8) 512

Taoism: a Chinese religion and way of life (Chapter 29) 2274

Taps: a bugle call (Chapter 30) 2392

tariff: a tax on goods brought in from other countries (Chapter 16) 1062

taro: a plant with a starchy root that Hawaiians cooked and ate (Chapter 37) 3075

TARP: the Troubled Asset Relief Program, the rescue plan for financial firms that members of Congress passed in October 2008 (Chapter 16) 1102

tarpaulin hat: a sailor's waterproof hat (Chapter 35) 2934

tarred and feathered: stripped of clothes, coated with hot pine tar that burned the skin, and covered with feathers (Chapter 16) 1062

Taser: a weapon that fires an electric shock (Chapter 21) 1468

task: the set amount of work a planter gave each enslaved rice worker every day, usually a quarter of an acre (Chapter 15) 995

task force: a group a state sets up to study a question (Chapter 13) 899

task system: the way overseers on the rice plantations gave each enslaved person a set task for the day. When it was done, the rest of the day was the person's own (Chapter 24) 1693

Tava-kaavi: the Ute name for Pikes Peak (Chapter 1) 44

taverns and inns: places where people drank, ate and stayed the night (Chapter 18) 1188

tax credit: money taken off a buyer's tax bill (Chapter 10) 711

tax evasion: not paying taxes that are owed (Chapter 21) 1456

tax-credit scholarship: a person or a company gives money to a scholarship fund, and the state takes the same amount off their tax bill (Chapter 30) 2474

TCP/IP: the internet's shared set of rules for moving data between computers (Chapter 8) 561

Te Deum: a Latin hymn of praise to God (Chapter 33) 2717

tea garden: an outdoor place for refreshments and shows (Chapter 34) 2841

teachers college: a college where future teachers studied for a four-year degree (Chapter 30) 2414

teaching certificate: the state's license to teach (Chapter 30) 2442

teamster: a man who drove a wagon (Chapter 10) 671

Teapot Dome: the case in which a member of the president's cabinet leased Navy oil land to two oil men who gave him money (Chapter 20) 1356

tear gas: a gas that stings the eyes, nose and throat, so people cough and their eyes stream with tears (Chapter 2) 170

teaz'd: pestered (Chapter 36) 2999

technetium: element 43, the first element made by people, named from a Greek word meaning "artificial" (Chapter 9) 614

technetium-99m: a radioactive chemical that gives off rays a camera outside the body picks up, to make pictures of organs (Chapter 26) 2005

technical consultants: people who advise filmmakers on how to get details right (Chapter 34) 2861

technicality: a small point about how a court case was handled (Chapter 29) 2287

teething: growing first teeth (Chapter 18) 1193

Tejano music: the Spanish-language music of Texas (Chapter 33) 2779

Tektite project: a project that let scientists live in a laboratory under the sea (Chapter 1) 82

telegram: a short message sent over electric wires (Chapter 11) 764

telegraph: a machine that sent messages over a wire as pulses of electricity (Chapter 3) 200

telegraph line: the wire that carried messages by electric signals (Chapter 8) 535

telephone operator: the person who connected each caller to the person being called (Chapter 8) 541

tellers: the members of Congress chosen to count the electoral votes (Chapter 20) 1390

temperance: drinking little or no alcohol (Chapter 28) 2147

tenant families: families who rent the land they farm (Chapter 4) 275

tenant farmer: a farmer who works land that someone else owns (Chapter 15) 1015

tenement: a cheap apartment building packed with families (Chapter 4) 283

tenets: the main rules of a faith (Chapter 29) 2324

teosinte: the wild grass Native farmers made corn out of. Its seed head holds only a few hard kernels (Chapter 15) 986

termination: members of Congress and federal officials no longer treating a tribe as a nation with its own government, and the tribe losing its federal services (Chapter 2) 158

terrace: a wide step, here on the side of a mound (Chapter 6) 395

territory: land that belongs to the United States but is not a state (Chapter 1) 64

Test Act: a 1704 Irish law under which only people who took communion in the Church of Ireland could hold a public job (Chapter 4) 267

test case: a trial arranged on purpose so that a court would rule on a law (Chapter 20) 1356

testicles: the organs that make sperm (Chapter 9) 633

testify: to speak as a witness in court or at a hearing (Chapter 4) 298

testimony: a statement to lawmakers (Chapter 8) 570

tetanus: an infection from a wound that makes the muscles tighten and lock (Chapter 12) 807

tetraethyl lead: a liquid made of lead joined with other chemicals, added to gasoline to stop engine knock (workers called it "loony gas") (Chapter 13) 868

Tewa: one of the Pueblo peoples (Chapter 2) 108

Texas fever: a cattle disease that a Kansas law of 1885 and 1886 was passed to keep out (Chapter 15) 1009

Texas Revolution: the war Texans fought to break away from Mexico (Chapter 12) 795

thanksgiving: to the colonists, a day of prayer in church, called after rain, a good harvest, the safe arrival of ships or a victory (Chapter 22) 1508

Thanksgiving Address: the words of thanks, to the people, the earth, the waters, the fish, the plants and more, one at a time, that Haudenosaunee people often use to start and end their meetings, also called the Words That Come Before All Else (Chapter 37) 3075

thatch: dried straw or reeds used as roofing (Chapter 6) 398

the bones: a rhythm instrument (Chapter 33) 2736

the Crown: the king or queen and the royal government (Chapter 5) 346

The Federalist: the 85 essays Hamilton, Madison and Jay wrote to persuade New Yorkers to vote for the Constitution (Chapter 20) 1322

the Union: the side of the United States government in the Civil War (Chapter 4) 283

theology: the study of religious belief (Chapter 29) 2256

theory of relativity: Einstein's account of space, time and light, and of how they are tied to gravity (Chapter 9) 604

theses: a printed sheet of the ideas graduates were ready to argue for in public at the ceremony (Chapter 18) 1182

thesis: a long paper written at the end of college (Chapter 8) 553

third degree: police beating, threatening or questioning a prisoner for hours or days to force a confession (Chapter 21) 1456

third-degree burns: burns that destroy the skin all the way through (Chapter 1) 82

Thirteenth Amendment: the part of the Constitution that bans slavery, except as a punishment for crime (Chapter 16) 1074

Thoroughbred: a breed of horse raised in England for racing (Chapter 36) 2995

Three Sisters: corn, beans and squash grown together in the same field (Chapter 3) 180

three-fifths: the rule in the Constitution that counted each enslaved person as three-fifths of a free person when working out a state's seats in the House (Chapter 20) 1322

throwing a person to the dogs: setting trained attack dogs on a captive to bite and tear the person, often to death (Chapter 22) 1502

thumb-lead style: Maybelle Carter's way of picking the tune on the low strings with the thumb while strumming the high strings with one finger (Chapter 33) 2759

thyroid: a gland in the neck (Chapter 22) 1575

tignon: the name people later gave the head cloth Black women in New Orleans were ordered to wear (Chapter 35) 2928

tilt at the ring: a game in which a galloping rider tried to push a lance through a ring and carry it off (Chapter 36) 2985

tilt with cane spears: a game in which two lines of riders threw light cane spears at each other and blocked them with shields (Chapter 36) 2985

timber: wood for building (Chapter 2) 120

time capsule: a box of papers sealed to be opened in the future (Chapter 9) 604

time zone: a region where all clocks show the same time (Chapter 11) 745

time-sharing computer: a computer that many people could use at once from different terminals (Chapter 8) 561

timing chain: an engine part a car cannot run without (Chapter 5) 376

tinware: pots, pans, cups and other things made of thin sheets of metal coated with tin (Chapter 18) 1188

tipi: a house covered with animal hides that a family could take down and pack up to move with the hunt (Chapter 7) 460

tiswin: the Apache corn beer (Chapter 28) 2120

tithables: the people counted for a tax on each person, all free men and all enslaved people 16 and older (Chapter 11) 728

Title I: the part of the 1965 school law under which federal officials send money to school districts according to how many of their children come from families with low incomes (Chapter 20) 1372

Title IX: the part of the Education Amendments of 1972 under which a school or college that gets federal money may not treat a student worse because the student is a girl or a boy (Chapter 20) 1372

Title VII: the part of the Civil Rights Act of 1964 that bans job discrimination because of sex (Chapter 20) 1372

titles: the parts of an act (Chapter 20) 1372

tobacco inspection house: a building where tobacco was checked before it was shipped (Chapter 6) 407

tobacco note: a receipt for inspected tobacco, passed from hand to hand as money (Chapter 17) 1119

toleration: letting people hold beliefs that others do not share (Chapter 29) 2213

toll road: a road that people paid a fee to use (Chapter 11) 732

Tom shows: stage versions of *Uncle Tom's Cabin* (Chapter 34) 2851

tomahawk chop: a chopping arm motion that makes fun of Native people (Chapter 34) 2877

tonic: a drink sellers claimed would make people healthy (Chapter 13) 868

top billing: having your name first on the posters (Chapter 34) 2841

top income-tax rate: the tax on each dollar of income above a high level (Chapter 16) 1096

topsoil: the top layer of soil, where crops grow (Chapter 3) 215

Torah: the Jewish scriptures (Chapter 29) 2324

torso: the middle of the body (Chapter 4) 320

torture: hurting a person's body on purpose to force them to talk (Chapter 1) 36

Tory: the old name for colonists who sided with Britain's king (Chapter 31) 2520

total abstinence: no alcohol at all, not even beer or wine (Chapter 28) 2147

total solar eclipse: the moon blocking all of the sun's light for a short time (Chapter 9) 604

tour: a stretch of service in a war zone (Chapter 22) 1575

tourniquet: a tight band tied around an arm or leg to slow bleeding (Chapter 22) 1543

town ball: a bat-and-ball game played under local rules (Chapter 36) 3008

town house: the building where a Native town's leaders met (Chapter 36) 2999

township: a square of land six miles on each side, cut into 36 sections (Chapter 3) 192

tracheostomy: a hole cut through the front of the neck into the windpipe, with a short tube held in it (Chapter 25) 1909

tracheotomy: an operation that cuts an opening in the front of the neck into the windpipe so that air can get in (Chapter 26) 2005

trachoma: an eye infection that can cause blindness (Chapter 4) 298

tract: a short printed paper about religion (Chapter 29) 2256

trade cards: small printed cards given out to customers (Chapter 18) 1193

trade union: a group of workers in one trade who join together to bargain, or make a deal, with their employers over pay and hours (Chapter 14) 920

trading post: a place where traders swapped goods for furs (Chapter 1) 44

trading stamps: small stamps that shoppers got with purchases, pasted into books and traded for goods (Chapter 18) 1214

Traditional Ecological Knowledge (TEK): the knowledge of ecology that Native nations built up by watching closely over many generations (Chapter 9) 581

traditional practitioners: people who kept the old ceremonies (Chapter 29) 2287

traditional tobacco: tobacco grown or gathered for ceremony or medicine and offered in prayer, set apart from commercial tobacco, the kind sold in stores (Chapter 28) 2120

trafficker: a trader (Chapter 35) 2934

tragedy: a serious play with a sad ending (Chapter 34) 2823

trail boss: the man in charge of the whole cattle drive (Chapter 15) 1009

Trail of Tears: the Cherokee removal of 1838 and 1839, when soldiers forced the Cherokee people west to Indian Territory (Chapter 2) 126

trainmen: the workers who ran the trains (Chapter 11) 745

trait: a feature of a living thing, such as color or size (Chapter 9) 604

trance: a state like a dream while awake (Chapter 28) 2120

transatlantic: across the Atlantic (Chapter 19) 1235

transfermium: the elements after fermium, element 100 (Chapter 13) 886

transformer: a machine that can easily raise or lower the voltage of alternating current (Chapter 10) 681

transgender: a person whose own sense of being male or female differs from the sex recorded at birth (Chapter 1) 82

transistor: a small part that controls the flow of electricity and can make a weak signal stronger (Chapter 8) 553

transit of Venus: the planet Venus passing across the face of the sun, as seen from Earth (Chapter 9) 591

transportation: sending convicts away across the ocean as a punishment (Chapter 4) 267

transported convict: a person found guilty of a crime in Britain and sent to the colonies to be sold into 7 to 14 years of forced work (Chapter 10) 669

transposition: genes moving from one place to another on the chromosomes (Chapter 9) 614

Transylvania: Richard Henderson's name for the colony in Kentucky he hired Boone to help start (Chapter 1) 39

traumatic brain injury: damage to the brain from a blow or a blast (Chapter 22) 1585

travois: a frame of two poles that a dog dragged along the ground (Chapter 7) 474

treason: the crime of making war against your own country (Chapter 16) 1062

treasurer: the official in charge of a colony's money (Chapter 2) 108

treasury: the office that handles a government's money (Chapter 4) 267

Treasury bills: short loans to the government (Chapter 17) 1153

treating: giving voters food and drink before and after an election (Chapter 20) 1309

treatise on domestic economy: a long book about running a home (Chapter 7) 474

treaty: a written agreement between nations (Chapter 1) 39

treaty council: a meeting where Native leaders and colonial officials bargained and made agreements (Chapter 2) 116

Treaty of Amity and Commerce: a treaty of friendship and trade (Chapter 23) 1605

Treaty of Paris (1763): a peace agreement that ended the war between Britain and France (Chapter 5) 346

Treaty of Paris (1783): the peace agreement in which British diplomats accepted that the United States was independent and handed it Britain's claim to land that Native nations lived on (Chapter 22) 1522

Treaty of Paris (1898): the peace agreement in which Spanish diplomats gave up Cuba, signed Puerto Rico and Guam over to the United States and sold it the Philippines (Chapter 23) 1623

tremor: shaking a person cannot stop (Chapter 13) 863

trespass: going onto private land without permission (Chapter 25) 1909

trestle: a raised track (Chapter 10) 691

tribunals: special courts in which planters sat as judges (Chapter 24) 1693

tribute: payments of money, goods or work that rulers force people to give (Chapter 1) 21

tricktrack: a board game like backgammon (Chapter 36) 2987

Trinity: the Christian belief that God is three persons in one, the Father, the Son and the Holy Ghost (Chapter 29) 2213

tripartite: three-sided (Chapter 23) 1623

triple jump: the event once called the hop, skip and jump (Chapter 36) 3019

troopers: soldiers on horseback (Chapter 18) 1174

Tropic of Cancer: a line on maps north of the equator (Chapter 19) 1235

trotting race: a race in which a horse pulled a driver in a light cart (Chapter 36) 3008

truants: children missing school without permission (Chapter 30) 2442

truce: an agreement to stop fighting (Chapter 2) 126

trumped up: made up (Chapter 37) 3125

trust: a way to run many companies as one business, with one small group in charge (Chapter 19) 1256

trust accounts: money federal officials kept for the Native children at Carlisle (Chapter 30) 2392

trust company: a kind of bank that took people's deposits and managed their money (Chapter 16) 1074

trust money: money that belonged to Native families and that the government held for them (Chapter 29) 2287

trust territory: islands one country governs for the United Nations, with a duty to look after the people (Chapter 23) 1647

trustee: a person chosen to look after property or a project, such as a school or a museum, for other people (Chapter 12) 807

try-works: a brick furnace built on a whaling ship's deck for boiling blubber into oil (Chapter 10) 677

Tsenacomoco: the land of the Powhatan chiefdom (Chapter 4) 260

tub mill: a small water mill whose wheel lies flat in the stream and turns the millstone directly (Chapter 10) 663

tubal ligation: an operation in which a surgeon cuts or ties the two tubes that carry eggs to the womb, so that a girl or woman can never become pregnant (Chapter 2) 158

tuberculosis: a lung disease that spreads through the air when a sick person coughs or talks (Chapter 1) 64

tuition: the cost of attending a school (Chapter 20) 1390

Tukudika: a band of Mountain Shoshone who had lived in the Yellowstone country for thousands of years (Chapter 1) 64

tularemia: a fever people catch from animals (Chapter 26) 1946

tumor: a lump of tissue that grows where it should not (Chapter 9) 614

tumpline: a band worn across the forehead to carry a load on the back (Chapter 35) 2908

tundra: the flat treeless land of the far north (Chapter 34) 2814

turbine: a wheel with many blades, spun by steam (Chapter 10) 702

turbulent: unruly (Chapter 4) 275

turner: a person who shapes pots on a wheel (Chapter 32) 2627

turn-out: the shoemakers' and mill workers' word for a strike (Chapter 14) 920

turnover: how often workers quit and must be replaced. At Ford in 1913 it meant hiring nearly four men a year for every job (Chapter 14) 941

turnpike: a road whose owners charge travelers a fee, called a toll, at gates along the way (Chapter 11) 732

turnstile: a gate with turning arms that lets one person through at a time (Chapter 18) 1204

turpentine: a liquid made from pine trees (Chapter 10) 677

turret lathe: a metal-cutting machine for making many copies of the same part (Chapter 14) 941

tutor: a teacher who lived with a family and taught its children (Chapter 8) 528

Tweed Ring: William M. Tweed and the men around him, who stole money from New York City (Chapter 20) 1341

Twenty-fifth Amendment: the 1967 change to the Constitution that states what happens when a president dies, resigns or is removed, and how to fill an empty vice presidency (Chapter 20) 1372

Twenty-first Amendment: the 1933 change to the Constitution that ended the ban on alcohol (Chapter 20) 1356

Twenty-fourth Amendment: the 1964 change to the Constitution that bans poll taxes in elections for president, vice president, senator and representative (Chapter 20) 1372

Twenty-second Amendment: the 1951 change to the Constitution under which no person may be elected president more than twice (Chapter 20) 1372

Twenty-sixth Amendment: the 1971 change to the Constitution that gave eighteen-year-olds the vote (Chapter 20) 1372

Twenty-third Amendment: the 1961 change to the Constitution that gave the District of Columbia electors for president (Chapter 20) 1372

twill: a weave that makes thin diagonal lines (Chapter 35) 2934

Twitch: a website where players show their games live to viewers (Chapter 36) 3058

type: the set of metal letters a printer puts together by hand to print a page (Chapter 8) 535

type 2 diabetes: an illness in which the body cannot keep the sugar in the blood at a healthy level (Chapter 15) 1039

typhoid: a disease that causes a high fever, caught from food or water dirtied by human waste (Chapter 5) 352

typhus: a fever spread by body lice (Chapter 22) 1522

tyranny: cruel and unfair rule (Chapter 20) 1317

tyrants: rulers who use their power cruelly (Chapter 25) 1770

U

ulcer: a sore in the stomach (Chapter 9) 614

Umoja: the Swahili word for unity (Chapter 37) 3125

unanimous: with every justice agreeing (Chapter 20) 1372

Unassigned Lands: the last part of Indian Territory federal officials had not given to any Native nation, opened in the 1889 Land Run (Chapter 5) 363

unauthorized charges: charges that players had not agreed to (Chapter 18) 1222

unceded: never given up by treaty or agreement (Chapter 25) 1778

unconditional discharge: a sentence of no jail, no fine and no probation (Chapter 21) 1484

unconstitutional: against the Constitution (Chapter 5) 376

uncouth: rude and rough (Chapter 25) 1829

uncultivated: untaught (Chapter 32) 2619

under guardianship: placed in someone else's care by law (Chapter 20) 1356

underage: younger than an adult (Chapter 4) 298

undercover: working in secret, hiding who you are (Chapter 15) 1015

Underground Railroad: a network of people, with guides and safe houses, who helped enslaved people escape to the free states and to Canada (Chapter 24) 1693

understanding clause: a rule that a man had to read any part of the state constitution, or understand it when read to him, or give "a reasonable interpretation" of it, before he could vote (Chapter 24) 1735

understory: the layer of brush and small plants under the tall trees (Chapter 3) 180

undertaker: a person who prepares the dead for burial (Chapter 5) 363

undertakers (old sense): people who take on a big job (Chapter 8) 517

uneducable: judged unable to be taught (Chapter 25) 1871

unemployment: the share of people who want work and cannot find it (Chapter 16) 1067

unemployment insurance: payments to workers who have lost their jobs (Chapter 16) 1084

UNESCO: the part of the United Nations that keeps the list of World Heritage Sites (Chapter 6) 395

unethical: wrong (Chapter 9) 596

unexecuted: not carried out (Chapter 20) 1341

Uniform Monday Holiday bill: the 1968 bill under which several holidays moved to Mondays (Chapter 37) 3125

uniform practice: the same rules everywhere (Chapter 20) 1333

uniformity of religion: everyone being made to follow the same religion (Chapter 29) 2213

unilateral: done by one person alone (Chapter 30) 2474

unincorporated territory: a place the United States owns and rules, where the people do not get the whole Constitution unless Congress chooses to give it to them (Chapter 23) 1634

union: a group of workers who join together to bargain with an employer over pay and working conditions (Chapter 10) 691

Union army: the army of the United States government in the Civil War (Chapter 4) 283

Unitarian: a member of a church that does not teach the Trinity (Chapter 29) 2304

United States Exploring Expedition: a Navy exploring voyage paid for by the US government (Chapter 1) 44

Universal Product Code (UPC): the barcode printed on packages in stores, read by a scanner at the checkout (Chapter 18) 1214

unlawful assembly: a meeting the law banned, which officials could break up (Chapter 30) 2375

unofficial spokesman: a man who speaks for a club without holding any title (Chapter 12) 815

unprecedented: never done before (Chapter 29) 2274

unremitting: without a break (Chapter 37) 3101

unsaved: not yet believing in Christ (Chapter 29) 2324

unseasonable night meetings: meetings at an improper hour of the night (Chapter 18) 1174

unsigned opinion: an opinion that no single justice signed as its author (Chapter 20) 1390

unsubstantiated: not backed by proof (Chapter 9) 633

unwarranted: without good reason (Chapter 19) 1280

upland cotton: cotton that grows away from the coast (Chapter 8) 528

Upper South: Virginia, Maryland, the Carolinas, and later Kentucky and Tennessee (Chapter 5) 352

uppowoc: the Algonquian name for tobacco (Chapter 26) 1949

uprising: an armed revolt (Chapter 2) 134

uranium: a heavy metal element whose atoms break apart slowly and give off radiation (Chapter 3) 240

uranium mill: a plant that takes uranium out of crushed rock (Chapter 13) 886

urban renewal: a federal program, run from 1949 to 1974, under which city officials forced families out of whole neighborhoods, had the buildings torn down and sold the cleared land to developers (Chapter 6) 443

Ursuline nuns: an order of Catholic women (Chapter 29) 2256

US attorney: a federal prosecutor (Chapter 21) 1468

US Commission of Fine Arts: a federal board that reviews designs in Washington (Chapter 12) 825

US marshals: federal police officers (Chapter 21) 1468

US Sanitary Commission: a group that checked on the health of soldiers and their camps (Chapter 22) 1543

USB ports: the sockets that computer memory sticks plug into (Chapter 20) 1390

USDA organic seal: a label for food that meets the national organic rules (Chapter 15) 1028

utilities: the companies that supplied things like gas and water (Chapter 14) 929

utter detestation: hatred (Chapter 35) 2916

V

vacate: to cancel a conviction (Chapter 20) 1356

vaccination: scratching fluid from a cowpox sore into the skin to protect a person against smallpox (Chapter 26) 1975

vaccine: a medicine that trains the body to fight off a germ before the germ can make a person sick (Chapter 9) 633

vacuum: a space with no air in it, like outer space (Chapter 8) 553

vacuum tube: a glass tube with the air taken out, like a light bulb (Chapter 8) 553

vagina: the passage a baby is born through (Chapter 9) 633

vagrancy: the crime of having no home or job (Chapter 5) 376

valet: a personal servant (Chapter 20) 1322

vanguard company: the group that goes ahead of the rest (Chapter 5) 352

vaping: using an e-cigarette, which heats a liquid, usually with nicotine, into a mist the user breathes in (Chapter 28) 2190

vapor: a gas rising off a liquid or a solid (Chapter 10) 681

variable star: a star whose brightness changes (Chapter 9) 604

variety stores: stores that sold many kinds of small, cheap goods (Chapter 18) 1214

varsity letters: awards for playing on a college's top teams (Chapter 36) 3028

vasectomy: an operation that cuts the tubes that carry sperm so a man can no longer father children (Chapter 9) 633

vassal: a person bound to obey a ruler (Chapter 2) 102

vat: a large tub (Chapter 16) 1074

Vatican: the headquarters of the Catholic Church in Rome (Chapter 29) 2324

vaudeville: a show made of many short, separate acts, one after another (Chapter 29) 2287

V-Bucks: game money that Fortnite players buy with real money to get costumes and dance moves for their characters (Chapter 18) 1222

vein: a long thin band of ore or metal running through the rock (Chapter 10) 671

veneers: thin sheets of fine wood laid over a surface (Chapter 35) 2928

Venerable: a title the pope gives to a person whom church leaders are studying as a possible saint (Chapter 4) 271

ventilated: with fresh air pumped in (Chapter 26) 2005

ventilating furnace: a small fire kept burning at the bottom of a mine shaft to make a draft that moved fresh air through the mine (Chapter 10) 681

ventilation: the fans and shafts that blow fresh air into a mine and push radon out (Chapter 13) 886

ventilator: a machine that pushes air through a tube into the lungs (Chapter 25) 1909

verdict: the jury's decision (Chapter 14) 922

vertical farms: farms where workers grow vegetables indoors on shelves stacked high (Chapter 15) 1039

vertical integration: one company owning each stage of making a product, from the raw material to the finished goods (Chapter 19) 1256

vesicovaginal fistula: a hole torn through the wall between the bladder and the vagina by a long, blocked childbirth, so that urine runs out of the woman's body all the time (Chapter 26) 1975

vestry: the governing board of a church, here St. Philip's in Charleston (Chapter 27) 2047

Veterans Day: the 1954 name for Armistice Day, chosen so that one day would honor the veterans of every war (Chapter 37) 3125

veto: a refusal by a president, a governor or a mayor to sign a bill into law. Members of Congress can pass a law over a president's veto when two-thirds of each house vote for it (Chapter 3) 200

viaduct: here, a two-level section of a highway raised above the ground (Chapter 27) 2093

vice versa: the other way around (Chapter 19) 1280

viceroy: the king's governor of a colony (Chapter 1) 21

Victorian dresses: the long dresses of the late 1800s (Chapter 30) 2392

victory gardens: home vegetable gardens grown to help feed the country during World War II (Chapter 15) 1015

Viet Cong: the communist fighters in South Vietnam who fought on North Vietnam's side (Chapter 22) 1575

vigilance committee: a group of private citizens who arrested, tried and punished people themselves, outside the courts (Chapter 21) 1442

vigilance committees: groups, run by free Black communities in the North, that hid people who had escaped slavery and helped them move on (Chapter 24) 1693

vigilante: a person who uses force to punish others without any legal right to (Chapter 5) 352

vilest miscreants: the worst villains (Chapter 1) 44

virgin soil epidemic: an epidemic among people never exposed to the disease, in which everyone in a town can be infected at the same time (Chapter 26) 1946

Virginia Company: the English company that ran the Virginia colony (Chapter 4) 260

Virginia General Assembly: Virginia's lawmakers (Chapter 12) 799

Virginia State Colony for Epileptics and Feebleminded: a place where Virginia's officials locked up people who had seizures or were judged slow to learn. Dr. John H. Bell, who ran it, sterilized Carrie Buck against her will in 1927 (Chapter 20) 1356

vise: a clamp that tightens with a screw (Chapter 37) 3125

Vitascope: a film projector (Chapter 34) 2851

void: having no force (Chapter 20) 1333

volt: a measure of how strongly electricity pushes through a wire or a body (Chapter 21) 1442

voltage: the force that pushes electric current through a wire (Chapter 8) 553

voluntary manslaughter: killing a person on purpose but without planning it ahead, a charge less serious than murder (Chapter 21) 1468

voter rolls: the lists of people allowed to vote (Chapter 25) 1829

Voting Rights Act: the 1965 law under which federal examiners could register voters and some states and counties had to get permission before changing any voting rule (Chapter 20) 1372

voucher: a payment from the state that a family can use toward a private school's fees instead of sending the child to the local public school (Chapter 30) 2474

vulcanized rubber: rubber treated with sulfur so that heat does not melt it (Chapter 8) 535

vulgar and debased: common and low (Chapter 36) 2995

vulva: the outer part of a woman's sex organs (Chapter 32) 2679

W

wage theft: an employer not paying workers all the money the law says they have earned (Chapter 14) 974

waggoner: a man who drove wagons (Chapter 13) 855

waistcoat: a vest or short jacket (Chapter 35) 2916

Wall Street: a street in New York City where people buy and sell shares in companies (Chapter 6) 399

wall-bearing building: a building whose outside walls hold up everything (Chapter 6) 418

wampum: beads cut from the white and purple parts of clam shells, strung on strings or woven into belts (Chapter 2) 99

wampum belt: shell beads woven into patterns in which each pattern stands for the terms of an agreement (Chapter 2) 99

Wampum Keeper: the nation that looks after the wampum belts (Chapter 30) 2345

wanton: done for no reason (Chapter 22) 1585

wapato: a root that people dug up and ate (Chapter 18) 1170

war bonds: loans people made to the government to pay for the war (Chapter 2) 149

war bride: a woman engaged or married to a man who served in the war (Chapter 4) 298

war crimes: acts that break the laws of war (Chapter 22) 1543

War Department: the part of the government that ran the army (Chapter 1) 44

War Powers Resolution: the 1973 law that limits how long a president may keep troops fighting without the approval of Congress (Chapter 20) 1372

War Production Board: the federal agency whose officials controlled materials during World War II (Chapter 35) 2949

warden: the official in charge of a prison or of prisoners (Chapter 16) 1074

wards: people a government is legally responsible for (Chapter 20) 1356

warrant: a paper from a court that allows an arrest or a search (Chapter 3) 192

wash and wear: clothes that could be washed and worn without ironing (Chapter 35) 2959

washboard: a ridged board set in a tub of warm water and soap, for scrubbing clothes (Chapter 7) 485

water cure: a torture in which soldiers poured water into a prisoner's mouth and nose until his stomach swelled, then pressed or stood on his stomach to force it out, and started again (Chapter 22) 1559

water engine: a pump that sprays water (Chapter 27) 2041

water frame: Richard Arkwright's spinning machine, named for the waterwheel that drove it (Chapter 8) 528

water main: a large pipe that carries water under the streets (Chapter 6) 431

water mold: a tiny living thing that grows on a plant and makes it rot (Chapter 4) 275

water table: the level underground where the soil is full of water (Chapter 3) 229

watercourts: Calusa pens with walls of shell where live fish were kept (Chapter 2) 99

watered stock: stock issued for more than the property behind it (Chapter 19) 1268

Watergate: the 1972 break-in at the Democratic National Committee's offices in the Watergate building, and the scandal that followed (Chapter 20) 1372

watershed: all the land that drains into one stream or river (Chapter 3) 180

wavelength: the spot on the radio dial where a station is heard (Chapter 31) 2559

WAVES: the women's branch of the Navy in World War II (Chapter 8) 561

wax cylinder: a tube of wax that held two or three minutes of sound, which a machine could play back (Chapter 33) 2746

wealth or net worth: what a household owns minus what it owes (Chapter 16) 1102

weapons of mass destruction: nuclear, chemical or biological weapons (Chapter 23) 1656

web browser: the program people use to look at websites (Chapter 18) 1222

weevils: small beetles (Chapter 22) 1522

weld: a place where two pieces of metal have been melted together (Chapter 6) 431

welfare: government help for people without enough money (Chapter 4) 298

welfare officers: the officials who handed out relief money (Chapter 4) 298

welts: raised and swollen stripes on the skin (Chapter 8) 528

Wendat: the people also called the Huron (Chapter 1) 31

weroance: the leader, or chief, of a tribe. Also spelled werowance and wiroans (Chapter 2) 108

West Indies: the islands of the Caribbean Sea (Chapter 2) 108

Western Hemisphere: the half of the world that includes North and South America (Chapter 4) 310

Westinghoused: a word Edison's supporters used to mean killed by electricity (Chapter 10) 681

whalebone: a stiff, bendable material from the mouths of some whales (Chapter 18) 1188

"What hath God wrought": words from the Bible, Numbers 23:23, meaning "What has God done" (Chapter 8) 535

whelk: a large sea snail (Chapter 16) 1049

wherefore: why (Chapter 4) 260

whip: the senator who counts votes for a party and keeps its members in line (Chapter 20) 1372

whipping: being struck on the bare back with a whip, often at a post in a public place. The whip cuts the skin and leaves welts and scars (Chapter 11) 734

Whiskey Rebellion: the 1794 uprising of thousands of farmers in western Pennsylvania against a federal tax on whiskey (Chapter 16) 1062

White Citizens' Council: a group founded in Mississippi in 1954, after the Supreme Court's *Brown v. Board of Education* ruling, to keep segregation in place (Chapter 25) 1871

white flag: the sign that both sides agree not to fight while they talk (Chapter 2) 126

white supremacist: a person who believes white people are better than others and should rule over them (Chapter 20) 1341

white supremacy: the belief that white people should rule over everyone else (Chapter 11) 764

white-collar jobs: jobs in offices, stores and schools (Chapter 14) 963

wholesale: selling goods in bulk to other sellers (Chapter 18) 1188

wholesome: healthy to live in (Chapter 6) 399

wicket: a bat-and-ball game like cricket (Chapter 36) 2999

wigwam: a house with a frame of saplings, covered with bark or with woven mats (Chapter 7) 460

Wild West show: a traveling show of riding, shooting and scenes of frontier life (Chapter 32) 2643

wildcat banks: banks set up under free-banking laws. The story went that some stood so far out in the woods that only wildcats lived nearby (Chapter 17) 1128

wilderness area: land kept free of roads and buildings (Chapter 3) 215

Wilderness Road: the trail Boone's work party cut through the Cumberland Gap into central Kentucky, first marked as Boone's Trace (Chapter 1) 39

wildlife refuge: land set aside to protect wild animals (Chapter 2) 170

will: the paper that says who gets a person's belongings after death (Chapter 7) 465

willful neglect of duty: knowingly failing to do one's job (Chapter 13) 899

willfully: knowingly and on purpose (Chapter 14) 974

winch: a machine that winds a cable (Chapter 12) 815

Wind River Reservation: land in Wyoming the US government had set aside for the Shoshone. A US Indian agent had the Tukudika moved there from their homeland by force (Chapter 1) 44

wind tunnel: a tunnel in which a fan blows a steady stream of air past a model (Chapter 8) 553

windlass: the winch that pulled up a ship's anchor chain (Chapter 24) 1670

Winnebago: the name long used in English for the Ho-Chunk people (Chapter 8) 535

winter solstice: the shortest day of the year (Chapter 37) 3075

wire fraud: cheating people by phone, email or the internet (Chapter 17) 1160

witchcraft: using the Devil's power to hurt others, something many colonists believed people could do. After the Salem trials of 1692 and 1693, Massachusetts lawmakers cancelled many of the convictions and, in 1957, apologized (Chapter 21) 1412

withdrawal: the sickness that comes when the body loses a drug it depends on (Chapter 28) 2154

within its jurisdiction: inside the area where its laws apply (Chapter 20) 1341

without apportionment: without dividing the money among the states by population (Chapter 20) 1356

woodcut: a picture printed from a carved block of wood (Chapter 30) 2351

woodlot: a piece of land kept for growing trees (Chapter 3) 196

workhouse: a building where poor people, or people who broke small laws, were held and made to work (Chapter 2) 120

working copper cold: shaping copper without melting it (Chapter 8) 512

working level months: a unit that measures how much radon a miner breathed over time (Chapter 13) 886

workmen's compensation: money employers pay to workers who are hurt or made sick by their jobs, or to their families when they are killed (Chapter 13) 868

Works Progress Administration (WPA): a federal program that hired people to build public projects such as roads, pipes and schools (Chapter 6) 431

World Heritage List: a list of places chosen because they matter to all people (Chapter 12) 783

World Trade Organization: a group of countries that agree on rules for trade between them (Chapter 23) 1656

World Wide Web: the system of linked pages that people open over the internet (Chapter 8) 561

writ: a written order from a court (Chapter 4) 260

writ of habeas corpus: a court order that the people holding someone bring that person before a judge and give a lawful reason for holding them (Chapter 4) 283

wrought iron: a tougher iron that bends instead of breaking (Chapter 13) 848

Y

Yankee: someone from New England (Chapter 10) 669

yardarm: a wooden beam that crosses a ship's mast (Chapter 2) 102

yarn: the thread a spinning machine twists from cotton fibers (Chapter 8) 528

yaws and bejel: diseases in the same family as syphilis that spread mainly by touching skin and mouths, not by sex (Chapter 26) 1946

yearly rate: how far output would fall in a full year at the speed it was falling (Chapter 16) 1102

year-round school: about the same number of school days spread across the whole year, with shorter breaks (Chapter 30) 2474

yellow fever: a deadly disease spread by mosquitoes (Chapter 4) 271

yellow journalism: reporting that put exciting stories ahead of facts (Chapter 31) 2545

Yiddish: a language spoken by many Jews in Eastern Europe (Chapter 7) 480

yoke (of oxen): a pair of oxen joined by a wooden frame (Chapter 30) 2375

yoke (on a child): a wooden frame worn over the neck and shoulders (Chapter 30) 2359

Yoruba: an African people (Chapter 12) 832

yucca: a desert plant (Chapter 32) 2598

Z

zeal: great eagerness (Chapter 19) 1291

zoning: dividing a city into districts and setting rules for what may be built in each one: how tall, how close to the street, and for what use (Chapter 6) 431

zoologist: a scientist who studies animals (Chapter 29) 2287

zoot suit: an outfit with high-waisted, very wide pants that narrowed at the ankle and a long coat with wide lapels (Chapter 35) 2949

Timeline

The key dates from every chapter and the country's big turning points, oldest first, each with the chapter where you can read the whole story. When a line gives only a year, it comes first in that year.

Before 1500

About 9,000 years ago: Farmers in southern Mexico begin breeding corn from a wild grass called teosinte (Chapter 15) 986

1021: Norse sailors cut trees at L'Anse aux Meadows, in Newfoundland (Chapter 1) 17

About 1100: Cahokia, the largest city north of Mexico, reaches its peak of roughly 10,000 to 20,000 people (Chapter 6) 395

October 12, 1492: Rodrigo de Triana, a lookout on Columbus's ship *Pinta*, sees Guanahani, an island in the Bahamas (Chapter 1) 17

June 7, 1494: The rulers of Spain and Portugal split the lands across the Atlantic at Tordesillas (Chapter 23) 1597

The 1500s

1540: Hopi guides lead Spanish soldiers to the rim of the Grand Canyon (Chapter 1) 21

September 8, 1565: At Seloy, a Timucua town, Pedro Menéndez de Avilés founds St. Augustine, the oldest European town on the US mainland (Chapter 4) 258

1573: In the Laws of the Indies, Spain's king orders a plaza and a grid for every new Spanish town (Chapter 6) 398

1585: John White paints the town of Secotan, on the coast of what is now North Carolina (Chapter 32) 2605

April 30, 1598: Juan de Oñate claims New Mexico for Spain in La Toma, "the taking" (Chapter 5) 336

April 30, 1598: On the day of La Toma, Spanish soldiers and priests act the first European play on record in what is now the United States, beside the Rio Grande (Chapter 34) 2818

The 1600s

May 13, 1607: The Virginia Company's settlers found Jamestown (Chapter 19) 1235

1614: John Rolfe sends his first tobacco to London (Chapter 16) 1052

July 30 to August 4, 1619: Twenty-two burgesses, two elected men from each of Virginia's settlements, meet at Jamestown as the first elected assembly in English North America (Chapter 20) 1309

August 1619: The English ship *White Lion* carries about twenty captive Africans to Point Comfort, Virginia (Chapter 24) 1670

November 1620: The *Mayflower* men dig up and take the seed corn that Nauset farmers had buried at Cornhill, on Cape Cod (Chapter 15) 991

Fall 1621: The harvest meal at Plymouth, called the first Thanksgiving only from 1841 (Chapter 37) 3083

1631: Massachusetts judges order settlers to keep a night watch (Chapter 21) 1412

1634: Massachusetts judges order Robert Coles to wear a red D for a year as punishment for drunkenness (Chapter 28) 2127

April 23, 1635: Boston Latin School opens (Chapter 30) 2351

May 26, 1637: English soldiers burn the Pequot town at Mystic and shoot the people who try to get out (Chapter 22) 1508

July 9, 1640: Virginia judges sentence John Punch, the only African among three runaways, to serve for life (Chapter 24) 1670

1642: The Narragansett leader Miantonomi describes what English settlers are doing to the land (Chapter 3) 185

1646: Joseph Jenks gets a patent for his water-driven mills (Chapter 8) 517

1651: Massachusetts lawmakers fine people worth less than 200 pounds for dressing like gentlemen (Chapter 35) 2916

December 29, 1653: John Pynchon's account book records that John Stewart, a Scottish prisoner of war sold into forced labor, owes him 30 pounds for his freedom (Chapter 18) 1174

1662: Virginia's lawmakers pass a law that a child born to an enslaved mother is enslaved for life (Chapter 24) 1670

October 2, 1672: Workers break ground for the Castillo de San Marcos, the stone fort at St. Augustine (Chapter 12) 789

January 1673: The first post rider leaves New York for Boston (Chapter 11) 726

September 10, 1674: Virginia judges punish a tailor for racing and call racing "a sport only for Gentlemen" (Chapter 36) 2987

August 10, 1680: Po'pay leads the Pueblo Revolt, and Pueblo fighters drive the Spanish out of New Mexico (Chapter 29) 2213

April 18, 1688: Four men at Germantown sign a protest against slavery (Chapter 25) 1760

September 25, 1690: Benjamin Harris prints the newspaper *Publick Occurrences* in Boston, and the governor and his council stop it four days later (Chapter 31) 2506

December 1690: Massachusetts lawmakers vote for paper money (Chapter 17) 1115

1700 to 1750

January 26, 1700: The Cascadia fault breaks along the Pacific coast, and its tsunami reaches Japan the next day (Chapter 27) 2047

November 30, 1711: New York's aldermen, the men who run the city, set up a market at Wall Street for selling enslaved people (Chapter 18) 1178

1721: The Boston doctor Zabdiel Boylston inoculates people, giving them a small case of smallpox on purpose so they will not catch it again. Cotton Mather first heard of the method from Onesimus, a man he enslaved (Chapter 26) 1961

September 9, 1739: About 20 enslaved men rise up at the Stono River, south of Charleston, South Carolina (Chapter 24) 1676

May 10, 1740: South Carolina's lawmakers pass the Negro Act and ban enslaved people from using drums and horns (Chapter 33) 2723

May 10, 1740: In the same law, South Carolina's lawmakers also make it a crime to teach an enslaved person to write (Chapter 30) 2359

May 10, 1740: In the same law, South Carolina's lawmakers also bar enslaved people from wearing anything finer than coarse cloth (Chapter 35) 2923

1750 to 1800

June 3, 1769: Four men at Norriton time the planet Venus crossing the sun (Chapter 9) 591

1773: Phillis Wheatley's *Poems* comes out in London while she is enslaved in Boston (Chapter 32) 2619

December 16, 1773: Colonists dump the East India Company's tea into Boston Harbor (Chapter 19) 1245

April 19, 1775: The shooting of the Revolution starts at Lexington, Massachusetts, where British soldiers kill eight militiamen, ordinary men called up to fight (Chapter 22) 1522

July 4, 1776: Delegates to the Continental Congress adopt the Declaration of Independence, which states that "all men are created equal" (Chapter 25) 1770

September 3, 1783: In the Treaty of Paris, British diplomats accept American independence (Chapter 23) 1605

May 20, 1785: Members of Congress pass the Land Ordinance and order the land northwest of the Ohio River measured into a grid (Chapter 3) 192

July 6, 1785: Members of Congress vote for a dollar counted in tens (Chapter 17) 1123

January 16, 1786: Virginia's lawmakers pass Jefferson's Statute for Establishing Religious Freedom (Chapter 29) 2242

June 2, 1786: Philadelphia's printers begin the earliest proven strike of workers in one trade in the United States (Chapter 14) 920

September 17, 1787: Thirty-nine delegates sign the Constitution in Philadelphia (Chapter 20) 1322

1790: Members of Congress let only free white people born in other countries become citizens (Chapter 4) 271

1790: Pennsylvania lawmakers turn the Walnut Street Jail in Philadelphia into the country's first state prison (Chapter 21) 1427

December 15, 1791: The First Amendment, on freedom of speech and of the press, takes effect (Chapter 31) 2520

1793: Eli Whitney builds the cotton gin (Chapter 8) 528

September 18, 1793: George Washington lays the cornerstone of the Capitol (Chapter 12) 799

1799: Conrad Reed, 12, finds a 17-pound rock in a North Carolina creek, and his family uses it as a doorstop until a jeweler identifies it as gold in 1802 (Chapter 13) 855

1800 to 1850

February 1803: In *Marbury v. Madison*, the justices of the Supreme Court first strike down part of a law passed by Congress (Chapter 20) 1333

April 30, 1803: American diplomats agree to pay France $15 million for the right to take Louisiana from Native nations (Chapter 1) 44

1806: Lewis and Clark reach St. Louis with about 140 maps (Chapter 1) 44

January 1, 1808: A federal law against bringing captives from abroad to be enslaved takes effect (Chapter 24) 1693

February 11, 1808: Jesse Fell burns hard coal in his tavern fireplace (Chapter 10) 677

1821: William Brown opens the African Theatre in New York, the first known Black theatre company in the United States (Chapter 34) 2841

October 26, 1825: The Erie Canal opens (Chapter 11) 734

February 13, 1826: Reformers in Boston found the American Temperance Society (Chapter 28) 2147

1828: Thomas Dartmouth Rice first goes on stage as "Jim Crow," in blackface (Chapter 34) 2841

May 28, 1830: President Andrew Jackson signs the Indian Removal Act (Chapter 2) 126

May 1838: US soldiers begin rounding up about 16,000 Cherokee for the Trail of Tears, and more than 4,000 die by the usual count, or as many as twice that by the scholar Russell Thornton's estimate (Chapter 2) 126

1839: In *Crania Americana*, Samuel Morton ranks the races by skull size (Chapter 9) 596

1841: Catharine Beecher's *A Treatise on Domestic Economy*, a book on running a home, comes out (Chapter 7) 474

June 22, 1842: Water from the Croton Aqueduct reaches New York City (Chapter 6) 413

October 4, 1842: Ojibwe bands give up the Keweenaw copper country in the Treaty of La Pointe (Chapter 13) 859

1843: Four white men in blackface perform in New York as the Virginia Minstrels (Chapter 33) 2736

May 24, 1844: Samuel Morse sends the first public telegraph message (Chapter 8) 535

September 23, 1845: The Knickerbocker club adopts twenty rules for baseball (Chapter 36) 3008

February 2, 1848: In the Treaty of Guadalupe Hidalgo, Mexican officials sign over the Southwest (Chapter 23) 1616

July 19 and 20, 1848: More than 300 people meet at Seneca Falls, New York, and vote to demand the vote for women (Chapter 25) 1778

1850 to 1900

1852: Massachusetts lawmakers pass the first law that makes children go to school (Chapter 30) 2392

1856: William Henry Perkin makes the first man-made dye, a purple, from coal tar (Chapter 35) 2940

1857: Dave, an enslaved potter, cuts "I made this Jar = for cash" into the Poem Jar (Chapter 32) 2643

March 6, 1857: The justices of the Supreme Court rule against Dred and Harriet Scott, saying no Black American can be a citizen (Chapter 24) 1712

August 27, 1859: Drake's crew strikes oil in Pennsylvania (Chapter 10) 681

1860: Census takers count 3,953,760 enslaved people (Chapter 16) 1074

April 12, 1861: Confederate gunners fire on Fort Sumter, in South Carolina, and the Civil War begins (Chapter 22) 1543

May 20, 1862: President Lincoln signs the Homestead Act (Chapter 5) 363

January 1, 1863: Lincoln's Emancipation Proclamation takes effect, and Union soldiers begin freeing enslaved people as they advance (Chapter 24) 1712

July 1 to 3, 1863: The Union and Confederate armies fight the battle of Gettysburg, in Pennsylvania, and about 7,000 soldiers are killed (Chapter 22) 1543

October 3, 1863: Lincoln proclaims a national Thanksgiving on the last Thursday in November (Chapter 37) 3107

March 3, 1865: Members of Congress end the whites-only rule for mail carriers (Chapter 31) 2545

April 14, 1865: The actor John Wilkes Booth shoots President Lincoln at Ford's Theatre, and Lincoln dies the next morning (Chapter 34) 2851

June 19, 1865: General Granger announces in Galveston that slavery has ended in Texas, the day later called Juneteenth (Chapter 37) 3107

December 6, 1865: The Thirteenth Amendment, which forbids slavery except as a punishment for crime, becomes part of the Constitution (Chapter 24) 1712

May 10, 1869: Chinese workers lay the last track of the first railroad across the country, at Promontory Summit (Chapter 11) 745

1870: The Fifteenth Amendment bars every state from denying a man the vote because of race (Chapter 20) 1341

October 6, 1871: The Fisk Jubilee Singers set out on their first tour (Chapter 33) 2746

March 1, 1872: Yellowstone becomes the first national park (Chapter 3) 200

August 18, 1872: Montgomery Ward mails his first catalog from Chicago (Chapter 18) 1193

June 25, 1876: Lakota, Cheyenne and Arapaho fighters defeat George Custer's soldiers at the Little Bighorn (Chapter 2) 134

February 28, 1877: Members of Congress take the Black Hills from the Sioux (Chapter 12) 807

April 24, 1877: The last federal troops leave the Louisiana statehouse, and Reconstruction, the rebuilding after the war, ends (Chapter 24) 1712

October 6, 1879: The first Native children arrive at the federal boarding school at Carlisle, Pennsylvania, far from their homes, a few weeks before it formally opens (Chapter 30) 2392

November 1, 1879: Richard Henry Pratt opens the Carlisle Indian Industrial School in Pennsylvania (Chapter 2) 134

May 6, 1882: President Arthur signs the Chinese Exclusion Act (Chapter 4) 283

September 4, 1882: Thomas Edison's workers start the country's first permanent central power station, on Pearl Street in New York City (Chapter 10) 681

May 24, 1883: The Brooklyn Bridge opens, after at least 21 workers died building it (Chapter 12) 807

1887: Under the Dawes Act, federal officials begin cutting Native nations' land into private pieces (Chapter 2) 134

July 2, 1890: The Sherman Antitrust Act becomes law (Chapter 19) 1256

December 29, 1890: Soldiers of the 7th Cavalry kill between 250 and 300 Lakota people at Wounded Knee (Chapter 2) 134

October 21, 1892: The first national Columbus Day (Chapter 37) 3107

February 1, 1893: A white mob burns Henry Smith to death in Paris, Texas (Chapter 21) 1442

May 18, 1896: In *Plessy v. Ferguson*, the justices of the Supreme Court rule against Homer Plessy and allow states to keep separating Black and white passengers by law (Chapter 11) 745

December 10, 1898: In the Treaty of Paris, Spanish diplomats sign over Puerto Rico and Guam and sell the Philippines (Chapter 23) 1623

1900 to 1950

1900: Army doctors near Havana prove that mosquitoes spread yellow fever (Chapter 26) 1990

September 8, 1900: A hurricane kills between 6,000 and 12,000 people in Galveston, Texas, the deadliest natural disaster in the country's history (Chapter 27) 2078

May 27, 1901: In *Downes v. Bidwell*, the justices rule that Puerto Rico "belongs to, but is not a part of, the United States" (Chapter 23) 1634

December 17, 1903: The Wright brothers make the first powered flights (Chapter 8) 553

April 1906: Pentecostal worship begins at the Azusa Street meetings in Los Angeles (Chapter 29) 2287

June 30, 1906: President Theodore Roosevelt signs the Pure Food and Drug Act and the Meat Inspection Act (Chapter 15) 1015

December 6, 1907: The Monongah mine explosions kill at least 362 miners (Chapter 10) 691

1909: Peary says his party has reached the North Pole (Chapter 1) 74

March 25, 1911: The Triangle fire kills 146 workers in a New York factory where a stairway door was locked (Chapter 14) 941

May 15, 1911: The justices of the Supreme Court rule that Standard Oil has broken the Sherman Antitrust Act and give its owners six months to split it up (Chapter 19) 1268

1912: Henrietta Leavitt publishes her rule for measuring how far away stars are (Chapter 9) 614

December 23, 1913: President Wilson signs the Federal Reserve Act (Chapter 17) 1143

September 1, 1914: Martha, the last passenger pigeon, dies at the Cincinnati Zoo (Chapter 3) 215

February 8, 1915: *The Birth of a Nation* opens in Los Angeles (Chapter 34) 2861

July 25, 1916: New York City officials adopt the first zoning rules for a whole city, setting what may be built where (Chapter 6) 431

September 6, 1916: Clarence Saunders opens the first Piggly Wiggly, where shoppers serve themselves (Chapter 18) 1204

January 17, 1920: National Prohibition, the federal ban on making and selling alcoholic drinks, begins (Chapter 28) 2165

August 10, 1920: Mamie Smith records "Crazy Blues," the first blues record to become a big hit (Chapter 33) 2759

August 26, 1920: The Nineteenth Amendment, on votes for women, becomes part of the Constitution (Chapter 25) 1829

November 2, 1920: KDKA, one of the first radio stations, broadcasts the presidential election results (Chapter 31) 2559

May 31 to June 1, 1921: White Tulsans burn Greenwood, the Black district of Tulsa, and kill as many as 300 people (Chapter 25) 1829

May 26, 1924: President Coolidge signs the quota law, which fixes how many immigrants may come from each country (Chapter 4) 298

June 8, 1928: The New Jersey dial painters, the Radium Girls, sign their settlement with the U.S. Radium Corporation (Chapter 13) 868

October 29, 1929: Stock prices fall hard on Black Tuesday (Chapter 16) 1084

1932: Public Health Service doctors begin the Tuskegee study, keeping 399 Black men with syphilis from treatment for 40 years (Chapter 26) 1990

January 1, 1934: Deposit insurance, the government's promise to pay savers back if their bank fails, begins (Chapter 17) 1143

August 14, 1935: President Roosevelt signs the Social Security Act (Chapter 16) 1084

March 1936: Dorothea Lange photographs Florence Owens Thompson at Nipomo, California, in the picture known as *Migrant Mother* (Chapter 32) 2660

June 25, 1938: President Roosevelt signs the law that sets the first federal minimum wage, 25 cents an hour (Chapter 14) 941

1939: DuPont sells its first nylon stockings (Chapter 35) 2949

December 14, 1940: Glenn Seaborg's team makes plutonium at Berkeley (Chapter 13) 868

December 7, 1941: Japanese Navy pilots attack Pearl Harbor, Hawaii, and kill 2,403 Americans (Chapter 22) 1559

February 19, 1942: President Roosevelt signs Executive Order 9066, and soldiers then force Japanese Americans on the West Coast into camps (Chapter 5) 376

August 6, 1945: An American bomber crew drops an atomic bomb on Hiroshima, and 90,000 to 166,000 people die within four months (Chapter 22) 1559

April 15, 1947: Jackie Robinson plays his first game for Brooklyn (Chapter 36) 3028

October 1, 1947: The first families move into Levittown, New York (Chapter 7) 485

1948: In *Shelley v. Kraemer*, the justices of the Supreme Court rule that courts can no longer enforce restrictive covenants, sections of house deeds that forbid selling to Black buyers (Chapter 6) 431

1950 to 2000

April 25, 1953: Watson and Crick publish the shape of DNA, which they worked out from Rosalind Franklin's X-ray pictures without her knowledge (Chapter 9) 633

May 17, 1954: In *Brown v. Board of Education*, all nine justices rule that separating children by race in public schools breaks the Constitution (Chapter 25) 1871

1955: Jonas Salk's polio vaccine is shown to work and approved for use (Chapter 26) 2005

December 1, 1955: Police in Montgomery, Alabama, arrest Rosa Parks for refusing to give up her bus seat (Chapter 25) 1871

June 29, 1956: President Eisenhower signs the Interstate highway law (Chapter 11) 764

March 18, 1963: The justices of the Supreme Court rule that a poor person charged with a serious crime must get a lawyer (Chapter 21) 1468

July 2, 1964: President Lyndon Johnson signs the Civil Rights Act, which makes segregation in businesses and public places illegal (Chapter 25) 1871

1965: Members of Congress end the national-origins quotas, which limited immigration country by country (Chapter 4) 310

August 6, 1965: President Lyndon Johnson signs the Voting Rights Act, which bans literacy tests for voting (Chapter 25) 1871

1968: Members of Congress pass the Fair Housing Act (Chapter 7) 495

1969: Armstrong and Aldrin walk on the Moon (Chapter 1) 82

April 22, 1970: About 20 million Americans take part in Earth Day events (Chapter 3) 229

June 17, 1971: President Nixon calls drug abuse "public enemy number one" (Chapter 28) 2179

June 30, 1971: The justices of the Supreme Court vote 6 to 3 that newspapers may keep printing the Pentagon Papers (Chapter 31) 2572

August 15, 1971: President Nixon ends the dollar's last tie to gold (Chapter 17) 1153

June 23, 1972: President Nixon signs Title IX, the law against shutting people out of school programs because of sex (Chapter 36) 3045

June 30, 1973: The law allowing the draft runs out (Chapter 22) 1575

August 11, 1973: Kool Herc plays records at the Bronx party that people name as the start of hip-hop (Chapter 33) 2779

February 12, 1974: Judge George Boldt upholds the Northwest fishing treaties (Chapter 2) 158

August 9, 1974: Richard Nixon resigns the presidency rather than face a House vote on three charges (Chapter 20) 1372

August 11, 1978: The American Indian Religious Freedom Act becomes law (Chapter 29) 2304

November 16, 1990: President George H. W. Bush signs NAGPRA, under which museums must return Native remains and sacred objects (Chapter 32) 2679

July 16, 1995: Amazon.com opens for orders (Chapter 18) 1214

1996: Purdue Pharma begins selling the painkiller OxyContin (Chapter 28) 2179

April 14, 1999: Judge Paul L. Friedman approves the *Pigford v. Glickman* settlement for Black farmers (Chapter 15) 1028

2000 to today

September 11, 2001: Nineteen al-Qaeda hijackers take over four passenger jets and kill 2,977 people. They fly three into the World Trade Center and the Pentagon, and the fourth crashes in Pennsylvania after passengers and crew fight back (Chapter 27) 2104

Paul Alexander: Dallas boy paralyzed by polio who lived in an iron lung for more than 70 years and became a lawyer (Chapter 26, 1950 to 2000) 2009

Muhammad Ali: the heavyweight champion who refused the draft and won his case in the Supreme Court (Chapter 22, 1950 to 2000) 1580

Muhammad Ali: the heavyweight champion whose title was taken when he refused to be drafted in 1967 (Chapter 36, 1950 to 2000) 3050

Virginia Ali: a co-founder of Ben's Chili Bowl on U Street in Washington, D.C., which she has helped run since 1958 (Chapter 6, 2000 to Today) 454

Richard Allen: Black Philadelphian who, with Absalom Jones, led volunteers to nurse the sick and bury the dead in the yellow fever of 1793 (Chapter 26, 1750 to 1800) 1974

Richard Allen: preacher born into slavery who walked out of St. George's and founded the African Methodist Episcopal Church (Chapter 29, 1750 to 1800) 2247

Kate Alterman: Triangle fire survivor who told the jury how Margaret Schwartz died at the locked door (Chapter 27, 1900 to 1950) 2084

Anarcha: enslaved young woman on whom J. Marion Sims operated about thirty times with nothing to stop the pain (Chapter 26, 1800 to 1850) 1981

John Anderson: enslaved man who became Hartford's Black governor in 1776, in a dispute that white officials investigated as a possible plot (Chapter 37, 1750 to 1800) 3100

Marian Anderson: Black contralto who sang at the Lincoln Memorial in 1939 and was the first Black American singer at the Metropolitan Opera (Chapter 33, 1900 to 1950) 2778

Marvin Roger Anderson: a Rondo resident whose family lost its townhomes to Interstate 94 and who now leads ReConnect Rondo (Chapter 6, 1950 to 2000) 446

Roy Chapman Andrews: naturalist who started as a janitor at the American Museum of Natural History and whose team found the first known nests of dinosaur eggs (Chapter 1, 1900 to 1950) 78

Giannis Antetokounmpo: basketball player born stateless in Greece to Nigerian parents, who came to play for the Milwaukee Bucks (Chapter 4, 2000 to Today) 328

Susan B. Anthony: voted in Rochester in 1872 and was the only one of fifteen women put on trial for it (Chapter 25, 1850 to 1900) 1803

Kathleen McNulty Mauchly Antonelli: one of the six women who programmed ENIAC (Chapter 8, 1900 to 1950) 559

Michael Arad: the architect whose design for the National September 11 Memorial was chosen from 5,201 entries (Chapter 12, 2000 to Today) 833

Reinaldo Arenas: Cuban novelist jailed for his writing and for being gay, who left in the Mariel boatlift (Chapter 4, 1950 to 2000) 315

Louis Armstrong: Black trumpet player and singer who told a reporter in 1957 that "the government can go to hell" over Little Rock (Chapter 33, 1900 to 1950) 2764

Neil Armstrong: Apollo 11 astronaut, the first person to step onto the Moon (Chapter 1, 1950 to 2000) 86

Anthony Aston: a British lawyer turned actor who wrote a play about South Carolina (Chapter 34, 1700 to 1750) 2829

John James Audubon: painter of *The Birds of America*, who put one 1813 flock of passenger pigeons at more than 1 billion birds (Chapter 3, 1800 to 1850) 198

B

Doukenie Bacos: Greek girl held three days at Ellis Island at 16 (Chapter 4, 1900 to 1950) 300

DeFord Bailey: Black harmonica player whose playing came just before the Grand Ole Opry got its name (Chapter 33, 1900 to 1950) 2767

Bill Bair: boy who played for Lycoming Dairy in the first Little League season, in 1939 (Chapter 36, 1900 to 1950) 3041

Jessie Little Doe Baird: Mashpee Wampanoag linguist who brought the Wôpanâak language back into use (Chapter 2, 2000 to Today) 177

The Baldizzi family: Sicilian immigrant family at 97 Orchard Street through the Depression, forced out in 1935, whose apartment museum staff rebuilt from the daughter's memories (Chapter 7, 1900 to 1950) 492

Charles Ball: enslaved man marched in a chained coffle from Maryland to South Carolina, who escaped and told his story (Chapter 5, 1800 to 1850) 354

Lucille Ball: star of *I Love Lucy* and the first woman to run a major television studio (Chapter 34, 1950 to 2000) 2883

Martha Ballard: Maine midwife whose diary of 27 years records 816 births and the daily work of her household (Chapter 7, 1750 to 1800) 473

Robert Ballard: Navy oceanographer who helped find life around hot springs on the sea floor and found the wreck of the *Titanic* (Chapter 1, 1950 to 2000) 89

Benjamin Banneker: a free Black tobacco farmer and self-taught astronomer whose observations fixed the starting corner of the federal district (Chapter 6, 1750 to 1800) 410

Benjamin Banneker: free Black farmer and self-taught astronomer who sent Thomas Jefferson his almanac as proof against Jefferson's claim that Black people were less able than white people (Chapter 9, 1750 to 1800) 594

P.T. Barnum: a showman whose first paid show was Joice Heth, an enslaved woman he advertised as 161 years old (Chapter 18, 1800 to 1850) 1190

Frédéric Auguste Bartholdi: the French sculptor who designed the Statue of Liberty (Chapter 12, 1850 to 1900) 813

Jean Jennings Bartik: one of the six women who programmed ENIAC (Chapter 8, 1900 to 1950) 559

Clara Barton: took supplies to Civil War battlefields and founded the American Red Cross (Chapter 26, 1850 to 1900) 1984

Clara Barton: founder of the American Red Cross, who led its relief after fires, floods and hurricanes (Chapter 27, 1850 to 1900) 2077

John Bartram: Quaker farmer and botanist who built the oldest surviving botanic garden in America (Chapter 9, 1700 to 1750) 590

Jim Beckwourth: Black fur trapper, born into slavery, who lived with the Crow and found the lowest pass through the Sierra Nevada in California (Chapter 1, 1850 to 1900) 65

Catharine Beecher: wrote *A Treatise on Domestic Economy* (1841) and argued that keeping house was a profession schools should teach (Chapter 7, 1800 to 1850) 476

Catharine Beecher: ran a school for girls and spent decades arguing that teaching was women's work (Chapter 30, 1800 to 1850) 2382

Alexander Graham Bell: Boston inventor who received the first telephone patent in 1876 (Chapter 8, 1850 to 1900) 545

Lucas Benitez: tomato picker who helped start the Coalition of Immokalee Workers and its Fair Food Program, and who investigated slavery in the orange groves around Lake Placid, Florida (Chapter 15, 2000 to Today) 1042

Adelaide Wisdom Benjamin: girl whose family grew a victory garden and shopped with ration stamps during World War II (Chapter 15, 1900 to 1950) 1025

Bruce Bent: set up the first money market fund, the Reserve Fund, with Henry Brown (Chapter 17, 1950 to 2000) 1157

Victor Berger: Milwaukee Socialist editor sentenced to 20 years under the Espionage Act and twice refused his House seat (Chapter 31, 1900 to 1950) 2565

Vitus Bering: Danish-born officer in the Russian navy who led the voyage that reached Alaska in 1741 (Chapter 1, 1700 to 1750) 36

Irving Berlin: Jewish boy from the Russian Empire who came through Ellis Island and wrote "God Bless America" (Chapter 4, 1850 to 1900) 296

Carl Bernstein: *Washington Post* reporter who, with Bob Woodward, tied the Watergate burglary to President Nixon's White House (Chapter 31, 1950 to 2000) 2580

Barbara Ann Berwick: San Francisco Uber driver whom a California hearing officer ruled to be Uber's employee in 2015 (Chapter 11, 2000 to Today) 774

Jeff Bezos: the founder of Amazon (Chapter 18, 2000 to Today) 1223

Nicholas Biddle: head of the Second Bank of the United States who cut off its loans in his fight with President Andrew Jackson (Chapter 19, 1800 to 1850) 1254

William Billings: Boston tanner who wrote about 340 choir songs, including "Chester," and died poor (Chapter 33, 1750 to 1800) 2730

Hiram Bingham: Yale history teacher, not a trained archaeologist, who made the Inca site of Machu Picchu famous (Chapter 1, 1900 to 1950) 77

Isaac Bissell: Suffield blacksmith who carried Joseph Palmer's Lexington letter toward Connecticut (Chapter 31, 1750 to 1800) 2524

Colleen Black: a teenager from Nashville who worked as a leak detector at Oak Ridge's K-25 plant and lived in Oak Ridge the rest of her life (Chapter 6, 1900 to 1950) 441

Nicholas Black Elk: Oglala Lakota holy man who also taught the Catholic faith for decades as a catechist (Chapter 29, 1900 to 1950) 2290

Elizabeth Blackwell: first woman in the United States to earn a medical degree (Chapter 26, 1800 to 1850) 1982

Theodore and Patricia Bladykas: the first family to move into Levittown, New York, on October 1, 1947 (Chapter 7, 1900 to 1950) 493

Nellie Bly: reporter who got herself locked in New York's asylum for women and reported what she saw (Chapter 31, 1850 to 1900) 2552

Daniel Boone: hunter who marked the road through the Cumberland Gap into Kentucky (Chapter 1, 1750 to 1800) 40

Edwin Booth: a Shakespeare actor who played Hamlet a record hundred nights in a row, brother of John Wilkes Booth (Chapter 34, 1850 to 1900) 2854

Gutzon Borglum: the sculptor who designed Mount Rushmore, after starting a Confederate carving at Stone Mountain that the Ku Klux Klan helped pay for (Chapter 12, 1900 to 1950) 819

Norman Borlaug: plant scientist whose wheat helped poor countries grow far more grain, in the Green Revolution (Chapter 15, 1950 to 2000) 1032

Elias Boudinot: editor of the *Cherokee Phoenix* who later signed the Treaty of New Echota. A group of Cherokee who supported John Ross stabbed him to death in 1839 (Chapter 31, 1800 to 1850) 2538

Zabdiel Boylston: the one Boston doctor who tried inoculation in 1721 (Chapter 26, 1700 to 1750) 1964

William Bradford: governor of Plymouth Colony, who wrote the colony's history, *Of Plimoth Plantation* (Chapter 37, The 1600s) 3086

Anne Bradstreet: author of the first book of poems by someone living in the English colonies (Chapter 32, The 1600s) 2611

Jim Bridger: trapper and guide who never learned to read or write and reached the Great Salt Lake in a buffalo-hide boat (Chapter 1, 1800 to 1850) 58

Ruby Bridges: at six she walked into an all-white school in New Orleans, and for months she was its only pupil (Chapter 30, 1950 to 2000) 2448

Sergey Brin: Jewish boy from Moscow who came at six and started Google (Chapter 4, 1950 to 2000) 318

Joseph Broussard (Beausoleil): Acadian who fought the British removal, then led about 200 Acadians to Louisiana (Chapter 5, 1750 to 1800) 349

Henry Brown: set up the first money market fund, the Reserve Fund, with Bruce Bent (Chapter 17, 1950 to 2000) 1157

Josie Mabel Brown: Navy nurse on the 1918 influenza wards at Great Lakes, Illinois (Chapter 26, 1900 to 1950) 1996

William Alexander Brown: the founder of the African Theatre, the first known Black theatre company in the United States, and author of *King Shotaway* (Chapter 34, 1800 to 1850) 2843

Blanche K. Bruce: man born enslaved who became a United States senator for Mississippi and the first Black senator to serve a full six-year term (Chapter 24, 1850 to 1900) 1730

Jette Bruns: German settler in Missouri who wrote letters home to her brother for more than fifty years (Chapter 4, 1800 to 1850) 277

William Jennings Bryan: former congressman from Nebraska who became the Democratic candidate for president in 1896 with his "cross of gold" speech for silver (Chapter 17, 1850 to 1900) 1142

Sharon Buchanan: the cashier who made the first sale ever scanned with a barcode (Chapter 18, 1950 to 2000) 1220

Carrie Buck: young Virginia woman picked for a rigged test case in which the Supreme Court's justices allowed Virginia doctors to sterilize her. Dr. John H. Bell then operated on her so that she could never have a child (Chapter 25, 1900 to 1950) 1853

Buffalo Bird Woman (Waheenee): Hidatsa woman who grew up in her mothers' earth lodge and told the story of her life to Gilbert Wilson (Chapter 7, 1800 to 1850) 477

James Bullocke: a York County, Virginia, tailor punished in 1674 for racing his mare against a gentleman's horse (Chapter 36, The 1600s) 2992

Tarana Burke: youth organizer who used the words "me too" with survivors years before the hashtag (Chapter 25, 2000 to Today) 1926

Daniel Burnham: the Chicago architect who directed the building of the 1893 world's fair and wrote the 1909 Plan of Chicago with Edward Bennett (Chapter 6, 1900 to 1950) 434

Liz Byrd: Cheyenne schoolteacher and lawmaker who brought the King holiday bill before her fellow Wyoming lawmakers nine times (Chapter 37, 1950 to 2000) 3133

Richard Byrd: Navy pilot who led the first flight to the South Pole, whose claim to have flown over the North Pole is disputed (Chapter 1, 1900 to 1950) 79

C

Álvar Núñez Cabeza de Vaca: Spanish member of the Narváez expedition, one of the four survivors who walked from Texas to Mexico City (Chapter 1, The 1500s) 25

Caesar: enslaved healer whose cure for poison led South Carolina's lawmakers to buy his freedom (Chapter 26, 1750 to 1800) 1967

Rachel Calof: young woman from Russia whose memoir records a 12-by-14-foot homestead shanty in North Dakota, shared in winter with her in-laws and the chickens (Chapter 7, 1850 to 1900) 484

Teresa and Francisco Camacho: a Spanish soldier and fisherman and his Native wife, who shared their St. Augustine household with her sister and her sister's son (Chapter 7, The 1500s) 464

James Cameron: Canadian film director, the first person to dive alone to the Challenger Deep (Chapter 1, 2000 to Today) 94

Canasatego: Onondaga speaker who told the colonies to unite at Lancaster in 1744 (Chapter 2, 1700 to 1750) 119

Al Capone: the Chicago gang boss who sold illegal beer and liquor and went to prison for not paying the taxes he owed (Chapter 21, 1900 to 1950) 1465

Frank Capra: Sicilian boy who came through Ellis Island and won three Academy Awards as a director (Chapter 4, 1900 to 1950) 299

Addie Card: child spinner in a Vermont cotton mill whose Lewis Hine photograph appeared on a 1998 postage stamp (Chapter 14, 1900 to 1950) 944

Andrew Carnegie: a Scottish immigrant who started as a mill boy, sold his steel company for 480 million dollars and gave away more than 350 million (Chapter 16, 1850 to 1900) 1082

Andrew Carnegie: Pittsburgh steelmaker whose company owned every step of making steel (Chapter 19, 1850 to 1900) 1261

William Harvey Carney: a man born enslaved who carried the flag at Fort Wagner, the earliest act of Black American bravery recognized with the Medal of Honor (Chapter 24, 1850 to 1900) 1722

Wallace Carothers: chemist who led the DuPont team that made neoprene and nylon (Chapter 35, 1900 to 1950) 2955

Rachel Carson: marine biologist who wrote *Silent Spring* about persistent pesticides (Chapter 3, 1950 to 2000) 230

Lillian Carter: nurse from Plains, Georgia, who joined the Peace Corps at 68 and served in India (Chapter 23, 1950 to 2000) 1649

Maybelle Carter: guitarist of the Carter Family who made the guitar a lead instrument in country music (Chapter 33, 1900 to 1950) 2766

George Washington Carver: scientist who taught poor Southern farmers how to rebuild worn-out cotton land and grow their own food (Chapter 15, 1900 to 1950) 1017

James Leander Cathcart: American sailor enslaved in Algiers for eleven years who became chief Christian clerk to the Dey, the ruler of Algiers, and put the 1795 treaty into English (Chapter 23, 1750 to 1800) 1612

Nicolás Catua: young Tesuque runner who, with Pedro Omtua, carried the knotted cords of the Pueblo Revolt and was hanged by the Spanish (Chapter 31, The 1600s) 2511

William Chadbourne: an English carpenter who helped build one of the first sawmills run by water in New England (Chapter 10, The 1600s) 666

Charlie Chaplin: a London comedian who became a film star around the world by acting without speaking (Chapter 34, 1900 to 1950) 2868

Frank Chapman: bird scientist who started the Christmas Bird Count in 1900 (Chapter 9, 1900 to 1950) 616

Cesar Chavez: organizer of the farmworkers' union in the California grape fields. In March 2026 *The New York Times* reported that two women, Debra Rojas and Ana Murguia, said he sexually abused them as girls. Dolores Huerta then said he had raped her. He died in 1993, and no court heard the accusations (Chapter 14, 1950 to 2000) 965

Caleb Cheeshahteaumuck: a Wampanoag student from Martha's Vineyard, the first Native American to graduate from Harvard (Chapter 30, The 1600s) 2357

Ezekiel Cheever: a schoolmaster who taught Latin and Greek for 70 years, the last 38 as head of the Boston Latin School (Chapter 30, The 1600s) 2353

Rotchana Cheunchujit: Thai garment worker held in the El Monte sewing shop until officers freed her in 1995 (Chapter 35, 1950 to 2000) 2969

Santino Chuor: Dinka refugee from Sudan who, like Peter Dut, was one of the "Lost Boys" resettled in the United States (Chapter 4, 2000 to Today) 329

William Clark: Army officer who led the expedition with Meriwether Lewis and held York as a slave (Chapter 1, 1800 to 1850) 45

Charity Clarke: New Yorker who promised her cousin "a fighting army of Amazons" armed with spinning wheels (Chapter 35, 1750 to 1800) 2930

Nick Clifford: the youngest worker on Mount Rushmore and the last of its carvers to die (Chapter 12, 1900 to 1950) 820

Isaac Cline: Galveston's chief weather forecaster, who had called a hurricane harming the city "a crazy idea" and whose wife died in the 1900 storm (Chapter 27, 1900 to 1950) 2080

DeWitt Clinton: New York governor who pushed the Erie Canal through while people mocked it (Chapter 11, 1800 to 1850) 740

Samuel Cole: sweet-maker who kept the earliest licensed tavern known in Boston (Chapter 28, The 1600s) 2129

Thomas Cole: landscape painter and a first leader of the Hudson River School (Chapter 32, 1800 to 1850) 2633

Robert Coles: Massachusetts colonist made to wear a red letter D for drunkenness (Chapter 28, The 1600s) 2130

David and Micki Colfax and their sons: California ranch family who taught their four sons at home, three of whom went to Harvard (Chapter 7, 1950 to 2000) 501

John Collins: an English mason the Spanish held prisoner, who made the lime and ran the quarry for the Castillo de San Marcos (Chapter 12, The 1600s) 793

Michael Collins: Apollo 11 astronaut who stayed in orbit around the Moon in the command module (Chapter 1, 1950 to 2000) 86

John Colter: Lewis and Clark soldier who stayed to trap, the first person of European descent known to see the Yellowstone country (Chapter 1, 1800 to 1850) 51

Christopher Columbus: sea captain from Genoa who sailed west for Spain looking for a sea route to Asia and never set foot in what is now the United States (Chapter 1, The 1500s) 22

Edward Converse: Puritan settler and deacon who ran the first ferry between Charlestown and Boston (Chapter 11, The 1600s) 727

Martin Cooper: Motorola engineer who made the first call on a handheld cell phone in 1973 (Chapter 8, 1950 to 2000) 564

Thornton Copeland: a freed man who advertised in 1865 for his mother, from whom he had been sold away in 1844 (Chapter 24, 1850 to 1900) 1725

Nephi Craig: White Mountain Apache and Diné (Navajo) chef who opened a café built around Apache foods (Chapter 15, 2000 to Today) 1045

Prudence Crandall: Connecticut teacher arrested, tried and attacked for teaching Black girls (Chapter 25, 1800 to 1850) 1783

Walter Cronkite: CBS anchor who told viewers in 1968 the Vietnam War was "mired in stalemate" (Chapter 31, 1950 to 2000) 2577

Cuffee: enslaved man in New York City, sentenced by Judge Horsmanden in the trials of 1741 and burned at the stake with Quack (Chapter 21, 1700 to 1750) 1426

Ame and Elizabeth Cuming: Boston shopkeeper sisters who refused to join the boycott and were named in the newspaper and the town record for it (Chapter 18, 1750 to 1800) 1185

Austin Curtis: an enslaved jockey and trainer who kept his enslaver's horses from British raiders and was freed in 1791 (Chapter 36, 1750 to 1800) 3003

Jennie Curtis: Pullman seamstress whose speech helped start the Pullman boycott (Chapter 14, 1850 to 1900) 938

Charlotte Cushman: a Boston-born actress who played men's parts, including Romeo and Hamlet (Chapter 34, 1850 to 1900) 2852

D

William Darby: one of three men tried for acting *Ye Bare and Ye Cubb* in Virginia, the one the sheriff was ordered to arrest (Chapter 34, The 1600s) 2825

Dave (David Drake): enslaved potter and poet who cut his name and verses into his jars (Chapter 32, 1800 to 1850) 2638

Benjamin O. Davis Jr.: commander of the Black fighter pilots trained at Tuskegee and the first Black general in the Air Force (Chapter 22, 1900 to 1950) 1569

Jacob Davis: Reno tailor who put copper rivets on work pants (Chapter 35, 1850 to 1900) 2945

Joycelyn Davis: a descendant of *Clotilda* survivors who organizes gatherings in their honor in Africatown (Chapter 24, 2000 to Today) 1751

Eugene V. Debs: locomotive fireman who founded the American Railway Union and went to jail for leading the Pullman boycott (Chapter 14, 1850 to 1900) 939

John Deere: plow maker at Grand Detour, Illinois, whose polished steel plow cleaned itself in sticky prairie soil (Chapter 8, 1800 to 1850) 539

Mark and Chris DeJonge: Michigan parents convicted of a crime for teaching their children at home, who won in the state's highest court in 1993 (Chapter 30, 1950 to 2000) 2469

C. L. Dellums: retired Pullman porter, fired by Pullman managers in 1927 for organizing porters into a union, who described the porters' work on film in 1982 (Chapter 11, 1900 to 1950) 761

Prince Demah: enslaved portrait painter in Boston who later served free in the Massachusetts militia (Chapter 32, 1750 to 1800) 2622

Rachael Denhollander: a former gymnast who was the first woman to accuse Larry Nassar in public (Chapter 36, 2000 to Today) 3068

John Dewey: a philosopher who argued that children learn by doing and ran a school in Chicago to test it (Chapter 30, 1900 to 1950) 2423

Gerald Dickey: a Youngstown steelworker who proposed that the workers and the town buy their closed mill and reopen it (Chapter 16, 1950 to 2000) 1099

Dorothea Dix: visited every Massachusetts jail and poorhouse and reported how people with mental illness were held (Chapter 25, 1800 to 1850) 1789

Christopher Dock: a Mennonite schoolmaster in Pennsylvania who wrote the first book about how to teach written in this country (Chapter 30, 1700 to 1750) 2366

Jennifer Doudna: Berkeley biochemist who with Emmanuelle Charpentier made CRISPR-Cas9 a tool for cutting DNA (Chapter 9, 2000 to Today) 652

Frederick Douglass: a man born enslaved who learned to read in secret, escaped, and became the most heard abolitionist of his century (Chapter 24, 1800 to 1850) 1700

Frederick Douglass: escaped from slavery and started the *North Star* (Chapter 31, 1800 to 1850) 2544

Frederick Douglass: writer who escaped slavery and sat for 160 known photographs (Chapter 32, 1800 to 1850) 2642

Frederick Douglass: man enslaved in Maryland who described his childhood shirt and escaped dressed as a sailor (Chapter 35, 1800 to 1850) 2938

Edwin Drake: the man whose 1859 well near Titusville, Pennsylvania, started the American oil business, though he lost his money afterward (Chapter 10, 1850 to 1900) 682

Tammy Duckworth: a helicopter pilot who lost both legs in Iraq and later became a US senator (Chapter 22, 2000 to Today) 1591

Monica Dunford: physicist on the ATLAS experiment followed in *Particle Fever* (Chapter 9, 2000 to Today) 651

Peter Dut: Dinka refugee from Sudan who, like Santino Chuor, was one of the "Lost Boys" resettled in the United States (Chapter 4, 2000 to Today) 329

Mary Dyer: Quaker hanged on Boston Common for returning to Massachusetts after she was banished (Chapter 29, The 1600s) 2221

Bob Dylan: songwriter who won the Nobel Prize in Literature (Chapter 33, 1950 to 2000) 2788

E

Charles Eames: designer who, with Ray Eames, made molded plywood and fiberglass chairs (Chapter 35, 1950 to 2000) 2961

Ray Eames: designer and painter who, with Charles Eames, made molded plywood and fiberglass chairs (Chapter 35, 1950 to 2000) 2961

Amelia Earhart: the first woman to fly alone and nonstop across the Atlantic, lost over the Pacific in 1937 (Chapter 1, 1900 to 1950) 81

Sylvia Earle: marine biologist who holds the women's record for the deepest dive to the sea floor and led the first all-woman team to live underwater (Chapter 1, 1950 to 2000) 88

Thomas Edison: inventor whose team at Menlo Park made a long-lasting electric lamp, the phonograph and a system to sell electric light (Chapter 8, 1850 to 1900) 548

Thomas Edison: the inventor who built his Pearl Street electric system on direct current, which could not travel far (Chapter 10, 1850 to 1900) 684

Jonathan Edwards: minister of the Northampton revival, preacher of "Sinners in the Hands of an Angry God," and an enslaver (Chapter 29, 1700 to 1750) 2238

Albert Einstein: physicist who came to Princeton in 1933, signed the 1939 bomb letter and called racism "a disease of white people" (Chapter 9, 1900 to 1950) 623

Izzy Einstein: federal Prohibition agent who made arrests in disguise (Chapter 28, 1900 to 1950) 2172

Dwight Eisenhower: president who signed the Interstate highway law 37 years after crossing the country in an Army convoy (Chapter 11, 1950 to 2000) 765

Chris Ernst: the Yale rowing captain whose 1976 protest won the women's team a locker room (Chapter 36, 1950 to 2000) 3053

Estevanico: enslaved African man from Morocco, one of the four survivors, whom people of the Zuni town of Hawikuh killed in 1539 (Chapter 1, The 1500s) 25

Estevanico: an enslaved man from Morocco who walked across the south of the continent after a shipwreck. The people of the Zuni town of Hawikuh killed him in 1539, while he was guiding a Spanish expedition (Chapter 24, The 1500s) 1669

F

David Falconer: a government photographer who recorded Oregon's gasoline shortage of 1973 and 1974 in pictures and captions (Chapter 10, 1950 to 2000) 707

Katty Familia: immigrant mother from the Dominican Republic who, with Pierre Solon, lost the family's Boston house to foreclosure in 2009 (Chapter 7, 2000 to Today) 506

Marcos Farfán de los Godos: a captain with Juan de Oñate who wrote the first European play on record in what is now the United States (Chapter 34, The 1500s) 2820

Alpheus Felch: Michigan bank commissioner, later the state's governor and a US senator, who wrote down the frauds he found in 1838 (Chapter 17, 1800 to 1850) 1134

Lee Felsenstein: engineer who set up Community Memory, ran the Homebrew Computer Club's meetings and designed the Sol-20 and the Osborne 1 (Chapter 8, 1950 to 2000) 565

Richard Feynman: physicist who won a Nobel Prize for his work on how light and charged matter act on each other, and who showed the *Challenger* O-ring failure in ice water (Chapter 9, 1950 to 2000) 642

Mamie Garvin Fields: a Black teacher in South Carolina who started in a one-room school at twenty and taught for about thirty-five years (Chapter 30, 1900 to 1950) 2417

Charles Grandison Finney: lawyer turned revival preacher whose New Measures and lectures guided other revival preachers (Chapter 29, 1800 to 1850) 2269

John Fitch: builder of the first steamboat service anywhere to carry paying passengers on a schedule (Chapter 11, 1750 to 1800) 733

John Fitisemanu: American national born in American Samoa, living in Utah, who sued to be counted a citizen from birth (Chapter 23, 2000 to Today) 1661

Christian Fleetwood: a free Black sergeant major who carried his regiment's flag at New Market Heights and received the Medal of Honor (Chapter 22, 1850 to 1900) 1550

Williamina Fleming: Scottish immigrant hired as a maid who sorted more than 10,000 stars at Harvard's observatory (Chapter 9, 1850 to 1900) 613

Viola Fletcher: Greenwood survivor who at 107 asked Congress for justice (Chapter 25, 1900 to 1950) 1846

Betty Ford: wife of President Gerald Ford, who told the country she was addicted to pills and alcohol and founded a treatment center (Chapter 28, 1950 to 2000) 2185

Henry Ford: carmaker whose workers at Highland Park, Michigan, built the Model T on a moving assembly line (Chapter 8, 1900 to 1950) 555

Henry Ford: the carmaker who roughly doubled his workers' pay in 1914 (Chapter 16, 1900 to 1950) 1085

Edwin Forrest: an American star actor whose fans rioted against his English rival at Astor Place (Chapter 34, 1800 to 1850) 2849

Charlotte Forten: the first Black graduate of the Salem Normal School and the first Black teacher in Beaufort County, South Carolina (Chapter 30, 1850 to 1900) 2397

Adam Fortunate Eagle: Ojibwe writer, Pipestone boarding-school student and a lead organizer of the Alcatraz occupation (Chapter 2, 1950 to 2000) 169

Josephine Foster: a schoolgirl beaten for whispering in class, whose parents charged her teachers with cruelty (Chapter 30, 1850 to 1900) 2402

Robert Joseph Pershing Foster: Black surgeon who drove from Louisiana to Los Angeles in 1953 to practice medicine (Chapter 5, 1950 to 2000) 384

Stephen Foster: white songwriter of minstrel songs such as "Oh! Susanna," who died with 37 cents and three pennies (Chapter 33, 1800 to 1850) 2741

Naomi Parker Fraley: war worker who drilled, patched airplane wings and riveted in the machine shop of the Naval Air Station at Alameda, California, and the woman in a 1942 photograph linked to the "We Can Do It!" poster (Chapter 14, 1900 to 1950) 961

Billy Frank Jr.: Nisqually fisherman arrested more than fifty times, a leader of the fish-ins (Chapter 2, 1950 to 2000) 168

Aretha Franklin: Black singer who turned "Respect" into a woman's demand (Chapter 33, 1950 to 2000) 2784

Benjamin Franklin: a Philadelphia printer who helped start the Union Fire Company, the first volunteer fire company in the colonies to protect a whole town (Chapter 6, 1700 to 1750) 406

Benjamin Franklin: Philadelphia printer who designed the Franklin stove and the lightning rod and refused to patent his inventions (Chapter 8, 1700 to 1750) 527

Benjamin Franklin: Philadelphia experimenter whose electricity letters made him the first American scientist known abroad (Chapter 9, 1700 to 1750) 589

Benjamin Franklin: printer's apprentice who ran away from his brother's Boston shop at 17 (Chapter 14, 1700 to 1750) 919

Benjamin Franklin: Pennsylvania printer who argued for paper money, then printed it with the veins of real leaves to stop counterfeiters (Chapter 17, 1700 to 1750) 1121

Benjamin Franklin: the Philadelphia printer who made advertising pay for his newspaper and ran advertisements offering enslaved people for sale (Chapter 18, 1700 to 1750) 1181

Benjamin Franklin: American commissioner and then minister in France, and one of the three Americans who made the peace with Britain (Chapter 23, 1750 to 1800) 1608

Benjamin Franklin: printer, newspaper owner and Philadelphia postmaster whose paper earned money from advertisements, including ones selling enslaved people (Chapter 31, 1700 to 1750) 2519

Darnella Frazier: 17-year-old whose phone video recorded the police murder of George Floyd and became trial evidence (Chapter 31, 2000 to Today) 2590

Garrison Frazier: Baptist minister who told the Secretary of War in 1865 what freedom meant (Chapter 29, 1850 to 1900) 2280

Rose Rosenfeld Freedman: Triangle fire survivor who told the truth about the locked doors for ninety years (Chapter 14, 1900 to 1950) 946

Elizabeth Freeman (Mum Bett): an enslaved woman who sued for her freedom under the Massachusetts constitution and won (Chapter 24, 1750 to 1800) 1688

Herbert Freeman Jr.: New Orleans man who rescued his mother by boat and stayed by her body after she died at the Convention Center (Chapter 27, 2000 to Today) 2108

John C. Frémont: Army mapmaker whose maps guided thousands west and whose men killed at least 120 Wintu people in California (Chapter 1, 1800 to 1850) 61

Richard Frethorne: English indentured servant whose letters home from Virginia survive (Chapter 4, The 1600s) 262

Richard Frethorne: indentured servant at Martin's Hundred, Virginia, whose letters home begging for food survive (Chapter 14, The 1600s) 916

Limor Fried: engineer who founded Adafruit Industries, which makes electronics kits (Chapter 8, 2000 to Today) 573

Grace Fryer: radium dial painter who sued the company while she was dying (Chapter 14, 1900 to 1950) 952

Grace Fryer: radium watch-dial painter who sued the company that poisoned her (Chapter 25, 1900 to 1950) 1848

Samuel Fuller: *Mayflower* wool weaver with no known medical training who became the doctor for Plymouth and its neighbors (Chapter 26, The 1600s) 1956

Robert Fulton: the man who made the steamboat a business that lasted (Chapter 11, 1800 to 1850) 736

G

Lloyd Gaines: won the NAACP's first school case at the Supreme Court and then disappeared (Chapter 25, 1900 to 1950) 1861

Antonio García: Mexican farmworker who joined the Bracero Program at seventeen (Chapter 4, 1950 to 2000) 313

Newport Gardner: born Occramer Marycoo in West Africa, enslaved in Newport, Rhode Island, music teacher who bought his freedom with a lottery prize (Chapter 33, 1750 to 1800) 2734

James Garfield: 16-year-old canal boat hand in 1848 who later became president (Chapter 11, 1800 to 1850) 741

Bill Gates: head of Microsoft when government lawyers sued it for keeping an illegal monopoly (Chapter 19, 1950 to 2000) 1287

Jeff German: Las Vegas reporter stabbed to death by an elected official he had written about (Chapter 31, 2000 to Today) 2589

Albert Ghiorso: the builder of instruments who helped discover 12 elements without ever earning a doctorate (Chapter 13, 1950 to 2000) 890

Josiah Willard Gibbs: Yale physicist who founded chemical thermodynamics and worked nine years without pay (Chapter 9, 1850 to 1900) 611

Lois Gibbs: Love Canal mother who organized the Love Canal Homeowners Association in 1978 (Chapter 3, 1950 to 2000) 236

Jeffrey Gibson: Choctaw and Cherokee artist, the first Native artist to represent the United States alone at the Venice Biennale (Chapter 32, 2000 to Today) 2703

Josh Gibson: a Negro Leagues catcher and home-run hitter the white major-league owners never signed (Chapter 36, 1900 to 1950) 3042

Clarence Earl Gideon: a poor man in Florida whose pencil letter to the US Supreme Court won the right to a lawyer for every person charged with a serious crime (Chapter 21, 1950 to 2000) 1471

Kyle "Bugha" Giersdorf: a 16-year-old who won the first Fortnite World Cup and $3 million in 2019 (Chapter 36, 2000 to Today) 3061

Ida Mae Brandon Gladney: sharecropper's wife who left Mississippi for Chicago in 1937 after white men nearly beat a cousin to death (Chapter 5, 1900 to 1950) 378

Hugh Glass: fur trapper who crawled and walked about 200 miles after a grizzly attack, abandoned by the men left to watch over him (Chapter 1, 1800 to 1850) 54

Victor Glover: NASA pilot of Artemis II, the first Black man to travel 252,756 miles from Earth (Chapter 1, 2000 to Today) 95

Mary Katharine Goddard: Baltimore printer and postmaster who printed the first Declaration copies with the signers' names (Chapter 31, 1750 to 1800) 2528

Robert Goddard: Clark University physicist who flew the first liquid-fuel rocket in 1926 (Chapter 9, 1900 to 1950) 617

Nan Goldin: photographer who became addicted to OxyContin and led protests against the Sackler family (Chapter 28, 2000 to Today) 2195

Samuel Gompers: cigar maker who led the American Federation of Labor for almost forty years (Chapter 14, 1850 to 1900) 935

Charles Goodnight: Texas cattleman who invented the chuckwagon (Chapter 15, 1850 to 1900) 1013

John Tackett Goolrick: Confederate soldier whose family's letters record his 30 years of morphine addiction (Chapter 28, 1850 to 1900) 2157

John B. Gough: bookbinder whose drinking cost him his work, who then spent his life asking others to sign the temperance pledge (Chapter 28, 1800 to 1850) 2151

Billy Graham: Southern Baptist preacher who held crusades from 1949 to 2005 (Chapter 29, 1950 to 2000) 2308

Moses Grandy: enslaved boatman on the Dismal Swamp canals who bought his freedom three times and described the men who dug the canals (Chapter 11, 1800 to 1850) 742

Milla Granson (Lilly Ann Granderson): an enslaved woman who ran a secret night school in Natchez and taught hundreds to read and write (Chapter 24, 1800 to 1850) 1702

Lee Grant: an actress blacklisted for twelve years who later won an Academy Award (Chapter 34, 1950 to 2000) 2880

Ulysses S. Grant: commander of all the Union armies from 1864, who took Lee's surrender at Appomattox (Chapter 22, 1850 to 1900) 1551

Angelina Grimké: antislavery speaker, the first woman in the United States to speak before a body of lawmakers (Chapter 25, 1800 to 1850) 1787

Sarah Grimké: South Carolina-born antislavery speaker who answered the ministers with letters on the equality of the sexes (Chapter 25, 1800 to 1850) 1787

Victor Gruen: the architect who designed Southdale, the first enclosed American mall, and later rejected what developers built from his idea (Chapter 18, 1950 to 2000) 1215

James Guild: a Vermont farm boy who peddled goods from a trunk and wrote down what happened to him (Chapter 18, 1800 to 1850) 1189

Nathalie Gumpertz: tenement mother of four at 97 Orchard Street who supported her children as a dressmaker after her husband disappeared (Chapter 7, 1850 to 1900) 483

Henry Gunther: a drafted bank clerk listed as the last American soldier killed in World War I (Chapter 22, 1900 to 1950) 1564

Woody Guthrie: folk singer who wrote "This Land Is Your Land" (Chapter 33, 1900 to 1950) 2772

H

Deb Haaland: Laguna Pueblo, one of the first two Native American women in Congress and the first Native American cabinet secretary (Chapter 2, 2000 to Today) 176

Fred Haise: Apollo 13 astronaut whose crew survived an explosion on the way to the Moon (Chapter 1, 1950 to 2000) 87

Sarah Josepha Hale: magazine editor who asked governors and presidents for years to make Thanksgiving one national holiday (Chapter 37, 1800 to 1850) 3106

Alex Haley: the writer of *Roots*, which led many Black Americans to search for their families. Experts who trace family histories through records have challenged parts of his research (Chapter 24, 1950 to 2000) 1743

Nelson Cole Haley: a New Bedford harpooner on the whaling ship *Charles W. Morgan* whose book tells how a crew turned a whale into lamp oil (Chapter 10, 1800 to 1850) 680

Charles Martin Hall: the 22-year-old who found the cheap way to make aluminum, in his family's woodshed (Chapter 13, 1850 to 1900) 867

Julia Brainerd Hall: Charles Martin Hall's older sister, a chemist whose notes helped him win the fight over his patent (Chapter 13, 1850 to 1900) 867

Lewis Hallam the Younger: a boy in the first touring company who became the leading actor and manager of the American Company (Chapter 34, 1750 to 1800) 2836

Nancy Hallam: an actress in the American Company whom Charles Willson Peale painted in costume (Chapter 34, 1750 to 1800) 2837

Fannie Lou Hamer: Mississippi organizer who told the country on television how state highway patrolmen made two prisoners beat her in jail (Chapter 25, 1950 to 2000) 1884

Alexander Hamilton: orphaned Caribbean clerk sent to school in New York after his letter about a hurricane (Chapter 4, 1750 to 1800) 271

Alexander Hamilton: wrote the plan to pay the Revolution's debts in full (Chapter 16, 1750 to 1800) 1064

Alexander Hamilton: first Secretary of the Treasury, who planned the national bank and the United States Mint (Chapter 17, 1750 to 1800) 1127

Dr. Alexander Hamilton: Annapolis doctor whose 1744 diary records colonial taverns and drinking clubs, a different man from the Alexander Hamilton who ran the Treasury (Chapter 28, 1700 to 1750) 2137

Andrew Hamilton: Philadelphia lawyer who defended John Peter Zenger without pay and told the jury it could judge the law as well as the facts (Chapter 20, 1700 to 1750) 1321

Thomas Hancock: Boston merchant whose firm rented out the ships that carried the Acadians away in 1755 (Chapter 19, 1700 to 1750) 1244

Lorraine Hansberry: the first Black woman to have a drama produced on Broadway (Chapter 34, 1950 to 2000) 2884

Jeremy Hansen: Canadian Space Agency astronaut on Artemis II, the first Canadian to travel 252,756 miles from Earth (Chapter 1, 2000 to Today) 95

Laszlo Hanyecz: programmer who bought two pizzas for 10,000 bitcoins, the first recorded time anyone paid with bitcoin (Chapter 17, 2000 to Today) 1162

Thomas Hariot (also spelled Harriot): English mathematician who smoked tobacco the Algonquian way at Roanoke and wrote down how the Algonquian people used it (Chapter 28, The 1500s) 2125

Thomas Harriot (also spelled Hariot): English mathematician and scientist who wrote down, town by town, the deaths among the Carolina Algonquians (Chapter 26, The 1500s) 1953

Benjamin Harris: London printer who printed the first newspaper in the English colonies, *Publick Occurrences* (Chapter 31, The 1600s) 2509

Sarah Harris: young Black woman whose wish to be taught began Prudence Crandall's school for Black girls (Chapter 25, 1800 to 1850) 1783

Harry: enslaved fiddler who ran away near Jamestown, Virginia, in 1746, known from one runaway notice (Chapter 33, 1700 to 1750) 2727

Ira Hayes: Akimel O'odham Marine who helped raise the second flag on Iwo Jima (Chapter 2, 1900 to 1950) 156

Victor Heiser: 16-year-old who rode the Johnstown Flood on a barn roof, lost both parents, and became a doctor (Chapter 27, 1850 to 1900) 2075

John Hemmings: an enslaved joiner who made the fine woodwork of Monticello's rebuilt rooms, one of five people Jefferson freed in his will (Chapter 12, 1800 to 1850) 806

Caroline Henderson: Oklahoma Panhandle homesteader who stayed through the dust years and wrote "Letters from the Dust Bowl" (Chapter 3, 1900 to 1950) 225

Joseph Henry: discoverer of self-induction and first head of the Smithsonian, who drew the first national weather maps (Chapter 9, 1800 to 1850) 601

Matthew Henson: Black sailor and explorer, Robert Peary's navigator and dog-sled driver on seven Arctic voyages (Chapter 1, 1900 to 1950) 75

Judy Heumann: refused a school place and a teaching license, then helped lead the 1977 Section 504 sit-in (Chapter 25, 1950 to 2000) 1905

Darleane Hoffman: nuclear chemist who found plutonium in nature (Chapter 9, 1950 to 2000) 639

Darleane Hoffman: the nuclear chemist who found plutonium in ancient rock, proving it occurs in nature (Chapter 13, 1950 to 2000) 891

Betty Snyder Holberton: one of the six women who programmed ENIAC (Chapter 8, 1900 to 1950) 559

Billie Holiday: Black jazz singer who recorded "Strange Fruit" and was arrested in her hospital bed (Chapter 33, 1900 to 1950) 2775

John Campanius Holm: New Sweden chaplain who kept the first known weather record in what is now the United States (Chapter 9, The 1600s) 587

John W. Holway: medical student hired as a Pinkerton guard, beaten by a crowd at Homestead in 1892 (Chapter 19, 1850 to 1900) 1265

Winslow Homer: drew the Civil War for *Harper's Weekly* and later painted the sea (Chapter 32, 1850 to 1900) 2647

Philip Hone: a New York merchant and former mayor whose diary recorded the Panic of 1837 as it happened (Chapter 16, 1800 to 1850) 1074

Thomas Hooker: minister who led about 100 members of his church from Massachusetts to found Hartford (Chapter 5, The 1600s) 342

Grace Hopper: mathematician and Navy officer who built the A-0 compiler (Chapter 8, 1950 to 2000) 562

Josiah Hornblower: the young English engine builder who came over with the first steam engine in America and later ran it (Chapter 10, 1750 to 1800) 673

Lafayette Houck: one of the last colliers at Hopewell Furnace, who taught the National Park Service how charcoal was made (Chapter 10, 1850 to 1900) 689

Howling Wolf: Southern Cheyenne survivor of Sand Creek who became a ledger artist as a prisoner at Fort Marion (Chapter 32, 1850 to 1900) 2654

Edwin Hubble: astronomer who showed Andromeda is a separate galaxy and the universe is expanding (Chapter 9, 1900 to 1950) 619

Henry Hudson: English sea captain who sailed the *Half Moon* up the Hudson River in 1609, whose crew later put him into an open boat and sailed away (Chapter 1, The 1600s) 32

Dolores Huerta: farmworkers' union organizer who negotiated the first grape contracts and made up the slogan "Sí, se puede" (Chapter 14, 1950 to 2000) 965

Fountain Hughes: a man born into slavery whose own voice survives on a 1949 Library of Congress recording (Chapter 24, 1900 to 1950) 1740

John Hull: Boston silversmith who ran the Massachusetts mint against English law and struck the pine-tree shilling (Chapter 17, The 1600s) 1118

Amos Humiston: a sergeant killed at Gettysburg, identified by the photograph of his three children (Chapter 22, 1850 to 1900) 1547

Hung Wah: the leading Chinese headman on the Central Pacific (Chapter 11, 1850 to 1900) 749

Zora Neale Hurston: novelist and folklorist who never earned more than $943.75 in royalties from any book (Chapter 32, 1900 to 1950) 2669

Anne Hutchinson: English woman who followed her minister to Boston and was banished by the Massachusetts court (Chapter 4, The 1600s) 264

Anne Hutchinson: Boston woman tried and banished for what she taught at meetings in her house (Chapter 25, The 1600s) 1762

Anne Hutchinson: Boston woman banished and put out of her church for her teaching (Chapter 29, The 1600s) 2226

I

Daniel Inouye: a Japanese American soldier who lost his right arm in Italy and later served Hawaii in the Senate for 50 years (Chapter 22, 1900 to 1950) 1570

Samuel Insull: Thomas Edison's former secretary, who tied more than 85 electric companies into one chain that collapsed in 1932 (Chapter 10, 1900 to 1950) 695

J

Jack: man taken from Gambia and enslaved in Virginia, who ran away within five weeks of his sale (Chapter 35, 1700 to 1750) 2925

Andrew Jackson: president who vetoed the Second Bank's new charter and moved the government's money out of it (Chapter 17, 1800 to 1850) 1131

Andrew Jackson: president who signed the law to remove Native nations from the East, used the veto to fight the national bank and gave government jobs to his supporters (Chapter 20, 1800 to 1850) 1337

Nathan Jackson: Tlingit carver of totem poles and masks, still carving in his eighties (Chapter 32, Before 1500) 2603

Jane Jacobs: the writer who helped defeat three New York projects, among them the Lower Manhattan Expressway (Chapter 6, 1950 to 2000) 448

Frank James (Wamsutta): Wampanoag leader who started the National Day of Mourning in 1970, after the Massachusetts officials planning the Pilgrims' 350th anniversary stopped his speech (Chapter 37, 1950 to 2000) 3130

Anna Jarvis: woman who campaigned to create Mother's Day and then fought the businesses that made money from it (Chapter 37, 1900 to 1950) 3120

Thomas Jefferson: the owner of Monticello and an enslaver, who designed his own house and worked on a design for Virginia's capitol modeled on a Roman temple (Chapter 12, 1750 to 1800) 803

Mae Jemison: doctor, the first African American woman in space (Chapter 1, 1950 to 2000) 90

Joseph Jenks: London sword maker who ran the Saugus blacksmith shop and won the Massachusetts colony's protection for his water-driven mills in 1646, which US Patent Office officials credit as the first patent for a machine in what is now the United States (Chapter 8, The 1600s) 522

Steve Jobs: cofounder of Apple Computer who made its first sale (Chapter 8, 1950 to 2000) 567

Barbara Rose Johns: sixteen-year-old who led her school out on strike, which led to one of the Brown cases (Chapter 25, 1950 to 2000) 1874

Andrew Johnson: New Jersey high school wrestler whose locs were cut beside the mat (Chapter 35, 2000 to Today) 2977

Ashley Johnson: the actor who played Ellie in *The Last of Us* with her voice and body (Chapter 34, 2000 to Today) 2892

Ed Johnson: a Black man wrongly convicted of rape and lynched after the US Supreme Court ordered him kept safe (Chapter 21, 1900 to 1950) 1457

Francis Johnson: free Black bandleader in Philadelphia who published more than 200 pieces of music (Chapter 33, 1800 to 1850) 2744

Jack Johnson: the Black heavyweight champion whose 1910 win was followed by white attacks on Black people in more than 25 states (Chapter 36, 1900 to 1950) 3031

Katherine Johnson: Black mathematician who calculated the flight paths of the first American spaceflights (Chapter 1, 1950 to 2000) 85

Lyndon B. Johnson: Senate leader who kept count of how each senator would vote, then a president who used the same skill on civil rights laws (Chapter 20, 1950 to 2000) 1379

Henrietta Johnston: first woman recorded as working for pay as an artist in the English colonies, a pastel portraitist in Charleston (Chapter 32, 1700 to 1750) 2614

Kathryn "Tubby" Johnston: a girl who played Little League under a boy's name in 1950, after which officials banned girls (Chapter 36, 1950 to 2000) 3046

Louis Jolliet: fur trader born near Quebec who paddled down the Mississippi with Jacques Marquette in 1673 (Chapter 1, The 1600s) 34

Tryntje Jonas: official midwife of New Amsterdam (Chapter 26, The 1600s) 1959

Absalom Jones: Black Philadelphian who, with Richard Allen, led volunteers to nurse the sick and bury the dead in the yellow fever of 1793 (Chapter 26, 1750 to 1800) 1974

Absalom Jones: man born into slavery who became the first priest of African descent in the Episcopal Church (Chapter 29, 1750 to 1800) 2250

Mother Jones (Mary Harris Jones): union organizer for coal miners who led the March of the Mill Children in 1903 (Chapter 14, 1900 to 1950) 942

Scott Joplin: Black composer of the "Maple Leaf Rag" and the opera *Treemonisha* (Chapter 33, 1850 to 1900) 2756

Russel and Mary Jane Jordan: Iowa farm couple who sold their machinery, livestock and household goods at auction to pay their bank (Chapter 15, 1950 to 2000) 1038

Chief Joseph: Nez Perce leader in the flight of 1877 who surrendered forty miles from Canada (Chapter 2, 1850 to 1900) 141

Ona Judge: an enslaved woman who walked out of President George Washington's household and was never caught (Chapter 24, 1750 to 1800) 1692

K

Zoë Keating: cellist who publishes what streaming services pay her (Chapter 33, 2000 to Today) 2798

Elizabeth Keckley: dressmaker born enslaved who bought her freedom by sewing and made Mary Todd Lincoln's dresses (Chapter 35, 1850 to 1900) 2943

Joseph Kennedy: football coach put on leave over his prayers on the field, who won his case in the Supreme Court (Chapter 29, 2000 to Today) 2338

Patrick Kennedy: barrel maker who left County Wexford, Ireland, during the Great Famine and married Bridget Murphy in Boston in 1849, great-grandfather of John F. Kennedy (Chapter 4, 1800 to 1850) 282

Billy Kersands: the most popular Black minstrel comedian of his day, who performed in burnt-cork blackface (Chapter 34, 1850 to 1900) 2856

Lina Khan: law student whose 2017 article on Amazon's power came before she led the Federal Trade Commission (Chapter 19, 2000 to Today) 1297

Robin Wall Kimmerer: Citizen Potawatomi botanist who uses Native knowledge and laboratory science together (Chapter 9, Before 1500) 583

Billie Jean King: a tennis champion who founded the Women's Tennis Association and beat Bobby Riggs in 1973 (Chapter 36, 1950 to 2000) 3054

Martin Luther King Jr.: minister chosen to lead the Montgomery boycott. He was shot in Memphis in 1968, and James Earl Ray pleaded guilty to his murder (Chapter 25, 1950 to 2000) 1876

Amelia Stewart Knight: Oregon Trail traveler whose 1853 diary does not mention her pregnancy until the birth (Chapter 5, 1850 to 1900) 364

Jack Knight: airmail pilot who flew through a night snowstorm in 1921 to finish the test that kept the airmail going (Chapter 11, 1900 to 1950) 759

Sarah Kemble Knight: Boston businesswoman whose 1704 journal records the households where she stayed on the road to New York (Chapter 7, 1700 to 1750) 470

Sarah Kemble Knight: Boston businesswoman whose journal of her 1704 ride is an eyewitness record of the road (Chapter 11, 1700 to 1750) 731

Christina Koch: NASA astronaut on Artemis II, the first woman to travel 252,756 miles from Earth (Chapter 1, 2000 to Today) 95

Kondiaronk: Huron-Wendat chief who argued for the Great Peace of Montréal while dying of a fever (Chapter 23, 1700 to 1750) 1603

DJ Kool Herc: Clive Campbell, the DJ at the 1973 Bronx party that people name as the start of hip-hop (Chapter 33, 1950 to 2000) 2791

Fred Korematsu: refused to leave his home under the removal orders and had his conviction thrown out in 1983 (Chapter 25, 1900 to 1950) 1868

Oluale Kossola (Cudjo Lewis): a man carried to Alabama on the *Clotilda*, the last known slave ship, who helped found Africatown (Chapter 24, 1850 to 1900) 1717

Ron Kovic: a Marine paralyzed in Vietnam who came home and spoke against the war (Chapter 22, 1950 to 2000) 1579

Ray Kroc: milkshake-machine salesman who became the McDonald brothers' franchise agent and then bought them out (Chapter 15, 1950 to 2000) 1031

L

Henrietta Lacks: Black woman whose cancer cells doctors took without asking, the first human cells to keep growing in a laboratory (Chapter 26, 1950 to 2000) 2006

Kendrick Lamar: Black rapper, the first musician outside classical music and jazz to win the Pulitzer Prize for Music (Chapter 33, 2000 to Today) 2803

Rebecca Lamar: survivor of the *Pulaski* explosion who lived five days on a piece of the wreck and wrote it down (Chapter 27, 1800 to 1850) 2064

William Henry Lane (Master Juba): a Black dancer who danced in blackface and toured with a white minstrel company (Chapter 34, 1800 to 1850) 2846

Dorothea Lange: government photographer of 1930s farm families and the 1942 forced removal of Japanese Americans (Chapter 32, 1900 to 1950) 2676

Lucy Larcom: a girl who went to work in a Lowell mill at 11 and later wrote about her childhood (Chapter 36, 1800 to 1850) 3017

Robert de La Salle: French fur trader and explorer who followed the Mississippi to the sea and claimed its whole valley for France (Chapter 1, The 1600s) 35

Lewis Latimer: self-taught draftsman who drew the telephone patent and patented a better way to make lamp filaments (Chapter 8, 1850 to 1900) 549

Ernest Lawrence: scientist at Berkeley who built the cyclotron (Chapter 8, 1900 to 1950) 560

Ernest Lawrence: the physicist who invented the cyclotron, the machine behind most of the elements discovered in the United States (Chapter 13, 1900 to 1950) 881

Jacob Lawrence: painter of the 60-panel *Migration Series* (Chapter 32, 1900 to 1950) 2673

Raef Lawson: Grubhub delivery driver whose court case asked whether an app driver is an employee (Chapter 14, 2000 to Today) 976

Opal Lee: retired Fort Worth teacher who organized Juneteenth celebrations for about 40 years and campaigned for it to become a national holiday (Chapter 37, 2000 to Today) 3137

Lee Puey You: Chinese "paper daughter" held about 20 months on Angel Island and deported (Chapter 4, 1900 to 1950) 302

Robert E. Lee: commander of the Confederate Army of Northern Virginia, who surrendered at Appomattox (Chapter 22, 1850 to 1900) 1551

Leif Erikson: Norse sailor from Greenland, son of Erik the Red, who led one of the first European voyages to North America (Chapter 1, Before 1500) 20

Pierre L'Enfant: the French-born engineer who drew the plan of Washington, D.C., and was dismissed in 1792 before it was built (Chapter 6, 1750 to 1800) 409

Aldo Leopold: forester who got the Gila Wilderness set aside in 1924 and wrote *A Sand County Almanac* (Chapter 3, 1900 to 1950) 227

William Levingston: a merchant and dancing teacher who built the first playhouse in the English colonies, with two indentured servants as his actors (Chapter 34, 1700 to 1750) 2830

Edmonia Lewis: Mississauga Ojibwe and African American sculptor who carved in marble in Rome after being beaten and falsely charged at Oberlin (Chapter 32, 1850 to 1900) 2648

Meriwether Lewis: Army officer sent by Jefferson with William Clark across the Louisiana Purchase to the Pacific (Chapter 1, 1800 to 1850) 45

Hugh Kwong Liang: 15-year-old Chinatown survivor of the 1906 San Francisco earthquake and fire (Chapter 27, 1900 to 1950) 2082

Queen Lili‘uokalani: last queen of Hawaii, overthrown with American help in 1893 and tried in her own palace in 1895 (Chapter 23, 1850 to 1900) 1628

Maya Lin: the 21-year-old college student whose design won the contest for the Vietnam Veterans Memorial (Chapter 12, 1950 to 2000) 830

Abraham Lincoln: president who suspended habeas corpus during the Civil War and kept doing it after the Chief Justice told him he had no power to (Chapter 20, 1850 to 1900) 1343

Charles Lindbergh: airmail pilot who made the first solo nonstop flight across the Atlantic Ocean (Chapter 1, 1900 to 1950) 80

Sandra Lindsay: Queens nurse who got the first COVID-19 vaccine given in the United States outside a trial (Chapter 26, 2000 to Today) 2026

Little Turtle (Mishikinaakwa): Miami war leader who helped destroy St. Clair's army in 1791 and signed the Treaty of Greenville (Chapter 2, 1750 to 1800) 125

Lydia Lobsiger: the first depositor paid back by federal deposit insurance, with a $1,250 check, her life savings, dated July 3, 1934 (Chapter 17, 1900 to 1950) 1151

Elijah Lovejoy: antislavery editor shot dead by a mob in Alton, Illinois, while defending his press (Chapter 31, 1800 to 1850) 2541

Jim Lovell: commander of Apollo 13, whose crew lived in the lunar module after an explosion and came home safely (Chapter 1, 1950 to 2000) 87

Ann Lowe: Black dressmaker who made gowns for rich families, Olivia de Havilland's 1946 Oscar gown and Jacqueline Kennedy's wedding dress (Chapter 35, 1900 to 1950) 2956

Frank Lumpkin: Chicago steelworker who fought for 17 years to win back the pay and pensions lost when Wisconsin Steel closed (Chapter 14, 1950 to 2000) 970

Tristán de Luna y Arellano: Spanish noble who led the colony at Pensacola Bay when a hurricane sank its ships and food (Chapter 27, The 1500s) 2038

Emilia Ruth Palmquist Lundberg: a widowed mother of six in Jersey City who shopped for her family with ration books in the Second World War (Chapter 18, 1900 to 1950) 1212

Hannah Lyman: Northampton girl of about 16 fined 10 shillings for wearing silk, who wore it even while charged (Chapter 35, The 1600s) 2921

Matthew Lyon: Vermont congressman, the first person tried under the Sedition Act, re-elected from jail (Chapter 31, 1750 to 1800) 2531

Patrick Lyon: a Philadelphia blacksmith held three months in the Walnut Street Prison for a bank robbery he did not commit (Chapter 21, 1750 to 1800) 1433

M

Clara Maass: nurse who died after letting infected mosquitoes bite her in a yellow fever experiment (Chapter 26, 1900 to 1950) 1992

James Madison: Constitutional Convention delegate who first argued against a bill of rights, then wrote one and steered it through Congress (Chapter 20, 1750 to 1800) 1328

Wilma Mankiller: the first woman elected Principal Chief of the Cherokee Nation (Chapter 2, 1950 to 2000) 167

Horace Mann: the first secretary of the Massachusetts Board of Education, who argued for free schools paid for by taxes (Chapter 30, 1800 to 1850) 2377

Manteo: Algonquian man from Croatoan who learned English in London and interpreted for the English (Chapter 31, The 1500s) 2505

Jacques Marquette: French Jesuit priest who paddled down the Mississippi with Louis Jolliet in 1673 (Chapter 1, The 1600s) 34

John Marshall: Chief Justice who wrote that judges may refuse to follow a law that breaks the Constitution (Chapter 20, 1800 to 1850) 1334

Thurgood Marshall: lawyer who won 29 of the 32 cases he argued in the Supreme Court and later became its first Black justice (Chapter 20, 1950 to 2000) 1375

Joseph Plumb Martin: a Connecticut teenager who joined at 15 and wrote down what the war was like (Chapter 22, 1750 to 1800) 1530

Maria Martinez: San Ildefonso potter known for black-on-black pottery (Chapter 32, 1900 to 1950) 2665

Frank Mayer: buffalo runner from 1872 to 1878 who said army posts gave hunters free ammunition (Chapter 3, 1850 to 1900) 210

Barbara McClintock: scientist who found that genes can move, in corn (Chapter 9, 1900 to 1950) 632

Harold McComber: a Mohawk ironworker from Kahnawake who left home to work on Manhattan skyscrapers, the man the film *High Steel* follows (Chapter 12, 1950 to 2000) 827

Cyrus McCormick: held the patent on the McCormick reaper and built the business that sold it (Chapter 8, 1800 to 1850) 539

Antron McCray: one of the Exonerated Five, New York teenagers convicted in 1990 of a Central Park rape and cleared in 2002 (Chapter 21, 2000 to Today) 1486

Hattie McDaniel: the first Black person to win an Academy Award (Chapter 34, 1900 to 1950) 2875

Kelly McKernan: illustrator who sued the makers of picture-making programs in 2023 (Chapter 32, 2000 to Today) 2706

Malcom McLean: North Carolina trucking owner who started shipping truck-sized containers by sea in 1956 (Chapter 11, 1950 to 2000) 771

Aimee Semple McPherson: Pentecostal preacher who built the Angelus Temple and preached from it by radio (Chapter 29, 1900 to 1950) 2300

Doña María Meléndez: Timucua chief of Nombre de Dios, beside St. Augustine, and a Catholic (Chapter 29, The 1500s) 2212

Marlyn Wescoff Meltzer: one of the six women who programmed ENIAC (Chapter 8, 1900 to 1950) 559

Sylvia Mendez: turned away from a California school at eight, one of about 5,000 children in her father's lawsuit, which the families won (Chapter 30, 1900 to 1950) 2439

Francisco Menéndez: a Mandinga man who escaped slavery in Carolina and led the free Black militia at Fort Mose (Chapter 24, 1700 to 1750) 1681

Metacom (King Philip): Wampanoag sachem who led the coalition war of 1675 and 1676 against the New England colonies (Chapter 2, The 1600s) 112

Miantonomi: Narragansett sachem who described what English settlers were doing to the land in 1642, sentenced to death by English officials and killed in 1643 (Chapter 3, The 1600s) 187

Oscar Micheaux: a Black homesteader and novelist who made more than 40 films for Black audiences (Chapter 34, 1900 to 1950) 2871

Albert Michelson: Prussian-born physicist who measured the speed of light to within about 0.05 percent (Chapter 9, 1850 to 1900) 612

Peter Mills: a twelve-year-old shut out of his Washington school, whose name is on the 1972 case that gave disabled children a right to public school (Chapter 30, 1950 to 2000) 2465

Maria Mitchell: Nantucket librarian and astronomer who found "Miss Mitchell's Comet" in 1847 (Chapter 9, 1800 to 1850) 603

Tom Molineaux: a boxer from Virginia who fought the English champion Tom Cribb twice (Chapter 36, 1800 to 1850) 3013

Annie Moore: Irish girl of 17, the first immigrant processed at Ellis Island (Chapter 4, 1850 to 1900) 295

Bridget and Joseph Moore: an Irish immigrant couple at 97 Orchard Street whose daughter Agnes Mary died of marasmus, a form of starvation, at five months in 1869 (Chapter 6, 1850 to 1900) 424

Linda Morabito: navigation engineer who found the first active volcano seen beyond Earth, on Io (Chapter 9, 1950 to 2000) 641

Rita Moreno: the first Hispanic woman to win an Academy Award (Chapter 34, 1950 to 2000) 2885

Irene Morgan: Baltimore war worker who refused to give up her bus seat in 1944 and won her case in the Supreme Court in 1946 (Chapter 11, 1900 to 1950) 763

J.P. Morgan: New York banker who ran the rescue in the Panic of 1907 from his own library (Chapter 17, 1900 to 1950) 1145

J.P. Morgan: Wall Street banker who joined rival companies into giant ones, among them US Steel (Chapter 19, 1900 to 1950) 1270

Robert Morris: ran the country's finances near the end of the Revolution, bought most of the Seneca Nation's land in New York, then went to a debtors' prison (Chapter 19, 1750 to 1800) 1248

Toni Morrison: editor and novelist who won the Nobel Prize in Literature (Chapter 32, 1950 to 2000) 2693

Samuel Morse: inventor who held the patents on the electric telegraph and sent the first public message in 1844 (Chapter 8, 1800 to 1850) 537

Robert Moses: the New York official who built bridges, parks and expressways for decades without winning an election (Chapter 6, 1950 to 2000) 448

Wandrea ArShaye "Shaye" Moss: Fulton County election worker falsely accused of cheating in the 2020 count, who told a committee of Congress under oath what followed (Chapter 20, 2000 to Today) 1397

Lucretia Mott: Quaker antislavery organizer who called the Seneca Falls convention with Elizabeth Cady Stanton (Chapter 25, 1800 to 1850) 1792

Ebenezer Mudgett: Weare, New Hampshire, sawmill owner fined for cutting the king's pines, who led the Pine Tree Riot of 1772 (Chapter 3, 1750 to 1800) 193

John Muir: Scottish-born writer whose articles made Yosemite known, first president of the Sierra Club (Chapter 3, 1850 to 1900) 213

The Munoz family: Las Vegas family whose four school-age children did school online at the dining room table in August 2020 (Chapter 7, 2000 to Today) 507

Bridget Murphy: woman from County Wexford, Ireland, who married Patrick Kennedy in Boston in the famine years, great-grandmother of John F. Kennedy (Chapter 4, 1800 to 1850) 282

Isaac Murphy: a jockey born into slavery who won the Kentucky Derby three times (Chapter 36, 1850 to 1900) 3023

Edward R. Murrow: CBS radio reporter in London before and during World War II (Chapter 31, 1900 to 1950) 2568

Daisy and William Myers: the first Black family in Levittown, Pennsylvania, who stayed in their house through weeks of mob attacks in 1957 (Chapter 7, 1950 to 2000) 498

N

R. Carlos Nakai: Navajo and Ute flute player whose records were the first of the traditional Native flute to sell 500,000 copies (Chapter 33, Before 1500) 2716

Carry Nation: Kansas woman who smashed saloons to force officials to enforce the state's liquor ban (Chapter 28, 1900 to 1950) 2166

William Cooper Nell: printer of the *North Star* and the first Black American known to hold a federal job (Chapter 31, 1850 to 1900) 2549

Eliot Ness: the federal agent whose team raided Al Capone's breweries (Chapter 21, 1900 to 1950) 1465

Ed Neufeldt: an Elkhart, Indiana, worker who built RV cabinets for 32 years, lost his job in 2008 and introduced President Obama in 2009 (Chapter 16, 2000 to Today) 1106

Rebecca Neugin: Cherokee woman taken west on the Trail of Tears at about three, interviewed in 1932 (Chapter 2, 1800 to 1850) 132

Rebecca Neugin: Cherokee woman forced west on the Trail of Tears at about three, interviewed at 97 or 98 (Chapter 5, 1800 to 1850) 357

Chester Nez: Navajo Marine, one of the twenty-nine who built the Navajo code (Chapter 2, 1900 to 1950) 157

Chester Nez: one of the first 29 Navajo code talkers, who fought on four Pacific islands (Chapter 22, 1900 to 1950) 1571

Emanuel Ninger: sign painter who drew fake money by hand and was caught when his ink ran on a wet bar in 1896 (Chapter 17, 1850 to 1900) 1138

E. D. Nixon: retired Pullman porter who called the meeting that organized the 1955 Montgomery bus boycott and described the porters' work on film in 1982 (Chapter 11, 1900 to 1950) 761

Solomon Northup: a free New Yorker kidnapped and held in slavery in Louisiana for twelve years, who named the people who did it (Chapter 24, 1800 to 1850) 1707

Rebecca Nurse: a member of the Salem church found not guilty of witchcraft, then convicted and hanged (Chapter 21, The 1600s) 1420

Emma Nutt: the first woman telephone operator, hired in Boston in 1878 (Chapter 8, 1850 to 1900) 546

O

Jim Obergefell: widower whose case made same-sex marriage legal in every state (Chapter 25, 2000 to Today) 1916

Uriah and Mattie Oblinger: Nebraska homesteaders whose letters describe the food and work of a farm claim (Chapter 15, 1850 to 1900) 1010

Georgia O'Keeffe: painter shown by Alfred Stieglitz in 1916 who later lived and painted in New Mexico (Chapter 32, 1900 to 1950) 2662

Frederick Law Olmsted: the designer, with Calvert Vaux, of Central Park (Chapter 6, 1850 to 1900) 427

Pedro Omtua: young Tesuque runner who, with Nicolás Catua, carried the knotted cords of the Pueblo Revolt and was hanged by the Spanish (Chapter 31, The 1600s) 2511

Juan de Oñate: Spanish leader of the 1598 colony that came over land into New Mexico, who ordered the attack on Acoma Pueblo (Chapter 5, The 1500s) 338

Onesimus: enslaved African man who described inoculation to Cotton Mather (Chapter 26, 1700 to 1750) 1963

Karla Ortiz: concept artist who told US senators how AI image programs affected artists and sued AI companies (Chapter 8, 2000 to Today) 575

Osceola: Seminole war leader seized under a flag of truce in 1837 (Chapter 2, 1800 to 1850) 134

Jesse Owens: a runner and jumper who won four gold medals at the 1936 Olympic Games in Berlin (Chapter 36, 1900 to 1950) 3039

P

Thomas Paine: writer of *Common Sense* and *The American Crisis* (Chapter 31, 1750 to 1800) 2526

Paquiquineo (Don Luís): Chesapeake man who met the king of Spain, came home with a Spanish mission in 1570 and led an attack on it (Chapter 2, The 1500s) 104

Paquiquineo (Don Luís de Velasco): a young man from the Chesapeake who spent years among Spanish priests and came home with a Jesuit mission (Chapter 30, The 1500s) 2349

Gordon Parks: first African American staff photographer at *Life* magazine (Chapter 32, 1950 to 2000) 2683

Rosa Parks: NAACP secretary whose arrest set off the Montgomery bus boycott (Chapter 25, 1950 to 2000) 1876

Dolly Parton: Tennessee songwriter who refused to give Elvis Presley's manager half the rights to "I Will Always Love You" (Chapter 33, 2000 to Today) 2808

Matthew Patten: New Hampshire farmer, carpenter and judge whose diary records what his family grew, caught and ate (Chapter 15, 1750 to 1800) 1001

Alice Paul: organizer of the White House picket line, jailed and fed by force, author of the Equal Rights Amendment (Chapter 25, 1900 to 1950) 1833

Cristian Pavón Pineda: an 11-year-old sixth grader who died in his family's mobile home in Conroe, Texas, during the 2021 blackout. Early reports blamed the cold, but police later said an autopsy found carbon monoxide poisoning (Chapter 10, 2000 to Today) 716

Charles Willson Peale: painter of the Revolution's leaders, whom a Maryland planter paid for portraits with two enslaved people, Scarborough and Lucy (Chapter 32, 1750 to 1800) 2621

Robert Peary: Navy officer who said his party reached the North Pole in 1909, a claim still disputed (Chapter 1, 1900 to 1950) 75

John Stith Pemberton: Georgia druggist, addicted to morphine, who invented Coca-Cola (Chapter 28, 1850 to 1900) 2159

William Penn: the founder of Pennsylvania, a Quaker, who had Philadelphia planned on paper before it existed on the ground (Chapter 6, The 1600s) 403

Frances Perkins: witness to the Triangle fire who became the first woman in a US Cabinet and pushed for the first federal minimum wage (Chapter 14, 1900 to 1950) 947

Frances Perkins: the Secretary of Labor who chaired the committee that planned Social Security, and the first woman in a United States Cabinet (Chapter 16, 1900 to 1950) 1091

Philippe Petit: a French high-wire walker who crossed between the Twin Towers on a cable eight times (Chapter 12, 1950 to 2000) 828

Clarice Phelps: the Oak Ridge nuclear chemist and Navy veteran who helped purify the berkelium used to confirm element 117 (Chapter 13, 2000 to Today) 901

Elizabeth Phillips: licensed midwife whose gravestone says she delivered more than 3,000 babies in and around Boston (Chapter 26, 1700 to 1750) 1965

Susan La Flesche Picotte: first Native American woman to earn a medical degree, doctor for the Omaha Nation (Chapter 26, 1850 to 1900) 1989

Sengbe Pieh (Joseph Cinqué): a Mende man who led the *Amistad* captives in taking the ship and won their freedom in the Supreme Court (Chapter 24, 1800 to 1850) 1706

Zebulon Pike: Army lieutenant sent to explore the edges of the Louisiana Purchase, arrested by Spanish soldiers in 1807 (Chapter 1, 1800 to 1850) 50

Gifford Pinchot: first chief of the U.S. Forest Service, fired by President Taft in 1910 (Chapter 3, 1900 to 1950) 221

Eliza Lucas Pinckney: planter's daughter who ran her family's South Carolina plantations as a teenager and made the colony's first successful indigo dye. She took charge of the 20 enslaved people who worked Wappoo plantation (Chapter 15, 1700 to 1750) 999

Eliza Lucas Pinckney: ran her father's three South Carolina plantations from the age of 16 and directed the colony's first successful indigo dye crop, which enslaved workers grew and processed (Chapter 16, 1700 to 1750) 1059

Allan Pinkerton: a Scottish barrel maker who started a private detective agency in Chicago (Chapter 21, 1850 to 1900) 1448

George Washington Plunkitt: New York machine politician who explained to a reporter, from a shoeshine stand, how he made his money and kept his votes (Chapter 20, 1900 to 1950) 1357

Sidney Poitier: the first Black man to win the Academy Award for Best Actor (Chapter 34, 1950 to 2000) 2886

Charles Pollard: farmer kept in the Tuskegee study for 40 years who brought the men's lawsuit (Chapter 26, 1900 to 1950) 2000

Jackson Pollock: painter who dripped and poured paint onto canvas laid on the floor (Chapter 32, 1950 to 2000) 2680

Po'pay (Popé): Tewa religious leader who organized the Pueblo rising of 1680 (Chapter 2, The 1600s) 115

John Pory: secretary of the Virginia colony, who served as Speaker of the first elected assembly in English North America and wrote the record of what it did (Chapter 20, The 1600s) 1313

John Wesley Powell: one-armed Civil War officer who led the first recorded boat journey by white men through the whole Grand Canyon (Chapter 1, 1850 to 1900) 69

Elvis Presley: white rock and roll singer whose manager took 25 and then 50 percent of his income (Chapter 33, 1950 to 2000) 2782

Joseph Priestley: the English chemist credited with discovering oxygen, who spent his last ten years in Pennsylvania (Chapter 13, 1750 to 1800) 857

John Punch: the first African known to have been sentenced by a Virginia court to serve for life (Chapter 24, The 1600s) 1673

Q

Quack: enslaved man in New York City, sentenced by Judge Horsmanden in the trials of 1741 and burned at the stake with Cuffee (Chapter 21, 1700 to 1750) 1426

Ke Huy Quan: a child actor from a refugee family who quit acting and came back to win an Academy Award (Chapter 34, 2000 to Today) 2898

Fray Cristóbal de Quiñones: Franciscan friar who put an organ in the church at San Felipe Pueblo and trained its singers (Chapter 33, The 1600s) 2721

Selena Quintanilla: Mexican American Tejano singer killed at 23 by the woman who ran her fan club (Chapter 33, 1950 to 2000) 2793

R

The Radium Girls: young women, among them Grace Fryer and Catherine Wolfe Donohue, poisoned by the radium paint they used on watch dials. Their supervisors told them to shape their brushes with their lips and said the paint was safe (Chapter 13, 1900 to 1950) 871

Joseph Hayne Rainey: man born to enslaved parents and forced to work on Confederate defenses, who became the first Black member of the US House and the first to preside over it (Chapter 20, 1850 to 1900) 1350

A. Philip Randolph: union leader who won the first contract between a major American company and a union led by Black workers (Chapter 14, 1900 to 1950) 958

A. Philip Randolph: union leader whose threatened marches won two presidents' orders against discrimination (Chapter 25, 1900 to 1950) 1863

Philip Ratcliffe: a servant whipped, his ears cut off, fined and banished for speaking against the Massachusetts government and the Salem church (Chapter 21, The 1600s) 1416

Bernice Johnson Reagon: Albany, Georgia, song leader of the civil rights movement and a SNCC Freedom Singer (Chapter 33, 1950 to 2000) 2787

Conrad Reed: the 12-year-old who found the first gold in the United States that an expert confirmed was real (Chapter 13, 1750 to 1800) 858

Philip Reid: an enslaved foundry worker who worked out how to take apart the model of the Statue of Freedom, free by the day it was raised (Chapter 12, 1850 to 1900) 808

Minnie Lee and Mary Alice Relf: Black sisters in Alabama, aged 12 and 14, whom surgeons sterilized through a federally paid clinic, operating on them so that they could never have children (Chapter 26, 1950 to 2000) 2019

Hiram Revels: Mississippi minister who in 1870 became the first Black United States senator (Chapter 24, 1850 to 1900) 1730

The Revis family: Bethel Baptist deacon James Revis and his daughters, whose porch became the guard post for a bombed church (Chapter 29, 1950 to 2000) 2307

Margie Richard: Norco, Louisiana, schoolteacher who led the Old Diamond campaign that made Shell pay to move the families (Chapter 3, 2000 to Today) 244

Kevin Richardson: one of the Exonerated Five, New York teenagers convicted in 1990 of a Central Park rape and cleared in 2002 (Chapter 21, 2000 to Today) 1486

Sally Ride: physicist, the first American woman in space (Chapter 1, 1950 to 2000) 90

Jacob Riis: a Danish immigrant and police reporter whose flash photographs showed how New York's poor lived (Chapter 6, 1850 to 1900) 423

John Riley: an Irish-born sergeant who led the San Patricios on the Mexican side and was whipped and branded (Chapter 22, 1800 to 1850) 1541

Mary Ring: Plymouth widow whose will and inventory record what one household owned (Chapter 7, The 1600s) 467

Mary Ring: Plymouth Colony widow whose list of belongings shows the colonists wore red, violet and blue (Chapter 35, The 1600s) 2917

Faith Ringgold: painter and quilt maker arrested for protesting at the Whitney Museum (Chapter 32, 1950 to 2000) 2689

David Rittenhouse: self-taught instrument maker and astronomer who timed Venus at Norriton in 1769 (Chapter 9, 1750 to 1800) 592

Barbara "Dusty" Roads: American Airlines stewardess who fought the rule that fired women at 32 or when they married (Chapter 11, 1950 to 2000) 768

Margo Robbins: Yurok woman who helped found the Cultural Fire Management Council in 2013 (Chapter 3, 2000 to Today) 242

Kimberly Rivers Roberts: New Orleans woman who filmed the Katrina flood from inside it (Chapter 5, 2000 to Today) 390

Sarah Roberts: a five-year-old Black girl put out of the Boston school nearest her home, whose father sued the city (Chapter 30, 1800 to 1850) 2391

Harriet Hanson Robinson: Lowell mill girl who led her room out on strike at 11 and later wrote a book about the mill girls (Chapter 14, 1800 to 1850) 927

Jackie Robinson: the first Black player in the white major leagues since the 1880s, from April 15, 1947 (Chapter 36, 1900 to 1950) 3043

John D. Rockefeller: founder of Standard Oil, which by 1880 controlled about 90 percent of American oil refining (Chapter 16, 1850 to 1900) 1083

John D. Rockefeller: built Standard Oil and set up the first large trust (Chapter 19, 1850 to 1900) 1257

John, Washington and Emily Roebling: the man who designed the Brooklyn Bridge, the son who took charge of building it, and the son's wife, who carried his instructions to the engineers for 11 years (Chapter 12, 1850 to 1900) 810

John Rolfe: the Jamestown colonist whose tobacco shipments to London began Virginia's export trade (Chapter 16, The 1600s) 1053

Franklin D. Roosevelt: president who lost key cases in the Supreme Court, tried to add justices to it and was elected four times (Chapter 20, 1900 to 1950) 1367

Theodore Roosevelt: president who put about 230 million acres under federal protection and camped in Yosemite with John Muir in 1903 (Chapter 3, 1900 to 1950) 217

Theodore Roosevelt: the president known as the trust-buster, whose lawyers won the Northern Securities case (Chapter 19, 1900 to 1950) 1272

Hannah Ropes: Civil War head nurse who reported a thieving steward to the Secretary of War and died of typhoid (Chapter 26, 1850 to 1900) 1985

Tabatha Rosproy: a preschool teacher named National Teacher of the Year in the spring of 2020, when her classroom was shut by the pandemic (Chapter 30, 2000 to Today) 2488

Clyde Ross: veteran refused a mortgage who bought his Chicago house on contract and became vice president of the Contract Buyers League (Chapter 7, 1950 to 2000) 500

Benjamin Roth: a Youngstown, Ohio, lawyer who kept a diary of the Great Depression for more than ten years (Chapter 16, 1900 to 1950) 1088

Alexandria Rubalcaba: a background actor scanned into a digital copy with no word on how it would be used (Chapter 34, 2000 to Today) 2902

Benjamin Rush: Philadelphia doctor who bled and purged patients in the 1793 yellow fever epidemic and wrongly said Black people could not catch it (Chapter 26, 1750 to 1800) 1973

Benjamin Rush: Philadelphia doctor and signer of the Declaration of Independence who wrote that heavy drinking was a disease (Chapter 28, 1750 to 1800) 2142

Bayard Rustin: planned the March on Washington, convicted in 1953 for sex with men, pardoned in 2020 (Chapter 25, 1950 to 2000) 1891

Babe Ruth: a pitcher and home-run hitter for Boston and New York who grew up in a reform school (Chapter 36, 1900 to 1950) 3036

S

Sacagawea: Lemhi Shoshone woman who interpreted for Lewis and Clark while carrying her baby son (Chapter 1, 1800 to 1850) 47

Harpreet Singh Saini: son of a woman killed at the Oak Creek gurdwara, who asked the Senate to count crimes against Sikhs (Chapter 29, 2000 to Today) 2327

Yusef Salaam: one of the Exonerated Five, New York teenagers convicted in 1990 of a Central Park rape and cleared in 2002 (Chapter 21, 2000 to Today) 1486

Jonas Salk: doctor who made the first polio vaccine and did not patent it (Chapter 26, 1950 to 2000) 2008

Deborah Sampson: a woman who served 17 months as Robert Shurtleff and was wounded in combat (Chapter 22, 1750 to 1800) 1531

Sir Edwin Sandys: ran the Virginia Company while its officers shipped thousands of settlers to a colony where most of them died (Chapter 19, The 1600s) 1238

Raymond Santana: one of the Exonerated Five, New York teenagers convicted in 1990 of a Central Park rape and cleared in 2002 (Chapter 21, 2000 to Today) 1486

Clarence Saunders: the Memphis grocer who started self-service shopping with Piggly Wiggly and lost the company in a fight over its stock (Chapter 18, 1900 to 1950) 1207

Augusta Savage: Harlem sculptor and teacher whose 16-foot sculpture *The Harp* was bulldozed after the 1939 World's Fair (Chapter 32, 1900 to 1950) 2667

Levi Savage: a sub-captain of the Willie handcart company, one of the leaders under the captain, who warned against leaving late in 1856 and kept a journal (Chapter 5, 1850 to 1900) 366

Carl Schurz: German Forty-Eighter who became a Union general, the first German-born senator and Secretary of the Interior (Chapter 4, 1850 to 1900) 285

Dred and Harriet Scott: an enslaved couple whose freedom suit ended in the Supreme Court ruling that no Black American could be a citizen (Chapter 24, 1850 to 1900) 1715

Glenn Seaborg: the chemist whose teams found plutonium and nine more elements, and the first person to see an element named for him while he was alive (Chapter 13, 1900 to 1950) 885

Richard Sears: the railroad station agent who sold watches and built the Sears catalog (Chapter 18, 1850 to 1900) 1201

Emilio Segrè: Italian physicist who lost his job under Mussolini's anti-Jewish laws and stayed at Berkeley (Chapter 9, 1900 to 1950) 624

Emilio Segrè: the Italian physicist who stayed in the United States after Mussolini's officials barred Jews from university jobs, and who helped find technetium and astatine (Chapter 13, 1900 to 1950) 884

Sequoyah: Cherokee silversmith who could not read any language and made a way to write Cherokee (Chapter 2, 1800 to 1850) 129

Andy Serkis: the English actor whose performance-capture work as Gollum started an argument about what counts as acting (Chapter 34, 2000 to Today) 2891

William J. Seymour: Black preacher who led the Azusa Street revival where Pentecostal worship began (Chapter 29, 1900 to 1950) 2292

Ella Sheppard: born into slavery, pianist and arranger of the Fisk Jubilee Singers (Chapter 33, 1850 to 1900) 2751

Amy Sherald: painter of Michelle Obama's official portrait and of Breonna Taylor, who cancelled her National Portrait Gallery show in 2025 (Chapter 32, 2000 to Today) 2697

Mélisande Short-Colomb: a descendant of two of the GU272, the 272 enslaved people the Maryland Jesuits sold in 1838, in part to keep Georgetown College going. She enrolled at Georgetown University at 63 (Chapter 24, 2000 to Today) 1747

Amelia Simmons: author of *American Cookery*, the first cookbook written by an American for American kitchens (Chapter 15, 1750 to 1800) 1003

Upton Sinclair: novelist whose book about the Chicago meatpacking plants came out months before the 1906 food-safety laws (Chapter 15, 1900 to 1950) 1016

Benjamin "Pap" Singleton: man born into slavery who organized Black Southerners to move to Kansas, the "Father of the Exodus" (Chapter 5, 1850 to 1900) 373

Sitting Bull: Hunkpapa Lakota leader and holy man killed by Indian police at Standing Rock in 1890 (Chapter 2, 1850 to 1900) 140

Samuel Slater: English mill worker who rebuilt England's spinning machines from memory at Pawtucket and hired children to run them (Chapter 8, 1750 to 1800) 534

Chris Smalls: fired Amazon warehouse worker who organized the first union at an Amazon warehouse in the United States (Chapter 14, 2000 to Today) 978

Robert Smalls: an enslaved harbor pilot who sailed a Confederate ship out of Charleston to freedom and later served five terms in Congress (Chapter 24, 1850 to 1900) 1719

John Smibert: Scottish portrait painter in Boston whose studio of copies trained younger painters (Chapter 32, 1700 to 1750) 2616

Bessie Smith: Black blues singer paid $125 a side, with no royalty, for a record that sold 780,000 copies (Chapter 33, 1900 to 1950) 2762

Henry Smith: a Black man tortured and burned to death by a white mob in Paris, Texas, with no trial (Chapter 21, 1850 to 1900) 1452

Jedediah Smith: fur trapper who led the first party of US citizens known to reach California over land (Chapter 1, 1800 to 1850) 56

Joseph Smith: founder of the Church of Jesus Christ of Latter-day Saints, killed by a militia mob at Carthage in 1844 (Chapter 29, 1800 to 1850) 2264

Kemba Smith: a college student sentenced to 24 and a half years in federal prison in a crack cocaine case, later freed and pardoned (Chapter 21, 1950 to 2000) 1479

James Smithson: English chemist who left his fortune to found the Smithsonian without ever visiting the country (Chapter 9, 1800 to 1850) 600

Pierre Solon: immigrant father from Haiti who, with Katty Familia, lost the family's Boston house to foreclosure in 2009 (Chapter 7, 2000 to Today) 506

John Philip Sousa: leader of the Marine Band and writer of "The Stars and Stripes Forever" (Chapter 33, 1850 to 1900) 2754

Press Clay Southworth: 14-year-old who shot the last confirmed wild passenger pigeon in 1900 (Chapter 3, 1900 to 1950) 222

Frances Bilas Spence: one of the six women who programmed ENIAC (Chapter 8, 1900 to 1950) 559

Frank Sprague: engineer whose 1888 Richmond streetcar system showed that electric streetcars could work in a city (Chapter 11, 1850 to 1900) 755

Squanto (Tisquantum): Patuxet man who taught the Plymouth colonists to plant corn after an English captain kidnapped him (Chapter 15, The 1600s) 993

Loara Standish: Plymouth Colony girl thought to have stitched the oldest known American sampler (Chapter 32, The 1600s) 2609

Elizabeth Cady Stanton: called the Seneca Falls convention and wrote the Declaration of Sentiments (Chapter 25, 1800 to 1850) 1792

George Swanson Starling: Florida fruit picker who fled to Harlem in 1945 when grove owners plotted to hang him (Chapter 5, 1900 to 1950) 382

Lilian St. Cyr (Red Wing): a Ho-Chunk actress who played the leading woman in the first Western made in Hollywood (Chapter 34, 1900 to 1950) 2865

Cecile Steele: Delaware farmer who began the business of raising chickens for meat after a hatchery sent her 500 chicks by mistake (Chapter 15, 1900 to 1950) 1021

John Stewart: a Scottish prisoner of war, sold into forced labor, who bought his freedom on credit and became Springfield's blacksmith (Chapter 18, The 1600s) 1176

Joseph Whiting Stock: travelling portrait painter who could not walk and kept a journal of 900 paintings (Chapter 32, 1800 to 1850) 2630

Carl Stokes: the first Black mayor of a major American city, elected in Cleveland in 1967 (Chapter 6, 1950 to 2000) 449

Carl Stotz: the Williamsport man who organized the first Little League games in 1939 (Chapter 36, 1900 to 1950) 3041

Joseph Strauss: the chief engineer of the Golden Gate Bridge, who hung a safety net under it that caught 19 men (Chapter 12, 1900 to 1950) 823

Levi Strauss: San Francisco merchant who shared the 1873 riveted-pants patent with Jacob Davis (Chapter 35, 1850 to 1900) 2945

George Templeton Strong: a young New York lawyer whose diary, kept for forty years, records the coming of Croton water (Chapter 6, 1800 to 1850) 417

Gilbert Stuart: painter of the unfinished Washington portrait on the one-dollar bill (Chapter 32, 1750 to 1800) 2626

Mary Swift: a seventeen-year-old in the first class of the first state school for teachers, who kept a journal of it (Chapter 30, 1800 to 1850) 2380

Taylor Swift: songwriter who recorded four albums again after a music manager bought her masters (Chapter 33, 2000 to Today) 2800

Jack Swigert: Apollo 13 astronaut who took the place of Ken Mattingly (Chapter 1, 1950 to 2000) 87

T

Henry Ossawa Tanner: Black painter who studied under Thomas Eakins and made his career in France (Chapter 32, 1850 to 1900) 2657

Joseph Tape: Chinese American father who sued the San Francisco Board of Education (Chapter 25, 1850 to 1900) 1819

Mary Tape: Chinese American mother who sued for her daughter's place in school and wrote to the school board (Chapter 25, 1850 to 1900) 1819

Franklin Tarbell: oil producer who fought Standard Oil from 1872 into the 1890s, father of Ida Tarbell (Chapter 19, 1850 to 1900) 1260

Ida Tarbell: reporter whose history of Standard Oil showed how John D. Rockefeller took over the oil business (Chapter 19, 1900 to 1950) 1271

Susie King Taylor: a girl who learned to read in secret schools and at 14 became the first Black teacher of freed children in a school working openly in Georgia (Chapter 24, 1850 to 1900) 1727

Tecumseh: Shawnee leader who argued that no single nation could sell land that belonged to all of them (Chapter 2, 1800 to 1850) 128

Ruth Lichterman Teitelbaum: one of the six women who programmed ENIAC (Chapter 8, 1900 to 1950) 559

Nikola Tesla: Serbian immigrant whose induction motor ran on alternating current (Chapter 8, 1850 to 1900) 551

Nikola Tesla: the inventor whose AC motors George Westinghouse bought the right to use in 1888 (Chapter 10, 1850 to 1900) 687

Anthony Thacher: colonist who, with his wife, alone survived a boat wreck in the hurricane of 1635 and wrote it down (Chapter 27, The 1600s) 2043

Marie Tharp: geologist and mapmaker who found the rift valley in the Mid-Atlantic Ridge (Chapter 9, 1950 to 2000) 637

Florence Owens Thompson: farmworker of Cherokee descent, the woman in Dorothea Lange's "Migrant Mother" (Chapter 5, 1900 to 1950) 380

Hugh Thompson Jr.: the Army helicopter pilot who landed between American soldiers and Vietnamese villagers at My Lai to stop the soldiers from killing unarmed villagers (Chapter 22, 1950 to 2000) 1582

Henry David Thoreau: writer and land surveyor who lived at Walden Pond and wrote "in Wildness is the preservation of the world" (Chapter 3, 1800 to 1850) 199

Jim Thorpe: Sac and Fox athlete and Carlisle student, the first Native American to win an Olympic gold medal (Chapter 2, 1900 to 1950) 155

Emmett Till: a 14-year-old Black boy from Chicago kidnapped and murdered in Mississippi, whose killers an all-white jury set free (Chapter 21, 1950 to 2000) 1469

Pat Tillman: a football player who joined the Army Rangers and was killed by soldiers of his own platoon (Chapter 22, 2000 to Today) 1589

Elizabeth Timothy: widow who ran and then owned the *South-Carolina Gazette* (Chapter 31, 1700 to 1750) 2517

Mary Beth Tinker: 13-year-old whose black armband led to the 1969 Supreme Court ruling on students' rights (Chapter 35, 1950 to 2000) 2963

Tom, Peter, Ben, Harry and Daniel: five enslaved carpenters who helped build the White House, known only by their first names on the carpenters' payroll for May 1795 (Chapter 12, 1750 to 1800) 801

Pierre Toussaint: man brought enslaved from Saint-Domingue who became a leading New York hairdresser and was freed in 1807 (Chapter 4, 1750 to 1800) 273

Toypurina: Tongva woman who helped plan an attack on Mission San Gabriel in 1785 (Chapter 29, 1750 to 1800) 2255

Tung Trinh: survivor of a Vietnamese refugee boat that drifted 37 days in 1988 (Chapter 4, 1950 to 2000) 317

Nicholas Trist: American diplomat who made peace with Mexico after President Polk ordered him home (Chapter 23, 1800 to 1850) 1623

Sojourner Truth: a woman who walked away from slavery in New York and sued to get back her son, sold south against the law (Chapter 24, 1800 to 1850) 1709

Sojourner Truth: woman born into slavery in New York who spoke for Black people's and women's rights for over thirty years (Chapter 25, 1850 to 1900) 1796

Harriet Tubman: a woman who escaped slavery in Maryland and went back about 13 times to lead about 70 people out (Chapter 24, 1800 to 1850) 1710

Rosina Tucker: porter's wife who worked to build the porters' union and tells their story in the 1982 film *Miles of Smiles, Years of Struggle* (Chapter 11, 1900 to 1950) 761

Frederic Tudor: Boston merchant called the Ice King, who shipped New England pond ice to warm places around the world (Chapter 15, 1800 to 1850) 1005

Nat Turner: an enslaved preacher who led the deadliest slave revolt in United States history (Chapter 24, 1800 to 1850) 1705

Renica Turner: an Amazon delivery driver in the California desert who joined a union to push for protection from the heat (Chapter 18, 2000 to Today) 1229

Mark Twain (Samuel Clemens): Mississippi River steamboat pilot before he wrote books (Chapter 11, 1850 to 1900) 751

Mark Twain: writer whose books were sold door to door (Chapter 32, 1850 to 1900) 2656

Francisco Tzul: Guatemalan garment worker in Los Angeles who told California lawmakers about piece pay (Chapter 35, 2000 to Today) 2975

V

José Luis Vaello Madero: man who moved from New York to Puerto Rico, where members of Congress have not made his federal payment available. Lawyers for the United States government sued him to get back $28,081 in payments that kept coming after the move (Chapter 23, 2000 to Today) 1662

Wayne Valliere: Ojibwe builder of birchbark canoes who teaches the craft and the Ojibwe language at Lac du Flambeau, Wisconsin (Chapter 8, Before 1500) 514

Cornelius Vanderbilt: ferryman who moved his money into railroads and left the largest American fortune of his time (Chapter 11, 1850 to 1900) 750

Jesse Vazquez: retired veteran in Puerto Rico who lived 96 days without electricity after Hurricane Maria with his mother (Chapter 27, 2000 to Today) 2110

Philip Vigol: one of the first two Americans found guilty of treason, for attacking whiskey-tax officers (Chapter 28, 1750 to 1800) 2145

Paul Volcker: chairman of the Federal Reserve who stopped the Great Inflation by letting interest rates rise past 20 percent (Chapter 17, 1950 to 2000) 1158

W

Ann Wager: the only teacher the Williamsburg Bray School ever had (Chapter 30, 1750 to 1800) 2372

Madam C. J. Walker: Black businesswoman who built a hair-care company and trained thousands of women to sell her products (Chapter 35, 1900 to 1950) 2952

Moses Fleetwood Walker: a catcher, the first major-league player known to the public as a Black man (Chapter 36, 1850 to 1900) 3022

Glenna Wallace: the first woman to lead the Eastern Shawnee Tribe of Oklahoma, chief from 2006 to 2026, who fought to get a golf course off the Octagon Earthworks (Chapter 12, Before 1500) 787

Don Walsh: Navy lieutenant who, with Jacques Piccard, made the first dive to the deepest point in the ocean (Chapter 1, 1950 to 2000) 83

Sam Walton: the Arkansas storekeeper who put discount stores in small towns and built Walmart (Chapter 18, 1950 to 2000) 1217

John Wanamaker: the Philadelphia merchant credited with spreading the price tag and the money-back promise (Chapter 18, 1850 to 1900) 1195

Aaron Montgomery Ward: the traveling salesman who started selling to farm families by mail from a printed catalog (Chapter 18, 1850 to 1900) 1200

Andy Warhol: painter of soup cans, dollar bills and famous faces (Chapter 32, 1950 to 2000) 2685

Mercy Otis Warren: a Massachusetts writer who attacked the royal government in five unsigned plays (Chapter 34, 1750 to 1800) 2839

Booker T. Washington: born enslaved, he founded the school at Tuskegee and ran it for 34 years (Chapter 30, 1850 to 1900) 2412

George Washington: first president, elected twice with every electoral vote, who chose to leave office after two terms. He was an enslaver who owned 123 people at Mount Vernon (Chapter 20, 1750 to 1800) 1326

George Washington: Virginia officer in the French and Indian War and commander of the Continental Army through the Revolution (Chapter 22, 1750 to 1800) 1529

George Washington: first president, who took the oath in brown wool woven in Connecticut (Chapter 35, 1750 to 1800) 2933

Alice Waters: cook who built her restaurant around food from nearby farms and started a school garden (Chapter 15, 1950 to 2000) 1036

Noah Webster: a schoolteacher who wrote the spelling book American children learned from for more than a hundred years (Chapter 30, 1750 to 1800) 2374

Rainer Weiss: MIT physicist and child refugee from Nazi Germany who worked out the idea for the LIGO detectors (Chapter 9, 2000 to Today) 653

Ida B. Wells: Memphis editor who counted lynchings and was driven out of the South for it (Chapter 25, 1850 to 1900) 1824

Ida B. Wells: Memphis editor who counted lynchings, printed the count and was driven from the city (Chapter 31, 1850 to 1900) 2553

George Westinghouse: the businessman who sold alternating current and won the jobs of lighting the 1893 Chicago world's fair and building the Niagara Falls generators (Chapter 10, 1850 to 1900) 687

Phillis Wheatley: a girl kidnapped from West Africa who became the first African American to publish a book of poetry (Chapter 24, 1750 to 1800) 1685

Phillis Wheatley: first African American to publish a book of poems, enslaved in Boston when it came out (Chapter 32, 1750 to 1800) 2624

John White: English artist whose 1585 Roanoke watercolors are the oldest surviving European pictures made here, later governor of the 1587 colony (Chapter 32, The 1500s) 2606

Ryan White: Indiana teenager with HIV from his hemophilia medicine who was kept out of school and spoke across the country about AIDS (Chapter 26, 1950 to 2000) 2021

George Whitefield: English preacher of the Great Awakening who pushed to make slavery legal in Georgia (Chapter 29, 1700 to 1750) 2236

Eli Whitney: builder of the cotton gin, patented in 1794, and the subject of a myth about interchangeable gun parts (Chapter 8, 1750 to 1800) 532

Jeffrey Wigand: tobacco company research chief who told the public his company changed its tobacco to strengthen the effect of nicotine (Chapter 28, 1950 to 2000) 2188

Henry Wight: minister and Revolutionary War veteran who started the Fourth of July celebration in Bristol, Rhode Island, which the town still holds (Chapter 37, 1750 to 1800) 3096

Laura Ingalls Wilder: author of the Little House books, whose family moved by covered wagon again and again (Chapter 5, 1850 to 1900) 370

Charles Wilkes: Navy lieutenant who led the United States Exploring Expedition, whose men burned villages in Fiji (Chapter 1, 1800 to 1850) 59

Will: enslaved man who put out the fire on St. Philip's Church roof and whom the church's leaders bought and freed (Chapter 27, 1750 to 1800) 2060

Bert Williams: a Black comedian who wore blackface and starred in an otherwise all-white Broadway show (Chapter 34, 1900 to 1950) 2867

Cathay Williams: a woman born enslaved who served two years as William Cathay and was refused a pension (Chapter 22, 1850 to 1900) 1556

Charles Williams: the first prisoner at Eastern State Penitentiary (Chapter 21, 1800 to 1850) 1438

Eunice Kanenstenhawi Williams: John Williams's daughter, taken at seven, who became Kanien'kehaka (Mohawk) at Kahnawake and refused to come back (Chapter 22, 1700 to 1750) 1518

John Williams: Deerfield's minister, captured in the 1704 raid, who wrote the best-known captivity story of colonial America (Chapter 22, 1700 to 1750) 1517

Roger Williams: minister thrown out of Massachusetts who founded Providence, where people of every faith lived as neighbors (Chapter 29, The 1600s) 2224

Woodrow Wilson: president who proposed the League of Nations and sent the Marines into Haiti (Chapter 23, 1900 to 1950) 1642

Melvin Windsor: Park Police officer who stood on a helicopter skid to pull the last Air Florida survivor from the Potomac (Chapter 27, 1950 to 2000) 2100

Sarah Winnemucca: Northern Paiute interpreter, lecturer and writer of the first known autobiography by a Native American woman (Chapter 2, 1850 to 1900) 145

Sarah Winnemucca: Northern Paiute interpreter who campaigned against her people's forced removal (Chapter 25, 1850 to 1900) 1813

Korey Wise: one of the Exonerated Five, tried as an adult at 16 and locked up about 13 years until another man's confession and DNA cleared all five in 2002 (Chapter 21, 2000 to Today) 1486

Reid Wiseman: NASA commander of Artemis II, the first flight to take people to the Moon since 1972 (Chapter 1, 2000 to Today) 95

Alice Wong: disabled organizer who founded the Disability Visibility Project (Chapter 25, 2000 to Today) 1933

Anna May Wong: often called the first Chinese American film star, who protested the parts studios gave her (Chapter 34, 1900 to 1950) 2874

Wong Kim Ark: San Francisco-born cook whose Supreme Court case made everyone born in the United States a citizen (Chapter 4, 1850 to 1900) 297

Granville T. Woods: Black inventor who patented a telegraph for messages between moving trains and stations (Chapter 8, 1850 to 1900) 550

Bob Woodward: *Washington Post* reporter who, with Carl Bernstein, tied the Watergate burglary to President Nixon's White House (Chapter 31, 1950 to 2000) 2580

F. W. Woolworth: the storekeeper who built a national chain of five-cent and ten-cent stores and paid cash for the tallest building in the world (Chapter 18, 1900 to 1950) 1205

George Worthylake: the first keeper of Boston Light, who drowned with his family in 1718 (Chapter 12, 1700 to 1750) 796

Steve Wozniak: cofounder of Apple Computer who designed the Apple I and the Apple II (Chapter 8, 1950 to 2000) 567

Orville Wright: bicycle builder from Dayton who made the first powered flight in 1903 and survived the 1908 crash that killed Thomas Selfridge (Chapter 8, 1900 to 1950) 554

Orville and Wilbur Wright: the brothers who flew their powered airplane four times on December 17, 1903 (Chapter 11, 1900 to 1950) 757

Wilbur Wright: bicycle builder from Dayton who, with his brother, flew the first powered airplane in 1903 (Chapter 8, 1900 to 1950) 554

Y

Jack Yates: Baptist minister, born enslaved, who led Black Houstonians in buying land for their Juneteenth celebrations (Chapter 37, 1850 to 1900) 3111

Pearl Yates: a country schoolteacher in western North Carolina who remembered when the lights first came on in her home in 1939 (Chapter 10, 1900 to 1950) 700

Al "Sonny" Yearick: boy who played for Lycoming Dairy in the first Little League season and later became the first Little Leaguer to play baseball for pay (Chapter 36, 1900 to 1950) 3041

Jonas and Frieda Yoder: Amish father and daughter whose case won the right to keep Amish children out of high school (Chapter 29, 1950 to 2000) 2315

York: Black man held as a slave by William Clark, who crossed the continent with the expedition and came home still a slave (Chapter 1, 1800 to 1850) 49

Brigham Young: Latter-day Saint leader of the first company to the Salt Lake Valley in 1847 (Chapter 5, 1800 to 1850) 360

Steve Young: Vlasic pickle executive who described selling to Walmart (Chapter 19, 1950 to 2000) 1289

Z

Babe Didrikson Zaharias: a track star, basketball player and golfer who won Olympic gold and helped found women's professional golf (Chapter 36, 1900 to 1950) 3038

Al Zampa: an ironworker who fell into the Golden Gate Bridge's net and lived, and who later had a bridge named for him (Chapter 12, 1900 to 1950) 823

Anna Catharina Zenger: kept the *New-York Weekly Journal* coming out while her husband was jailed, then ran the shop after he died (Chapter 31, 1700 to 1750) 2515

John Peter Zenger: Palatine boy who became a New York printer, jailed and found not guilty of seditious libel (Chapter 4, 1700 to 1750) 268

John Peter Zenger: New York printer jailed for more than eight months for printing attacks on the governor, then found not guilty by a jury (Chapter 20, 1700 to 1750) 1320

Zitkala-Ša: Yankton Dakota writer taken to a boarding school as a child, who later wrote against the schools (Chapter 2, 1850 to 1900) 147

Zitkala-Ša: a Yankton Dakota girl whose braids were cut at a boarding school in Indiana, and who wrote down what was done to her (Chapter 30, 1850 to 1900) 2410

Places to See

Museums, sites and archives the chapters name, grouped by state so you can find the ones near you. Then come places in more than one state, places in other countries, online collections, and last, other places whose state the chapters do not give. Places close and exhibits change, so check before you go.

Alabama

16th Street Baptist Church, Birmingham: where the children's march began, and where a bomb set by Ku Klux Klan members killed four girls in 1963 (Chapter 25) 1871

Africatown, Mobile: the town founded by survivors of the *Clotilda*, the last known slave ship to reach the United States. It has the church and school they started, and Lewis Quarters, one of the first pieces of land they bought (Chapter 24) 1712

Edmund Pettus Bridge, Selma: where state troopers attacked civil rights marchers with clubs and tear gas on Bloody Sunday, March 7, 1965. Television cameras filmed the attack (Chapter 25) 1871

Freedom Monument Sculpture Park, Montgomery: the National Monument to Freedom, with more than 122,000 last names from the 1870 census (Chapter 12) 832

Freedom Monument Sculpture Park, Montgomery: work by Kehinde Wiley (Chapter 32) 2695

National Memorial for Peace and Justice and the Legacy Museum, Montgomery: 805 steel blocks, one for each county where a lynching was recorded (Chapter 12) 832

Alaska

Castle Hill, Sitka: site of the 1867 handover of Alaska, on Tlingit land the Russians took from the Kiksadi clan in 1804 (Chapter 23) 1623

Arizona

Arizona State Museum, Tucson: the four Ancestral Pueblo flutes from Broken Flute Cave, made between 620 and 670 (Chapter 33) 2713

Café Gozhóó, Whiteriver, on the White Mountain Apache Reservation: Nephi Craig's café built around Apache foods, opened in 2021 (Chapter 15) 1039

Arkansas

Central High School, Little Rock: where nine Black students entered in 1957 (Chapter 25) 1871

Daisy Bates home, Little Rock: where the nine students met every school day (Chapter 25) 1871

California

50 UN Plaza, San Francisco: the federal offices disabled protesters occupied in 1977 (Chapter 25) 1871

88-Inch Cyclotron, Berkeley: a later cyclotron at Berkeley that still runs (Chapter 8) 553

Alcatraz Island, San Francisco Bay: held by Native activists from 1969 to 1971 (Chapter 25) 1871

Alfred Zampa Memorial Bridge, Carquinez Strait: the bridge named for the ironworker in 2003 (Chapter 12) 815

Angel Island Immigration Station, San Francisco Bay: the barracks whose wooden walls carry more than 200 poems carved by Chinese people held there (Chapter 4) 298

Azusa Street plaque, 312 Azusa Street, Los Angeles: marks the site of the 1906 to 1931 revival (Chapter 29) 2287

Beckwourth Riverfront Park, Marysville: the town's largest park, named in 1996 to recognize the debt Marysville still owed Jim Beckwourth (Chapter 1) 64

Chez Panisse, Berkeley: Alice Waters's restaurant, opened in 1971 (Chapter 15) 1028

Chicano Park, San Diego: murals on the bridge pillars, first painted in 1973 (Chapter 32) 2679

The Edible Schoolyard, Martin Luther King Jr. Middle School, Berkeley: a school garden where students grow food, cook it and eat it (Chapter 15) 1028

Golden Gate Bridge, San Francisco: the bridge opened in 1937 (Chapter 12) 815

Hetch Hetchy Valley, Yosemite National Park: under water behind the O'Shaughnessy Dam since 1923 (Chapter 3) 215

LA Plaza, Los Angeles: the 2012 plaque apologizing for the Mexican Repatriation (Chapter 4) 298

Mount Wilson Observatory: the Hooker telescope Hubble used (Chapter 9) 614

Museum of Contemporary Art, Los Angeles: Kara Walker's Unmanned Drone, made from a Stonewall Jackson statue (Chapter 32) 2695

Presidio of San Francisco, San Francisco: the Army post where officers kept Chinese survivors apart in 1906 (Chapter 27) 2078

Room 307, Gilman Hall, Berkeley: the room where plutonium was proved a new element, now a National Historic Landmark (Chapter 13) 868

Temple of the Forest Beneath the Clouds, Weaverville: Chinese Taoist temple of 1874, still in use, held by California State Parks (Chapter 29) 2274

Tule Lake: the prison camp where Japanese Americans harvested almost 30 crops and most field workers were paid $12 a month (Chapter 15) 1015

Yosemite Valley, Yosemite National Park: the Ahwahneechee homeland, and Wahhoga, the site of the last Native village, where a roundhouse was finished in 2025 (Chapter 3) 200

Colorado

Cliff Palace, Mesa Verde: the largest cliff dwelling in North America, built between about 1190 and 1280, with about 150 rooms and 23 kivas, round rooms for ceremonies (Chapter 12) 783

Mesa Verde: where Ancestral Pueblo potters made black-on-white pottery from about 600 to 1300 (Chapter 32) 2598

Sand Creek Massacre National Historic Site: the place of the 1864 massacre, looked after by National Park Service staff (Chapter 2) 134

Connecticut

Mashantucket Pequot Museum, Mashantucket: the Pequot Nation's museum and history of the Pequot War (Chapter 22) 1508

Mystic Seaport Museum, Mystic: the Charles W. Morgan, the last wooden whaling ship left in the world, on which Nelson Cole Haley sailed as a harpooner (Chapter 10) 677

Florida

Anhaica, Tallahassee: the Apalachee town de Soto's army seized in 1539. Archaeologists have found burned corncobs at the site (Chapter 15) 989

Castillo de San Marcos National Monument (Fort Marion), St. Augustine: the fort of coquina, a stone made of packed seashells, that Spanish builders began in 1672. Army officers held Native prisoners from the Plains there from 1875 to 1878 (Chapter 12) 789

Fort Mose Historic State Park, near St. Augustine: the site of Fort Mose, the first free Black town in what is now the United States to be recognized by law (Chapter 24) 1676

Fountain of Youth Park, St. Augustine: the remains of Seloy's Timucua town lie under it (Chapter 7) 463

Mass grave site and state historical marker, West Palm Beach: where Black victims of the 1928 hurricane were buried, marked in 2003 (Chapter 27) 2078

Matanzas Inlet, south of St. Augustine: where Menéndez's soldiers killed French prisoners who had given up, in 1565 (Chapter 23) 1599

Mound Key: the shell mounds of Calos, the Calusa capital (Chapter 2) 99

Pelican Island: the first federal bird reservation, named in 1903 (Chapter 3) 215

Plaza de la Constitucion, St. Augustine: the oldest public square in the country (Chapter 6) 398

St. Augustine: the oldest town Europeans founded on the US mainland, begun by the Spanish in September 1565 at Seloy, a Timucua village (Chapter 4) 258

St. Augustine National Cemetery, St. Augustine: the graves of Fort Marion prisoners (Chapter 32) 2643

Georgia

Andersonville: the Confederate prison camp where almost 13,000 Union soldiers died (Chapter 22) 1543

Fort Pulaski National Monument, near Savannah: a national park site whose exhibit showed a copy of the 1863 photograph of Peter's back, covered in scars from whipping. Peter had escaped slavery in Louisiana. In 2025 newspapers reported that officials ordered the photograph removed, and an Interior Department spokesperson said park sites were not asked to remove it (Chapter 24) 1744

Jekyll Island Club, Jekyll Island: where six men secretly wrote a plan for a central bank in November 1910 (Chapter 17) 1143

Hawaii

Bellows Beach site, Waimānalo, Oʻahu: the one early home site in Hawaii dated with confidence (Chapter 23) 1597

ʻIolani Palace, Honolulu: where officials of the Republic of Hawaii tried Queen Liliʻuokalani in her throne room in 1895 and held her prisoner in an upstairs bedroom (Chapter 23) 1623

Kealakekua Bay, island of Hawaii: where Captain Cook's sailors watched Hawaiians surf in 1779 (Chapter 36) 2999

Mauna Loa: where the Keeling Curve measurements have run since 1958 (Chapter 9) 633

USS Arizona, Pearl Harbor: the sunken ship, with more than 900 of its crew still inside (Chapter 22) 1559

Illinois

Cahokia, across the Mississippi from St. Louis: the largest town north of Mexico before Europeans came. Its remains are now Cahokia Mounds State Historic Site, on the World Heritage List. The site has Monks Mound, the Grand Plaza, the burial mound called Mound 72, and the places where the log wall, the Woodhenge circles of sunrise posts and a copper workshop stood (Chapter 6) 395

Chicago History Museum, Chicago: its Haymarket history counts eight police officers dead and an unknown number in the crowd killed or wounded (Chapter 14) 929

Chicago History Museum, Chicago: its count of the 163 items on Montgomery Ward's first catalog, a single sheet of paper he mailed from Chicago in 1872 (Chapter 18) 1193

Chicago's bungalows, Chicago: more than 80,000 brick bungalows built between 1910 and the mid-1930s (Chapter 7) 485

Field Museum, Chicago: covered display cases in two halls under the 2024 NAGPRA rule (Chapter 9) 648

Haymarket Square, Chicago: the square where the bomb was thrown at the police on May 4, 1886 (Chapter 14) 929

Henry Gerber House, Chicago: a National Historic Landmark, home of the founder of the Society for Human Rights (Chapter 25) 1829

Monks Mound, Cahokia: the largest structure made of earth in North and South America (Chapter 12) 783

Nauvoo: the town on the Mississippi River where the Latter-day Saints settled in 1839, on ground where a large Meskwaki village had stood. After a mob killed their founder, Joseph Smith, in 1844, they began leaving for the West in 1846. A state park is there today (Chapter 29) 2256

Newberry Library, Chicago: a research library whose staff write about the Spanish missions in New Mexico (Chapter 29) 2213

Kentucky

Kentucky Horse Park: Isaac Murphy's grave (Chapter 36) 3019

Louisiana

Congo Square, New Orleans: the place where enslaved people gathered to sing, dance and play music on Sunday afternoons (Chapter 33) 2736

LIGO detector, Livingston: one of the two detectors that first picked up gravitational waves, on September 14, 2015 (Chapter 9) 648

Poverty Point: five mounds and six curved ridges built 3,100 to 3,700 years ago, on the World Heritage List (Chapter 12) 783

Tate, Etienne and Prevost Center, New Orleans: the old McDonogh No. 19 school. On November 14, 1960, Leona Tate, Gail Etienne and Tessie Prevost, all six years old, walked in with federal marshals, among the first Black children in white public schools in Louisiana. The building reopened as the center on May 4, 2022 (Chapter 30) 2442

William Frantz Elementary School, New Orleans: a bronze statue of Ruby Bridges, unveiled on November 14, 2015 (Chapter 30) 2442

Maine

Great Works bridge, Brattle Street, South Berwick: the rocky gorge below the bridge where the 1634 sawmill stood (Chapter 10) 665

Unity College: 16 of the Carter White House solar panels, put back up to heat water for the cafeteria (Chapter 10) 702

Maryland

Catoctin Furnace: the iron furnace the Johnson brothers built, where at least 271 enslaved African Americans worked, and the cemetery of its African American workers, with burials going back to 1774 (Chapter 13) 855

Clara Barton National Historic Site, Glen Echo: Clara Barton's house, built partly from the lumber of the Red Cross buildings at Johnstown (Chapter 27) 2117

Fort McHenry, Baltimore: the fort the British shelled for 25 hours in 1814 (Chapter 22) 1534

Jefferson Patterson Park and Museum: its staff say people went on playing chunkey across North America after Cahokia declined around 1500 (Chapter 36) 2981

Maryland Center for History and Culture, Baltimore: Kühn's portrait of Henry Darnall III with the enslaved boy in a collar (Chapter 32) 2613

Most Holy Redeemer Cemetery, Baltimore: Henry Gunther's grave (Chapter 22) 1559

Mount Clare Museum House, Baltimore: the museum whose staff record the history of the Baltimore Iron Works and the enslaved people who worked there (Chapter 13) 852

Massachusetts

Boston Light, Little Brewster Island, Boston Harbor: the tower rebuilt in 1783 on the site of the first lighthouse (Chapter 12) 795

Bunker Hill Monument, Charlestown: the 221-foot granite obelisk on Breed's Hill (Chapter 12) 804

Cole's Hill, Plymouth: the hill above Plymouth Rock where the statue of Massasoit stands and the National Day of Mourning is held at noon every Thanksgiving. Its plaque comes from the 1998 agreement between the town and the Day of Mourning marchers, after Plymouth police arrested 25 of them in 1997 (Chapter 37) 3125

Cornhill, Cape Cod: where the *Mayflower* men dug up Nauset seed corn in November 1620 (Chapter 15) 991

Deer Island, Boston Harbor: where colonists held the Christian Native people of the praying towns as prisoners in the winter of 1675 to 1676, and many of them died of hunger and cold. Descendants hold a remembrance there every year (Chapter 30) 2351

Faneuil Hall, Boston: the hall where a 1744 concert raised 205 pounds for the poor of Boston, and where British officers staged the play *Zara* in 1775 (Chapter 33) 2723

Harvard Law School, Cambridge: Feke's portrait of the Royall family (Chapter 32) 2613

Lowell: the mill city the Boston Associates built at Pawtucket Falls on the Merrimack River, on the land of the Pennacook people. Lowell National Historical Park there is about its mills and the slave-grown cotton they spun (Chapter 14) 922

Massachusetts Archives: Joseph Jenks's patent petition, dated May 10, 1646 (Chapter 8) 517

Massachusetts Historical Society, Boston: keeps the letters of Abigail and John Adams (Chapter 25) 1767

Museum of Fine Arts, Boston: the two jars Dave made in 1857, one bought from his descendants and one lent by them (Chapter 32) 2619

Old North Church, Boston: the steeple where two lanterns were hung on April 18, 1775 (Chapter 12) 795

Old Ship Meetinghouse, Hingham: the only Puritan meetinghouse from the 1600s still standing (Chapter 12) 789

Old State House, Boston: the brick Town House rebuilt after the fire of 1711 (Chapter 27) 2047

Phipps Street Burying Ground, Charlestown: Elizabeth Phillips's gravestone, which says she "brought into this world above 3000 Children" (Chapter 26) 1961

Pilgrim Hall Museum, Plymouth: Loara Standish's sampler (Chapter 32) 2608

Pocumtuck Valley Memorial Association, Deerfield: Deerfield's history museum, which keeps the town's old records of the 1704 raid (Chapter 22) 1515

Post Office Square, Plymouth: a plaque that tells of Metacom, whose head the English put on a pole in that square and left there for 25 years (Chapter 37) 3125

Rebecca Nurse's house, Danvers: her house, which still stands (Chapter 21) 1412

Saugus Iron Works National Historic Site, Saugus: the Hammersmith ironworks, which ran from the 1640s until about 1670, rebuilt on its old site (Chapter 8) 517

Shaw Memorial, Boston Common, Boston: Saint-Gaudens's memorial to Shaw and the 54th Massachusetts (Chapter 32) 2643

Thacher Island, off Cape Ann: the island where Anthony Thacher and his wife came ashore in 1635 (Chapter 27) 2041

Walden Pond, near Concord: where Thoreau built his cabin and lived from 1845 to 1847. Workers also cut ice from the pond in winter (Chapter 3) 196

West End Museum, Boston: a history page on Edward Converse's ferry, which it calls the first on that crossing (Chapter 11) 726

West End Museum, Boston: a history of the Shawmut Peninsula and the Massachusett people, with the count of the 1616 to 1618 epidemic (Chapter 19) 1235

Worcester Art Museum, Worcester: the Freake portrait of Elizabeth and Mary Freake (Chapter 32) 2608

Minnesota

Ingalls dugout site, Plum Creek near Walnut Grove: the hollow in the creek bank where the Ingalls family's dugout stood, on the former Gordon farm (Chapter 7) 480

University of Minnesota: holds the Eugenics Record Office records (Chapter 9) 614

University of Minnesota St. Paul campus, St. Paul: four of the Rangh Court townhomes moved for Interstate 94 (Chapter 6) 443

Mississippi

Natchez City Cemetery, Natchez: Milla Granson's grave (Chapter 24) 1693

Missouri

Gateway Arch National Park, St. Louis: the 630-foot stainless steel arch. On July 14, 1964, Percy Green and Richard Daly climbed 125 feet up its unfinished north leg to protest that Black workers were kept out of the jobs building it (Chapter 12) 832

Missouri State Archives: records of the 1838 fighting between older Missouri settlers and armed Mormon groups (Chapter 5) 352

Sugarloaf Mound, St. Louis: the last Native mound in the city, now owned by the Osage Nation (Chapter 12) 807

Truman Library, Independence: where President Johnson signed Medicare and Medicaid in 1965 (Chapter 26) 2005

Montana

Glacier National Park: on land federal officials say the Blackfeet sold in 1895. Many Blackfeet say they only leased it (Chapter 3) 215

National Bison Range, Flathead Reservation: the bison refuge that members of Congress gave back to the Confederated Salish and Kootenai Tribes in 2020 (Chapter 3) 240

Nebraska

Homestead National Historical Park, near Beatrice: the Freeman School, a one-room brick school used from 1872 to 1967 (Chapter 30) 2392

Nebraska State Historical Society: keeps the letters of Uriah and Mattie Oblinger, a homestead family in Nebraska in the 1870s (Chapter 15) 1009

Nevada

Hoover Dam, near Boulder City: the dam dedicated in 1935 (Chapter 12) 815

University of Nevada, Las Vegas library, Las Vegas: keeps a history of Hoover Dam that tells how company doctors called tunnel workers' illness pneumonia (Chapter 14) 941

New Hampshire

Amoskeag Falls, on the Merrimack River: Pennacook fishing place where Matthew Patten fished in 1767 (Chapter 15) 1000

New Jersey

Arts Council of Princeton, Princeton: Nathan Jackson's Raven and Fog Woman pole, in the lobby (Chapter 32) 2598

Falls of the Passaic River, Paterson: where Hamilton's Society for Establishing Useful Manufactures started a factory town (Chapter 16) 1062

Nothnagle Log House, Greenwich Township: a log house built in about 1638 to 1643 that still stands (Chapter 7) 471

Rutgers Oral History Archives: Donald Lundberg's 2008 interview about shopping under rationing (Chapter 18) 1204

New Mexico

Acoma Pueblo: the Acoma people's town on its mesa. Spanish soldiers under Vicente de Zaldívar attacked it in January 1599 and killed men, women and children. Juan de Oñate then sentenced the survivors over 12 to twenty years of forced work, the men over 25 to have a foot cut off as well, and the old people to slavery (Chapter 2) 102

Chaco Canyon, northwestern New Mexico: the stone great houses of the Ancestral Puebloans, begun in the 800s and lined up with the sun and moon, and their planned roads. Casa Rinconada there is a great kiva, a round room for ceremonies, about 63 feet across (Chapter 29) 2203

El Camino Real de Tierra Adentro National Historic Trail: the road from Mexico City to northern New Mexico that Oñate's colonists traveled north in 1598 (Chapter 5) 336

Fajada Butte, Chaco Canyon: the Sun Dagger slabs and carved spirals (Chapter 9) 581

Gila Wilderness: the first area in the world officially named a wilderness area (Chapter 3) 215

Palace of the Governors, Santa Fe: on the plaza, used as a public building without a break for longer than any other building in the United States (Chapter 6) 399

Pueblo Bonito, Chaco Canyon: the largest great house, four stories high, where jars from about 1000 to 1125 held traces of a drink made from cacao, the bean chocolate comes from (Chapter 12) 783

San Esteban del Rey, Acoma Pueblo: the oldest European church in New Mexico that still stands, built by Acoma workers (Chapter 32) 2608

San Miguel Chapel, Santa Fe: an adobe chapel on foundations from about 1620 (Chapter 12) 789

Taos Pueblo, Taos: the North House and the South House, five stories of adobe built between about 1000 and 1450, where people have lived for more than 1,000 years (Chapter 7) 460

Volcanic cliffs west of Albuquerque, Petroglyph National Monument: about 24,000 to 25,000 petroglyphs, pictures that Native artists cut or pecked into the rock (Chapter 32) 2598

White Sands National Park: human footprints at least 21,000 years old (Chapter 1) 17

New York

1520 Sedgwick Avenue, the Bronx: the building city officials named the birthplace of hip-hop (Chapter 33) 2779

Arthur Ashe Stadium, New York City: where the first Fortnite World Cup final was played in 2019 (Chapter 36) 3058

Brooklyn Bridge, New York: the suspension bridge opened in 1883 (Chapter 12) 807

Brooklyn Museum, Brooklyn: Judy Chicago's The Dinner Party (Chapter 32) 2679

Castle Clinton, Battery Park, New York: the site of Castle Garden, the first official immigrant depot, 1855 to 1890 (Chapter 4) 283

Central Park, New York: the site of Seneca Village, where about 225 people lived by 1855, most of them African American. City officials forced them out by 1857 to make the park (Chapter 6) 413

Cold Spring Harbor Laboratory: its archive website publishes the Eugenics Record Office history (Chapter 9) 614

Columbia University: Charity Clarke's letters to her cousin Joseph Jekyll (Chapter 35) 2928

Cooper Union, New York: the hall where Clara Lemlich called the shirtwaist makers out on strike in 1909 (Chapter 14) 941

East Hampton Library: Robert Townsend's account books of 1773 to 1785, copied out and published by its staff (Chapter 18) 1182

Ellis Island, New York Harbor: the immigration station where about 12 million immigrants came through from 1892 to 1954. Its main building has been a museum of immigration since 1990, and a statue of Annie Moore, the first immigrant to come through it, stands there (Chapter 4) 267

Empire State Building, New York: the 102-story building finished in 1931 (Chapter 12) 815

Lewis Latimer House Museum, East Flushing, Queens: the house Lewis Latimer lived in from 1903 (Chapter 8) 541

Metropolitan Museum of Art, New York: the Temple of Dendur, in the wing where Nan Goldin's group protested in 2018 and that no longer carries the Sackler name (Chapter 28) 2190

Metropolitan Museum of Art, New York: a signed painting by Prince Demah, and Cole's The Oxbow (Chapter 32) 2619

Morgan Library & Museum, New York City: an exhibition on the Panic of 1907 that describes Morgan's locked-door meeting (Chapter 17) 1143

Museum of Modern Art, New York: the even-numbered panels of Jacob Lawrence's The Migration Series (Chapter 32) 2660

National Baseball Hall of Fame, Cooperstown: Josh Gibson's plaque, which says he hit "almost 800" home runs (Chapter 36) 3072

National September 11 Memorial and Museum, New York: two pools with the names of 2,983 people, the people killed on September 11, 2001, and six killed in a 1993 bombing of the towers. The museum has an exhibit about Mohawk ironworkers called "Skywalkers" (Chapter 12) 832

New York Public Library, New York: Le Moyne's painting Laudonnière and Athore, 1564 (Chapter 32) 2605

One World Trade Center, New York: the tower 1,776 feet to the tip of its spire (Chapter 12) 832

Onondaga Nation, central New York: keeps the wampum records of the Haudenosaunee (Chapter 31) 2500

St. Patrick's Cathedral, New York: the crypt where Pierre Toussaint's remains lie (Chapter 4) 271

Statue of Liberty, New York Harbor: the statue, with Emma Lazarus's poem mounted on a bronze plaque inside its base in 1903, and the original 1886 torch in the statue's museum (Chapter 12) 807

Stonewall National Monument, New York: Christopher Park, in memory of the 1969 uprising at the Stonewall Inn (Chapter 25) 1909

Sun Building, 280 Broadway, New York City: A. T. Stewart's Marble Palace store building of 1846, which still stands (Chapter 18) 1188

Tenement Museum, New York: the Moores' apartment at 97 Orchard Street, recreated as it was in 1869 (Chapter 6) 418

Tenement Museum, 97 Orchard Street, New York: the tenement where about 7,000 people lived, with the Baldizzi family's apartment rebuilt from Josephine Baldizzi's memories (Chapter 7) 480

Thomas Cole National Historic Site, Catskill: Cole's house and studio (Chapter 32) 2627

Tompkins Square Park, New York City: where police beat people with clubs and drove out a crowd of about 7,000 jobless people on January 13, 1874 (Chapter 16) 1074

Wall Street and Water Street, New York City: a sign marking where the city's market for enslaved people stood from 1711 to 1762 (Chapter 18) 1178

Wesleyan Chapel, Seneca Falls: where the 1848 women's rights convention met (Chapter 25) 1778

Woolworth Building, New York: the tallest building in the world when it was finished in 1913 (Chapter 12) 815

North Carolina

Berry site, Burke County: the remains of Fort San Juan, built in 1567 (Chapter 22) 1502

Biltmore House, Asheville: the largest privately owned house in the United States (Chapter 12) 807

Roanoke Island: where John White left 117 colonists in 1587 and found CROATOAN carved on a post in 1590 (Chapter 31) 2502

Southern Oral History Program, University of North Carolina: the 1984 interview with Pearl and Oral Yates about electricity reaching Haywood County (Chapter 10) 691

Ohio

Hopewell Ceremonial Earthworks: earthen walls and mounds built between about the years 1 and 400, a World Heritage Site (Chapter 29) 2203

Miami University: its librarians keep more than 300 editions of the McGuffey Readers (Chapter 30) 2375

Octagon Earthworks, Newark: earth walls about 2,000 years old that line up with the moonrise, a golf course from 1910 to 2024 and open to the public since January 1, 2025 (Chapter 12) 783

Ohio History Connection, Columbus: keeps "Buttons," the last confirmed wild passenger pigeon, shot in 1900 (Chapter 3) 215

Serpent Mound: a snake of earth about a quarter of a mile long (Chapter 12) 783

Taft Museum of Art, Cincinnati: Duncanson's eight landscape murals in the entrance hall (Chapter 32) 2643

Oklahoma

Greenwood, Tulsa: the Black district a white mob burned in 1921, which its residents rebuilt (Chapter 17) 1143

Greenwood Cultural Center, Tulsa: where President Biden met the three Greenwood survivors in 2021 (Chapter 25) 1829

Oaklawn Cemetery, Tulsa: where searchers have dug up the remains of 55 people in the search for the massacre's graves (Chapter 25) 1829

Oregon

Crater Lake, southern Oregon: the lake that filled the collapsed top of Mount Mazama, 1,943 feet deep (Chapter 27) 2032

Hells Canyon, Snake River: where a gang of white horse thieves killed as many as 34 Chinese miners in 1887, with a 2012 stone marker in English, Chinese and Nez Perce (Chapter 4) 283

Pennsylvania

Amos Humiston monument, Gettysburg: on North Stratton Street, the only monument on the battlefield to a single enlisted soldier (Chapter 22) 1593

Carlisle Indian Industrial School grounds, Carlisle: a national monument since December 9, 2024, with the Carlisle Barracks cemetery, where many of the children who died at the school are buried (Chapter 30) 2474

Eastern State Penitentiary, Philadelphia: the prison where Charles Williams became Prisoner Number 1 in 1829, now a historic site (Chapter 21) 1434

Eden Cemetery, Collingdale: burial place of 19 Black Philadelphians from the Morton collection (Chapter 9) 596

Franklin Institute, Philadelphia: a science museum with a history of Franklin's inventions (Chapter 8) 524

Haverford College, Haverford: keeps the 1688 Germantown protest against slavery (Chapter 25) 1942

Historical Society of Pennsylvania, Philadelphia: Hesselius's portraits of Lapowinsa and Tishcohan (Chapter 32) 2613

Hopewell Furnace National Historic Site, French Creek, Berks County: the charcoal iron furnace that ran from 1771 to 1883, on land federal officials bought in the 1930s. More than 100 woodcutters and about 20 colliers, the men who made the charcoal, worked there in the 1830s (Chapter 10) 671

Independence Hall, Philadelphia: the Pennsylvania State House, whose planning Andrew Hamilton led, where the delegates signed the Constitution on September 17, 1787, open to visitors as part of a national park (Chapter 20) 1317

John Bartram's botanic garden, Kingsessing, on the Schuylkill River: the oldest botanic garden in America that survives today (Chapter 9) 588

Logan, Franklin, Washington and Rittenhouse squares and City Hall, Philadelphia: the five squares of Holme's 1682 plan (Chapter 6) 399

Mother Bethel, Sixth and Lombard Streets, Philadelphia: Richard Allen's church, where he is buried in the basement (Chapter 29) 2242

Mütter Museum, Philadelphia: a museum of medical history (Chapter 26) 1967

Penn Museum, University of Pennsylvania, Philadelphia: holds Samuel Morton's skull collection (Chapter 9) 596

Penn Museum, Philadelphia: quilled pieces from the 1830s and later, including pieces George Catlin collected between 1832 and 1839 (Chapter 35) 2908

Philadelphia Mint, Philadelphia: where the last pennies made for everyday use were struck on November 12, 2025 (Chapter 17) 1160

Philadelphia Museum of Art, Philadelphia: Augustin de Saint-Aubin's 1777 engraving of Benjamin Franklin in his fur cap (Chapter 23) 1605

Philadelphia Museum of Art, Philadelphia: Moses Williams's silhouettes of the Peale family (Chapter 32) 2627

President's House site, Philadelphia: where George Washington lived while he was president, and where Ona Judge, an enslaved woman, walked out to freedom in 1796. Its exhibit panels describe nine people Washington held in slavery there. Officials of the Trump administration replaced the old panels with their own in July 2026 (Chapter 12) 832

Priestley's house, Northumberland: Joseph Priestley's house, finished in 1798, where American chemists met in 1874, now a National Historic Landmark (Chapter 13) 855

Soldiers' National Cemetery, Gettysburg: the graves of the Gettysburg dead, 979 of them marked "Unknown" (Chapter 22) 1543

Valley Forge: the winter camp of 1777 to 1778 (Chapter 22) 1522

Rhode Island

Bristol: the Fourth of July celebration held every year since 1785, which the town calls the oldest in the United States that has never stopped (Chapter 37) 3094

Roger Williams National Memorial, Providence: the memorial Congress voted to set up in 1965 (Chapter 29) 2213

South Carolina

Avery Research Center, Charleston: the papers of Mamie Garvin Fields (Chapter 30) 2414

Charleston County Register of Deeds, Charleston County: hundreds of colonial land mortgages (Chapter 17) 1119

Charleston Museum, Charleston: two Dave jars that each hold more than 40 gallons (Chapter 32) 2627

International African American Museum, Charleston: the 1850 Zealy daguerreotypes of Renty, Delia and five others, on public view since March 11, 2026 (Chapter 9) 604

International African American Museum, Charleston: a museum at Gadsden's Wharf, one of the main places where slave ships landed their captives (Chapter 24) 1744

South Carolina Department of Archives and History: thousands of early chattel mortgages, in which enslavers and lenders listed enslaved people as property (Chapter 17) 1119

St. Philip's Church, Charleston: the church whose burning roof Will saved in 1796 (Chapter 27) 2047

Sullivan's Island, Charleston: the harbor island where enslaved Africans were held in pest houses (Chapter 4) 267

South Dakota

Mount Rushmore, Black Hills: the carving on the mountain the Lakota call Tunkasila Sakpe, the Six Grandfathers (Chapter 12) 815

South Dakota Cultural Heritage Center: the La Verendrye lead plate from 1743, found at Pierre in 1913 (Chapter 1) 36

Wounded Knee, Pine Ridge Reservation: the site of the 1890 massacre and the 1973 occupation (Chapter 2) 134

Tennessee

Clayborn Temple, Memphis: the church where police fired tear gas and clubbed marchers on March 28, 1968 (Chapter 14) 963

Dollywood, Pigeon Forge: the theme park Dolly Parton became a partner in (Chapter 33) 2795

Ed Johnson memorial, Chattanooga: a memorial to Ed Johnson, the Black man a mob lynched in 1906, dedicated on September 19, 2021 (Chapter 21) 1456

Graceland, Memphis: Elvis Presley's home, where he died (Chapter 33) 2779

Jubilee Hall, Fisk University, Nashville: the building paid for by the Fisk Jubilee Singers' tours, a National Historic Landmark (Chapter 33) 2746

Lorraine Motel, Memphis: where James Earl Ray shot and killed Martin Luther King Jr. on April 4, 1968, during the sanitation strike (Chapter 14) 963

Reelfoot Lake, northwest Tennessee: the lake formed when the ground sank in the New Madrid earthquakes (Chapter 27) 2061

Texas

The Alamo, San Antonio: the unfinished mission church begun in 1758 (Chapter 12) 795

Anchor monument, Texas City: lists 576 people known to have died in the 1947 explosions (Chapter 27) 2078

Blackwell School, Marfa: a school for Mexican American children from 1909 to 1965, a national historic site since October 2022 (Chapter 30) 2442

Emancipation Park, Houston: the ten acres Black Houstonians bought for Juneteenth in 1872, the oldest park in Houston, where Juneteenth celebrations are still held (Chapter 37) 3107

Galveston seawall, Galveston: the seawall built after the 1900 hurricane, 17 feet above the low-tide line (Chapter 27) 2068

Witte Museum, San Antonio: two dried peyote tops about 5,700 years old (Chapter 28) 2120

Utah

Bears Ears National Monument: the monument five tribes proposed and President Donald Trump cut by about 91 percent in July 2026 (Chapter 3) 240

Edge of the Cedars State Park Museum, southeastern Utah: a blanket of about 11,550 turkey feathers made in the 1200s (Chapter 35) 2908

Golden Spike National Historical Park, Promontory Summit: marks where the last track of the first railroad across the country was laid in 1869. Working copies of the engines Jupiter and No. 119 run there from May to October (Chapter 11) 779

Topaz camp site, near Delta: one of the ten camps where officials held Japanese Americans (Chapter 25) 1829

Vermont

Vermont Historical Society: printed James Guild's journal in 1937 (Chapter 18) 1188

Virginia

Abby Aldrich Rockefeller Folk Art Museum, Williamsburg: *The Old Plantation*, the earliest known painting of a banjo (Chapter 33) 2729

Arlington National Cemetery: where Matthew Henson and his wife were buried again in 1988 (Chapter 1) 74

Arlington National Cemetery: L'Enfant's grave, on a hillside above Washington (Chapter 6) 407

Arlington National Cemetery: the grave of William Hushka, a veteran police shot and killed during the Bonus Army protest of 1932 (Chapter 16) 1084

Arlington National Cemetery: Zitkala-Ša's grave, whose headstone gives the wrong year of death (Chapter 30) 2392

Arlington National Cemetery: where the first national Decoration Day ceremony was held in 1868, on land that had been the home of Robert E. Lee (Chapter 37) 3107

Colonial Williamsburg, Williamsburg: owns Charles Willson Peale's painting of Nancy Hallam dressed as Fidele (Chapter 34) 2833

Historic Jamestowne, Jamestown: the oldest playing marble that can be dated at Jamestown, made of brown stoneware, a hard kind of pottery (Chapter 36) 2987

Jamestown Island: the foundations of rows of houses at New Towne, dug up by archaeologists (Chapter 6) 399

Monticello: Thomas Jefferson's home and plantation, where enslaved people did the farm work. The house has woodwork by enslaved craftsmen such as John Hemmings (Chapter 12) 799

Mount Vernon: George Washington's home and plantation, built and enlarged by enslaved workers. His whiskey distillery there made almost 11,000 gallons in 1799. Mount Vernon holds the brown wool coat he wore when he took the oath as president in 1789. Archaeologists found a limestone marble there that may have belonged to an enslaved child (Chapter 12) 799

Salem Witch Trials Documentary Archive, University of Virginia: the papers of the 1692 cases, among them Rebecca Nurse's case file, number 94 (Chapter 21) 1412

Virginia Museum of Fine Arts, Richmond: Kehinde Wiley's Rumors of War (Chapter 32) 2695

Virginia State Capitol, Richmond: the capitol modeled on the Maison Carrée, an ancient Roman temple in France (Chapter 12) 799

Williamsburg Bray School building, Colonial Williamsburg, Williamsburg: the oldest surviving schoolhouse for Black children in the United States, moved there on February 10, 2023 (Chapter 30) 2496

Washington

LIGO detector, Hanford: one of the two detectors that first picked up gravitational waves, on September 14, 2015 (Chapter 9) 648

Space Needle, Seattle: the 605-foot tower built for the 1962 world's fair (Chapter 12) 825

Washington, D.C.

Ben's Chili Bowl, 1213 U Street NW: the diner, still open (Chapter 6) 452

Blair House: where President Truman was living when two Puerto Rican Nationalists attacked it in 1950 (Chapter 23) 1647

Emancipation Hall, Capitol Visitor Center: the block of Aquia Creek sandstone that honors the enslaved laborers who quarried the Capitol's stone (Chapter 12) 832

Ford's Theatre: the theatre where John Wilkes Booth shot President Lincoln, restored, with its first public performance since that night in 1968 (Chapter 34) 2851

Kennedy Center: the building for music, theater and dance, closed as of October 26, 2026, with no date set to reopen (Chapter 33) 2795

Library of Congress: Robert Cornelius's 1839 self-portrait, the oldest surviving portrait photograph made in America (Chapter 8) 535

Library of Congress: John Adams's letter of June 3, 1785, to Thomas Jefferson about meeting King George III (Chapter 23) 1605

Library of Congress: "Born in Slavery," more than 2,300 life stories of formerly enslaved people recorded from 1936 to 1938, with photographs, and the "Voices Remembering Slavery" recordings, including Fountain Hughes (Chapter 24) 1735

Library of Congress: holds copies of the three pamphlets of the 1844 and 1845 argument between Horace Mann and the Boston schoolmasters (Chapter 30) 2375

Library of Congress: about 10,000 wax cylinders, nearly 8,000 of them holding Native songs and speech (Chapter 33) 2729

Library of Congress: Charles Dana Gibson's Gibson Girl drawings, shown in an exhibition (Chapter 35) 2940

Lincoln Memorial: Daniel Chester French's seated Lincoln. Marian Anderson sang on its steps on April 9, 1939, and the March on Washington ended there in 1963 (Chapter 12) 815

Martin Luther King, Jr. Memorial: the 30-foot Stone of Hope (Chapter 12) 832

National Archives: all 374 ratified treaties between the United States and Native nations, every one online (Chapter 2) 120

National Archives: records of the 1942 forced removal of Japanese Americans, which count about 120,000 people removed (Chapter 5) 376

National Archives: David Falconer's photographs and captions of Oregon's 1973 and 1974 gasoline shortage (Chapter 10) 702

National Archives: the Freedman's Savings Bank's signature books and deposit records from 29 branches, which list depositors' names, ages, jobs and family members (Chapter 17) 1136

National Archives: the Freedmen's Bureau marriage registers (Chapter 24) 1712

National Museum of African American History and Culture: stands on part of Notley Young's plantation (Chapter 6) 407

National Museum of African American History and Culture: the building whose metal screen copies ironwork by enslaved and free Black craftsmen (Chapter 12) 832

National Museum of African American History and Culture: history galleries that begin with the slave trade, and a cabin where enslaved people lived (Chapter 24) 1744

National Museum of the American Indian: the national museum of Native peoples on the National Mall, opened in 2004 (Chapter 2) 108

National Portrait Gallery: the Obama portraits by Kehinde Wiley and Amy Sherald, and (with the Museum of Fine Arts, Boston) Stuart's Athenaeum portrait of Washington (Chapter 32) 2619

Phillips Collection: the odd-numbered panels of Jacob Lawrence's The Migration Series (Chapter 32) 2660

Smithsonian: the Ontonagon Boulder, a 3,708-pound lump of pure copper sacred to the Ojibwe, held there since 1860 (Chapter 13) 844

Smithsonian: a purple velvet gown Elizabeth Keckley made for Mary Todd Lincoln (Chapter 35) 2940

Smithsonian American Art Museum: Edmonia Lewis's The Death of Cleopatra (Chapter 32) 2627

Smithsonian Institution: collections that the Wilkes expedition's more than 60,000 plant and bird specimens helped start (Chapter 1) 44

Smithsonian Institution: has Martha, the last passenger pigeon (Chapter 3) 200

Smithsonian Institution: half of the cylinder of the first steam engine in America (Chapter 10) 671

Smithsonian Institution: a hornbook, a child's wooden reading paddle, made in the 1700s, in its National Museum of American History (Chapter 30) 2359

Smithsonian Institution Building: the red sandstone building called the Castle (Chapter 12) 804

Smithsonian's National Air and Space Museum: the collection whose curator calls the DC-3 the first airliner able to make money just by carrying passengers (Chapter 11) 756

Smithsonian's National Museum of American History: the paper tape of Morse's first public telegraph message, May 24, 1844 (Chapter 8) 535

Smithsonian's National Museum of American History: one of President Carter's 1979 White House solar panels (Chapter 10) 702

Smithsonian's National Museum of American History: one of the first ten barcode scanners, a Spectra-Physics Model A (Chapter 18) 1214

Smithsonian's National Museum of American History: Sandra Lindsay's hospital scrubs and ID badge from the first COVID-19 vaccine outside a trial (Chapter 26) 2022

Smithsonian's National Museum of Natural History: in 2023 reporters found that the museum still held at least 255 human brains, most of them collected by Aleš Hrdlička or people working for him (Chapter 9) 614

Smithsonian's National Museum of Natural History: the two best-known Etowah Birdman copper plates (Chapter 32) 2598

Statue of Freedom, US Capitol dome: the bronze statue Philip Reid helped cast (Chapter 12) 807

Statue of Po'pay, National Statuary Hall Collection, US Capitol: the 2005 statue of Po'pay, the Pueblo man who led the rising against the Spanish in 1680, with whipping scars carved on its back (Chapter 29) 2213

United States Capitol: Sarah Winnemucca's statue for Nevada (Chapter 25) 1795

Vietnam Veterans Memorial, National Mall: Maya Lin's black granite walls, with the names of 58,281 Americans who died in the Vietnam War (Chapter 12) 825

Washington Monument: the change in the marble's color about 150 feet up, where work stopped for 25 years, and the aluminum pyramid set on its top on December 6, 1884 (Chapter 12) 804

West Virginia

West Virginia Mine Wars Museum: it puts the Monongah mine dead of 1907 at more than 500, higher than the official count of 362 (Chapter 14) 941

West Virginia Mine Wars Museum: a page describing coal-company scrip as debt bondage (Chapter 18) 1204

Wyoming

Obsidian Cliff: a source of obsidian that traders carried as far as western Canada (Chapter 16) 1049

Yellowstone National Park: the first national park, made a public park in 1872, where wolves returned in 1995. John Colter walked through its hot springs country in the winter of 1807 to 1808 (Chapter 3) 229

More than one state

Boston Post Road (part of US Route 1), between New York and Boston: the trail of the first post rider in 1673 (Chapter 31) 2506

The Dalles Dam, on the Columbia River between Oregon and Washington: the dam whose lake covers Celilo Falls and the old trading place (Chapter 18) 1170

Emmett Till and Mamie Till-Mobley National Monument: places connected to Emmett Till and his mother, made a national monument by President Joe Biden on July 25, 2023 (Chapter 21) 1468

Ghost forests, rivers and bays of Washington and Oregon: dead cedar trunks from the coast's drop in the 1700 earthquake (Chapter 27) 2047

Trail of Tears National Historic Trail, nine states: more than 2,200 miles of the Cherokee removal routes, run by the National Park Service (Chapter 5) 392

Outside the United States

Benjamin Franklin House museum, London, England: a museum about Franklin that names seven people he and his household bought (Chapter 31) 2512

British Museum, London, England: John White's watercolors, the Mound City pipes and the Cherokee double-woven baskets of 1725 (Chapter 32) 2598

Cobh, Ireland: a statue of Annie Moore (Chapter 4) 283

Kahnawake, Canada: crosses made from the Quebec Bridge's steel in the village cemetery, and the 2007 monument to the men killed (Chapter 12) 815

L'Anse aux Meadows, Newfoundland, Canada: the Norse camp where trees were cut in 1021 (Chapter 1) 17

Lomanikoro, Rewa, Fiji: the chiefs' burial ground where Vendovi's remains were buried in December 2025. Vendovi was a Fijian chief the Wilkes expedition took prisoner, and he died in New York in 1842 (Chapter 1) 44

Machu Picchu, Andes Mountains, Peru: the Inca site Hiram Bingham made famous, where Agustin Lizarraga had written "A. Lizarraga 1902" on a wall (Chapter 1) 74

Museo de América, Madrid, Spain: Tadeo Haenke's 1791 sheets of Tlingit songs (Chapter 33) 2729

National Archives of the United Kingdom: the one surviving copy of John Pory's report on the first General Assembly at Jamestown in 1619 (Chapter 20) 1309

Qaanaaq, Greenland: where the remains of Qisuk and three other Inuit were buried after their return in 1993. Robert Peary had tricked them into sailing to New York in 1897, and they died there in 1898 (Chapter 1) 64

Solar museum, Dezhou, China: some of the Carter White House solar panels (Chapter 10) 702

Online

Bracero History Archive: more than 700 recorded interviews with braceros, including Antonio García's (Chapter 4) 310

discoverfreedmen.org: about 1.8 million searchable names from the Freedmen's Bureau records (Chapter 24) 1744

DoHistory.org: the whole of Martha Ballard's diary (Chapter 7) 471

K-25 Virtual Museum: Colleen Black's account (Chapter 6) 431

"Last Seen: Finding Family After Slavery": more than 5,000 "Information Wanted" advertisements, including Thornton Copeland's, item 918 (Chapter 24) 1712

Library of Congress, Prairie Settlement collection: 318 of the Oblinger family's letters, written from 1862 to 1911 (Chapter 15) 1009

Mapping Inequality project, University of Richmond: the 1930s redlining maps and the appraisers' notes (Chapter 6) 431

Voices of the Manhattan Project, Atomic Heritage Foundation: Colleen Black's 2005 oral history (Chapter 6) 431

Other places

American Antiquarian Society: holds a copy of the 1727 edition of The New England Primer (Chapter 30) 2351

Baltimore and Ohio Railroad Museum: its page on the Tom Thumb describes the 1830 race with a horse as a legend (Chapter 11) 734

Carter Library: some of the Carter White House solar panels (Chapter 10) 702

Computer History Museum: its profile of Lee Felsenstein, who received its Fellow Award in 2016 (Chapter 8) 561

Devils Tower National Monument: the first national monument, sacred to dozens of Native nations. The Lakota call it Mato Tipila, or Bear Lodge (Chapter 3) 252

Eli Whitney Museum: its history of the cotton gin (Chapter 8) 528

Jim Crow Museum at Ferris State University: its writers' account of blackface minstrelsy (Chapter 34) 2841

NASA's Johnson Space Center: keeps the 2,200 Apollo Moon samples (Chapter 9) 633

National WWII Museum: Adelaide Wisdom Benjamin's 2013 oral history (Chapter 15) 1015

Smithsonian's National Museum of the American Indian: the exhibition Booming Out: Mohawk Ironworkers Build New York (Chapter 6) 418

United States Holocaust Memorial Museum: its count of 254 *St. Louis* passengers killed in the Holocaust (Chapter 23) 1634

US Botanic Garden: the garden that grew from the 254 live plants the Wilkes expedition brought home (Chapter 1) 44

Voices of Rondo oral-history collection: Marvin Roger Anderson's account (Chapter 6) 443

Walter P. Reuther Library, Wayne State University: its account that children in several San Joaquin Valley towns had cancer at rates "800% above the norm" in the 1980s (Chapter 15) 1028

Winterthur Museum: showed 40 of Ann Lowe's gowns in 2023 (Chapter 35) 2949

Movies

Every movie and TV show listed in the story boxes, from A to Z, with what each box says about it. A title that begins with "The" or "A" is sorted by its next word, so *The Revenant* is under R. Some of these were made for adults, so check each one's rating and ask a grown-up before you watch it.

10,000 Black Men Named George (2002): a television drama with Andre Braugher as A. Philip Randolph (Chapter 14) 958

12 Years a Slave (2013): a film directed by Steve McQueen that won the Academy Award for Best Picture (Chapter 24) 1707

17 Miracles (2011): a drama about the Willie handcart company that draws on Levi Savage's journal (Chapter 5) 366

42 (2013): a drama with Chadwick Boseman as Jackie Robinson (Chapter 36) 3043

A. Philip Randolph: For Jobs and Freedom (1996): a documentary shown on PBS (Chapter 14) 958

Alexander Hamilton (2007): a two-hour documentary in the PBS series *American Experience*, with Brían F. O'Byrne as Hamilton (Chapter 16) 1064

Alice Waters and Her Delicious Revolution (2003): a documentary in the PBS series *American Masters* (Chapter 15) 1036

All the Beauty and the Bloodshed (2022): a documentary by Laura Poitras about Nan Goldin's life and her protests (Chapter 28) 2195

All the President's Men (1976): a drama about Bob Woodward and Carl Bernstein's reporting, with Robert Redford as Woodward (Chapter 31) 2580

Amazing Grace (2018): a documentary film of Aretha Franklin's 1972 gospel concert in a Los Angeles church (Chapter 33) 2784

Amazon Empire: The Rise and Reign of Jeff Bezos (2020): a documentary by James Jacoby and Anya Bourg in the PBS series *Frontline*, an investigation that argues a case against Amazon's power (Chapter 18) 1223

American Socialist: The Life and Times of Eugene Victor Debs (2017): a documentary about Debs's life, directed by Yale Strom (Chapter 14) 939

Amistad (1997): a drama about the *Amistad* case (Chapter 24) 1706

Andrew Jackson: Good, Evil and the Presidency (2007): a two-hour PBS documentary narrated by Martin Sheen. It covers Jackson's whole presidency, not only the Bank War (Chapter 17) 1131

Andy Warhol: A Documentary Film (2006): a four-hour documentary by Ric Burns about Warhol's life, shown on PBS (Chapter 32) 2685

Apollo 13 (1995): a film based on Jim Lovell's book about the flight, *Lost Moon* (Chapter 1) 87

Athlete A (2020): a Netflix documentary by Bonni Cohen and Jon Shenk about the *Indianapolis Star* reporters and Larry Nassar's sexual abuse of gymnasts (Chapter 36) 3068

Becoming Frederick Douglass (2022): a documentary by Stanley Nelson about Douglass's life, shown on PBS (Chapter 24) 1700

Before Night Falls (2000): a drama based on Reinaldo Arenas's life story (Chapter 4) 315

Being the Ricardos (2021): a drama about Lucille Ball and Desi Arnaz, written and directed by Aaron Sorkin (Chapter 34) 2883

Benjamin Franklin (2022): a two-part documentary by Ken Burns about Franklin's whole life, shown on PBS in April 2022 (Chapter 8) 527

Bessie (2015): an HBO drama with Queen Latifah as Bessie Smith (Chapter 33) 2762

Billie (2019): a documentary about Billie Holiday (Chapter 33) 2775

The Birth of a Nation (1915): a drama by D. W. Griffith that showed Ku Klux Klan members lynching a Black man and stopping Black men from voting. After it opened in Atlanta, a preacher named William J. Simmons started the Klan again (Chapter 34) 2861

The Birth of a Nation (2016): a drama about Nat Turner's revolt. Its makers took the title on purpose from a 1915 film by D. W. Griffith that inspired a new Ku Klux Klan (Chapter 24) 1705

Bolinao 52 (2008): a documentary directed by Duc Nguyen about a boat of refugees from Vietnam that drifted at sea for 37 days in 1988. Tung Trinh was one of its 52 survivors (Chapter 4) 317

Born in Freedom: The Story of Colonel Drake (1954): a 30-minute drama paid for by the oil industry's American Petroleum Institute, with Vincent Price as Drake (Chapter 10) 682

Born on the Fourth of July (1989): a drama directed by Oliver Stone and based on Ron Kovic's memoir. Kovic helped write the script (Chapter 22) 1579

Bound for Glory (1976): a Hollywood drama based loosely on Woody Guthrie's own book about his life (Chapter 33) 2772

Brooklyn Bridge (1981): Ken Burns' first documentary, about the bridge and the Roeblings, narrated by David McCullough. It was nominated for the Academy Award for Best Documentary Feature (Chapter 12) 810

The Carter Family: Will the Circle Be Unbroken (2005): a documentary about the Carter family in the PBS series *American Experience* (Chapter 33) 2766

The Central Park Five (2012): a documentary by Ken Burns, Sarah Burns and David McMahon (Chapter 21) 1486

Cesar Chavez (2014): a drama directed by Diego Luna, with Michael Peña as Chavez. It came out before March 2026, when the New York Times reported that Chavez had sexually abused two girls in the 1970s and Dolores Huerta said he had raped her (Chapter 14) 965

Chaplin (1992): a drama about Charlie Chaplin's life, directed by Richard Attenborough (Chapter 34) 2868

The Circus (2018): a two-part documentary about the American circus in the PBS series *American Experience*. It tells a large part of P. T. Barnum's story (Chapter 18) 1190

Citizen Jane: Battle for the City (2016): a 92-minute documentary directed by Matt Tyrnauer about Jane Jacobs's fights with Robert Moses over his plans for New York City (Chapter 6) 448

The Computers (2014): a short documentary about the six ENIAC programmers (Chapter 8) 559

Crisis in Levittown (1957): a documentary by Lee Bobker and Lester Becker, filmed while the events were happening (Chapter 7) 498

The Current War (2017): a Hollywood drama, not a documentary, with Michael Shannon as George Westinghouse and Nicholas Hoult as Nikola Tesla (Chapter 10) 687

DeFord Bailey: A Legend Lost (2002): a documentary about Bailey made by Nashville Public Television (Chapter 33) 2767

Descendant (2022): a documentary by Margaret Brown about the *Clotilda*, Africatown and the families of the survivors. Joycelyn Davis appears in it (Chapter 24) 1717

Dolly Parton: Here I Am (2019): a documentary about Dolly Parton (Chapter 33) 2808

Dolores (2017): a documentary about Dolores Huerta directed by Peter Bratt. It came out before March 2026, when Huerta said Cesar Chavez had raped her in 1966 (Chapter 14) 965

Dorothea Lange: Grab a Hunk of Lightning (2014): a documentary about Lange's life and work in the PBS series *American Masters*, directed by her granddaughter Dyanna Taylor (Chapter 32) 2676

Eames: The Architect and the Painter (2011): a documentary about Charles and Ray Eames in the PBS series *American Masters* (Chapter 35) 2961

Edison (2015): a documentary about Thomas Edison's life and work in the PBS series *American Experience* (Chapter 8) 548

Elvis (2022): a Hollywood drama about Elvis Presley and his manager (Chapter 33) 2782

Escaping the Madhouse: The Nellie Bly Story (2019): a Lifetime television drama that its makers call a fictionalized account, meaning parts of it are made up (Chapter 31) 2552

The Fantastic Mr Feynman (2013): a BBC documentary with interviews with Richard Feynman, his family and his colleagues (Chapter 9) 642

The Far Horizons (1955): a drama that invents a romance between Sacagawea and William Clark, and a rivalry between Clark and Meriwether Lewis (Chapter 1) 45

The Farthest (2017): a documentary about the Voyager missions, in which Linda Morabito tells the story of her discovery (Chapter 9) 641

Flags of Our Fathers (2006): a drama in which Adam Beach plays Ira Hayes (Chapter 2) 156

Fly With Me (2024): a documentary about flight attendants in the PBS series *American Experience*, directed by Sarah Colt and Helen Dobrowski. Dusty Roads appears in it (Chapter 11) 768

Food Chains (2014): a documentary about the Coalition of Immokalee Workers. Lucas Benitez appears in it (Chapter 15) 1042

The Founder (2016): a drama based on Ray Kroc's story and the McDonald brothers' (Chapter 15) 1031

Frank Capra's American Dream (1997): a documentary made for television (Chapter 4) 299

Franklin (2024): an eight-part drama series on Apple TV+, not a documentary, about Benjamin Franklin's time in France, with Michael Douglas as Franklin. It is based on Stacy Schiff's book *A Great Improvisation* (Chapter 23) 1608

Frederick Law Olmsted: Designing America (2014): a PBS documentary first shown on June 20, 2014 (Chapter 6) 427

Gather (2020): a documentary about Native food sovereignty that features Nephi Craig (Chapter 15) 1045

George Washington Carver: An Uncommon Life (2018): a documentary made by Iowa PBS (Chapter 15) 1017

Georgia O'Keeffe (about 1977): a documentary about O'Keeffe's life and work by Perry Miller Adato, made with the New York public television station WNET (Chapter 32) 2662

Gideon's Trumpet (1980): a television drama with Henry Fonda as Clarence Earl Gideon, based on Anthony Lewis's 1964 book (Chapter 21) 1471

Good Night, and Good Luck (2005): a film directed by George Clooney about Edward R. Murrow's television reports on Senator Joseph McCarthy in 1953 and 1954 (Chapter 31) 2568

Grant (2020): a History channel documentary in three parts about Ulysses S. Grant, with acted scenes (Chapter 22) 1551

The Greatest Showman (2017): a musical movie about P. T. Barnum. Its story is mostly made up, and Joice Heth does not appear in it (Chapter 18) 1190

Green Fire: Aldo Leopold and a Land Ethic for Our Time (2011): a documentary about Aldo Leopold (Chapter 3) 227

The Gruen Effect: Victor Gruen and the Shopping Mall (2009): a documentary by Anette Baldauf and Katharina Weingartner about Gruen and the malls he started (Chapter 18) 1215

Half Past Autumn: The Life and Works of Gordon Parks (2000): a documentary about Gordon Parks's life (Chapter 32) 2683

Hamilton (2020): the Broadway stage musical, filmed with its original cast, and not a documentary (Chapter 4) 271

Harriet (2019): a drama about Harriet Tubman's life, with Cynthia Erivo as Tubman (Chapter 24) 1710

Henry Ford (2013): a documentary about Ford's life and his company in the PBS series *American Experience*, directed by Sarah Colt (Chapter 8) 555

A Hero for Daisy (1999): a documentary about Chris Ernst by Mary Mazzio (Chapter 36) 3053

Hidden Figures (2016): a drama in which Taraji P. Henson plays Katherine Johnson (Chapter 1) 85

High Steel (1965): a documentary about Harold McComber's working life by the National Film Board of Canada, directed by Don Owen (Chapter 12) 827

Human Nature (2019): a documentary about CRISPR in which Jennifer Doudna is one of the main people interviewed (Chapter 9) 652

I Will Fight No More Forever (1975): a television drama whose title quotes Chief Joseph's words at his surrender in 1877 (Chapter 2) 141

The Immortal Life of Henrietta Lacks (2017): a drama made for HBO about Henrietta Lacks and her daughter Deborah (Chapter 26) 2006

Inside Bill's Brain: Decoding Bill Gates (2019): a Netflix series directed by Davis Guggenheim (Chapter 19) 1287

The Insider (1999): a drama about Jeffrey Wigand, directed by Michael Mann, with Russell Crowe as Wigand (Chapter 28) 2188

Is Wal-Mart Good for America? (2004): a documentary about Walmart in the PBS series *Frontline* (Chapter 19) 1289

Izzy and Moe (1985): a television film about two Prohibition agents, with Jackie Gleason as Izzy Einstein and Art Carney as Moe Smith (Chapter 28) 2172

The Jackie Robinson Story (1950): a drama in which Jackie Robinson played himself (Chapter 36) 3043

Jim Thorpe – All-American (1951): a drama about Jim Thorpe (Chapter 2) 155

John Adams (2008): a drama miniseries made for HBO about John Adams and his family. Abigail Adams is one of its main characters (Chapter 7) 472

John James Audubon: Drawn from Nature (2007): a documentary in the PBS series *American Masters* (Chapter 3) 198

John Muir in the New World (2011): a documentary in the PBS series *American Masters* (Chapter 3) 213

Jubilee Singers: Sacrifice and Glory (2000): a documentary about the Fisk Jubilee Singers in the PBS series *American Experience* (Chapter 33) 2751

Kemba (2024): a film about Kemba Smith's life, shown on BET+ (Chapter 21) 1479

Lincoln (2012): a film about the fight in January 1865 to get the House of Representatives to pass the Thirteenth Amendment. It is about the amendment, not about habeas corpus (Chapter 20) 1343

Little House on the Prairie (NBC series, 1974 to 1983): a television drama series with Michael Landon as Charles Ingalls, loosely based on Laura Ingalls Wilder's books (Chapter 5) 370

Lois Gibbs and the Love Canal (1982): a CBS television drama with Marsha Mason as Lois Gibbs (Chapter 3) 236

Lorraine Hansberry: Sighted Eyes/Feeling Heart (2017): a documentary about Hansberry's life and work (Chapter 34) 2884

Lost Boys of Sudan (2003): a documentary that records the lives of Peter Dut and Santino Chuor (Chapter 4) 329

Louis Armstrong's Black & Blues (2022): a documentary about Louis Armstrong (Chapter 33) 2764

Man in the Wilderness (1971): a film based on Hugh Glass's story, like *The Revenant* (Chapter 1) 54

Man on Wire (2008): a documentary about Philippe Petit's walk, directed by James Marsh. It won the Academy Award for Best Documentary Feature (Chapter 12) 828

The Man Who Tried to Feed the World (2020): a documentary about Norman Borlaug in the PBS series *American Experience* (Chapter 15) 1032

Mankiller (2017): a documentary about Wilma Mankiller (Chapter 2) 167

Maria Martinez: Indian Pottery of San Ildefonso (1972): a documentary that shows Maria Martinez and her son Popovi Da making pottery at the pueblo (Chapter 32) 2665

Marian Anderson: The Lincoln Memorial Concert (1939): a short film of Marian Anderson's concert at the Lincoln Memorial (Chapter 33) 2778

Mark Twain (2001): a documentary by Ken Burns about Mark Twain's whole life, shown on PBS in January 2002 (Chapter 11) 751

Maya Lin: A Strong Clear Vision (1994): a documentary about Maya Lin that won the Academy Award for Best Documentary Feature (Chapter 12) 830

The Men Who Built America (2012): a History Channel series about John D. Rockefeller, Andrew Carnegie, J. P. Morgan and others. It is a docudrama, in which actors play the real people in scripted scenes (Chapter 19) 1257

Midnight Ramble: Oscar Micheaux and the Story of Race Movies (1994): a PBS documentary about Oscar Micheaux and about films made for Black audiences (Chapter 34) 2871

A Midwife's Tale (1997): a documentary about Martha Ballard, made for the PBS series *American Experience* (Chapter 7) 473

Miles of Smiles, Years of Struggle (1982): a documentary by Jack Santino and Paul Wagner, made from the Pullman porters' own accounts (Chapter 11) 761

Miss Americana (2020): a documentary about Taylor Swift (Chapter 33) 2800

Miss Lillian: More Than a President's Mother (2021): a documentary about Lillian Carter directed by Vivian Winther (Chapter 23) 1649

Mr. Sears' Catalogue (1989): a documentary about Richard Sears and his catalog in the PBS series *American Experience* (Chapter 18) 1201

No Direction Home: Bob Dylan (2005): a documentary by Martin Scorsese (Chapter 33) 2788

One Man's Hero (1999): a feature film about John Riley, with Tom Berenger as Riley. It is a drama, not a documentary (Chapter 22) 1541

The Outsider (1961): a drama about Ira Hayes (Chapter 2) 156

Particle Fever (2013): a documentary that follows six physicists, Monica Dunford among them, from the start-up of the Large Hadron Collider to the announcement of the Higgs boson in 2012 (Chapter 9) 651

Penn of Pennsylvania (1941): a drama released in the United States as *The Courageous Mr. Penn* (1942). It is about William Penn's life in general, not the making of the plan for Philadelphia (Chapter 6) 403

Pollock (2000): a drama about Jackson Pollock's life, directed by Ed Harris, who also plays Pollock (Chapter 32) 2680

Prince of Players (1955): a drama about Edwin Booth's life (Chapter 34) 2854

The Queen of Code (2015): a short documentary about Grace Hopper's life and work, directed by Gillian Jacobs (Chapter 8) 562

Race (2016): a drama about Jesse Owens (Chapter 36) 3039

Rachel Carson (2017): a documentary in the PBS series *American Experience* (Chapter 3) 230

Radium Girls (2018): a drama inspired by the dial painters' case. Its main characters are two invented sisters, not Grace Fryer (Chapter 14) 952

The Revenant (2015): a film based on Hugh Glass's story (Chapter 1) 54

The Richest Man in the World: Andrew Carnegie (1997): a documentary about Andrew Carnegie in the PBS series *American Experience*, first shown on January 20, 1997 (Chapter 16) 1082

Rise (2022): a Disney+ drama, not a documentary, about the Antetokounmpo family, made with the family (Chapter 4) 328

Rita Moreno: Just a Girl Who Decided to Go for It (2021): a documentary about Rita Moreno (Chapter 34) 2885

The River Ran Red (1993): a documentary about the Homestead lockout that tells the story from the workers' side (Chapter 19) 1265

The Rockefellers (2000): a documentary in the PBS series *American Experience* about four generations of John D. Rockefeller's family, not about him alone (Chapter 16) 1083

The Roosevelts: An Intimate History (2014): a Ken Burns documentary on PBS about the whole Roosevelt family (Chapter 3) 217

Roots (1977): a television miniseries on ABC based on Alex Haley's book. It tells his family's story as a drama and is not a documentary about Haley (Chapter 24) 1743

The Ryan White Story (1989): a drama made for ABC television, in which Ryan White had a small part (Chapter 26) 2021

Searching for Augusta Savage (2024): a short documentary about Augusta Savage's life and her lost work, made for the PBS series *American Masters* (Chapter 32) 2667

Seeking the Greatest Good (2013): a documentary about Gifford Pinchot, from WVIA and PBS (Chapter 3) 221

Selena (1997): a Hollywood drama about Selena Quintanilla, with Jennifer Lopez (Chapter 33) 2793

Sidney (2022): a documentary about Sidney Poitier, directed by Reginald Hudlin (Chapter 34) 2886

Sitting Bull: A Stone in My Heart (2006): a documentary built from Sitting Bull's own recorded words (Chapter 2) 140

Soul of the Game (1996): a television drama about several Negro Leagues players, with Mykelti Williamson as Josh Gibson (Chapter 36) 3042

Squanto: A Warrior's Tale (1994): a drama that mixes Squanto's real story with invented events (Chapter 15) 993

Stars and Stripes Forever (1952): a Hollywood drama loosely based on John Philip Sousa's memoir (Chapter 33) 2754

Steve Jobs (2015): a drama, not a documentary, directed by Danny Boyle and written by Aaron Sorkin. Actors play the real people, and it is based on Walter Isaacson's biography of Jobs (Chapter 8) 567

Steve Jobs: The Man in the Machine (2015): a documentary about Jobs directed by Alex Gibney (Chapter 8) 567

Summoned: Frances Perkins and the General Welfare (2020): a documentary about Perkins's life by Mick Caouette, shown on PBS (Chapter 14) 947

Ten Who Dared (1960): a Disney drama about John Wesley Powell's expedition (Chapter 1) 69

Till (2022): a drama about Emmett Till's mother, Mamie Till-Mobley, and her fight after his murder (Chapter 21) 1469

Toni Morrison: The Pieces I Am (2019): a documentary by Timothy Greenfield-Sanders about Morrison's life and work (Chapter 32) 2693

TR: The Story of Theodore Roosevelt (1996): a documentary in the PBS series *American Experience*, first shown in October 1996 (Chapter 19) 1272

Trouble the Water (2008): a documentary built largely on Kimberly Rivers Roberts's own video (Chapter 5) 390

Troublesome Creek: A Midwestern (1995): a documentary about the Jordan family. It won the Grand Jury Prize at the Sundance Film Festival and was nominated for an Academy Award (Chapter 15) 1038

Two Dollars and a Dream (1987): a documentary about Madam C. J. Walker's life by Stanley Nelson (Chapter 35) 2952

Union (2024): a documentary by Brett Story and Stephen Maing about the union campaign at Amazon's JFK8 warehouse. It won a Special Jury Award at the Sundance Film Festival in 2024 (Chapter 14) 978

The Untouchables (1987): a drama, not a documentary, and it changes many of the facts (Chapter 21) 1465

Wal-Mart: The High Cost of Low Price (2005): a documentary by Robert Greenwald that argues against the company and is not a life story of Sam Walton (Chapter 18) 1217

Walter Cronkite: Witness to History (2006): a documentary about Cronkite in the PBS series *American Masters* (Chapter 31) 2577

Washington (2020): a History channel documentary series in three parts, with acted scenes (Chapter 22) 1529

We Shall Remain: Tecumseh's Vision (2009): a PBS documentary about Tecumseh and his brother (Chapter 2) 128

We Still Live Here: Âs Nutayuneân (2011): a documentary about the work of Jessie Little Doe Baird, who brought back the Wôpanâak language (Chapter 2) 177

When They See Us (2019): a Netflix drama series directed by Ava DuVernay (Chapter 21) 1486

With Byrd at the South Pole (1930): a documentary film of the trip (Chapter 1) 79

Wright Brothers' Flying Machine (2003): a documentary about the brothers' flying machine in the PBS series *NOVA*, first shown on November 11, 2003 (Chapter 8) 554

Zora Neale Hurston: Jump at the Sun (2008): a documentary by Sam Pollard about Hurston's life and writing, made for the PBS series *American Masters* (Chapter 32) 2669

Answers to the Chapter Questions

Each chapter opens with three questions, and here they are with their answers, chapter by chapter.

Chapter 1: Exploration and Discovery

How do we know people were living here at least 21,000 years ago? Human footprints at White Sands, in New Mexico, lie between layers of seeds, pollen and quartz sand, and three different tests date those layers to about 21,000 to 23,000 years ago. 96

What did the explorers do to the people whose land they crossed? Some traded with them and were fed by them. Others took captives, from the 500 Taino Columbus's men shipped to Spain to the six Inuit Peary brought to New York, and some killed: de Soto's men at Mabila, Coronado's at Arenal, Frémont's on the Sacramento River. 96

Which famous "firsts" are still in doubt? Peary's North Pole in 1909 and Byrd's flight over it in 1926. Wally Herbert found Peary's records unreliable, and most researchers think Byrd's plane could not carry enough fuel. Older firsts are in doubt too: Spanish slave raiders may have reached Florida before Ponce de León, Ute tradition says Ute ancestors climbed Pikes Peak before Long's men, and nobody knows whether the Norse camp in Newfoundland was Leif's own. 96

Chapter 2: Native Nations

How did Native nations govern themselves and deal with other nations before the United States existed? They ran their own councils and laws, as the Haudenosaunee did under the Great Law of Peace. Their leaders made alliances and treaties and recorded them on wampum belts. 177

What did United States officials and soldiers do to take the nations' land and break the nations up? Soldiers forced whole nations west and onto reservations, and killed hundreds of people at a time at Sand Creek, Wounded Knee and other places. Officials cut the nations' land from about 138 million acres to 48 million and took children to boarding schools, where at least 973 died. 177

How did Native nations hold on to their governments, their languages and some of their land? They went to court, from *Worcester v. Georgia* in 1832 to *McGirt v. Oklahoma* in 2020. They organized until members of Congress restored the Menominee, and they kept their languages, first in secret and now in schools of their own. 177

Chapter 3: Land and Environment

How did Native nations shape the land before Europeans came? They burned the eastern forests on purpose, again and again, to keep them open and grow food for game, and they planted corn, beans and squash together to keep the soil good. 252

What happened to the 30 million bison and the billions of passenger pigeons? Hide hunters, carried by the railroads and helped by army officers who wanted the Plains nations' food gone, left fewer than 1,000 bison by 1900. Netters and shooters killed the pigeons at their nestings, and the last one died in a zoo in 1914. 252

Who was pushed out when parks were made, and who lived next to the waste? Native people were pushed out: the Ahwahneechee in Yosemite, the Tukudika in Yellowstone, the Blackfeet at Glacier. Studies from 1983 on found waste sites far more often beside Black and poor neighborhoods. 252

Chapter 4: Immigration to America

Why did people leave home to come here? Many came for land and work, like the Germans who farmed the Midwest and the Chinese who built the western railroad, or to worship in their own way, like the Puritans. Others ran from danger: the Irish famine, the pogroms against Jews in the Russian Empire, the Nazis, and wars in Vietnam and Sudan. 330

Who did Americans try to keep out, and how? Lawmakers shut out Chinese workers in 1882 and almost everyone from Asia in 1924, and they cut the number of southern and eastern Europeans with quotas. Mobs burned Catholic churches in Philadelphia and drove Chinese people out of Eureka and Tacoma. Officials pushed hundreds of thousands of people of Mexican descent, many of them citizens, across the border in the 1930s and again in 1954. In 2018 agents took thousands of children from their parents at the border, and in January 2026 officers held more than 71,000 people in detention, the most ever. 330

Who could become a citizen, and how did that change? In 1790 only "a free white person" could become a citizen. In 1870 members of Congress added people of African birth or descent. In 1898 the Supreme Court ruled in Wong Kim Ark's case that anyone born here is a citizen, and in 1952 members of Congress removed the limit to white people. 330

Chapter 5: Migration Across America

How did horses reach the Native nations of the Plains? In the older account, horses spread north through trade after the Pueblo Revolt of 1680, when the Spanish left perhaps more than 1,500 of them behind. A 2023 study of horse bones found that many nations had horses by the early 1600s, decades earlier, as the nations' own histories say. 392

How many Cherokee died when soldiers forced them west? Nobody knows exactly. The count most often given is about 4,000, and estimates run from more than 1,000 on the journey itself to about 8,000 or more. 392

Why did about 6 million Black Americans leave the South between 1910 and 1970? They left lynch mobs, Jim Crow laws and cotton crops ruined by the boll weevil and floods, and they went toward jobs in Northern and Western cities. In Georgia, one example, lynch mobs killed more than 450 people between 1880 and 1930, and nearly all Black Georgians could not vote. 392

Chapter 6: City Building

Why do so many American cities have straight streets that cross in a grid? Town founders chose the grid on purpose, from Spain's town rules of 1573 to Penn's Philadelphia in 1682. The three men who laid a grid over Manhattan in 1811 wrote that square-cornered houses were "the most cheap to build and the most convenient to live in." 456

How did people get clean water into crowded cities? City leaders paid for big waterworks after epidemics and fires: steam pumps in Philadelphia in 1801, the Croton Aqueduct in New York in 1842, and a canal that turned Chicago's river around in 1900. 456

Who decided which families could live in which neighborhoods? White owners wrote rules called covenants into their deeds to bar Black buyers, and judges enforced them until 1948. Federal officials refused to back home loans where Black families lived, and after 1949 city officials cleared about 2,000 neighborhoods. 456

Chapter 7: Home and Family Life

Who lived together under one roof, from the longhouse to today? A longhouse held 30 to 60 relatives, and colonial households held servants, apprentices and enslaved people too. By 2025 the average household held 2.50 people. 507

Who did the work of keeping house, and did stoves, pipes and wires make it lighter? Women and children did most of it. In Ruth Schwartz Cowan's argument, the machines did not cut a housewife's hours, because families expected more. 507

How did lenders and builders keep Black families out of new neighborhoods, and what did those families do? FHA officials usually refused to back loans where Black families lived, and William Levitt sold only to white families. The Myers family stayed through weeks of attacks, and about 500 families in the league Clyde Ross helped lead stopped paying together. 507

Chapter 8: Technology

Why did planters enslave far more people after the cotton gin? One gin cleaned about 50 pounds of cotton a day, work that took several hundred hours by hand. Planters grew far more cotton and enslaved far more people to grow and pick it, nearly 4 million by 1860. 578

Why could an enslaved inventor not get a patent? Only the inventor could get a patent, and only by swearing an oath. In 1858 Attorney General Jeremiah Black ruled that an enslaved man was not a citizen and could not swear it, and that the enslaver could not take the patent instead. 578

What went wrong when people trusted a computer's answer? In 2023 two lawyers cited court decisions that ChatGPT had made up, and a judge ordered them and their law firm to pay a $5,000 penalty. In 2020 Detroit police held Robert Williams for 30 hours after a face-recognition search matched him by mistake. 578

Chapter 9: Science

How did American scientists learn how far away the stars are? Henrietta Leavitt showed in 1912 that the blink of a Cepheid star tells how bright it truly is, and so how far away it is. Edwin Hubble used her rule in 1923 to place Andromeda far outside our own galaxy. 658

Why did scientists collect human skulls and brains, and where are those remains now? Samuel Morton, the Army's museum scientists and Aleš Hrdlička measured them to rank the races, an idea that is false. Morton's skulls are at the Penn Museum, whose staff buried 19 of them in 2024, and the Smithsonian still held at least 255 of the brains in 2023. Many Native American remains have been returned since the laws of 1989 and 1990, but in January 2025 museums still had 90,831 not yet made available for return. 658

Who did the work but was left out of the credit? Lise Meitner explained fission, and Rosalind Franklin's X-ray pictures showed the shape of DNA. The Nobel Prizes went to Otto Hahn alone in 1944 and to Watson, Crick and Wilkins in 1962. 658

Chapter 10: Energy

Did kerosene really save the whales? No. Whaling was shrinking before kerosene came, and in most homes kerosene replaced camphene, after a Civil War tax on alcohol raised camphene's price. 718

How did electricity reach almost every American home? Edison's Pearl Street station began selling current in 1882, and alternating current, which a transformer could raise or lower, carried power from Niagara Falls to Buffalo by 1896. After 1935 federal loans paid for farmers' own power lines, and by 1950, 94 households in 100 had electricity. 718

Who paid for America's energy with their freedom, their land or their lives? Enslaved people fed the iron furnaces, at least 271 at Catoctin alone, and about 105,000 coal miners died in accidents from 1900 through 2025. Federal officials made 82,000 people in the Tennessee Valley leave their homes for dams, other dams flooded Kettle Falls and the Fort Berthold farmlands, and husbands, guardians and others murdered Osage people for their oil money. 718

Chapter 11: Transportation

How much faster and cheaper did travel get? On the Erie Canal a ton of goods went from Buffalo to New York City for under $10 instead of about $100 by wagon, and on the first railroad across the country a coast-to-coast trip took a week instead of four months. By 1956, loading a ton of cargo onto a ship cost about 16 cents in containers, against about $5.86 by hand. 779

Who built the new routes, and whose land and homes did they take? Irish and American-born laborers dug the Erie Canal, enslaved people dug the Dismal Swamp Canal and built most of the Southern railroads, and Chinese workers built the western part of the first railroad across the country. Builders and US officials took Native nations' land, and highway officials building federal roads took the homes of more than 475,000 households, many in Black neighborhoods. 779

How did Black travelers fight the laws that made them sit apart? They refused to move, went to court and stayed off the buses: Ida B. Wells sued a railroad in 1884, Homer Plessy tested a Louisiana law and lost in 1896, Irene Morgan won in the Supreme Court in 1946, and Black riders in Montgomery, Alabama, stayed off the city buses for more than a year in 1955 and 1956. After white mobs and Klansmen beat the Freedom Riders in Alabama in 1961, federal officials banned separating passengers in bus and train stations. 779

Chapter 12: Landmarks

Who built the White House and the Capitol, and who was paid for their work? Enslaved men did much of the work, from quarrying the stone to sawing boards and hauling loads. The officials in charge rented them from their owners by the year, and the owners collected the pay. 840

How many workers died building Hoover Dam? By the official count, 96. The records list 42 more as dying of pneumonia, deaths that workers blamed on carbon monoxide in the tunnels, so the exact number is not known. 840

What has happened to the Confederate monuments since 2015? By April 2025 officials and work crews had taken down, moved or renamed 415 Confederate memorials, from statues to place names. Hundreds of them came down or were renamed after Dylann Roof killed nine Black worshippers in Charleston in 2015, James Alex Fields Jr. killed Heather Heyer in Charlottesville in 2017 and the police officer Derek Chauvin murdered George Floyd in Minneapolis in 2020. In 2025 federal officials began putting some back. 840

Chapter 13: The Elements

Who lost their land when Americans found gold and copper on it? The Cherokee lost theirs after gold turned up in Georgia in 1829, when Georgia lawmakers gave it away by lottery and soldiers forced them west in 1838. The Ojibwe bands of Lake Superior gave up the copper country in the Treaty of La Pointe in 1842, and members of Congress took the Black Hills from the Sioux in 1877, after Custer's men found gold there. 906

What did the people in charge say about the radium, lead and uranium that poisoned workers? Supervisors told the dial painters the paint was safe, the Bayway supervisor said his poisoned men had worked too hard, and Thomas Midgley breathed the vapor of tetraethyl lead in front of reporters to show it was safe. Public Health Service researchers agreed with mine owners not to tell the uranium miners what they found. 906

When did someone in the United States first discover a new element? In 1940, at Berkeley, California, when teams using Ernest Lawrence's cyclotron made astatine and neptunium, and then plutonium. Every element before that had been found abroad, and Fred Allison's 1931 claims were false. 906

Chapter 14: Work and Workers

Which workers were not free to leave their work? Native people forced to work under Spanish rule, indentured servants bound for years, enslaved people, prisoners leased to Southern mines and planters, and the Thai garment workers held behind a fence in El Monte until 1995. Virginia judges sentenced John Punch in 1640 to serve for the rest of his life. 983

What happened when workers went on strike? Some won, like the Philadelphia printers in 1786 and the Flint autoworkers in 1937. Many times police, hired guards and soldiers broke the strike, and at Lattimer in 1897, Ludlow in 1914 and Chicago in 1937 they killed strikers, their families and people marching with them. 983

What made work less deadly? Laws written after workers died: more than one way out of every Pennsylvania mine after the Avondale fire, safer couplers after thousands of brakemen died, new factory laws in New York after the Triangle fire, and the 1969 coal mine law after Farmington. Deaths on the job fell from about 38 a day in 1970 to about 14 a day in 2024. 983

Chapter 15: Food and Farming

How did Native farmers turn a wild grass into corn? For thousands of years, starting in southern Mexico about 9,000 years ago, they saved seed only from the teosinte plants they chose, until the grass became corn. 1046

Who did the hardest farm work, and what did they get for it? Enslaved people worked the rice and cotton fields for no pay, and sharecroppers got half the crop's value or less and stayed in debt. From 1992 to 2006, crop workers died of heat at nearly 20 times the rate of all American workers. 1046

How did Americans come to eat food grown far away by people they never met? With canning, pond ice and railroad cars cooled with ice, food could be sold far from the farm, and the farms grew fewer, down to 1.9 million in 2022. 1046

Chapter 16: Economy

How did slavery make money for people far from any plantation? Bankers in London, Amsterdam and New York sold bonds backed by mortgages on enslaved people, Northern companies insured their lives, and Boston mill owners spun the cotton that enslaved people grew. Rhode Island merchants sent out ships that carried more than 100,000 Africans into slavery. 1109

What happened to ordinary families when a boom turned into a crash? Judges jailed debtors in 1819, creditors sold enslaved families apart in 1837, one worker in four had no job by 1933, and lenders took 7.7 million to 10 million homes in the crisis that began in 2007. In the 1930s and after 2007, Black families lost jobs and homes at higher rates than white families. 1109

When did the national government start helping people who lost their jobs? In the 1930s. Before 1933 the federal government paid no unemployment insurance or old-age pensions, and members of Congress set up both in the Social Security Act of 1935, though farm and domestic workers had to wait until 1950 and 1954. 1109

Chapter 17: Money

What has stood behind the dollar, and what stands behind it now? Silver and gold stood behind it, then gold alone. Since August 15, 1971, only the law and people's trust in the government that prints it have stood behind it. 1167

Why did people rush to pull their money out of banks, and who lost when a bank failed? A bank keeps only part of its money in cash, so the first in line got paid. Until deposit insurance began in 1934, the rest took the loss, about $1.34 billion from 1930 to 1933. 1167

How did enslavers and bankers use enslaved people to raise money? Enslavers pledged them for loans, and in the 1830s Louisiana banks lent out their own paper money against them. When the loans went unpaid, the people were sold. 1167

Chapter 18: Marketplace and Consumer Life

How did colonists pay for goods when they had almost no coins? They took goods home on credit and paid later in crops, other goods, work and wampum, while the shopkeeper wrote each debt in a ledger. 1230

Where were people bought and sold like goods? At the market New York's aldermen set up on Wall Street in 1711, in newspaper advertisements such as the 277 or more in Franklin's *Pennsylvania Gazette*, and at a racetrack near Savannah, where Pierce Butler sold between 429 and 436 people in 1859. 1230

How much of what Americans buy today is bought online? About one dollar in six: online sales were 17.1 percent of all retail sales from April to June 2026, by the US Census Bureau's count. 1230

Chapter 19: Big Business and Its Power

How did a few companies come to control whole industries? Their owners made secret deals with railroads, bought out rivals and joined companies into trusts and mergers. By 1880 Standard Oil refined 90 to 95 percent of the country's oil. 1300

What did owners do when their workers went on strike? They locked workers out and hired armed guards, and officials sent soldiers and court orders. At Homestead in 1892 Frick's Pinkerton men fought the steelworkers, and at Ludlow in 1914 soldiers paid by the mine owners burned the strikers' tent camp. 1300

Did breaking up a giant company ever work? Not clearly. Judges split Standard Oil into 34 companies in 1911, yet Rockefeller was three times as rich by 1913. AT&T gave up its local telephone companies in 1984 in a deal most newspapers called a win for AT&T, the order to split Microsoft was thrown out in 2001, and judges in 2025 and 2026 would not make Google sell off parts of its business. 1300

Chapter 20: Government, Law, and Politics

Who decided who could vote, and how did the answer change? Each colony's and then each state's lawmakers decided, and the men who wrote the Constitution left it that way. Virginia's lawmakers took the vote from free Black men in 1723, New Jersey's lawmakers took it from women and free Black men in 1807, and Southern delegates took it from Black men again after 1890. Members of Congress took most of that power from the states with four amendments (1870, 1920, 1964, 1971), which state lawmakers approved, and with the Voting Rights Act of 1965. 1402

When did judges first cancel a law, and what have they done with that power since? In 1803, in *Marbury v. Madison*. The justices have used it to allow forced sterilization, separate railroad cars and the wartime camps, and to strike down school segregation, official prayers, poll taxes and unequal districts. 1402

What happens when people in power break the law? A jury, a court or the Senate decides. In 1614 royal judges found Juan de Oñate, a former governor of New Mexico, guilty of 12 charges and ordered him out of New Mexico for life. A jury found a cabinet secretary guilty of taking a bribe in 1929, and a judge sentenced him to a year in prison. A president resigned in 1974 rather than face a vote. Bill Clinton and Donald Trump were impeached, Trump twice, and the senators found neither guilty. A jury found a senator guilty of bribery in 2024, and he went to prison. 1402

Chapter 21: Crime, Police, and Justice

How did punishment move from the whipping post to the prison cell? Colonial judges had people whipped, branded and hanged in public, and had their ears cut off. Pennsylvania's lawmakers turned the Walnut Street Jail into the country's first state prison in 1790, and by 2009 American prisons held about 1.62 million people. 1496

Who kept order before there were police? Among the Native nations, families and clans settled killings, and in the colonies settlers took turns on a night watch while white men in the South rode on slave patrols. Full-time police began work in Boston in 1838 and in New York in 1845, and the US attorney general put 34 federal agents to work in 1908. 1496

What happened to the people in mobs who killed without a trial? In almost every case the chapter describes, nobody punished them. No one was charged for killing twenty Conestoga people in 1763, for burning Francis McIntosh in 1836 or for burning Henry Smith in 1893, and no white person went to prison for the attack on Greenwood, the Black district of Tulsa, in 1921. 1496

Chapter 22: War and the Military

What killed most American soldiers before World War II? Disease. In the war with Mexico seven of every eight American dead died of something other than enemy fire, and in World War I flu and pneumonia killed more soldiers than the war's deadliest battle did. 1593

Who was made to fight, and who could get out of it? Drafts filled the armies of the Civil War, both world wars and Vietnam. In 1863 a drafted man could pay $300 and go home, and in the Vietnam years college students could put off the draft. Since 1973 everyone who serves has volunteered. 1593

Were soldiers who killed people who could not fight back ever punished? Rarely. No one was charged for killing 96 Christian Lenape and Mohican people at Gnadenhutten in 1782, and no one was tried for Sand Creek. Lieutenant William Calley, the only man convicted for My Lai, went free on parole in 1974. 1593

Chapter 23: America and the World

Who got to choose when this land and its islands changed hands? Almost never the people who lived there: no Native nation was at Paris in 1783, and no one from Puerto Rico, Guam or the Philippines was at Paris in 1898. Of today's five territories, only the Northern Mariana Islands voted to join, and Hawaii's voters chose statehood in 1959 from a ballot that left out independence. 1662

How did a weak new country come to rule islands and overthrow governments? First it grew: by 1848 it reached the Pacific, and by 1900 its mills made more steel than Britain's and Germany's together. Then its leaders used force. Marines helped overthrow Hawaii's queen in 1893, American leaders took Puerto Rico, Guam and the Philippines after a war with Spain in 1898, and after 1950 CIA officers secretly helped overthrow governments in Iran, Guatemala and Chile. 1662

Are the people of the territories American citizens? Most are, but people born in American Samoa are nationals, not citizens, and no one living in a territory can vote for president. 1662

Chapter 24: Slavery and Freedom

How did a servant in Virginia become a slave for life, and a child a slave from birth? Virginia's judges and lawmakers did it one ruling at a time. Judges sentenced John Punch to serve for life in 1640, and in 1662 lawmakers ruled that a child born to an enslaved mother was enslaved for life. 1752

How did enslaved people fight back? They worked slowly, ran away, sued, learned to read in secret and rose up with weapons. During the Civil War about half a million freed themselves by reaching the Union army. 1752

What happened to the freedom people won in 1865? Freed people voted, built schools and sent 16 men to Congress. But within twelve years Southern lawmakers passed Black Codes, Klansmen whipped and murdered freed people, and federal officials stopped enforcing their rights in the South until members of Congress passed the laws of 1964 and 1965. 1752

Chapter 25: Rights and Movements

How did people without power get the people in power to listen? They signed petitions, printed pamphlets and spoke to crowds, and later they planned test cases, boycotted, marched, sat in and filmed the police, from the Germantown protest of 1688 to Darnella Frazier's video in 2020. 1942

What did organizing cost the people who did it? Their jobs, their homes and their freedom, and sometimes their bodies and their lives. A prison doctor fed Lucy Burns by force through a tube, state highway patrolmen had Fannie Lou Hamer beaten in a Mississippi jail, Byron De La Beckwith shot Medgar Evers in his driveway, and Klansmen killed four girls with a bomb in a Birmingham church. 1942

Can a right that has been won be taken away again? Yes. New Jersey's lawmakers took the vote from women and free Black men in 1807, members of Congress took Utah women's vote in 1887, and the justices of the Supreme Court cut back the Voting Rights Act in 2013 and 2026 and ended the right to an abortion in 2022. 1942

Chapter 26: Health, Disease, and Medicine

Why did new diseases kill so many Native people after 1492? The crowd diseases, such as smallpox and measles, had never reached the Americas, so nobody here was immune and a whole town could fall sick at once. Smallpox killed about half of the Cherokee in 1738 and 1739. 2029

How did Americans learn to stop smallpox, yellow fever and polio? Boston doctors tried inoculation in 1721, using a method Onesimus described, and safer vaccination followed in 1800. Army doctors proved in 1900 that mosquitoes spread yellow fever, and after the Salk and Sabin vaccines the last polio case caught inside the country came in 1979. 2029

Who was used in medical experiments without agreeing, and what changed because of it? Enslaved women operated on by J. Marion Sims, the Black men of the Tuskegee study, prisoners and patients in Guatemala, and children at Willowbrook. After the Tuskegee study became public, members of Congress passed the National Research Act in 1974, and researchers in a federally paid study on people must now get each person's informed consent. 2029

Chapter 27: Disasters and Rescue

What rules did Americans make after disasters, and did they work? Some worked, some failed and some are still being tested. Lawmakers and officials wrote new rules after many disasters, from Boston's fire wardens in 1711 to one building code for Florida after Hurricane Andrew. The rule to put a smell in natural gas after the New London school explosion was in use within weeks, but the 1838 steamboat law had no one to enforce it. In late September 2026 members of Congress were still debating FEMA's future. 2117

Was anyone punished when people's choices killed others? Rarely. No one was punished for the *Sultana*, the Johnstown club won in court, a jury found the Triangle owners not guilty, and no Pittston official was charged after Buffalo Creek. Barnett Welansky went to prison for the Cocoanut Grove fire, and PG&E pleaded guilty to 84 counts of involuntary manslaughter after the Camp Fire. 2117

Did everyone get the same help after a disaster? No. Officials paid out London's money for Charleston in 1740 by the size of each loss, so most of it went to rich merchants. Armed men forced Black workers to handle Galveston's dead in 1900, and camp leaders forced Black people to work in the 1927 flood. In 2005 police turned back people walking out of New Orleans at gunpoint, and in 2025 orders to leave reached west Altadena hours late. 2117

Chapter 28: Drugs and Alcohol

How long have people here used tobacco, and what did they use it for? For at least 12,300 years, since the fire at the Wishbone site. Native people offered it in prayer, burning it or smoking it in pipes, and the Algonquian people at Roanoke smoked it to keep the body healthy. 2198

What happened when the whole country banned alcohol from 1920 to 1933? Drinking fell at first to about 30 percent of what it had been, then rose to about 60 to 70 percent. Treasury officials had more poison added to factory alcohol, and the poison killed thousands of drinkers before delegates in Utah ended the ban on December 5, 1933. 2198

Who has been punished for drugs, and who has not? Robert Coles with his red D, the laborer Samuel Caldwell with four years of hard labor, Billie Holiday handcuffed to her hospital bed, and the people sentenced for crack, 91 of every 100 of them Black in 1992, were all punished. Harry Gross never served his jail sentence, and no member of the Sackler family has been charged with a crime. 2198

Chapter 29: Religion

Why did colonists who crossed the ocean to worship freely punish other people for their faith? The Puritans wanted freedom for their own way of worship, and they ran Massachusetts by it. Their leaders banished Roger Williams and Anne Hutchinson and hanged four Quakers in Boston. 2342

How did Americans stop paying taxes to support churches? Baptists and James Madison defeated a new church tax in Virginia, where Jefferson's religious freedom law passed in 1786. Massachusetts ended the last state church tax in 1833. 2342

How long did US officials treat Native ceremonies as crimes? For ninety-five years, from Hiram Price's rules of 1883 until members of Congress passed the American Indian Religious Freedom Act in 1978. 2342

Chapter 30: School and Education

When did school become free, and required, for every child? It came in steps, not on one date. Horace Mann argued for free schools paid for by taxes from 1837, and Massachusetts lawmakers made school a legal duty in 1852. Every state had done the same by 1918, and disabled children won the right to a free public school only in 1975. 2496

Which children were kept out of school, and how did they get in? Lawmakers barred enslaved people from learning to read, and officials separated Black, Chinese and Mexican American children, turned disabled children away and took Native children far from home. Judges first backed keeping them out or apart, in Sarah Roberts's case in 1850, *Plessy* in 1896 and Martha Lum's case in 1927. Later judges let them in, from the Mendez case in 1946 and *Brown* in 1954 to the *Mills* case in 1972, and in 1975 members of Congress passed a law for disabled children and a law that let Native nations run their own schools. 2496

Is it still lawful for a teacher to hit a child? Yes, in 15 states in 2026. The justices of the Supreme Court ruled in 1977 that the Constitution's ban on cruel and unusual punishment does not cover paddling at school, so state lawmakers have banned it one state at a time. 2496

Chapter 31: News and Communication

Did the First Amendment stop the government from punishing people for what they printed? No. Seven years after it took effect, federal judges jailed editors under the Sedition Act, and during World War I prosecutors won more than 1,000 convictions for words. 2594

Who was shut out of carrying and printing the news? From 1802 to 1865 federal law let only free white persons carry the mail, and white mobs drove Black editors out of Memphis and Wilmington. Black and Cherokee Americans started papers of their own. 2594

Why have so many local newspapers closed since 2005? Advertisers moved their money online, where most of it went to technology companies such as Google and Facebook, so newspapers' advertising money fell by more than four-fifths between 2005 and 2022. Readers moved to phones and feeds too, and by 2025, 212 counties had no local news source. 2594

Chapter 32: Art

How did enslaved artists make art, and who got paid for it? They painted, cut silhouettes, turned pots and wrote poems while other people held them as property, and the people who held them got the money. Dave's jars were sold for the profit of Lewis J. Miles, and Moses Williams learned to cut silhouettes and build exhibits in Peale's museum while Peale held him enslaved. Henry Barnes took Prince Demah to London for painting lessons, and Dave cut verses into his jars in years when it was a crime for him to learn to read. 2710

Who decided what counted as art, and who got to see it? Mostly people with money or power: the Met's trustees, who kept it shut on Sundays until 1891, a teacher in Santa Fe who taught one "authentic" Native style, and a congressman who called a touring show of modern paintings trash. Artists pushed back, from Oscar Howe's letter in 1958 to Amy Sherald cancelling her show in 2025. 2710

Why are museums giving back things they once took? Diggers took objects and human remains out of Native graves, at Mound City in 1846 and at Spiro in the 1930s, and sold many of the objects. Under a 1990 law, NAGPRA, museums that take federal money must return Native remains and sacred objects, and since 2024 they need a nation's consent even to show them. 2710

Chapter 33: Music

Where did the banjo and the blues come from? The banjo came from West African instruments, and enslaved Black people played it in the colonies from at least 1736, about a hundred years before a white man played it on a stage. The blues grew out of the work songs and field calls of enslaved people and the songs of Black workers in the South after slavery, between about 1870 and 1900. 2811

Why did so many musicians make hit songs and still die poor? Many were paid a set fee and no royalty, as Bessie Smith was at $125 a side, or someone else put his name on their song, as Don Robey did on "Hound Dog." Others, like Stephen Foster, sold their rights to future payments for money right away. 2811

Who tried to stop people from playing their own music, and why? South Carolina lawmakers banned drums and horns in 1740, saying the sound could call enslaved people together to rise up. Spanish friars burned Pueblo masks in the 1600s to punish Pueblo people for keeping their own religion. Richard Henry Pratt gave Carlisle students brass horns to stop their drumming, at a school whose own paper gave its aim as "the complete transformation of the Indians." Federal rules from 1883 to 1978 punished Native religious dances, which the Secretary of the Interior had called "heathenish." 2811

Chapter 34: Storytelling Evolution

Who tried to stop Americans from acting, and why? Early on, church leaders and lawmakers tried to stop it, for reasons of religion and morals. Spanish priests burned Pueblo masks to end the ceremonies, and Massachusetts lawmakers banned plays, saying they made people less moral and less religious. Later, police arrested Black actors after a rival white manager, by one account, started a riot to destroy their company, and studio heads blacklisted hundreds of film workers over communism. 2905

Why did white actors play Black, Asian and Native people for so long? White audiences paid to laugh at blackface from 1828 on, and producers carried the old minstrel parts into film and radio. Because of the studio heads' own Code and state laws against marriage between races, producers kept actors of color out of leading parts. 2905

Who controls a computer copy of an actor's face and voice? Since the strikes of 2023 and 2024 to 2025, union contracts require a studio or game company to get the performer's consent before it makes or uses one, and the game contract also requires pay. Lawmakers in Tennessee and California passed laws of their own in 2024, and as of September 2026 Congress had passed no national law. 2905

Chapter 35: Styles

Why did lawmakers and officials make rules about other people's clothes and hair? To keep rank where everyone could see it, and to control the people below them: Massachusetts fined people worth less than 200 pounds for wearing silk, South Carolina held enslaved people to coarse cloth in 1740, and a federal official ordered Native men's hair cut in 1902. Since 2019, CROWN Acts in about 30 states have turned the rule around and forbidden punishing people for natural hair, braids, locs or twists. 2978

Who made the cloth Americans wore? Native weavers first, then enslaved people who grew the cotton and made the indigo, and mill workers in New England. Today almost all of it is sewn in other countries, by workers in places like Bangladesh, and in small Los Angeles shops where workers were paid by the piece until a California law required hourly pay in 2022. 2978

Which new materials changed what Americans wore? Churro wool, brought in 1598, became the main thread for weaving in New Mexico. Dyes made from coal tar, from 1856, gave clothes new colors such as mauve. In the 1920s "artificial silk" let more women dress in the new styles. Nylon made stockings from 1939, and polyester suits from 1951 could be washed and worn without ironing. 2978

Chapter 36: Sports and Play

Who invented baseball? No one person did. Clubs wrote the rules, and the Knickerbocker club of New York adopted twenty of them in 1845. The story that Abner Doubleday invented it in 1839 rests on one letter from a man who was 5 years old that year. 3072

Who was kept out of American games, and how did they get in? The people who ran the games kept out laborers, Black players, girls and Black swimmers, and left enslaved riders' names off the race cards. Some got in through courts and a new law, like Maria Pepe and the girls of Title IX. Jackie Robinson got in when Branch Rickey signed him, and Kathryn Johnston played anyway, under a boy's name. 3072

How has children's free time changed? In the 1830s Lucy Larcom made doll furniture from burrs while the grown-ups left the children alone. Since then more of children's time has gone to lessons and organized sports, and by 2022, 95 of every 100 teenagers had or could use a smartphone. 3072

Chapter 37: Holidays

Who decided when Americans would give thanks, and why did it take until 1941 to fix the date? Governors and church elders set the days one at a time, until Lincoln proclaimed a national Thursday in 1863 at Sarah Josepha Hale's request. Every president after him named the day by proclamation, so when Franklin Roosevelt moved it in 1939 to help stores, sixteen states refused by the National Archives' count, and Congress ended the confusion with the 1941 law. 3140

Which days did Black Americans make their own, from election days to Juneteenth? Black governors' election days in New England from about 1749, January 1 from 1808, July 5 in New York in 1827, August 1 after 1834, and Juneteenth from 1866, which Congress made a federal holiday in 2021. 3140

Why did President Harrison proclaim the first Columbus Day in 1892, and why do some states no longer keep it? He proclaimed it for the 400th anniversary of Columbus's landing, a year and a half after a New Orleans mob lynched eleven Italian American men, and some writers say the holiday was partly meant to calm Italy. Native groups and others object to honoring a man whose men enslaved Taino people. Since Berkeley in 1992, cities and 17 states have used the day to honor Indigenous peoples, and some of those states keep Columbus Day too. 3140
